The data base for Africa contains vegetation data, climate data, and other thematic data for a recent three and a half year period. The documentation contains separate chapters of material edited about separate data sets of the overall Global Change Data Base, Pilot (diskette) Project for Africa. Descriptions of data formats, authors, and contributors are accompanied by documentation of the development/use of the data. These materials have been suggested and contributed directly by the authors of the individual data sets. To avoid confusion, some information contained in the documentation that is not directly relevant to the data base has been either omitted, crossed out, or blanked out. GRA

NEWLY RECOGNIZED DUCTILE SHEAR ZONE IN THE NORTHERN KLAMATH MOUNTAINS, OREGON. IMPLICATIONS FOR NEVADAN ACCRETION
Mary M. Donato 1992 17 p
(PB93-115632; USGS/BULL-2028; LC-92-20834) Avail: CASI HC A03/MF A01

One of the most frequently encountered problems in structural analysis of complexly deformed metamorphic terranes is the determination of the sense of movement in sheared rocks. In regions composed of accreted terranes, such as the Klamath Mountains, such information can shed light on the relative motions of large blocks of crust and may enhance our understanding of the processes by which accretion takes place. This study uses mesoscopic structural data, petrographic criteria, and quartz petrofabric analysis to deduce the sense of shear in ductility deformed quart-zites and semi-pelitic schists from a newly discovered mylonitic shear zone separating the May Creek Schist and structurally underlying amphibolite in the northern-most Klamath Mountains. GEOLOGY AND GEOCHEMISTRY OF EARLY PROTEROZOIC ROCKS IN THE DUNBAR AREA, NORTHEASTERN WISCONSIN
P. K. Sims, K. J. Schulz, and Z. E. Peterman 1992 74 p
(PB93-115640; USGS-PP-1517; LC-90-14105) Avail: CASI HC A04/MF A01

The main purpose of this study was to gain a better understanding of the geologic evolution of this part of the Wisconsin magmatic terranes and its relationship to the adjacent continental-margin assemblage in Michigan. As part of the study, we mapped in detailed reconnaissance fashion the Dunbar and Dunbar NE 7 1/2-minute quadrangles. Samples of representative rocks were collected from these areas as well as from previously mapped areas for petrographic and chemical studies and isotopic age determinations. This report describes the field relations, structure, geochemistry, and ages of major rock units in the Dunbar area. GRA

WORLD DATA CENTER A FOR SOLID EARTH GEOPHYSICS. CATALOG OF SIGNIFICANT EARTHQUAKES 2150 B.C.-1991 A.D. INCLUDING QUANTITATIVE CASUALTIES AND DAMAGE
Paula K. Dunbar, Patricia A. Lockridge, and Lowell S. Whiteside Sep. 1992 329 p Sponsored by National Geophysical Data Center, Boulder, CO
(PB93-118198; SE-49) Avail: CASI HC A15/MF A03

The catalog is a listing of historical earthquakes throughout the world that range in date from 2150 B.C. to 1991 A.D. The events were gathered from scientific and scholarly sources, regional and worldwide catalogs, and individual event reports. The list includes all events that meet at least one of the following criteria: moderate damage (approximately $1 million or more); ten or more deaths; magnitude 7.5 or greater; and intensity X or greater (for events lacking magnitude). A new inversion method, in which the frequency dependence of shear wave internal friction (Q(sub mu))(sup -1) is allowed to vary with depth, was developed and applied to selected Rayleigh wave attenuation data in the Basin and Range Province of the southwestern United States. Models were further constrained to satisfy observed values of Q and the frequency dependence of Lg waves in that region. Many models can explain those two data sets within their uncertainties, but at 1 Hz most have low values of Q(sub mu) (50-80) in the upper 8 km of the crust, rapidly increasing values to about 1000 at mid-crustal depths, and decreasing values at greater depths. Models which include a layer of higher Q values (80-150) in the upper few km of the crust, overlying a region of low Q values, cannot be predicted by the data of this study. Models for which the frequency dependence is low (0.0-0.1) in the upper crust best explain the available data. In the lower crust that frequency dependence may be substantial and leads to models in which Q(sub mu) may be an order of magnitude lower (approximately 100) at a period of 100 s than it is at 1 s (approximately 1000). 1992 221 p
(JMA-159) Avail: CASI HC A10/MF A03

This is one of the annual reports, which presents the results of the magnetic observations carried out at the Kakioka Magnetic Observatory, its two branches at Memambetsu and Kanoya, and an unmanned observatory at Chichijima. The Kakioka Magnetic Observatory, the national standard magnetic observatory of Japan, is one of the organizations administered by the Japan Meteorological Agency. The Kakioka Magnetic Observatory started magnetic observations in 1913 in succession to the Tokyo Observatory (1897 - 1912). The branches at Memambetsu and Kanoya started magnetic observations in 1952 and 1958, respectively. These three observatories are sufficiently free from artificial magnetic disturbances. At Chichijima, we started magnetic observations in 1973. This observatory has been considerably affected by artificial magnetic disturbances due to mainly automobiles. Author

The functional dependence of magnetic reconnection on solar wind

parameters is examined utilizing the am geomagnetic index and satellite observations at the magnetopause. Several parameters in the solar wind are found to control geomagnetic activity. Reconnection is found to be most efficient when the interplanetary magnetic field is southward, although some activity remains when the IMF is horizontal and slightly northward. The reconnection efficiency increases with the solar wind dynamic pressure but decreases when the Mach number is greater than 7.5. These results are compared with the functional dependencies found by correlating solar wind and magnetosheath measurements with observations of accelerated flows at the magnetopause. Accelerated flows are found to occur most often when the interplanetary magnetic field is directed southward. However, accelerated flows do occur when the IMF is horizontal and northward. Accelerated flows are also affected by the magnetosheath beta such that higher beta inhibits their occurrence. The location of accelerated flows indicates that reconnection occurs mainly at the subsolar point. DOE

ISOTOPES OF CARBON MONOXIDE IN THE FREE TROPOSPHERE AND THEIR IMPLICATIONS TO ATMOSPHERIC CHEMISTRY Ph.D. Thesis

John Eugene Mak (California Univ., San Diego.) 1992 120 p

(PB92-218650; NCAR/CT-134) Copyright Avail: Issuing Activity

The thesis project was designed to provide information for the following questions: what is the oxidation capacity of the troposphere, and how are the source strengths of carbon monoxide partitioned. Because of its active role in tropospheric chemistry, carbon monoxide is important in determining the fate of a number of species, including hydroxyl radicals. CO-14 serves as a natural tracer for its destruction, as the source function can be well constrained. By determining the tropospheric inventory of CO-14 and calculating its source strength, one may realize the rate of destruction. Similarly, because certain sources have unique stable isotope signatures, an analysis of the stable isotopes provides information on the relative source strengths. A sampling system was built which allowed for the collection of large, whole air samples from an aircraft platform. CO was extracted and the isotopes were determined, and from these data, an OH abundance was calculated using a 2-D transport model. GRA

DETERMINATION OF METHANE STABILITY IN THE UPPER MANTLE AND LOWER CRUST Final Report, 1 Jul. 1989 - 30 Jun. 1990

Bernard J. Wood and L. Taras Bryndzia Apr. 1992 82 p In American Journal of Science, 1992 v. 290, p 1-24 Sponsored by Gas Research Institute

(Contract GRI-5087-260-1569)

(PB93-100931; GRI-92/0197) Avail: CASI HC A05/MF A01

In part 1 of the report, the variability in mantle oxygen fugacity f(sub O2) from the Earth's suboceanic upper mantle is examined. The samples they have examined are abyssal spinel peridotites. They chose to study abyssal spinel peridotites as probes of the upper mantle because a sufficient number of samples were available that had a broad global distribution. These provide important constraints on fluid speciation in the system C-O-H, the approximate bulk composition of dominant volatile species in the Earth's upper mantle. Part B of the report presents an analysis of available analytical data on volatiles trapped in quenched mid-oceanic ridge basalt (MORB) glasses from three major oceanic rift systems. The results show that on average, the Earth's suboceanic mantle is more reduced than the subcontinental mantle and that both upper mantle regimes are too oxidized to be in equilibrium with graphite. The results also indicate that conditions favorable to CH4 being an important component of the volatile phase in the upper mantle may be satisfied in the vicinity of mantle plumes (i.e. hot spots). Assuming that the physical and chemical characteristics of mantle plumes are similar beneath the continents, the authors propose that an attractive subject for further research would be to investigate continental supracrustal sedimentary rocks, particularly in regions of continental extension where the manifestation of a subcontinental mantle plume are obvious. ANALYSIS OF SOLAR TRANSMISSION DATA FROM SABLE 89 Report No. 2

D. R. Longtin 1 May 1992 68 p

(Contract F19628-91-C-0093)

(AD-A258602; AD-E201241; LTR92-005; PL-TR-92-2112) Avail: CASI HC A04/MF A01

This study analyzes solar transmissometer data that was taken during the South Atlantic Backscatter Lidar Experiment (SABLE). The instrument operated on six days between 25 June and 7 July 1989. The instrument was located on Ascension Island, and it measured solar transmission at 532 nm versus time and transmission across the solar spectrum. Time

series of solar transmission at 532 nm are used to study the properties of cirrus and boundary layer stratocumulus that passed in front of the sun while the instrument was working. For 25 June 1989, a qualitative assessment shows the transmissions through cirrus to be between 0.4 and 0.8, and the cirrus thicknesses are estimated to be between 1.0 and 2.2 km. These estimates are consistent with cirrus observations and from aircraft. The analysis also focuses on the properties of the stratocumulus cloud edges and thin spots. Stratocumulus are shown to have very similar edge characteristics from day-to-day; there is a uniform distribution of cloud transmission values between about 0.1 and 0.7, and the percentages increase significantly as cloud transmissions increase from 0.7 to 0.9. The number of occurrences of stratocumulus thin spots and edges are then compared against the total number of stratocumulus occurrences. The comparisons clearly show that the stratocumulus over Ascension Island often are not optically thick and they frequently transmit partial direct solar radiation. GRA

THE SPLIT WINDOW MICROWAVE RADIOMETER (SWMR) FOR HURRICANE WIND SPEED MEASUREMENT FROM SPACE Final Report
Calvin T. Swift and P. G. Black (National Oceanic and Atmospheric Administration, Washington, DC.) 27 Jul. 1992 38 p
(Grant NAG1-1318)
(NASA-CR-192316; NAS 1.26:192316) Avail: CASI HC A03/MF A01

The monitoring of hurricanes demands considerable resources each year by the National Oceanic and Atmospheric Administration. Even with the extensive use of satellite and airborne probing of those storms, there is still much uncertainty involved in predicting landfall for timely evacuation of people subject to the threat. The concept of the Split Window Microwave Radiometer (SWMR) is to add an additional capability of remotely measuring surface winds to hopefully improve prediction capabilities or at least define the severity of the storm while it is far from land. Some of the present science and observational needs are addressed in this report as are remote sensing limitations which impact the design of a minimal system which can be launched into low earth orbit by a low cost launch system. This study has concluded that wind speed and rain rate maps of hurricanes can be generated with an X-Band radiometer system with an antenna whose aperture is 2 m on a side. Author

THE ROLE OF CONDITIONAL SYMMETRIC INSTABILITY IN THE DEVELOPMENT OF MODERATE TO HEAVY FROZEN PRECIPITATION BANDS M.S. Thesis
Thomas E. Lambert 1992 127 p
(AD-A258575; AFIT/CI/CIA-92-100) Avail: CASI HC A07/MF A02

The relationship between conditional symmetric instability (CSI), slantwise convection, and heavy frozen precipitation in winter type extratropical cyclones (ETCs) is analyzed for several cases where thunder and frozen precipitation were reported. Analysis of the atmosphere's vertical temperature, humidity, and wind field structure was used to identify areas of CSI and the atmospheric conditions that may serve as precursors to the development of CSI. Vertical cross sections showing areas of CSI were used to provide insight into when and where slantwise convection could be expected. A correlation was found between vertical motion, vertical wind shear, the equivalent potential temperature (theta-e) field, and areas of CSI, slantwise convection, and heavy frozen precipitation. Regions of moderate to strong upward vertical motion, strong vertical wind shear, and small increases or even decreases in theta-e with height are the regions where CSI tends to develop in winter type ETCs. Areas of CSI were present in all cases where thunder and frozen precipitation were reported. CSI creates conditions favorable for the development of slantwise convection and the heavy frozen precipitation it sometimes produces. GRA

STRATIFORM CLOUDS AND THEIR INTERACTION WITH ATMOSPHERIC MOTION Final Technical Report, 15 Jun. 1991 - 15 Jun. 1992
John H. E. Clark and Hampton N. Shirer 22 Feb. 1993 32 p
(Grant NAG8-780)
(NASA-CR-192280; NAS 1.26:192280) Avail: CASI HC A03/MF A01

The spatial patterns of stratocumulus cloud frequency for the continental United States and adjacent oceans were routinely obtained from surface cloud observations every six hours. These frequencies were correlated with upper air patterns at 850, 700, and 500 mb. Significant frequency maxima were found near trough axes over marine areas during relatively stationary large-scale wave patterns. These maxima tended to occur to the east of trough axes. Over continental regions, there was little relationship between stratocumulus and synoptic-scale flows patterns, probably because of the short lifetime of cloud over land. A summary of these findings is included. Derived from text

THE EFFECTS OF SMALL ICE CRYSTALS ON THE INFRARED RADIATIVE PROPERTIES OF CIRRUS CLOUDS Semiannual Status Report, 1 Oct. 1989 - 31 Mar. 1990
Y. Takano, K. N. Liou, S. Asano (Meteorological Research Inst., Tsukuba, Japan.), A. Heymsfield (National Center for Atmospheric Research, Boulder, CO.), and P. Minnis (National Aeronautics and Space Administration. Langley Research Center, Hampton, VA.) 30 Apr. 1990 4 p
(Grant NAG1-1048)
(NASA-CR-192181; NAS 1.26:192181) Avail: CASI HC A01/MF A01

To be successful in the development of satellite retrieval methodologies for the determination of cirrus cloud properties, we must have fundamental scattering and absorption data on nonspherical ice crystals that are found in cirrus clouds. Recent aircraft observations (Platt et al. 1989) reveal that there is a large amount of small ice particles, on the order of 10 micron, in cirrus clouds. Thus it is important to explore the potential differences in the scattering and absorption properties of ice crystals with respect to their sizes and shapes. In this study the effects of nonspherical small ice crystals on the infrared radiative properties of cirrus clouds are investigated using light scattering properties of spheroidal particles. In Section 2, using the anomalous diffraction theory for spheres and results from the exact spheroid scattering program, efficient parameterization equations are developed for calculations of the scattering and absorption properties for small ice crystals. Parameterization formulas are also developed for large ice crystals using results computed from the geometric ray-tracing technique and the Fraunhofer diffraction theory for spheroids and hexagonal crystals. This is presented in Section 3. Finally, applications to the satellite remote sensing are described in Section 4. Author

NASA/MSFC FY92 EARTH SCIENCE AND APPLICATIONS PROGRAM RESEARCH REVIEW
James E. Arnold, ed. and Fred W. Leslie, ed. Washington Jan. 1993 116 p Workshop held in Huntsville, AL, 7-9 Jul. 1992
(NASA-CP-3184; M-704; NAS 1.55:3184) Avail: CASI HC A06/MF A02

A large amount of attention has recently been given to global issues such as the ozone hole, tropospheric temperature variability, etc. A scientific challenge is to better understand atmospheric processes on a variety of spatial and temporal scales in order to predict environmental changes. Measurement of geophysical parameters such as wind, temperature, and moisture are needed to validate theories, provide analyzed data sets, and initialize or constrain numerical models. One of NASA's initiatives is the Mission to Planet Earth Program comprised of an Earth Observation System

(EOS) and the scientific strategy to analyze these data. This work describes these efforts in the context of satellite data analysis and fundamental studies of atmospheric dynamics which examine selected processes important to the global circulation. For individual titles, see N93-20068 through N93-20108.

Lower stratospheric temperature anomalies from MSU channel 4 were compared to ten years of radiosonde data to validate the satellite record, and the results were submitted for publication. Various assumed stratospheric weighting profiles were tested to determine whether the theoretical channel 4 weighting function had significant errors. It was found that the real weighting function is slightly sharper than the theoretical weighting function. We also found evidence for a step-function cooling in the radiosonde record during 1982, a period when two satellites were operating with no evidence of changes in the satellites. Lower tropospheric bulk temperature datasets continue to be sent to climate researchers and modelers, as well as to the Climate Analysis Center (CAC). The CAC is also implementing our MSU software to be able to do the MSU processing at their site. Drift in MSU channel 3 is being quantified and corrected to allow it to be used together with channel 2 for a better lowertropospheric gridpoint temperature product. A new global oceanic precipitation dataset has been produced from MSU channel 1 data, and compared to ten years of global raingage data. Author

The research program focuses on large-scale circulations and their interaction with the global convective pattern. An 11-year record of global cloud imagery and contemporaneous fields of motion and temperature have been used to investigate organized convection and coherent variability of the tropical circulation operating on intraseasonal time scales. This study provides a detailed portrait of tropical variability associated with the so-called Madden-Julian Oscillation (MJO). It reveals the nature, geographical distribution, and seasonality of discrete convective signal, which is a measure of feedback between the circulation and the convective pattern. That discrete spectral behavior has been evaluated in light of natural variability of the ITCZ associated with climatological convection. A composite signature of the MJO, based on cross-covariance statistics of cloud cover, motion, and temperature, has been constructed to characterize the lifecycle of the disturbance in terms of these properties. The composite behavior has also been used to investigate the influence the MJO exerts on the zonal-mean circulation and the involvement of the MJO in transfers of momentum between the atmosphere and the solid Earth. The aforementioned observational studies have led to the production of two animations. One reveals the convective signal in band-pass filtered OLR and compares it to climatological convection. The other is a 3-dimensional visualization of the composite lifecycle of the MJO. With a clear picture of the MJO in hand, feedback between the circulation and the convective pattern can be diagnosed meaningfully in numerical simulations. This process is being explored in calculations with the linearized primitive equations on the sphere in the presence of realistic stability and shear. The numerical framework represents climatological convection as a space-time stochastic process and wave-induced convection in terms of the vertically-integrated moisture flux convergence. In these calculations, frictional convergence near the equator emerges as a key to feedback between the circulation and the convective pattern. At low latitudes, nearly geostrophic balance in the boundary layer gives way to frictional balance. This shifts the wave-induced convection into phase with the temperature anomaly and allows the attending heating to feed back positively onto the circulation. The calculations successfully reproduce the salient features of the MJO. They are being used to understand the growth and decay phases of the composite lifecycle and the conditions that favor amplification of the MJO. Author

BASIC STUDIES OF BAROCLINIC FLOWS

Timothy L. Miller, Fred W. Leslie, H.-I. Lu, and K. A. Butler *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 19-20 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

A fully nonlinear 3-dimensional numerical model (GEOSIM), previously developed and validated for several cases of geophysical fluid flow, has been used to investigate the dynamical behavior of laboratory experiments of fluid flows similar to those of the Earth's atmosphere. The phenomena investigated are amplitude vacillation, and the response of the fluid system to uneven heating and cooling. The previous year's work included hysteresis in the transition between axisymmetric and wave flow. Investigation is also continuing of the flows in the Geophysical Fluid Flow Cell (GFFC), a low-gravity Spacelab experiment. Much of the effort in the past year has

been spent in validation of the model under a wide range of external parameters including nonlinear flow regimes. With the implementation of a 3-dimensional upwind differencing scheme, higher spectral resolution, and a shorter time step, the model has been found capable of predicting the majority of flow regimes observed in one complete series of baroclinic annulus experiments of Pfeffer and co-workers. Detailed analysis of amplitude vacillation has revealed that the phase splitting described in the laboratory experiments occurs in some but not all cases. Through the use of animation of the models output, a vivid 3-dimensional view of the phase splitting was shown to the audience of the Southeastern Geophysical Fluid Dynamics Conference in March of this year. A study on interannual variability was made using GEOSIM with periodic variations in the thermal forcing. Thus far, the model has not predicted a chaotic behavior as observed in the experiments, although there is a sensitivity in the wavenumber selection to the initial conditions. Work on this subject, and on annulus experiments with non-axisymmetric thermal heating, will continue. The comparison of GEOSIM's predictions will result from the Spacelab 3 GFFC experiments continued over the past year, on a 'back-burner' basis. At this point, the study (in the form of a draft of a journal article) is nearly completed. The results from GEOSIM compared very well with the experiments, and the use of the model allows the demonstration of flow mechanics that were not possible with the experimental data. For example, animation of the model output shows that the forking of the spiral bands is a transient phenomenon, due to the differential east-west propagation of convection bands from different latitudes. LABORATORY AND THEORETICAL MODELS OF PLANETARY-SCALE INSTABILITIES AND WAVES

John E. Hart *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 21-23 (For primary document see N93-20067 07-47)
Avail: CASI HC A01/MF A02

Research work is proceeding in theoretical, numerical, and experimental geophysical fluid dynamics leading up to a reflight of the GFFC (Geophysical Fluid Flow Cell Experiment) on USML-2. The work is intended not only to generate ideas for future space experiments, but to provide fundamental results concerned with nonlinear and chaotic properties of thermal convection and baroclinic waves in terrestrial and planetary atmospheres. The major efforts are focussed on thermal convection in a rapidly rotating annulus relevant to Jovian atmospheric dynamics, and on the chaotic behavior of baroclinic waves relevant to the Earth's atmosphere. The approach, in preparation for USML-2, is primarily theoretical and numerical. Mechanistic process models are solved numerically in order to identify physical mechanisms that may be observed in the GFFC, and which are important in real geophysical applications. The results from numerical simulations of geophysical fluid flow (subject to rotation and stratification) are compared with previous GFFC experiments on Spacelab-3 and with existing and proposed terrestrial laboratory experiments of various types. Pattern recognition algorithms have been employed to generate low-dimensional descriptions of the highly nonlinear and turbulent numerical simulations. Such empirically truncated descriptions provide for simplified but robust physical interpretations of the dynamics, as well as yielding highly efficient computations of these chaotic flows. Author

RESEARCH ON DIABATIC INITIALIZATION

Akira Kashara *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 25-28 (For primary document see N93-20067 07-47)
Avail: CASI HC A01/MF A02

The objective of this research is to contribute to the improvement of the analyses of irrotational wind and moisture fields in the tropics through advancement in the technique of initialization, incorporating diabatic effects and use of satellite-derived, radiometric imagery data that are not used currently by operational centers. Significant accomplishments during the period of May 1991 - April 1992 in research involving the following are presented: impact of tropical initialization upon the spin-up of precipitation forecasts; and a unified approach to diabatic initialization for improvement in the analysis of divergence and water vapor fields in the tropics. Focus of current research and plans for next year are discussed with respect to the topics of controlling the precipitation over shoot during the early part of a numerical forecast and the use of satellite imagery data for improvement of the tropical analysis. NONLINEAR DYNAMICS OF GLOBAL ATMOSPHERIC AND EARTH SYSTEM PROCESSES **c46**

Barry Saltzman *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 29-30 (For primary document see N93-20067 07-47)
Avail: CASI HC A01/MF A02

During the past eight years, we have been engaged in a NASA-supported program of research aimed at establishing the connection between satellite signatures of the earth's environmental state and the nonlinear dynamics of the global weather and climate system. Thirty-five publications and four theses have resulted from this work, which included contributions in five main areas of study: (1) cloud and latent heat processes in finite-amplitude baroclinic waves; (2) application of satellite radiation data in global weather analysis; (3) studies of planetary waves and low-frequency weather variability; (4) GCM studies of the atmospheric response to variable boundary conditions measurable from satellites; and (5) dynamics of long-term earth system changes. Significant accomplishments from the three main lines of investigation pursued during the past year are presented and include the following: (1) planetary atmospheric waves and low frequency variability; (2) GCM studies of the atmospheric response to changed boundary conditions; and (3) dynamics of long-term changes in the global earth system. LIFE CYCLES OF TRANSIENT PLANETARY WAVES

Terrence Nathan *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 31-33 (For primary document see N93-20067 07-47)
Avail: CASI HC A01/MF A02

In recent years there has been an increasing effort devoted to understanding the physical and dynamical processes that govern the global-scale circulation of the atmosphere. This effort has been motivated, in part, from: (1) a wealth of new satellite data; (2) an urgent need to assess the potential impact of chlorofluorocarbons on our climate; (3) an inadequate understanding of the interactions between the troposphere and stratosphere and the role that such interactions play in short and long-term climate variability; and (4) the realization that addressing changes in our global climate requires understanding the interactions among various components of the earth system. The research currently being carried out represents an effort to address some of these issues by carrying out studies that combine radiation, ozone, seasonal thermal forcing and dynamics. Satellite and ground-based data that is already available is being used to construct basic states for our analytical and numerical models. Significant accomplishments from 1991-1992 are presented and include the following: ozone-dynamics interaction; (2) periodic local forcing and low frequency variability; and (3) steady forcing and low frequency variability. GLOBAL WATER CYCLE

Franklin Robertson, Steven J. Goodman, John R. Christy (Alabama Univ., Huntsville.), Daniel E. Fitzjarrald, Shi-Hung Chou, William Crosson (Universities Space Research Association, Huntsville, AL.), Shouping Wang (Universities Space Research Association, Huntsville, AL.), and Jorge Ramirez (Colorado State Univ., Fort Collins.) *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 35-37 (For primary document see N93-20067 07-47)
Avail: CASI HC A01/MF A02

This research is the MSFC component of a joint MSFC/Pennsylvania State University Eos Interdisciplinary Investigation on the global water cycle extension across the earth sciences. The primary long-term objective of this investigation is to determine the scope and interactions of the global water cycle with all components of the Earth system and to understand how it stimulates and regulates change on both global and regional scales.

Significant accomplishments in the past year are presented and include the following: (1) water vapor variability; (2) multi-phase water analysis; (3) global modeling; and (4) optimal precipitation and stream flow analysis and hydrologic processes. Author

COORDINATED FIELD STUDY FOR CaPE: ANALYSIS OF ENERGY AND WATER BUDGETS

Steven J. Goodman, Claude Duchon (Oklahoma Univ., Norman.), Edward T. Kanemasu (Georgia Univ., Griffin.), Eric A. Smith (Florida State Univ., Tallahassee.), William Crosson (Universities Space Research Association, Huntsville, AL.), Chip Laymon (Universities Space Research Association, Huntsville, AL.), and Jeff Luvall *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 39 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The objectives of this hydrologic cycle study are to understand and model (1) surface energy and land-atmosphere water transfer processes, and (2) interactions between convective storms and surface energy fluxes. A surface energy budget measurement campaign was carried out by an interdisciplinary science team during the period July 8 - August 19, 1991 as part of the Convection and Precipitation/Electrification Experiment (CaPE) in the vicinity of Cape Canaveral, FL. Among the research themes associated with CaPE is the remote estimation of rainfall. Thus, in addition to surface radiation and energy budget measurements, surface mesonet, special radiosonde, precipitation, high-resolution satellite (SPOT) data, geosynchronous (GOES) and polar orbiting (DMSP SSM/I, OLS; NOAA AVHRR) satellite data, and high altitude airplane data (AMPR, MAMS, HIS) were collected. Initial quality control of the seven surface flux station data sets has begun. Ancillary data sets are being collected and assembled for analysis. Browsing of GOES and radar data has begun to classify days as disturbed/undisturbed to identify the larger scale forcing of the pre-convective environment, convection storms and precipitation. The science analysis plan has been finalized and tasks assigned to various investigators. CASI

INVESTIGATION OF THE ROLE OF THERMAL BOUNDARY LAYER PROCESSES IN INITIATING CONVECTION UNDER THE NASA SPACE FIELD PROGRAM

Richard T. McNider (Alabama Univ., Huntsville.), Aaron Song (Alabama Univ., Huntsville.), Dan Casey (Alabama Univ., Huntsville.), William Crosson (Universities Space Research Association, Huntsville, AL.), and Peter Wetzel *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 41 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The current NWS ground based network is not sufficient to capture the dynamic or thermodynamic structure leading to the initiation and organization of air mass moist convective events. Under this investigation we intend to use boundary layer mesoscale models (McNider and Pielke, 1981) to examine the dynamic triggering of convection due to topography and surface thermal contrasts. VAS and MAN's estimates of moisture will be coupled with the dynamic solution to provide an estimate of the total convective potential. Visible GOES images will be used to specify incoming insolation which may lead to surface thermal contrasts and JR skin temperatures will be used to estimate surface moisture (via the surface thermal inertia) (Weizel and Chang, 1988) which can also induce surface thermal contrasts. We will use the SPACE-COHMEX data base to evaluate the ability of the joint mesoscale model satellite products to show skill in predicting the development of air mass convection. We will develop images of model vertical velocity and satellite thermodynamic measures to derive images of predicted convective potential. We will then after suitable geographic registration carry out a pixel by pixel correlation between the model/satellite convective potential and the 'truth' which are the visible images. During the first half of the first year of this investigation we have concentrated on two aspects of the project. The first has been in generating vertical velocity fields from the model for COHMEX case days. We have taken June 19 as the first case and have run the mesoscale model at several different grid resolutions. We are currently developing the composite model/satellite convective image. The second aspect has been the attempted calibration of the surface energy budget to provide the proper horizontal thermal contrasts for convective initiation. We have made extensive progress on this aspect using the FIFE data as a test data set. The calibration technique looks very promising. CASI

AMPR/SSMI DATA COMPARISONS

Roy W. Spencer, Robbie Hood, Mark James, Eric Cantrel, Dave Simmons (Sverdrup Technology, Inc., Huntsville, AL.), John Jackson (Sverdrup Technology, Inc., Huntsville, AL.), and Frank LaFontaine (Universities Space Research Association, Huntsville, AL.) *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 43 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The AMPR was flown during CAPE and STORMFEST, during which some good data were gathered. Significant instrument noise problems were encountered in both deployments which appear to be temperature related. These are being fixed before the TOGA COARE deployment. New calibration loads have also been manufactured for the TOGA COARE configuration. Eric Smith at FSU had been analyzing the AMPR data and has written a journal article to be submitted early this summer. The emphasis of his work is on the interpretation of low resolution microwave data from space, based upon what we have learned from the high-resolution AMPR signatures. Author

WetNet: USING SSM/I DATA INTERACTIVELY FOR GLOBAL DISTRIBUTION OF TROPICAL RAINFALL AND PRECIPITABLE WATER

Edward J. Zipser and James P. McGuirk *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 45-47 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The research objectives were the following: (1) to use SSM/I to categorize, measure, and parameterize effects of rainfall systems around the globe, especially mesoscale convective systems; (2) to use SSM/I to monitor key components of the global hydrologic cycle, including tropical rainfall and precipitable water, and links to increasing sea surface temperatures; and (3) to assist in the development of efficient methods of exchange of massive satellite data bases and of analysis techniques, especially their use at a university. Numerous tasks have been initiated. First and foremost has been the integration and startup of the WetNet computer system into the TAMU computer network. Scientific activity was infeasible before completion of this activity. Final hardware delivery was not completed until October 1991, after which followed a period of identification and solution of several hardware and software and software problems. Accomplishments representing approximately four months work with the WetNEt system are presented. Author

IMPROVEMENT AND FURTHER DEVELOPMENT OF SSM/I OVERLAND PARAMETER ALGORITHMS USING THE WetNet WORKSTATION

Christopher M. U. Neale, Jeffrey J. McDonnell, Douglas Ramsey, Lawrence Hipps, and David Tarboton *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 49-51 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

Since the launch of the DMSP Special Sensor Microwave/Imager (SSM/I), several algorithms have been developed to retrieve overland parameters. These include the present operational algorithms resulting from the Navy calibration/validation effort such as land surface type (Neale et al. 1990), land surface temperature (McFarland et al. 1990), surface moisture (McFarland and Neale, 1991) and snow parameters (McFarland and Neale, 1991). In addition, other work has been done including the classification of snow cover and precipitation using the SSM/I (Grody, 1991). Due to the empirical nature of most of the above mentioned algorithms, further research is warranted and improvements can probably be obtained through a combination of radiative transfer modelling to study the physical processes governing the microwave emissions at the SSM/I frequencies, and the incorporation of additional ground truth data and special cases into the

regression data sets. We have proposed specifically to improve the retrieval of surface moisture and snow parameters using the WetNet SSM/I data sets along with ground truth information namely climatic variables from the NOAA cooperative network of weather stations as well as imagery from other satellite sensors such as the AVHRR and Thematic Mapper. In the case of surface moisture retrievals the characterization of vegetation density is of primary concern. The higher spatial resolution satellite imagery collected at concurrent periods will be used to characterize vegetation types and amounts which, along with radiative transfer modelling should lead to more physically based retrievals. Snow parameter retrieval algorithm improvement will initially concentrate on the classification of snowpacks (dry snow, wet snow, refrozen snow) and later on specific products such as snow water equivalent. Significant accomplishments in the past year are presented.

CLIMATIC VARIATION OF STORMS

Ted Fujita *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 53-55 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

Long-term variation of U.S. tornadoes were studied by obtaining the best possible data during the 75 years, 1916-90. The most difficult task was to estimate the number of early tornadoes in 1916-50 when the reporting efficiency was very bad, resulting in undercounting of the incidents. In generating the best possible data, Fujita's Tornado Tape produced at the University of Chicago, the book Significant Tornadoes, 1880-1989, by Thomas P. Grazulis, and the NSSFC Tornado Tape were combined. First, the annual number of tornadoes were smoothed to obtain the smoothed number of annual tornadoes which was normalized to the standard number of tornadoes defined as the mean number in the recent 30 years 1960-89. The normalization factor was obtained by computing the ration of smoothed and standard number. In the early years, the factor was in excess of 7. Thereafter, the normalized number of annual tornadoes was computed and plotted, finding that the results are very satisfactory. In order to visualize the variation of tornado activities, the tornado activity number (TAN) was initiated and computed. The TAN including all annual tornadoes show certain periodicity. For climatological evaluation, the peak-activity day of each year, such as Superoutbreak day, 3 April 1974, Palm Sunday, 11 April 1965 were eliminated. The TAN, excluding peak-day tornadoes, is of extreme interest.

OLS DATA SYSTEM/GLOBAL SURVEY OF LIGHTNING

Steven J. Goodman, Hugh Christian, Pat Wright (Universities Space Research Association, Huntsville, AL.), and Greg Scharfen (International Geophysical Year World Data Center A, Boulder, CO.) *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 57 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

A global lightning climatology is being assembled from the nighttime imagery of the DMSP Optical Linescan Sensor (OLS). Lightning saturates the visible channel of the OLS at nighttime and can be identified as a horizontal streak on the order of 50-100 km in horizontal extent. Lightning streaks apparent in the film strips located at the National Snow and Ice Data Center (NSIDC) prior to 1991 are being digitized. An initial survey was completed for the F7 satellite observation period January 1986 - October 1987 and for the Q satellite for the period June-July 1973. Comparisons between the OLS lightning climatology with the Arkin GPI data set during the 1986-87 El Nino event shows similar regional variations in convective activity. The digital archive of global DMSP data began at the end of February. Software is being developed at both MSFC and NSIDC to extract, navigate, and view the OLS fine and smooth imagery.

ATMOSPHERIC ELECTRICITY/METEOROLOGY ANALYSIS

Steven J. Goodman, Richard Blakeslee, and Dennis Buechler (Alabama Univ., Huntsville.) *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 59 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

This activity focuses on Lightning Imaging Sensor (LIS)/Lightning Mapper Sensor (LMS) algorithm development and applied research. Specifically we are exploring the relationships between (1) global and regional lightning activity and rainfall, and (2) storm electrical development, physics, and the role of the environment. U.S. composite radar-rainfall maps and ground strike lightning maps are used to understand lightning-rainfall relationships at the regional scale. These observations are then compared to SSM/I brightness temperatures to simulate LIS/TRMM multi-sensor algorithm data sets. These data sets are supplied to the WETNET project archive. WSR88-D (NEXRAD) data are also used as it becomes available. The results of this study allow us to examine the information content from lightning imaging sensors in low-earth and geostationary orbits. Analysis of tropical and U.S. data sets continues. A neural network/sensor fusion algorithm is being refined for objectively associating lightning and rainfall with their parent storm systems. Total lightning data from interferometers are being used in conjunction with data from the national lightning network. A 6-year lightning/rainfall climatology has been assembled for LIS sampling studies.

ELECTRIFICATION IN WINTER STORMS AND THE ANALYSIS OF THUNDERSTORM OVERFLIGHT DATA

Marx Brook IN NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 61-63 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

We have been focusing our study of electrification in winter storms on the lightning initiation process, making inferences about the magnitude of the electric fields from the initial pulses associated with breakdown, i.e., with the formation of the initial streamers. The essence of the most significant finding is as follows: (1) initial breakdown radiation pulses from stepped leaders prior to the first return stroke are very large, reaching values of 20-30 Volts/meter, comparable to return stroke radiation; and (2) the duration of the stepped leader, from the initial detectable radiation pulse to the return stroke onset, is very-short-ranging from a minimum 1.5 ms to a maximum of 4.5 ms. This past summer (June-August of 1991) we participated in the CAPE program at the Kennedy Space Center in order to acquire data on stepped leaders in summer storms with the same equipment used to get the winter storm data. We discovered that the vigorous leaders seen in winter so frequently were present in summer storms, although not as large in amplitude and certainly not as frequent.

ER-2 INVESTIGATIONS OF LIGHTNING AND THUNDERSTORMS

Richard Blakeslee *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 65-67 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The primary objective of the ER-2 lightning program is to investigate relationships between lightning and storm electrification and a number of underlying and interrelated phenomena including the structure, dynamics, and evolution of thunderstorms and thunderstorm systems, precipitation distribution and amounts, atmospheric chemistry processes, and the global electric circuit. This research is motivated by the desire to develop an understanding needed for the effective utilization and interpretation of data from the Lighting Imaging Sensor (LIS), the Lightning Mapper Sensor (LMS), and other satellite-based lightning detectors planned for the late 1900's and early 2000's. These satellite lightning detection systems will be characterized by high detection efficiencies (i.e., 90 percent) and the capability to detect both intracloud and cloud-to-ground discharges during day and night. The Lightning Imaging Sensor (LIS) is being developed by NASA for the Tropical Rainfall Measuring Mission (TRMM) satellite. In the ER-2 and related investigations, the emphasis is on establishing quantitative relationships and developing practical algorithms that employ lightning data, such as could be derived from satellite observations of optical lightning emissions, as the independent variable. Significant accomplishments made during the past year are presented.

AIRBORNE FULL POLARIZATION RADIOMETRY USING THE MSFC ADVANCED MICROWAVE PRECIPITATION RADIOMETER (AMPR)

Al J. Gasiewski and D. B. Kunkee *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 69-70 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The applications of vertically and horizontally polarized brightness temperatures in both atmospheric and surface remote sensing have been long recognized by many investigators, particularly those studying SMMR and SSM/I data. Here, the large contrast between the first two Stokes' parameters (T(sub V) and T(sub H)) can be used for detection of sea ice, measurement of ocean surface wind speed, and measurement of cloud and water vapor opacity. High-resolution aircraft data from instruments such as the NASA/MSFC AMPR is crucial for verifying radiative transfer models and developing retrieval algorithms. Currently, the AMPR is outfitted with single-polarization channels at 10, 18, 37 and 85 GHz. To increase its utility, it is proposed that additional orthogonal linearly polarized channels be added to the AMPR. Since the AMPR's feedhorns are already configured for dual orthogonal linearly polarized modes, this would require only a duplication of the currently existing receivers. To circumvent the resulting polarization basis skew caused by the cross-track scanning mechanism, the technique of Electronic Polarization Basis Rotation is proposed to be implemented. Implementation of EPBR requires precise measurement of the third Stokes parameter and will eliminate polarization skew by allowing the feedhorn basis skew angle to be corrected in software. In addition to upgrading AMPR to dual polarization capability (without skew), the modifications will provide an opportunity to demonstrate EPBR on an airborne platform. This is a highly desirable intermediate step prior to satellite implementation. Author

NONHYDROSTATIC EFFECTS IN NUMERICAL MODELING OF MESOSCALE CONVECTIVE SYSTEMS AND BAROCLINIC WAVES

Charles Cohen *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 71 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The present investigation is concerned with the role of convection upon mesoscale modeling results, particularly when the grid resolution becomes small enough that there is not a clear scale separation between the explicitly resolved circulations and the parameterized clouds. In those situations, the vertical accelerations in explicitly resolved circulations become strong enough that the hydrostatic assumption may no longer be valid. These concerns arise from interests in improving mesoscale modeling per se and in improving the subgrid-scale parameterizations in global models. The hydrostatic and the nonhydrostatic options of the Colorado State University Regional Atmospheric Modeling System were used to simulate dry gravity currents in two dimensions, using several different horizontal grid sizes. With horizontal grid intervals of 10 km or less, nonhydrostatic simulations produce wider and colder heads and weaker but wider forced updrafts than do the hydrostatic simulations. Comparing the hydrostatic and nonhydrostatic models show that the difference between the vertical mass fluxes is much less than the difference between the vertical velocities. When the grid is fine enough to resolve the head of the gravity current, horizontal convergence at the gust front extends upwards almost to the head of the cold air. Vertical mass flux in the forced updraft at the front varies with horizontal grid size mainly as a function of the height of the simulated head. For coarser grids, which do not resolve the head, vertical mass flux at all heights decreases with increasing horizontal grid size. A comparison on nonhydrostatic simulations with horizontal grid intervals of 1 km and 2 km illustrates how decreasing the grid size does not necessarily increase the intensity of the resolved circulation. The smaller grid enables the simulated gravity current to entrain a bubble of warm air behind the head, which results in a weaker circulation with a shorter head and weaker updraft. Author

SYNOPTIC/PLANETARY-SCALE INTERACTIONS AND BLOCKING OVER THE NORTH ATLANTIC OCEAN

Phillip J. Smith, Anthony R. Lupo, Melinda L. Hunter, and David R. Stettner *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 73-75 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The central theme of this project has been the diagnosis of blocking anticyclogenesis and the corresponding interactions with synoptic-scale circulations. To that end an extensive investigation of the dynamics and energetics of a major blocking anticyclone and two upstream cyclones, all of which occurred over the North Atlantic Ocean and the United States in January 1979, was undertaken. Data for the study were provided by Goddard Laboratory for Atmospheres (GLA) 4 LAT by 5 LON FGGE analyses. The methodology has primarily focused on the diagnosis of circulation forcing mechanisms using the modified forms (referred to as the extended forms) of the height tendency and Zwack-Okossi equations developed by our research group. Calculations use routine second-order finite differencing with boundary layer fraction and sensible heating and latent heat release represented as parameterized quantities. Of particular interest are the latent heat release estimates, which combine convectional parameterized values with estimates derived from satellite IR data. The latter were obtained using an algorithm derived by Dr. Franklin R. Robertson of NASA's Marshall Space Flight Center. Results are contained in project reports, theses and publications identified in previous review summaries and reports, and publications listed at the end of this summary. Significant accomplishments in the past year are presented. Author

N93-20092*# National Aeronautics and Space Administration. Marshall Space Flight Center, Huntsville, AL.

OBSERVATIONAL AND MODELING STUDIES OF HEAT, MOISTURE, PRECIPITATION, AND GLOBAL-SCALE CIRCULATION PATTERNS

Dayton G. Vincent (Purdue Univ., Elkhart, IN.) and Franklin Robertson *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 77-79 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The research sponsored by this grant is a continuation and an extension of the work conducted under a previous contract, 'South Pacific Convergence Zone and Global-Scale Circulations'. In the prior work, we conducted a detailed investigation of the South Pacific convergence zone (SPCZ), and documented many of its significant features and characteristics. We also conducted studies of its interaction with global-scale circulation features through the use of both observational and modeling studies. The latter was accomplished toward the end of the contract when Dr. James Hurrell, then a Ph.D. candidate, successfully ported the NASA GLA general circulation model (GCM) to Purdue University. In our present grant, we have expanded our previous research to include studies of other convectively-driven circulation systems in the tropics besides the SPCZ. Furthermore, we have continued to examine the relationship between these convective systems and global-scale circulation patterns. Our recent research efforts have focused on three objectives: (1) determining the periodicity of large-scale bands of organized convection in the tropics, primarily synoptic to intraseasonal time scales in the Southern Hemisphere; (2) examining the relative importance of tropical versus mid-latitude forcing for Southern Hemisphere summertime subtropical jets, particularly over the Pacific Ocean; and (3) estimating tropical precipitation, especially over oceans, using observational and budget methods. A summary list of our most significant accomplishments in the past year is given. Author

TROPICAL PACIFIC MOISTURE VARIABILITY

James P. McGuirk *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 81-83 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The research objectives are the following: (1) to describe synoptic scale variability of moisture over the tropical Pacific Ocean and the systems leading to this variability; (2) to implement satellite analysis procedures to accomplish (1); (3) to incorporate additional satellite information into

operational analysis/forecast systems at NMC; and (4) to synthesize knowledge gained from satellite observations through diagnosis and numerical models. Significant accomplishments in FY 91/92 are presented and include the following: (1) satellite forecast applications; (2) satellite data analysis; and (3) tropical plume mechanisms. Author

Work has been primarily focussed on three tasks: (1) comparison of wind fields produced at MSFC with the CO2 autowind/autoeditor system newly installed in NESDIS operations; (2) evaluation of techniques for improved tracer selection through use of cloud classification predictors; and (3) development of height assignment algorithm with water vapor channel radiances. The contract goal is to improve the CIMSS wind system by developing new techniques and assimilating better existing techniques. The work reported here was done in collaboration with the NESDIS scientists working on the operational winds software, so that NASA funded research can benefit NESDIS operational algorithms. Author

Since the deployment of the DMSP SSM/I microwave imagers in 1987, increased utilization of passive microwave radiometry throughout the 10 - 100 GHz spectrum has occurred for measurement of atmospheric constituents and terrestrial surfaces. Our efforts have focused on observations and analysis of the microwave radiative transfer behavior of precipitating clouds. We have focused particular attention on combining both aircraft and SSM/I radiometer imagery with ground-based multiparameter radar observations. As part of this and the past NASA contract, we have developed a multi-stream, polarized radiative transfer model which incorporates scattering. The model has the capability to be initialized with cloud model output or multiparameter radar products. This model provides the necessary 'link' between the passive microwave radiometer and active microwave radar observations. This unique arrangement has allowed the brightness temperatures (TB) to be compared against quantities such as rainfall, liquid/ice water paths, and the vertical structure of the cloud. Quantification of the amounts of ice and water in precipitating clouds is required for understanding of the global energy balance. CASI

Modeling global atmospheric circulations and forecasting the weather would improve if worldwide information on winds aloft were available. Accurate prediction of weather is important to agriculture, shipping, air traffic, and many other fields. Global system models of climate are of great importance. Current global atmospheric models use pressure measurements and thermodynamic properties to calculate the effects of wind for use in Numerical Weather Prediction (NWP) models. Inputs to the NWP models are temperature, pressure and wind velocities at different heights. Clearly direct wind measurements could significantly improve the NWP model performance. The RAdar Wind Sounder (RAWS) program at the University of Kansas is a study of the feasibility and the trade-offs in the design of a space-based radar system to measure wind vectors. This can be done by measuring the Doppler shift of cloud and rain returns from three or more points and calculating the components of the wind vector. The RAWS study to date uses the candidate system selected after preliminary study of frequencies and sensitivities. Two frequencies chosen, 10 and 35 GHz, allow higher sensitivity for clouds and more penetration for rain. The past year was devoted to modeling the signal-to-noise ratio (SNR) achievable for the two frequencies. The determination of SNR versus cloud penetration depth used a cloud backscattering and attenuation model in the appropriate radar equation. Calculations assumed reasonable losses in reception and transmission, in addition to the atmospheric attenuation. We discovered that ice clouds provide a higher SNR than previously calculated, but some water clouds give lower SNRs than we calculated before. One of the primary issues in the SNR calculation was the choice of the drop size distribution. Although Xin used several distributions (e.g., log normal, Khrigian and Mazin), this year we used the Deirmendjian cloud model. SNR versus cloud penetration plots were generated to validate the candidate system. Rain, which appears in the cloud models at the lower altitudes, provides ample SNR, as do the higher clouds composed of ice particles. However, in some cloud situations we found the sensitivity for the clouds was marginal or inadequate. At 35 GHz, two of the cloud models characterized by 1 to 2 g/cu m of water content at altitudes extending from 150 to 1500 meters, produced a sufficient SNR. Other models, however, with water contents ranging from 0.5 to 4 g/cu m and altitudes up to 4000 meters, exhibit SNR of -3 to -23 dB, largely because of attenuation in the upper cloud layers. These results coupled with the lower SNR at 10 GHz, led to an investigation of alternate frequencies. The rain present beneath these clouds provides adequate SNR at 10 GHz, and in most cases, at GHz. MAMS: HIGH RESOLUTION ATMOSPHERIC/SURFACE PROPERTIES

Gary J. Jedlovec, Anthony R. Guillory, Grant S. Carlson (Universities Space Research Association, Huntsville, AL.), and Robert J. Atkinson (General Electric Co., Huntsville, AL.) *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 95-97 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The Multispectral Atmospheric Mapping Sensor (MAMS) has been used for a number of investigations over the last 8 years. It has served as the basis for retrieval technique development, for atmospheric process studies, and to retrieve geophysical parameters at the surface (land and ocean). It was used most recently to collect high resolution visible and infrared imagery for the CaPE and STORMFEST experiments during FY91 and FY92. The Wildfire spectrometer (similar to MAMS but with different infrared channels) was also used during STORMFEST. The goals of MAMS during CaPE were: (1) to collect MAMS data to support the overall CaPE science objectives; (2) refine techniques for the retrieval of atmospheric moisture and surface geophysical parameters; (3) map the moisture distributions associated with the sea breeze front over Florida with MAMS ancillary satellite data on a case study basis; (4) identify surface features which may serve as local sources of heat and moisture and influence preferential convective regions over Florida, and (5) process MAMS data and derived relevant geophysical parameters to support other CaPE investigators. For STORMFEST both the MAMS and Wildfire spectrometers were used to collect unique multispectral data to study atmospheric processes. The Wildfire objectives were: (1) to collect high quality Wildfire data in conjunction with other in situ and remote measurements available during the STORMFEST field phase (1 February - 15 March 1992); (2) to develop algorithms to retrieve total ozone content and compare with those from TOMS and HIRS (IR); and (3) along with water vapor imagery, use the ozone data to better understand the 3-dimensional structure and dynamics of jet streaks and frontal systems in a case study investigation. The MAMS objectives were: (1) collect MAMS data to support a GSFC investigation of gravity waves; and (2) process the MAMS data to locate gravity wave features, and produce various moisture products in support of the gravity wave investigation. The research activities over the last year are presented and they focused on analyzing the CaPE data sets and collecting and starting preliminary analysis of the STORMFEST MAMS and Wildfire data. DEVELOPMENT OF A 100 mJ, 5 Hz, FLASHLAMP-PUMPED, Cr,Tm:YAG COHERENT LIDAR TRANSMITTER c36

S. Henderson (Coherent Technologies, Inc., Boulder, CO.) and S. Johnson *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 107 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

A contract to develop a 100 mJ, 5 Hz, flashlamp-pumped Cr,Tm:YAG coherent lidar transmitter has been awarded to Coherent Technologies, Inc. (CTI). The lidar transmitter will operate at an eyesafe wavelength of 2.01 microns. The development complements work being performed under an SBIR Phase II with Electro-Optics Technology (EOT). EOT is developing continuous wave, low and medium power Tm:YAG oscillators of a unique design. One of the low power oscillators will be used as the injection seeder/local oscillator in the CIT lidar transmitter. The lidar transmitter will require the addition of a receiver section. Once completed, the lidar will be used in atmospheric performance studies, allowing comparison with that of the more mature CO2 lidar technology. The focus of current research and plans for next year are presented. Author

MULTI-CENTER AIRBORNE COHERENT ATMOSPHERIC WIND SENSOR (MACAWS) c36

Jeffry Rhothermel, W. D. Jones, J. A. Dunkin, and E. W. McCaul, Jr. (Universities Space Research Association, Huntsville, AL.) *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 109-110 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

This effort involves development of a calibrated, pulsed coherent CO2 Doppler lidar, followed by a carefully-planned and -executed program of multi-dimensional wind velocity and aerosol backscatter measurements from the NASA DC-8 research aircraft. The lidar, designated as the Multi-center Airborne Coherent Atmospheric Wind Sensor (MACAWS), will be applicable to two research areas. First, MACAWS will enable specialized measurements of atmospheric dynamical processes in the planetary boundary layer and free troposphere in geographic locations and over scales of motion not routinely or easily accessible to conventional sensors. The proposed observations will contribute fundamentally to a greater understanding of the role of the mesoscale, helping to improve predictive capabilities for mesoscale phenomena and to provide insights into improving model parameterizations of sub-grid scale processes within large-scale circulation models. As such, it has the potential to contribute uniquely to major, multi-institutional field programs planned for the mid 1990's. Second, MACAWS measurements can be used to reduce the degree of uncertainty in performance assessments and algorithm development for NASA's prospective Laser Atmospheric Wind Sounder (LAWS), which has no space-based instrument heritage. Ground-based lidar measurements alone are insufficient to address all of the key issues. To minimize costs, MACAWS is being developed cooperatively by the lidar remote sensing groups of the Jet Propulsion Laboratory, NOAA Wave Propagation Laboratory, and MSFC using existing lidar hardware and manpower resources. Several lidar components have already been exercised in previous airborne lidar programs (for example, MSFC Airborne Doppler Lidar System (ADLS) used in 1981,4 Severe Storms Wind Measurement Program; JPL Airborne Backscatter Lidar Experiment (ABLE) used in 1989,90 Global Backscatter Experiment Survey Missions). MSFC has been given responsibility for directing the overall program of instrument development and scientific measurement. The focus of current research and plans for next year are presented. Author

AEROSOL CHEMISTRY IN GLOBE

Antony D. Clarke (Hawaii Univ., Honolulu.), Jeffry Rothermel, and Maurice A. Jarzembski *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 111 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

This task addresses the measurement and understanding of the physical and chemical properties of aerosol in remote regions that are responsible for aerosol backscatter at infrared wavelengths. Because it is representative of other clean areas, the remote Pacific is of extreme interest. Emphasis is on the determination size dependent aerosol properties that are required for modeling backscatter at various wavelengths and upon those features that may be used to help understand the nature, origin, cycling and climatology of these aerosols in the remote troposphere. Empirical relationships will be established between lidar measurements and backscatter derived from the aerosol microphysics as required by the NASA Doppler Lidar Program. This will include the analysis of results from the NASA GLOBE Survey Mission Flight Program. Additional instrument development and deployment will be carried out in order to extend and refine this data base. Identified activities include participation in groundbased and airborne experiments. Progress to date includes participation in, analysis of, and publication of results from Mauna Loa Backscatter Intercomparison Experiment (MABIE) and Global Backscatter Experiment (GLOBE). Author

CO2 LIDAR BACKSCATTER EXPERIMENT

Maurice A. Jarzembski, Jeffry Rothermel, David A. Bowdle (Alabama Univ., Huntsville.), Vandana Srivastava (Universities Space Research Association, Huntsville, AL.), Dean Cutten (Alabama Univ., Huntsville.), and Eugene W. McCaul, Jr. (Universities Space Research Association, Huntsville, AL.) *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 113-116 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The Aerosol/Lidar Science Group of the Remote Sensing Branch engages in experimental and theoretical studies of atmospheric aerosol scattering and atmospheric dynamics, emphasizing Doppler lidar as a primary tool. Activities include field and laboratory measurement and analysis efforts by in-house personnel, coordinated with similar efforts by university and government institutional researchers. The primary focus of activities related to understanding aerosol scattering is the GLObal Backscatter Experiment (GLOBE) program. GLOBE was initiated by NASA in 1986 to support the engineering design, performance simulation, and science planning for the prospective NASA Laser Atmospheric Wind Sounder (LAWS). The most important GLOBE scientific result has been identified of a background aerosol mode with a surprisingly uniform backscatter mixing ratio (backscatter normalized by air density) throughout a deep tropospheric layer. The backscatter magnitude of the background mode evident from the MSFC CW lidar measurements is remarkably similar to that evident from ground-based backscatter profile climatologies obtained by JPL in Pasadena CA, NOAA/WPL in Boulder CO, and by the Royal Signals and Radar Establishment in the United Kingdom. Similar values for the background mode have been inferred from the conversion of in situ aerosol microphysical measurements to backscatter using Mie theory. Little seasonal or hemispheric variation is evident in the survey mission data, as opposed to large variation for clouds, aerosol plums, and the marine boundary layer.

Additional features include: localized aerosol residues from dissipated clouds, occasional regions having mass concentrations of nanograms per cubic meter and very low backscatter, and aerosol plumes extending thousands of kilometers and several kilometers deep. Preliminary comparison with meteorological observations thus far indicate correlation between backscatter and water vapor under high humidity conditions. Limited intercomparisons with the Stratospheric Aerosol and Gas Experiment (SAGE) limb extinction sounder shows differences in the troposphere, however, it should be noted that in general SAGE measurements have not yet been validated in the troposphere. SIMULATIONS OF SATELLITE DOPPLER WIND OBSERVATIONS

George D. Emmitt (Simpson Weather Associates, Inc., Charlottesville, VA.), S. A. Wood (Simpson Weather Associates, Inc., Charlottesville, VA.), L. S. Wood (Simpson Weather Associates, Inc., Charlottesville, VA.), and O. Vaughan *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 117-118 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

This study will involve two objectives: (1) to develop, through computer simulations, optimal satellite-based sensor scanning techniques for direct measurement of tropospheric winds on the meso- and synoptic scales; and (2) to construct simulations of remotely measured wind fields for assessing impact of such fields on the diagnosis and prognosis of atmospheric phenomena through the use of Observing System Simulation Experiments (OSSE). Using the LAWS Simulation Model (LSM), various global coverage scenarios have been investigated as part of an effort to define the optimal orbit, configuration and sampling strategies for observations of winds for use in global circulation models. Simulated data sets have been provided to GSFC, FSU and several LAWS team members. Particular emphasis has been on providing realistic cloud cover, cirrus backscatter, aerosol distribution and wind variance on scales less than 600 km. Progress is currently being made to incorporate other remote sensors (AIRS/AMSU, STIKSCAT) into the global OSSEs.

A MODELING STUDY OF MARINE BOUNDARY LAYER CLOUDS

Shouping Wang (Universities Space Research Association, Huntsville, AL.) and Daniel E. Fitzjarrald *In its* NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 119-120 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

Marine boundary layer (MBL) clouds are important components of the earth's climate system. These clouds drastically reduce the amount of solar radiation absorbed by the earth, but have little effect on the emitted infrared radiation on top of the atmosphere. In addition, these clouds are intimately involved in regulating boundary layer turbulent fluxes. For these reasons, it is important that general circulation models used for climate studies must realistically simulate the global distribution of the MBL. While the importance of these cloud systems is well recognized, many physical processes involved in these clouds are poorly understood and their representation in large-scale models remains an unresolved problem. The present research aims at the development and improvement of the parameterization of these cloud systems and an understanding of physical processes involved. This goal is addressed in two ways. One is to use regional modeling approach to validate and evaluate two-layer marine boundary layer models using satellite and ground-truth observations; the other is to combine this simple model with a high-order turbulence closure model to study the transition processes from stratocumulus to shallow cumulus clouds. Progress made in this effort is presented.

COMPUTER MODELING OF PULSED CO2 LASERS FOR LIDAR APPLICATIONS **c36**

Gary D. Spiers *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 121-124 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The object of this effort is to develop code to enable the accurate prediction of the performance of pulsed transversely excited (TE) CO2 lasers prior to their construction. This is of particular benefit to the NASA Laser Atmospheric Wind Sounder (LAWS) project. A benefit of the completed code is that although developed specifically for the pulsed CO2 laser much of the code can be modified to model other laser systems of interest to the lidar community. A Boltzmann equation solver has been developed which enables the electron excitation rates for the vibrational levels of CO2 and N2, together with the electron ionization and attachment coefficients to be determined for any CO2 laser gas mixture consisting of a combination of CO2, N2, CO, He and CO. The validity of the model has been verified by comparison with published material. The results from the Boltzmann equation solver have been used as input to the laser kinetics code which is currently under development. A numerical code to model the laser induced medium perturbation (LIMP) arising from the relaxation of the lower laser level has been developed and used to determine the effect of LIMP on the frequency spectrum of the LAWS laser output pulse. The enclosed figures show representative results for a laser operating at 0.5 atm. with a discharge cross-section of 4.5 cm to produce a 20 J pulse with aFWHM of 3.1 microns. The first four plots show the temporal evolution of the laser pulse power, energy evolution, LIMP frequency chirp and electric field magnitude. The electric field magnitude is taken by beating the calculated complex electric field and beating it with a local oscillator signal. The remaining two figures show the power spectrum and energy distribution in the pulse as a function of the varying pulse frequency. The LIMP theory has been compared with experimental data from the NOAA Windvan Lidar and has been found to be in good agreement.

REMOTE SENSING OF WATER VAPOR FEATURES

Henry E. Fuelberg *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 125-127 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

Water vapor plays a critical role in the atmosphere. It is an important medium of energy exchange between air, land, and water; it is a major greenhouse gas, providing a crucial radiative role in the global climate system; and it is intimately involved in many regional scale atmospheric processes. Our research has been aimed at improving satellite remote sensing of water vapor and better understanding its role in meteorological processes. Our early studies evaluated the current GOES VAS system for measuring water vapor and have used VAS-derived water vapor data to examine pre-thunderstorm environments. Much of that research was described at the 1991 Research Review. A second research component has considered three proposed sensors--the High resolution Interferometer Sounder (HIS), the Multispectral Atmospheric Mapping Sensor (MAMS), and the Advanced Microwave Sounding Unit (AMSU). We have focused on MAMS and AMSU research during the past year and the accomplishments made in this effort are presented. Derived from text

AN INVESTIGATION OF THE ROLE OF CURRENT AND FUTURE REMOTE SENSING DATA SYSTEMS IN NUMERICAL METEOROLOGY

George R. Diak and William L. Smith *In* NASA. Marshall Space Flight Center, NASA/MSFC FY92 Earth Science and Applications Program Research Review Jan. 1993 p 129-133 (For primary document see N93-20067 07-47)

Avail: CASI HC A01/MF A02

The goals of this research endeavor have been to develop a flexible and relatively complete framework for the investigation of current and future satellite data sources in numerical meteorology. In order to realistically model how satellite information might be used for these purposes, it is necessary that Observing System Simulation Experiments (OSSEs) be as complete as possible. It is therefore desirable that these experiments simulate in entirety the sequence of steps involved in bringing satellite information from the radiance level through product retrieval to a realistic analysis and forecast sequence. In this project we have worked to make this sequence realistic by synthesizing raw satellite data from surrogate

atmospheres, deriving satellite products from these data and subsequently producing analyses and forecasts using the retrieved products. The accomplishments made in 1991 are presented. The emphasis was on examining atmospheric soundings and microphysical products which we expect to produce with the launch of the Advanced Microwave Sounding Unit (AMSU), slated for flight in mid 1994. A COMPARISON OF INTENSE EXTRATROPICAL CYCLONE LIFE CYCLES FROM DIVERSE GEOGRAPHICAL LOCATIONS Ph.D. Thesis
Russell Stephen Schneider 1992 253 p
Avail: Univ. Microfilms Order No. DA9224177

The complete life cycles of eleven intense wintertime extratropical cyclones from diverse oceanic and continental regions were studied to determine their systematic regional characteristics. In addition, the influence of intense cyclones on the water vapor and kinetic energy balance of the extratropics was examined. To accomplish these objectives, storm-relative (quasi-Lagrangian) mass, water vapor, kinetic energy, static stability, and angular momentum diagnostics (Johnson and Downey 1975a, b; 1976) were evaluated for each cyclone using ECMWF FGGE-IIIB Final Analysis data. The cyclone water vapor and kinetic energy balances were compared to similar diagnostics for a global domain. The results indicate that the distribution of northern hemisphere cold continental landmasses and warm ocean currents exerts a pervasive influence on the regional characteristics of wintertime extratropical cyclones. In most oceanic cyclones, strong surface sensible and latent heat fluxes contribute to weak static stability, strong water vapor convergence, intense latent heat release, and life cycles of long duration. As a result, relatively small oceanic cyclones have a dominant impact on the northern hemisphere wintertime extratropical hydrologic cycle, heat balance, and kinetic energy balance. With the importance of the atmospheric component of the global hydrologic cycle to the energy balance of the entire Earth System, the 5 day residence time for extratropical water vapor, and the nonlinearity associated with intense latent heat release, successful modeling of the water vapor balance in these wintertime oceanic cyclones is essential for successful medium and long-range numerical predictions. Dissert. Abstr.

A NUMERICAL INVESTIGATION OF SQUALL LINES Ph.D. Thesis
Kit Kong Szeto 1991 191 p
(ISBN-0-315-69244-8) Avail: Univ. Microfilms Order No. DANN69244

A two-dimensional, anelastic, cloud-resolving numerical model was used to simulate squall systems. Large domain and fine grid resolutions were utilized so that both the convective and mesoscale components of squall lines could be handled adequately by the model. Both the life-cycle and storm structure of the simulated squall lines compare favorably to observed systems. New insights in squall line dynamics were obtained through systematic sensitivity experiments and careful analysis of results. In particular, the interactions between convection, low-level cold outflows and ambient shear has been examined. It was found that the temporal evolution of squall lines could be controlled by its internal dynamics. Mechanisms responsible for the initiation and maintenance of the mesoscale circulation (and the associated stratiform precipitation) have been investigated. The mesoscale updraft was found to be a consequence of the destabilization of the upper-troposphere by detrainments of heat and moisture from the cumulonimbus and mesoscale convergence at the mid-levels. The inclusion of ice-phase microphysics has been found to be important in simulating the realistic precipitation and kinematic features of squall systems. Experiments performed with the Coriolis force neglected produced systems with stronger horizontal flows and consequently wider trailing stratiform precipitation region. This result suggests a plausible explanation for the usually observed wider stratiform regions associated with tropical mesoscale convective systems than their mid-latitude counterparts. Dissert. Abstr.

N93-20281 Washington Univ., Saint Louis, MO.
ON THE SIZE DEPENDENCE OF THE CHEMICAL PROPERTIES OF CLOUD DROPLETS: EXPLORATORY STUDIES BY AIRCRAFT Ph.D. Thesis
Cynthia H. Twohy 1992 250 p
Avail: Univ. Microfilms Order No. DA9239511

Clouds play an important role in the climate of the earth and in the transport and transformation of chemical species, but many questions about clouds remain unanswered. In particular, the chemical properties of droplets may vary with droplet size, with potentially important consequences. The counterflow virtual impactor (CVI) separates droplets from interstitial particles and gases in a cloud and also can collect droplets in discrete size ranges. As such, the CVI is a useful tool for investigating the chemical components present in droplets of different sizes and their potential interactions with cloud processes. The purpose of this work is twofold. First, the sampling characteristics of the airborne CVI are investigated, using data from a variety of experiments. A thorough understanding of CVI properties is necessary in order to utilize the acquired data judiciously and effectively. Although the impaction characteristics of the CVI seem to be predictable by theory, the airborne instrument is subject to influences that may result in a reduced transmission efficiency for droplets, particularly if the inlet is not properly aligned. Ways to alleviate this problem are being investigated, but currently the imperfect sampling efficiency must be taken into account during data interpretation. Relationships between the physical and chemical properties of residual particles from droplets collected by the CVI and droplet size are then explored in both stratiform and cumulus clouds. The effects of various cloud processes and measurement limitations upon these relationships are discussed. In one study, chemical analysis of different-sized droplets sampled in stratiform clouds showed a dependence of chemical composition on droplet size, with larger droplets containing higher proportions of sodium than non-sea-salt sulfate and ammonium. Larger droplets were also associated with larger residual particles, as expected from simple cloud nucleation theory. In a study of marine cumulus clouds, the CVI was combined with a cloud condensation nucleus spectrometer to study the supersaturation spectra of residual particles from droplets. The median critical supersaturation of the droplet residual particles was consistently less than or equal to the median critical supersaturation of ambient particles except at cloud top, where residual particles exhibited a variety of critical supersaturations. Dissert. Abstr.

SATELLITE DERIVED RAINFALL AND THE INTENSITY OF TROPICAL CYCLONES AND POSSIBLE RELATIONSHIPS TO SEA SURFACE TEMPERATURE M.S. Thesis
Timothy D. Hutchison 1992 91 p
(AD-A258573; AFIT/CI/CIA-92-106) Avail: CASI HC A05/MF A01

This research used a nonlinear algorithm developed by Olson, et al. (1989) to retrieve rainrates from satellite derived microwave brightness temperatures for tropical cyclones over tropical oceanic regions, These derived rainrates were used to determine the total 24 hour rainfall and subsequent, amount of energy generated via latent heat release for eight cases. The results showed good agreement with previous results and indicate that the SSM/I is a useful tool in assessing the total amount of rainfall of a tropical cyclone over oceanic regions. The derived rainrates were used to determine total rainfall, total convective rainfall and total stratiform rainfall. These were correlated with surrounding sea surface temperatures. Results indicate there is only a weak correlation between sea surface temperatures and the convective, stratiform and total rainfall. This supports previous findings regarding the highly complex nature of tropical cyclones and the nonlinearity of the numerous predictors. Stronger correlations were found between the surface temperature variance and rainfall indicating that the temperature contrast may be more important in determining rainfall than the actual temperatures. Significantly stronger relationships were identified between sea surface temperature and storm intensity. Strong correlations were found between SST's surrounding the storm and the future intensity. The most significant relationship was found for the outer regions and the intensity 24-48 hours later which agrees with the 1-2 day lag between convective bursts and intensification. It seems apparent that SST's play a critical role in this process, although the specific mechanism is not known. GRA

The Joint Typhoon Warning Center JTWC92 model for the prediction of tropical cyclone motion was developed by Science Applications International Corporation (SAIC), Division 425, Monterey, CA. The project was performed in three phases: database development, model development, and model

testing and implementation. The period of performance was September 15, 1989 through July 23, 1992. Progress was interrupted between and within phases due to the incremental nature of funding. Total funding for the program was $207,102, with $49,275 for database development and a total of $157,828 for the last two phases. GRA

[ACTIVITIES OF SOUTH DAKOTA SCHOOL OF MINES AND TECHNOLOGY] Annual Technical Report, 1 Jul. 1991 - 30 Sep. 1992
30 Sep. 1992 8 p
(Contract N00014-91-J-4017)
(AD-A259282) Avail: CASI HC A02/MF A01

The primary objectives of the research are to numerically simulate stratus, stratocumulus, and cumulus clouds in the marine boundary layer. This will include the formation, evolution, and dissolution of the clouds and the area covered by the cloud fields. If a large enough domain can be covered, then the change from one type of cloud to another would be investigated. Also the change from open cell to closed cell type convection and the formation of cloud streets could be investigated. Another objective is to increase our understanding of conditions in the marine boundary layer. What determines the vertical profiles of humidity, temperature, and cloud characteristics in space and time? What causes the changing depth of the boundary layer? What are its interaction with the clouds in and out of the boundary layer? A third objective is to compare various numerical models among themselves and with observations. GRA

GUST FORECASTING [LA PREVISION DES RAFALES]
A. Quinet and J. Nemeghaire 1991 57 p In FRENCH
(Misc-SER-A-125; ETN-93-92993) Avail: CASI HC A04/MF A01

The hypothesis that in intense turbulent mixing conditions, the maximum gust results from the deflection up to the ground of air streams flowing at the top of the Surface Boundary Layer (SBL), is presented. The main steps of the neutral SBL theory are outlined and it is noticed that for a site, such as the meteorological station at Uccle (Belgium), the base of the SBL is at a height of 100 m. Since 1 Jan. 1990 a new radiosounding system in Uccle has given an adequate resolution of the SBL configuration. Twenty nine case studies were distributed into three classes based on wind or temperature profiles. The first class is characterized by a typical logarithmic wind and neutral thermal profile. In a second class case studies where the wind profile is influenced by a stable thermal stratification were gathered together. A third category concerned the situations where the free convection level is located in the turbulent mixing layer. The forced convection switches then to free convection and the mixing affects a largely thicker layer than the characteristic SBL. In all case studies, the observations, and the above mentioned hypothesis are consistent. ESA

NOCTURNAL TEMPERATURE FORECASTING [LA PREVISION DES TEMPERATURES NOCTURNES]
J. vanderBorght and A. Quinet 1992 43 p In FRENCH
(Misc-SER-A-126; ETN-93-92994) Avail: CASI HC A03/MF A01

A method to forecast nocturnal temperatures, which individually considers the diverse physical processes which contribute to marked falls in night temperature, is described. Large falls in temperature occur either when polar air arrives directly after the passage of a cold front, or in conjunction with a weak wind in a clear atmosphere, especially when the global contents of water vapor in the column above the site is small. The latter is often associated with anticyclones. Hybrid situations are also possible. The analysis described is more relevant to the second category. The analysis takes into account: the radiative transfer in clear atmosphere during the night; vertical transfer of ground heat; and, to a small extent, because the winds are generally weak, turbulent transfer following the vertical. The calculation of these variables is shown. The effects of large scale advection and of oceanic effects are ignored. ESA

CONTRIBUTION TO THE STUDY OF THE ATMOSPHERIC SURFACE LAYER IN STABLE CONDITIONS, SIMULATED IN A WIND TUNNEL Ph.D. Thesis [CONTRIBUTION A L'ETUDE DE LA COUCHE DE SURFACE ATMOSPHERIQUE, EN SITUATION STABLE, SIMULEE EN SOUFFLERIE]
Rabah Zegadi 1991 187 p In FRENCH
(ECL-91-15; ETN-93-91953) Avail: CASI HC A09/MF A02

The atmospheric surface layer in thermally stratified stable conditions is simulated for the cases of smooth and rough wall, in an attempt to analyze the effects of such a stratification on the turbulent characteristics of the flow. The experimental device and the measurement techniques are described. The smooth and rough cases are compared, and experimental results are given for three degrees of stability obtained in smooth wall. The theory of Monin and Obukhov is tested on rough wall in stable and neutral conditions. The results obtained for the smooth case, for a degree of stability defined by the global Richardson number 0.13 with a k-epsilon model adapted to flows submitted to the force of gravity, are compared. WORLD OCEAN CIRCULATION EXPERIMENT: DATA SUMMARY OF JAPAN METEOROLOGICAL AGENCY SURVEYS ALONG 137 DEG E (1967-1988)
Terrence M. Joyce and Bo Qui Jun. 1992 152 p
(Grants NSF OCE-89-07815; NSF OCE-92-06184)
(PB92-219658; WHPO-92-2; WOCE-88/92) Avail: CASI HC A08/MF A02

A repeated hydrographic survey along the 137 deg E meridian in the western North Pacific has been performed by the Japan Meteorological Agency every winter since 1967 and every summer since 1972. This data summary provides an assessment of measurement error for temperature, salinity, and oxygen, a description of data quality control, and a regridding procedure in analyzing this hydrographic data set. Scientific studies based on these repeated observations and results of the objectively mapped distributions of temperature, salinity, and oxygen for the 39 cruises (1967-1988) are documented. Sampling of this hydrographic line is to be continued as a Japanese contribution to the WOCE Hydrographic Program (WHP); it has been given the designation PR2. GRA

The results of twenty further vertical soundings were arranged, according to the synoptic conditions. In Sc, St cloudiness of a high pressure area, the Total Water Content (TWC) generally increased with growing distance from the cloud base. It reached its maximum (0.18 to 0.48 g/cu m) in the middle or immediately beneath the cloud top. The temperature gradient had values between -0.4 and 0.8 per 100 m. The Median Volume Diameter (MVD) had mainly small values, between 3 and 20 micrometers. In Sc, Ac, As, and Ns, cloudiness in the range of cold or warm fronts or in a flow from variable direction, the maximum values of the TWC were between 0.10 and 1.10 g/m, and those of MVD up to 600 micrometers. The temperature gradient had values between -0.3 and -0.8 C per 100 m.

CLIMATE OF SALT LAKE CITY, UTAH
Wilbur E. Figgins, Alexander R. Smith, Craig C. Schmidt, and James A. Cisco Jul. 1992 95 p Revised
(PB92-228402; NOAA-TM-NWS-WR-152) Avail: CASI HC A05/MF A01
The purpose of the publication is an attempt to bring together under one cover as much data as possible concerning the climate of Salt Lake City. This was a difficult undertaking because of the wide variance of climate in the Salt Lake area. The Wasatch Mountain range, immediately east of the city, and the location of the Great Salt Lake, a short distance to the west, cause a great difference in local microclimates. The Salt Lake City weather records began over 100 years ago; however, the statistics in the report are based on the airport weather records which began May 1, 1928. The airport location continues to be the National Weather Service's official weather observing location for the Salt Lake City area. This provides us with over 64 years of continuous weather information that was observed from an existing or comparable exposure location.

COHERENT INTERFERENCE TESTS FOR WIND PROFILERS
Rigoberto Munoz Diaz and Russell B. Chadwick Jun. 1992 87 p
(PB92-227248; NOAA-TM-ERL-FSL-3) Avail: CASI HC A05/MF A01
A coherent interference test for wind profilers is presented. The test determines whether or not coherent interference or 'changing' coherent interference is small enough to have negligible effect on profiler wind estimates. The test is based on velocity estimates made when the profiler received signal is white, Gaussian noise. These mean radial velocity estimates are uniform over the Nyquist interval, and their distribution can be tested using the chi square test of goodness-of-fit for random variables. Methods for short- and long-term tests are described. The long-term test is for uniformity of distribution in time while the short-term test is across different range gates.

METEOROLOGICAL EVENTS IN ARIZONA AND NEW MEXICO DURING SWAMP
Morris S. Webb, Jr. Oct. 1992 20 p
(PB93-100410; NOAA-TM-NWS-SR-142) Avail: CASI HC A03/MF A01
New Mexico's weather, like Arizona's, is influenced by the Southwest Monsoon. Indeed, the major part of Arizona's and New Mexico's warm-season rainfall usually occurs between 1 July and 15 September. This was particularly true in the monsoon season of 1990, when both states reported several severe thunderstorm and flash flood events. This study attempts to determine effects of the Southwest Monsoon on Arizona and New Mexico during the period from 14 June to 26 September 1990. Climatological data from both Mexico and the United States and severe storm reports from Arizona and New Mexico were the primary data sources used in this study. Results show that the percentage of locations having measurable precipitation in a 24-hour period was greater in New Mexico than in Arizona during the 1990 Southwest Monsoon. Also, there were more 'superpeak' days in New Mexico than in Arizona during the period of study. Possible reasons for the difference in precipitation frequency are addressed. Precipitation patterns present in Arizona and New Mexico during the monsoon season of 1990 are also shown.

HYDROSTATICALLY CONSISTENT NORTH AMERICAN RADIOSONDE DATA BASE AT THE FORECAST SYSTEMS LABORATORY, 1946-PRESENT
Barry Schwartz and Mark Govett Aug. 1992 91 p
(PB93-112225; NOAA-TM-ERL-FSL-4) Avail: CASI HC A05/MF A01
A data base containing all known upper-air reports for North America has been created at the Forecast Systems Laboratory (FSL). Rawinsonde data acquired from various sources for the period 1946 to the present were subjected to gross error and hydrostatic consistency checks. The data base was created for two reasons: to satisfy a requirement to support ongoing case studies and climatological research with a conveniently accessible data base located at FSL, and to include data not contained in the data base residing at the National Climatic Data Center (NCDC). This Technical Memorandum describes the creation of the FSL data base and the quality control procedures used. It also includes the methods used to replace parts of the soundings that are missing from the NCDC data, a description of the data access routine, real-time updates to the data base, and station history and inventory information.

A PROCEDURE TO REDUCE NORTHWARD DRIFT OF TROPICAL STORMS IN A NUMERICAL MODEL
Mukut B. Mathur and Alan M. Shapiro (University Corp. for Atmospheric Research, Boulder, CO.) Jul. 1992 36 p
(PB92-226406; NOAA-TM-NWS-NMC-71) Avail: CASI HC A03/MF A01
Operational primitive equation models often predict hurricane tracks that lie to the right of the observed motion. Such a bias in the National Meteorological Center's Quasi-Lagrangian Model (QLM) is most pronounced for the storms that moved westward. It is shown that a westward displacement of the storm's circulation in the initial analysis significantly contributes to this erroneous motion to the right of the observed track in the QLM. A procedure to reduce this bias for westward moving storms is presented. It consists of imposing a secondary circulation (a dipole) over the initial storm area. The cyclonic (anticyclonic) lobe of the dipole is centered to the south (north) of the observed track. The use of the dipole procedure resulted in a substantial improvement in the forecast track throughout the 72 hour period in several cases.

CAPACITIES OF THE DLR POLARIZATION DIVERSITY RADAR FOR DETERMINING ICING RELEVANT CLOUDPHYSICAL PARAMETERS [EINSATZMOEGLICHKEITEN DES DLR-POLARISATION-DIVERSITY-RADARS ZUR BESTIMMUNG VEREISUNGSRELEVANTER WOLKENPHYSIKALISCHER PARAMETER]

Heinrich Salbreiter Apr. 1991 99 p In GERMAN
(DLR-Mitt-91-14; ETN-93-91915) Avail: CASI HC A05/MF A02; DLR, Wissenschaftliches Berichtswesen, VB-PL-DO, Postfach 90 60 58, 5000 Cologne, Germany, HC

The capacities of radar for improving the forecast of aircraft icing within stratiform clouds are studied. The sensitivity of the Polarization Diversity Radar (POLDIRAD) is estimated. A discussion on which of the icing relevant cloud physical parameters can be determined from polarization and doppler measurements is given. Additional investigation is recommended for widening and conforming actual measuring and analyzing methods. Medium termed estimations are expected to be possible for the icing parameters, liquid water content and particle phase, drop size distribution, ice particle type, and particle fraction of an ice water mixture in individual cases. POLDIRAD may give valuable assistance, in localizing icing relevant regions and estimating icing hazard. ESA

Gruza (Institute of Global Climate and Ecology, Moscow, Russia.), Richard Heim (National Oceanic and Atmospheric Administration, Asheville, NC.), Raino Heino (Finnish Meteorological Inst., Helsinki.), Philip Jones (East Anglia Univ., Norwich, England.), Bill Kininmonth (Bureau of Meteorology, Melbourne, Australia.), Vernon Kousky (Naval Oceanographic Office, Washington, DC.), Luiz Molion (Space Research Inst., Manaus, Brazil.), and Laban OGallo (Nairobi Univ., Kenya.) et al May 1991 108 p Original contains color illustrations
Avail: NTIS MF A06; print copy available at WMO, Geneva, Switzerland

The Climate System Monitoring (CSM) project of the World Climate Data and Monitoring Program (WCDMP) was initiated in 1984 following a recommendation of the Ninth Congress of the World Meteorological Organization (WMO) in response to the occurrence of significant climate system anomalies over the last few years associated with adverse impacts on the social and economic activities of many countries. CSM is designed to provide Meteorological Services and other national and international organizations with synthesized information on the state of the climate system and diagnostic insights into significant large-scale anomalies of regional and global consequence. A CSM Monthly Bulletin has been issued since July 1984. This report, the fourth biennial review of THE GLOBAL CLIMATE SYSTEM, is based on the current scientific understanding of the climate system and provides a basis for the monitoring of a global change. This monitoring supports efforts such as the newly formed Climate Change Detection Project of the WCDMP, by facilitating the identification of persistent anomalies on both global and regional scales, which is a necessary first step toward separating the 'signal' of climate change from the 'noise' of natural variability. Due to deficiencies in the global observing system, the diagnostic analysis of cause-effect relationships are preliminary for some regions and some climatic events or processes. Derived from text

GLOBAL ANALYSES FROM ECMWF AND ATLAS OF 1000 TO 10 mb CIRCULATION STATISTICS

Kevin E. Trenberth Jun. 1992 195 p
(Grant NASA Order W-17661; NA86AA-N-RG0100)
(NASA-CR-192720; NAS 1.26:192720; PB92-218718; NCAR/TN-373+STR)
Avail: CASI HC A09/MF A03

The purpose of the project is to establish the climate record from global analyses of meteorological data. This record may be used in the diagnostic studies of the atmosphere, to compile climatologies which may then be used, among other things, to validate the Community Climate Model, and for examining anomalies such as occur in association with El Nino-Southern Oscillation events. To make optimal use of these data sets, it is necessary to know of any problems that might exist and the effects of any changes in the operational system that produced the analyses. Accordingly, we have gathered information from many sources in order to summarize what is known about the data sets. We have further carried out a number of tests of the internal consistency of the data. Thus, each data set has been documented and evaluated. The report describes the European Center for Medium Range Weather Forecasts (ECMWF) global analyses available to NCAR. GRA

METEOROLOGICAL CONDITIONS OVER THE SOUTH ATLANTIC OCEAN DURING JULY AND AUGUST OF 1991
M. Robinette, S. R. Piotrowicz, R. S. Artz, and T. Pizer Aug. 1992 136 p
(PB92-235738; NOAA-TM-ERL-AOML-70) Avail: CASI HC A07/MF A02

In the austral winter of 1991, the NOAA Ship, Malcolm Baldrige, conducted a research cruise in the South Atlantic Ocean investigating ozone, carbon dioxide, and other related trace species which may be significant to the earth's radiation balance. To better understand the environmental conditions accompanying the acquired air samples, meteorological data were collected on board ship using twice daily rawinsondes. The meteorological data are presented using soundings and cross-sections along with synoptic maps and back-trajectories developed during post-cruise analyses. The synoptic maps illustrate the general meteorological conditions of the area in terms of pressure distribution at mean sea-level while the back-trajectories illustrate the flow of an air parcel due to the synoptic conditions over the 10 days prior to reaching the ship. The report provides details for the design of a 24-hour weather prediction system for snow and ice control operations in road maintenance. The system accounts for detailed terrain effects on weather. Output is provided either in terms of weather maps at 6-hour intervals for meteorological users, or in terms of easy-to-read icons indicating rain, snow, temperature, and wind conditions, laid on top of terrain and road network sequences. Graphs of forecasts at specific locations can be manipulated by the user through simple mouse point-and-click actions, thus allowing forecast updates based upon local conditions. The system has been tested extensively during the winter of 1991-1992, and has performed excellently, providing details superior to those issued by the National Weather Service. GRA

RADAR OCEAN WAVE SPECTROMETER (ROWS) PREPROCESSING PROGRAM (PREROWS2.EXE). USER'S MANUAL AND PROGRAM DESCRIPTION
Charles R. Vaughn Jan. 1993 90 p
(NASA-TM-104579; Rept-93B00031; NAS 1.15:104579) Avail: CASI HC A05/MF A01

This Technical Memorandum is a user's manual with additional program documentation for the computer program PREROWS2.EXE. PREROWS2 works with data collected by an ocean wave spectrometer that uses radar (ROWS) as an active remote sensor. The original ROWS data acquisition subsystem was replaced with a PC in 1990. PREROWS2.EXE is a compiled QuickBasic 4.5 program that unpacks the recorded data, displays various variables, and provides for copying blocks of data from the original 8mm tape to a PC file. Author

THEORY AND NUMERICAL MODELING OF LOW-FREQUENCY ACOUSTIC SCATTERING FROM BUBBLE PLUMES NEAR THE SEA SURFACE
R. F. Gragg and D. Wurmser 18 Dec. 1992 69 p
(AD-A259199; NRL/FR/7140-92-9391) Avail: CASI HC A04/MF A01

From a theoretical foundation in boundary integral equations, we develop and implement a general method for computing the complex acoustic scattering amplitudes of bubble plumes near the sea surface. The implementation, named BIRPS (Boundary Integral Resonant Plume Scatter) incorporates surface-image and resonance effects, and allows user-specified plume shapes, interior sound speed functions, and depths. Simulations with model intermediate plumes reveal multiple sub-kHz resonant features. The resonance spectrum depends mainly on the plume's size, shape, and mean sound speed. The Q of a resonance depends on these parameters and on the sound speed gradient. Resonant scattering responses have a nonquadratic depth dependence and an elevation dependence whose complexity and frequency sensitivity increase with frequency. BIRPS may be joined with a continuous wave (CW) propagation model to provide scattering simulations or with a multifrequency driver to generate reverberation predictions. Our results provide a theoretical/modeling component for the investigation of surface reverberation and are relevant to problems of resonant scattering from complex bodies in general. GRA

(BCRS-92-04; ISBN-90-5411-038-4; ETN-92-92849) Avail: CASI HC A05/MF A01

Optical properties of the sea water and suspended particles were measured onboard of the research vessel and above and in the water column at selected stations and depths. Spectral reflection of the water surface was measured along the track of the ship. Spectral light absorption of the water was measured with an experimental submersible absorption meter. Depth profiles of absorption, and up and downwelling radiance were recorded. In addition photosynthetically available radiation was measured in the water column. From collected water samples absorption and light attenuation were measured with a spectrophotometer. Spectral data was recorded with 2 nm wavelength resolution. Flow cytometric analysis of untreated samples was carried out on board. Corresponding samples were preserved for analysis in the laboratory with a flow cytometer for algae. Details of the study area and field program, of the materials and methods used, and of the results obtained, are given. ESA

BOTSWANA WATER AND SURFACE ENERGY BALANCE RESEARCH PROGRAM. PART 1: INTEGRATED APPROACH AND FIELD CAMPAIGN RESULTS
A. A. vandeGriend (Vrije Univ., Amsterdam, Netherlands.), M. Owe, H. F. Vugts (Vrije Univ., Amsterdam, Netherlands.), and G. K. Ramothwa (Meteorological Services of Botswana, Gaborone.) Feb. 1992 50 p Sponsored by Vrije Univ. and Food and Agriculture Organization of the United Nations
(BCRS Proj. AO-4.4)
(NASA-TM-108607; NAS 1.15:108607; BCRS-91-38A2-Pt-1; ISBN-90-5411-028-7; ETN-92-92842) Avail: CASI HC A03/MF A01

The Botswana water and surface energy balance research program was developed to study and evaluate the integrated use of multispectral satellite remote sensing for monitoring the hydrological status of the Earth's surface. Results of the first part of the program (Botswana 1) which ran from 1 Jan. 1988 - 31 Dec. 1990 are summarized. Botswana 1 consisted of two major, mutually related components: a surface energy balance modeling component, built around an extensive field campaign; and a passive microwave research component which consisted of a retrospective study of large scale moisture conditions and Nimbus scanning multichannel microwave radiometer microwave signatures. The integrated approach of both components in general are described and activities performed during the surface energy modeling component including the extensive field campaign are summarized. The results of the passive microwave component are summarized. The key of the field campaign was a multilevel approach, whereby measurements by various similar sensors were made at several altitudes and resolution. Data collection was performed at two adjacent sites of contrasting surface character. The following measurements were made: micrometeorological measurements, surface temperatures, soil temperatures, soil moisture, vegetation (leaf area index and biomass), satellite data, aircraft data, atmospheric soundings, stomatal resistance, and surface emissivity. ESA

SHIP-OF-OPPORTUNITY HYDROGRAPHIC TRANSECT OF WARM-CORE EDDY TRITON: 27-29 JANUARY 1992
D. C. Biggs, ed. May 1992 181 p
(Contract DI-C-14-35-0001-30501)
(PB92-218171; TR-92-01-T) Avail: CASI HC A09/MF A02

From 27-29 January 1992, three Texas A&M University (TAMU) technicians made a 16 expandable bathythermograpy (XBT) + 8 conductivity and temperature versus depth (CTD) transect of the central Gulf of Mexico, as R/V GYRE returned to Galveston from contract work off west Africa. They also ran GYRE's acoustic Doppler current profilers (ACDP) and thermosalinograph to collect data on near-surface currents, temperature, and salinity while underway. From ARGOS-tracked buoy trajectories and AVHRR imagery provided shortly before the cruise by colleagues in industry and at Stennis Space Center, the authors knew that a large warm-core eddy, Triton, which had separated in fall 1991 from the loop current, was passing across the central gulf, and that it was centered approximately 26 deg N and 92 deg W. Because they wanted to sample the eddy to continue/extend previous observations of rings in the central and western gulf, they vectored R/V GYRE so that its homeward bound course from Grand Cayman island to Galveston passed through the point. GRA

HYDROGRAPHIC DATA FROM TEXAS CONTINENTAL SHELF AND THE NORTHWEST CONTINENTAL SLOPE OF THE GULF OF MEXICO: R/V GYRE CRUISE 92G-03 (16-20 MARCH 1992)
P. Santschi and D. C. Biggs, ed. May 1992 94 p
(Contract DI-C-14-35-0001-30501; NSF OCE-90-12103; NSF OCE-91-00233; NSF OCE-90-00343)
(PB92-218155; TR-92-02-T) Avail: CASI HC A05/MF A01

Cruise 92G-03 departed Galveston at 9 p.m. on March 15 and returned to Galveston at 6:30 p.m. on March 20, 1992. The principal science programs were interdisciplinary, with goals to (1) carry out large-volume sampling of Th, Ra, and Pb isotopes using the Multiple InSitu Pumping System, MIPS, which allows battery-operated in situ pumping at up to six user-selectable depths (six times three serially linked cartridges extracting suspended particles and dissolved radioisotopes); and (2) verify MIPS with independent techniques using Fe hydroxide precipitation and MnO2 impregnated acrylic fiber extractions of 100-200 liter of seawater, sampled from surface waters with a shipboard pump. WORLD OCEAN CIRCULATION EXPERIMENT. WOCE RESULTS OF AN OXYGEN/SALINITY COMPARISON CRUISE ON THE R/VVERNADSKY Technical Report, 27 Jun. - 8 Jul. 1991
Terrance Joyce, Sheldon Bacon, Pavel Kalashnikov, Alexander Romanov, and Marvel Stalcup Jul. 1992 78 p Sponsored by NSF and Intergovernmental Oceanographic Commission, Paris, France
(Grants NSF OCE-89-07815; NSF OCE-92-06184)
(PB93-116523; WOCE-93/92; WHOP-92-3) Avail: CASI HC A05/MF A01

The report summarizes the work under the auspices of the WOCE Hydrographic Program (WHP), which took place on the R/V Ademik Vernadsky in June-July 1991. The goal of the exercise was an international comparison/training cruise to obtain comparisons of water sampling methods and analytical techniques employed by several groups for the oceanographic

measurement of salinity and oxygen in seawater. The training aspect was formalized in a pre-cruise practicum held on board the vessel by Dr. Fred Culkin and Mr. Paul Ridout of Ocean Scientific International, the manufacturer of IAPSO Standard Seawater. At-sea comparisons of Russian Reference Water, manufactured in Moscow, were made with IAPSO water. Further work involved comparisons of a Guildline and a pair of SOKOL salinometers using reference water and natural seawater collected on the cruise. GRA

OBSERVATIONS OF TURBULENCE, INTERNAL WAVES, AND BACKGROUND FLOWS: AN INQUIRY INTO THE RELATIONSHIPS BETWEEN SCALES OF MOTION Ph.D. Thesis
Kurt L. Polzin Sep. 1992 248 p
(Contracts N00014-87-K-0007; N00014-89-J-1073)
(AD-A259361; WHOI-92-39) Avail: CASI HC A11/MF A03

Oceanic profile data are used to examine the parameterization of turbulent dissipation due to internal waves. For observations exhibiting GM (Munk 1981) internal wave characteristics, the dissipation magnitude and its functional dependence upon wave energy level and buoyancy frequency was best described by the dynamical model of Henyey et al. (1986). For non-GM wave fields, dissipations were modeled most effectively by a frequency based correction to this model. The Richardson number scaling model of Kunze et al. (1990) produced consistent dissipation estimates. Model agreement here appears a consequence of statistical dependence between velocity shear and strain, hypothesized to be an effect of turbulent fluxes. These fluxes can effect low wavenumber spectral amplitudes only in the limit of strong stratification, low average wave-frequency and Coriolis frequency. An internally consistent picture of mixing in the ocean results: Energy is transported through the internal wave spectrum to small vertical scales where it is dissipated via shear instability processes. We find background diffusivities small and independent of depth (less than 10 to the -5 sq m/s); heightened wave energy in the abyss associated with topographic features or larger scale flows appears needed for internal waves to cause the 1-10 x 10 to the -4 sq m/s diffusivities generally inferred from deep ocean hydrographic data. GRA

NONLINEAR OCEAN WAVES Progress Report, 1 Jan. - 31 Dec. 1992
Harvey Segur 12 Jan. 1993 4 p
(Contract N00014-92-J-1274)
(AD-A259335; Rept-153-4647) Avail: CASI HC A01/MF A01

Two separate lines of research have been developed under this contract: numerically induced chaos; and waves in shallow water. In (1), careful numerical studies show how numerical simulations of nonlinear dynamical systems can exhibit chaos, even for a dynamical system that is known not to be chaotic. In (2), explicit analytical models are used to describe waves in shallow water, without the usual restrictions to infinitesimal wave amplitudes or to one-dimensional waves. GRA

SHIPBOARD ACOUSTIC DOPPLER CURRENT PROFILER DATA COLLECTED DURING THE SUBTROPICAL ATLANTIC CLIMATE STUDIES (STACS) PROJECT (1989-1990)
W. Douglas Wilson and J. Allison Routt Sep. 1992 147 p
(PB93-116598; NOAA-DR-ERL-AOML-71) Avail: CASI HC A07/MF A02

The Subtropical Atlantic Climate Studies (STACS) Program of NOAA is directed at determining the role of ocean circulation in global atmospheric climate, providing data for numerical model verification, and developing monitoring strategies for climatically important circulation features. The initial emphasis of STACS was on the subtropics, where earlier studies suggested that oceanic heat flux in the Atlantic is a maximum. Results of an intensive two-year study of the Florida Current at 27 N provided data on its role in Atlantic circulation and oceanic heat flux. The study also provided a system for monitoring the current on a long-term basis. GRA

A critical requirement for climate and global change research is the availability of digital global oceanographic data covering long time periods. It has been estimated that perhaps two-thirds of all global historical oceanographic data exist only in manuscript form in archives around the world, and thus effectively are not available to researchers and other users. To address this problem, the U.S. National Oceanographic Data Center (NODC)/World Data Center A for Oceanography (WDC-A) has begun an 'Oceanographic Data Archaeology and Rescue project. Data archaeology is the term used to describe the process of seeking out, restoring, evaluating, correcting, and interpreting historical data sets. Summarizing the data held in the world's maintained archives in digital form is a first step to allow researchers and data managers to know what data are available, where the gaps in data coverage are, and what data they have or have knowledge of that are not in these archives. The data distribution plots have been prepared from the NODC and WDC-A archives through June 1992 as part of this initial step. These plots for Mechanical, Expendable, and Selected Level Bathythermograph Profiles, CTD/STD Profiles, and Oceanographic Station Profiles have been prepared by yearly period. The publication is a first in a series. GRA

Cross Seamount is located at 18 deg 42'N, 158 degrees 17'W at a water depth of 500 meters at the truncated summit, and 4,500 meters at the base. The seamount is part of a chain of Cretaceous-age seamounts located 200 nautical miles south of the Island of Oahu. The southwest Hawaiian seamounts are a group of Cretaceous seamounts with extensive cobalt-rich manganese crust covered talus pavements located along steep slopes of the seamounts ranging in depth from 400 meters to 2,000

meters. We have cross-correlated the mineralogy of crusts collected with the PISCES 5 from Cross Seamount, where up to 6 centimeter thick cobalt and platinum enriched crusts have formed on coalesced pavements on talus chutes. GRA

The Center for Applied Isotope Studies (CAIS) conducted a three-year program to upgrade and field test the Gamma Isotope Measurement System (GIMS), one of several CAIS systems capable of rapid, remote surveillance and collection of seafloor data. The GIMS is designed specifically for detecting the gamma radiation that is emitted by naturally occurring radioactive minerals on or near the seafloor, which can then be used for the interpretation of seafloor lithology. The GIMS consists of a towed sled containing a gamma radiation detector and a battery pack, connected by signal cable to a shipboard data acquisition system. The system processes the gamma spectrum to identify certain radioactive isotopes, simultaneously measuring four levels of radioactivity. Following the three-year system upgrade program, the operational parameters of the GIMS were substantially improved from the prototype gamma radiation detection systems first developed in the mid-1970s. Gamma radiation detection sensitivity has been increased fourfold with the inclusion of a larger thallium-activated sodium iodide (NaI(Tl)) crystal detector. The maximum operating depth of the system was doubled to a capability of 300 feet at a towing speed of 3 knots, allowing access to extensive areas of seafloor that were not previously available for rapid survey investigation. Enhanced data processing, storage, and mapping capabilities now provide user access to gamma spectrum analyses and two- and three-dimensional maps in near real time. In addition to these improvements, computer software now in development at CAIS will be applicable to the GIMS system to permit real time mapping within the next year. GRA

TWO STRIKES AGAINST PERFECT PHYLOGENY
Hans L. Bodlaender, Mike R. Fellows (Victoria Univ., British Columbia.), and Tandy J. Warnow (University of Southern California, Los Angeles.) Feb. 1992 19 p
(Contract EEC-3075; NSF CCR-88-13632; NSF DMS-90-05833)
(RUU-CS-92-08; ETN-93-92808) Avail: CASI HC A03/MF A01

A study on perfect phylogeny is presented. A major effort in molecular biology is the computation of phylogenies for species sets. A longstanding open problem in this area is called the perfect phylogeny problem. For almost two decades the complexity of this problem remained open, with progress limited to polynomial time algorithms for a few special cases and relaxations of the problem shown to be NP complete. From an applications point of view, the problem is of interest both in its general form, where the number of characters may vary, and in its fixed parameter form. The perfect phylogeny problem has been shown to be equivalent to the problem of triangulating colored graphs. It has also been shown recently that for a given fixed number of characters, the yes-instances have bounded treewidth, opening the possibility of applying methodologies for bounded tree width to the fixed parameter form of the problem. The Perfect Phylogeny problem is shown to be difficult in two different ways. The general problem is shown to be NP complete, and the various finite state approaches for bounded treewidth are shown not to be applicable to the fixed parameter forms of the problem. ESA

BIOCHEMICALLY ACTIVE LAYERS FOR SELECTIVE MATERIAL DETECTION SENSORS [BIOCHEMISCH ACTIVE SCHICHTEN FUER SENSOREN ZUR SELEKTIVEN STOFFDETEKTION]
Reinhold Hilpert 1992 17 p In GERMAN Presented at the Seminar on Grunbauelemente zur Chemischen Sensorik, Munich, Germany, 19-20 May 1992y 1992
(MBB-Z-0440-92-PUB; ETN-93-92756) Avail: CASI HC A03/MF A01

The requirements for biological components of biosensors are reviewed. The examples of blood glucose and pesticides in drinking water are given. Properties of metabolizing components such as enzymes are examined. The posibility of using antibodies as biosensors is investigated. The methods for the immobilization of biological components on the transducer are studied: adsorption bonding at the transducer surface, embedding in matrices or behind semipermeable membranes, covalent coupling. The difficulties of obtaining numerical data on biochemical reactions to estimate response time or sensitivity area of sensor are pointed out. ESA

PROLOGUE TO ACTION. LIFE SCIENCES EDUCATION AND SCIENCE LITERACY
Mar. 1992 71 p Conference held in Columbus, OH, Jun. 1991; sponsored by US Public Health Service
(PB93-107514) Avail: CASI HC A04/MF A01

In recommendations springing from the Prologue to Action -- Life Sciences Education and Science Literacy Conference in Ohio, attendees overwhelmingly agreed that Public Health Service (PHS) should become an aggressive advocate for excellence and equality in life sciences education. Conference participants called for PHS to mobilize its corps of intramural and extramural scientists in the service of life sciences education and literacy by creatively combining the knowledge of scientists with the practical teaching skills of classroom teachers. Scientists should help train science teachers and other educators and help structure learning experiences to ensure that all students have a chance to develop the ability to think and learn on their own. Scientists should help train student teachers at the university level, for instance, and help revise undergraduate science curriculums. They should become local or national speakers, be mentors to local teachers, loan equipment to science class projects in local schools, and get involved in undergraduate and precollege curriculum development. The following summary of reports from the seven subcommittees includes

overview and discussions of their perspectives, issues, and recommendations for PHS. GRA

RADIOLOGICAL ASSESSMENT FOR SPACE STATION FREEDOM
Gautam D. Badhwar, Alva C. Hardy, Donald E. Robbins, and William Atwell (Rockwell International Corp., Houston, TX.) Jan. 1993 14 p
(NASA-TM-104758; S-703; NAS 1.15:104758) Avail: CASI HC A03/MF A01

Circumstances have made it necessary to reassess the risks to Space Station Freedom crewmembers that arise from exposure to the space radiation environment. An option is being considered to place it in an orbit similar to that of the Russian Mir space station. This means it would be in a 51.6 deg inclination orbit instead of the previously planned 28.5 deg inclination orbit. A broad range of altitudes is still being considered, although the baseline is a 407 km orbit. In addition, recent data from the Japanese A-bomb survivors has made it necessary for NASA to have the exposure limits reviewed. Preliminary findings of the National Council on Radiation Protection and Measurements indicate that the limits must be significantly reduced. Finally, the Space Station will be a laboratory where effects of long-term zero gravity on human physiology will be studied in detail. It is possible that a few crewmembers will be assigned to as many as three 1-year missions. Thus, their accumulated exposure will exceed 1,000 days. Results of this radiation risk assessment for Space Station Freedom crewmembers finds that females less than 35 years old will be confined to mission assignments where the altitude is less than about 400 km. Slight restrictions may also need to be made for male crewmembers less than 35 years old. Author

EFFECT OF AEROBIC CAPACITY ON LOWER BODY NEGATIVE PRESSURE (LBNP) TOLERANCE IN FEMALES
Alan D. Moore, Jr. (Krug Life Sciences, Inc., Houston, TX.), Suzanne M. Fortney, and Steven F. Siconolfi Washington Mar. 1993 14 p
(NASA-TP-3298; S-695; NAS 1.60:3298) Avail: CASI HC A03/MF A01

This investigation determined whether a relationship exists in females between: (1) aerobic capacity and Lower Body Negative Pressure (LBNP); and (2) aerobic capacity and change in LBNP tolerance induced by bed rest. Nine females, age 27-47 (34.6 plus or minus 6.0 (Mean plus or minus SD)), completed a treadmill-graded exercise test to establish aerobic capacity. A presyncopal-limited LBNP test was performed prior to and after 13 days of bed rest at a 6 deg head-down tilt. LBNP tolerance was quantified as: (1) the absolute level of negative pressure (NP) tolerated for greater than or equal to 60 sec; and (2) Luft's Cumulative Stress Index (CSI). Aerobic capacity was 33.3 plus or minus 5.0 mL/kg/min and ranged from 25.7 to 38.7. Bed rest was associated with a decrease in NP tolerance (-9.04 1.6 kPa(-67.8 plus or minus 12.0 mmHg) versus -7.7 1.1 kPa(-57.8 plus or minus 8.33 mmHg); $p = 0.028$) and in CSI (99.4 27.4 kPa min(745.7 plus or minus 205.4 mmHg min) versus 77.0 16.9 kPa min (577.3 plus or minus mmHg min); $p = 0.008$). The correlation between aerobic capacity and absolute NP or CSI pre-bed rest did not differ significantly from zero ($r = -0.56$, $p = 0.11$ for NP; and $r = -0.52$, $p = 0.16$ for CSI). Also, no significant correlation was observed between aerobic and pre- to post-rest change for absolute NP tolerance ($r = -0.35$, $p = 0.35$) or CSI ($r = -0.32$, $p = 0.40$). Therefore, a significant relationship does not exist between aerobic capacity and orthostatic function or change in orthostatic function induced by bed rest. Author

NUTRITION AND HYDRATION STATUS OF AIRCREW MEMBERS CONSUMING THE FOOD PACKET, SURVIVAL, GENERAL PURPOSE, IMPROVED DURING A SIMULATED SURVIVAL SCENARIO Final Report, Jun. 1991 - Nov. 1992
Tanya E. Jones, Susan H. Mutter, Judy M. Aylward, James P. DeLany, and Robert L. Stephens Nov. 1992 126 p
(DA Proj. 3M2-63002-D-819)
(AD-A258744; USARIEM-T1-93) Avail: CASI HC A07/MF A02

Adequate nutrition and hydration can be crucial to the survival of downed aircrews. To determine the nutritional adequacy and palatability of an improved, all-purpose, all-environment survival packet (GP-I) compared to the old survival packet (GP), a field test was conducted using combat survival school students. During a five day survival exercise, 41 aircrew member's ate the GP-I and 57 ate the GP. Nutrition/hydration status were assessed from food/fluid intake records as well as changes in body weight. Water turnover was measured in a subset of subjects (n=30) using deuterium oxide. Pre- and posttest hemoglobin, hematocrit plasma osmolality, urine specific gravity (SG) and ketones were also measured. Acceptability of the two rations was evaluated. Subjects eating the GP-I consumed more Calories; GP-I 774+/-436 vs GP 642+/-408 kcal/d. Carbohydrate and protein consumption were similar but the GP-I group ate significantly more fat, 35+/-21 vs 24+/-18 g/d. Mean fluid intake was similar for both groups (GP-I 4.3+/-1.7, GP 4.4+/-1.9 L/d). Sodium intakes were 1.6 g/d. Weight decreased significantly for the GP-I and GP groups (2.9+/-1.4, 3.4+/-1.7 kg, respectively); changes were similar between groups. Water turnover data indicated subjects maintained adequate hydration as did hemoglobin, hematocrit, and plasma osmolality. Mean posttest urine SG was 1.024-/+0.007 and moderate amounts of ketones were detected. Both rations received favorable ratings, but the greater variety of the GP-I ration resulted in higher acceptability ratings for this ration. We conclude from these results that either ration is adequate, however, the variety and palatability of the GP-I is more desirable than He GP. GRA

The effects of microclimate cooling on aviator performance and physiology in nuclear, biological, and chemical (NBC) individual protective equipment (IPE) were evaluated in the USAARL UH-60 research flight simulator. Sixteen male aviators flew the simulator in two temperature conditions, 95 F and 105 F, both at 50 percent relative humidity (RH). Two thermoelectric conditioning units were used, one providing cooled blown air, the other cooled water to the aviators. At each temperature, they flew for up to 6 hours in NBC IPE with no cooling, air cooling, and liquid cooling. There was an extra condition at 105 F when vent air with no cooling was blown through the air vest, making a total of seven test conditions. There were significant improvements in flight performance as a result of the cooling, more so at the higher temperature. Also, there were differences between the two cooling systems at 105 F, with the air system producing significantly lower flight error rates. Survival time was based on the length of time each subject stayed in the condition before reaching physiological withdrawal criteria (rectal temperature of 39 C or heart rate of 150 beats per minute for 15 minutes) or exercising their option to retire early. There were considerable increases in survival time with the use of microclimate cooling. The mean survival time at 95 F was increased to 385 minutes with the liquid system from 285 minutes without cooling. At 105 F to 333 minutes for the air system from 79 minutes with no cooling, the improvement was even more dramatic. There were significant differences between the two cooling systems at 105 F with the air system producing longer survival times. GRA

RETINAL INFORMATION PROCESSING FOR MINIMUM LASER LESION DETECTION AND CUMULATIVE DAMAGE Final Report, 1 May 1989 - 30 Apr. 1992
Myron L. Wolbarsht 17 Sep. 1992 24 p
(Contract DAMD17-89-C-9027; DA Proj. 3M1-62787-A-878)
(AD-A259195) Avail: CASI HC A03/MF A01

Minimum ophthalmoscopically visual lesions are not perceived very well by the injured person either from clinical experience or other forms of testing, certainly not with the detail that retinal images of the same size are seen. Previous experiments have suggested a model for retinal organization suitable for small detail detection but which will not detect retinal small lesions very well. Smaller lesions of a sub-threshold nature can cause histological damage but are not visible ophthalmoscopically, nor can they be demonstrated to cause a loss of function. A series of animal experiments has been carried out to test the electrophysiological responses of retinal ganglion cells with sufficient resolution to detect threshold laser exposures with possible deficits in perceiving moving spot/edges and other optical discontinuities. The results are accurate with high resolution and the results should be correlated with supra-threshold exposures of a level to cause sub-retinal hemorrhages and/or vitreous hemorrhages. Both qualitative and quantitative comparisons are needed between the kind of damage caused by sub-threshold, barely threshold, and markedly supra-threshold lesions on this aspect of retinal organization. GRA

SUBJECTIVE FATIGUE IN A-6, F-14, AND F/A-18 AIRCREWS DURING OPERATIONS DESERT SHIELD AND STORM Interim Report
C. A. DeJohn, S. A. Shappell, and D. F. Neri Oct. 1992 19 p
(Proj. MM3-3-P-30)
(AD-A259243; NAMRL-1377) Avail: CASI HC A03/MF A01

Fatigue during naval air combat can reduce performance, impair operational effectiveness, and compromise safety. This study examines the effect of combat missions on the subjective fatigue of naval aircrews deployed aboard USS AMERICA during Desert Shield and Desert Storm. Fatigue was determined using three questionnaires that were completed before and after each mission. Although fatigue significantly increased during combat missions, it usually returned to preflight levels by the next day without noticeably increasing as the operation progressed. We feel that judicious aircrew scheduling on the part of operational planners was one of the most important factors contributing to this result. To minimize fatigue during naval air combat operations, we recommend that, as resources permit, 'no-fly' days be regularly scheduled, only one or two missions should be scheduled per day, and adequate crew rest should be planned between missions. STATISTICALLY BASED DECOMPRESSION TABLES. 7: SELECTION AND TREATMENT OF PRIMARY AIR AND N2O2 DATA Final Report, Aug. 1986 - Feb. 1992
P. K. Weathersby, S. S. Survanshi, R. Y. Nishi, and E. D. Thalmann 18 Sep. 1992 120 p
(Proj. M00-99)
(AD-A259090; NSMRL-1182; NMRI-92-85) Avail: CASI HC A06/MF A02

Probabilistic models of decompression sickness (DCS) require high quality data of diving profiles and DCS occurrence to get reliable predictions of the probability of DCS, P(DCS). Over 400 experimental dives performed since 1977 in the U.S., U.K., and Canada were collected, verified, and formatted for use in probabilistic models. In most cases the dive profile precision is within 1 fsw in depth, 30 sec in time, and 0.1 ATA in PO2. DCS outcome and other medical records are of the highest quality expected for test dives done in military laboratories. The data sources, steps used in the review and formatting process, and summaries of the data collection are described. GRA

RAPID SUSCEPTIBILITY TESTING OF MYCOBACTERIUM AVIUM COMPLEX AND MYCOBACTERIUM TUBERCULOSIS ISOLATED FROM AIDS PATIENTS Interim Report, 1 Oct. 1992 - 31 Jan. 1993
Arvind M. Dhople 31 Jan. 1993 14 p
(Grant NAG10-0106)
(NASA-CR-192382; NAS 1.26:192382) Avail: CASI HC A03/MF A01

In ominous projections issued by both U.S. Public Health Service and the World Health Organization, the epidemic of the Human Immunodeficiency Virus (HIV) infection will continue to rise more rapidly worldwide than predicted earlier. The Acquired Immunodeficiency Syndrome (AIDS) patients are susceptible to diseases called opportunistic infections of which tuberculosis and M. avium Complex (MAC) infection are most common. This has created an urgent need to uncover new drugs for the treatment of these infections. In the seventies, NASA scientists at Goddard Space Flight Center, Greenbelt, Maryland, had adopted a biochemical indicator, adenosine triphosphate (ATP), to detect presence of life in extraterrestrial space. Therefore, we proposed to develop ATP assay technique to determine sensitivity of antibacterial compounds against MAC and M. tuberculosis.

The work was initiated in June 1992. In the last report, we described our efforts in developing ATP assay method using MAC. Studies were continued further, and during the period of this report, we established the relationship between colony forming units and ATP levels of these organisms during the growth cycle. Also, we evaluated the effects of standard antimycobacterial drugs using ATP assay technique and compared the results with those obtained with conventional tube dilution proportional method. TOXIC SUBSTANCES REGISTRY SYSTEM: INDEX OF MATERIAL SAFETY DATA SHEETS

Jul. 1992 839 p

(NASA-TM-108582; NASA-GP-23-1; NAS 1.15:108582) Avail: CASI HC A99/MF A10

The Jul. 1992 Revision of the KSC Toxic Substances Registry System (TSRS) Index of Material Safety Data Sheets (MSDS's) is presented. The listed MSDS's reflect product inventories and associated MSDS's which were submitted to the Toxic Substance Registry Data Base maintained by the Base Operations Contractors of the Biomedical Operations and Research Office of KSC. The purpose of the index is to provide a means of accessing information on the hazards associated with the toxic and otherwise hazardous chemicals stored and used at KSC. Indices are provided for manufacturers, trademarks, and stock numbers. CASI

MEASUREMENT OF BEHAVIORAL THERMOREGULATION

Christopher J. Gordon and Roberto Refinetti (College of William and Mary, Williamsburg, VA.) 1992 34 p Submitted for publication

(PB92-217033; EPA/600/A-92/166) Avail: CASI HC A03/MF A01

The measurement of thermoregulatory behavior by the techniques of thermal gradient and operant conditioning allows the study of many parameters of the behavioral control of body temperature in particular species as well as the comparative study of thermo-regulatory capabilities of different species. In neuroscience research, these techniques provide a reliable dependent variable for the investigation of the action of specific neurotransmitters and the specificity of particular brain loci involved in the regulation of body temperature. Much of the current knowledge about the neural control of thermoregulatory behavior has been obtained by using thermal gradients and operant conditioning in conjunction with systemic and intracerebral injections of neurotransmitters, local thermal stimulation of brain regions, and selective destruction of particular brain sites by electrolytic lesions. ENVIRONMENTAL HEALTH DISCIPLINE SCIENCE PLAN

1991 28 p

(NASA-TM-108042; NAS 1.15:108042) Avail: CASI HC A03/MF A01

The purpose of this plan is to provide a conceptual strategy for NASA's Life Sciences Division research and development activities in environmental health. It covers the significant research areas critical to NASA's programmatic requirements for the Extended Duration Orbiter, Space Station Freedom, and exploration mission science activities. These science activities include ground-based and flight; basic, applied, and operational; animal and human subjects; and research and development. This document summarizes the history and current status of the program elements, outlines available knowledge, establishes goals and objectives, identifies scientific priorities, and defines critical questions in the three disciplines: (1) Barophysiology, (2) Toxicology, and (3) Microbiology. This document contains a general plan that will be used by both NASA Headquarters Program Officers and the field centers to review and plan basic, applied, and operational research and development activities, both intramural and extramural, in this area. The document is divided into sections addressing these three disciplines. Author

MONITORING HUMAN TISSUES FOR TOXIC SUBSTANCES Final Report

1991 216 p

(PB92-223239; ISBN-0-309-04437-5; LC-91-61252) Avail: CASI HC A10/MF A03

The National Human Monitoring Program (NHMP) was established in 1967 within the U.S. Public Health Service to study changes in pesticide residues in the U.S. population. The primary activities of the NHMP are the National Human Adipose Tissue Survey (NHATS) and special studies that support other programs requiring data relevant to chemical exposures. The NHMP, including NHATS, was transferred to the Environmental Protection Agency (EPA) in 1970. The NHATS is now out of date and only partially fulfills its objectives. Design and management problems have been compounded by insufficient financial support for the changing and expanding objectives, and the overall quality of the NHATS has deteriorated. In 1987 EPA announced its intention to eliminate the NHMP. Congress responded by instructing EPA to retain the program, pending a review of its usefulness. EPA asked the National Research Council (NRC) to review and evaluate the effectiveness and potential applications of the NHMP. The report evaluates the current activities of the NHMP; identifies important scientific, technical, and programmatic issues; and makes recommendations regarding the design of the program and use of its products. THE CENTRAL EXECUTIVE COMPONENT OF WORKING MEMORY Annual Report, 1 Sep. 1991 - 31 Aug. 1992
A. Baddeley, J. Duncan, and H. Emslie 31 Oct. 1992 21 p
(Grant AF-AFOSR-0343-90)
(AD-A258724; AFOSR-92-0946TR) Avail: CASI HC A03/MF A01

Our approach to the central executive (CE) involves combined studies of dual task interference, frontal lobe function and general intelligence or Spearman's g. In this reporting period we have focused on dual task interference, in particular using variants of Baddeley's (1986) random generation task, thought to load the CE because of its continual requirement for novel, non- stereotyped responding. Results suggest three main conclusions. First, the CE is modality-independent, in contrast to the peripheral slave systems of working memory. Second, there is a link between CE requirements and frontal lobe functions, indicated by substantial interference between random generation and a conventional frontal task, word fluency. Third, there is some tendency for tasks with high g correlations also to show the greatest interference with random generation. Taken together, these results support the convergence of methods from experimental cognitive psychology, neuropsychology and differential psychology, to define a common CE system. GRA

(NASA-CR-192361; NAS 1.26:192361) Avail: CASI HC A09/MF A03

Previous use of various task analysis processes for the purpose of display interface design or enhancement has run the risk of failing to improve user performance due to the analysis resulting in only a sequential listing of user tasks. Adopting an ecological approach to performing the task analysis, however, may result in the necessary modeling of an unpredictable and variable task domain required to improve user performance. Kirlik has proposed an Ecological Task Analysis framework which is designed for this purpose. It is the purpose of this research to measure this framework's effectiveness at enhancing display interfaces in order to improve user performance. Following the proposed framework, an ecological task analysis of experienced users of a complex and dynamic laboratory task, Star Cruiser, was performed. Based on this analysis, display enhancements were proposed and implemented. An experiment was then conducted to compare this new version of Star Cruiser to the original. By measuring user performance at different tasks, it was determined that during early sessions, use of the enhanced display contributed to better user performance compared to that achieved using the original display. Furthermore, the results indicate that the enhancements proposed as a result of the ecological task analysis affected user performance differently depending on whether they are enhancements which aid in the selection of a possible action or in the performance of an action. Generalizations of these findings to larger, more complex systems were avoided since the analysis was only performed on this one particular system. Author

NIGHT VISION GOGGLE TRAINING: DEVELOPMENT AND PRODUCTION OF SIX VIDEO PROGRAMS Final Report, Jan. - Nov. 1992
DeForest Q. Joralmon Nov. 1992 13 p
(Contract F33615-90-C-0005)
(AD-A258529; AL-TR-1992-0136) Avail: CASI HC A03/MF A01

A paper submitted to the 14th Interservice/Industry Training Systems Conference held 25 Nov. 1992 in San Antonio, TX is presented. With the increased use of night vision goggles (NVG) within the US Air Force, Navy, and Marine aviation communities, there is an expanded need for NVG training. The role of NVG training videos within the prototype NVG training course, the content of the presentations, and techniques used in the production of the programs are described. It concludes that video presentations showing examples of NVG imagery can successfully be used to augment NVG training. GRA

A MEMBRANE-BASED SUBSYSTEM FOR WATER-VAPOR RECOVERY FROM PLANT-GROWTH CHAMBERS
R. J. Ray (Bend Research, Inc., OR.) Sep. 1992 70 p
(Contract NAS2-13345)
(NASA-CR-177602; A-92193; NAS 1.26:177602) Avail: CASI HC A04/MF A01

Bioregenerative systems--life-support systems to regenerate oxygen, food, and water--are the key to establishing man's permanent presence in space. NASA is investigating the use of plant-growth chambers (PGC's) for space missions and for bases on the moon and Mars. PGC's serve several important purposes, including the following: (1) oxygen and food production; (2) carbon-dioxide removal; and (3) water purification and reuse. The key to the successful development of PGC's is a system to recover and reuse the water vapor that is transpired by the leaves of the growing plants. In this program we propose to develop a simple, reliable, membrane-based system that allows the recovery, purification, and reuse of the transpired water vapor through control of temperature and humidity levels in the PGC. This system has characteristics that make it ideally suited to use in space: (1) minimal power requirements; (2) small volume and mass; (3) simplicity; (4) reliability; and (5) versatility. In Phase 1 we will do the following: (1) develop an accurate, predictive model of our temperature- and humidity-control system, based on parametric tests of membrane modules; and (2) use this model to design systems for selected PGC's. In Phase 2, we will seek to design, fabricate, test, and deliver a breadboard unit to NASA for testing on a PGC. Author (revised)

MISSION AND SAFETY CRITICAL (MASC): AN EVACS SIMULATION WITH NESTED TRANSACTIONS Interim Report
David Auty (Softech, Inc., Houston, TX.), Colin Atkinson (Houston Univ., Clear Lake, TX.), and Charlie Randall (GHG Corp., Houston, TX.) Sep. 1992 47 p
(Contract NCC9-16; RICIS Proj. SE-16)
(NASA-CR-192295; NAS 1.26:192295) Avail: CASI HC A03/MF A01

The Extra-Vehicular Activity Control System (EVACS) Simulation with Nested Transactions, a recent effort of the MISSION Kernel Team, is documented. The EVACS simulation is a simulation of some aspects of the Extra-Vehicular Activity Control System, in particular, just the selection of communication frequencies. The simulation is a tool to explore mission and safety critical (MASC) applications. For the purpose of this effort, its current definition is quite narrow serving only as a starting point for prototyping purposes. (Note that EVACS itself has been supplanted in a larger scenario of a lunar outpost with astronauts and a lunar rover). The frequency selection scenario was modified to embed its processing in nested transactions. Again as a first step, only two aspects of transaction support were implemented in this prototype: architecture and state recovery. Issues of concurrency and distribution are yet to be addressed. PHYSIOLOGICAL RESPONSES TO WEARING THE SPACE SHUTTLE LAUNCH AND ENTRY SUIT AND THE PROTOTYPE ADVANCED CREW ESCAPE SUIT COMPARED TO THE UNSUITED CONDITION
Linda H. Barrows (Krug Life Sciences, Inc., Houston, TX.), John J. McBrine (Krug Life Sciences, Inc., Houston, TX.), Judith C. Hayes (Krug Life Sciences, Inc., Houston, TX.), Marcella D. Stricklin (Krug Life Sciences, Inc., Houston, TX.), and Michael C. Greenisen Washington Mar. 1993 13 p
(NASA-TP-3297; S-694; NAS 1.60:3297) Avail: CASI HC A03/MF A01

The launch and entry suit (LES) is a life support suit worn during Orbiter ascent and descent. The impact of suit weight and restricted mobility on egress from the Orbiter during an emergency is unknown. An alternate suit - the advanced crew escape suite (ACES) - is being evaluated. The physiological responses to ambulatory exercise of six subjects wearing the LES and ACES were measured and compared to those measurements taken while unsuited. Dependent variables included heart rate and metabolic response to treadmill walking at 5.6 km/h (3.5 mph), and also bilateral concentric muscle strength about the knee, shoulder, and elbow. No significant (p greater than 0.06) differences in heart rate or metabolic variables were measured in either suit while walking at 5.6 km/h. Significant (p less than 0.05) decreases in all metabolic variables were remarked when both suits were compared to the unsuited condition. There were no significant (p greater than 0.05) differences among the three suit conditions at 30 or 180 deg/s for muscles about the elbow and knee; however, about the shoulder, a significant ($p = 0.0215$) difference between the ACES and the unsuited condition was noted. Therefore, wearing a life support suit while performing Orbiter egress imposes a significant metabolic demand on crewmembers. Selective upper body strength movements may be compromised. Author

SURVEY OF PROTOCOLS FOR CONDUCTING INDOOR AIR QUALITY INVESTIGATIONS IN LARGE BUILDINGS
Roy C. Fortmann Jun. 1992 25 p Presented at the ASHRAE IAQ 1992 Conference on Environment for People, San Francisco, CA, 18-21 Oct. 1992; sponsored by EPA
(Contract EPA-68-02-4544)
(PB93-119865; EPA/600/A-92/226) Avail: CASI HC A03/MF A01

Numerous investigations are conducted in large buildings each year to evaluate health and comfort complaints that building occupants perceive to be related to poor indoor air quality. Some guidelines have been developed for conducting indoor air quality investigations, but standardized building diagnostics protocols have not been developed. The purpose of the work was to compile information that might be used to develop standardized protocols. A computerized literature search and a mail-out survey were conducted. A number of reports describing indoor air quality investigation guidelines and protocols were identified. The recently-published EPA/NIOSH Building Air Quality document contained the most comprehensive guidance. A survey of other documents identified many common elements, particularly for the collection of information during the initial walk-through investigation phases. GRA

UPPER INTERIOR HEAD PROTECTION. VOLUME 1. THE DEVELOPMENT OF A RESEARCH TEST PROCEDURE Final Report
Donald T. Willke Nov. 1991 83 p
(PB93-113769; DOT-HS-807-865; VRTC-89-0140-Vol-1) Avail: CASI HC A05/MF A01

About 4000 fatalities and 9300 serious injuries result each year from occupants' heads striking various upper interior structures. The magnitude of the problem has prompted both the Government and industry to address the issue of reducing head injuries due to contact with these structures. Over the last several years, the Research and Development arm of the National Highway Traffic Safety Administration has conducted extensive research on the subject. The report, which is divided into two volumes, contains the results and findings from much of the work. A research test procedure for use in evaluating the potential for head injury due to impacts with vehicle upper interior structures is presented in Volume 1. This includes a discussion of the selection of a free-motion headform, as well as the results and analysis of testing done in the development of the component test procedure. Presented in Volume 2 are the results of tests conducted to estimate the potential for head injury in the current U.S. passenger vehicle fleet. The results of tests to evaluate the effectiveness of padding as a countermeasure are also included. All these tests were conducted following the research test procedure described in Volume 1. GRA

REQUIREMENTS FOR AN AUTOMATED HUMAN FACTORS, MANPOWER, PERSONNEL, AND TRAINING (HMPT) PLANNING TOOL Final Report, 1 Aug. 1991 - 31 Jan. 1992
Susan M. Evans and Nicole A. Ritchie May 1992 85 p
(Contract F33657-91-C-2211)
(AD-A258531; VRI-AFHEL-1-FR-92-1; ASD-TR-92-5010) Avail: CASI HC A05/MF A01

This Phase 1 Small Business Innovative Research (SBIR) project investigated the impact of system design decisions on human operator

performance during concept development. The research established the functional and information requirements for an effective automated design analysis and crew performance assessment methodology for use in Premilestone 1 planning. The information structure included process, task, dynamic crew performance, operator graphic and human factors parameters, and training requirements. Existing automated tools such as the IDEF sub 0 structured analysis methodology, the SAINT task network simulation model and various operator graphic and human factors models were evaluated, along with other proven methodologies such as IDEAL and the Air Force's Instructional Systems Development (ISD) process. Insights from designers and other potential users identified special functional, information, and hardware requirements which were included in the methodology. The requirements will direct the implementation of an automated Human Factors, Manpower, Personnel, and Training System in Phase 2. The resulting system will make a significant contribution to the complex problems of considering HMPT issues early in system planning. It has potential application by elements in DoD program offices and organizations, and would also be of use in the private sector by those who are involved with the early concept phases in the design of complex human-operated systems.... UPPER INTERIOR HEAD PROTECTION. VOLUME 2: FLEET CHARACTERIZATION AND COUNTERMEASURE EVALUATION Final Report

Donald T. Willke Nov. 1991 50 p

(PB93-113777; DOT/HS-807-866; VRTC-89-0140-Vol-2) Avail: CASI HC A03/MF A01

About 4000 fatalities and 9300 serious injuries result each year from occupants' heads striking various upper interior structures. The magnitude of the problem has prompted both the Government and industry to address the issue of reducing head injuries due to contact with these structures. Over the last several years, the Research and Development arm of the National Highway Traffic Safety Administration has conducted extensive research on the subject. The report, which is divided into two volumes, contains the results and findings from much of the work. A research test procedure for use in evaluating the potential for head injury due to impacts with vehicle upper interior structures is presented in Volume 1. This includes a discussion of the selection of a free-motion headform, as well as the results and analysis of testing done in the development of the component test procedure. Presented in Volume 2 are the results of tests conducted to estimate the potential for head injury in the current U.S. passenger vehicle fleet. The results of tests to evaluate the effectiveness of padding as a countermeasure are also included. All these tests were conducted following the research test procedure described in Volume 1. GRA

SPACE STATION ECLSS INTEGRATION ANALYSIS Final Report

Jan. 1993 14 p

(Contract NAS8-36407)

(NASA-CR-192470; NAS 1.26:192470; MDC-93W5044) Avail: CASI HC A03/MF A01

The Space Station Environmental Control and Life Support System (ECLSS) contract with NASA MSFC covered the time frame from 9 May 1985 to 31 Dec. 1992. The contract roughly covered the period of Space Station Freedom (SSF) development from early Phase B through Phase C/D Critical Design Review (CDR). During this time, McDonnell Douglas Aerospace-Huntsville (formerly McDonnell Douglas Space Systems Company) performed an analytical support role to MSFC for the development of analytical math models and engineering trade studies related to the design of the ECLSS for the SSF. ADVANCING AUTOMATION AND ROBOTICS TECHNOLOGY FOR THE SPACE STATION FREEDOM AND FOR THE U.S. ECONOMY Progress Report No. 15, 27 Feb. - 15 Sep. 1992

Henry Lum, Jr. Dec. 1992 46 p

(RTOP 476-14-01)

(NASA-TM-103992; A-93019; NAS 1.15:103992) Avail: CASI HC A03/MF A01

In April 1985, as required by Public Law 98-371, the NASA Advanced Technology Advisory Committee (ATAC) reported to Congress the results of its studies on advanced automation and robotics technology for use on Space Station Freedom. This material was documented in the initial report (NASA Technical Memorandum 87566). A further requirement of the law was that ATAC follow NASA's progress in this area and report to Congress semiannually. This report is the fifteenth in a series of progress updates and covers the period between 27 Feb. - 17 Sep. 1992. The progress made by Levels 1, 2, and 3 of the Space Station Freedom in developing and applying advanced automation and robotics technology is described. Emphasis was placed upon the Space Station Freedom program responses to specific recommendations made in ATAC Progress Report 14. Assessments are presented for these and other areas as they apply to the advancement of automation and robotics technology for Space Station Freedom. Author

HUMAN-COMPUTER INTERACTION IN THE SCHOOL OF COMPUTER SCIENCE

Bonnie E. John, Philip L. Miller, Brad A. Myers, Christine M. Neuwirth, and Steven A. Shafer Oct. 1992 26 p

(AD-A258634; CMU-CS-92-193) Avail: CASI HC A03/MF A01

The SCS faculty interested in Human-Computer Interaction (HCI) presents its position on what role HCI can play in Carnegie Mellon's School of Computer Science. We present a short description of the need for HCI research and recommend a task/human/computer approach to satisfying that need. After presenting illustrative research scenarios, we draw implications of adopting this approach for our research and educational programs. SCS is well positioned to implement this approach, given the interests and skills of our faculty and faculty in other organizations at CMU. We recommend that the Computer Science Department form a new area in HCI. GRA

NEURAL-NETWORK DEDICATED PROCESSOR FOR SOLVING COMPETITIVE ASSIGNMENT PROBLEMS Patent

Silvio P. Eberhardt, inventor (to NASA) (Jet Propulsion Lab., California Inst. of Tech., Pasadena.) 16 Mar. 1993 16 p Filed 12 Aug. 1991 Supersedes N92-17884 (30 - 8, p 1337)

(NASA-Case-NPO-17781-1-CU; US-Patent-5,195,170; US-Patent-Appl-SN-744042; US-Patent-Class-395-24; US-Patent-Class-395-11; US-Patent-Class-395-23; Int-Patent-Class-G06F-15/18) Avail: US Patent and Trademark Office

A neural-network processor for solving first-order competitive assignment problems consists of a matrix of N x M processing units, each of which corresponds to the pairing of a first number of elements of (R sub i) with a second number of elements (C sub j), wherein limits of the first number are programmed in row control superneurons, and limits of the second number are programmed in column superneurons as MIN and MAX values. The cost (weight) W sub ij of the pairings is programmed separately into each PU. For each row and column of PU's, a dedicated constraint superneuron insures that the number of active neurons within the associated row or column fall within a specified range. Annealing is provided by gradually increasing the PU gain for each row and column or increasing positive feedback to each PU, the latter being effective to increase hysteresis of each PU or by combining both of these techniques.

DESIGN OF A LABORATORY COMPUTER INTERFACE M.S. Thesis

Douglas L. Durand Jun. 1992 106 p

(AD-A259126; AFIT/GEO/ENG/92D-01) Avail: CASI HC A06/MF A02

An interface for the LSI-11 computer was designed and implemented so that the computer supports data acquisition, data reduction, and equipment control. The design includes both hardware and software and addresses both parallel and serial input/output (I/0). The serial interface's hardware is simply a Serial Line Unit card. This card plugs into the LSI-11 bus and provides the signals necessary to interface EIA RS-232 compatible devices. A software utility was developed to allow communication with the serial device and to allow exchange of data files. Routines were written to allow serial I/O through a FORTRAN program. The interface's parallel hardware includes the general purpose laboratory interface system (GPLIS) architecture. In addition, hardware modules were designed to convert certain device's signal levels to TTL levels. Software utilities were developed to acquire and store parallel data and routines were written to allow parallel I/O through a FORTRAN program. GRA

KNOWLEDGE-BASED CONSULTING SYSTEM FOR DYNAMIC NETWORK SECURITY CONTROL Ph.D. Thesis [WISSENSBASIERTES BERATUNGSSYSTEM ZUR DYNAMISCHEN NETZSICHERHEITSFUEHRUNG]

Frank Heibel 1992 111 p In GERMAN Sponsored by Siemens A.G.

(ETN-93-93420) Avail: CASI HC A06/MF A02

A hybrid approach for a consulting system is presented which combines a knowledge based system with a real time simulation system. All the network specific knowledge is included in the simulation system, while the content of the knowledge based component is completely independent from network structure. The presented knowledge base approach may be flexibly applied. The connection of the simulation systems enables later embedding of the expert system in existing network control environments. The concept was tested by prototype development. Further development will lead to a support system which could provide valuable assistance to the dispatch center of electric power utilities. ESA

LEVEL 3 BLAS FOR DISTRIBUTED MEMORY CONCURRENT COMPUTERS
Jaeyoung Choi, D. W. Walker, and J. J. Dongarra (Tennessee Univ., Knoxville.) 1992 14 p Presented at the CNRS-NSF Collaboration Workshop on Environments and Tools for Parallel Scientific Computing, St. Hilaire du Touvet, France, 7-8 Sep. 1992
(Contract DE-AC05-84OR-21400)
(DE93-003613; CONF-9209274-2) Avail: CASI HC A03/MF A01

This paper discusses issues in developing a version of the Level 3 BLAS for distributed memory concurrent computers. The Level 3 BLAS are particularly important when using machines with hierarchical memory as they maximize reuse of data in the upper levels of the memory hierarchy. In implementing the distributed Level 3 BLAS, a block scattered decomposition is employed. Details of the parallel implementation of DGEMM, for performing matrix-matrix multiplication, and DTRSM, for solving triangular systems, are given, and results are presented for runs on the Intel Touchstone Delta computer. COMPUTER AIDED RELIABILITY, AVAILABILITY, AND SAFETY MODELING FOR FAULT-TOLERANT COMPUTER SYSTEMS WITH COMMENTARY ON THE HARP PROGRAM Final Report
Martin L. Shooman 1 Apr. 1991 120 p
(Grant NAG1-1001)
(NASA-CR-192405; NAS 1.26:192405) Avail: CASI HC A06/MF A02

Many of the most challenging reliability problems of our present decade involve complex distributed systems such as interconnected telephone switching computers, air traffic control centers, aircraft and space vehicles, and local area and wide area computer networks. In addition to the challenge of complexity, modern fault-tolerant computer systems require very high levels of reliability, e.g., avionic computers with MTTF goals of one billion hours. Most analysts find that it is too difficult to model such complex systems without computer aided design programs. In response to this need, NASA has developed a suite of computer aided reliability modeling programs beginning with CARE 3 and including a group of new programs such as: HARP, HARP-PC, Reliability Analysts Workbench (Combination of model solvers SURE, STEM, PAWS, and common front-end model ASSIST), and the Fault Tree Compiler. The HARP program is studied and how well the user can model systems using this program is investigated. One of the important objectives will be to study how user friendly this program is, e.g., how easy it is to model the system, provide the input information, and interpret the results. The experiences of the author and his graduate students who used HARP in two graduate courses are described. Some brief comparisons were made with the ARIES program which the students also used. Theoretical studies of the modeling techniques used in HARP are also included. Of course no answer can be any more accurate than the fidelity of the model, thus an Appendix is included which discusses modeling accuracy. A broad viewpoint is taken and all problems which occurred in the use of HARP are discussed. Such problems include: computer system problems, installation manual problems, user manual problems, program inconsistencies, program limitations, confusing notation, long run times, accuracy problems, etc. Author (revised)

THE PERFORMANCE OF CACHE-BASED ERROR RECOVERY IN MULTIPROCESSORS
Bob Janssens and W. F. Fuchs 25 Aug. 1992 24 p
(Contract NAG1-613; N00014-91-J-1283)
(NASA-CR-192142; NAS 1.26:192142; AD-A259426) Avail: CASI HC A03/MF A01

Several variations of cache-based checkpointing for rollback error recovery in shared-memory multiprocessors have been recently developed. By modifying the cache replacement policy, these techniques use the inherent redundancy in the memory hierarchy to periodically checkpoint the computation state. Three schemes, different in the manner in which they avoid rollback propagation, are evaluated. By simulation with address traces from parallel applications running on an Encore Multimax shared-memory multiprocessor, the performance effect of integrating the recovery schemes in the cache coherence protocol are evaluated. The results indicate that the cache-based schemes can provide checkpointing capability with low performance overhead but uncontrollable high variability in the checkpoint interval. GRA

EXPLICIT POLYMORPHISM AND CPS CONVERSION
Robert Harper and Mark Lillibridge Oct. 1992 25 p
(Contract F19628-91-C-0168; ARPA Order 8313)
(AD-A258635; CMU-CS-92-210) Avail: CASI HC A03/MF A01

The typing properties of continuation passing style (CPS) conversion for an extension of F(sub omega), with control operators is studied. Two

classes of evaluation strategies are considered, each with call-by-name and call-by-value variants. Under the 'standard' strategies, constructor abstractions are values, and constructor applications can lead to non-trivial control effects. In contrast, the 'ML-like' strategies evaluate beneath constructor abstractions, reflecting the usual interpretation of programs in languages based on implicit polymorphism. Three continuation passing style sub-languages are considered, one on which the standard strategies coincide, one on which the ML-like strategies coincide, and one on which all the strategies coincide. Compositional, type-preserving CPS transformation algorithms are given for the standard strategies, resulting in terms on which all evaluation strategies coincide. This has as a corollary the soundness and termination of well-typed programs under the standard evaluation strategies. A similar result is obtained for the ML-like call-by-name strategy. In contrast, such results are obtained for the call-by value ML-like strategy only for a restricted sub-language in which constructor abstractions are limited to values. GRA

INTERACTIVE GRAPHICS SYSTEM FOR THE STUDY OF VARIANCE/COVARIANCE STRUCTURES OF BIVARIATE AND MULTIVARIATE NORMAL POPULATIONS M.S. Thesis

Ronald G. Garlicki Sep. 1992 214 p

(AD-A259449; AFIT/GSM/ENC/92S-9) Avail: CASI HC A10/MF A03

This research created a graphics oriented computer program which was used as part of a Visualization, Verbalization, Algorithmization, and Mathematization (VVAM) learning protocol. The curriculum for this research was the study of variance/covariance structures of bivariate and multivariate normal populations. The program displays the geometric images corresponding to the various possible covariance structures. These images facilitate and encourage experiment-based self discovery learning. The program encourages the student to take an active role in their own education. The program created is self contained, calculating all the statistical values it requires to create the various geometric images. The students have complete control in choosing what scenario they wish to study. The program was tested using four specific scenarios which represented a cross section of all possible scenarios. Within each of these scenarios were several options which were designed to encapsulate different aspects of the curriculum. The results of the research showed that the program, under the aegis of the VVAM, does facilitate the visualization and verbalization of the complex mathematical concepts associated with covariance structures. The learning environment was found to promote the creation of new knowledge on three distinct levels. GRA

USER INTERFACE OF COMPLEX INTERACTIVE COMPUTER SYSTEMS Ph.D. Thesis [INTERFACE UTILISATEUR DES SYSTEMES INTERACTIFS COMPLEXES]

Salah Sadou 1992 199 p In FRENCH

(ECL-92-05; ETN-93-93051) Avail: CASI HC A09/MF A03

An approach to build user interfaces for complex interactive applications is proposed. The aim of the work is to develop an integrated system which takes into account the interface lifetime (design, management, evolution). The history of user interfaces and several system architectures are summarized. The concept allowing dissociation of the application semantics from the interface is applied. An approach to the generation of interfaces often found in computer aided design applications, which is able to evolve with the application requirements, is discussed. The importance of an interfacial intelligent support to model the application semantics to take into account the user level is demonstrated. An object base interface generator is developed and a suitable architecture for optimal interactive application is developed. ESA

A UNIFIED MODEL OF PROGRAM BEHAVIOR M.S. Thesis

Douglas T. Michel Dec. 1992 169 p

(AD-A259142; AFIT/GCS/ENG/92D-09) Avail: CASI HC A08/MF A02

This thesis is an attempt to account for and unify the three types of locality: temporal, spatial, and structural. A diverse sample of traces are used in measuring program behavior with respect to these localities and a model is presented which represents the memory references a program generates as it goes through execution. The model is validated by estimating the entropy of a synthetically generated trace and comparing it with actual traces. The results indicate that there is more predictability contained in the original trace than what the model was able to capture. Different variations of the model were tried and the results varied depending on the trace type being modeled. Various other measurements concerning temporal, spatial, and structural locality are used in building the model and provide interesting and useful insight into the memory referencing patterns of programs. TOMITA'S ALGORITHM: EXTENSIONS AND APPLICATIONS

Rob Heemels, ed., Anton Nijholt, ed., and Klaas Sikkel, ed. Sep. 1991 103 p Proceedings of the First Twente Workshop on Language Technology, Enschede, Netherlands, 22 Mar. 1991

(Memo-INF-91-68; ETN-93-92819) Avail: CASI HC A06/MF A02

This volume contains the papers presented at a workshop in language technology. Tomita's algorithm is the generalized LR parsing algorithm introduced by Masaru Tomita. Since then, others have investigated the method both theoretically and empirically. Some of their results can be found in the proceedings of the 1st and 2nd International Workshop on Parsing Technologies. Papers concerned with generalized LR parsing and closely related methods are included. This volume contains: LR parsing from Knuth to Tomita, recursive ascent parsing, parsing algorithm for nondeterministic context sensitive languages, unrestricted online parsing and transduction with graph stacks, substring parsing for arbitrary context free grammars, detection and correction of morphosyntactic errors in shift-reduce parsing, Tomita's algorithm in practical applications, empirical comparison of generalized LR tables, and bottom-up parallelization of Tomita's algorithm. For individual titles, see N93-20221 through N93-20229.

RECURSIVE ASCENT PARSING

Rene Leermakers *In* Univ. Twente, Tomita's Algorithm: Extensions and Applications Sep. 1991 p 9-19 (For primary document see N93-20220 07-61)

Avail: CASI HC A03/MF A02

The correctness of LR parsing is discussed. LR parsing is defined in a purely functional way, without constructing a push down automaton for each grammar. In this functional formulation, LR parsing turns out to be analogous to recursive descent parsing. The resulting parsers have a correctness proof that is extremely simple compared to the conventional ones. The recursive descent recognizer is presented. The recursive ascent recognizer as well as its proof are shown. The time and space complexities of the recognizer are analyzed, and the algorithm for constructing a cubic representation for parse forests is given. The extendability of the theory is demonstrated. A formalism for Marcus parsers is proposed and a natural family of look-ahead parsers is established. ESA

A PARSING ALGORITHM FOR NON-DETERMINISTIC CONTEXT-SENSITIVE LANGUAGES

Henk Harkema and Masaru Tomita (Carnegie-Mellon Univ., Pittsburgh, PA.) *In its* Tomita's Algorithm: Extensions and Applications Sep. 1991 p 21-31 (For primary document see N93-20220 07-61)

Avail: CASI HC A03/MF A02

A shift reduce algorithm for the recognition of sentences of nondeterministic languages defined by context sensitive grammars is introduced. The algorithm is a composite of Tomita's efficient parsing method for nondeterministic languages and a procedure for processing deterministic context sensitive languages. The algorithm employs two stacks, one of which is used for representing the context of the several active processes. The other stack is the normal parsing stack. The two stacks are linked by means of a set of pointers. When manipulating context-sensitive languages in an LR manner, there is no need for a separate goto table anymore. In case of a reduce action, all the symbols of the left hand side of the rule under consideration are pushed back into the input buffer. The state which appears on top of the stack when having popped off the symbols of the right hand side, and the first symbol in the input buffer determine the next action. ESA

A program generator for linguistic purposes is described with the following properties: (1) the formalism unifies weak equivalent formalisms for Chomsky type-0 grammars, cascaded transduction grammars, regular expressions, pattern matching, augmented transition networks, and attribute grammars; (2) in the compiler, extensions for the LR table generation technique are implemented; (3) the generated code runs on a formal machine which makes use of two dag structured stacks and which maintains a parse forest for the efficient storage of parses of ambiguous grammars, like in the algorithm of Tomita; (4) parsing is done online and transduction is done with finite delay; and (5) new bounds are obtained for the runtime of some pattern matching problems. The system was used in projects concerning the recognition patterns in tagged corpora of texts and music, for the parsing of a number of natural languages, for the transformation of graphemes into phonemes by a cascaded transduction grammar, for the recognition of compound words, for the classification of words in a number of languages, and for interactive detection of the structure of a document and its subsequent conversion into another format. SUBSTRING PARSING FOR ARBITRARY CONTEXT-FREE GRAMMARS

Jan Rekers and Wilco Koorn (Amsterdam Univ., Netherlands.) *In* Univ. Twente, Tomita's Algorithm: Extensions and Applications Sep. 1991 p 61-68 Sponsored in part by Netherlands Organization for Applied Scientific Research TNO (For primary document see N93-20220 07-61) (ESPRIT Proj. 2177)

Avail: CASI HC A02/MF A02

A substring recognition algorithm is described. A substring recognizer for a language L determines whether a string s is a substring of a sentence in L. The algorithm for substring recognition presented accepts general context free grammars and uses the same parse tables as the general context free parsing algorithm from which it was derived. By extending the substring 'recognizer' with the ability to generate trees for the possible contextual completions of the substring, a substring 'parser', which can be used in a syntax directed editor to complete fragments of sentences, is obtained. The adaptation of the Tomita algorithm to substring parsing results in a powerful algorithm. The main advantage is that substring parsing can be applied in a very general manner. Substring parsing is slower than ordinary parsing. The use of the substring parser in incremental parsing has to be investigated. ESA

DETECTION AND CORRECTION OF MORPHO-SYNTACTIC ERRORS IN SHIFT-REDUCE PARSING

Theo Vosse *In* Univ. Twente, Tomita's Algorithm: Extensions and Applications Sep. 1991 p 69-77 (For primary document see N93-20220 07-61)

Avail: CASI HC A02/MF A02

A systematic approach to detecting and correcting morphosyntactic errors using a shift reduce parser for augmented context free grammars is described. In particular, adaptations to the Tomita parsing algorithm are studied. The types of errors to detect and possibly correct, and the need for a parser, are discussed. Augmented context free grammars and shift reduce parsers for these grammars are discussed, with special attention paid to applying them in error detection. The adaptations to the Tomita algorithm needed to efficiently deal with erroneous input are discussed. The use of the parse results to correct the errors is considered. Some of the results of this approach are evaluated using this scheme in a Dutch grammar checking system. ESA

TOMITA'S ALGORITHM IN PRACTICAL APPLICATIONS

Rob Heemels *In* Univ. Twente, Tomita's Algorithm: Extensions and Applications Sep. 1991 p 79-86 (For primary document see N93-20220 07-61)

Avail: CASI HC A02/MF A02

Some of the requirements of a natural language processing system able to handle grammatical as well as ungrammatical input are discussed. The errors in ungrammatical sentences, at competence level and at the user level, are summarized. The requirements of a robust parsing algorithm are given. The properties of Tomita's algorithm are overviewed. Some problems of solving language ambiguities are presented. The analysis shows that Tomita's algorithm is an attractive algorithm in the field of natural language processing. In particular, the parse forest is a promising candidate for the representation of the analyses. Together with the precompiled parse tables and the breadth first approach which makes online parsing possible, it is a solid basis for a natural language processing module. ESA

AN EMPIRICAL COMPARISON OF GENERALIZED LR TABLES

Marc Lankhorst (Universiteit Twente, Enschede, Netherlands.) *In* Univ. Twente, Tomita's Algorithm: Extensions and Applications Sep. 1991 p 87-93 (For primary document see N93-20220 07-61)

Avail: CASI HC A02/MF A02

The table sizes and parsing efficiency of Tomita's algorithm with LR(0), SLR(1), LALR(1), and LR(1) parsing tables are compared on the basis of empirical data. From this comparison, it can be concluded that LALR(1) tables are the best choice regarding parsing time. The reasons for which LR(1) is slower than the other types presented are given. The results show that LR(1) tables are unsuitable for the generalized LR parsing algorithm of Tomita. These tables are much larger than the other three types presented and result in significantly longer parsing times. The use of these tables can result in a 5 to 10 percent improvement in parsing time compared to LR(0). Also, a gain in space efficiency of the same order of magnitude can be achieved. If the size of the parsing tables is a constraint, LR(0) tables are advisable. These are several times smaller than the other types. Another advantage of LR(0) tables is their ease of construction. ESA

BOTTOM-UP PARALLELIZATION OF TOMITA'S ALGORITHM

Klaas Sikkel *In its* Tomita's Algorithm: Extensions and Applications Sep. 1991 p 95-103 (For primary document see N93-20220 07-61)

Avail: CASI HC A02/MF A02

A new parallel parsing algorithm is described, which is based on Tomita's generalized LR parser and related to a well known parallel version of Earley's algorithm. It uses a pipeline of processors, one for every word in the sentence. Each processor parses all constituents starting with its 'own' word. While constructing such a partial parse, constituents that were parsed

by other processors higher up the pipeline may be used as terminal symbols. A generalized LR(0) parser, assuming some basic knowledge of LR parsing techniques, is described. The bottom-up parallelization is discussed. The construction of a shared parse forest is presented. ESA

ANYTIME DECLARATIVISM Final Technical Report, 1 Nov. 1990 - 30 Apr. 1992
Matthew L. Ginsberg and Nils J. Nilsson Oct. 1992 5 p
(Grant AF-AFOSR-0363-90)
(AD-A258698; AFOSR-92-1023TR) Avail: CASI HC A01/MF A01

The objectives of this grant is to formalize the notion of anytime inference. This work consisted of an extension to Ginsberg's work on multivalued logics, since this earlier work allows arbitrarily finely grained responses to declarative queries. They will also develop a procedure that responds to a declarative query in an anytime fashion, in that it returns the correct answer in the large runtime limit but only approximate answers in shorter times. Both uniform and nonuniform convergence will be addressed. GRA

(AD-A258699; AFOSR-92-0326TR) Avail: CASI HC A01/MF A01

In research carried out to this date under this grant they investigated a number of issues, semantical and algorithmic, in the design of agents in a multi-agent environment. The issues that were investigated included the structure of agents' (which they called 'mental state'), the flow of control of agents' activities over time, a particular programming language geared towards controlling agents, and a number of subsidiary computational problems. The researchers have developed a computational framework called agent oriented programming. AOP can be viewed as a specialization of object oriented programming (OOP). The state of an agent consists of components called beliefs, choices, capabilities, commitments, and possibly others; for this reason the state of an agent is called its mental state. The mental state of agents is captured formally in an extension of standard epistemic logics: beside temporalizing the knowledge and belief operators, AOP introduces operators for commitment, choice and capability. Agents are controlled by agent programs, which include primitives for communicating with other agents. In the spirit of speech-act theory, each communication primitives is of a certain type: informing, requesting, offering, and so on. GRA

A FRAMEWORK FOR CORPORATE IMPLEMENTATION OF OBJECT-ORIENTED SOFTWARE DEVELOPMENT M.S. Thesis
James M. McVay 1992 208 p
(AD-A258717; AFIT/CI/CIA-92-109) Avail: CASI HC A10/MF A03

The object paradigm is praised by many software engineers as a solution for managing today's complex software development. Its scope covers all phases of a software development life cycle. Applying the paradigm through object-oriented analysis, object-oriented design, and object-oriented programming promises many benefits. Code is easier to reuse. Transitions across the development phases are more understandable. System development costs and time are reduced to yield higher returns on investment. Reaping the benefits of object-oriented software development (OOSD) comes at the expense of major changes. Traditional software developers must covert to a technology conceptually opposed to past practices. The initial costs for converting to OOSD are quite high. New training, tools, and management practices are required. Before fully committing to these changes a company must answer three basic questions: (1) Is the object paradigm useful to software development? (2) If so, how can it be applied to reap the most benefits? (3) What are the impacts on organizational dynamics? GRA

SOFTWARE QUALITY MEASUREMENT: A FRAMEWORK FOR COUNTING PROBLEMS AND DEFECTS Final Report
William A. Florac Sep. 1992 91 p
(Contract F19628-90-C-0003)
(AD-A258556; CMU/SEI-92-TR-22; ESC-TR-92-022) Avail: CASI HC A05/MF A01

This report presents mechanisms for describing and specifying two software measures-software problems and defects-used to understand and predict software product quality and software process efficacy. We propose a framework that integrates and gives structure to the discovery, reporting, and measurement of software problems and defects found by the primary problem and defect finding activities. Based on the framework, we identify and organized measurable attributes common to these activities. We show how to use the attributes with checklists and supporting forms to communicate the definitions and specifications for problem and defect measurements. We illustrate how the checklist and supporting forms can be used to reduce the misunderstandings of measurement results and can be applied to address the information needs of different users. GRA

A RADIOSITY APPROACH REALISTIC IMAGE SYNTHESIS SYSTEM M.S. Thesis
Richard L. Remington Dec. 1992 89 p
(AD-A259082; AFIT/GCE/ENG/92D-09) Avail: CASI HC A05/MF A01

The Air Force Institute of Technology (AFIT) has not had the capability to generate photorealistic images. Research effort to implement such a system at AFIT, and to apply knowledge from the particle transport community to this problem is addressed. Investigation into various techniques for generating photorealistic images led to the conclusion that the radiosity method would serve as the foundation for development. This is because of the increased accuracy of the diffuse reflections with the radiosity method and the fact that the images produced with radiosity are view-independent. Two distinct tools to generate photorealistic images are described. The first of these follows the progressive radiosity methodology using ray tracing for form factor calculation. This tool models only diffuse reflections. The second tool is also based on the radiosity method, but does away with the restriction that all surfaces be lambertian diffuse and models specular reflections as well. The design and implementation of the specular radiosity tool uses continuous functions to represent the bidirectional reflectance distribution functions, (BRDF's) and intensities. A new method of representing the BRDF's using a truncated Legendre polynomial expansion is presented. GRA

KERNEL OPTIMUM NEARLY-ANALYTICAL DISCRETIZATION (KOND) ALGORITHM APPLIED TO PARABOLIC AND HYPERBOLIC EQUATIONS
Yoshiomi Kondoh (Gunma Univ., Japan.), Yasuo Hosaka (Gunma Univ., Japan.), and Kenji Ishii (Gunma Univ., Japan.) Oct. 1992 74 p Submitted for publication
(NIFS-191; AD-B169728L) Avail: CASI HC A04/MF A01

Two applications of the Kernel Optimum Nearly-analytical Discretization (KOND) algorithm to the parabolic and the hyperbolic type equations are presented in detail to lead to novel numerical schemes with very high numerical accuracy. It is demonstrated numerically that the two dimensional KOND-P scheme for the parabolic type yields quite less numerical error by over 2 - 3 orders and reduces the CPU time to about 1/5 for a common numerical accuracy, compared with the conventional explicit scheme of reference. It is also demonstrated numerically that the KOND-H scheme for the hyperbolic type yields fairly less diffusive error and has fairly high stability for both of the linear- and the nonlinear wave propagations compared with other conventional schemes. AN OBJECT-ORIENTED COMPUTER AIDED DESIGN PROGRAM FOR MODERN CONTROL SYSTEMS ANALYSIS M.S. Thesis
Frederick L. Trevino Dec. 1992 250 p
(AD-A259139; AFIT/GE/ENG/92D-36) Avail: CASI HC A11/MF A03

This investigation is a continuation of the ICECAP-PC research project conducted under Prof. Gary B. Lamont at the Air Force Institute of Technology. It is an ongoing development of a public domain Computer Aided Design (CAD) package for Control Engineering students and faculty, with a special emphasis on education. This investigation focuses on three areas. First, an object-oriented environment is specified, designed, and implemented. The functional structure of ICECAP-PC is then converted into an object-oriented structure because object-orientation provides an advanced logic and implementation structure and effectively addresses common software engineering issues. Additionally, a new interface featuring pull-down menus, mouse support, and single stroke access provides optimal user friendliness. Second, the numerical methods used for modern control capabilities are updated providing state of the art numerical capabilities. Third, using a program extension known as a toolbox, a basic MIMO (Multiple Input Multiple Output) faculty is created to augment the MISO capabilities. The MIMO QFT toolbox allows the entry and manipulation of up to a 3x3 MIMO plant matrix of transfer functions for the QFT solution to MIMO control systems problems. GRA

VERSION AND TRANSACTION MANAGEMENT IN OSMagic: AN OBJECT-ORIENTED DATABASE IMPLEMENTATION OF THE MAGIC VLSI LAYOUT DESIGN TOOL M.S. Thesis
Gary Michael Lightner Dec. 1992 108 p
(AD-A259138; AFIT/GCS/ENG/92D-07) Avail: CASI HC A06/MF A02

The goal of this thesis was to study the feasibility of using an object-oriented database management system to provide the functionality and performance needed to support a complex computer-aided design tool. We do this by modifying OSMagic, a prototype system of the Magic very large scale integrated (VLSI) circuit design tool implemented on the ObjectStore object-oriented database management system. OSMagic was changed to support three different interfaces to ObjectStore and to work in a networking environment. We then designed and examined the use of version and transaction management models as a means of addressing the weaknesses of the prototype as well as a means of introducing new multi-user capabilities. Throughout the effort, errors discovered in data definition and allocation were corrected, and lessons which pertain to all such conversions were noted. While the current OSMagic is not yet a fully functional version of Magic, the foundation is now in place for achieving this by implementing our more complex transaction model. OSMagic performs as well or better than Magic in about half of the areas tested. Those areas that showed performance degradation were examined with respect to the tradeoffs between added multi-user capabilities and database support versus the severity of the degradation, user perception of the degradation, and the frequency of use for each area. When these tradeoffs were considered along with the expected increased performance of a fully implemented and optimized OSMagic, we conclude that it is highly probable that object-oriented database management systems can provide the functionality and performance needed to support typical computer-aided design applications. GRA

FORMALIZING, VALIDATING, AND VERIFYING REAL-TIME SYSTEM REQUIREMENTS WITH REACTO AND VHDL M.S. Thesis
Frank C. Young 15 Dec. 1992 173 p
(AD-A259224; AFIT/GCS/ENG/92D-24) Avail: CASI HC A08/MF A02

We develop a methodology for formalizing, verifying, and validating the requirements specification of real-time systems based on the graphical and formal hierarchical Finite State Machine (FSM) language Reacto. We define a means to quantify time and express real-time constraints in Reacto and a transformation from Reacto to the Very High Speed Integrated Circuit (VHSIC) Hardware Description Language (VHDL). Reacto's high level abstractions, graphical nature, and theorem prover produce efficient, accurate, and easily understood specifications. We use VHDL's event driven simulation capability, concurrency, and temporal operators to thoroughly examine temporal dependencies between the state machine transitions, and to increase simulation power by simulating multiple communicating FSM's. We apply the methodology to two example problems: a cruise control and a lift (elevator) controller. We verify that the state machine specification is consistent and validate the specification using executable simulations in both Reacto and VHDL. We evaluate the methodology against criteria for real-time specification languages and conclude that Reacto and VHDL complement each other well. Together, they abstract the real world well, are clearly understood, verify that the specification and implementation are consistent, are easy to modify, allow requirements tracing, and finally, support specification of concurrency and timing constraints. GRA

REAL IMAGE VISUAL DISPLAY SYSTEM M.S. Thesis
James R. Brandt Dec. 1992 90 p
(AD-A259125; AFIT/GEO/ENG/92D-03) Avail: CASI HC A05/MF A01

This thesis investigates a technique for improving the perception of three-dimensionality in images generated by a Silicon Graphics workstation. The technique involves using a spherical mirror into which the graphics from the CRT are projected. A real image of the graphic is formed by the mirror and it appears to be floating at the image plane. The three-dimensional effect is improved by adding reflections or shadows of the displayed object. Additionally, a method of using real objects with computer generated shadows and computer generated objects with real shadows is investigated. This is done in an effort to quantify how far the real world can be integrated with the display as well as to show that the three-dimensionality of the original graphic is enhanced. The optical system is analyzed to show where the images are being formed and to determine the aberrations present in the system. The most noticeable image degradation is due to curvature of field. An improved optical system is proposed that would reduce this effect and increase the size of the display. Finally, this optical device along with the graphic techniques are integrated with two other research efforts. The first integration involves research in binaural sound and focuses on coupling visual and aural cues to create a pseudo synthetic environment. The second integration effort introduces battlefield terrain images into the optical device to enhance the images and functions as a C3I display. GRA

ProperCAD: A PORTABLE OBJECT-ORIENTED PARALLEL ENVIRONMENT FOR VLSI CAD
Balkrishna Ramkumar and Prithviraj Banerjee Jan. 1993 44 p
(Grant NAG1-613)
(NASA-CR-192308; NAS 1.26:192308; UILU-ENG-93-2205; CRHC-93-04)
Avail: CASI HC A03/MF A01

Most parallel algorithms for VLSI CAD proposed to date have one important drawback: they work efficiently only on machines that they were designed for. As a result, algorithms designed to date are dependent on the architecture for which they are developed and do not port easily to other parallel architectures. A new project under way to address this problem

is described. A Portable object-oriented parallel environment for CAD algorithms (ProperCAD) is being developed. The objectives of this research are (1) to develop new parallel algorithms that run in a portable object-oriented environment (CAD algorithms using a general purpose platform for portable parallel programming called CARM is being developed and a C++ environment that is truly object-oriented and specialized for CAD applications is also being developed); and (2) to design the parallel algorithms around a good sequential algorithm with a well-defined parallel-sequential interface (permitting the parallel algorithm to benefit from future developments in sequential algorithms). One CAD application that has been implemented as part of the ProperCAD project, flat VLSI circuit extraction, is described. The algorithm, its implementation, and its performance on a range of parallel machines are discussed in detail. It currently runs on an Encore Multimax, a Sequent Symmetry, Intel iPSC/2 and i860 hypercubes, a NCUBE 2 hypercube, and a network of Sun Sparc workstations. Performance data for other applications that were developed are provided: namely test pattern generation for sequential circuits, parallel logic synthesis, and standard cell placement. EXPERT SYSTEM VERIFICATION AND VALIDATION STUDY Final Report
Scott W. French (International Business Machines Corp., Houston, TX.) and David Hamilton (International Business Machines Corp., Houston, TX.) 28 Aug. 1992 153 p
(Contract NCC9-16; RICIS Proj. AL-16)
(NASA-CR-192175; NAS 1.26:192175) Avail: CASI HC A08/MF A02

Five workshops on verification and validation (V&V) of expert systems (ES) where taught during this recent period of performance. Two key activities, previously performed under this contract, supported these recent workshops (1) Survey of state-of-the-practice of V&V of ES and (2) Development of workshop material and first class. The first activity involved performing an extensive survey of ES developers in order to answer several questions regarding the state-of-the-practice in V&V of ES. These questions related to the amount and type of V&V done and the successfulness of this V&V. The next key activity involved developing an intensive hands-on workshop in V&V of ES. This activity involved surveying a large number of V&V techniques, conventional as well as ES specific ones. In addition to explaining the techniques, we showed how each technique could be applied on a sample problem. References were included in the workshop material, and cross referenced to techniques, so that students would know where to go to find additional information about each technique. In addition to teaching specific techniques, we included an extensive amount of material on V&V concepts and how to develop a V&V plan for an ES project. We felt this material was necessary so that developers would be prepared to develop an orderly and structured approach to V&V. That is, they would have a process that supported the use of the specific techniques. Finally, to provide hands-on experience, we developed a set of case study exercises. These exercises were to provide an opportunity for the students to apply all the material (concepts, techniques, and planning material) to a realistic problem. Derived from text

PLANE MULTIFLOWS WITH A FIXED NUMBER OF DEMANDS
Andras Sebo Mar. 1992 11 p
(RR-885-M; ETN-93-92714) Avail: CASI HC A03/MF A01

A polynomial algorithm which decides the integer solvability of multicommodity flow problems where the union of 'capacity' and 'demand' edges forms a planar graph, and the number of demand edges is bounded by a prefixed integer k, is presented. The main results of the study is a polynomial algorithm that finds such a multiflow or proves that it does not exist, for arbitary fixed k. A more general polynomial algorithm, namely to decide whether the relation nu(G,T) = tau(G,T) or its weighted generalization holds for the pair (G,T), (where G is not necessarily planar), provided the cardinal of the set T is fixed, is given. ESA

REFLECTIONS ON SEGMENTATION [REFLEXIONS SUR LA SEGMENTATION]
Marc Salotti Jan. 1992 49 p In FRENCH
(RR-873-I; ETN-93-92716) Avail: CASI HC A03/MF A01

Principle strategies and problems encountered by tested methods of segmentation are recalled. Images presenting specific problems are studied and different possible approaches are discussed. An attempt to define the apparent basic problem is made: methods so far developed give very fast results but lack essential information for efficient evolution of operations. In carrying out an analogy with an industrial product manufacturing, a specification for an ideal segmentation system is presented, which proves to be that of a general vision system, where the levels are too overlapping to be individually discernable. Several directives relating to efficient information management by strong control of each decision are proposed. One of the consequences of these directives is the differentiation of situations into principle categories. This seems to be required particularly for region and contour detection. The study seems to reveal that it is the informatic (information processing) aspect which has been the most neglected in all the segmentation methods. ESA

BOND GRAPH BASED MODELLING USING MACROS: AN INTRODUCTION TO THE PROGRAM BAMMS
C. H. Verheul and H. B. Pacejka 1991 19 p
(MEMT-18; ISBN-90-370-0060-6; ETN-93-92011) Copyright Avail: CASI HC A03/MF A01

A versatile and flexible software package called BAMMS (Bond graph based Algorithm for Modeling Multibody Systems) is presented. The complete program is written in FORTRAN 77. The BAMMS program can be used in various ways to analyze both linear and nonlinear systems. It can perform a time domain simulation or a frequency response analysis and, if desired, it can be used to produce the complete set of equations of a system in any conceivable domain (mechanical, electric, etc.). The method of modeling is described, as well as a number of predefined submodels (macros available in a library for creating a model). The resulting ready to run models are simulated with the simulation package included in BAMMS. ESA

NEW METHODOLOGIES TOWARD THE INTEGRATION OF TOLERANCING IN CAD/CAM SYSTEMS
Roland Weill *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 7 p (For primary document see N93-20823 07-61)
(Paper-C-1-2) Avail: CASI HC A02/MF A02

With the actual development of more efficient CAD/CAM systems, the need for integrating tolerancing in CAD/CAM is universally recognized. Basically, the efforts to reach this goal are following two main streams: 1. Recognizing that existing standardization is not suitable for integration in CAD/CAM systems, a large amount of work is spent to build up a more 'computer friendly' tolerancing system. In this field of research, the emphasis is put on tolerancing principles compatible with solid modeler packages and the technical background is essentially based on computerized geometry. 2. Other research, with a background in technological approaches to tolerancing, is endeavoring to develop algorithms replacing the conventional functional gauges used up to now. This approach is of a more modular nature and tries to introduce relevant algorithms in the existing software of the modern CMM (computerized measuring machines). This paper intends to review the state of the art in the field of computer aided tolerancing and to assess the relative merits of both approaches. ISA

ELEMENTS OF COMPUTER-AIDED TOLERANCE ANALYSIS
E. A. Lehtihet, N. U. Gunasena, and I. Ham *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 7 p (For primary document see N93-20823 07-61)
(Paper-C-1-3) Avail: CASI HC A02/MF A02

Computer aided tolerancing is a vital component of integrated CAD/CAM; it touches upon areas in design, manufacturing, and inspection. A system dealing with two elements is described: formulation and analysis. Separate modules are used to formulate problems arising in design and manufacturing contexts. Two alternative methods are available to analyze a formulated problem. The proposed analytical method for tolerance analysis is based on the second moment reliability concept and the beta distribution model associated with Bjorke's tolerance control method. Optimal design tolerances are determined by applying a constrained non-linear optimization technique. The second method is based on Monte Carlo simulation. ISA

VECTORIAL TOLERANCING
Adolf Wirtz *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 5 p (For primary document see N93-20823 07-61)
(Paper-C-1-4) Avail: CASI HC A01/MF A02

Most ISO (International Standards Organization) tolerances are defined as combinations of deviations in diameter, position, and angle; these do not lend themselves to computerized treatment. Vectorial tolerancing uses the mathematical definition of a workpiece shape in terms of appropriate vectors, and the application of tolerances to each vector, within a workpiece coordinate system. For milling and turning, vectorial tolerancing is applied to controlling the position, direction, and size of a surface; form deviations are corrected by using a mathematical description of the generating profile. In slab milling, the correction factor is based on the direction deviation of the milled plane; in face milling, the correction for each tool path is proportional to the tool diameter multiplied by the same factor as that used in slab milling. In turning, two profiles are used to generate the cylinder, and its form and size deviation are described in terms of a polynomial. Machining corrections are related to the coefficients of the polynomial. ISA

OPTIMIZING POSITIONING OF MECHANICAL PARTS
M. Laloum, I. Dar-El, and Roland Weill *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 3 p (For primary document see N93-20823 07-61)
(Paper-C-1-5) Avail: CASI HC A01/MF A02

A new approach to determining an acceptable datum system is defined; it uses the isostatism principle and the screw model theory. The isostatism model aims correctly to position six independent points for gripping a rigid part. The screw model applies to very small movement of a rigid part; it resolves each movement into a combination of a rotation element and a translation element. The method is applied to a simple example of a box-shaped part. The method does not converge, but it provides a satisfactory set of points for use in a designer's datum system. ISA

DEVELOPMENT OF ALGORITHMS FOR COMPOSITE POSITIONAL TOLERANCE MEASUREMENT USING COORDINATE MEASURING MACHINES
E. Bratmann and Roland Weill (Technion - Israel Inst. of Tech., Haifa.) *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 5 p (For primary document see N93-20823 07-61)
(Paper-C-1-6) Avail: CASI HC A01/MF A02

The three steps forming the inspection of the positional requirements of a part are: defining the problem in terms of existing standards; measurement; and determination of whether the measurements comply with the requirements. Computerized measurement has simplified the second step; computerized methods for analysing the results of the measurement are presented. Analytical and iterative solutions to the problem are presented. Computerized methods enable an iterative solution to be obtained relatively quickly. However, greater efficiency is obtained by applying the least squares method first. If the part is rejected by that method, the process must be continued by iteration, beginning at one of the vertex positions defined by application of a mathematical gage, used to define the tolerancing zone. FUNCTIONAL TOLERANCING IN CAD/CAM
Abdelmadjid Cheikh and Peter F. McGoldrick *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 4 p (For primary document see N93-20823 07-61)
(Paper-C-2-1) Avail: CASI HC A01/MF A02

Based on the concept of functional tolerancing and the principle of minimum dimensional chains represented by all functional loops within an assembly, tolerance analysis and synthesis models were developed. These models are part of a tolerance technology which totally agrees with the semantics set forth by the ISO (International Standards Organization) philosophy of functional tolerancing and yet, at the same time, represents a general form that can be implemented in a computer based design system to handle various tolerancing problems occurring in industry. VALIDITY AND WELL-FORMEDNESS OF DIMENSION AND TOLERANCE INFORMATION IN SOLID MODELING SYSTEMS
Neil S. Bernstein and Kenneth Preiss (Ben Gurion Univ. of the Negev, Beersheva, Israel.) *In* CASA-RI/SME, Proceedings of the International

Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 8 p (For primary document see N93-20823 07-61)
(Paper-C-2-2) Avail: CASI HC A02/MF A02

Practitioners in the field of mechanical dimensioning and tolerancing are well aware that various combinations of tolerances can give rise to problems of validity and consistency. On the other hand, solid modeling software systems do not provide a capability of analyzing the validity of those data. In order to develop that automated capability, it is necessary to derive suitable representations and algorithms for the problem. Currently, engineers usually succeed in evaluating the validity of tolerance data on a drawing. Nevertheless, there are two major motivations for providing computerized assistance for this task. The first is the growing complexity of mechanical designs; this yields increasing numbers of part and assembly designs that exceed human analytical capabilities. The second is the trend toward concurrent product design; substantial reductions in design time presuppose further automation of the design process. The method of representing dimension and tolerance data in solid models should enable analysis as to whether the data represent a feasible and manufacturable product. In other words, it should be possible to compute whether the data are consistent and valid. This computation should not require excessive computer time or storage. This paper presents the constraint propagation approach, which is a scheme to represent dimension and tolerance data in solid models and is suited to the problem as described above. It then illustrates how this scheme may be employed to evaluate the validity and consistency of those data. ISA

TOWARD A COMPUTER AIDED FUNCTIONAL TOLERANCING MODEL
B. Charles (Dassault Systemes, Suresnes, France.), A. Clement, A. Desrochers, P. Pelissou, and A. Riviere *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 7 p (For primary document see N93-20823 07-61)
(Paper-C-2-4) Avail: CASI HC A02/MF A02

This paper presents the basic features of a computer aided functional tolerancing module within CAD/CAM (computer aided design/computer aided manufacturing) software. In this perspective, the main requirements for such a module are first presented. Then some solution proposals are submitted, several of which have already been implemented on a computer. Finally, an example provides a concrete illustration of the suggested dimensioning and tolerancing procedure. Our approach to this problem is based on the concept of Technologically and Topologically Related Surfaces (TTRS) developed in previous articles. ISA

TOLERANCE, CHAINS AND SETTING OF MACHINES: THREE DIMENSIONAL STATISTICAL MODEL OF MACHINED DIMENSIONS
A. Castano and P. Bourdet *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 6 p (For primary document see N93-20823 07-61)
(Paper-C-2-5) Avail: CASI HC A02/MF A02

The possibility to integrate a CNC (computerized numerical control) measuring center into a flexible production system enables us to obtain series of three-dimensional data which we must be able to interpret from the statistical point of view. These results can immediately be used: to determine the machined dimensions in order to conform with the original drawing; to inspect the machine tool adjustment during machining and manufacturing; to analyze the behavior of the machined workpiece in its fixture. This is possible only if we have a three-dimensional model to represent the dimensions actually obtained on a series of workpieces. The statistical models used to determine manufacturing dimensions and to inspect the machine-tool adjustment validity are uni-dimensional. There is no method to enable the behavior of the workpiece in its manufacturing fixture to be analyzed from results obtained after machining. The purpose of this study is to define a three-dimensional model of the dimensions obtained on a workpiece available for these different applications. The statistical model proposed allows us to take into account the defects in shape, orientation, wear, position and adjustment. The analysis method used to determine these different parameters is defined, as well as the method of determination of the position of the associated frame relative to any surface. This position is directly linked to the method of positioning the workpiece during machining and is computed so that the parameters can be independent. ISA

TOLERANCING IN THE CONTEXT OF THE AUTOMATED MANUFACTURING AND THE DESIGN AXIOMS
Nam P. Suh and Shinya Sekimoto (Toshiba Corp., Kawasaki, Japan.) *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 10 p (For primary document see N93-20823 07-61)
(Paper-C-2-6) Avail: CASI HC A02/MF A02

In design/manufacturing, tolerances are specified for various functional requirements and design parameters. The purpose of specifying tolerances is to satisfy the functional requirements of a given product and to maximize the manufacturing productivity. In the manufacturing process, the upper and lower bounds on tolerances are given by the need to satisfy the independence of functional requirements and to minimize the information content (and thus complexity). This paper discusses the role of tolerancing from the point of view of the design axioms and manufacturing operations. ISA

ON IMPROVING ACCURACY OF MACHINING CENTERS
Moshe M. Barash, R. Venugopal (Bell Telephone Labs., Inc., Columbus, OH.), and S. K. Lee (Automotive Components Ltd., Kyungbook, Republic of Korea.) *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 5 p (For primary document see N93-20823 07-61)
(Contract N00014-83-K-0385)
(Paper-C-3-1) Avail: CASI HC A01/MF A02

The effect of internal heat sources, primarily electric motors and spindle bearings, on the distortion and errors of the structure (frame) of a 3-axis machining center was investigated. Three methods were employed: analytical-numerical analysis using finite elements, calibration with a laser interferometer measuring system, and calibration with an independently calibrated 'master part' called here 'metrology pallet' and a touch probe. A machining test using the latter was also conducted. The maximum volumetric error in all the cases could be reduced to approximately the same value which was less than half of the uncorrected error. PROBLEMS OF QUALITY INSPECTION AND DIAGNOSING IN MODERN MANUFACTURING SYSTEMS
Leszek Nawara and Marek Kowalski *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 7 p (For primary document see N93-20823 07-61)
(Paper-C-3-2) Avail: CASI HC A02/MF A02

Effective control of a technological process is possible only if a very quick information system about the quality of the actually performed production process is operating. From this point of view, a close cooperation between production and quality inspection is necessary. Such a cooperation may be reached using coordinate measuring machines (CMM) for the measurements. Simultaneously, some basic problems relating to the measuring conditions and strategy should be solved. The presentation of these conditions, emphasizing the above-mentioned problems, and solving some of them, is the subject of this report. The conditions needed for the introduction of CMM's in modern, especially flexible manufacturing systems, are given. The integration of CMM's and material flow consists, inter alia, of the adaptation of CMM's to cooperate with the handling and transport systems. The integration of CMM's and information flow is done by coupling the CMM computer with the host computer of the system. Some examples of such an integration are given. ISA

QUALITY ASSURANCE IN THE FUTURE INDUSTRIAL PLANT **c38**
Avner Halevy *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on

Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 2 p (For primary document see N93-20823 07-61)
(Paper-C-3-3) Avail: CASI HC A01/MF A02

Statistical tools for industrial use are usually associated with statistical quality control. This, in turn, is usually associated with sampling plans, control charts, or some other tool for process control. However, quality must be incorporated into the product by design. No control, efficient as it may be, can improve a product's characteristics, i.e., its quality. Statistical tools used in designing for quality were developed in England in the 30's. Certain varieties of these tools are widely used in Japan, but have not yet been adopted in the West in any appreciable volume. The designer uses these tools in the understanding that lack of quality incurs actual losses to both the producer and the user. The loss is measured with the help of a loss function which is to be minimized, using techniques of statistical design of experiments. A production plant wishing to survive in the future will have to employ systematic and efficient processes of design for quality during the development phase of the products. ISA

STATISTICAL PROCESS CONTROL (SPC) IN FMS/CIM SYSTEMS c63
Gideon Halevi *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 8 p (For primary document see N93-20823 07-61)
(Paper-C-3-4) Avail: CASI HC A02/MF A02

Statistical Process Control (SPC) is a technique for error prevention rather than error detection. With SPC, products will be of the required quality because they are manufactured properly and not because they are inspected. Thus, SPC increases productivity by continuous process improvement and by reducing scrap and rework. Other methods that aim at increasing productivity such as FMS, CIM, or JIT turn to hardware flexibility, integrating information flow, or by reducing inventory. Seldom does a system turn to technological flexibility to accomplish the desired results. SPC is accomplished by technological means (statistics for detection and technology for prevention). The technology can be applied by a manual cause and effect study or automatically by an appropriate Generative Process Planning Program (GPPP). This paper describes the specifications for a GPPP module to be employed in SPC and the method to construct such a GPP program. Furthermore, the paper will show that the similar requirements and programs are mandatory in Flexible Manufacturing Systems (FMS) if a true flexibility is to be accomplished in software as well as in hardware, and in Computer Integrated Manufacturing (CIM) for incorporating technology in production management activities. ISA

TOTAL QUALITY ASSURANCE c38
E. Louzon *In* CASA-RI/SME, Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment 14 Dec. 1989 3 p (For primary document see N93-20823 07-61)
(Paper-C-3-5) Avail: CASI HC A01/MF A02

Quality, cost, and schedule are three factors affecting the competitiveness of a company; they require balancing so that products of acceptable quality are delivered, on time and at a competitive cost. Quality costs comprise investment in quality maintenance and failure costs which arise from failure to maintain standards. The basic principle for achieving the required quality at minimum cost is that of prevention of failures, etc., through production control, attention to manufacturing practices, and appropriate management and training. Total quality control involves attention to the product throughout its life cycle, including in-service performance evaluation, servicing, and maintenance. ISA

CIME OF MICROSYSTEMS
Helmut Zinner 1992 15 p Presented at CIM Europa Annual Conference, Birmingham, England, 27-29 May 1992
(MBB-Z-0428-92-PUB; ETN-92-92755) Avail: CASI HC A03/MF A01

A concept for an integrated CIM methodology for microsystems is presented. Microsystem technology is defined and its objectives outlined: microsystems are systems that combine different basic technologies such as electronics, mechanics, and optics, that have functional structures of the size of several micrometers, and that are optimized as whole systems. Advantages over existing solutions, especially for SME's, are considered. The fabrication of microsystems requires capabilities in the fields of process technologies, of design and simulation, and the so called systems technologies that enable the topdown development of these systems and their integration into products. The state of the art was investigated. Recommendations for further research and for the management of this innovative technology is derived from this analysis. ESA

MODULA-2* AND ITS COMPILATION
Michael Philippsen (Karlsruhe Univ., Germany.), Walter F. Tichy (Karlsruhe Univ., Germany.), and Christian G. Herter (Karlsruhe Univ., Germany.) Apr. 1991 15 p
(INRIA-RR-1421; ETN-93-9264199) Avail: CASI HC A03/MF A01

Major advantages of MODULA-2* over the data parallel programming model are described. MODULA-2*, an extension of MODULA-2, is a programming language for writing highly parallel programs in a machine independent, problem oriented way. The novel attributes of MODULA-2* are that programs are independent of the number of processors, independent of whether memory is shared or distributed, and independent of the control modes (SIMD or MIMD) of a parallel machine. The principles of translating MODULA-2* programs to MIMD and SIMD machines are presented and the lessons learned from the first compiler, targeting the connection machine, are discussed. Important architectural principles required of parallel computers to allow for efficient, compiled programs are given in conclusion. ESA

N93-20863# Technische Univ., Delft (Netherlands). Faculty of Mathematics and Informatics.
A BUILD-UP VARIANT OF THE PATH-FOLLOWING METHOD FOR LP
D. denHertog, C. Roos, and T. Terlaky Jun. 1991 15 p Sponsored by Shell
(Contract OTKA-2116)
(Rept-91-47; ETN-93-92015) Copyright Avail: CASI HC A03/MF A01

A strategy for building up the Linear Program (LP) while using a path following method is proposed. The method starts with a (small) subset of the constraints and follows the corresponding central path until the iterate is close to (or violates) one of the constraints. Then this constraint is added to the current system. This process is repeated until an optimal solution is reached. If a constraint is added to the current system, the central path will change of course. The effect of the barrier function value if a constraint is added is analyzed. An upper bound is given for the number of iterations needed to return to the new path. In the worst case, the complexity is proved to be the same as the complexity of the standard path following method. In practice, this build up scheme is likely to save computational effort. ESA

DYNAMIC LOCATION IN AN ARRANGEMENT OF LINE SEGMENTS IN THE PLANE
Olivier Devillers, Monique Teillaud, and Mariette Yvinec (Centre National de la Recherche Scientifique, Paris, France.) Nov. 1991 19 p Sponsored in part by EEC
(INRIA-RR-1558; ETN-93-92667) Avail: CASI HC A03/MF A01

An algorithm which dynamically maintains the trapezoidal map of an

arrangement of line segments is described. This algorithm is a generalization of an influence graph data structure used to deal with the semidynamic case. The complexity results are randomized: the insertion sequences are supposed to be evenly distributed along the n possible sequences of n segments, and when an object is deleted, the supposition that it can be any of the already inserted objects with the same probability is made. Under these assumptions the algorithm needs O(n + a) expected space, O(log n + a/n) expected insertion time, O((1 + a/n) log log n) expected deletion time and O(log n) time to locate any query point in the arrangement, where a is the current size of the arrangement and n the current number of segments. EFFECT OF DESIGN SELECTION ON RESPONSE SURFACE PERFORMANCE Final Report

William C. Carpenter 18 Feb. 1993 180 p

(Grant NAG1-1378)

(NASA-CR-192275; NAS 1.26:192275) Avail: CASI HC A09/MF A02

The mathematical formulation of the engineering optimization problem is given. Evaluation of the objective function and constraint equations can be very expensive in a computational sense. Thus, it is desirable to use as few evaluations as possible in obtaining its solution. In solving the equation, one approach is to develop approximations to the objective function and/or restraint equations and then to solve the equation using the approximations in place of the original functions. These approximations are referred to as response surfaces. The desirability of using response surfaces depends upon the number of functional evaluations required to build the response surfaces compared to the number required in the direct solution of the equation without approximations. The present study is concerned with evaluating the performance of response surfaces so that a decision can be made as to their effectiveness in optimization applications. In particular, this study focuses on how the quality of approximations is effected by design selection. Polynomial approximations and neural net approximations are considered. Derived from text

EFFICIENT COMPILATION OF A SYNCHRONOUS DECLARATIVE LANGUAGE: LUSTRE-V3 CODE GENERATOR Ph.D. Thesis [COMPILATION EFFICACE D'UN LANGAGE DECLARATIF SYNCHRONE: LE GENERATUER DE CODE LUSTRE-V3]

Pascal Raymond 1991 146 p In FRENCH

(ETN-93-92679) Avail: CASI HC A07/MF A02

The production of sequential code from the dataflow synchronous language LUSTRE is presented. The main difficulty comes from the declarative style of the language: there is no explicit control statement in a LUSTRE program, so the whole control structure must be synthesized by the compiler. This synthesis consists in building a finite automaton by simulating the behavior of boolean variables. The execution of the resulting code is efficient: the boolean operations are performed at compile time. The exhaustive aspect of this method can cause a real explosion of the code size. This problem can be due to the intrinsic complexity of the program source; in this case, a compromise between execution time and memory size has to be found. The explosion can also be caused by the building method, which often produces non-minimal automata. An algorithm which always generates minimal automata is developed. This algorithm requires a lot of symbolic manipulations of boolean functions, implemented by using binary decision diagrams. ESA

OBJECT-ORIENTED DESIGN. MECANO: A METHOD AND AN ENVIRONMENT FOR OBJECT-ORIENTED APPLICATIONS CONSTRUCTION Ph.D. Thesis [CONCEPTION PAR OBJETS. MECANO: UNE METHODE ET UN ENVIRONNEMENT DE CONSTRUCTION D'APPLICATIONS PAR OBJETS]

Xavier Girod 1991 255 p In FRENCH

(ETN-93-92682) Avail: CASI HC A12/MF A03

MECANO (French acronym for a method and an environment of object-oriented applications construction) is presented. MECANO is based on the object oriented programming model and provides new concepts for the software design phase in order to improve evolutivity and reusability. The inheritance taxonomy provides semantics to the class/superclass relationship and improves the understandability of the inheritance graph. The structuring entity called domain is based on this taxonomy. Domains are specialization/realization hierarchies containing reusable components. Two structuring entities are also introduced: composites and applications which provide complementary ways for class organization. A graphic formalism and a design process to define other aspects of the MECANO design method are given. An example showing how the method leads to more flexible and reusable designs is presented. ON THE COMPARISON OF SEQUENCES: ANALYZING BEHAVIOURAL ASPECTS OF COURSEWARE DEVELOPMENT AND USE

Cornelis Hoede Jan. 1992 16 p

(MEMO-1030; ETN-93-92458) Avail: CASI HC A03/MF A01

Sequences of acts, as seen by van Schaik as representations of the behavior of courseware developers, are addressed. Ideal sequences are all those sequences that can be generated by a grammar in which the production rules represent correct acts. The deviation of an observed sequence from the set of ideal sequences is calculated by Baas and van Schaik by a global comparison of the observed sequence and the ideal sequences. This leads to large computation times. The assumption of global comparison is discussed and an alternative calculation of the deviation is suggested that reduces the computation time considerably. ESA

A TRUNCATED SQP ALGORITHM FOR LARGE SCALE NONLINEAR PROGRAMMING PROBLEMS
Paul T. Boggs, Jon W. Tolle (North Carolina Univ., Chapel Hill.), and Anthony J. Kearsley (Rice Univ., Houston, TX.) Aug. 1992 14 p
(PB92-226299; NISTIR-4900) Avail: CASI HC A03/MF A01

The inequality constrained non-linear programming problem and a sequential quadratic programming algorithm for its solution are considered. Two aspects of the general procedure, namely, the approximate solution of the quadratic program, and the need for an appropriate merit function are of primary concern. An (iterative) interior-point method for the quadratic programming subproblem that, no matter when it is terminated, yields a descent direction for a suggested new merit function is described. An algorithm based on ideas from trust region and truncated Newton methods is suggested and some of their preliminary numerical results are discussed. GRA

GENERALIZED 3D VORONOI DIAGRAM: FIRST RESULTS [DIAGRAMME DE VORONOI GENERALISE 3D: PREMIERS RESULTATS]
Etienne Bertin and Jean-Marc Chassery Mar. 1992 24 p In FRENCH
(RR-879-M; ETN-93-92708) Avail: CASI HC A03/MF A01

A theoretical discussion on separator equations is given and an approximate solution to representing the generalized 3D (three dimensional) Voronoi diagram with the aid of the 3D pinpoint Voronoi diagram is given. The computation time of the algorithms is relatively long. A specific type of 'divide and conquer' algorithm for the object interior and incremental for the exterior should also be used. The algorithmic difficulties seem to be huge, particularly for quadric intersection calculation and the problem of convex envelope construction in 3D. A direct application of the 3D Voronoi diagram is the construction of the skeleton, the exoskeleton and the SKIZ (Skeleton by Influence Zone) of 3D objects. ESA

NUMERICAL MODELING AND OPTIMIZATION FOR THE RECONSTRUCTION OF A POLYHEDRON FROM ITS GENERALIZED GAUSSIAN IMAGE Ph.D. Thesis [MODELISATION ET OPTIMISATION NUMERIQUE POUR LA RECONSTRUCTION D'UN POLYEDRE A PARTIR DE SON IMAGE GAUSSIENNE GENERALISEE]
Hamid Zouaki 1991 92 p In FRENCH
(ETN-93-92683) Avail: CASI HC A05/MF A01

An algorithm to reconstruct the surface shape of a convex polyhedron from its extended gaussian image is presented. This algorithm is based on Minkowski's theorem. This reconstruction is done by solving a convex optimization problem. The extended gaussian image is defined as representation of convex objects. The most important properties are investigated. The method of reconstruction and improvements which make the algorithm more efficient are given. The general scheme of the algorithm is given along with some comments on numerical aspects. This method is illustrated by some examples and it is shown that the extended gaussian image can be used as a way to sculpt objects. ESA

THREE DIMENSIONAL REPRESENTATION AND 3D RECONSTRUCTION USING TWO DIMENSIONAL SECTIONS Ph.D. Thesis [REPRESENTATION TRIDIMENSIONNELLE ET RECONSTRUCTION 3D A PARTIR DE COUPES 2D]
Franck Rolland 1991 210 p In FRENCH
(ETN-93-92686) Avail: CASI HC A10/MF A03

Methods and steps to perform three dimensional reconstruction from two dimensional sequential cross sections are defined. The models applied in the analysis of two and three dimensional structures are summarized. A three dimensional skeleton method to obtain two or one dimensional basic structures is presented. Reconstruction and the development of the medium line graphic based on structural inference processes are included. The relationship between graphics is analyzed by a heuristic process. The medium line method allows reconstruction of three dimensional bodies by superposition of two dimensional inferred structures. Some results and their consequences are summarized. ESA

REFERENCE MODEL FOR THE DESCRIPTION OF GRAPHIC DATA PROCESSING AND FOR THE INTEGRATION OF GRAPHIC SYSTEMS WITH OTHER DATA PROCESSING FIELDS Ph.D. Thesis [REFERENZMODELL ZUR BESCHREIBUNG DER GRAPHISCHEN DATENVERARBEITUNG UND ZUR INTEGRATION GRAPHISCHER SYSTEME MIT ANDEREN BEREICHEN DER DATENVERARBEITUNG]
Jochem Poller 1990 177 p In GERMAN
(ETN-93-93417) Avail: CASI HC A09/MF A02

A model is presented which outlines the relations between already existing systems and reference models and describes their interfaces. The reference model developed allows the description of the existing standards and to identify their errors and problems. The reference model of graphic data processing is described in detail. The emphasis is put on the concepts for formal description, such as the concept of components and framework. A subdivision in layers of graphic data processing is presented. The relations of the graphic system with its applications and with other duties are described on the basis of the reference model. It is shown that an integration without a suitable reference model is not possible. ESA

PROXIMAL TECHNIQUES FOR CONVEX PROGRAMMING
Philippe Mahey, Said Oualibouch, Van Hien Nguyen (Facultes Univ. Notre-Dame de la Paix, Namur, Belgium.), and Dinh Tao Pham (Institut National des Sciences Appliquees, Routen, France.) Feb. 1992 53 p
(RR-877-M; ETN-93-92706) Avail: CASI HC A04/MF A01

Three studies on proximal techniques for convex programming are presented. The theoretical study of the convergence of the projected proximal method is addressed and certain results of Brezis on the sum of maximal monotone operators are generalized. The application of the projected proximal method to different separable convex optimization problems is described. This results in a family of decomposition algorithms that can be interpreted as separable augmented Lagrangian methods. The proximal decomposition method in the monotone operator graph is presented. This algorithm is shown to be equivalent to the inverse partial Spingarn method in the case of the minimization of a convex function on a subspace. An optimal value of the scale factor is shown to exist, which confirms the numerical experiments. ESA

REDESIGNING THE WINDOW PROTOCOL: THE BLOCK ACKNOWLEDGEMENT REVISITED
Anneke A. Schoone Feb. 1992 18 p
(Contract EEC-3075)
(RUU-CS-92-04; ETN-93-92804) Avail: CASI HC A03/MF A01

A review on the block acknowledgement protocol is given. Brown, Gouda, and Miller claim that they have redesigned the window protocol such that it tolerates both message loss and message disorder, while using only bonded sequence numbers. They suggest an implementation of the timeout condition of the protocol by means of timers. The consequences of an implementation with timers is analyzed and the implementation of the protocol as specified is shown to not always be possible by means of timers. This is due to the fact that in the original protocol it is not observable for the sender whether the timeout conditions holds or not. The protocol is slightly modified such that an implementation with timers is possible, and proved to be correct. ESA

DESIGN AND IMPLEMENTATION OF LOGRES
F. Cacace, S. Ceri, and L. Tanca 1992 49 p Sponsored in part by CNR and Commission of the European Communities
(Rept-92-040; ETN-93-93037) Avail: Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy

A new generation database system integrating deductive and object oriented databases is presented. The data model of LOGRES supports structural and semantic complexity through a rich collection of concepts

from object oriented models. The rule language of LOGRES allows for the manipulation of complex objects, and the definition of active constraints. The application of rules to database states is controlled by means of qualifiers, which dictate the side effects of rules; qualifiers are the unique procedural feature of LOGRES, otherwise a fully declarative language. The LOGRES data model and language are illustrated and their prototype implementation are described. ESA

DATABASE LANGUAGE SQL: INTEGRATOR OF CALS DATA REPOSITORIES

Leonard Gallagher and Joan Sullivan Sep. 1992 64 p Sponsored by Office of the Deputy Assistant Secretary of Defense for Total Quality Management

(PB93-113637; NISTIR-4902) Avail: CASI HC A04/MF A01

The Computer-aided Acquisition and Logistic Support (CALS) program of the U.S. Department of Defense requires a logically integrated database of diverse data. Previous reports to CALS have identified the importance of Database Language SQL and its distributed processing counterpart, Remote Database Access (RDA), for their ability to address a significant portion of CALS data management requirements. The new 'Object SQL' facilities proposed for inclusion in SQL3 is presented, SQL abstract data types (ADT's) are introduced, the benefits of 'generic ADT packages' for management of application specific objects are discussed, and a new external repository interface (ERI) that would allow integration of heterogenous, non-SQL data repositories is proposed. The appendices give the current status and applicability of national, international, and Federal standards for SQL and RDA, discuss the availability of conforming implementations, and present the status of the National Institute of Standards and Technology (NIST) SQL and RDA validation testing. INTERACTIVE GRAPHICS INTERSECTION DESIGN SYSTEM: FIRST-STAGE DEVELOPMENT

Thomas W. Rioux, Robert F. Inman, Charles H. Berry, Jr., Clyde E. Lee, and Randy B. Machemehl Nov. 1991 54 p Sponsored by Federal Highway Administration and Texas Dept. of Transportation

(PB92-227693; CTR-3-8/18-89/1-1139-1F; RR-1139-1F; FHWA/TX-92+1139-1F) Avail: CASI HC A04/MF A01

The reported research establishes a versatile foundation for initial and future development of an Iteractive Graphics Intersection Design System (IGIDS). Functional requirements, basic capabilities, and computer program structure for the system are established. Candidate hardware and software system components were identified and evaluated for selection of suitable examples used in the first-stage development. An extensive amount of programming was accomplished interfacing the example graphics engine (MicroStation), database engine (Informix), and intersection analysis program (TEXAS Model for Intersection Traffic). Provisions were incorporated to allow implementation of several other computer applications as the need arises. The research demonstrates the feasibility of integrating computer hardware and software components into a user-friendly interactive graphics system supporting the intersection designer. GRA

SOLUTION OF QUADRATIC DISTRIBUTED CONTROL PROBLEMS BY OPTIMIZATION METHODS Ph.D. Thesis [LOESUNG QUADRATISCHER VERTEILTER KONTROLLPROBLEME DURCH OPTIMIERUNGSMETHODEN]

Min Sha 1990 113 p In GERMAN Sponsored by DFG

(ETN-93-93409) Avail: CASI HC A06/MF A02

The controllability of special vibrational systems is examined. The processes for the computation of the solution of a determined class of optimization problems is considered, in relation with the standard minimal control of special vibrational problems. The generalized Lagrange multiplier process is used as the continuation of the penalty method. The numerical result obtained by the penalty method is used as the starting value of the improved process. A special process is developed, in order to solve optimization problems for a quadratic F function. It allows more rapid and economical computation. Convergence problems produced by the discretization of the optimization problem are discussed. ESA

INTRODUCTION TO GRAPHICAL USER INTERFACES AND THEIR USE BY CITIS

Susan Q. Sherrick Jul. 1992 25 p

(PB92-213404; NISTIR-4876) Avail: CASI HC A03/MF A01

A Graphical User Interface (GUI) is a powerful tool that is used for simplifying a computing environment. This paper provides a tutorial on the various meanings of the term GUI, describes the usefulness of GUI's, identifies problems with GUI's, and recommends that the X Window System GUI be used within the Contractor Integrated Technical Information Service (CITIS) specification. The term 'GUI' can have various meanings in different contexts. In order to provide a framework for discussion in the paper, a GUI is characterized as having at least one of the following components: Display Manager Program, Application User Interface, or Application Programmer's Interface (API). One of the major problems with GUI's is the potential lack of portability of an application developed to run using a particular GUI. The X Window System provides a means of overcoming the problem because applications developed using the X Window API may be run using almost all other GUI's. Consequently, the X Window System can be used by CITIS to provide easy to use applications which may be used on almost all GUI platforms. GRA

GEOMETRIC APPROACHES OF IMAGE GENERATION USING VORONOI MODELS Ph.D. Thesis [APPROCHES GEOMETRIQUES PAR MODELES DE VORONOI EN SEGMENTATION D'IMAGES]
Mahmoud Melkemi 1992 162 p In FRENCH
(ETN-93-92690) Avail: CASI HC A08/MF A02

Geometrical models for solving the problem of image segmentation and the problem of event detection in multisource imaging are investigated. The geometrical structure used is a punctual Voronoi diagram. A region segmentation approach based on the use of Voronoi tessellation is presented. Three main steps describe this algorithm: initialization, split and merge steps. Such a tool is used to provide a solution for the problem of multisource image analysis. The second segmentation approach is based on a cooperative process between edges and regions. The proposed method consists of the generation of an initial partition for which edges are included on frontiers of Voronoi regions. Split and merge operations are included. The data structure used for the realization of this algorithm is the generalized Voronoi diagram. For its computation, a new method providing an approximation of this structure is developed. The algorithm is based on the use of a classical punctual Voronoi diagram associated to seeds generated on detected contours. ESA

SKETCHES AND COMPUTATION
Dominique Duval (Limoges Univ., France.) and Jean-Claude Raynaud Dec. 1991 71 p Sponsored in part by CNRS
(RR-871-I-IMAG-123-LIFIA; ETN-93-92720) Avail: CASI HC A04/MF A01

A categorical framework based on sketches for specification and evaluation (in the sense of algebraic specifications and algebraic programming) is defined. Results and illustrative examples are given. This framework goes beyond the first motivation to specify computation in algebraic number fields. Sketches are redefined in order to deal explicitly with programs. Properties of expressions and terms, and also quasi algebraic sketches are introduced. Static evaluation in these sketches are described. This allows a rigorous basis for evaluation in structures (not necessarily equational) which admit an initial model to be proposed. For structures which do not have initial models, dynamic evaluation explains and justifies a more general process. At present, this process is not used in algebraic specification systems, but computer algebra systems are beginning to use it as a basic tool. Some applications of dynamic evaluation to computation in extension fields are given. ESA

This report will present a brief overview of the transient dynamics capabilities at Sandia National Laboratories, with an emphasis on recent new developments and current research. In addition, the Sandia National Laboratories (SNL) Engineering Analysis Code Access System (SEACAS), which is a collection of structural and thermal codes and utilities used by analysts at SNL, will be described. The SEACAS system includes pre- and post-processing codes, analysis codes, database translation codes, support libraries, Unix shell scripts for execution, and an installation system. SEACAS is used at SNL on a daily basis as a production, research, and development system for the engineering analysts and code developers. Over the past year, approximately 190 days of CPU time have been used by SEACAS codes on jobs running from a few seconds up to two and one-half days of CPU time. SEACAS is running on several different systems at SNL including Cray Unicos, Hewlett Packard HP-UX, Digital Equipment Ultrix, and Sun SunOS. An overview of SEACAS, including a short description of the codes in the system, will be presented. Abstracts and references for the codes are listed at the end of the report. DOE

During the reporting period, the development of the theory and application of methodologies for decision making under uncertainty was addressed. Two subreports are included; the first on properties of general hybrid operators, while the second considers some new research on generalized threshold logic units. In the first part, the properties of the additive gamma-model, where the intersection part is first considered to be the product of the input values and the union part is obtained by an extension of De Morgan's law to fuzzy sets, is explored. Then the Yager's class of union and intersection is used in the additive gamma-model. The inputs are weighted to some power that represents their importance and thus their contribution to the compensation process. In the second part, the extension of binary logic synthesis methods to multiple valued logic synthesis methods to enable the synthesis of decision networks when the input/output variables are not binary is discussed. MULTIVERSION SOFTWARE RELIABILITY THROUGH FAULT-AVOIDANCE AND FAULT-TOLERANCE Semiannual Technical Report No. 2, 1 Sep. 1989 - 31 Mar. 1990
Mladen A. Vouk and David F. McAllister 31 Mar. 1990 48 p
(Grant NAG1-983)
(NASA-CR-192191; NAS 1.26:192191) Avail: CASI HC A03/MF A01

In this project we have proposed to investigate a number of experimental and theoretical issues associated with the practical use of multi-version software in providing dependable software through fault-avoidance and fault-elimination, as well as run-time tolerance of software faults. In the period reported here we have working on the following: We have continued collection of data on the relationships between software faults and reliability, and the coverage provided by the testing process as measured by different metrics (including data flow metrics). We continued work on software reliability estimation methods based on non-random sampling, and the relationship between software reliability and code coverage provided through testing. We have continued studying back-to-back testing as an efficient mechanism for removal of uncorrelated faults, and common-cause faults of variable span. We have also been studying back-to-back testing as a tool for improvement of the software change process, including regression testing. We continued investigating existing, and worked on formulation of new fault-tolerance models. In particular, we have partly finished evaluation of Consensus Voting in the presence of correlated failures, and are in the process of finishing evaluation of Consensus Recovery Block (CRB) under failure correlation. We find both approaches far superior to commonly employed fixed agreement number voting (usually majority voting). We have also finished a cost analysis of the CRB approach. Derived from text

(Contract NRC-RES-91-003)
(PB93-114619; NIST/SP-500/204) Avail: CASI HC A06/MF A02

The report presents results of a study of standards, draft standards, and guidelines (all of which will hereafter be referred to as documents) that provide requirements for the assurance of software in safety systems in nuclear power plants. The study focused on identifying the attributes necessary in a standard for providing reasonable assurance for software in nuclear systems. The study addressed some issues involved in demonstrating conformance to a standard. The documents vary widely in their requirements and the precision with which the requirements are expressed. Recommendations are provided for guidance for the assurance of high integrity software. It is recommended that a nuclear industry standard be developed based on the documents reviewed in this study with additional attention to the concerns identified in this report. GRA

FURTHER DEVELOPMENT OF THE CANAERO COMPUTER CODE TO INCLUDE A TIME-STEPPING CAPABILITY Final Report
J. Conway and F. Tezok Oct. 1991 127 p
(DREA-CR-91-478; CTN-93-60715; RAZ-000-563) Avail: CASI HC A07

The CANAERO panel method has been successfully extended to perform unsteady incompressible inviscid calculations using a time-stepping procedure with wake convection. The new program, called CANAERO-T, provides an unsteady potential flow panel method for calculating the flow around, and forces and moments on, complex configurations. CANAERO-T has been interfaced with the OMNIPLOT graphics package to permit animated displays of geometry and aerodynamics. The implementation and testing of the new CANAERO-T unsteady code are described, together with a description of the mathematical formulation of the method, some features of which appear to be unique to CANAERO-T. Results from CANAERO-T are presented for the following test cases: an impulsively started wing; an impulsively started oscillating wing; two impulsively started wings with one located in the slipstream of the other; a 3-bladed marine propeller; an impulsively started submarine at 9 degrees of drift; and a maneuvering submarine. The results have shown that unsteady effects are crucial in calculating the forces and moments on a hull plus sail configuration during a turn maneuver. Author (CISTI)

EXPERIENCES WITH THE ACPMAPS 50 GFLOP SYSTEM
M. Fischler Oct. 1992 5 p Presented at the Tenth Conference on Computing in High Energy Physics, Annecy, France, 21-25 Sep. 1992
(Contract DE-AC02-76CH-03000)
(DE93-004418; FNAL/C-92/277; CONF-920966-15) Avail: CASI HC A01/MF A01

The Fermilab Computer R&D and Theory departments have for several years collaborated on a multi-GFLOP (recently upgraded to 50 GFLOP) system for lattice gauge calculations. The primary emphasis is on flexibility and ease of algorithm development. This system (ACPMAPS) has been in use for some time, allowing theorists to produce QCD results with relevance for the analysis of experimental data. We present general observations about benefits of such a scientist-oriented system and summarize some of the advances recently made. We also discuss what was discovered about features needed in a useful algorithm exploration platform. These lessons can be applied to the design and evaluation of future massively parallel systems (commercial or otherwise). DOE

VARIATIONAL NODAL SOLUTION ALGORITHMS FOR MULTIGROUP CRITICALITY PROBLEMS
C. B. Carrico and E. E. Lewis 1991 5 p Presented at the International Topical Meeting on Advances in Mathematics, Computation and Reactor Physics, Pittsburgh, PA, 28 Apr. - 2 May 1991
(Contracts DE-FG02-88ER-12810; W-31-109-eng-38)
(DE93-003462; CONF-910414-38) Avail: CASI HC A01/MF A01

Variational nodal transport methods are generalized for the treatment of multigroup criticality problems. The generation of variational response matrices is streamlined and automated through the use of symbolic manipulation. A new red-black partitioned matrix algorithm for the solution of the within-group equations is formulated and shown to be at once both a regular matrix splitting and a synthetic acceleration method. The methods are implemented in X-Y geometry as a module of the Argonne National Laboratory code DIF3D. For few group problems highly accurate P(sub 3) eigenvalues are obtained with computing times comparable to those of an existing interface-current nodal transport method. DOE

DEVELOPMENT OF VISUAL PROGRAMMING TECHNIQUES TO INTEGRATE THEORETICAL MODELING INTO THE SCIENTIFIC PLANNING AND INSTRUMENT OPERATIONS ENVIRONMENT OF ISTP Final Report
Charles C. Goodrich 26 Mar. 1993 16 p Original contains color illustrations
(Grant NAG5-1825)
(NASA-CR-192707; NAS 1.26:192707) Avail: CASI HC A03/MF A01; 3 functional color pages

The goal of this project is to investigate the use of visualization software based on the visual programming and data-flow paradigms to meet the needs of the SPOF and through it the International Solar Terrestrial Physics (ISTP) science community. Specific needs we address include science planning, data interpretation, comparisons of data with simulation and model results, and data acquisition. Our accomplishments during the twelve month grant period are discussed below. Author (revised)

By 1995, improvements in semiconductor technology will allow as many as four high-performance floating-point arithmetic and logic units (ALU's) and several megabits of memory to reside on a single chip. Multiple arithmetic units can be organized into a single processor to exploit instruction-level parallelism. Processor Coupling is a mechanism for controlling multiple ALU's to exploit both instruction-level and inter-thread parallelism. Processor Coupling employs both compile time and runtime scheduling. The compiler statically schedules individual threads to discover available intra-thread instruction-level parallelism. The runtime scheduling mechanism interleaves threads, exploiting inter-thread parallelism to maintain high ALU utilization. ALU's are assigned to threads on a cycle by cycle basis, and several threads can be active concurrently. GRA

OPTIMAL BROADCASTING ALGORITHMS ON TORUS
Philippe Michallon, Denis Trystram, and Gilles Villard Jan. 1992 48 p Sponsored by CNRS
(RR-872-I; ETN-93-92715) Avail: CASI HC A03/MF A01

Arc-disjoint spanning trees for torus are presented. This basic tool is useful for broadcasting a message from one processor to all the others: the strategy consists of pipelining parts of the initial message along the spanning trees. Assuming a store and forward full duplex model of communications, the construction of 4-arc-disjoint spanning trees of nominal depth which improves the previous results by providing an optimal result for broadcasts based on pipelining is presented. These theoretical studies are completed by some experiments on a 128 reconfigurable transputer network. The architecture is presented and its communication model is analyzed. Broadcasting algorithms are developed and some experimental results are given. ESA

EVALUATION AND COMPARATIVE STUDY OF COMBINATORIAL OPTIMIZATION ALGORITHMS: APPLICATION TO THE PROBLEM OF PROCESS PLACEMENT
E.-G. Talbi and T. Muntean Apr. 1992 38 p In FRENCH; ENGLISH summary Sponsored by EEC
(RR-886-I; ETN-93-92717) Avail: CASI HC A03/MF A01

An example application of local search iterative algorithms, simulated annealing, and genetic algorithms, is presented: the problem of static placement of communication processes on a distributed memory parallel architecture. Classical graph partitioning and quadratic assignment problems are examples of the problem addressed. Each algorithm studied is evaluated and optimized in relation to its parameters. The parallelization of the algorithms is studied; a genetic algorithm is proposed, and implemented on a transputer network. Performances are compared according to the quality of the solution found and the search time used. A combination of the algorithms is proposed and evaluated. ESA

LOCAL EDGE GROUPING BY SIMPLE PROCESS ITERATION
Frank Mangin, Marc Berthod, and Josiane Zerubia Nov. 1991 24 p
(INRIA-RR-1559; ETN-93-92668) Avail: CASI HC A03/MF A01

An iterative algorithm for edge intensity images enhancement is proposed. It uses local cooperation-inhibition processes to produce an edge image in which the most relevant contours have reached maximal activation, and small gaps and junctions have been filled. Implementation on a massively parallel machine provided high speed performances, and results of

experimentations with images of real scenes are presented. The algorithm is robust in complex edge images context, and is perfectly stable under any number of iterations. ESA

A CONTRIBUTION TO THE STUDY OF OR-PARALLEL IN PROLOG OVER DISTRIBUTED MEMORY MACHINES Ph.D. Thesis [UNE CONTRIBUTION A L'ETUDE DU PARALLELISME OU EN PROLOG SUR DES MACHINES SANS MEMOIRE COMMUNE]
Claudio Fernando ResinGeyer 1991 158 p In FRENCH
(ETN-93-92681) Avail: CASI HC A08/MF A02

The implementation of OR-parallel PROLOG over distributed memory machines is studied. The OPERA OR multi-sequential model is presented. It uses compiling techniques and preserves the PROLOG semantics. Multi-environment management and scheduling, the two major problems of OPERA, are described. Multi-environment management is realized by incremental copying, in parallel to the computation. The treatment of conditional variables is included in the Warren Abstract Machine (WAM), in order to allow an efficient and coherent cooperation. The method introduces a new pile for these variables, initialization, binding and unbinding of which are adapted. The cost of WAM sequential operations is constant and independent of the number of processes. A method for implementing cut in parallel is proposed. An OPERA prototype was implemented over a transputer array. In the current prototype, scheduling is resolved by heuristics of load evaluation. This scheduling is centralized, a unique process balancing the load of the other PROLOG workers, and using an approximate representation of the state of the system. The OPERA prototype is one of the most efficient PROLOG implementations on the transputer, and reaches effective speedups in parallel. ESA

ANALYSIS OF TIMED-TOKEN RING PROTOCOLS
Eitan Altman Dec. 1991 25 p
(INRIA-RR-1570; ETN-93-92671) Avail: CASI HC A03/MF A01

The performance of Token Ring Protocols with constraints on the cycle times is analyzed. Each station may have a different cycle time constraint, and a different number of buffers. Two types of service discipline are considered in the different stations: the 1 limited case, where at most one packet may be transmitted from each queue at each visit of the token, and the exhaustive service discipline where in each queue, packets are trasmitted till either the queue empties or the cycle time constraint in that queue is exceeded. The system analyzed approximates both the FDDI protocol (Fiber Distributed Data Interface) and the IEEE 802.4 Token Bus Standard. The technique of the analysis is based on the power series expansions of the state probabilities as functions of the load of the system, a method for analyzing multi dimensional queuing systems. The expected throughput and delay in every station are obtained as well as the first two moments of the queues' length. ESA

PAC: PARALLEL ALGEBRAIC COMPUTATIONS: CURRENT RESEARCHES AND PERSPECTIVES
J. L. Roch and G. Villard Jan. 1992 35 p Partly in ENGLISH and FRENCH Sponsored in part by CNRS
(RR-876-M; ETN-93-92705) Avail: CASI HC A03/MF A01

A general presentation of the PAC (Parallel Algebraic Computing) project is given. PAC is an environment dedicated to algebraic computations and is designed for distributed memory parallel architectures. The past and current researchers of the project are discussed and its perspectives are detailed. Efforts are mainly concentrated on the study of real life dimensioned applications, and on the implementation and the validation of a dynamic load balancing system. The different problems encountered while parallelizing an application are illustrated. From the sequential algorithm to the implementation in an existing parallel machine, the difficulties are presented, and solutions are proposed. The example which is treated is the parallel lattice basis reduction. A complexity result is given, and the theoretical study is completed by empirical tests which show that high speed ups are obtained even for large amounts of processors. A crucial problem of computer algebra is addressed. One main constraint of the domain and more generally of non numerical computations, is the dynamical, nonpredictible, behavior of the executions. A new load balancing system for parallel architectures with a great number of processors is proposed. It is original in the sense that it considers the task complexity as a consistent information in order to achieve efficiency. The load balancer is currently under development and will be validated with linear algebra computations on polynomials and lattice basis reduction. ESA

STUDY AND DEVELOPMENT OF A MULTIPROCESSOR INTERFACE CIRCUIT, VOLUME 1 Ph.D. Thesis [ETUDE ET REALISATION D'UN CIRCUIT D'INTERFACE DANS UN ENVIRONNEMENT MULTIPROCESSEUR]
Jean-Michel Courbet 1991 195 p In FRENCH
(ECL-91-11-Vol-1; ETN-93-91950) Avail: CASI HC A09/MF A03

A PSB (Parallel System Bus) for the Multibus 2 system is described. The evolution of specific and standard buses available on the market is analyzed and characteristics of the developed PSB are described. The interface circuit was developed to be well fitted to transfers in I/O (Input/Output) space with the aim of a standard interface, and to report treatments on I/O data in a CPU (Central Processing Unit) board connected to the bus. The first version is a SMD module with a gate array which contains the major parts of the interface logic. This is a CMOS component integrating 2500 gates in a 2 micrometer technology; to achieve its development internal (Intel) tools were used rather than more classical methods (which are more expensive): for instance, the interface is functionally tested using a specific testing printed board and a testing software. A second wholly integrated version of the interface was realized the same way, using a 4800 gates CMOS gate array with a 1.5 micrometer technology. ESA

The Royal Signals and Radar Establishment (RSRE) and members of the Hardware Verification Group at Cambridge University conducted a joint effort to prove the correspondence between the electronic block model and the top level specification of Viper. Unfortunately, the proof became too complex and unmanageable within the given time and funding constraints, and is thus incomplete as of the date of this report. This report describes an independent attempt to use the HOL (Cambridge Higher Order Logic) mechanical verifier to verify Viper. Deriving from recent results in hardware verification research at UC Davis, the approach has been to redesign the electronic block model to make it microcoded and to structure the proof in a series of decreasingly abstract interpreter levels, the lowest being the electronic block level. The highest level is the RSRE Viper instruction set. Owing to the new approach and some results on the proof of generic interpreters as applied to simple microprocessors, this attempt required an effort approximately an order of magnitude less than the previous one.

VERIFICATION METHODS OF THE BEHAVIORAL SPECIFICATIONS: STUDY AND IMPLEMENTATION Ph.D. Thesis [METHODES DE VERIFICATION DE SPECIFICATIONS COMPORTEMENTALES: ETUDE ET MISE EN OEUVRE]
Laurent Mounier 1992 205 p In FRENCH
(ETN-93-92687) Avail: CASI HC A10/MF A03

The verification of the behavioral specifications for parallel programs is presented. The design of efficient algorithms for the comparison of two labeled transition systems modulo a simulation or bisimulation relation is included. The principle of the classical decision procedures based on partition refinement algorithms is reviewed. This approach requires previous building of the transition relations of the two systems before the comparison phase which constitutes a practical limitation. An algorithm based on a depth first

traversal of a synchronous product of the two systems is proposed. It can perform the comparison 'on the fly', without explicitly building or storing the two transition relations. This 'on the fly' comparison algorithm was implemented within the Aldebaran verification tool. Its application to the verification of several LOTOS programs confirms the interest of this approach in comparison with the more classical one. Diagnostic generation when the two labeled transitions systems are not equivalent is discussed. ESA

MODELING AND SIMULATION OF A FORMAL NEURAL NETWORK: IMPLEMENTATION ON A 'HYPERCUBE FPS T-40' PARALLEL MACHINE Ph.D. Thesis [MODELISATION ET SIMULATION D'UN RESEAU DE NEURONES FORMELS: IMPLANTATION SUR MACHINE PARALLELE 'HYPERCUBE FPS T-40']
Djamel Benaouda 1992 252 p In FRENCH Original contains color illustrations
(ETN-93-92688) Avail: CASI HC A12/MF A03

A study to model the neural networks located downstream of the cochlear nucleus which constitutes the first layer of speech signals processing coming from the perripheral auditory system, particularly from the basilar membrane, is presented. These signals represent the neuronal information carried by the auditory nerve fibers. The activitiy of these fibers is described through the recording of spike strains that constitutes the input to be treated by the network. The input is modeled by a two dimensional binary random field. The nature of the temporal, spatial, and stochastic neural signal is taken into account. The general frame of the neural network is presented. Models based on the threshold automata networks and cellular automata networks are included. The Gibbs measure, random fields, and network models are presented. The study on the ergodicity problem of the probabilistic neural networks is considered. In the simple cases, the model of the neural network in parallel iteration mode is ergodic and converges to the unique invariant measure mu(sub p), in response to the stationary input. The technical environment where the simulations of the neural network were realized is described. A general survey of the parallelization principles and an introduction to the parallel distributed memory machine 'Hypercube FPS (Floating Point System) T-40' is presented. The implementation of the neural network algorithm on the Hypercube FPS T-40, the numerical experimentations, and the interpretation of the numerical results are discussed. The results are visualized graphically on an image processing workstation (VINIX) using the appropriate statistical measures which summarize the dynamic behavior of the neural network. ESA

DELIVERY OF VERY HIGH BANDWIDTH WITH ATM SWITCHES AND SONET
S. A. Gossage Oct. 1992 37 p
(Contract DE-AC04-76DP-00789)
(DE93-004274; SAND-92-1295) Avail: CASI HC A03/MF A01

The choice of technologies for the delivery of very high bandwidth throughout a facility capable of ultimately achieving gigabits per second performance, is a crucial one for any high technology facility. The components of a high bandwidth delivery system include high performance sources and sinks in the form of central facilities (major mainframes, large file storage and specialized peripherals) and powerful, full bandwidth distributed local area networks (LAN's). In order to deliver bandwidth among the sources and sinks, a ubiquitous inter-/intra-building cable plant consisting of single mode and multimode fiber as well as twisted pair copper is required. The selection of the 'glue' to transport and interconnect the LAN's with the central facility over the pervasive cable plant is the focus of this paper. A design philosophy for high performance communications systems is proposed. A description of the traditional problems that must be overcome to provide very high bandwidth beyond the narrow confines of a computer center is given. The advantages of ATM switching and SONET physical transport are explored in the structured design presentation. The applicability of Asynchronous Transfer Mode (ATM) switching (interconnection) and Synchronous Optical NETwork (SONET) (transport) for high bandwidth delivery is described using the environment and requirements of Sandia National Laboratories as a context to examine the suitability of those technologies. The synergy and utility of ATM and SONET in the campus network are explored. Other methods for distributing high data rates are compared and contrasted to ATM and SONET with respect to cable plant impact, reliability/availability, maintainability, and capacity. Sandia is implementing a standards based foundation utilizing a pervasive single mode fiber cable plant, SONET transport, and ATM switching to meet the goals of gigabit networking. DOE

RESEARCH IN MODELS FOR MASSIVELY PARALLEL COMPUTING
N. R. Morse 21 Oct. 1992 4 p Presented at the IEEE Scientific Supercomputing Subcommittee Meeting, Livermore, CA, 25 Oct. 1992
(Contract W-7405-eng-36)
(DE93-003748; LA-UR-92-3495; CONF-9210229-1) Avail: CASI HC A01/MF A01

Supercomputing in the DoE has been traditionally performed on von Neumann vector pipeline machines. In the past few years, a belief has developed that advances in supercomputing capability in the future must come from massively parallel architectures. When considering such architectures, many questions remain which are active areas of research. Examples of research subjects for massively parallel computing paradigms are communication structures, memory structures, node processor architectures, latency hiding, algorithm development, switching schemes, communication bandwidth and support software. A problem which has existed in computing since networks were invented is that the quality of service received by those using a computing resource is inversely proportional to the user's physical distance from the server. The goal of the CASA Gigabit project is to remove this restriction by inventing gigabit speed networks with support protocols, switches, etc. which will operate at global distances. DOE

PROBABILISTIC STUDENT MODELING WITH KNOWLEDGE SPACE THEORY Interim Report, Feb. 1991 - Feb. 1992
Michael Villano and Charles Bloom Oct. 1992 16 p
(Contract F33615-91-C-0002)
(AD-A258622; AL-TP-1992-0046) Avail: CASI HC A03/MF A01

This article presents Knowledge Space Theory (Falmagne and Doignon) as the foundation for a probabilistic student model to be imbedded in an intelligent Tutoring System (ITS). Applications to typical ITS student modeling issues such as knowledge representation, adaptive assessment, curriculum

representation, advancement criteria, and student feedback are discussed. Several factors contribute to uncertainty in student modeling such as careless errors and lucky guesses, learning and forgetting, and unanticipated student response patterns. However, a probabilistic student model can represent uncertainty regarding the estimate of the student's knowledge and can be tested using empirical student data and established statistical techniques. GRA

UPSIDE-DOWN META-INTERPRETATION OF THE MODEL ELIMINATION THEOREM-PROVING PROCEDURE FOR DEDUCTION AND ABDUCTION
Mark E. Stickel 14 Sep. 1992 20 p
(Contract N00014-90-C-0220; NSF CCR-89-22330)
(AD-A259436) Avail: CASI HC A03/MF A01

Typical bottom-up, forward-chaining reasoning systems such as hyperresolution lack goal-directedness while typical top-down, backward-chaining reasoning systems like Prolog or model elimination repeatedly solve the same goals. Reasoning systems that are goal-directed and avoid repeatedly solving the same goals can be constructed by formulating the top-down methods metatheoretically for execution by a bottom-up reasoning system (hence, upside-down meta-interpretation is being used). This also facilitates the use of flexible search strategies, such as merit-ordered search, that are common to bottom-up interpreters. The model elimination theorem proving procedure, its extension by an assumption rule for abduction and its restriction to Horn clauses, are adapted here for such upside-down meta-interpretation. This model can be regarded as an extension of the magic set method for query evaluation in deductive databases to both non-Horn clauses and abductive reasoning. GRA

GEOMETRIC ASPECTS OF VISUAL OBJECT RECOGNITION
Thomas M. Breuel May 1992 174 p
(Contracts N00014-89-J-3139; N00014-85-K-0124; DACA76-85-C-0010)
(AD-A259454; AI-TR-1374) Avail: CASI HC A08/MF A02

Systems (artificial or natural) for visual object recognition are faced with three fundamental problems: the correspondence problem, the problem of representing 3D shape, and the problem of defining a robust similarity measure between images and views of objects. In this thesis, I address each of these problems. I present a recognition algorithm (RAST) that works efficiently even when no correspondence or grouping information is given; that is, it works in the presence of large amounts of clutter and with very primitive features. I discuss representations of 3D objects as collections of 2D views for the purposes of visual object recognition. Such representations greatly simplify the problems of model acquisition and representing complex shapes. I present theoretical and empirical evidence that this view-based approximation is an efficient, robust, and reliable approach to 3D visual object recognition. I present Bayesian and MDL approaches to the similarity problem that may help us build more robust recognition systems. GRA

ROBOT MOTION VISION BY FIXATION
M. A. Taalebinezhaad Sep. 1992 148 p
(Contracts N00014-85-K-0124; N00014-91-J-4038)
(AD-A259456; AI-TR-1384) Avail: CASI HC A07/MF A02

In numerous current and future applications ranging from autonomous navigation of mobile robots to collision avoidance systems for cars, an imaging system (installed on a moving vehicle) takes 2D images of an environment with the aim of finding the motion of the vehicle (translational and rotational velocities) as well as the structure of the environment (shape). In machine vision, this problem is referred to as the general motion vision problem. A direct method called fixation for solving this general motion vision problem, arbitrary motion relative to an arbitrary environment is introduced. Avoiding feature correspondence and optical flow was the motivation behind this direct method which uses the spatio-temporal brightness gradients of the images directly. The fixation method results in a linear constraint equation (Fixation Constraint Equation) which explicitly expresses the rotational velocity in terms of the translational velocity. The combination of this constraint equation with the Brightness-Change Constraint Equation (a fundamental equation which relates the motion to the brightness gradients at any image point) solves the general motion vision problem. GRA

SIGNAL PHASE PATTERN SENSITIVE NEURAL NETWORK SYSTEM AND METHOD Patent
Steven L. Speidel, inventor (to Navy) 8 Sep. 1992 33 p Filed 19 Jun. 1989
(AD-D015571; US-Patent-5,146,541; US-Patent-Appl-SN-368504) Avail: US Patent and Trademark Office

A signal phase pattern sensitive neural network system can discern persistent patterns of phase in a time varying or oscillatory signal. The system employs duplicate inputs from each of its sensors to the processing elements of a first layer of its neural network, with the exception that one input is phase shifted relative to the other. The system also employs a modification of a conventional Kohonen competitive learning rule which is applied by the processing and learning elements of a second layer of its neural network. GRA

Our experimental work has focused upon a precise description of the wind fields for individual type A thoracic interneurons and is beginning to describe the leg movements associated with individual leg motor neurons. In the first set of experiments, a graduate student supported on the ONR grant has moved from studies on paired GI responses to the wind responses of the thoracic interneurons that receive inputs from the GI's. Although the basic wind field properties for the entire population were described earlier, we do not have the precise wind fields for individual interneurons. This information is necessary for further development of the escape model and for future experiments that will utilize the computer model to determine the extent to which wind field properties are due to convergence of vGI inputs. Model-based reasoning permits diagnostic applications to be written without waiting for someone to become an 'expert' of the system. For model-based diagnostics, there must be a model to reason from. This thesis explores using a VHDL description of the system as that model. A system based around a VHDL interpreter was written specifically for a model-based diagnostic algorithm. Currently, the diagnostic system uses an algorithm by Dries. This algorithm was derived from Scarl's Full Consistency Algorithm. The system was designed to be modular so that different diagnostic techniques could be implemented. It is divided into three parts: a VHDL parser, a VHDL interpreter, and a set of routines to implement Dries' Diagnose algorithm. The system can find stuck-at faults on combinatorial digital circuits. A 3D WORLD MODEL BUILDER WITH A MOBILE ROBOT

Zhengyou Zhang and Olivier D. Faugeras Nov. 1991 43 p Submitted for publication Sponsored in part by EEC

(INRIA-RR-1546; ETN-93-92666) Avail: CASI HC A03/MF A01

A system to incrementally build a world model with a mobile robot in an unknown environment is described. The model is segment based. A trinocular stereo system is used to build a local map about the environment. A global map is obtained by integrating a sequence of stereo frames taken when the robot navigates in the environment. The emphasis is on the representation of the uncertainty of three dimensional (3D) segments from stereo and on the integration of segments from multiple views. The proposed representation is simple and very convenient to characterize the uncertainty of segments. A Kalman filter is used to merge line segments matched. An important characteristic of the integration strategy is that a segment observed by the stereo system corresponds only to one part of the segment in space, so the union of the different observations gives a better estimate on the segment in space. The integration of 35 stereo frames taken in the robot room was successful. ESA

A CONTRIBUTION TO THE ADAPTIVE CONTROL OF SERVO-DRIVES WITH DIRECT CURRENT MOTOR Ph.D. Thesis [EIN BEITRAG ZUR ADAPTIVEN REGELLUNG ON SERVOANTREIBEN MIT GLEICHSTROM-MOTOR]

Junmai Wang 1992 127 p In GERMAN

(ETN-93-92562) Avail: CASI HC A07/MF A02

The adaptive servosystem was built in a pilot plant and constructed according to the design of a Model Identification Adaptive System (MIAS). The adaptive system procedure is described. A digital model was developed for parameter identification and control design. A second order submodel was derived from the fourth order complete model. Hence a strong reduction of calculation costs for parameter identification. It is shown that the complete model can be regenerated from the submodel. A direct computation procedure was developed for control design. The results show that direct computation is eight times as fast as conventional computation. Test results show that a coordination of parameter identification and optimal control design allows a better servosystem efficiency. ESA

BASIC AND EVOLUTIVE CONCEPTS OF PATTERN RECOGNITION: PLURIDISCIPLINE APPROACH. APPROXIMATION CONCEPT Ph.D. Thesis [ASPECTS FONDAMENTAUX ET EVOLUTIFS DE LA RECONNAISSANCE DE FORMES. APPROCHE PLURIDISCIPLINAIRE. NOTION D'APPROXIMATION]

Claire Leschi 1991 390 p In FRENCH

(ISAL-91-0098; ETN-93-92693) Avail: CASI HC A17/MF A04

The purpose of the work is to investigate the appearance of concepts of pattern recognition approaches. Different approaches developed for pattern recognition, involving statistical models, structure, syntax, knowledge based systems and automata networks, are analyzed. The study takes into account investigations carried out in the field of psychology and neurosciences. The topics of concern involving present artificial pattern recognition investigations are discussed. Special attention is given to the classification and similarity concepts. Several tools to compare different entities from local to global concepts are presented. The concept of appproximation associated to the pre-topological structure is proposed as a basis to a similitude model for automatic perceptions. ESA

A HIGH-SPEED AUTO-TUNING PID REGULATOR BASED ON PROGRAMMABLE LOGIC DEVICES

G. Bico, M. Brambilla, Alberto Leva, N. Scarabottolo, and R. Scattolini 1992 15 p Sponsored in part by Italian Ministry of University Research and Science and Technology

(Rept-92-042; ETN-93-93039) Avail: Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy

The prototype of a fast autotuning proportional integral derivative (PID) regulator where the control algorithm is implemented by the use of logic cell array devices, so that the sampling rates higher than 20 kHz can be obtained is presented. The autotuning method is based on a preliminary use of relay feedback to bring the process output to a permanent oscillation. Experimental results obtained by employing the prototype for speed control of a DC motor are reported. ESA

MULTI-APERTURE VISION SYSTEM COUPLED TO NEURAL NETWORK PROCESSORS Progress Report

Keith Bromley 15 Dec. 1992 27 p

(Contract N00014-92-C-0167)

(AD-A259353) Avail: CASI HC A03/MF A01

As outlined in the original proposal, FEO intends to determine how effectively a neural network coupled to a multiple aperture vision system (MAVS) can be applied to the tracking task. Over the course of the contract FEO will perform seven (7) experimental simulations to evaluate the proposed tracking systems' performance. The October 15, 1992 report discussed the modeling of the first three (3) configurations. This report discusses the results of the implementation of these first three experiments on the Silicon Graphics IRIS Indigo workstation. Additionally, FEO has completed the optical modeling of experiments four through seven and completed the C++ coding of experiments four and five. FEO has enclosed a DAT tape containing executable code and source code for experiments 1 through 3. The programs can be loaded onto a Silicon Graphics workstation using the tar tape facility. A description of the operation of each program is provided. Once begun, operation of the executable programs is self-explanatory. GRA

The problem of designing controllers that minimize the peak-to-peak gain, or the 1-one optimal control problem, in the presence of structured uncertainty is discussed in this report. Four problems are discussed. First, controller design in the presence of structured-uncertainty with a general discussion of the synthesis of 1-one optimal controllers is presented. Next, the 1-one state feedback problem is discussed. Then, the advantages of nonlinear controllers in minimizing the 1-infinity induced norm are summarized. Finally, peak-to-peak performance for slowly time varying systems are considered. GRA

AUTOMATIC DESIGN OF A MAGLEV CONTROLLER IN STATE SPACE

Feng Zhao and Richard Thornton Dec. 1991 19 p

(Contract N00014-89-J-3202; NSF MIP-90-01651)

(AD-A259336; AI-M-1303) Avail: CASI HC A03/MF A01

We describe the automatic synthesis of a global nonlinear controller for

stabilizing a magnetic levitation system that is a simplified model of the German Transrapid system. A systematic state-space design method for determining the global switching points of the controller is presented. The synthesized control system can stabilize the maglev vehicle with large initial displacements from an equilibrium. Additionally, the control system possesses a much larger operating region than the classical linear feedback design for the same system. The controller is automatically synthesized by a suite of computational tools that visualize and model the state-space geometry and topology of a given system, use a novel technique of 'flow pipes' to plan global reference trajectories in state space, and navigate the system along the planned trajectories. A FAMILY OF ASYMPTOTICALLY STABLE CONTROL LAWS FOR FLEXIBLE ROBOTS BASED ON A PASSIVITY APPROACH

Leonardo Lanari (Rome Univ., Italy.) and John T. Wen (Rome Univ., Italy.) Feb. 1991 40 p

(Grants NAGw-1333; NAG9-462; NSF MSS-89-10437)

(NASA-CR-191870; NAS 1.26:191870; RPI-CIRSSE-85) Avail: CASI HC A03/MF A01

A general family of asymptotically stabilizing control laws is introduced for a class of nonlinear Hamiltonian systems. The inherent passivity property of this class of systems and the Passivity Theorem are used to show the closed-loop input/output stability which is then related to the internal state space stability through the stabilizability and detectability condition. Applications of these results include fully actuated robots, flexible joint robots, and robots with link flexibility. Author

RELIABLE FUSION OF CONTROL AND SENSING IN INTELLIGENT MACHINES Thesis

John E. McInroy Aug. 1991 166 p

(Grant NAGw-1333)

(NASA-CR-192780; NAS 1.26:192780; RPI-CIRSSE-99) Avail: CASI HC A08/MF A02

Although robotics research has produced a wealth of sophisticated control and sensing algorithms, very little research has been aimed at reliably combining these control and sensing strategies so that a specific task can be executed. To improve the reliability of robotic systems, analytic techniques are developed for calculating the probability that a particular combination of control and sensing algorithms will satisfy the required specifications. The probability can then be used to assess the reliability of the design. An entropy formulation is first used to quickly eliminate designs not capable of meeting the specifications. Next, a framework for analyzing reliability based on the first order second moment methods of structural engineering is proposed. To ensure performance over an interval of time, lower bounds on the reliability of meeting a set of quadratic specifications with a Gaussian discrete time invariant control system are derived. A case study analyzing visual positioning in robotic system is considered. The reliability of meeting timing and positioning specifications in the presence of camera pixel truncation, forward and inverse kinematic errors, and Gaussian joint measurement noise is determined. This information is used to select a visual sensing strategy, a kinematic algorithm, and a discrete compensator capable of accomplishing the desired task. Simulation results using PUMA 560 kinematic and dynamic characteristics are presented. Author

ADAPTIVE CONTROL WITH AN EXPERT SYSTEM BASED SUPERVISORY LEVEL Thesis

Gerald A. Sullivan Aug. 1991 233 p

(Grant NAGw-1333)

(NASA-CR-192742; NAS 1.26:192742; RPI-CIRSSE-115) Avail: CASI HC A11/MF A03

Adaptive control is presently one of the methods available which may be used to control plants with poorly modelled dynamics or time varying dynamics. Although many variations of adaptive controllers exist, a common characteristic of all adaptive control schemes, is that input/output measurements from the plant are used to adjust a control law in an on-line fashion. Ideally the adjustment mechanism of the adaptive controller is able to learn enough about the dynamics of the plant from input/output measurements to effectively control the plant. In practice, problems such as measurement noise, controller saturation, and incorrect model order, to name a few, may prevent proper adjustment of the controller and poor performance or instability result. In this work we set out to avoid the inadequacies of procedurally implemented safety nets, by introducing a two level control scheme in which an expert system based 'supervisor' at the upper level provides all the safety net functions for an adaptive controller at the lower level. The expert system is based on a shell called IPEX, (Interactive Process EXpert), that we developed specifically for the diagnosis and treatment of dynamic systems. Some of the more important functions that the IPEX system provides are: (1) temporal reasoning; (2) planning of diagnostic activities; and (3) interactive diagnosis. Also, because knowledge and control logic are separate, the incorporation of new diagnostic and treatment knowledge is relatively simple. We note that the flexibility available in the system to express diagnostic and treatment knowledge, allows much greater functionality than could ever be reasonably expected from procedural implementations of safety nets. The remainder of this chapter is divided into three sections. In section 1.1 we give a detailed review of the literature in the area of supervisory systems for adaptive controllers. In particular, we describe the evolution of safety nets from simple ad hoc techniques, up to the use of expert systems for more advanced supervision capabilities. Author

A DISTRIBUTED PETRI NET CONTROLLER FOR A DUAL ARM TESTBED

Atle Bjanes Jan. 1991 150 p

(Grant NAGw-1333)

(NASA-CR-192733; NAS 1.26:192733; RPI-CIRSSE-82) Avail: CASI HC A07/MF A02

This thesis describes the design and functionality of a Distributed Petri Net Controller (DPNC). The controller runs under X Windows to provide a graphical interface. The DPNC allows users to distribute a Petri Net across several host computers linked together via a TCP/IP interface. A sub-net executes on each host, interacting with the other sub-nets by passing a token vector from host to host. One host has a command window which monitors and controls the distributed controller. The input to the DPNC is a net definition file generated by Great SPN. Thus, a net may be designed, analyzed and verified using this package before implementation. The net is distributed to the hosts by tagging transitions that are host-critical with the

appropriate host number. The controller will then distribute the remaining places and transitions to the hosts by generating the local nets, the local marking vectors and the global marking vector. Each transition can have one or more preconditions which must be fulfilled before the transition can fire, as well as one or more post-processes to be executed after the transition fires. These implement the actual input/output to the environment (machines, signals, etc.). The DPNC may also be used to simulate a Great SPN net since stochastic and deterministic firing rates are implemented in the controller for timed transitions. Author

DISTANCE ESTIMATION AND COLLISION PREDICTION FOR ON-LINE ROBOTIC MOTION PLANNING

K. J. Kyriakopoulos and G. N. Saridis Jan. 1991 28 p
(Grant NAGw-1333)
(NASA-CR-192737; NAS 1.26:192737; RPI-CIRSSE-25) Avail: CASI HC A03/MF A01

An efficient method for computing the minimum distance and predicting collisions between moving objects is presented. This problem has been incorporated in the framework of an in-line motion planning algorithm to satisfy collision avoidance between a robot and moving objects modeled as convex polyhedra. In the beginning the deterministic problem, where the information about the objects is assumed to be certain is examined. If instead of the Euclidean norm, L(sub 1) or L(sub infinity) norms are used to represent distance, the problem becomes a linear programming problem. The stochastic problem is formulated, where the uncertainty is induced by sensing and the unknown dynamics of the moving obstacles. Two problems are considered: (1) filtering of the minimum distance between the robot and the moving object, at the present time; and (2) prediction of the minimum distance in the future, in order to predict possible collisions with the moving obstacles and estimate the collision time. TASK SEQUENCE PLANNING IN A ROBOT WORKCELL USING AND/OR NETS

Tiehua Cao and Arthur C. Sanderson Jun. 1991 25 p Sponsored in part by the Defense Logistics Agency
(Grant NAGw-1333)
(NASA-CR-192735; NAS 1.26:192735; RPI-CIRSSE-94) Avail: CASI HC A03/MF A01

An approach to task sequence planning for a generalized robotic manufacturing or material handling workcell is described. Given the descriptions of the objects in this system and all feasible geometric relationships among these objects, an AND/OR net which describes the relationships of all feasible geometric states and associated feasibility criteria for net transitions is generated. This AND/OR net is mapped into a Petri net which incorporates all feasible sequences of operations. The resulting Petri net is shown to be bounded and have guaranteed properties of liveness, safeness, and reversibility. Sequences are found from the reachability tree of the Petri net. Feasibility criteria for net transitions may be used to generate an extended Petri net representation of lower level command sequences. The resulting Petri net representation may be used for on-line scheduling and control of the system of feasible sequences. A simulation example of the sequences is described. Author (revised)

AVOIDING SPACE ROBOT COLLISIONS UTILIZING THE NASA/GSFC TRI-MODE SKIN SENSOR Final Technical Report, 15 Nov. 1991 - 14 Dec. 1992

F. B. S. Prinz and S. Mahalingam 14 Dec. 1992 13 p
(Grant NAG5-1468)
(NASA-CR-192292; NAS 1.26:192292) Avail: CASI HC A03/MF A01

A capacitance based proximity sensor, the 'Capaciflector' (Vranish 92), has been developed at the Goddard Space Flight Center of NASA. We had investigated the use of this sensor for avoiding and maneuvering around unexpected objects (Mahalingam 92). The approach developed there would help in executing collision-free gross motions. Another important aspect of robot motion planning is fine motion planning. Let us classify manipulator robot motion planning into two groups at the task level: gross motion planning and fine motion planning. We use the term 'gross planning' where the major degrees of freedom of the robot execute large motions, for example, the motion of a robot in a pick and place type operation. We use the term 'fine motion' to indicate motions of the robot where the large dofs do not move much, and move far less than the mirror dofs, such as in inserting a peg in a hole. In this report we describe our experiments and experiences in this area. Derived from text

USE OF NEURAL NETWORKS IN THE ANALYSIS OF COMPLEX SYSTEMS

R. E. Uhrig (Tennessee Univ., Knoxville.) 1992 10 p Presented at the WNN-1992: Workshop on Neural Networks, Alburn, AL, 10-12 Feb. 1992
(Contracts DE-FG07-88ER-12824; DE-AC05-84OR-21400)
(DE93-003554; CONF-9202142-1) Avail: CASI HC A02/MF A01

The application of neural networks, alone or in conjunction with other advanced technologies (expert systems, fuzzy logic, and/or genetic algorithms) to some of the problems of complex engineering systems has the potential to enhance the safety reliability and operability of these systems. Complex systems or parts of such systems that can be isolated from the total system are addressed. Typically, the measured variables from the systems are analog variables that must be sampled and normalized to expected peak values before they are introduced into neural networks. Often data must be processed to put it into a form more acceptable to the neural network. The neural networks are usually simulated on modern high-speed computers that carry out the calculations serially. However, it is possible to implement neural networks using specially designed microchips where the network calculations are truly carried out in parallel, thereby providing virtually instantaneous outputs for each set of inputs. Specific applications described include: diagnostics: state of the plant; hybrid system for transient identification; detection of change of mode in complex systems; sensor validation; plant-wide monitoring; monitoring of performance and efficiency; and analysis of vibrations. Although the specific examples described deal with nuclear power plants or their subsystems, the techniques described can be applied to a wide variety of complex engineering systems. DOE

MONITORING OF VIBRATING MACHINERY USING ARTIFICIAL NEURAL NETWORKS
I. E. Alguindigue, A. Loskiewicz-Buczak, and R. E. Uhrig 1991 6 p Presented at the 2nd Government Neural Network Applications Workshop, Huntsville, AL, 10-12 Sep. 1991
(Contracts DE-FG07-88ER-12824; DE-AC05-84OR-21400)
(DE93-003566; CONF-9109447-1) Avail: CASI HC A02/MF A01

The primary source of vibration in complex engineering systems is rotating machinery. Vibration signatures collected from these components render valuable information about the operational state of the system and may be used to perform diagnostics. For example, the low frequency domain contains information about unbalance, misalignment, instability in journal bearing, and mechanical looseness; analysis of the medium frequency range can render information about faults in meshing gear teeth; while the high frequency domain will contain information about incipient faults in rolling-element bearings. Trend analysis may be performed by comparing the vibration spectrum for each machine with a reference spectrum and evaluating the vibration magnitude changes at different frequencies. This form of analysis for diagnostics is often performed by maintenance personnel monitoring and recording transducer signals and analyzing the signals to identify the operating condition of the machine. With the advent of portable fast Fourier transform (FFT) analyzers and 'laptop' computers, it is possible to collect and analyze vibration data an site and detect incipient failures several weeks or months before repair is necessary. It is often possible to estimate the remaining life of certain systems once a fault has been detected. RMS velocity, acceleration, displacements, peak value, and crest factor readings can be collected from vibration sensors. To exploit all the information embedded in these signals, a robust and advanced analysis technique is required. Our goal is to design a diagnostic system using neural network technology, a system such as this would automate the interpretation of vibration data coming from plant-wide machinery and permit efficient on-line monitoring of these components. This four-week school consisted of seven short courses together with seminars, computer workshops, and experimental labs supplementing the lectures. The first week of the school focussed on introductory material. The final three weeks were devoted to lectures on specific topics. The goal of the summer school is to provide graduate students and postdoctoral fellows with an introduction to the study of complex behavior in mathematical, physical, and living systems. The emphasis is on developing techniques to the study of specific systems. Topics include nonlinear dynamics, neural nets and computational neurobiology, lattice gases, pattern formation in biological systems, and design of parallel-processing algorithms. GRA

HIGHER ORDER CROSSINGS Final Report, 1 Oct. 1988 - 30 Sep. 1992
Benjamin Kedem Sep. 1992 10 p
(Grant AF-AFOSR-0049-89)
(AD-A258727; AFOSR-92-0953TR) Avail: CASI HC A02/MF A01

In the research on higher order crossings (HOC) they have solved some of the mathematical/statistical problems associated with a certain contraction mapping method for frequency detection and estimation in the presence of noise. They can now tell how to shrink the filters bandwidth to achieve almost sure convergence of the HOC sequence. The sample first order autocorrelation in filtered data is called a higher order correlation, or HOC again. Given the close association between the two types of HOC, these two types of HOC are in fact equivalent under some conditions the nonlinear least squares precision using O(N) computational complexity, but without any matrix inversion and/or other complicated calculations.

LEAST SQUARE METHODS FOR SOLVING SYSTEMS OF INEQUALITIES WITH APPLICATION TO AN ASSIGNMENT PROBLEM Final Report
Janet H. Spoonamore Nov. 1992 89 p
(AD-A258682; CERL-TM-FF-93/03) Avail: CASI HC A05/MF A01

This research addresses algorithmic approaches for solving two related types of optimization problems: (1) solving a specific type of assignment problem using continuous methods; and (2) solving systems of inequalities (and equalities) in a least square sense. The specific assignment problem has piece-wise linear additive separable server cost functions, which are continuous everywhere except at zero, the point of discontinuity for the assignment condition. Continuous relaxation of the consults yields a linear programming problem. Solving the dual of the linear programming problem yields the complementarity conditions for a primal solution, a system of linear inequalities and equalities. Adding equations to this system to enforce a solution in the relaxed solution set yields an augmented system, not necessarily linear. Methods to solve this system, a system of linear inequalities and non-linear equations, in a least square sense are developed. Common algorithmic approaches to solve nonlinear least square problems are adapted to solve systems of inequalities. Local and global convergence results are developed. Rates of convergence are analyzed. Applications of the algorithms for solving the piece-wise linear assignment subproblem are developed and analyzed. Application of the algorithms for solving linear programming problems, and linear and convex complementarity problems are described. GRA

LINEAR ALGEBRA APPLIED TO PHYSICS DETERMINING SMALL VIBRATIONS IN CONSERVATIVE ELASTIC SYSTEMS Final Report
Shirley J. Hamilton 4 Nov. 1992 128 p
(AD-A259114; USAFA-TR-92-5) Avail: CASI HC A07/MF A02

The purpose of this application was to create a supplement to an undergraduate course in linear algebra. This application was drawn from the field physics and shows how linear algebra is used to solve systems of second order linear differential equations, which could be used to model

small vibrations in molecules. This application was designed so that an instructor of linear algebra could use it either as an independent study project or as an integrated part of the course. GRA

EXPLICIT REPRESENTATIONS OF LYAPUNOV FUNCTIONS FOR STABLE ANALYTIC SYSTEMS
S. P. Banks Aug. 1990 11 p
(RR-402; ETN-92-92762) Avail: CASI HC A03/MF A01

An explicit series expansion for a Lyapunov function for a nonlinear analytic system is presented using Lie series. In the general case of not necessarily exponentially stable systems, the state can be augmented and the problem reduced to that of a nonautonomous exponentially stable system. The solution is given as a Taylor series expansion with an explicit characterization of the coefficients of the monomials in the state space coordinates. These coefficients can be evaluated approximately, possibly by using a computer algebra package. ESA

GLOBAL STABILIZATION OF LINEAR ANALYTIC SYSTEMS
S. P. Banks and B. J. Mass Aug. 1990 16 p
(RR-403; ETN-92-92763) Avail: CASI HC A03/MF A01

A technique for the choice of a stable, and globally attracting switching surface for a linear analytic system assuming discontinuous feedback, is implemented. The method is based on the solution of a pair of coupled partial differential equations, and a geometrical alternative is derived. Only mild conditions are required to be satisfied by the system. A generalization to systems expressed as polynomials in the control is considered. The basic partial differential equation for the switching manifold is derived and the stability of the switching manifold is shown. The method can be implemented by solving a pair of coupled partial differential equations or by satisfying geometrical conditions. It is demonstrated that even in simple examples, this can lead to strange switching surfaces which could not be predicted by other methods. ESA

CALCULATION OF THE JORDAN FORM OF A MATRIX WITH RATIONAL COEFFICIENTS (USING THE FORMAL COMPUTATION SYSTEM AXIOM) [CALCUL DE AL FORME DE JORDAN D'UNE MATRICE A COEFFICIENTS RATIONNELS (EN UTILISANT LE SYSTEME DE CALCUL FORMEL AXIOM)]
Isabelle Gil Apr. 1992 35 p In FRENCH
(RR-882-M; ETN-93-92711) Avail: CASI HC A03/MF A01

An algorithm for computing the Jordan form of a square matrix with rational coefficients using the computer algebra system Axiom and an IBM R.S.6000/320 with 24 Mb memory is presented. The general method, which is essentially based on the use of the Frobenius form of the matrix in order to compute its Jordan form, is described. The algorithm 'froben' which computes the Frobenius form of a matrix is streamlined, the transformation from the Frobenius form to the Jordan form is detailed, and the so called algorithm 'Jordform' is given. The complexity of this algorithm is studied and the algorithm is proved to be polynomial. The computation of the matrix exponential using the Jordan form is explained. ESA

A GENTZEN-SYSTEM FOR CTL
J. V. Echague Nov. 1991 22 p
(RR-865-I-IMAG-122-LIFIA; ETN-93-92719) Avail: CASI HC A03/MF A01

A sound and complete Gentzen System (G(CTL)) for Computation Tree Logic (CTL) is presented. Two proofs of completeness are given: the first one shows that G(CTL) is equivalent to the system proposed in a referenced study and the second one uses Henkin method. The latter gives, as a by product, a weak version of the normal form theorem for G(CTL): the cut rule can be removed from G(CTL) without changing the set of theorems. In systems for classical propositional logic this result entails decidability. However, this is not the case here, due to the existence of essential induction rules. Finite theories and a deduction theorem are also introduced. ESA

C-INTEGRABLE NONLINEAR PDE'S. 1
F. Calogaro (Istituto Nazionale di Fisica Nucleare, Rome, Italy.) and Ji Xiaoda (Istituto Nazionale di Fisica Nucleare, Rome, Italy.) 20 Feb. 1991 40 p Submitted for publication
(Preprint-787; ETN-93-92897) Avail: CASI HC A03/MF A01

A technique to generate C-integrable nonlinear Partial Differential Equations (PDE's) is reported. C-integrable nonlinear PDE's are nonlinear PDE's solvable by an appropriate change of variables. The C-integrable nonlinear PDE's provide a theoretical environment to understand nonlinear phenomena such as the elastic scattering of solitons, a particular kind of inelastic scattering of solitons, and the possibility to solve problems such as certain initial boundary value problems. The technique introduced is based on a change of dependent variables. The equations of C-integrable PDE's obtained via linear and quadratic conservation laws are presented. The equations for n = 1, n = 2, and for arbitrary n are discussed. ESA

FAST THEOREM PROVING IN INTUITIONISTIC PROPOSITIONAL LOGIC
Max I. Kanovich (Tver State Univ., Russia.) Dec. 1991 18 p Sponsored in part by Netherlands Organization for Scientific Research
(CWI-CS-R9157; ETN-92-92498) Copyright Avail: CASI HC A03/MF A01

The decision problem for Intuitionistic propositional logic (Int) is considered: a computational semantics is introduced for relational knowledge bases, the semantics naturally arising from practical experience of databases and knowledge bases; it is stated that the corresponding logic coincides exactly with the intuitionistic one; methods of proof of the general theorems turn out to be very useful for designing new efficient algorithms. In particular, on the basis of a specific calculus of tasks related to this computational

interpretation, an efficient prove or disprove algorithm is designed with the following properties: for an arbitrary intuitionistic propositional formula, the algorithm runs in linear deterministic space; for every 'reasonable' formula, the algorithm runs in 'reasonable' time, despite the fact that in theory it has an 'exponential' uniform lower bound. Note that in view of the PSPACE completeness of propositional intuitionistic logic an exponential execution time can be expected in the worst case. But such cases only arise for very unnatural formulas, that is for formulas that even in their best solution need maximal crosslinking of all their possible subtasks. The theorem prover was implemented in PASCAL. ESA

SINGULAR POINTS AT INFINITY OF QUADRATIC SYSTEMS OF DIFFERENTIAL EQUATIONS

J. W. Reyn and R. E. Kooij 1991 52 p

(Rept-91-58; ETN-93-92019) Copyright Avail: CASI HC A04/MF A01

Singular points at infinity of quadratic systems of differential equations in the plane are studied. A detailed description of the possible singular points is given as well as the conditions on the coefficients for which they occur. The only restriction is that it is assumed that the singular point is at the end of the x axis. In particular, the index of the point and its multiplicity in the tangential and transversal directions with respect to the Poincare circle are determined. ESA

N93-20853# Technische Univ., Delft (Netherlands). Faculty of Mathematics and Informatics.

RESOLUTION IN MODAL PROPOSITIONAL LOGIC

R. Sommerhalder and S. C. vanWestrhenen 1991 49 p

(Rept-91-59; ETN-93-92020) Copyright Avail: CASI HC A03/MF A01

An extension of the classical resolution method to the propositional modal logics K, D, T S(sub 4), and S(sub 5) is addressed. The intuition behind the rules as defined has not become obvious and the rules seem somewhat complicated. A system for resolution in modal propositional logics which is intuitively transparent is defined. Soundness and completeness proofs for the systems K, D, T S(sub 4), and S(sub 5) are detailed. A definition of the rules is given, making a distinction between resolution rules and simplification rules. In contrast to the rules defined by previous researchers, the resolution rules are independent of the modal system but the simplification rules depend on the system at hand. Performing a resolution step is defined as applying a resolution rule and subsequently applying any number of simplification rules. Although the rules differ, this is basically the same as in the previous systems. The soundness and completeness proofs are of course not identical to, but often very similar to, those of the previous work. The completeness proof is based on a normalized version of a semantic tableaux represented as trees. These trees are different from the semantic trees used by previous researchers. Also, the rules applied at the nodes of the tree are the same in all systems apart from D, whereas the earlier work has tree rules that depend on the system at hand. ESA

ON HOMOGENEOUS QUASILINEAR EVOLUTION EQUATION

Shuanhu Li 1991 21 p

(Rept-91-65; ETN-93-92021) Copyright Avail: CASI HC A03/MF A01

Quasi-linear evolution equations of the form u(dot) + A(u)u = 0, are studied in a general Banach space E(sub 0). A(u) is assumed, for each fixed argument, the infinitesimal generator of a strongly continuous analytic semigroup, such that the domain E(sub 1) of A(u) is independent of u. The equation is studied in complex interpolation spaces E(sub theta) between E(sub 0) and E(sub 1), and it is shown to possess a unique maximal solution, which depends (Lipschitz-) continuously upon its initial value. STOCHASTIC ORDERINGS ON PARTIAL SUMS OF RANDOM VARIABLES AND ON COUNTING MEASURES OF RANDOM INTERVALS [ORDONNANCEMENT STOCHASTIQUE DE SOMMES PARTIELLES DE VARIABLES ALEATOIRES ET DE MESURES DE COMPTAGE D'INTERVALES ALEATOIRES]

Alain Jean-Marie and Zhen Liu 11 Apr. 1991 40 p

(INRIA-RR-1422; ETN-93-92642) Avail: CASI HC A03/MF A01

Relationships are established between the stochastic ordering of random variables, of their random partial sums, and of counting measures of random intervals. Two types of results are obtained. Conditions are given under which a stochastic ordering between sequences of random variables is inherited by (vectors of) random partial sums of these variables. These results extend and generalize theorems of Borovkov, Ross, and Stoyan. Conditions are provided under which the counting measures of a given point process in two ordered random intervals are also ordered. These results are applied to several comparison problems in queueing systems. It is shown that if the service times in two M/GI/1 systems compare for some stochastic ordering, the busy periods compare for the same ordering. Various bounds on waiting times and response times are provided for queues with bulk arrivals. The cyclic and Bernoulli policies for customer allocation to parallel queues are compared in the transient regime. Stochastic ordering relations are established for the cycle times in polling systems. ESA

THE ORIGINS OF LAMBDA-CALCULUS AND TERM REWRITING SYSTEMS [LES ORIGINES DU LAMBDA-CALCUL ET DES SYSTEMES DE REECRITURE]

Yves Bertot Oct. 1991 21 p

(INRIA-RR-1543; ETN-93-92665) Avail: NTIS HC A03/MF A01

Origin functions are used to describe the notions of descendance and residuals in reduction systems such as the lambda calculus and linear term rewriting systems. The original functions of the lambda calculus and for term rewriting systems that implement this calculus, lambda-sigma and lambda-Env, are compared. The notions of origin are shown not to correspond exactly, but an extension of the notion of origin that permits the correct computation of lambda calculus origins for derivations of lambda-Env is described. The extension is shown not sufficient to give the same result of lambda-sigma and another extension for that system is given. This work is interesting as it provides a distinction between the two term rewriting systems. This work has applications in the debugging of languages based on the lambda calculus or environments. ON A FUNDAMENTAL NOTION OF EQUIVALENCE IN LINEAR SYSTEMS THEORY

A. C. Pugh, N. P. Karampetakis (Aristotle Univ. of Thessaloniki, Greece.), G. E. Hayton (Hull Univ., England.), and A. I. G. Vardulakis (Aristotle Univ. of Thessaloniki, Greece.) Jun. 1992 15 p

(Maths-Rept-A-162; ETN-92-92758) Avail: CASI HC A03/MF A01

A fundamental form of equivalence between two homogeneous systems of ordinary differential equations is defined in terms of isomorphisms between the 'finite' and 'infinite' solution sets. This equivalence is an alternative characterization of the transformation of full equivalence in the case of nonsingular matrices. This characterization enabled the true nature and role of the conditions of full equivalence in the case where square and nonsingular polynomial matrices are involved. Thus the McMillan degree conditions are seen to be vital in a quite fundamental way. It is concluded that the transformation of full equivalence, with its various characterizations, is the basic transformational tool for the simultaneous study of the finite and finite frequency behavior of general autonomous systems. FORCING COLORATIONS, INTERVALS AND THE PERFECT GRAPH CONJECTURE (AN EXTENDED ABSTRACT)

Andras Sebo Nov. 1991 11 p

(RR-867-M; ETN-93-92699) Avail: CASI HC A03/MF A01

A study on Strong Perfect Graph Conjecture (SPGC) is presented. One direction of general results is summarized with some notions defined: Lovasz's theorem on partitionability; Padberg's corollaries; Chvatal's remarks on transversals. The characterization of unique colorability is addressed. A step forward in proving that a minimal imperfect graph with 'enough combinatorial forcing' is a hole or an antihole is attempted. The following generalized theorem is proved: if a minimal imperfect graph G has adjacent forced vertices, then G is a hole or antihole. Theorems relating to the following are given: critical edges and the PGC, unique colorability and

critical edges; local structure and (omega - 1) cliques. A selection of reformulations of the SPGC which follow from the results of the study are given. ESA

CONFORMAL LENGTH OF GRAPHS Ph.D. Thesis [KONFORMLAENGE VON GRAPHEN]
Michelle Brehm 1992 87 p In GERMAN
(ETN-93-93419) Avail: CASI HC A05/MF A01

A definition of the conformal length of a graph is given as an invariant function. It is shown that it is difficult to determine exactly the conformal length of a given graph, hence the interest of giving good lower and upper bounds of the conformal volume. Lower bounds are derived from the number of edges between the minimal sections of the graph and the number of corners of the minimal section. The upper bound is derived, using a special realization. It is shown that the two bounds are only distinguished by a pi/2 factor. The conformal length is exactly computed for the class of the trees. ESA

GRAPHS WITH MAXIMUM NUMBER OF MINIMUM CUTS
Jeno Lehel (Hungarian Academy of Sciences, Budapest.), Frederic Maffray (Centre National de la Recherche Scientifique, Grenoble, France.), and Myriam Preissmann (Centre National de la Recherche Scientifique, Grenoble, France.) Apr. 1992 17 p
(Grant MRT/MICECO-058936E12215E)
(RR-880-M; ETN-93-92709) Avail: CASI HC A03/MF A01

The structure of minimum cuts, extremal multigraphs and extremal simple graphs are addressed. The following is considered: let sigma(n,k) be the maximum number of minimum cuts in a k connected multigraph with n vertices. Sigma(n,k) are determined and extremal graphs are characterized for every n and k. The same problem is also investigated for graphs with no multiple edges. ESA

THE WEYL METHOD FOR SIMULTANEOUS CALCULATION OF POLYNOMIAL ROOTS (FIRST PART) [LA METHODE DE WEYL POUR LE CALCUL SIMULTANE DES RACINES D'UN POLYNOME (1ERE PARTIE)]
R. Coleman Apr. 1992 26 p In FRENCH
(RR-881-M; ETN-93-92710) Avail: CASI HC A03/MF A01

A Weyl method which applies to all polynomials, requires no approximation, and calculates all the roots simultaneously, is analyzed. The Weyl algorithm is studied theoretically. The algorithm is composed of four steps: polynomial normalization, construction of an epsilon-inclusion, division of S(epsilon) into connected components, and calculation of the number of roots in each connected component of S(epsilon). A linear algorithm to draw triconnected cubic planar graphs planar on a linear sized hexagonal grid such that in at most one edge are bends is presented. This algorithm can be used to draw this class of graphs planar with straight lines on a n/2 by n/2 grid, improving the best known grid bounds by a factor 4. A demonstration of how to draw planar graphs of degree at most 3 planar with straight lines such that the minimum angle is greater than or equal to pi/6 is given. ESA

LOCAL AND GLOBAL PROPERTIES OF CURVE CONGRUENCIES IN EUCLIDEAN THREE DIMENSIONAL SPACE Ph.D. Thesis [LOKALE UND GLOBALE EIGENSCHAFTEN VON KURVEZNKONGRUENZEN IM DREIDIMENSIONALEN EUKLIDISCHEN RAUM]
Udo Mueller 1990 163 p In GERMAN
(ETN-93-93411) Avail: CASI HC A08/MF A02

A computation giving a survey of the invariants of a curve congruency is developed. The geometry of curve congruencies can be described by invariant derivation equations, which lead to geometric determinants. With the necessary integrability conditions, it is shown that a proper selection of determinants is sufficient for the existence of a congruency. Propositions are produced in the classification and existence of striction points and new classes of integral variants. Differential geometry of the immersion of a foliation is dealt with. ESA

EFFICIENT IMPLEMENTATION OF A FUNCTIONAL LANGUAGE FOR THE DEFINITION OF PRACTICABLE, DENOTATIONAL SEMANTICS Ph.D. Thesis [EFFIZIENTE IMPLEMENTIERUNG EINER FUNKTIONALEN SPRACHE ZUR DEFINITION AUSFUEHRBARER DENOTATIONALER SEMANTIK]
Rolf Bahlke 1990 145 p In GERMAN
(ETN-93-93413) Avail: CASI HC A07/MF A02

The emphasis is put on an efficient implementation of EVA functional language, which constitutes the basis of semantic definition language. A translation function is derived by a series of transformation steps. The terms of the functional core of EVA are translated into a code for an abstract machine. A series of important optimizations of EVA machines are presented. It is shown that the optimization of required memory selective management of environment entries is developed. Based on the former abstract model of EVA machine, a concrete version is developed which is used as a basis for an implementation of EVA on a real machine. The reference counting method is used as memory management. ESA

A PRELIMINARY STUDY OF THE GRIBOV AMBIGUITY IN LATTICE SU(3) COULOMB GAUGE
C. Parrinello, S. Petrarca, and A. Vladikas 16 Jul. 1991 13 p Submitted for publication Sponsored in part by EEC
(Preprint-816; ETN-93-92922) Avail: CASI HC A03/MF A01

Simulations of pure SU(3) gauge theory on a 1000 by 20 lattice at beta = 6.0 in the Coulomb gauge are reported. From this gauge condition the Gribov ambiguity appears to be maximal, in the sense that the gauge fixing process is highly unstable with respect to variations of the starting configuration via random gauge transformations. A heuristic explanation of the larger number of Gribov copies in such a gauge with respect to the Landau gauge is given. ESA

ON THE ORIGIN OF SL(nC) CURRENT ALGEBRA IN GENERALIZED TWO DIMENSIONAL GRAVITY
K. Yoshida (Istituto Nazionale di Fisica Nucleare, Rome, Italy.) 17 Jul. 1991 24 p Submitted for publication
(Preprint-818; ETN-93-92923) Avail: CASI HC A03/MF A01

The origin of local SL(nC) symmetry in induced gravity in two dimensions, enlarged with so called W fields is considered on higher genus Riemann surface. In the case of W(sub 2) the mathematical structure of Polyakov's two dimensional gravity precisely corresponds to the projective structure of Riemann surfaces. The lack of a consistent generalization of the 'Lagrangian' formulation of two dimensional induced gravity on an arbitrary Riemann surface is underlined. The generalization to higher W(sub n) algebras is presented. ESA

ULTRAMETRICITY IN AN INHOMOGENEOUS SIMPLEST SPIN GLASS MODEL
Silvio Franz (Istituto Nazionale di Fisica Nucleare, Rome, Italy.), Giorgio Parisi (Tor Vergata Univ., Rome, Italy.), and Miguel Angel Virasoro (Istituto Nazionale di Fisica Nucleare, Rome, Italy.) 18 Jul. 1991 6 p Submitted for publication
(Preprint-819; ETN-93-92924) Avail: CASI HC A02/MF A01

The limits of validity of ultrametricity are studied. A system composed of two SK models weakly coupled among themselves is considered. It is assumed that each one of them separately obeys ultrametricity while it is an open question whether the relevant configurations of the total system intended as a whole can be so classified. For zero coupling the answer is trivially negative. For arbitarily small interaction energy, an analysis of the associated generalized random energy models suggests that ultrametricity is recovered. The distribution of the thermodynamical states, in mean field models in inhomogeneous spin glasses, showed that the ultrametric organization of the states is uneffected by inhomogeneity. In the replica formalism, the maximization of the correlations between the states of the two systems is observed. It is possible to introduce an additional interaction term in the replicated hamiltonian so as to decrease this kind of correlation. ESA

UMBILICI, LINES OF CURVATURE, FOCAL SURFACES AND THEIR METAMORPHOSIS Ph.D. Thesis [NABELPUNKTE, KRUEMMUNGSLINIEN, BRENNFLAECHEN UND IHRE METAMORPHOSEN]
Martin Lang 1990 213 p In GERMAN
(ETN-93-93414) Avail: CASI HC A10/MF A03

Fundamental and general statements of surface theory are repsesented. Singular differential equations of the first order are introduced in two variables, as a generalization of approximation differential equations of the curvature line network around umbilici and of other geometrically interesting approximation differential equations. Principles of the invariant theory are caused in the two dimensional and multidimensional differential geometry. A modern introduction to the algebraic invariant theory with differential geometric orientation is presented. Umbilici are examined, using the invariant theory. The generic properties, the generic development/disappearing, and the generic metamorphoses of umbilici are reported. ESA

HYBRID SINGLE-PARTICLE LAGRANGIAN INTEGRATED TRAJECTORIES (HY-SPLIT): VERSION 3.0: USER'S GUIDE AND MODEL DESCRIPTION
Roland R. Draxler Jun. 1992 78 p
(PB92-218114; NOAA-TM-ERL-ARL-195) Avail: CASI HC A05/MF A01

The algorithms and equations used in the calculation of long-range pollutant transport and dispersion are presented from the meteorological data sources through the calculation of air concentrations. The model calculation methods are a hybrid between Eulerian and Lagrangian approaches. A single pollutant particle represents the initial source. Advection and diffusion calculations are made in a Lagrangian framework. As the dispersion of the initial particle spreads it into regions of different wind direction or speed, the single particle is divided into multiple particles to provide a more accurate representation of the complex flow field. Air concentrations are calculated on a fixed three dimensional grid by integrating all particle masses over the sampling time. The model code can be run on a personal computer. GRA

THE GENERALIZED VORONOI DIAGRAM FOR A SET OF POLYGONS: ALGORITHMS, OPERATION AND APPLICATIONS TO SHAPE ANALYSIS Ph.D. Thesis [DIAGRAMME DE VORONOI GENERALISE POUR UN ENSEMBLE DE POLYGONES: ALGORITHMES, REALISATION ET APPLICATION EN ANALYSE DE FORMES]
Hai-Tao Hu 1991 201 p In FRENCH
(ETN-93-92689) Avail: CASI HC A10/MF A03

Theoretical and practical problems for the construction of the Generalized Voronoi Diagram (GVD) for a set of polygons are presented. The basis of this work is the construction on multi-scales. In order to construct the GVD of the interior of a polygon, Lee's algorithm, which meets some counterexamples, was modified. The correct condition for terminating a merge process of two subdiagrams based on the concept of visibility between objects is given. For the construction of the GVD of the exterior of a set of polygons, an incrementation algorithm combined with the divide and conquer strategy was implemented. A method to compute a separator in linear time at each step for the incrementation is proposed. This method constitutes the key of this algorithm. To construct a separator efficiently, an algorithm that can simultaneously find the convex hull and the information related to the inclusion of two convex polygons called simple intersection is also proposed. By determining, a priori, the shape and number of continuous branches of a separator, a method of semi-dynamic construction, which updates in linear time a GVD of a set of polygons when a new complex polygon is randomly inserted into the set of polygons, is included. The application of the GVD to pattern analysis is studied. The continuous skeletons of the polygonal patterns are shown to be the inherent features of the GVD. ESA

THE SHAPLEY VALUE FOR COOPERATIVE GAMES UNDER PRECEDENCE CONSTRAINTS
U. Faigle and W. Kern Jan. 1992 25 p
(MEMO-1025; ETN-93-92453) Avail: CASI HC A03/MF A01

Cooperative games where only those coalitions of players are feasible that respect a given precedence structure on the set of players are considered. Strengthening the classical symmetry axiom, three axioms that give rise to a unique Shapley value in this model are obtained. The Shapley value is seen to reflect the expected marginal contribution of a player to a feasible random coalition, which allows the Shapley value to be evaluated nondeterministically. Every exact algorithm for the Shapley value is shown to require an exponential number of operations already in the classical case and even restriction to simple games is shown to be hash-P-hard in general. The multi choice cooperative games of Hsiao and Raghavan can be treated in this context, which leads to a Shapley value that does not depend on preassigned weights. ESA

WELL-POSEDNESS AND STABILIZABILITY OF A VISCOELASTIC EQUATION IN ENERGY SPACE Research Report
Olif J. Staffans Jul. 1992 53 p
(PB93-111920; RR-A312; ISBN-951-22-1154-8) Avail: CASI HC A04/MF A01

The authors consider the well-posedness and exponential stabilizability of the abstract Volterra integrodifferential system in a Hilbert space. In a typical viscoelastic interpretation of the equation, one lets upsilon represent velocity, upsilon' represent acceleration, sigma represent stress, -D(sup *) sigma represent the divergence of the stress nu upsilon = or greater than 0 pure viscosity (usually equal to zero), D(upsilon) represent the time derivative of the strain, and alpha represent the linear stress relaxation modulus of the material. The problems that they treat are one-dimensional in the sense that they require alpha to be scalar. First, they prove well-posedness in a new semigroup setting, where the history component of the state space describes the absorbed energy of the system rather than the history of the function upsilon. To get the well-posedness they need, extremely weak assumptions are made on the kernel; it suffices if the system is 'passive', i.e., alpha is of positive type; it may even be a distribution. The system is exponentially stabilizable with a finite dimensional continuous feedback if and only if the essential growth rate of the original system is negative. Under additional assumptions on the kernel they prove that this is indeed the case. The final part of the treatment is based on a new class of kernels. These kernels are of positive type, but they need not be completely monotone. Still, they have many properties similar to those of completely monotone kernels, and a number of results that have been proved earlier for completely monotone kernels can be extended to the new class. Many computations on sparse matrices have a phase that predicts the nonzero structure of the output, followed by a phase that actually performs the numerical computation. We study structure prediction for computations that involve nonsymmetric row and column permutations and nonsymmetric or non-square matrices. Our tools are bipartite graphs, matchings, and alternating paths. Our main new result concerns LU factorization with partial pivoting. We show that if a square matrix A has the strong Hall property (i.e., is fully indecomposable) then an upper bound due to George and Ng on the nonzero structure of L + U is as tight as possible. To show this, we prove a crucial result about alternating paths in strong Hall graphs. The alternating-paths theorem seems to be of independent interest: it can also be used to prove related results about structure prediction for QR factorization. DOE

EXTENSION OF HIGH-RESOLUTION SCHEMES FOR SYSTEMS TO MULTIPLE DIMENSIONS
W. J. Rider 1992 11 p Presented at the AIAA Computational Fluid Dynamics Conference, Orlando, FL, 21-23 Jun. 1992
(Contract W-7405-eng-36)
(DE93-003734; LA-UR-92-3363; CONF-9206313-1) Avail: CASI HC A03/MF A01

The extension of high-resolution schemes from one to two or more dimensions can be accomplished in a number of ways. Several methods for extending one-dimensional Godunov-type schemes to two-dimensional problems are discussed. The different algorithms are described, and results are given for several standard test problems. These tests reveal that standard dimensional splitting has a number of advantages in terms of performance and efficiency. DOE

OPTIMAL SAMPLING PLANS FOR ITEMS REPRESENTING TWO POPULATION GROUPS Final Report
Randal S. Wendell Apr. 1992 77 p
(AD-A259429; DLA-92-P20041) Avail: CASI HC A05/MF A01

A problem of determining optimal sampling plans is examined. The items to be sampled belong to two distinct populations which are partitioned into sub-populations that require sampling plans. Three mathematical programming models are investigated that minimize the total sample size while also ensuring that the proportion of samples closely resemble the

actual population proportions. Both linear and non-linear programming techniques are used to find an optimal sampling plan. Finally, comparisons are made from the solutions generated by 'real' data for all three models. GRA

THE DEVELOPMENT OF THE NAVY'S MULTIVARIATE OPTIMUM INTERPOLATION ANALYSIS SYSTEM Final Report

E. H. Barker Jul. 1992 41 p

(AD-A258569; NOARL-44) Avail: CASI HC A03/MF A01

The equations for the Navy's multivariate optimum interpolation (MVOI) analysis system for atmospheric analysis are presented in complete form. Included are the derivations for horizontal and vertical covariances that retain the geostrophic constraint a various kinds of observations such as pressure thickness, pressure height, and winds. Methods that scale the observation values to the resulting nondimensional values so that they are consistent with the constraints are presented. The derivations of the analysis equations are provided using optimal theory to minimize the analysis error variance. The derivation of the internal data checking procedure is given. The method compares suspicious values with neighboring values and removes rejected values in a computationally consistent manner. Validation experiments that show the exactness of the constraints, expected analysis error, and the method for analysis of wind around the poles are presented. These experiments have known results, and therefore are useful in catching design and program errors. A brief description is provided of the observation selection procedures and internal quality control, and some recommendations for improvement are given. GRA

DENUMERABLE CONSTRAINED MARKOV DECISION PROBLEMS AND FINITE APPROXIMATIONS

Eitan Altman Dec. 1991 32 p

(INRIA-RR-1568; ETN-93-92669) Avail: CASI HC A03/MF A01

The establishment of the theory of discounted constrained Markov decision processes with countable state and action spaces with general multichain structure and the introduction of finite approximation methods are addressed. The occupation measures are defined and properties of the set of all achievable occupation measures under the different admissible policies are obtained. The sufficiency of stationary policies for the constrained control problem is established and a Linear Program (LP) with a countable number of decision variables through which optimal stationary policies are computed is obtained. Since for such an LP an optimal solution in a finite number of operations is not expected, two schemes for finite approximations are presented and their convergence to the required value for both the discounted and the expected average cost is established. ESA

THE LINEAR PROGRAM APPROACH IN MARKOV DECISION PROCESSES REVISITED

Eitan Altman and Flos Spieksma (Leiden Univ., Netherlands.) Dec. 1991 20 p

(INRIA-RR-1569; ETN-93-92670) Avail: CASI HC A03/MF A01

Some aspects of linear programs are investigated. Linear programming is known to be an important and useful tool for solving Markov Decision Processes (MDP's). Its derivation relies on the dynamic programming approach, which also serves to solve MDP's. However, for Constrained MDP the only available methods are based on linear programs. A stochastic interpretation of the decision variables that appear in the linear programs available in the literature is presented. It is then shown for the multiconstrained MDP that a (referenced) linear program can be obtained from an equivalent unconstrained Lagrange formulation for the control problem. This shows the connection between the linear program approach and the Lagrange approach, that was previously used only for the case of a single constraint. ESA

ESTIMATES OF CYCLE TIMES IN STOCHASTIC PETRI NETS

Francois Baccelli and Panagiotis Konstantopoulos Dec. 1991 22 p

(INRIA-RR-1572; ETN-93-92672) Avail: CASI HC A03/MF A01

The derivation of bounds and estimates for cycle times of strongly connected stochastic event graphs with independent and identically distributed holding times is addressed. Association properties satisfied by partial sums of the holding times are used in order to prove that the firing epochs compare for stochastic ordering with the last birth in a multitype branching process, the structure of which is determined from the characteristics of the event graph using simple algebraic manipulations. Classical large deviation estimates are then used to compute the growth rate of this last birth epoch, following the method of Kingman and Biggins. The method allows a computable upper bound for the cycle time to be described, and is exemplified on tandem queueing networks with communication blocking. ESA

A NECESSARY AND SUFFICIENT CONDITION FOR THE EXISTENCE OF THE MAXIMUM LIKELIHOOD ESTIMATE IN AUTOREGRESSIVE MODELS

Serge Degerine Nov. 1991 20 p

(RR-866-M; ETN-93-92698) Avail: CASI HC A03/MF A01

A necessary and sufficient condition for the existence of the Maximum Likelihood Estimate (MLE) in Autoregressive (AR) models is given. It is shown that for almost all sets of n records of length m of complex data, the MLE in AR(p) models exists if and only if the n records can not be exactly fitted by complex sinusoids using the same set of p distinct frequencies. So in estimating AR(p) models with increasing order p, the maximum likelihood method can be applied until p = m - 1 or stops with p just smaller than the minimal number of sinusoids fitting the data exactly. The method working on the reflection coefficients, the discrete spectrum of such sets of sinusoids could be obtained as a borderline case. A second study on local maxima of the likelihood function for Toeplitz matrix estimation is presented. It is demonstrated that in estimating a Toeplitz covariance matrix, the likelihood function can present a local maximum close to the global maximum. An analytical proof is given for the matrices of order 3 and numerical examples are shown for orders 3, 4 and 5. It is shown that when implementing the MLE, it is important to take a good

estimate of the covariance matrix as starting value of the iterative process. ESA

ASYMPTOTIC BEHAVIOUR OF SOME BILINEAR FUNCTIONALS OF THE EMPIRICAL PROCESS
Tadeusz Inglot (Wroclaw Univ., Poland.), Wilbert C. M. Kallenberg, and Teresa Ledwina (Wroclaw Univ., Poland.) Feb. 1992 30 p
(MEMO-1031; ETN-93-9245990) Avail: CASI HC A03/MF A01

For a very large class of bilinear statistics (strong) moderate and large deviation theorems are derived under the null hypothesis, thus extending previous results in this area. The asymptotic distribution is established under the null hypothesis and under alternatives for a wide range of alternatives, in general much wider than the classical range of contiguous alternatives. In the proofs, strong approximation techniques play an important role. ESA

ESTIMATION METHODS FOR PARAMETERS OF MULTIVARIATE AUTOREGRESSIVE MODELS Ph.D. Thesis [METHODES D'ESTIMATION DE PARAMETRES DE MODELES AUTOREGRESSIFS MULTIVARIES]
Dinh Quy Tong 1991 163 p In FRENCH
(ETN-93-92685) Avail: CASI HC A08/MF A02

Algorithms for the maximum likelihood method are constructed. Methods and concepts applied in the field of multivariate autoregressive estimations are presented. Algorithmic aspects of the Yule-Walker method, the Burg method, and methods based on partial correlations are considered. Two least means square algorithms, of Dickinson and of Pham, are discussed. Concerning the maximum likelihood method different ways of calculating the log likelihood function are presented; the calculation of the first order derivative and an approximation method for the second order derivative are included. Optimization algorithms for the maximum likelihood method are constructed by using the modified Newton-Raphson iterative method. Results from algorithm simulations and implementation are included. INVERSE SEQUENTIAL DETECTION OF PARAMETER CHANGES IN DEVELOPING TIME SERIES
Uwe Radok and Timothy J. Brown [1992] 9 p
(Grant NAGw-2706)
(NASA-CR-191996; NAS 1.26:191996) Avail: CASI HC A02/MF A01

Progressive values of two probabilities are obtained for parameter estimates derived from an existing set of values and from the same set enlarged by one or more new values, respectively. One probability is that of erroneously preferring the second of these estimates for the existing data ('type 1 error'), while the second probability is that of erroneously accepting their estimates for the enlarged test ('type 2 error'). A more stable combined 'no change' probability which always falls between 0.5 and 0 is derived from the (logarithmic) width of the uncertainty region of an equivalent 'inverted' sequential probability ratio test (SPRT, Wald 1945) in which the error probabilities are calculated rather than prescribed. A parameter change is indicated when the compound probability undergoes a progressive decrease. The test is explicitly formulated and exemplified for Gaussian samples. Author (revised)

STOCHASTIC SCHEDULING WITH VARIABLE PROFILE AND PRECEDENCE CONSTRAINTS
Zhen Liu and Eric Sanlaville (Paris VI Univ., France.) Sep. 1991 31 p
(INRIA-RR-1525; ETN-93-92830) Avail: CASI HC A03/MF A01

The stochastic profile scheduling problem of a partially ordered set of tasks on uniform processors is considered. The set of available processors varies in time. The running times of the tasks are independent random variables with exponential distributions. Simple optimal preemptive policies which stochastically minimize the makespan when the partial order is an interval order, or an in-forest, or an out-forest, are obtained. ESA

FLEXIBLE PRIOR MODELS IN BAYESIAN IMAGE ANALYSIS
K. M. Hanson 1992 9 p Presented at the Entropy and Bayesian Workshop, Paris, France, Jul. 1992
(Contract W-7405-eng-36)
(DE93-003728; LA-UR-92-3387; CONF-9207167-1) Avail: CASI HC A02/MF A01

A new class of prior models is proposed for Bayesian image analysis. This class of priors provides an inherent geometrical flexibility, which is achieved through a transformation of the coordinate system of the prior distribution or model into that of the object under analysis. Thus, prior morphological information about the object being reconstructed may be adapted to various degrees to match the available measurements. An example of tomographic reconstruction illustrates the potential of this approach. DOE

SIMULATION METHOD FOR STATIONARY GAUSSIAN RANDOM FUNCTIONS BASED ON THE SAMPLING THEOREM
M. Grigoriu and S. Balopoulou 11 Jun. 1992 81 p Sponsored by National Science Foundation, Washington, DC and New York State Science and Technology Foundation, Albany Prepared in cooperation with Cornell Univ., Ithaca, NY
(Grants NSF BCS-90-25010; NEC-91029)
(PB93-127496; NCEER-92-0015) Avail: CASI HC A05/MF A01

A unified method is developed for simulating realizations of real-valued stationary Gaussian processes, vector processes, fields, and vector fields. The method has direct applications to earthquake engineering. Realizations of Gaussian processes and vector processes can be used to model seismic ground accelerations at single and multiple sites. Gaussian random fields can provide representations of the spatial variation of soil properties that need to be considered in earthquake engineering when dealing with systems extending over large areas such as pipeline systems. The proposed method involves parametric random models consisting of superpositions of deterministic functions of time or space with random fields. The proposed simulation method is efficient and uses algorithms for generating realizations of random processes and fields that are similar to simulation techniques based on ARMA models. Several examples are presented to demonstrate the proposed simulation method and evaluate its efficiency and accuracy. GRA

The Instrumentation and Controls Division at Oak Ridge National Laboratory recently developed and installed a large scale, real-time measurement system for the world's largest pressurized water tunnel. This water tunnel, the Large Cavitation Channel (LCC) provides a research and development facility for the study of acoustic phenomena to aid in model testing of new naval ship and submarine designs. The LCC design required the development of a near-field beamformer in addition to extending the range of real-time processing capability to frequencies unavailable at other facilities. The beamformer acquires and processes time-domain acoustic data at 9.5 MB/s from up to 45 hydrophones while performing 200 million floating-point operations per second, producing a time-integrated, spatially filtered, frequency-domain data set with improved signal-to-noise ratio. The acoustic processing software provides for the real-time analysis of acoustic data. Up to 128 facility sensors are sampled, time stamped, and stored at 600 kB/s. The system generates information for acoustic phenomena and facility measurements in real-time so that the operator can make facility adjustments to control the running equipment. This real-time control of facility conditions requires that the measurement system integrate facility and acoustic data for simultaneous display to the operator in engineering units via high-end workstations. A dual-host minicomputer configuration with high-end workstations connected via an Ethernet networking cluster controls and integrates measurement and display subsystems. The hardware and software architecture is described in this paper. DOE

EXPERIMENTAL INVESTIGATIONS ON CONVERGING SECOND-SOUND SHOCK WAVES IN He 2 [EXPERIMENTELLE UNTERSUCHUNGEN AN KONVERGIERENDEN SECOND-SOUND-STOSSWELLEN IN HE II]
Georg Stamm 1991 83 p In GERMAN
(MPIS-103/1991; ETN-93-92591) Avail: CASI HC A05/MF A01

The propagation of converging second sound shock waves is investigated in a counterflow channel of appropriate geometry. A method to measure both the spatial and the temporal evolution of the temperature and the local vortex line density field produced by the shock front of a heating pulse is described. The pulse repetition rate is between 0.2 and 0.5 s, and the distance from the heated surface can be adjusted from 1 to 40 mm. When comparing the experiments with numerical simulations, it is shown that a drift velocity of the same direction and of the same order of magnitude as the counterflow velocity, is to be assumed. EXPERIMENT AND MODELING OF THE NOISE REDUCTION FOR A TURBULENT SUPERSONIC JET BY MEANS OF A NOZZLE WITH A SUDDEN ENLARGEMENT Thesis [EXPERIMENT UND MODELLIERUNG ZUR MINDERUNG DER SCHALLEMISSION VON TURBULENTEN UEBERSCHALLFREISTRAHLEN MITTELS EINER DUESE MIT QUERSCHNITTSSPRUNG]
Andreas Menne Dec. 1991 84 p In GERMAN
(MPIS-15/1991; ETN-93-92592) Avail: CASI HC A05/MF A01

Noise reduction is accomplished by using a convergent nozzle having a sudden enlargement behind the narrowest cross sectional area. The observed noise reduction is due to the decrease in the flow velocity behind the shock and the absence of further shock waves. A further expansion of the subsonic flow was achieved by using a short diffuser behind the sudden enlargment. The configuration yields a maximum noise reduction of 30 dB as compared with the noise of a free jet emerging from a convergent nozzle. Based on the Borda Carnot relation and on the modeling of the throat as a cylindrical or a spherical source, a gas dynamical evaluation of the flow quantities and the nozzle parameters was performed which allowed calculations with regard to the minimal noise emission. EMBEDDED FIBER OPTIC ACOUSTIC SENSORS Patent Application
Nicholas Lagkas, inventor (to Navy) 20 Aug. 1992 41 p
(AD-D015568; US-Patent-Appl-SN-932685; Navy-Case-74303) Avail: CASI HC A03/MF A01

A interferometric planar and linear fiber optic sensor system comprised of a sensor element and a reference element. In the planar fiber optic sensor system the sensor and reference fibers are shaped in loops circularly and uniformly, heat treated or bonded together and embedded in a spiral pattern within a low Bulk Modulus and Young's Modulus elastomer encapsulant. The invention results in high and frequency independent sensitivity which minimizes acceleration effects. For the linear sensor, the sensing fiber is shaped in loops forming a linear chain which is embedded in an appropriate low bulk modulus elastomeric encapsulant. The reference fiber is shaped in loops around a cylindrical aluminum mandrel within which the input and output fiber cables and couplers are encapsulated in a high bulk modulus material epoxy resin. In both the planar and linear forms, the sensing and reference fiber may be of equal length, however, the reference fiber may be of a shorter length when a coherent light source is utilized. GRA

Over 680 publications from 282 social surveys of residents' reactions to environmental noise have been examined to locate 495 published findings on 26 topics concerning non-noise explanations for residents' reactions to environmental noise. This report (1) tabulates the evidence on the 26 response topics, (2) identifies the 495 findings, and (3) discusses the implications for en route noise assessment. After controlling for noise level, over half of the social survey evidence indicates that noise annoyance is not strongly affected by any of the nine demographic variables examined (age, sex, social status, income, education, homeownership, type of dwelling, length of residence, or receipt of benefits from the noise source), but is positively associated with each of the five attitudinal variables examined (a fear of danger from the noise source, a sensitivity towards noise generally, the belief that the authorities can control the noise, the awareness of non-noise impacts of the source, and the belief that the noise source is not important). A prediction scheme for jet noise is applied for noise calculations. The results are discussed for the neighborhood of an airfield for which sound emission is shown in the form of contour plots. The noise reduction potential achievable by varying operational parameters is demonstrated and quantified. The variation of takeoff and landing procedures, the decrease of aircraft weight and flight Mach number, and the increase of the flight altitude are shown to possibly result in a partially substantial noise reduction. Associated particle imaging (API) is a fast-neutron reaction imaging system. An object is illuminated with 14-MeV neutrons and these neutron interaction sites are imaged. The T(d,n)(sup 4)He reaction is used to produce a neutron and an alpha particle which move apart in opposite directions. By detecting the alpha particle, the direction of travel of the neutron is known. When the neutron strikes any material (except hydrogen and helium) it causes the material to emit gamma radiation. If one of the gamma-rays is detected it is then known that a reaction has taken place. By measuring the time between alpha detection and gamma detection, it is known how long the neutron traveled before reacting. By constructing a tally (or histogram) of these reaction sites an image is constructed. By examining the gamma-ray spectra corresponding to each region of space, elemental analysis of that region can be performed. This technique and it's applications are discussed. DOE

Proton- and deuteron-induced nuclear reactions which produce radioactivities are surveyed for application to experiments with intense ion beams from pulsed power generators. Positive Q-value reactions with up to 10-MeV protons or deuterons on carbon, aluminum, titanium-alloy, steel, and brass targets are identified. For each radioactivity, the half-life and decay products are tabulated. Measured cross sections from the published literature are used to identify reaction yields. For protons, thick-target yields are evaluated for (p,n) reactions on these targets. For deuterons, thick-target yields are evaluated for several (d,n), (d,p), and (d,a) reactions on these targets. INCLUSIVE BEAUTY DECAYS AND THE SPECTATOR MODEL
G. Altarelli and S. Petrarca 27 Feb. 1991 18 p Submitted for publication
(Preprint-790; ETN-93-92900) Avail: CASI HC A03/MF A01

A complete updated analysis of the branching ratios of inclusive b decays in a pure parton picture with inert spectator light quark(s) is presented. Recent data indicate a small value for the average semileptonic decay fraction. Particular attention is devoted to evaluating the central value and the range of theoretical error for this quantity. It shows that, while the data is consistent with the spectator model, there are indications for a moderate non spectator contribution. These terms are discussed and the ratio tau(minus)/tau(neutral) is suggested to be around its present upper limit. ESA

HIGH FREQUENCY SPECTROSCOPY FOR COLLISION EXCITED HELIUM ATOM FINE STRUCTURE OF 1s4f CONFIGURATION Ph.D. Thesis [HOCHFREQUENZSPEKTROSCOPIE AN STOSSANGEREGTEN HELIUMATOMEN FEINSTRUKTUR DER 1S4F-KONFIGURATION]
Hans Walter Schilling 1992 93 p In GERMAN
(ETN-93-92560) Avail: CASI HC A05/MF A01

Excited helium atoms with n = 4.5 and l equal to or greater than 2 were examined using the methods of high frequency spectroscopy of an ionic collision apparatus. The 1s4f multiplet is the energetically deepest fine structure multiplet of the helium atom. The great polarizabilities of the excited helium structures allowed induction of electric to quantum dipole transitions between structures of equal parity. The induction of high frequency transitions developed a change in the intensity of collision lighting. The measured energy dissociation and the calculated exchange integral are in very good agreement with values calculated using a variational method.

SEMI-LEPTONIC DECAYS OF D-MESONS IN LATTICE QCD
V. Lubicz (Istituto Nazionale di Fisica Nucleare, Rome, Italy.), G. Martinelli (Istituto Nazionale di Fisica Nucleare, Rome, Italy.), M. S. McCarthy (Southampton Univ., England.), and C. T. Sachrajda (Southampton Univ., England.) 2 Jul. 1991 16 p Submitted for publication
(Preprint-808; SHEP-90/91-27; ETN-93-92917) Avail: CASI HC A03/MF A01

The results of a lattice calculation of D-meson semileptonic decays into pseudoscalar and vector particles are presented. With respect to previous studies of D decays to K, polarized K, pi, and rho, the statistis could be doubled, and the SU(3) breaking effects on the relevant form factors were studied. The Zweig allowed contributions to the form factors and the corresponding partial rates for the semileptonic decays of D and D(sub S) into phi, omega, eta and eta' mesons were predicted. The lattice results for the form factor which govern semileptonic decays into pi and K mesons are in good agreement with experimental results. ESA

MIXING AND CP-VIOLATION IN K AND B-MESONS: A LATTICE QCD POINT OF VIEW
Maurizio Lusignoli (Istituto Nazionale di Fisica Nucleare, Rome, Italy.), Luciano Maiani (Istituto Nazionale di Fisica Nucleare, Rome, Italy.), Guido Martinelli (Istituto Nazionale di Fisica Nucleare, Rome, Italy.), and Laura Reina (SISSA, Trieste, Italy.) 3 Jul. 1991 36 p Revised Submitted for publication
(Preprint-810; ETN-93-92918) Avail: CASI HC A03/MF A01

The neutral K-antineutral K and neutral B-antineutral B mixing is analyzed on the basis of experimental results and theoretical lattice determination of the relevant matrix elements. A top mass larger than 140 GeV and f(sub B) equal or greater than 200 MeV is found. These results suggest a Charge conjugation and Space inversion (CP) violating asymmetry in B decays to J/psi + K(sub S) much larger than previously estimated. The corresponding theoretical prediction for epsilon'/epsilon for which rather large experimental and theoretical uncertainties still exist is reported. The basic definitions and formulae for the calculation of epsilon, R(sub d) and epsilon(prime) are given. The determination of the real angles from semileptonic data is discussed. The calculation of the Wilson coefficients is illustrated. Short distance Quantum Chromodynamics (QCD) corrections are evaluated. The B parameters, from lattice calculations, are presented.

TWO LOOP CALCULATION OF THE ANOMALOUS DIMENSION OF THE AXIAL CURRENT WITH STATIC HEAVY QUARKS
V. Gimenez 5 Jul. 1991 44 p Sponsored by Spanish Ministerio de Education y Ciercia; Submitted for publication
(Preprint-813; ETN-93-92919) Avail: CASI HC A03/MF A01

A method to perform two loop calculations in Eichten's effective field theory for heavy quarks is developed. The anomalous dimension of the axial current for static heavy quarks is calculated at two loops. For N = 3, (gamma(sub A))(sup 2) = -1/36(127/2 + 94(xi)2 - 5N(sub f)). The result is very important to understand the physical significance of the lattice measurement of the decay constant of the B meson. The two loop correction generated by the second coefficient of (gamma(sub A))(sup 2) turns out to be small, less than 1.5 percent for four quark flavors, so that the value of the decay constant of the B meson does not need in practice renormalization group improvement. The self energy renormalization constant at two loop level for a heavy static quark and that for the coupling of a heavy quark to a gluon are obtained. ESA

DEVELOPMENT AND UTILIZATION OF A SEMI-ANALYTIC ALTERNATIVE CHARGE PROCESS FOR THE RAPID CALCULATION OF POTENTIAL DISTRIBUTIONS AND ELECTRON ORBITS Ph.D. Thesis [ENTWICKLUNG UND ANWENDUNG EINES SEMI-ANALYTISCHEN ERSATZLADUNGSVERFAHRENS ZUR SCHNELLEN BERECHNUNG VON POTENTIALVERTEILUNGEN UND ELEKTRONENBAHNEN]
Gerald Schoenecker 1989 98 p In GERMAN
(ETN-93-93416) Avail: CASI HC A05/MF A02

Rapid processes were developed for the computation of potential distributions and electron orbits in present electrode arrangements. The knowledge of electron orbits in these fields allowed fast and accurate determination of the electron optical properties of the arrangement. An alternative to the mesh process was used, according to which the analytically given potentials of simple charge distributions were so superposed that the boundary conditions, for example the potentials on the electrode surfaces, were reproduced. The potential and the electric field were analytically given in each spatial point. The developed alternative charge process allowed the solution of two dimensional and simple not rotationally symmetric three dimensional problems. Utilization examples were given.

THE ELECTROMAGNETIC CALORIMETER FOR THE STAR EXPERIMENT AT RHIC
D. G. Underwood 1992 4 p Presented at the 3rd International Conference on Calorimetry in High Energy Physics, Corpus Christi, TX, 29 Sep. - 2 Oct. 1992
(Contract W-31-109-eng-38)
(DE93-002780; ANL-HEP-CP-92-95; CONF-9209263-3) Avail: CASI HC A01/MF A01

The STAR detector at the Relativistic Heavy Ion Collider (RHIC) can be used both for searches for quark-gluon plasma and for high energy pp spin physics. An electromagnetic calorimeter is being planned which will be used for triggering on high pt direct gammas, e(+ or -), and the electromagnetic component of jets. Jets will be measured for both kinds of physics by using the electro-magnetic calorimeter and central TPC tracking. Some features of the fiber-tile calorimeter as it is presently being designed is described. DOE

Data from measurements at NIKHEF-K of the electro-production of

neutral pions from the proton were completely analyzed and are about to be submitted for publication. These results represent the first precise measurement of this fundamental process in the threshold region. The results are completely consistent with calculations based upon the Low Energy Theorems. Results from studies of a gas jet target in the electron storage ring of the Saskatchewan Accelerator Laboratory (SAL) have been fully analyzed and are being prepared for publication. An Internal Target Development Facility (ITDF), established at NIKHEF-K in a collaborative effort for the purpose of developing higher density gas jet targets suitable for use in electron rings, is operational. Diagnostic techniques are being evaluated in preparation for evaluating jet technology options. Our study of the calcium isotopes C-42 and C-44 is nearing completion. Both the electron and proton scattering data were completely analyzed. Consistent proton and neutron transition densities were extracted, and are being compared to corresponding results from pion scattering. Preparations for (gamma, pi(-)) measurements at SAL were completed, and data taking is about to commence. DOE

RADIATION FROM MOVING CHARGED PARTICLES WITH SPIN

A. Luccio Oct. 1992 24 p

(Contract DE-AC02-76CH-00016)

(DE93-004633; BNL-52348; AGS/AD-93-1) Avail: CASI HC A03/MF A01

The theory of radiation emitted by a charged particle with spin in relativistic motion in an external magnetic field is reviewed. Approximate expressions suitable for numerical computation, in far and near field, are derived. In particular, the case of the passage of a particle accelerator beam through an undulator is considered. It is shown that observation of the spectrum of the emitted radiation, in its two states of polarization, can be used not only for beam diagnostics, but also to measure the spin state of the accelerated particles. Undulator radiation is compared with Compton scattering of laser light by the particle beam. Examples for high energy electron and proton colliders are presented. DOE

(DE93-004950; DOE/ER-40609/2) Avail: CASI HC A04/MF A01

An earlier study of unusual electromagnetic decays in (sup 86)Zr was extended in order to make comparisons with its isotone (sup 84)Sr and with (sup 84)Zr. The K=14 (t(sub 1/2) = 70 ns) high-spin isomer in (sup 176)W was found to have a 13 percent branch directly to the K=O ground-state band, one of the strongest violations of K-selection rules known. A new program to search for a predicted region of oblate deformation involving neutron deficient isotopes in the Rn/Fr/Ra region was begun. In the area of nuclear astrophysics, as part of a study of the onset of the rp-Process, a set of measurements searching for possible new resonances for (sup 14)O+(alpha) and (sup 17)F+p reactions was completed and a coincidence experiment measuring the (sup 19)F ((sup 3)He,t) (sup 19)Ne(alpha) (sup 15)O and (sup 19)F ((sup 3)He,t) (sup 19)Ne(p) (sup 18)F reactions in order to determine the rates of the (sup 18)F(p,(alpha)) (sup 15)O and (sup 18)F(p,(gamma)) (sup 19)Ne reactions was begun. Experimental measurements of (beta)n(alpha) coincidences from the (sup 15)N(d,p) (sup 16)N((beta)- (nu)) (sup 16)O((alpha)) (sup 12)C reaction have also been completed and are currently being analyzed to determine the rate of the (sup 12)C((alpha),(gamma)) reaction. In the APEX collaboration, we have completed the assembly and testing of two position-sensitive Na barrels which surround the axial silicon detector arrays and serve as the e(sup +) triggers by detecting their back-to-back annihilation quanta were completed. The HI@AGS and RHIC collaborations, construction and implementation activities associated with the space-time-tracker detector and in the design of the central detector for the PHENIX experiment were carried out. Operation of the ESTU tandem accelerator has been reliable, delivering beam on target at terminal voltages as high as 19.3 MV and running for as long as 143 days between tank openings. Fabrication and bench testing of a new negative ion source system have been completed. DOE

SEMIEMPIRICAL STUDIES OF ATOMIC STRUCTURE

L. J. Curtis 1992 3 p

(Contract DE-FG05-88ER-13958)

(DE93-005117; DOE/ER-13958/30) Avail: CASI HC A01/MF A01

The energy level structure, transition probabilities, and general spectroscopic properties of highly ionized many-electron systems are studied through the combined use of sensitive semiempirical data systematizations, selected precision experimental measurements, and specialized theoretical computations. Measurements are made primarily through the use of fast ion beam excitation methods, which are combined with available data from laser and tokamak produced plasmas, astrophysical sources, and conventional light sources. The experimental studies are strengthened through large-scale ab initio calculations. Typical examples are the following: lifetime measurements in the neon isoelectronic sequence; multiplexed decay curve measurements of Li-like Si 12; and isoelectronic specification of intershell resonance and intercombination decay rates using measured transition probabilities and spectroscopically determined singlet-mixing amplitudes. DOE

THE DISCOVERY OF THE TAU LEPTON

M. L. Perl Sep. 1992 15 p Presented at the 3rd International Symposium on the History of Particle Physics, the Rise of the Standard Model, Stanford, CA, 24-27 Jun. 1992

(Contract DE-AC03-76SF-00515)

(DE93-004013; SU-SLAC-PUB-5937; CONF-9206131-3) Avail: CASI HC A03/MF A01

The discovery of the tau lepton and the third generation of fermions came from the convergence of three physics streams in the late 1960's and early 1970's. These streams were: the failed attempts by myself and others to understand the connection between the electron and the muon; the development of electron-positron storage rings; and the development of the theory of sequential leptons. I give the history of the discovery of the tau and the measurement of its major properties - the properties which established the tau as a sequential lepton. DOE

NON-EQUILIBRIUM STRUCTURES INDUCED BY ION IRRADIATION IN Ni4Mo

P. Bellon (Commissariat a l'Energie Atomique, Saclay, France.), P. R. Okamoto, and G. Schumacher (Hahn-Meitner-Inst. G.m.b.H., Berlin, Germany.) Nov. 1992 17 p Presented at the 3rd Conference on Evolution of Microstructure in Metals during Irradiation, Minett, Ontario, 29 Sep - 2 Oct. 1992

(Contract W-31-109-eng-38)

(DE93-004193; ANL/MSD/CP-78010; CONF-920970-5) Avail: CASI HC A03/MF A01

We have studied the stability of equilibrium and metastable ordered phases (called LRO and SRO respectively) in Ni4Mo during 500-keV Ne or 250-keV He irradiations. Some irradiations were performed in situ, allowing thus to follow the evolution of the samples, which were characterized by Transmission Electron Microscopy. Dynamical equilibrium phase diagrams are built, by varying the irradiation flux, temperature and dose. At a fixed ion flux, there exists a temperature range where a 'mixed' ordered state is stabilized, and remains stable up to the maximum doses reached (1.7 dpa). This state, which cannot be obtained by electron irradiation, consists in the coexistence of the two ordered phases at a very fine scale (less than or = 2nm). Comparison with results already reported after electron irradiation is made, stressing the role played by displacement cascades in our results. Furthermore we observed alignment of dislocation loops along, the (001) c-axis of the quadratic LRO phase. DOE

NUMERICAL VALIDATION OF A CONSTITUTIVE THEORY FOR AN ARBITRARILY FRACTURED SOLID
B. C. Trent and L. G. Margolin 1992 12 p Presented at the International Conference on Discrete Element Methods, Cambridge, MA, 17-18 Mar. 1993
(Contract W-7405-eng-36)
(DE93-003863; LA-UR-92-3917; CONF-930365-2) Avail: CASI HC A03/MF A01

We have developed a general constitutive theory that estimates the effective elastic moduli of a cemented granular material by applying statistical mechanical averaging to a purely micromechanical model. We have also constructed a distinct element model of a cemented granular material, based on the same micromechanical model, which accounts for the elastic forces due to bonding between pairs of spherical particles, and which allows for the possibility of anisotropic damage to the bonds. In this paper, we use a model based on the distinct element method (DEM) to validate the predictions of the theory for various prescribed patterns of damage. In particular, we impose several anisotropic patterns of damage on the bonds of a randomly generated assembly of particles. We then do numerical experiments, sending both p-waves and s-waves through the samples and measuring the wave velocities. The predictions of the theory for these velocities agree well with the results of the numerical model for a variety of damage patterns. We discuss the implications of our theory as well as potential applications. DOE

EFFECT OF QUARK-GLUON PLASMA BOUNDARY ON THE MOMENTUM DISTRIBUTION OF QUARKS
Cheuk-Yin Wong 1992 5 p Presented at the 22nd International Symposium on Multiparticle Dynamics, Santiago de Compostela, Spain, 13-17 Jul. 1992
(Contract DE-AC05-84OR-21400)
(DE93-004166; CONF-9207169-1) Avail: CASI HC A01/MF A01

The boundary of a quark-gluon plasma affects the momentum distribution of quarks in the plasma. In particular, a transverse boundary leads to a transverse momentum distribution with a shape different from the thermal distribution especially in the high transverse momentum region. Consequently, boundary effect must be taken into account if one wishes to estimate the magnitudes of signals in a search for the quark-gluon plasma. DOE

We have measured angular distributions of double-electron capture in C(4+) yields He collisions at energies between 400 and 800 eV. The experimental energy-gain spectra show that the ground state of C(2+) (1s(sup 2) 2s(sup 2)) is populated. In the angular distributions we observe an interference pattern which is attributed to Stueckelberg oscillations. We find additional structures in the spectra that are not related to the Stueckelberg interferences. The presented results are compared to experimental data as well as theoretical calculations by other authors. DOE

POLARIZATION EFFECTS IN COHERENT AND INCOHERENT PHOTON SCATTERING: SURVEY OF MEASUREMENTS AND THEORY RELEVANT TO RADIATION TRANSPORT CALCULATIONS
John H. Hubbell Jul. 1992 34 p
(PB93-126092; NISTIR-4881) Avail: CASI HC A03/MF A01

The report reviews available information on polarization effects arising when photons in the x-ray and gamma-ray energy regime undergo coherent (Rayleigh) scattering and incoherent (Compton) scattering by atomic electrons. In addition to descriptions and discussions of these effects, including estimates of their magnitudes as they apply to radiation transport calculations, an annotated bibliography 1905-1991 of 102 selected works is provided, with particularly relevant works for the purpose of the report flagged with asterisks. A major resource for the report is a 1948 unpublished informal report by L.V. Spencer which will be quoted here almost in its entirety, since, of all the works cited in the annotated bibliography, it appears to be the only one which explicitly and directly addresses the purpose of the report, hence the valuable material should be re-introduced into the available and current literature. STABLE CLUSTERS IN THE CONDENSED STATE AND SOME POSSIBILITIES FOR GAS PHASE CLUSTERS
J. D. Corbett and S. C. Sevov 17 Sep. 1992 5 p Presented at the 6th International Symposium on Small Particles and Inorganic Clusters, Chicago, IL, 16-22 Sep. 1992
(Contract W-7405-eng-82)
(DE93-004446; IS-M-721; CONF-920921-7) Avail: CASI HC A01/MF A01

The classical naked cluster ions of the post-transition elements that are stable in solid compounds and their lower charged analogues observed in mixed metal beams reflect the reduced number of good bonding orbitals. New cluster ions of indium that are hypoelectronic (fewer than 2n + 2 skeletal bonding electrons) because of distortions or the bonding of heterometal atoms within the clusters are described. A large family of new, orbital-rich clusters of the group 3 and 4 transition metals sheathed by halide are all centered by a wide variety of heteroatoms. Factors in their stability, possible analogous naked cluster targets, and some calculations are considered. DOE

DIFFERENTIAL ELECTRON EMISSION IN MULTI-CHARGED ION ATOM COLLISIONS: SYSTEMATICS FOR DISTANT AND CLOSE COLLISIONS
R. D. DuBois, L. H. Toburen, M. E. Middendorf, and O. Jagutzki (Johann-Wolfgang-Goethe-Univ., Frankfurt am Main, Germany.) Sep. 1992 6 p Presented at the 6th International Conference on Physics of Highly Charged Ions, Manhattan, KS, 28 Sep. - 2 Oct. 1992
(Contract DE-AC06-76RL-01830)
(DE93-004324; PNL-SA-21302; CONF-920948-11) Avail: CASI HC A02/MF A01

Absolute doubly differential cross sections for electron emission are presented for 0.5 MeV/u multi-charged ion impact on helium, neon, and argon targets. For the helium target, B(q+), C(q+) (q = 2-5) and O(q+), F(q+) (q = 3-6) projectiles were studied; for neon and argon, only C(q+) (q = 2-5) projectiles were used. Electron emission for 10 deg is less than or equal to theta is less than or equal to 60 deg was studied. The measured cross sections were assumed to scale as the square of an effective projectile charge, Z(sub eff), which was determined as a function of emitted electron energy and angle. For distant collisions (low emitted electron energies), Z(sub eff) is approximately q for small q and Z(sub eff) less than q for the highest values of q investigated. For sufficiently close collisions (above the binary encounter peak), Z(sub eff) is greater than Z

and increases as q decreases. This is true for all angles and targets investigated. DOE

N93-21854# Fermi National Accelerator Lab., Batavia, IL.
MULTI-JET PRODUCTION RATES IN DEEP-INELASTIC MUON-PROTON SCATTERING
C. W. Salgado Oct. 1992 8 p Presented at the ICHEP-26: Twenty-Sixth International Union of Pure and Applied Physics Conference on High Energy Physics, Dallas, TX, 6-12 Aug. 1992
(Contract DE-AC02-76CH-03000)
(DE93-004410; FNAL/C-92/262; CONF-920837-25) Avail: CASI HC A02/MF A01

Measurements of forward multi-jet production rates in deep-inelastic muon-proton scattering are presented. Data were taken with a 490 GeV muon beam incident on a hydrogen target. Jets were defined using the JADE jet finding algorithm. The measured rates are presented as functions of W, the hadronic center-of-mass energy and the jet resolution parameter, y(sub cut), in energies up to W = 33 GeV. Good agreement is found in comparisons with predictions of the QCD-inspired Lund Monte Carlo models. Non-perturbative QCD production mechanisms, inside the Lund Model, can not reproduce the results for energies greater than W approximately equal to 20 GeV. Sensitivities of the jet rate measurements to the low x (x approximately equal to 0.02) gluon content of the nucleon and the evolution of (alpha)(sub s), are studied. DOE

ELECTRON IMPACT IONIZATION OF HIGHLY CHARGED LITHIUMLIKE IONS Ph.D. Thesis
D. A. Vogel Aug. 1992 290 p
(Contract W-7405-eng-48)
(DE93-002895; UCRL-LR-111710) Avail: CASI HC A13/MF A03

Inner-shell ionization of highly-charged lithiumlike ions by electron collision is observed, and the cross section for ionization at different energies is observed. Two elements, chromium and iron, were selected for the investigation. The two elements are close together in the periodic table, with atomic numbers of Z = 24 and Z = 26, respectively. In the lithiumlike state, all of their electrons except the last three have been removed, leaving a highly-charged positive ion with the atomic configuration 1s(sup 2)2sD(sup 2)S(sub 1/2). Removal of an inner-shell electron, that is, a 1s electron, from these highly-charged ions requires a relatively large energy transfer from the colliding electron, 7350 eV for Cr(21+) and 8685 eV for Fe(23+). The process leaves the ion in an excited heliumlike configuration, 1s2s, and the excited ions can decay radiatively to the heliumlike ground state, producing observable x rays. It is these decay x rays that provide the means of detecting the ionization events and measuring the impact ionization cross section. DOE

NEUTRON-PROTON BREMSSTRAHLUNG EXPERIMENTS
J. E. Koster, R. O. Nelson, M. E. Schillaci, S. A. Wender, D. Mayo, F. P. Brady, J. Romero, D. Krofcheck, M. Blann, and P. Anthony et al 1992 8 p Presented at the 12th International Conference on the Application of Accelerators in Research and Industry, Denton, TX, 2-5 Nov. 1992
(Contract W-7405-eng-36)
(DE93-003737; LA-UR-92-3334; CONF-921116-16) Avail: CASI HC A02/MF A01

It is well known that charged particles emit bremsstrahlung radiation when they are accelerated. Classical electron bremsstrahlung occurs when a photon is emitted by an electron accelerated in the field of a nucleus. The bremsstrahlung process also occurs in the scattering of nucleons, for which it is the lowest energy inelastic process that can occur. Like electron bremsstrahlung, nucleon-nucleon bremsstrahlung also requires the exchange of a virtual particle to conserve energy and momentum. In electron bremsstrahlung a virtual photon is exchanged but with two nucleons a meson can be exchanged. Unlike electron bremsstrahlung, in nucleon-nucleon bremsstrahlung the photon can originate from the exchanged meson. This exchange contribution has been shown in calculations to be a significant fraction of bremsstrahlung events. Thus bremsstrahlung serves as a probe of exchange currents in the nucleon-nucleon interaction. Because of a lack of a free neutron target or an intense neutron beam, few measurements of neutron-proton bremsstrahlung exist, each having poor statistical accuracy and poor energy resolution. The white neutron source at the Weapons Neutron Research (WNR) target area at the Los Alamos Meson Physics Facility (LAMPF) produces neutrons with energies from below 50 to above 400 MeV. Using time-of-flight techniques and a liquid hydrogen target, we are measuring the outgoing photons of energies up to 250 MeV at gamma ray angles of around 90 deg relative to the incident beam. Protons scattered at very forward angles are also detected in coincidence with the gamma rays. DOE

EXPERIMENTAL INVESTIGATIONS OF UNDULATOR RADIATION COMPATABILITY Ph.D. Thesis [EXPERIMENTELLE UNTERSUCHUNGEN ZUR BERECHENBARKEIT VON UNDULATORSTRAHLUNG]
Karl Molter 1992 148 p In GERMAN
(ETN-93-92566) Avail: CASI HC A07/MF A02

For the development of a calculable radiation source prototype of intensive variable frequency monochromatic radiation, the efficiency of the compatibility of undulator radiation was examined by comparison of measured and calculated radiation intensity of various installed undulators in the BESSY storage ring. A compact pinhole transmission grill spectrometer was developed and characterized for the experimental determination of undulator radiation intensity in the spectral field of 50 up to 500 eV. A radiometric comparison was carried out between the calculable BESSY and two short undulators with 6.5 to 7.5 periods and a 35 period undulator. The results of the investigations showed that an undulator with a great number of periods is particularly suitable for radiometric applications, with regard to spectral purity, low bandwidth, and high radiation intensity. ANOMALOUS WWZ COUPLINGS AT FUTURE E(+)E(-) COLLIDERS
S. Ambrosanio and B. Mele (Istituto Nazionale di Fisica Nucleare, Rome, Italy.) 30 Jul. 1991 40 p Submitted for publication
(Preprint-814; ETN-93-92920) Avail: CASI HC A03/MF A01

The effects of possible charge conjugation and space inversion conserving anomalous couplings in the trilinear gauge vertex WWZ in the process positron-electron decay to Z neutral-nu-nu bar are studied. Total cross sections and distributions for various square root of S are computed versus the anomalous eta(sub Z) and lambda(sub Z) couplings by means of the analytic expression for the invariant differential cross section. An explicit expression for sigma is given at different square root of S. Limits on eta(sub Z) and lambda(sub Z) that can be put at future positron-electron colliders on the basis of the reaction positron-electron decay to Z neutral-nu-nu(bar) are discussed. A table of coefficients which allow to calculate cross sections for any value of WWZ couplings is given. Various distributions in the neutral boson kinematical variables are included. ESA

CONSTRUCTION OF A CHANNELING RADIATION SOURCE AND PRODUCTION OF INTENSIVE CHANNELING RADIATION AT THE DARMSTADT (GERMANY) SUPERCONDUCTIVE ELECTRON ACCELERATOR Ph.D. Thesis [AUFBAU EINER CHANNELINGSTRAHLUNGSQUELLE UND ERZEUGUNG INTENSIVER CHANNELINGSTRAHLUNG AM SUPRALEITENDEN DARMSTAEDTER ELEKTRONENBESCHLEUNIGER]
Wilfried Lotz 1990 117 p In GERMAN
(ETN-93-93410) Avail: CASI HC A06/MF A02

The apparatus designed and constructed for the production and the measurement of channeling radiation at a new superconductive electron accelerator is described. Channeling radiation induced by electrons in silicon single crystals and diamond was detected. The line positions of the considered graduations were considered and compared with theoretical models. An experimental investigation for the development of a quasi monochromatic, continuously variable radiation source of high brilliancy was represented. High electronic currents used, result in photon intensities per second, of up to six orders of magnitude, with regard to intensities reached to date. ESA

(DE93-003469; UCRL-JC-105642-Rev-1; CONF-9202117-7-Rev-1) Avail: CASI HC A03/MF A01

In relativistic shocks, the mechanisms of high energy particle acceleration and of basic thermalization can be one and the same -- accelerating relativistic particles can be part of the problem of shock structure itself. In fact, the highest energy electrons and positrons in the shock theory we outline below are those which have Larmor radii comparable to the gyro-radii of the heavy ions which control the shock thickness, and are precisely the e(plus minus) which give rise to the highest energy synchrotron photons observed in the nebular spectrum. Thus, the problems of shock structure and of nonthermal particle acceleration are one and the same. DOE

A development program is underway to apply rf superconductivity to the design of continuous-wave (cw) linear accelerators for high-current, high-brightness ion beams. During the last few years, considerable progress has been made both experimentally and theoretically toward this application. Recent tests of niobium resonators for ion acceleration have yielded average accelerating gradients as high as 18 MV/m. In an experiment with a radio-frequency quadrupole geometry, niobium was found to sustain cw peak surface electric fields as high as 128 MV/m over large (10 cm) surface areas. Theoretical studies of beam halo, cumulative beam breakup, and alternating-phase focusing have also yielded important results. This paper summarizes the recent progress and identifies current and future work in the areas of superconducting accelerator technology for high-current ion beams. DOE

(DE93-001619; UCRL-JC-110847; CONF-9207162-1) Avail: CASI HC A01/MF A01

Two remote measurement systems that efficiently exploit the information transmission capacity of optical guided-wave technology are developed. The first system, which operates at 820 nm, was developed for nuclear weapons measurements and emphasizes high-bandwidth high-dynamic range information transmission. The second system was developed for the detector readout at the Super-Conducting Super Collider (SSC); this system emphasizes high charge sensitivity measurement transmission and operates at 1320 nm. Most of the component design (including modeling), fabrication, packaging, characterization, and system integration was done at Lawrence Livermore National Laboratory (LLNL) specifically for these specialized physics measurements applications. GEOMETRY AND PHOTOMETRY IN 3D VISUAL RECOGNITION
Amnon Shashua Nov. 1992 177 p
(Contract N00014-91-J-4038; NSF IRI-89-00267)
(AD-A259443; AI-TR-1401) Avail: CASI HC A09/MF A02

This thesis addresses the problem of visual recognition under two sources of variability: geometric and photometric. The geometric deals with

the relation between 3D objects and their views under parallel, perspective, and central projection. The photometric deals with the relation between 3D matte objects and their images under changing illumination conditions. Taken together, an alignment-based method is presented for recognizing objects viewed from arbitrary viewing positions and illuminated by arbitrary settings of light sources. In the first part of the thesis we show that a relative non-metric structure invariant that holds under both parallel and central projection models can be defined relative to four points in space and, moreover, can be uniquely recovered from two views regardless of whether one or the other was created by means of parallel or central projection. As a result, we propose a method that is useful for purposes of recognition (via alignment) and structure from motion, and that has the following properties: (1) the transition between projection models is natural and transparent, (2) camera calibration is not required, and (3) structure is defined relative to the object and does not involve the center of projection. BIREFRINGENT POLARIZATION RAY TRACING: THEORY AND APPLICATIONS Ph.D. Thesis
Stephen Charles McClain 1992 263 p
Avail: Univ. Microfilms Order No. DA9300803

Birefringent polarization ray tracing is an extension of geometric ray tracing. In addition to calculating ray paths and phases, it also analyzes the state of polarization through birefringent devices. Some systems containing birefringent elements include optical computers, radiometers, optical isolators, bar code scanners, and optical data storage systems. This dissertation derives explicit algorithms for polarization ray tracing through anisotropic media, optically active media, and anisotropic optically active media, such as quartz. The objective was to go beyond the electromagnetic relations to establish algorithms in standard ray tracing format, ready for direct inclusion into lens design software. The algorithms, derived from Maxwell's equations, constitutive relations, and boundary conditions, calculate the wavevector, ray vector, optical path length, refractive index, and polarization state of a ray. Generalized Fresnel relations govern the division of energy at each interface into two transmitted and two reflected modes. The algorithms are applied to calculate the polarization aberrations of a variety of birefringent devices. In particular, it is established that the polarization properties of quartz vary significantly (greater than 20 percent) over angles of only 5 degrees. This limits the useful field of view of quartz devices. Field of view aberrations of birefringent elements can critically affect the performance of optical systems. Also, design guidelines are presented for pseudodepolarizers. These devices spatially scramble the polarization. Inserted into an instrument, a depolarizer negates the polarization sensitivity of the elements which follow it. Presented in detail is the design and analysis of a depolarizer for use in a spectrometer on NASA's Earth Observing System (EOS). Dissert. Abstr.

(NASA-CR-191440; NAS 1.26:191440) Avail: CASI HC A03/MF A01

During the past several years, a number of investigators have addressed the design, analysis, fabrication, and testing of spherical Schwarzschild microscopes for soft-x-ray applications using multilayer coatings. Some of these systems have demonstrated diffraction limited resolution for small numerical apertures. Rigorously aplanatic, two-aspherical mirror Head microscopes can provide near diffraction limited resolution for very large numerical apertures. The relationships between the numerical aperture, mirror radii and diameters, magnifications, and total system length for Schwarzschild microscope configurations are summarized. Also, an analysis of the characteristics of the Head-Schwarzschild surfaces will be reported. The numerical surface data predicted by the Head equations were fit by a variety of functions and analyzed by conventional optical design codes. Efforts have been made to determine whether current optical substrate and multilayer coating technologies will permit construction of a very fast Head microscope which can provide resolution approaching that of the wavelength of the incident radiation. TREND FIELD TEST REPORT
23 Nov. 1992 56 p
(Contract N00014-91-C-0015)
(AD-A258568; RRI-TR-1/C68-603B) Avail: CASI HC A04/MF A01

This report describes work carried out, leading up to and including the final ground based field test of the Testbed for Realistic Evaluation of Novel Discriminants (TREND) electro-optical system. The ultimate goal of this system is to provide a means of passive discrimination between moving objects and a stationary cluttered background by virtue of signal source angular velocity separation. Angular velocity may be inferred by signal frequency on a single periodically masked detector as the source moves across its field of view. The signal amplitude must vary sufficiently over an angular subtense equal to half the mask period to register above the local noise. Such signals may arise from point objects (with respect to half the mask period) or hard edges perpendicular to the mask period. An additional twist to this method, utilized in the TREND sensor, optically filters selected spatial frequencies by dividing the wavefront at the aperture, transmitting radiation through a double slit. METHOD AND APPARATUS FOR CONTROLLING INTERNAL ROTATION OF PRINCIPAL AXES IN FABRICATION OF BIREFRINGENT FIBERS Patent Application
Charles G. Askins, inventor (to Navy) and M. J. Marrone, inventor (to Navy) 29 Jun. 1992 17 p
(AD-D015611; US-Patent-Appl-SN-906093; Navy-Case-70230) Avail: CASI HC A03/MF A01

A technique and apparatus for detecting the internal rotation of the principal axes in the fabrication of birefringent fibers is based upon a new method for producing and interpreting the interference fringe pattern backscattered power from a birefringent fiber side-illuminated with a laser light source to determine the internal orientation of the strain-inducing axes. An apparatus employing this technique for controlling internal rotation of the principal axes provides for adjustment of the orientation of at least one of the traction surfaces pulling the fiber during drawing fabrication to maintain parallel alignment of the planes of rotation of the surfaces to reduce the fiber rotation-inducing motion which leads to internal rotation of the fibers principal axes. INTERFEROMETRIC OPTICAL FIBER DATA LINK Patent
Donald J. Albares, inventor (to Navy) 18 Aug. 1992 6 p Filed 2 May 1985
(AD-D015581; US-Patent-5,140,636; US-Patent-Appl-SN-789046) Avail: US Patent and Trademark Office

An apparatus for a method for assuring the secure transmission of information between a transmitter and a receiver is fabricated along the lines of a Mach-Zehnder interferometer. Two, identical length single-mode fibers extend between the transmitter and receiver to act as transmission paths. Within the transmitter a coiled length of like single-mode fiber integrally extends from one of the fibers reaching from the transmitter to the receiver. Within the receiver a like length of like singlemode fiber integrally extends

from the other end of the other fiber reaching from the transmitter to the receiver. A superradiant diode in the transmitter emits pulses of coherent wavetrains that are split and sent through the two lengths of fibers and their associated integrally connected coils. GRA

AUTOMATIC MODELING OF NONPOLYHEDRAL OBJECTS BY MONOCULAR OBSERVATION Ph.D. Thesis [MODELISATION AUTOMATIQUE D'OBJETS NON POLYEDRIQUES PAR OBSERVATION MONOCULAIRE]
Emmanuel Arbogast 1991 146 p In FRENCH Sponsored by EEC
(ETN-93-92678) Avail: CASI HC A07/MF A02

A method to analyze nonpolyhedral moving scenes by monocular vision technique is investigated. Special attention is given to the differential geometry and to the space-time surface on the surface reconstruction by using image boundary data. The problem of evaluating the camera's own motion from fixed boundaries observations is discussed. The reconstruction model is presented. Curves and surfaces are reconstructed from moving image data. By the analysis of the boundaries from several images, the reconstruction of either a three dimensional boundary or its surface is possible. This technique requires an accurate description of the camera's motion. Such differential methods require an accurate data smoothing and subpixel accuracy. The B splines supply all these requirements. Synthetic and real examples illustrate the technique's feasibility. ESA

Nonlinear interactions in fibers, primarily for applications to all-optical switching devices, have been investigated. (1) The theory of all-optical switching with gain in erbium-doped dual core fibers has been developed. (2) Several and various experiments were performed in nonlinear fiber rocking filters. (3) A femtosecond infrared (1650 nm) source has been built. (4) An APM color center laser (300 fsec - 1 psec pulse width) has been constructed. (5) A new mechanism for soliton compression has been demonstrated. (6) A dual frequency, CW color center laser has been constructed. (7) The periodic evolution into dark solitons of a pulsed two color source has been demonstrated. (8) Photoinduced gratings in Ge doped sol-gel films have been demonstrated. (9) Nonlinear fiber-optic experiments in tapered fibers have been attempted. GRA

(AD-D015564; US-Patent-Appl-SN-937765; Navy-Case-73863) Avail: CASI HC A03/MF A01

This invention pertains to optical waveguides which includes waveguides of all shapes and sizes, preforms, and optical fibers made from the preforms, and to a method for making waveguides devoid of a physical interface. The method includes preparation of a waveguide from a halide-containing glass, heating the waveguide to a temperature below crystallization temperature of the glass so that it is still solid, providing a gaseous reactive medium containing halide ions of higher electronegativity than halide ions in the waveguide, exposing the waveguide to said reactive medium for a sufficient duration for the halide ions of higher electronegativity in the reactive medium to replace at least a portion of the halide ions of lower electronegativity in the waveguide, and cooling the waveguide whereby a lower refractive index is formed on the side of the waveguide exposed to the reactive medium than the refractive index internally of the waveguide so that light can travel through the portion of the waveguide having the higher refractive index. TOWARDS AUTONOMOUS MOTION VISION
M. A. Taalebinezhaad Apr. 1992 20 p
(Contract N00014-85-K-0124)
(AD-A259339; AI-M-1334) Avail: CASI HC A03/MF A01

Earlier, we introduced a direct method called fixation for the recovery of shape and motion in the general case. The method uses neither feature correspondence nor optical flow. Instead, it directly employs the spatiotemporal gradients of image brightnesses. This work reports the experimental results of applying some of our fixation algorithms to a sequence of real images where the motion is a combination of translation and rotation. These results show that parameters such as the fixation patch size have crucial effects on the estimation of some motion parameters. Some of the critical issues involved in the implementation of our autonomous motion vision system are also discussed here. Among those are the criteria for automatic choice of an optimum size for the fixation patch, and an appropriate location for the fixation point which results in good estimates for important motion parameters. Finally, a calibration method is described for identifying the real location of the rotation axis in imaging systems. GRA

In line with the specified objectives, a Bridgman-type growth configuration in which unavoidable end effects - conventionally leading to growth interface relocation - are compensated by commensurate input-power changes is developed; the growth rate on a microscale is predictable and unaffected by changes in heat transfer conditions. To permit quantitative characterization of the growth furnace cavity (hot-zone), a 3-D thermal field mapping technique, based on the thermal image, is being tested for temperatures up to 1100 C. Computational NIR absorption analysis was modified to now permit characterization of semi-insulating single crystals. Work on growth and characterization of bismuth-silicate was initiated. Growth of BSO ($B_{12}SiO_{20}$) for seed material by the Czochralski technique is currently in progress. Undergraduate research currently in progress includes: ground based measurements of the wetting behavior (contact angles) of semiconductor melts on substrates consisting of potential confinement materials for solidification experiments in a reduced gravity environment. Hardware modifications required for execution of the wetting experiments in a KC-135 facility are developed. Author

(DE93-003750; LA-UR-92-3491; CONF-9208184-1) Avail: CASI HC A03/MF A01

An improved reflection technique was introduced to permit more accurate measurements of material optical constants delta and beta, the density

rho, and from these the atomic scattering factors f' and f''. Regions of normal and anomolous dispersion can be measured with resolving power 1000 or larger using a portable reflectometer that is moved to any of three beamlines at NSLS or two at CHESS. Herein the reflectometer and measurement techniques are described together with sample characteristics and preliminary results for the Ni LIII edge and the M edges of Au, Pt, and Ir. The primary accuracy limiting factors are density determination, accumulation of surface oxides or carbonaceous deposits, and synchrotron orbit stability. Each sample must be prepared for the specific energy range to be measured so that model fitting routines have the minimum possible number of free variables. DOE

OPTOELECTRONICS RESEARCH IN THE FORMER SOVIET UNION Technical Assessment Report
H. C. Casey, Jr., S. G. Bishop, E. Eichen, R. F. Kazarinov, and H. F. Taylor May 1992 223 p
(PB93-111516) Avail: CASI HC A10/MF A03

Optoelectronics research in the former Soviet Union has been examined in the areas of eptitaxial layer growth and device processing, photonic devices such as semiconductor laser and photodetectors, high-speed lasers, the integration of photonic devices and transistors for optoelectronic integrated circuits (OEIC's), optical amplifiers, optoelectronic switching, and optical communications. These devices are largely prepared with 3-5 compound semiconductors. The assessment by a panel of US experts is based on a review of the translated Soviet technical literature, supplemented by information from recent visits to the former Soviet Union. The majority of Soviet optoelectronic devices were fabricated on wafers prepared by liquid-phase epitaxy. The strongest area of Soviet optoelectronic device research has been semiconductor lasers. No reports of ER(3+)-doped fiber amplifiers were found in the Soviet literature. However, Er(3+)-doped fiber fabrication is extremely simple, and, given its traditional strengths in the area of glass fabrication, the former Soviet Union should have the capability to fabricate Er(3+)-doped optical-fiber amplifiers. The current turmoil in the former Soviet Union makes predictions of the future difficult. It is likely that researchers will be driven to develop funding ties with foreign entities, and they also will become better integrated into the world research community by publishing in foreign (mainly US) journals. OPTICAL FIBER FLUOROSENSOR Patent Application
Claudio O. Egalon, inventor (to NASA) (College of William and Mary, Hampton, VA.) and Robert S. Rowgowski, inventor (to NASA) 16 Sep. 1991 15 p
(NASA-Case-LAR-14525-1-CU; NAS 1.71:LAR-14525-1-CU; US-Patent-Appl-SN-761298) Avail: CASI HC A03/MF A01

Optical fibers may have applications including fluorosensors which sense the concentration of an analyte. Like communication fibers, these fluorosensors are modeled using a weakly guiding approximation which is only effective when the difference between the respective refractive indices of the fiber core and surrounding cladding are minimal. An optical fiber fluorosensor is provided having a portion of a fiber core which is surrounded by an active cladding which is permeable by the analyte to be sensed and containing substances which emit light waves upon excitation. A remaining portion of the fiber core is surrounded by a guide cladding which guides these light waves to a sensor which detects the intensity of waves, which is a function of the analyte concentration. Contrary to conventional weakly guiding principles, the difference between the respective indices of refraction of the fiber core is surrounded by an active cladding which is thin enough such that its index of refraction is effectively that of the surrounding atmosphere, thereby the atmosphere guides the injective indices of the fiber core and the cladding results in an unexpected increase in the power efficiency of the fiber core. POLOIDAL ROTATION, DENSITY ASYMMETRIES, AND MOMENTUM CONFINEMENT IN TOKAMAK EXPERIMENTS
W. M. Stacey and D. R. Jackson Aug. 1992 25 p
(Contract DE-FG05-87ER-51112)
(DE93-002319; GTFR-103) Avail: CASI HC A03/MF A01

Poloidal rotation speeds and density asymmetries are calculated for the deuterium and dominant carbon (oxygen) impurity ions in discharges in ASDEX, DIII, ISX-B, JET, and TFTR for which upsilon(sub (phi) is approximately upsilon(sub th) for the ions. These poloidal rotation speeds and density asymmetries are used to evaluate the neoclassical gyroviscous model for the momentum confinement time. The rather good agreement with experimental momentum confinement times obtained over this wide range of plasma parameters provides a measure of confidence in the calculated density asymmetries and poloidal rotation, as well as arguing for a neoclassical explanation for momentum confinement in tokamaks. DIMENSIONLESS SCALING OF CONFINEMENT IN ATF
M. Murakami, T. S. Bigelow, J. B. Wilgen, R. A. Dory, B. A. Carreras, D. B. Batchelor, L. R. Baylor, G. L. Bell, J. D. Bell, and R. J. Colchin et al 1992 11 p Presented at the 14th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Wuerzburg, Germany, 30 Sep. - 7 Oct. 1992
(Contract DE-AC05-84OR-21400)
(DE93-001705; CONF-920913-3) Avail: CASI HC A03/MF A01

The results of dimensionless-parameter modulation and configuration control experiments in the Advanced Toroidal Facility (ATF) are presented. The global energy confinement time fits gyro-Bohm scaling better than Bohm-like scaling. An additional dependence was detected by modulation of single dimensionless parameters (collisionality nu(sub *) and beta (beta)), yielding tau(sub E)/tau(sub gB) is proportional to (((nu(sub *))(sup(alpha(sub nu)))(beta(sup (alpha(sub beta)), where alpha(sub nu) = 0.18 plus or minus 0.03 and alpha(sub beta) = 0.3 plus or minus 0.1. Application of this formula to NBI and ECH data significantly improves the fit, implying that improved confinement will result from increasing the heating power. Little change in confinement occurred for wide variations in the confined trapped particle fraction at constant magnetic well radius and shear. This may be explained by reduction of the helically trapped particle loss region due to the radial electric field. Configuration modulation experiments showed that the energy confinement time improves as the magnetic well radius expands, the result expected from some stabilization of resistive interchange instabilities. This is consistent with fluctuation measurements and may explain the positive dependence of confinement on beta. DOE

EFFECTS OF NONCLASSICAL ION LOSSES ON RADIAL ELECTRIC FIELD IN CHS TORSATRON/HELIOTRON
Heiji Sanuki, Kimitaka Itoh, and Sanae-I. Itoh Jul. 1992 51 p Sponsored by the Japanese Ministry of Education
(NIFS-160; AD-B168318L) Avail: CASI HC A04/MF A01

A self consistent analysis is discussed to determine the radial electric field and loss cone boundary in torsatron/heliotron plasmas under the influence of nonclassical ion losses. Effects of the loss cone, charge exchange loss of fast ions with neutrals, and the bipolar part of anomalous loss are taken into account. Analysis is applied to the neutron beam injection (NBI) heated plasma in the compact helical systems (CHS) device. Comparison is made between theoretical results and experimental observations. The increased ion particle losses by the orbit loss and charge exchange loss with neutrals make the radial electric field more negative

than the value of purely neoclassical calculation. The partition of the injection energy among the shine through, direct orbit loss, charge exchange loss, and bulk heating is estimated by using the self-consistent electric field profile. The power loss of fast ions caused by the orbit loss or charge exchange process is by a factor of several tens to hundreds greater than the reduction of the energy loss of bulk ions through the enhancement of radial electric field. Comparison with W7-A experiment is made, and the differences are discussed. Author

An experiment in a new regime of ion Bernstein wave (IBW) heating has been carried out using 130 MHz high power transmitters in the JIPP T-IIU tokamak. The heating regime utilized the IBW branch between the 3rd and 4th harmonics of the hydrogen ion cyclotron frequencies. This harmonic number is the highest among those used in the IBW experiments ever conducted. The net radio-frequency (RF) power injected into the plasma is around 400 kW, limited by the transmitter output power. Core heating of ions and electrons was confirmed in the experiment and density profile peaking was found to feature the IBW heating (IBWH). The peaking of the density profile was also found when IBW was applied to the neutral beam injection heated discharges. An analysis by use of a transport code with these experimental data indicates that the particle confinement should be improved in the plasma core region on the application of IBWH. It is also found that the ion energy distribution function observed during IBWH has a shorter energy tail than those in the conventional ion cyclotron range of frequency heating regimes. The observed IBWH-produced ion energy distribution function is in a reasonable agreement with the calculation based on the quasi-linear RF diffusion/Fokker-Planck model. Author

ON A BALLISTIC METHOD FOR DOUBLE LAYER REGENERATION IN A VLASOV-POISSON PLASMA
Sergey V. Bazdenkov (Kurchatov, I. V. Inst. of Atomic Energy, Moscow, USSR.) and Tetsuya Sato Jun. 1992 29 p
(NIFS-153) Avail: CASI HC A03/MF A01

Double layers generated by a current-driven instability are extant for a short time and then destroyed by emitting solitons and other nonlinear waves. It is analytically shown that they can be regenerated in the one-dimensional Vlasov-Poisson plasma system where the upstream velocity distribution is swiftly heated to restore an unstable condition in the downstream region due to ballistic deformation. STEADY STATE TOKAMAK SUSTAINED BY BOOTSTRAP CURRENT WITHOUT SEED CURRENT
Kimitaka Itoh, Sanae-I. Itoh, and Atsushi Fukuyama (Okayama Univ., Japan.) Jul. 1992 17 p Sponsored by the Japanese Ministry of Education
(NIFS-159; AD-B168317L) Avail: CASI HC A03/MF A01

The steady state tokamak solution is studied in the context of the current diffusivity. The seed current for generating the Bootstrap current is supplied through the radial diffusion of the Bootstrap current. Steady state tokamak operation, without external current drive power, is, in principle, possible. Author (revised)

TRANSITION TO H-MODE BY ENERGETIC ELECTRONS
Kimitaka Itoh and Sanae-I. Itoh Jul. 1992 18 p Sponsored by the Japanese Ministry of Education
(NIFS-158; AD-B168316L) Avail: CASI HC A03/MF A01

The effect of electron loss, due to toroidal ripple, on H-mode transition is studied. When energetic electrons exist in tokamaks, e.g., in the case of current drive by lower hybrid (LH) waves, the edge electric field can show the bifurcation to the more positive value. In this state, both the electron loss and ion loss (such as loss cone loss) are reduced. The criterion for the transition is derived. Comparison with the H-mode in the JT-60 LH plasma shows a qualitative agreement. Author (revised)

The construction of the Large Helical Device (LHD) is progressing as a 7 year project in Japan. The project began in 1990. This year, necessary research and development programs are approaching the final goal of the original schedule, and we have started the construction of the basic components of the LHD. We report on the results of the physics and engineering design studies and the recent status of the construction of LHD. Author (revised)

REFINED THEORY OF DIAMAGNETIC EFFECT IN STELLARATORS
V. D. Pustovitov (Kurchatov, I. V. Inst. of Atomic Energy, Moscow, USSR.) Aug. 1992 21 p
(NIFS-162; AD-B168323L) Avail: CASI HC A03/MF A01

The difference delta(phi) between the toroidal magnetic flux phi(sub p) through the plasma cross-section and the same flux phi(sub v) of a vacuum magnetic field is calculated analytically for 'conventional' stellarators with a planar circular axis. It was done without limitations on the aspect ratio, shape, or position of the plasma. The results obtained show weak dependence of delta(phi)/phi(sub p) on the geometry of the equilibrium configuration. It proves that diamagnetic measurements can be considered as a reliable basis for the direct evaluation of stored plasma energy at various experimental conditions. Author (revised)

THOUGHT ANALYSIS ON SELF-ORGANIZATION THEORIES OF MHD PLASMA
Yoshiomi Kondoh (Gunma Univ., Japan.) and Tetsuya Sato Aug. 1992 59 p
(NIFS-164; AD-B168319L) Avail: CASI HC A04/MF A01

A thought analysis on the self-organization theories of dissipative MHD plasmas is presented to lead to three groups of theories that lead to the same relaxed state of del x B = lambda(B), in order to find an essential physical picture embedded in the self-organization phenomena due to nonlinear and dissipative processes. The self-organized relaxed state due to the dissipation by the Ohm loss is shown to be formulated generally as the state such that yields the minimum dissipation rate of global auto- and/or cross-correlations between two quantities in j, B, and A for their own instantaneous values of the global correlations. A SYNERGETIC TREATMENT OF THE VORTICES BEHAVIOUR OF A PLASMA WITH VISCOSITY
Vo Hong Anh (Vietnam National Atomic Energy Commission, Hanoi.) and Nguyen Tien Dung (Vietnam National Atomic Energy Commission, Hanoi.) Sep. 1992 11 p
(NIFS-166; AD-B168321L) Avail: CASI HC A03/MF A01

The known system of nonlinear differential equations (PDE) describing vortical motions of an ideal electron-ion plasma with viscosity in the presence of a slightly inhomogeneous magnetic field is reduced to a Lorentz type system of 3 ordinary differential equations (ODE). The numerical solution of this system, with a set of values for real plasma physical parameters, shows the occurrence of a state with strange attractors. This means that the beginning of the vortices' formation is essentially a nonlinearity effect. Author

PHYSICAL MECHANISM OF E(SUB PSI)-DRIVEN CURRENT IN ASYMMETRIC TOROIDAL SYSTEMS
Noriyoshi Nakajima, Masao Okamoto, and Masami Fujiwara Sep. 1992 22 p
(NIFS-172; AD-B168928L) Avail: CASI HC A03/MF A01

Physical mechanism of the E sub psi-driven neoclassical current which

exists only in asymmetric toroidal systems is clarified. It is found that symmetry-breaking, violating the total angular momentum conservation, changes the direction of flow and heat flux to be damped by the parallel viscosities. The change in the direction depends on the collisionality through the geometric factor which reflects symmetry-breaking. As a result, in contrast to symmetric toroidal systems, the flow and heat flux due to the radial electric field E sub psi can be damped according to the collisionality in asymmetric toroidal systems. If dominant species such as electrons and primary ions have different collisionalities, there remains a difference between the flows due to E psi, hence a parallel current proportional directly to the radial electric field, i.e., the E psi-driven current, is generated in asymmetric toroidal systems in spite of the charge neutrality condition. SELFCONSISTENT ANALYSIS OF RADIAL ELECTRIC FIELD AND FAST ION LOSSES IN CHS TORSATRON/HELIOTRON
H. Sanuki, K. Itoh, and S.-I. Itoh (Kyushu Univ., Fukuoka, Japan.) Sep. 1992 20 p Presented at the IAEA Technical Committee Meeting on Tokamak Plasma Biasing, Montreal, Ontario, 8-10 Sep. 1992 Submitted for publication
(NIFS-178; AD-B169202L) Avail: CASI HC A03/MF A01

A self consistent analysis is developed to determine the radial electric field and loss cone boundary in Torsatron/Heliotron plasmas under the influence of non-classical ion losses such as the loss cone loss and charge exchange loss of fast ions with neutrals. Analysis is applied to the NBI heated plasmas in the Compact Helical System (CHS) device. Comparison is made between theoretical results and experimental observations. The increased ion particle losses caused by the orbit loss and charge exchange loss with neutrals make the radial electric field more negative than the value of purely neoclassical calculation. The partition of the injection energy among the shine through, direct orbit loss, charge exchange loss, and bulk heating is evaluated by using the selfconsistent electric field profile. On-going experiments in the CHS device are briefly introduced. Author

EFFECT OF ALPHA PARTICLES ON RADIAL ELECTRIC FIELD STRUCTURE IN TORSATRON/HELIOTRON REACTOR
K. Itoh, H. Sanuki, and S.-I. Itoh (Kyushu Univ., Fukuoka, Japan.) Sep. 1992 29 p Submitted for publication
(NIFS-182; AD-B169201L) Avail: CASI HC A03/MF A01

The radial electric field structure in the fusion reactor of the Torsatron/Heliotron configuration is discussed taking into account the effects of the orbit loss of alpha particles. It was found that the direct loss of alpha-particles has small influence on the profile of the radial electric field. The trapping efficiency of the alpha particle is also evaluated by using the self-consistent radial electric field. Author (revised)

THE EFFECTS OF EXTERNALLY IMPOSED MAGNETIC PERTURBATIONS ON PLASMAS IN TEXT Ph.D. Thesis
Mark Stephen Foster 1992 128 p
Avail: Univ. Microfilms Order No. DA9239252

The Texas Experimental Tokamak (TEXT) has a set of eight perturbing coils which imposes a spatially resonant radial magnetic field structure on a tokamak plasma. These coils were designed to produce a magnetic perturbation with an m = 7, n = 2 mode structure. This perturbation produces magnetic island chains on the rational surfaces in the plasma. The perturbing coils are driven with alternating current in a 2-8 kHz range of frequencies, thus oscillating the magnetic islands. These frequencies are of the same order as the natural MHD oscillations in TEXT. When used in this manner, the imposed magnetic perturbation is termed the Resonant Helical Oscillator (RHO). A theoretical model developed by Dr. Alan Boozer predicts that currents will flow on the perturbed rational surfaces so as to oppose the applied magnetic perturbation. The plasma parameters of density, current, toroidal field, and working gas, and the RHO settings of frequency and current are varied to characterize the plasma response under several conditions. The plasma response to the RHO is detected by a special set of sensing coils and compared to the predictions of the model. The experimental data from these coils supports the theory that small toroidal currents are being driven by the RHO on the island chains. For normal TEXT plasmas exhibiting low levels of MHD activity, these currents oppose the applied perturbations as predicted. The magnitude of the plasma response increases with perturbation frequency and strength as expected. In addition, the plasma response from the perturbed resonant surfaces appears to exhibit the predicted inverse relationship to the local parallel resistivity. This type of measurement can thus be used to measure changes in Z(sub eff) on the resonant rational surfaces. The phase shift of the plasma response is also examined and its dependences are consistent with a model of the plasma as an inductive element. Although the general trends predicted by Boozer's model are supported by the experimental evidence, the magnitude of the response is typically 2-3 times greater than the theoretical value. This could be due to coupling between the applied perturbations and the naturally occurring tearing modes in the plasma. Dissert. Abstr.

REVIEW OF JAPANESE RESULTS ON HEATING AND CURRENT DRIVE
T. Watari Oct. 1992 55 p Presented at the Europhysics Topical Conference on Radiofrequency Heating and Current Drive of Fusion Devices, Brussels, Belgium, 1992 Submitted for publication
(NIFS-193) Avail: CASI HC A04/MF A01

This article discusses Japanese contributions in the fields of plasma heating and current drive and, together with other reviews presented at this conference, will serve as a reference for future investigations. The Japanese fusion community has several tokamaks: JAERI (STA) has JT-60 and JFT-2M. TRIAM-1M (Kyushu University), WT-3 (Kyoto University), and JIPP T-2 U (National Institute for Fusion Science (NIFS)) belong to the Ministry of Education (MOE). A lot of contributions were made by these devices in heating and current drive in the various frequency ranges: electron cyclotron (EC) frequency range, lower hybrid (LH) frequency range, and ion cyclotron (IC) frequency range. This paper only deals with tokamak results: results on LHCD are described in section 1; ECH is described in section 2; results of high power ICRF heating are given in section 3; IBWH is described in section 4; and finally, FWCD is covered in section 5. Because the Matrix of different machine and different frequency range gives an intractable list of results, sampling will be made in describing the progress, i.e., JT-60 for LHCD, WT-3 for ECH/CD, JIPP T-2 U for IBWH, and JT-60 for higher harmonic ICRF heating. Special attention is given to the investigation of fast wave current drive which has some history in Japan. Results from JIPP T-2 U, JFT-2M, HT-2, and JT-60 are summarized. Aside from the tokamak, MOE has an alternative magnetic fusion program centered around CHS and HELIOTORON-E (Kyoto University). The LHD (Large Helical Device) is a machine under construction in the new site of NIFS. Gamma-10 (Tsukuba University) and HIEI (Kyoto University) are tandem mirror type open end systems. Due to the allotted space, works in this field will not be covered in this review. It should also be noted that there are a lot of contributions in theory which continued to support experiments very strongly through this decade. Derived from text

FORCE BALANCE NEAR AN X LINE ALONG WHICH E (DOT) IS LESS THAN 0
L. R. Lyons and D. C. Pridmore-Brown 15 Sep. 1992 11 p
(Grant NAGw-2126)
(NASA-CR-192341; NAS 1.26:192341; AD-A258640; ATR-91(7234)-2)
Avail: CASI HC A03/MF A01

Observations suggest that plasma can occasionally be transferred from closed to open field lines in the Geomagnetic tail during periods when the separatrix between open and closed field lines moves rapidly toward decreasing latitudes. Such transfer would require E (dot) J greater than 0 along the distant tail X line (E being the electric field and J the current density), and it would give important information on the physical processes that occur near an X line. The condition E (dot) J greater than 0 is not allowed in resistive reconnection theory. Collisionless reconnection theory, however, requires a balance between the electric force and a gyroviscous force at an X line but does not necessarily require that E (dot) J less than 0. We have recently shown that gyroviscosity can provide the force required to balance the electric force along an X line having E (dot) J greater than 0. GRA

EFFECTS OF NET TOROIDAL CURRENT ON MERCIER CRITERION IN THE LARGE HELICAL DEVICE
Katsuji Ichiguchi, Noriyoshi Nakajima, Masao Okamoto, Yuji Nakamura (Kyoto Univ., Uji, Japan.), and Masahiro Wakatani (Kyoto Univ., Uji, Japan.) Sep. 1992 44 p Submitted for publication
(NIFS-174; AD-B168891L) Avail: CASI HC A03/MF A01

Effects of the net toroidal current on the local ideal MHD stability or the Mercier criterion are investigated for a plasma in the heliotron/torsatron configuration by taking the Large Helical Device as an example. The three dimensional equilibrium code, VMEC, is used to study the local stability of equilibria with given net toroidal current. It is found that a subtractive current which decreased the rotational transform improves the stability while an additive current which increases the rotational transform deteriorates the stability. The change of the rotational transform of the magnetic axis due to the net toroidal current is the essential mechanism for the change of the stability property. Stability diagrams are drawn against the Mercier criterion for the configuration of the Large Helical Device shifting the plasma position inward or outward. Author

LONG PULSE DISCHARGES SUSTAINED BY SECOND HARMONIC ELECTRON CYCLOTRON HEATING USING A 35 GHz GYROTRON IN THE ADVANCED TOROIDAL FACILITY
S. Morimoto, M. Sato, H. Yamada, H. Ji, S. Okamura, S. Kubo, O. Motojima, M. Murakami (Oak Ridge National Lab., TN.), T. C. Jernigan (Oak Ridge National Lab., TN.), and T. S. Bigelow (Oak Ridge National Lab., TN.) et al Sep. 1992 15 p Submitted for publication
(NIFS-183; AD-B168890L) Avail: CASI HC A03/MF A01

A second harmonic electron cyclotron heating (ECH) discharge was sustained for approximately 20 s in the Advanced Toroidal Facility (ATF) at relatively weak magnetic field of B = 0.63 T. The high electron temperature (T(sub eo) approximately 700 eV), helium plasmas were produced with ECH power of P = 100-200 kW from a 35 GHz gyrotron. The line-averaged electron density and stored plasma energy were 2.3 x 10(exp 18) m(exp -3) and 300-500 J, respectively. The stored energy follows closely the gyro-reduced Bohm confinement scaling law. The maximum discharge duration was limited by ECH pulse duration but not by plasma collapse. Diagnostic signals showed attainment of a quasi-stationary plasma and no impurity build-up was indicated by soft x-ray and VUV spectroscopic signals. Author (revised)

MODEL OF THE L-MODE CONFINEMENT IN TOKAMAKS
K. Itoh, S.-I. Itoh (Kyoto Univ., Uji, Japan.), A. Fukuyama (Okayama Univ., Japan.), M. Yagi (Japan Atomic Energy Research Inst., Naka.), and M. Azumi (Japan Atomic Energy Research Inst., Naka.) 16 Sep. 1992 13 p Conference on Plasma Physics and Controlled Nuclear Fusion Research of the Fourteenth IAEA held in Wuerzburg, Germany, 30 Sep. - 7 Oct. 1992 Submitted for publication
(NIFS-187; IAEA-CN-56/H; AD-B169730L) Avail: CASI HC A03/MF A01

Model of the L-mode confinement in tokamaks is developed based on the microscopic ballooning mode instability. The anomalous transport coefficients determine the stability below the critical beta against the ideal MHD ballooning instability. The current-diffusivity has strong destabilizing effect, while the thermal transport chi and ion viscosity tend to stabilize the mode. The stability boundary for the least stable microscopic ballooning mode determines the anomalous transport coefficients. The obtained formula is compared with experimental observations on the L-mode confinement. The predictions on (1) the radial shape of chi, (2) the temperature-profile resilience, (3) the global confinement characteristics, such as the power degradation and the dependences on the plasma current, current profile and mass number, and (4) the ratio of the perturbative chi to the energy balance chi are consistent with the experimental database. BETA-LIMITING PHENOMENA IN HIGH-ASPECT-RATIO TOROIDAL HELICAL PLASMAS
K. Itoh, A. Fukuyama (Okayama Univ., Japan.), and S.-I. Itoh (Kyoto Univ., Uji, Japan.) Oct. 1992 34 p Submitted for publication
(NIFS-188; AD-B169726L) Avail: CASI HC A03/MF A01

Evolutions of the local pressure gradient and the amplitude of the helical mode are studied near the critical pressure gradient against the linear resistive interchange instability in high aspect ratio toroidal helical plasmas. Three characteristic dynamic evolutions are identified; monotonous saturation, relaxation oscillation and periodic limit cycle solution. As the heating power is increased, the dynamic evolution changes from the monotonous saturation, to the relaxation oscillation and finally to the limit cycle. The time average of the pressure gradient is limited by the critical gradient against the linear stability. Dependences of the amplitude and period of the sawtooth oscillation on the heating power are also analyzed. Author (revised)

CROSS FIELD ION MOTION AT SAWTOOTH CRASH
K. Itoh, S.-I. Itoh (Kyoto Univ., Uji, Japan.), and A. Fukuyama (Okayama Univ., Japan.) Oct. 1992 16 p Submitted for publication
(NIFS-189; AD-B169731L) Avail: CASI HC A03/MF A01

Turbulent ion motion which is caused by the sawtooth crash is analyzed in the framework of the magnetic stochasticity model of the sawtooth crash. The average current profile changes much more slowly than the pressure profile after the onset of the crash, so that inhomogeneity of the parallel current along the field line is generated. This causes the perpendicular current with a short scale length, leading to the ion cross field motion. Author

(Grant AF-AFOSR-0264-88)
(AD-A259272; AFOSR-93-0007TR) Avail: CASI HC A05/MF A01

This report describes research results on Fundamental Processes in Partially Ionized Plasmas obtained in the High Temperature Gasdynamics Laboratory at Stanford University. This research has emphasized studies of plasma properties and associated diagnostics. The present report discusses, in the first part, optical diagnostics in air plasmas and, in the second part, measurements of the radiative emission of such plasmas. These experimental results have unveiled severe deficiencies in existing computer codes such as the widely used NASA code NEQAIR. Several modeling improvements are therefore proposed and included into NEQAIR. As a result, the enhanced version of the code is capable of predicting the radiative emission of air plasmas with better than 20 percent accuracy, as opposed to only orders of magnitude with the original version. Finally, the report presents first measurements of the radiative source strength of air for temperatures in the range between 5000 and 7500 K. To our knowledge, these are the first measurements of this important property in this temperature range. Excellent agreement is again obtained with the predictions of the enhanced NEQAIR code. GRA

RADIO STIMULATION AND DIAGNOSTICS OF SPACE PLASMAS Progress Report
Min-Chang Lee 1 Feb. 1993 107 p
(Grant NAG5-1055)
(NASA-CR-192366; NAS 1.26:192366) Avail: CASI HC A06/MF A02

We have investigated the small-scale topside ionospheric plasma structures first observed at Millstone Hill, Massachusetts with the 440 MHz incoherent scatter radar. These small-scale obliquely propagating plasma modes occurring in the vicinity of the midlatitude ionospheric trough, have large radar cross-sections and narrow spectral widths. They have, until recently, been dismissed solely as hard target contamination of the incoherent scatter radar. The geophysical conditions associated with the ionospheric trough, such as the field-aligned current activity and steep plasma density gradients, suggest that these recently discovered small-scale topside ionospheric plasmas may also appear in the auroral and polar ionosphere. In fact, this speculation has been corroborated by the preliminary experiments and data analyses at Tromso, Norway and Sondrestromfjord, Greenland. The primary research results are highlighted. Described in Section 3 are the experiments conducted at Arecibo, Puerto Rico in the past

summer for simulating the geophysical conditions of generating these topside ionospheric plasma structures. Recommendation for the future research is finally given. Attached as the appendix of this report are several chapters which present the detailed results of research in the concerned topside ionospheric clutter. Highlights of the research results include: (1) causes of the enhanced radar backscatter (ERB) phenomenon; (2) occurrence of the ERB phenomenon; (3) altitudes of the ERB phenomenon; (4) strength of the ERB returns; (5) range of altitudes of the ERB returns; (6) occurrence frequency of the ERB phenomenon; (7) Doppler effect of the ERB phenomenon; (8) persistency of the ERB; and (9) distinction between ERB phenomenon and space object signatures. DISCRIMINANT ANALYSIS OF PLASMA FUSION DATA
O. J. W. F. Kardaun (Max-Planck-Inst. fuer Plasmaphysik, Garching, Germany.), J. W. P. F. Kardaun (Netherlands Bureau of Statistics, Voorburg.), Sanae-I. Itoh, and Kimitaka Itoh Jun. 1992 14 p Presented at the 10th International Symposium of Computational Statistics, Lausanne, Switzerland, 24-28 Aug. 1992
(NIFS-156) Avail: CASI HC A03/MF A01

Discriminant analysis is a branch of statistics with applications in many fields. One of these (a relatively new one) is nuclear fusion research, where one is interested in various types of plasma discharges produced in toroidal devices. In many instances, one has a small number, say 2 or 3, of different types of discharges under investigation. For instance, L-mode and H-mode discharges (L stands for Low confinement, and H for High confinement), or: H-mode discharges without ELM's, with 'small' ELM's, and with 'large' (giant) ELM's. The abbreviation ELM's stands for Edge Localized Modes, which are detected by light recording instruments. They enhance the outward transport of the plasma, including the plasma impurities, but if they are large, they produce a heavy heat load on material contacts of the plasma with the wall. There are typically 4 or 5 continuous variables, for instance plasma current Ip, magnetic field B(sub t), plasma electron density n(sub e), input heating power P(inj), that influence the type of discharge ('shot') that will occur. In addition, there may be a few (2 or 3) discrete variables that are physically expected to be important. Finally, there are a number of wall conditioning aspects, which influence the type of shots that will be produced. In the framework of the ITER project, a collaborative effort between Europe, GUS, Japan and the USA, an international fusion reactor device is being designed which is due to operate at the beginning of the next century. In this context, a database (ITERH.DB1) has been assembled containing plasma confinement data of about 1000 H-mode discharges from 6 different tokamaks. These data have been released for general use by plasma physicists and other interested scientists. We will use part of these data to illustrate various discriminant analysis techniques. Several discriminant analysis methods have been applied and compared to predict the type of ELM's in H-mode discharges: (1) quadratic discriminant analysis (linear discriminant analysis being a special case), (2) discrimination by non-parametric (kernel-) density estimates, and (3) discrimination by a produce multinomial model on a discretized scale. Practical evaluation was performed using SAS in the first two cases, and INDEP, a standard FORTRAN program, initially developed for medical applications, in the last case. We summarize the approach and its results. Derived from text

A REVIEW ON APPLICATION OF MHD THEORY TO PLASMA BOUNDARY PROBLEMS IN TOKAMAKS
Kimitaka Itoh Aug. 1992 67 p Presented at the 3rd International Workshop on Plasma Edge Theory Sponsored by the Japanese Ministry of Education
(NIFS-163; AD-B168324L) Avail: CASI HC A04/MF A01

A survey is made on the problems of the edge plasmas, to which the analyses based on the MHD theory have been successfully applied. Also discussed are the efforts to extend the model equation to more general (and important as well) problems such as H-mode physics. An overview is first made on the advantages of the MHD picture, and the necessary supplementary physics are examined. Next, one- and two-dimensional models of the spatial structure of the edge plasma is discussed. The results on the stationary structure, both analytical and numerical, are reviewed: typical examples as well as the scaling law are shown. The instabilities associated with edge plasma is next reviewed. The surface kink mode, ballooning mode, interchange mode, resistive interchange mode, and thermal instability are discussed. Role of the geometry such as the location of the X-point is studied. Influences of the atomic processes, and those of the radial electric field are also discussed. The analysis of the H-mode transition physics is finally discussed. The boundary plasma is a nonlinear media which possesses the possibility for bifurcation in which the radial electric field plays a key role. The model of the ion viscosity is also studied. Transition physics is developed. Analysis on the self-generating oscillation is shown and the relation with ELMs is discussed. After reviewing these problems, several comments are made as to the direction of future study. Author (revised)

A ROLE OF NEUTRAL HYDROGEN IN CHS PLASMAS WITH REHEAT AND COLLAPSE AND COMPARISON WITH JIPP T-IIU TOKAMAK PLASMAS
S. Morita, H. Yamada, H. Iguchi, K. Adati, R. Akiyama, H. Arimoto, M. Fujiwara, Y. Hamada, K. Ida, and H. Idei et al 14 Sep. 1992 15 p Conference on Plasma Physics and Controlled Nuclear Fusion Research of the Fourteenth IAEA held in Wuerzburg, Germany, 30 Sep. - 7 Oct. 1992 Submitted for publication
(NIFS-186; IAEA-CN-56/C-2-5) Avail: CASI HC A03/MF A01

Results are described on NBI plasmas of the Compact Helical System (CHS). An increase in the stored energy, which is called plasma 'reheat' is observed with density peaking when gas puffing is turned off in the high density region. A plasma collapse with large increase in radiation loss occurs even in discharges whose Z(sub eff) values (typically, less than 2-3) do not show any increase when the gas puffing is continued. Both phenomena are basically explained by the edge electron temperature due to the difference in the amount of edge hydrogen neutrals. After turning off the gas puffing, the central electron density n(sub e 0) shows an increase of 80 percent and the density peaking factor (n(sub e 0)/bar-n(sub e)) changes from 1.0 to 2.0 in typical cases, and a high inward velocity of the impurities appears (v = 20 m/s). The accumulation is studied in relation to the poloidal rotation and the edge temperature. These results are compared with results from plasmas with IOC- and H-modes in the JIPPT-IIU tokamak. COMPREHENSIVE SIMULATION STUDY ON LOCAL AND GLOBAL DEVELOPMENT OF AURORAL ARCS AND FIELD-ALIGNED POTENTIALS
Tomohiko Watanabe (Tohoku Univ., Sendai, Japan.), Hiroshi Oya (Tohoku Univ., Sendai, Japan.), Kunihiko Watanabe, and Tetsuya Sato Oct. 1992 43 p
(NIFS-195; AD-B169729L) Avail: CASI HC A03/MF A01

Extensive three-dimensional computer simulations of the magnetosphere-ionosphere (M-I) coupling are performed to study self-excitation of auroral arcs with special emphasis on (1) nonlinear evolution of the feedback instability in the M-I coupling system; (2) controlling mechanisms of the auroral arc structure; (3) formation of a field-aligned electric potential structure in association with the development of the feedback instability; and (4) effects of the parallel potential generation on auroral arc development. As was already shown by Sato (1978) and Watanabe and Sato (1988), it is reconfirmed that the feedback instability produces a longitudinally elongated, latitudinally striated structure where the upward field-aligned current and the ionosphere density are locally enhanced. On top of this the present extended study reveals the following important new features: (1) The global distribution of the striation structure is primarily governed by the magnetospheric convection pattern and the ionospheric density distribution. (2) There appears a significant dawn-dusk asymmetry in the auroral arc formation, even though the apparent geometrical relationship is symmetric. This dawn-dusk asymmetry reflects the geometrical fact that the ionospheric Pedersen current closing the magnetospheric current is anti-symmetric with respect to the moon-midnight plane, while the self-closed Hall current is symmetric. (3) The recombination effect plays a significant role in the global, as well as local, development of the auroral arc structure. The nonlinearity of recombination, in conjunction with the closure of an arc-associated local field-aligned current system, acts to destroy an old arc and creates a new arc in a different but adjacent position. This results in a peculiar behavior of auroral arc formation and deformation. (4) A V-shaped field aligned potential structure is created in

association with an auroral arc. Rapid increase in the electron density and the local upward field-aligned current of an arc arises as a result of enhanced ionization by precipitating electrons accelerated by the parallel potential. (5) A drastic oscillatory behavior of appearance and disappearance of auroral arcs is obtained when the ionization effect is strong. The period is primarily given by the Alfven bounce time. SURFACE MODIFICATION USING A CASCADE ARC PLASMA SOURCE Ph.D. Thesis
Jacobus Johannes Beulens 1992 172 p Sponsored by Stichting voor Fundamenteel Onderzoek der Materie
(ETN-93-93065) Avail: CASI HC A08/MF A02

Investigations on the plasma physical aspects of a seeded argon cascade arc plasma, expanding into vacuum, used as a particle source for surface modifications are considered. The cascade arc particle source, the expansion with monomer seeding, and the surface modification and its interrelations are emphasized. The objective was to understand the plasma physical processes that govern the radical and ion fluxes impinging on the substrate, in relation with the external settings, and finally the parameters of the modified substrate. L-MODE CONFINEMENT MODEL BASED ON TRANSPORT-MHD THEORY IN TOKAMAKS
K. Itoh, M. Yagi (Japan Atomic Energy Research Inst., Naka.), S.-I. Itoh (Kyushu Univ., Fukuoka, Japan.), A. Fukuyama (Okayama Univ., Japan.), and M. Azumi (Japan Atomic Energy Research Inst., Naka.) Oct. 1992 20 p Submitted for publication
(NIFS-192) Avail: CASI HC A03/MF A01

Theory of the L-mode confinement in tokamaks is developed based on the microscopic ballooning instability which is destabilized by the plasma transport below the critical pressure gradient against the ideal MHD instability. The destabilization by the current-diffusivity and the stabilization by the thermal transport and ion viscosity are analyzed. The least stable mode determines the anomalous transport coefficients. The formula of the thermal transport coefficient is derived, which explains major experimental observations on the L-mode confinement. Author (revised)

FORMATION OF H-MODE LIKE TRANSPORT BARRIER IN THE CHS HELIOTRON/TORSATRON
K. Toi, S. Okamura, H. Iguchi, H. Yamada, S. Morita, S. Sakakibara, K. Ida, K. Nishimura, K. Matsuoka, and R. Akiyama et al 13 Oct. 1992 15 p Conference on Plasma Physics and Controlled Nuclear Fusion Research of the IAEA held in Wuerzburg, Germany, 30 Sep. - 7 Oct. 1992 Submitted for publication
(NIFS-198; IAEA-CN-56/H-1-3) Avail: CASI HC A03/MF A01

Control of rotational transform profile with a small ohmic heating (OH-) current to increase the rotational transform has led to a continuous rise in the line-averaged electron density with reduction of H-alpha lights around the torus, in a heliotron/torsatron plasma heated by neutral beams. During the density rise, the transport barrier with steep temperature and density gradients near the plasma edge has been formed. Edge localized modes (ELM)-like activity is also observed. Incoherent magnetic fluctuations in the frequency range f greater than 20 kHz are clearly suppressed during the density rise phase, while the low frequency coherent part remains almost unchanged. Global energy confinement time in the density rise phase is improved by approx. 15 percent, compared with that of the discharge without the OH- current. These experimental observations are very similar to the H-mode in tokamaks. There is a threshold of the current for the transition, where the increment of rotational transform by the threshold current corresponds to approx. 0.1 at the edge. No obvious increase in the edge poloidal rotation velocity, however, is observed during the density rise phase, that is, at most approx. 3 km/s. Author (revised)

MODIFICATION AND EVALUATION OF A MICROWAVE PLASMA/ATOMIC EMISSION DETECTOR SYSTEM
M. Eileen Birch 14 May 1992 36 p
(PB92-217959) Avail: CASI HC A03/MF A01

Modifications made to an Applied Chromatography Systems plasma emission detector and the evaluation of the performance of the modified instrument were described. The detector modified was the MPD-850. The overall performance of the modified equipment was much improved for carbon (7440440) determination relative to that found for the original instrument. Limits of detection were somewhat higher for the other elements examined in the study including hydrogen (1333740), fluorine (778414), chlorine (7782505), bromine (7726956), and iodine (7553562). The carbon response for seven of the compounds examined in the study did not appear to be compound dependent when the helium flow rate was 70 milliliters/minute. Toluene (108883) and 2-chlorobutane (78864) responses were lower than expected. Carbon responses for two fluorinated compounds were also low, possibly as a result of a fluorine/quartz tube wall interaction. Modification of the original system included replacement of the 1/4 gamma cavity with a Beenakker TM010 cavity, replacement of the gas flow control unit with electronic mass flow controllers, addition of valves and plumbing associated with a solvent venting scheme, and construction of a gas chromatographic/plasma interface. STIMULATED BRILLOUIN BACKSCATTERING FOR NONLINEAR IONIC SOUND WAVES IN LASER PLASMAS Ph.D. Thesis [STIMULIERTE BRILLOUIN RUECKTREUUNG AN NICHTLINEAREN IONENSCHALLWELLEN IN LASERPLASMEN]
Stefan Hueller 1990 123 p In GERMAN
(ETN-93-93415) Avail: CASI HC A06/MF A02

The basic model equations of involved electromagnetic waves are derived. Their characteristic features when propagating in inhomogeneous plasmas are reported. Ionic sound waves or ionic acoustic waves occurring in plasmas as low frequency components or the stimulated Brillouin scattering are dealt with. The order of magnitude of dissipative and dispersive levels are discussed. Taking as an assumption the existence of asymptotic stationary conditions, a new solution including daughter waves is presented. Its importance with regard to other solutions is discussed. The character and the rate of growth of the instability are examined. The wave particle action is characterized, and the action of rapid 'hot' ions on the stimulated Brillouin scattering is compared, using simulation results and a stationary model. ESA

ION TRAPPING IN DUSTY PLASMAS
J. Goree (Iowa Univ., Iowa City.) Feb. 1992 11 p Submitted for publication
(MPE-Preprint-219; ETN-93-93530) Copyright Avail: Fachinformationszentrum Karlsruhe, 7514 Leopoldschafen-Eggenstein 2, Germany

Motivated by space and laboratory applications, a theory for trapped ions orbiting a charged dust grain in a plasma is presented. Trapped ions are confined within the grain's attractive Debye sphere, and they shield the grain's considerable electric charge. The number N(trap) is determined by the capture and loss rates, due to charge exchange collisions. At steady state, N(trap) is independent of the collisional mean free path and proportional to the plasma ion density. Because of the ion density dependence, trapping will be negligible in most space plasmas, but very significant in laboratory plasmas, which are usually much denser. ESA

CURRENT-DRIVE AND PLASMA-FORMATION EXPERIMENTS ON THE VERSATOR-2 TOKAMAK USING LOWER-HYBRID AND ELECTRON-CYCLOTRON WAVES Ph.D. Thesis
J. A. Colborn Aug. 1992 235 p
(Contract DE-AC02-78ET-51013)
(DE93-002333; PFC/RR-92-13) Avail: CASI HC A11/MF A03

During lower-hybrid current-driven (LHCD) tokamak discharges with thermal electron temperature T(sub e) is approximately 150 eV, a two-parallel-temperature tail is observed in the electron distribution function. The cold tail extends to parallel energy E(sub parallel) is approximately 4.5 keV with temperature T is approximately 1.5 keV, and the hot tail extends to E(sub parallel) is approximately 4.5 keV with T greater than 40 keV. Fokker-Planck computer simulations suggest the cold tail is created by low power, high N(sub parallel) sidelobes in the lower-hybrid antenna spectrum, and that these sidelobes bridge the 'spectral gap', enabling current drive on small tokamaks such as Versator. During plasma-formation experiments using 28 GHz electron-cyclotron (EC) waves, the plasma is born near the EC layer, then moves toward the upper-hybrid (UH) layer within 100-200 microsec. Wave power is detected in the plasma with frequency f = 300 MHz, indicating the EC waves decay into ion modes and electron Bernstein waves during plasma formation. Measured turbulent plasma fluctuations are correlated with decay-wave amplitude. Toroidal currents up to I(sub p) is approximately 1 kA are generated, consistent with theory, which predicts asymmetric electron confinement. Electron-cyclotron current-drive (ECCD) is observed with loop voltage V(sub loop) is less than or equal to 0 and fully sustained plasma current I(sub p) is approximately less than 15 kA at densities up to n(sub e) = 2 x 10(exp 12) cm(sup -3). The ECCD efficiency eta is equivalent to n(sub e)I(sub p)R(sub O)/P(sub rf) = 0.003, which is 30-40 percent of the maximum achievable LHCD efficiency on Versator. The efficiency falls rapidly to zero as the density is raised above n(sub e) = 3 x 10(exp 12) cm(sup -3), suggesting the ECCD depends on low collisionality. X-ray measurements indicate the current is carried primarily by electrons with energies 1 keV is approximately less than E is approximately less than 10 keV. DOE

VLASOV EQUATION IN THE STOCHASTIC MAGNETIC FIELD
Hideo Sugama, Masao Okamoto, and Masahiro Wakatani (Kyoto Univ., Uji, Japan.) Sep. 1992 27 p Submitted for publication
(NIFS-171; AD-B168929L) Avail: CASI HC A03/MF A01

We investigate the Vlasov equation in the stochastic magnetic field as a stochastic Liouville equation and derive the equation for the ensemble-averaged distribution function. The term resulting from the stochastic magnetic field has the derivatives with respect to both the velocity and the real space coordinates, which is a contrast to both the real space diffusion as seen in the guiding center picture and the velocity space diffusion as in the quasi-linear theory of the Vlasov equation including the electric field fluctuations. We find that this term retains the mass and energy conservation properties of the original Lorentz force due to the stochastic magnetic field and yields the additional force in the momentum equation. This additional force produced by the stochastic field gives the drift velocity which corresponds to the familiar real space diffusion of the guiding center in the stochastic field. The finite Larmor radius effect on the diffusion is also estimated. Author

ON RELATION BETWEEN HAMADA AND BOOZER MAGNETIC COORDINATE SYSTEM
Noriyoshi Nakajima, Jiro Todoroki, and Masao Okamoto Sep. 1992 25 p Submitted for publication
(NIFS-173; AD-B169200L) Avail: CASI HC A03/MF A01

The relation between the Hamada and the Boozer magnetic coordinate system is clarified by deriving them from a general magnetic field coordinate system. The coordinate transformation from the Hamada to the Boozer coordinate system is performed using a transformation function, which is easily calculated with the knowledge of the magnetic field strength only. In non-axisymmetric systems, the Fourier spectrum of the magnetic field strength (absolute value of B) in the Hamada coordinate system is broader than that in the Boozer coordinate system and the leading modes of (absolute value of B) in the Hamada coordinate system significantly deviate from a simple model field in comparison with the Boozer coordinate system. The Boozer coordinate system is suitable for numerical calculations, especially, for neoclassical and orbit calculations in non-axisymmetric systems. Author (revised)

NEOCLASSICAL THEORY OF THE PLASMA EDGE
W. M. Stacey Oct. 1992 20 p
(PB93-123586; GTFR-104) Avail: CASI HC A03/MF A01

Tokamak neoclassical theory is extended to the plasma edge region, where the gradient scale lengths of density, temperature, and rotation are comparable to the ion poloidal gyroradius and where v(sub theta) B(sub phi)/v(sub th) B(sub theta) approx = O(1). A new drift due to viscosity is found to be important. A self-consistent set of equations for determining particle flows within and across flux surfaces, asymmetries over the flux surface in densities and in the electrostatic potential, and the radial electric field in the plasma edge of tokamaks is presented. Numerical solutions of the nonlinear, resistive magnetohydrodynamic

(MHD) equations are used to study the evolution of a perturbed or stressed x-type neutral point. By performing individual simulations for both compressible and incompressible plasmas, we are able to demonstrate that the important physics for this problem involves just the interaction between the plasma flow velocity and the magnetic field and that the thermodynamics has a relatively passive effect. We have also done separate simulations for both solid, conducting wall boundary conditions at a fixed distance from the x-point and for open boundary conditions that adjust as required by the evolving solution within the boundaries. With solid, conducting wall boundary conditions, our solutions for azimuthally symmetric disturbances agree with those obtained in previous analytic linear studies. In this case the stressed x-point relaxes back to the unstressed state on a time scale somewhat shorter than the time scale for the linear resistive tearing mode. Perturbations that are not azimuthally symmetric can relax even faster than the symmetric modes. When the conditions at the boundary are free to adjust, the disturbances grow in amplitude on an Alfven time scale with the eventual formation of a current sheet separating two y-points. This rapid growing behavior is, of course, in sharp contrast to the relatively slow decaying solutions obtained with closed boundaries. The growing solutions qualitatively agree with previous analytic x-point solutions that have been suggested as an explanation for the rapid energy conversion in flares and substorms. DOE

MAGNETICALLY INSULATED ION DIODES FOR SYNTHESIS OF ADVANCED MATERIALS
R. J. Faehl and D. J. Rej 1992 6 p Presented at the 12th International Conference on the Application of Accelerators in Research and Industry, Denton, TX, 2-5 Nov. 1992
(Contract W-7405-eng-36)
(DE93-003747; LA-UR-92-3496; CONF-921116-14) Avail: CASI HC A02/MF A01

Magnetically insulated ion diode technology has been used to generate intense ion beams. We have used such beams to form ablation plasmas from solid targets. Initial experiments have studied congruent deposition of complex stoichiometric thin films. Typical ion diode parameters are 400 kV and 50 kA ion beams over a pulse length of 0.5-1.0 micron. Diode operation has been modeled with 2.5-D particle-in-cell simulations. These calculations allow us to unfold the dynamics of electron flow, ion flow, and their interactions to recover time-dependent impedance behavior which is in good agreement with data. Transport of the dense ion flow through an extraction section of the diode requires a high degree of charge neutralization. Self-consistent neutralization dynamics have been modeled with the simulations. We present the latest numerical results and compare them with data from the ongoing experiments. DOE

PENNING SURFACE-PLASMA SOURCE SCALING LAWS: THEORY AND PRACTICE
H. V. Smith, Jr., P. Allison, and J. D. Sherman 1992 10 p Presented at the Production and Neutralization of Negative Ions and Beams, Upton, NY, 9-13 Nov. 1992
(Contract W-7405-eng-36)
(DE93-003814; LA-UR-92-3664; CONF-921145-1) Avail: CASI HC A02/MF A01

The small-angle source (SAS), 4X source, and 8X source are Penning surface-plasma sources (SPS) that produce high-current, high-brightness H(-) ion beams for accelerator applications. It is desirable to achieve high duty-factor (df) operation, ultimately dc, with a Penning SPS. Two developments may make this goal possible. First, the H(-) beam-emission scaling from the SAS (the 1X device) to the 4X source, and from the 4X source to the 8X source, is more favorable than the scaling laws predict. Second, fringe-field separation of the e(-) and H(-) beams may make it possible to handle the power of the coextracted e(-) beam, especially since a collar arrangement reduces the e(-) loading. We compare our measured results with the predictions of the Penning SPS scaling laws. Particular attention is paid to the H(-) current and temperature scaling as well as the power efficiency. DOE

PHYSICS MODELS AND USER'S GUIDE FOR THE NEUTRAL BEAM MODULE OF THE SuperCode
John Mandrekas Aug. 1992 33 p
(PB93-121887; GTFR-102) Avail: CASI HC A03/MF A01

The report contains a description of the neutral beam heating and current drive module beams that was developed at Georgia Tech for the SuperCode, the new systems and operations code for the ITER EDA. The NB module calculates profiles of the neutral beam deposition, fast ion pressure, beam heating power, and neutral beam driven current density. It also computes global parameters such as current drive efficiencies, beam shine through, fast beam ion beta, and the fusion power and neutron production due to beam-plasma interactions. The most important consideration during the development of the module was to make it computationally fast without compromising physical accuracy. The authors believe that through careful selection of physical models and optimized coding, these conflicting requirements have been largely met. As a result, the SuperCode has now the ability to perform self-consistent calculations involving NB heating and current drive. This capability is very important for the study of sub-ignited, hybrid, or steady-state ITER and post-TFTR reactor operating scenarios. It is also the first time that a systems code has had such capabilities, usually found only in 1-1/2D plasma transport codes.

EFFECT OF ALPHA PARTICLES ON TOROIDAL ALFVEN EIGENMODES
H. L. Berk Nov. 1992 21 p
(Contract DE-FG05-80ET-53088)
(DE93-003635; DOE/ET-53088-583; IFSR-583) Avail: CASI HC A03/MF A01

An overview is given of the analytic structure for the linear theory of the Toroidal Alfven Eigenmode (TAE), where multiple gap structures occur. A discussion is given of the alpha particle drive and the various dissipation mechanisms that can stabilize the system. A self-consistent calculation of the TAE mode, for a low-beta high-aspect-ratio plasma, indicates that though the alpha particle drive is comparable to the dissipation mechanisms, overall stability is still achieved for ignited ITER-like plasma. A brief discussion is given of the nonlinear theory for the TAE mode and how nonlinear alpha particle dynamics can be treated by mapping methods. DOE

DENSE PLASMA FOCUS POWERED BY FLUX COMPRESSION GENERATORS
C. M. Fowler, B. L. Freeman, R. S. Caird, D. J. Erickson, and W. B. Garn 1992 13 p Presented at the International Conference on Progress and Applications of Plasma Focus Research, Hoboken, NJ, 27-31 May 1992
(Contract W-7405-eng-36)
(DE93-003781; LA-UR-92-3506; CONF-9105399-1) Avail: CASI HC A03/MF A01

A short summary is given of earlier Los Alamos work in which a Dense Plasma Focus was powered by Flux Compression Generators. Neutron yields obtained in the shot series scaled well with the fifth power of the current. The shot parameters were modeled surprisingly well through the plasma rundown phase by a simple snowplow model. It is shown, with the use of this model, that DPF currents in excess of 10 MA should be obtained with existing generators and initial energy sources. One new element is needed--a high energy opening switch such as a fuse. Much more is known about fuse operation since the Los Alamos program was stopped, so development of this component should be relatively straightforward. If the yield-current scaling relation holds to this current level, then D-T neutron yields in excess of 10(exp 16) per burst would result, sufficient for some interesting pulsed radiography applications that involve rapidly moving components. Finally, in a sheer flight of fancy, it is shown that D-T yields approaching 10(exp 20) could be obtained, using FCG's not too much beyond the state of the art, provided the simple modeling and neutron-current scaling relations continue to hold, a rather unlikely supposition. DOE

SIMULATION MODELS FOR TOKAMAK PLASMAS
A. M. Dimits and B. I. Cohen 2 Oct. 1992 17 p Presented at the International Atomic Energy Agency (IAEA) Technical Committee Meeting on Advances in Simulation and Modeling of Thermonuclear Plasmas, Montreal, Quebec, 15 Jun. 1992

(Contract W-7405-eng-48)
(DE93-002876; UCRL-JC-109895; CONF-9206235-4) Avail: CASI HC A03/MF A01

Two developments in the nonlinear simulation of tokamak plasmas are described. Simulation algorithms that use quasiballooning coordinates were implemented in a 3D fluid code and a 3D partially linearized delta(f) particle code. In quasiballooning coordinates, one of the coordinate directions is closely aligned with that of the magnetic field, allowing both optimal use of the grid resolution for structures highly elongated along the magnetic field as well as implementation of the correct periodicity conditions with no discontinuities in the toroidal direction. Progress on the implementation of a like-particle collision operator suitable for use in partially linearized particle codes is reported. The binary collision approach is shown to be unusable for this purpose. The algorithm under development is a complete version of the test-particle plus source-field approach that was suggested and partially implemented by Xu and Rosenbluth. DOE

Wisps have long been observed in the Crab Nebula. Modern observations reveal a whole series of wisps to the northwest, and at least one much fainter wisp to the southeast. Recently, a conceptual model of the wisps in the Crab Nebula has been proposed based on the shock structure of a relativistic magnetosonic shock wave in a electron-positron-proton plasma. The ion overshoot, downstream compressional oscillations, and possibly the pair overshoot can be identified with the wisps. In this paper, we study the linear stability properties of the Weibel instability, which are collective electromagnetic oscillations driven by pitch-angle anisotropy of the distribution functions. This instability can cause pitch-angle scattering of the charged particles and the isotropization of the distribution functions. DOE

Toroidicity-induced Alfven eigenmodes (TAE) and ellipticity-induced Alfven eigenmodes (EAE) are currently of great interest because they may destroy the confinement of fast ions in a burning tokamak plasma. The present study focuses on kinetic effects, extending the non-perturbative kinetic analysis of the TAE to the EAE. One finds that the parameter which measures the kinetic character of the EAE is significantly smaller than it is for the TAE for elongated plasmas like DIII-D. The parameter is rather small for the lower mode numbers but attains values of order unity or larger for the higher mode numbers, since the parameter scales as the square of the mode number. Consequently, one expects the lower mode number EAE's to have a strongly magnetohydrodynamic (MHD) character, and to suffer only perturbative damping that depends linearly on the dissipative mechanisms. However, while the former is true, the latter is not necessarily the case. This work examines these kinetic T/EAE(KT/EAE) modes in further detail. DOE

MULTIPLE PROJECTOR SMALL DOME DISPLAY Final Report, Jun. 1991 - Jul. 1992
Diane A. Hughes Dec. 1992 22 p
(Contract F33615-88-C-0001)
(AD-A258621; AL-TP-1992-0057) Avail: CASI HC A03/MF A01

This document describes the Multiple Projector Small Dome Display Project. The goal of this project was to demonstrate the capability of current low-cost liquid crystal display projectors to create a low-cost dome display system. Four such projectors were configured to project on a 10-ft-diameter half-dome. The ability of the image generator to pre-correct the image for the distortion of the curved projection surface was essential since the projectors offered no raster adjustments. As configured for this project, the four projectors provided a field of view of 70 degrees horizontal by 45 degrees vertical. Performance of the display provided better than 6 arc minutes per pixel resolution, brightness of 4 foot-lamberts and a contrast ratio of 28 to 1. GRA

ORIENTED, SINGLE-PHASE THIN FILMS OF POTASSIUM TANTALATE-NIOBATE Patent Application
Azar Nazari, inventor (to Navy) and Manfred Kahn, inventor (to Navy) 25 Sep. 1992 44 p
(AD-D015543; US-Patent-Appl-SN-950558; Navy-Case-73175) Avail: CASI HC A03/MF A01

An oriented, essentially single phase perovskite film of potassium tantalate-niobate is formed. Preferred substrate surfaces for deposition include SrTiO3 (110) and (100) and MgO (100). Films formed on SrTiO3 (110) and (100) are epitaxial. The films are formed by applying a solution of an organometallic complex of tantalum, potassium, and niobium onto a substrate surface. The deposited solution is dried and organics removed by heating. The thus formed film is then transferred to an oven preheated to a temperature of between about 700 C and 750 C. After cooling, further layers of single phase, oriented potassium tantalate-niobate may be deposited by repeating the same procedures. The deposited films can form a useful device for microelectronics and electro-optics.

LOW-PRESSURE DIAMOND GROWTH USING A SECONDARY RADICAL SOURCE
Tertu I. Hukka, Robin E. Rawles, and Mark P. DEvelyn 11 Dec. 1992 8 p
(Contract N00014-91-J-1550)
(AD-A258539; TR-15) Avail: CASI HC A02/MF A01

A method for chemical vapor deposition and atomic layer epitaxy using radical precursors under medium vacuum conditions is being developed. Fluorine atoms are generated by thermal dissociation in a hot tube and abstract hydrogen atoms from precursor molecules injected immediately downstream of the source, generating radicals with complete chemical specificity. The radical precursors are then transported to the growing substrate surface under nearly collision-free conditions. To date we have grown diamond films from CCl3 or CH3 radicals together with atomic hydrogen, generated by injecting CHCl3 or CH4 and H2 into the F atom stream at reactor pressures between 10(exp -4) and 10(exp -2) Torr.

This approach should be ideal for low-temperature growth and atomic layer epitaxy: growth rates remain relatively high because activation energies for radical reactions are typically small and because the cycle times for atomic layer epitaxy can be reduced to the msec range by fast gas-stream switching, and contamination and segregation are minimized by keeping the surface 'capped' by chemisorbed intermediates. (AD-A258541) Avail: CASI HC A03/MF A01

UHV surface analysis measurements of film growth were coupled with novel precursor chemistry to study the effect of precursor chemical structure on the efficiency of diamond film nucleation and growth. The goal is to optimize source gases and substrate surface preparation methods for both doped and undoped diamond film nucleation and growth, enabling the use of diamond in field emission, semiconductor, and optoelectronic applications. 'Surface perfection' of the diamond substrate was found to be a crucial factor in CVD of sp2-free diamond deposition. Exposure of a diamond 100 surface to CO at high temperature (900 C) resulted in propagation of the diamond surface and extreme smoothing as monitored by RHEED. Growth was apparently linked to an inadvertent impurity, iron, which may have catalyzed the decomposition of CO. Improved nucleation and growth rates from non-hydrogen-containing carbon sources may be achievable with catalysis by transition metals. We intend to use this discovery in Phase 2 to develop diamond emitters for flat panel displays, UHV analytical instruments, and microwave vacuum electronics. GRA

[A STUDY OF TRIGLYCINE SULFATE (TGS) CRYSTALS FROM THE INTERNATIONAL MICROGRAVITY LABORATORY MISSION (IML-1)] Monthly Technical Report, 1 Mar. - 31 Aug. 1992
R. B. Lal 31 Aug. 1992 52 p
(Contract NAS8-36634)
(NASA-CR-191956; NAS 1.26:191956) Avail: CASI HC A04/MF A01

Preliminary evaluation of the data was made during the hologram processing procedure. A few representative holograms were selected and reconstructed in the HGS; photographs of sample particle images were made to illustrate the resolution of all three particle sizes. Based on these evaluations slight modifications were requested in the hologram processing procedure to optimize the hologram exposure in the vicinity of the crystal. Preliminary looks at the data showed that we are able to see and track all three sizes of particles throughout the chamber. Because of the vast amount of data available in the holograms, it was recommended that we produce a detailed data reduction plan with prioritization on the different types of data which can be extracted from the holograms. Theoretical computations using the Car-Parrinello version of quantum molecular dynamics is being used to study the structure, bonding, and reactions of various C-, Cl-, and H-containing species on the diamond surface, particularly as they pertain to the ALE of diamond. Related studies are also focused on the potential for particular elements to be donor and acceptor species in GaN and AlN. The interfacial aspects of diamond growth and the negative electron affinity on the (111) surface have been extensively investigated. Computer-controlled synthesis of diamond has been achieved using an oxy-C2H2 torch. Two-dimensional growth was achieved. Epitaxial films of cubic Beta(3C)-SiC(111) and AlN(0001) have been deposited on alpha(6H)-SiC(0001) substrates oriented 3-4 deg towards (1120) at 1050 C via gas-source MBE using Si2H6, C2H4, thermal evaporation of Al, and activated N species from an ECR plasma. HRTEM revealed that the nucleation and growth of the Beta(3C)-SiC regions occurred primarily on terraces between closely spaced steps. Pseudomorphic bilayer structures containing Beta(3C)-SiC and 2H-AlN have been grown under the same conditions for the first time. Epitaxial GaP and GaN films have also been achieved via GSMBE at 200 C and ALE at 635 C, respectively. Rectifying contacts of SiGe alloys and Ti, Pt, and Hf have been deposited and characterized on diamond (100) and alpha(6H)-SiC(0001), respectively. GRA

The main goals of the research under this grant consist of the development of mathematical tools and measurement of transport properties necessary for high fidelity modeling of crystal growth from the melt and solution, in particular, for the Bridgman-Stockbarger growth of mercury cadmium telluride (MCT) and the solution growth of triglycine sulphate (TGS). Of the tasks described in detail in the original proposal, two remain to be worked on: (1) development of a spectral code for moving boundary problems; and (2) diffusivity measurements on concentrated and supersaturated TGS solutions. Progress made during this seventh half-year period is reported. Derived from text

CLUSTER FORMATION AND EVOLUTION ON SEMICONDUCTOR SURFACE Final Report, 1 Oct. 1989 - 30 Sep. 1992
J. H. Weaver 15 Dec. 1992 13 p
(Contract N00014-90-J-1190)
(AD-A259190) Avail: CASI HC A02/MF A01

This program focused on fundamental problems related to the nucleation and growth of clusters and the interaction of those clusters with surfaces. The issues it addressed were those involved with the deposition of atoms on a surface, particularly the chemical environments created by those atoms and the processes encountered as the number of atoms increases. It investigated cluster formation and cluster-induced reaction, as well as the tendency of clusters to nucleate preferentially at particular defect sites of the surface. It focused on the evolution of clusters into new structures with distinct crystalline character. These issues are of very broad importance because they are encountered when considering the growth of elemental and compound layers on any surface, be they semiconductors, high temperature superconductors, or fullerides. ATOMIC AND ELECTRONIC STRUCTURE OF ULTRATHIN FILMS Ph.D. Thesis
Di Tian 1992 215 p
Avail: Univ. Microfilms Order No. DA9232810

The most important result of this work is the establishment of low-energy electron diffraction (LEED) as a reliable quantitative technique for experimental studies of ultrathin films, i.e., films with thicknesses ranging from less than 1 to a few tens of atomic layers, and in particular for the determination of the growth mode and the atomic structure of such films. The experiments were focussed on films of metals on metallic substrates, and special attention was devoted, in view of the widespread interest in monolayer magnetism, to films of both body-centered-cubic (BCC) and face-centered cubic (FCC) iron and of FCC manganese on low-index surfaces of nickel, copper, ruthenium, palladium and silver. It was found that metastable FCC iron could indeed be grown epitaxially on (001) surfaces of copper and nickel, but on all other substrates tested in this work only the stable BCC phase of iron could be grown. Layer-by-layer growth of iron was not found to occur on any substrate, in contrast to several literature reports, and Stranski-Krastanov growth was reliably detected only on the basal plane of ruthenium. Ultrathin films of manganese with the metastable FCC structure were found to be relatively easy to grow on several FCC substrates, and a new phase with as-yet unknown crystal structure was found to be formed on Pd(111) and Cu(111). With non-magnetic materials the most noteworthy results concern the epitaxial growth of copper in the form of highly-strained tetragonally-distorted films on Pd(001) and of incommensurate films on Pd(111). The inversion of this epitaxial system, i.e., deposition of palladium on Cu(001), produced a surface alloy with the

Cu3Au structure. The work presented herein includes also the use of LEED in its traditional mode of quantitative intensity analysis for the purpose of characterizing the atomic structure of the clean surfaces which were used as substrates in the epitaxial experiments. Attention was also devoted to the study of the electronic properties of copper and silver by means of photoemission experiments carried out at the National Synchrotron Light Source. Dissert. Abstr.

THIN FILM PROCESSING OF PHOTOREFRACTIVE BaTiO3 Annual Progress Report
Paul R. Schuster Jan. 1993 83 p Original contains color illustrations
(Grant NAG1-1247)
(NASA-CR-192169; NAS 1.26:192169) Avail: CASI HC A05/MF A01; 11 functional color pages

During the period covered by this report, October 11, 1991 through October 10, 1992, the research has progressed in a number of different areas. The sol-gel technique was initially studied and experimentally evaluated for depositing films of BaTiO3. The difficulties with the precursors and the poor quality of the films deposited lead to the investigation of pulsed laser deposition as an alternative approach. The development of the pulsed laser deposition technique has resulted in continuous improvements to the quality of deposited films of BaTiO3. The initial depositions of BaTiO3 resulted in amorphous films, however, as the pulsed laser deposition technique continued to evolve, films were deposited in the polycrystalline state, then the textured polycrystalline state, and most recently heteroepitaxial films have also been successfully deposited on cubic (100) oriented SrTiO3 substrates. A technique for poling samples at room temperature and in air is also undergoing development with some very preliminary but positive results. The analytical techniques, which include x-ray diffraction, ferroelectric analysis, UV-Vis spectrophotometry, scanning electron microscopy with x-ray compositional analysis, optical and polarized light microscopy, and surface profilometry have been enhanced to allow for more detailed evaluation of the samples. In the area of optical characterization, a pulsed Nd:YAG laser has been incorporated into the experimental configuration. Now data can also be acquired within various temporal domains resulting in more detailed information on the optical response of the samples and on their photorefractive sensitivity. The recent establishment of collaborative efforts with two departments at Johns Hopkins University and the Army Research Lab at Fort Belvoir has also produced preliminary results using the metallo-organic decomposition technique as an alternative method for thin film processing of BaTiO3. RF and DC sputtering is another film deposition approach that should be initiated in the near future. Other techniques for optical characterization, which may even allow for intragrannular (within single grains) investigations, are also being considered. Derived from text

GROWTH AND DOPING OF Al(x)Ga(1-x) FILMS BY ELECTRON CYCLOTRON RESONANCE ASSISTED MOLECULAR BEAM EPITAXY Semiannual Report
Theodore Moustakas 30 Oct. 1992 91 p
(Contract N00014-92-J-1436)
(AD-A258722) Avail: CASI HC A05/MF A01

Growth and doping of GaN by ECR assisted MBE is reported. We report on the role of the GaN-buffer and AlN-buffer, and their combination on the two dimensional nucleation rate and lateral growth rate. Conditions for quasi layer by layer growth were identified. XRD was used to study secondary phase, the direction and quality of orientational ordering in and out of the substrate, and homogeneous and inhomogeneous strain.' Relatively high mobility autodoped films were produced and their transport mechanism was investigated. Intrinsic GaN films were produced and were doped n- and p- type with Si and Mg respectively, without requiring annealing for dopant activation. RIE processing of GaN was developed and metal contacts were investigated. A direct correlation between the metal work function and barrier height was also found. GRA

QUANTUM DYNAMICS OF SHOCK WAVES IN MOLECULAR CRYSTALS
30 Sep. 1992 4 p
(Contract N00014-89-J-1379)
(AD-A258749) Avail: CASI HC A01/MF A01

This research has focused upon theoretical studies of shock wave transport in model molecular lattices via both classical and quantal techniques. In the previous grant period, the cluster model was developed and applied to model harmonic and cubic anharmonic molecular lattices. During this grant period, the cluster method has been extended to three more complex and physically significant situations. These are: (1) shock wave propagation in a linear chain of Morse oscillators; (2) shock wave propagation in a linear NCCN lattice with Morse interaction potentials; (3) shock wave propagation in a 2D model CH3NO2 lattice. During this grant period, the semiclassical cluster model was applied to three lattice models of increasing complexity. In the first study, which has been published in J. Phys. Condens. Matter, a lattice od diatomic molecules was considered. All interatomic interactions were described by Morse potentials. GRA

GROWTH, CHARACTERIZATION AND DEVICE DEVELOPMENT IN MONOCRYSTALLINE DIAMOND FILMS Annual Letter Report, 1 Jan. - 31 Dec. 1992
Robert F. Davis Dec. 1992 64 p
(Contract N00014-90-J-1604)
(AD-A259099) Avail: CASI HC A04/MF A01

Investigations concerned with bias-enhanced nucleation (BEN) of diamond films revealed that the substrate holder must be diamond coated to achieve this phenomenon. This suggests that some unique property of diamond is responsible for the increased nucleation densities. The carbide-forming substrates tended to nucleate more rapidly than other substrates, thus indicating that the carbide forming nature of the substrate may play an important role. A statistical experimental design was implemented to optimize the process parameters associated with BEN. Continued efforts regarding the surface and interface properties of diamond showed an increased density of impurity-related defects during the initial stages of growth. Angle resolved photo-emission revealed a negative electron affinity (NEA) on diamond(111) after cleaning and after sub-monolayer deposition of Ti. The Schottky barrier height of Ti on diamond was also measured. A model is proposed for the observed NEA. The device modeling research on MESFET's was expanded to include MOSFET's and JFET's. The NCSU large-signal FET model was augmented with simulations using Stanford's Pisces IIB simulator. An interface program was written to couple the NCSU and Stanford models and used to investigate the dc performance of three diamond FET's. Good agreement between measured and simulated data was obtained. GRA

(AD-A259177) Avail: CASI HC A04/MF A01

Pseudomorphic bilayer structures containing Beta(3C)-SiC and 2H-AlN have been grown for the first time on vicinal alpha(6H)-SiC(0001) homoepitaxial layers at 1050 C by plasma-assisted, gas source molecular beam epitaxy. High energy electron diffraction and cross-sectional high-resolution transmission electron microscopy showed all layers to be monocrystalline. The AlN layers were uniform in thickness. Defects in these layers were initiated at steps on the 6H-SiC film. Pseudomorphic layers of GaN have also been deposited on thin films of AlN grown on a(6H)-SiC(0001) and sapphire(0001). This was achieved by preventing the formation of a thin amorphous layer on both substrates via reaction with the active N species from the ECR plasma source. The p-type and n-type doping of GaN during deposition with Mg and Si, respectively, has also been achieved for the first time. The resistivity, Hall mobility and carrier concentration of the p-type material were 0.5 ohm-cm, 10 sq cm/V-s and 1 x 10(exp 18) cm(exp -3), respectively. Layers of cubic-BN have been achieved on Si(100) and diamond(100); however, they were occurred as a final step in a sequence; wherein, the prior layers consisted of a-BN and h-BN. GRA

LOW TEMPERATURE DEPOSITION AND CHARACTERIZATION OF N- AND P-TYPE SILICON CARBIDE THIN FILMS AND ASSOCIATED OHMIC AND SCHOTTKY CONTACTS Annual Report, 1 Jan. - 31 Dec. 1992
R. F. Davis, R. J. Nemanich, R. S. Kern, R. Patterson, and L. B. Rowland Jan. 1992 65 p
(Contract N00014-92-J-1500)
(AD-A259247) Avail: CASI HC A04/MF A01

Single-crystal epitaxial films of cubic Beta(3C)-SiC(111) and AlN(0001) have been deposited on alpha(6H)-SiC(OOO1) substrates oriented 3-4 deg towards zone axes 1120 at 1050 C via gas-source molecular beam epitaxy using disilane (Si2H6), ethylene (C2H4), thermal evaporation of Al, and activated N species derived from an ECR plasma. High resolution transmission electron microscopy revealed that the nucleation and growth of the Beta(3C)-SiC regions occurred primarily on terraces between closely spaced steps. Pseudomorphic bilayer structures containing Beta(3C)-SiC and 2H-AlN have been grown under the same conditions for the first time. HREED and cross-sectional HRTEM showed all layers to be monocrystalline. Initial high temperature chemical interdiffusion studies between SiC and AlN show that all components diffuse very slowly across the interface. AHRTEM and SAS are being used to determine the concentration profiles. Thin film solid solutions of AlN and SiC have been deposited using similar techniques and conditions as the individual compounds. Metal contacts of Ti, Pt, and Hf deposited at RT on n-type alpha(6H)-SiC(OOO1) exhibit rectifying behavior with ideality factors between 1.01 and 1.09. The Pt and Hf contacts had leakage currents of 5 x 10(exp -8) A/sq cm at -10 V. Values of barrier heights for all contacts were within a few tenths of 1.0 eV which is indicative that the Fermi level is pinned at the SiC surface. GRA

THE EFFECT OF OXIDE LAYERS AND BORON DOPING ON THE BREAKDOWN OF HIGH PURITY SILICON M.S. Thesis
Brian A. Hibbeln 1 Dec. 1992 65 p
(AD-A259171; AFIT/GEP/ENP/92D-5) Avail: CASI HC A04/MF A01

For many applications such as lasers and radar drive circuits, there exists a need for solid state, high voltage, high current switches. Current gaseous discharge switches fail to satisfy the ruggedness, reliability, and lifetime requirements of today's systems. A promising alternative is the Photoconductive Semiconductor Switch (PCSS). The limiting factor in the operation of these switches is the occurrence of breakdown through channels formed slightly below the surface. A theory on the formation of these channels is presented based upon band bending at the metal-semiconductor interface, a nonhomogeneous space charge due to irregular trap distributions, and thermal runaway in localized regions. Experimental results on the effect of thin oxide layers and boron doping at the metal-semiconductor junctions reveal that the junctions play a very important role in the breakdown of the samples, changing the breakdown potential by almost a factor of three. By placing a thin oxide layer at the anode face of a sample, an excellent photoconductive switch can be produced. The resistance of this switch was changed by three orders of magnitude through optical illumination. GRA

Bulk form of superconducting materials are produced by pouring a melt of O2-containing superconducting material into a heated mold, cooling the mold until solidification begins, removing the cast object from the mold, gradually cooling the cast object to prevent the development of thermal stresses, and then annealing the cast cooled object to restore O2 to near equilibrium levels. The bulk form produced according to the present invention may be used as a sputtering target in the production of wires, or as a bulk form semiconductor. GRA

DEFECTS AND IMPURITIES IN AMORPHOUS SEMICONDUCTORS AND IN LIQUID ELECTROLYTES
Gerhard Mueller and Gerhard Kroetz 1992 8 p Repr. from Applied Physics A, v. 54, 1992 p 40-46
(MBB-Z-0386-91-PUB; ETN-92-92753) Avail: CASI HC A02/MF A01

Amorphous (a-) semiconductors like a-Si:H and the chalcogenide glasses possess a general tendency to establish an overall equilibrium between the electronic system and the lattice with its dopant and defect sites. The chemical interactions which establish these equilibria within the bulk of the a-semiconductor lattices are compared to chemical interactions in liquid electrolytes, particularly to those in H2O. These considerations reveal close similarities between autocompensation doping in a-semiconductors and acid/base reactions in H2O. The effects of light and field effect induced defect formation, on the other hand, are shown to be related to the phenomenon of electrolysis in H2O. The consideration of these analogies further emphasizes the roles of charge carrier localization and that of H diffusion in promoting dopant and defect equilibrium reactions in a-semiconductors. ESA

(DE93-003104; CONF-920716-9) Avail: CASI HC A02/MF A01

Resistivity changes produced by 1 MeV neutron irradiation at room temperature have been measured in float-zone grown n and p-type silicon with initial resistivities ranging from 1.8 to 100 k-ohms(cm). Observed changes are discussed in terms of net electrically active impurity concentration. A model is presented which postulates escape of Si self-interstitials and vacancies from damage clusters and their subsequent interaction with impurities and other pre-existing defects in the lattice. These interactions lead to transfer of B and P from electrically active substitutional configurations into electrically inactive positions (B(sub i), Pi(sub i), and E-center), resulting in changes of net electrically active impurity concentration. The changes in spatial distribution of resistivity are discussed, and the experimental data are fit by theoretical curves. Differences in the behavior of n-type and p-type material are explained on the basis of a faster removal of substitutional P and a more nonuniform spatial distribution of the original P concentration. RELAXATION OF RADIATION DAMAGES IN a-Si:H LAYERS Abstract Only [RELAXATION VON STRAHLENSCHAEDEN IN A-SI:H SCHICHTEN]
H. Stitzl, Gerhard Kroetz, and Gerhard Mueller 1990 2 p In GERMAN Presented at the 8th Honnefer Gespraech Amorphe Halbleiter, Bad Honnel, Germany, 17-19 Oct. 1990
(MBB-Z-0317-90-PUB; ETN-93-93443) Avail: CASI HC A01/MF A01

The irradiation of a-Si:H fibers with electrons, protons, and a series of heavy ions was carried out, and the relaxation of resulting radiation damages was examined under isothermal conditions, using conduction and photoconduction measurements. It was found that constant radiation doped specimens, in particular boron doped, annealed more rapidly than undoped and compensated specimens. For strong specimen doping, an increase of activation energy was observed, in relation with increasing radiation dosage. ESA

BIAS-ANNEALING EXPERIMENTS FOR DOPED a-Si:H LAYERS Abstract Only [BIAS-ANNEALING EXPERIMENTE AN DOTIERTEN A-SI:H SCHICTEN]
Gerhard Kroetz, Joerg Wind, and Gerhard Mueller 1990 3 p In GERMAN Presented at 8th Honnefer Gespraech Amorphe Halbleiter, Bad Honnef, Germany, 17-19 Oct. 1990
(MBB-Z-0316-90-PUB; ETN-93-93442) Avail: CASI HC A01/MF A01

The layers which were separated in field effect arrangement were characterized, using transport and optical measurements. Thermal oxidized high doped c-Si was used as a substrate and as a gate electrode. It was found that, after recovery with charge carrier depletion, very high conducting conditions were frozen, and that, after recovery with charge carrier enrichment, low conducting conditions were frozen. These effects were very high for n-material, whereas they were much lower for p-material. ESA

DIFFRACTION PEAKS IN X RAY SPECTROSCOPY: FRIEND OR FOE?
R. G. Tissot and R. P. Goehner 1992 8 p Presented at the Annual Denver X Ray Conference, Denver, CO, 3-7 Aug. 1992
(Contract DE-AC04-76DP-00789)
(DE93-002482; SAND-92-2079C; CONF-9208129-6) Avail: CASI HC A02/MF A01

Diffraction peaks can occur as unidentifiable peaks in the energy spectrum of an x-ray spectrometric analysis. Recently, there has been increased interest in oriented polycrystalline films and epitaxial films on single crystal substrates for electronic applications. Since these materials diffract x-rays more efficiently than randomly oriented polycrystalline materials, diffraction peaks are being observed more frequently in x-ray fluorescent spectra. In addition, micro x-ray spectrometric analysis utilizes a small, intense, collimated x-ray beam that can yield well defined diffraction peaks. In some cases these diffraction peaks can occur at the same position as elemental peaks. These diffraction peaks, although a possible problem in qualitative and quantitative elemental analysis, can give very useful information about the crystallographic structure and orientation of the material being analyzed. The observed diffraction peaks are dependent on the geometry of the x-ray spectrometer, the degree of collimation, and the distribution of wavelengths (energies) originating from the x-ray tube and striking the sample. OXYGEN CONFIGURATIONS AND THEIR EFFECT ON CHARGE TRANSFER IN YBa2Cu3O(z)
R. McCormack, D. deFontaine, and G. Ceder (Massachusetts Inst. of Tech., Cambridge.) Apr. 1992 7 p Presented at the 1992 Material Research Society (MRS) Spring Meeting, San Francisco, CA, 27 Apr. - 2 May 1992
(Contract DE-AC03-76SF-00098)
(DE93-002543; LBL-32828; CONF-920402-61) Avail: CASI HC A02/MF A01

The relationship between oxygen structure, charge transfer (hole count), and oxygen content in the YBa2Cu3Oz superconductor is studied by combining Monte-Carlo simulation with existing electronic structure calculations. The present model proposed an expansion of the hole count in terms of oxygen configuration variables for states of an arbitrary degree of order. Calculations of hole count as a function of oxygen content suggest that oxygen ordering is, at least in part, responsible for the observed plateau structure of T(sub c) vs. oxygen content z. DOE

VACUUM STRUCTURE OF PURE GAUGE THEORIES ON THE LATTICE
R. W. Haymaker, V. Singh, D. Browne, and J. Wosiek (Jagellonian Univ., Cracow, Poland.) 1992 14 p Presented at the Workshop on QCD Vacuum Structure, Paris, France, 1-5 Jun. 1992
(Contract DE-FG05-91ER-40617)
(DE93-001920; DOE/ER-40617/129; CONF-9206280-3) Avail: CASI HC A03/MF A01

Results from simulations on two aspects of quark confinement in the pure gage sector are presented. First is the calculation of the profile of the flux tube connecting a static q(bar q) pair in SU(2). By use of the Michael sum rules as a constraint, evidence is set forth that the energy density at the center of the flux tube goes to a constant as a function of quark separation. Slow variation of the width and energy density is not ruled out. Secondly in the confined phase of lattice U(1), the curl of the magnetic monopole current is calculated, and it is shown that the dual London equation is satisfied and that the electric fluxoid is quantized. THE ROLE OF MICROSTRUCTURAL PHENOMENA IN MAGNETIC THIN FILMS
D. E. Laughlin and D. N. Lambeth 1992 31 p
(Contract DE-FG02-90ER-45423)
(DE93-005132; DOE/ER-45423/3) Avail: CASI HC A03/MF A01

Magnetic recording media is studied. Results during the first 2 years are presented under the following headings: atomic resolution transmission electron microscopy (TEM) of CoNiCr films; CoNiCr and CoCrTa thin films; development of texture; and CoSm/Cr thin films. The high resolution electron microscopy (HREM) results showed that defects in Co-based films may be responsible for higher coercivity. Findings are presented on the effects of Cr interlayers on the microstructure of the second Co-based film in Co/Cr/Co/Cr multilayer films. Proposed research plans are outlined. DOE

NEUTRON STUDY OF CRYSTAL-FIELD TRANSITIONS IN ErPO4
C.-K. Loong, L. Soderholm, J. P. Hammonds, M. M. Abraham, L. A. Boatner, and N. M. Edelstein 1992 13 p Presented at the Conference on Magnetism and Magnetic Materials, Houston, TX, 1-4 Dec. 1992
(Contract W-31-109-eng-38)
(DE93-004131; ANL/CP-76341; CONF-921201-8) Avail: CASI HC A03/MF A01

The crystal-field splitting of the Er(sup 3+) ground multiplet, (sup 4)I(sub 15/2), in ErPO4 is investigated by inelastic neutron scattering. Four excitations from the Gamma(sub 7) ground state to the excited states and several transitions between the excited states have been identified. The observed transition energies and intensities are used to refine the parameters of the crystal-field potential. The calculated magnetic susceptibility, chi(T), agrees well with experimental values from single-crystal measurements. A comparison of the neutron data with optical absorption and both nonresonance and resonance Raman scattering measurements has been made. DOE

INTERFACIAL STRUCTURE OF Si3N4 BRAZED WITH AN Ag-Cu-Ti ALLOY

H. Suematsu, J. J. Petrovic, T. E. Mitchell, and T. Yano (Tokyo Inst. of Tech., Japan.) 1992 11 p Presented at the Ceramic Science and Technology Congress and Exposition, San Francisco, CA, 1-4 Nov. 1992
(Contract W-7405-eng-36)
(DE93-003777; LA-UR-92-3702; CONF-921128-4) Avail: CASI HC A03/MF A01

Single crystal Si3N4 was brazed using a Ag-Cu eutectic alloy containing 2 percent Ti at 950 C for 30 min and the interface was observed by high resolution electron microscopy. A layer of reaction products is formed between the Si3N4 and the brazed metal. TiN and Ti2N are formed near the interface; however, only TiN is found at the interface in contact with the Si3N4. A crystallographic orientation relationship was found between the TiN and Si3N4 in which the N atoms are shared between the two structures with little distortion. DOE

PROPERTIES OF ALIGNED YBa2Cu3O(7-DELTA) SUPERCONDUCTOR AS A FUNCTION OF OXYGEN DEFICIENCY DELTA
J. G. Ossandon (Talca Univ., Chile) and J. R. Thompson 1992 10 p Presented at the 3rd International Conference and Exhibition of the World Congress on Superconductivity, Munich, Germany, 14-19 Sep. 1992 Submitted for publication
(Contract DE-AC05-84OR-21400)
(DE93-001707; CONF-920916-2) Avail: CASI HC A02/MF A01

Systematic studies of flux pinning and intragrain critical current J(sub c) were conducted in magnetically aligned, sintered Y1Ba2Cu3O(7-delta) material as a function of oxygen deficiency delta in the range 0 approximately 0.2. The essential findings are: (1) maximum J(sub c) occurred at full oxygenation, i.e., J(sub c) and pinning decreased steadily as oxygen was removed; (2) the irreversibility line B(sub irr)(T,delta) was degraded with the introduction of oxygen defects; (3) this degradation was strongly correlated with the reduction of J(sub c)(delta), implying that the irreversibility line is determined by the strength of the flux pinning defects; (4) the condensation energy F(sub c) decreased significantly with delta, indicating a rapid weakening in the effectiveness of pre-existing pinning centers; (5) both lambda and xi increased as oxygen was removed, while (6) their ratio kappa and the superconductive anisotropy parameter gamma = (lambda(sub c)/(lambda(sub ab)) approx 5 varied little for delta less than or equal to 0.2. DOE

MANY-BODY EFFECTS IN Cu(2+)(H2O)(SUB m) CLUSTERS
L. A. Curtiss and W. Rodriguez (Puerto Rico Univ., Bayamon.) Oct. 1992 10 p Presented at the 182nd Meeting of the Electrochemical Society, Toronto, Ontario, 11-16 Oct. 1992
(Contract W-31-109-eng-38)
(DE93-002988; ANL/CMT/CP-77775; CONF-921036-10) Avail: CASI HC A02/MF A01

The importance of many-body interactions is investigated for m = 4,6,8 in Cu(2+)(H2O)(m) clusters using ab initio molecular orbital theory. A slow convergence of the interaction terms to the full many-body result is found similar to what was found in a previous study of Fe(3+)(H2O)(m) clusters. Implications for molecular dynamics and Monte Carlo simulations are discussed. DOE

MELT PROCESSING OF THE Bi2Sr2CaCu2O(y) SUPERCONDUCTOR IN OXYGEN AND ARGON ATMOSPHERES
T. G. Holesinger, D. J. Miller, and L. S. Chumbley (Ames Lab., IA.) Aug. 1992 5 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992
(Contracts W-31-109-eng-38; W-7405-eng-82)
(DE93-002999; ANL/CP-77532; CONF-920802-31) Avail: CASI HC A01/MF A01

Solidification and subsequent annealing of Bi2Sr2CaCu2O(y) (2212) in oxygen and argon atmospheres were investigated in order to identify alternative processing routes for controlling microstructures and superconducting properties. In addition to 2212, several other phases formed on cooling in O2 and did not disappear upon subsequent annealing. Crystallization in Ar resulted in a divorced eutectic structure of Bi2Sr(3-x)Ca(x)O(y) and Cu2O/CuO. The superconductor was formed on subsequent anneals. Samples melted in Ar and then annealed, generally possessed a more uniform microstructure compared with samples that were melted in oxygen and annealed. Compositional measurements of the 2212 phase suggest that CaO segregation in the melt may be minimized with an overall composition such as Bi(2.15)Sr2Ca(0.85)Cu2O(y). DOE

GROWTH AND DEFECTS OF EXPLOSIVES CRYSTALS
H. H. Cady 1992 12 p Presented at the Material Research Society Fall Meeting, Boston, MA, 30 Nov. - 5 Dec. 1992
(Contract W-7405-eng-36)
(DE93-003866; LA-UR-92-3946; CONF-921101-9) Avail: CASI HC A03/MF A01

Large single crystals of PETN, RDX, and TNT can be grown easily from evaporating ethyl acetate solutions. The crystals all share a similar type of defect that may not be commonly recognized. The defect generates conical faces, ideally mosaic crystals, and may account for the 'polymorphs' of TNT and detonator grades of PETN. TATB crystals manufactured by the amination of trichlorotrinitrobenzene in dry toluene entrain two forms of ammonium chloride. One of these forms causes 'worm holes' in the TATB crystals that may be the reason for its unusually low failure diameters. Strained HMX crystals form mechanical twins that can spontaneously revert back to the untwinned form when the straining force is removed. Large strains or temperatures above 100 C lock in the mechanical twins. DOE

MAGNETIZATION AND FLUX PINNING IN HIGH-Tc CUPRATES: IRRADIATED AND OXYGEN DEFICIENT MATERIALS
J. R. Thompson, Yang Ren Sun (Tennessee Univ., Knoxville.), J. G. Ossandon (Tennessee Univ., Knoxville.), D. K. Christen, H. R. Kerchner, B. C. Sales, B. C. Chakoumakos, L. Civale (IBM Watson Research Center, Yorktown Heights, NY.), A. C. Marwick (IBM Watson Research Center, Yorktown Heights, NY.), and F. Holtzberg (IBM Watson Research Center, Yorktown Heights, NY.) Nov. 1992 6 p Presented at the 5th US/Japan Workshop on High Tc Superconductors, Tsukuka, Japan, 9-10 Nov. 1992
(Contract DE-AC05-84OR-21400)
(DE93-004169; CONF-9211144-2) Avail: CASI HC A02/MF A01

Recent studies of the intragrain current density J and vortex pinning in high Tc superconductors are surveyed. Materials include Y1Ba2Cu3O(7-delta) and Bi2Sr2Ca1Cu2O8 single crystals and aligned polycrystals. To probe the flux pinning, the strength, number, and morphology of defects were modified. Varying the oxygen content (7-delta) in YBa2Cu3O(7-delta) or irradiating the materials with ions, having either light or heavy masses, gives systematic changes in the character of the all-important defects. DOE

DIFFRACTION STUDIES OF THE THERMAL PROPERTIES OF NANOCRYSTALLINE Pd AND Cr
J. A. Eastman, L. J. Thompson, M. R. Fitzsimmons (Los Alamos National Lab., NM.), A. C. Lawson (Los Alamos National Lab., NM.), and R. A. Robinson (Los Alamos National Lab., NM.) Sep. 1992 7 p Presented at the Conference on Nanostructured Materials, Cancun, Mexico, 21-25 Sep. 1992
(Contracts W-31-109-eng-38; W-7405-eng-36)
(DE93-002911; ANL/MSD/CP-77539; CONF-920947-2) Avail: CASI HC A02/MF A01

Quantitative X-ray and neutron diffraction measurements were made on nanocrystalline and coarse-grained samples of Pd and Cr. For both materials, Debye-Waller parameter comparisons over a temperature range of approximately 20-300 K indicate that the nanocrystalline materials have increased static displacements of atoms from their equilibrium sites compared to coarse-grained material. No grain-size-correlated differences in thermal vibrational amplitude, lattice parameter, or thermal expansion coefficients were observed in either material. In contrast to earlier results on nanocrystalline Pd, significantly more non-peak intensity is observed from a nanocrystalline Cr sample than from a coarse-grained Cr sample. Impurities may account for the increased background intensity from nanocrystalline Cr. These results indicate that there is no significant grain boundary excess volume in nanocrystalline Pd, and therefore the reduced density typically observed in nanocrystalline Pd samples must be due to porosity. DOE

N93-21981# Argonne National Lab., IL.
MICROSTRUCTURAL CHARACTERIZATION OF Ag-SHEATHED Tl-Ba-Ca-Cu-O AND Bi-Sr-Ca-Cu-O SUPERCONDUCTING TAPES BY ANALYTICAL ELECTRON MICROSCOPY
J. G. Hu, D. J. Miller, K. C. Goretta, and R. B. Poeppel Sep. 1992 5 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992
(Contract W-31-109-eng-38)
(DE93-002980; ANL/MSD/CP-77605; CONF-920802-29) Avail: CASI HC A01/MF A01

The microstructures of Tl(1223) and Pb-doped Bi(2223) silver tapes produced by the powder-in-tube (PM) method have been examined by scanning electron microscopy (SEM), transmission electron microscopy (TEM), and energy dispersive spectrometry (EDS). The Tl tapes annealed below the melting point exhibited fine grains and a high density of pores while tapes subjected to partial melting prior to solid state annealing were fully dense with large grains. However, these tapes also showed an increase in the size and density of impurity particles, particularly CaO and a Ba-Cu rich phase. Silver powders added to the precursors tended to promote the growth of Tl(1223) at lower temperatures but also interfered with the development of texture by providing nucleation sites of random orientations. In contrast, the Bi(2223) tape exhibited a high degree of texture and alignment. The incorporation of silver within the superconducting phase was found to be negligible for both the Tl(1223) and Bi(2223) tapes. DOE

EFFECTIVE ACTIVATION ENERGY IN THE Bi-Sr-Ca-Cu-O SYSTEMS
S. Sengupta, D. Shi, Z. Wang, M. Smith, and P. J. McGinn (Notre Dame Univ., IN.) Aug. 1992 4 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992
(Contracts W-31-109-eng-38; DE-FG02-90ER-45427)
(DE93-002996; ANL/CP-77481; CONF-920802-36) Avail: CASI HC A01/MF A01

Magnetic relaxation in the Bi-Sr-Ca-Cu-O systems has been investigated in a wide temperature regime. Previously reported studies of the effective activation energy, U, have been controversial in terms of temperature and field dependence of the critical current density, j(sub c). We have considered the temperature dependence of j(sub c) and constructed the U-j (or M) curves for the Bi-Sr-Ca-Cu-O system. We found that at a constant driving force and temperature, U is considerably higher for 2245 samples than for 2223 samples. This enhancement can be attributed to the flux pinning from finely dispersed calcium- and copper-rich precipitates. DOE

Liu (New South Wales Univ., Kensington, Australia.), and Y. C. Guo (New South Wales Univ., Kensington, Australia.) Aug. 1992 4 p Presented at the Applied Superconductivity Conference, Chicago, IL, 23-28 Aug. 1992
(Contracts W-31-109-eng-38; DE-FG02-90ER-45427)
(DE93-002998; ANL/CP-77533; CONF-920802-30) Avail: CASI HC A01/MF A01

Transport data, magnetic hysteresis, and flux creep activation energy experimental results are presented for silver-sheathed high-(Tc) Bi2Sr2Ca2Cu3O(x) superconducting tapes. The 110 K superconducting phase was formed by lead doping in a Bi-Sr-Ca-Cu-0 system. The transport critical current density was measured at 4.0 K to be 0.7 x 10(exp 5) A/sq cm (the corresponding critical current is 74 A) at zero field and 1.6 x 10(exp 4) A/sq cm at 12 T for H(parallel)ab. Excellent grain alignment in the a-b plane was achieved by a short-melting method, which considerably improved the critical current density and irreversibility line. Flux creep activation energy as a function of current is obtained based on the magnetic relaxation measurements. DOE

DOPING INDUCED INSULATOR-METAL TRANSITION IN THE PLATINUM BASED MX COMPLEXES
X. Z. Huang, A. Saxena, and A. R. Bishop 1992 6 p Presented at the 1992 International Conference on Science and Technology of Synthetic Metals, Goeteborg, Sweden, 12-18 Aug. 1992
(Contract W-7405-eng-36)
(DE93-003690; LA-UR-92-3238; CONF-9208132-4) Avail: CASI HC A02/MF A01

Platinum halide linear chain MX (X = Cl, Br, I) complexes exhibit various strengths of the charge-density-wave (CDW) ground state. One way of characterizing the strength is to study the response to charge doping. On a finite length chain, we found that PtCl preserves its CDW pattern while forming a polaron array when doped; PtI is rapidly unstable against charge doping and undergoes an insulator-metal transition easily; PtBr is in between PtCl and PtI. These trends are consistent with the CDW strength, which is strong for PtCl, medium for PtBr and very weak for PtI. DOE

ESR SPECTRA OF PHOTOINDUCED DEFECTS IN MX CHAIN SOLIDS
A. Saxena, A. R. Bishop, I. Batistic, and M. Alouani 1992 7 p Presented at the 1992 International Conference on Science and Technology of Synthetic Metals, Goeteborg, Sweden, 12-18 Aug. 1992
(Contract W-7405-eng-36)
(DE93-003692; LA-UR-92-3236; CONF-9208132-6) Avail: CASI HC A02/MF A01

We calculate the electron spin resonance (ESR) spectra associated with the spin carrying nonlinear excitations such as neutral solitons, triplet excitons as well as electron and hole polarons for halogen-bridged mixed-valence transition metal (MX: M=Pt, X=Cl,Br,I) linear chain materials within a discrete, 3/4-filled, two-band, tight-binding extended Peierls-Hubbard model. The strongly distorted and localized CDW material, PtCl, is contrasted with the weak CDW, delocalized material, PtBr. The hyperfine structure in the ESR spectra arises from the spin density on the Pt atoms while the superhyperfine structure is attributed to a small spin density present on the halogen sublattice. These theoretical predictions are compared with the recent experimental ESR data on photoinduced defects in PtX materials. DOE

(NASA-TP-3287; E-6874; NAS 1.60:3287) Avail: CASI HC A11/MF A03

This report is a compilation of thermodynamic functions of 50 elements in their standard reference state. The functions are C(sub p)(sup 0), (H(sup 0)(T) - H(sup 0)(0)), S(sup 0)(T), and -(G(sup 0)(T) - H(sup 0)(O)) for the elements Ag, Al, Ar, B, Ba, Be, Br2, C, Ca, Cd, Cl2, Co, Cr, Cs, Cu, F2, Fe, Ge, H2, He, Hg, I2, K, Kr, Li, Mg, Mn, Mo, N2, Na, Nb, Ne, Ni, O2, P, Pb, Rb, S, Si, Sn, Sr, Ta, Th, Ti, U, V, W, Xe, Zn, and Zr. Deuterium D2 and electron gas e(sup -) are also included. The data are tabulated as functions of temperature as well as given in the form of least-squares coefficients for two functional forms for C(sub p)(sup 0) with integration constants for enthalpy and entropy. One functional form for C(sub p)(sup 0) is a fourth-order polynomial and the other has two additional terms, one with T(exp -1) and the other with T(exp -2). The gases Ar, D2, e(sup -), H2, He, Kr, N2, Ne, O2, and Xe are tabulated for temperatures from 100 to 20,000 K. The remaining gases Cl2 and F2 are tabulated from 100 to 6000 K and 1000 to 6000 K. The second functional form for C(sub p)(sup 0) has an additional interval from 6000 to 20,000 K for the gases tabulated to 20,000 K. The fits are constrained so that the match at the common temperature endpoints. The temperature ranges for the condensed species vary with range of the data, phase changes, and shapes of the C(sub p)(sup 0) curves. Author (revised)

PROCEEDINGS OF THE INTERNATIONAL WORKSHOP ON QUANTUM EFFECT PHYSICS, ELECTRONICS, AND APPLICATIONS Final Report, 1 Jan. - 31 Dec. 1992
Henry Smith 15 Dec. 1992 270 p Workshop held in Luxor, Egypt, 6-10 Jan. 1992
(Contract N00014-92-J-1325)
(AD-A259457) Avail: CASI HC A12/MF A03

Quantum Effects Physics, Electronics, and Applications contains contributions presented at an international workshop held in Luxor, Egypt on 6-10 Jan. 1992. Topics covered include: (1) competing concepts and technologies with quantum effects; (2) theoretical calculations and models of bandstructures, transport, fluctuations, and noise in confined geometries; (3) nanofabrication; (4) transport experiments; (5) optical prpoerties and spectroscopy results in vertical superlattices, wires, dots, and arrays of dots and antidots; (6) resonant tunnelling and Coulomb blockade; and (7) applications based on quantum phenomena. CALORIMETRIC EXAMINATION OF THE POLARIZATION CLUSTER OF THE BEGINNING FERROELECTRIC MATERIAL KTaO3 Ph.D. Thesis [KALORIMETRISCHE UNTERSUCHUNG DER POLARISATIONSCLUSTER DES BEGINNENDEN FERROELEKTRIKUMS KTAO3]
Stefan Riegel 1990 122 p In GERMAN
(ETN-93-93418) Avail: CASI HC A06/MF A02

The dynamics of KTaO3 is examined at low temperatures. By the analysis of the temporal behavior of the heat flow when the specimen is cooling, the total calorific capacity, the calorific capacities contained in the partial systems, and the relaxation times are determined in order to examine the beginning ferroelectric material KTaO3. The specific heat of this system was determined up to 140 mK. Experiments in electric field showed a thermal dissipation of the specimen. It was shown that dissipated heat does not originate from the quadrupole system, but is caused by dissipation effect, when spatial charges are moving in the specimen. ESA

SCIENCE AND ENGINEERING PROGRAMS: ON TARGET FOR WOMEN Final Report, 1 Oct. 1991 - 12 Oct. 1992

Marsha Lakes Matyas, ed. and Linda Skidmore Dix, ed. 12 Oct. 1992 236 p
(PB93-116499; ISBN-0-309-04778-1; LC-92-61248) Avail: CASI HC A11/MF A03

The National Research Council's Committee on Women in Science and Engineering (CWSE) has several important roles related to the challenge of increasing women's participation in science and engineering including (1) to inform both the science and engineering community and the public of the need to increase economic competitiveness and educational and occupational equity and (2) to collect and disseminate information on programs designed to address that need. The committee's November 1991 conference on science and engineering programs examined a sample of interventions established in the private and public sectors to increase the participation of U.S. citizens, both men and women, in science and engineering careers; determined the characteristics shared by those programs; and discussed methods of implementing such programs more broadly. Initiators, administrators, and funders of interventions heightened awareness of what universities, corporations, foundations, and others are doing to encourage U.S. students to pursue careers in the sciences and engineering. The report summarizes presentations by experts and informal deliberations and presents information on specific strategies for increasing the participation of women in science and engineering--at the undergraduate and graduate levels of study and in all employment sectors. Those expected to benefit from its contents include the broad community of policy makers, educators, employers, researchers, women S&E undergraduate and graduate students, and scientists and engineers themselves. CORRELATES OF CREATIVE PROBLEM SOLVING Final Report, Jun. 1988 - Jun. 1990
Steven R. Stewart and Donna C. Angle Oct. 1992 193 p
(AD-A258720; ARI-RN-93-01) Avail: CASI HC A09/MF A03

The purposes of this research were to identify individual differences related to unstructured problem-solving capability, and evaluate the effectiveness of a training course designed to enhance performance in solving unstructured problems. One group underwent training designed to teach thinking process skills. The second group underwent instruction about thinking and problem solving that was content (not process) oriented. Four predictors accounted for 60 percent of the criterion's variance. They were, in order of importance, mental rotations, use of intuition, use of introversion (both as assessed with the Myers-Briggs Type Indicator), and risk-taking propensity. Students taking the thinking process training significantly outscored those taught only about problems and errors in human judgment and decision making. GRA

DEFINING CONTRACT TERMS M.S. Thesis
Michael J. Cushing Sep. 1992 238 p
(AD-A259088; AFIT/GCM/LSP/92S-3) Avail: CASI HC A11/MF A03

Consensus definitions for fifty-one (51) contracting-terms was developed. This was accomplished by developing a synthesized definition for each term based on a review of the available published literature, subjecting the synthesized definitions to expert scrutiny via a survey distributed to recognized contracting professionals, and amending the literature-based definitions as indicated by the survey responses. Using this approach, consensus was achieved on all but one term. The consensus definitions developed in this way are recommended for inclusion in a comprehensive dictionary of contracting terminology, to be comprised of the results of this and other related theses. In addition, as indicated by the survey results, three terms are recommended for further study in a later thesis effort. GRA

THE NASA PLAN: TO AWARD EIGHT PERCENT OF PRIME AND SUBCONTRACTS TO SOCIALLY AND ECONOMICALLY DISADVANTAGED BUSINESSES

1990 13 p

(NASA-NP-136; NAS 1.83:136) Avail: CASI HC A03/MF A01

It is NASA's intent to provide small disadvantaged businesses, including women-owned, historically black colleges and universities and minority education institutions the maximum practicable opportunity to receive a fair proportion of NASA prime and subcontracted awards. Annually, NASA will establish socioeconomic procurement goals including small disadvantaged business goals, with a target of reaching the eight percent level by the end of FY 1994. The NASA Associate Administrators, who are responsible for the programs at the various NASA Centers, will be held accountable for full implementation of the socioeconomic procurement plans. Various aspects of this plan, including its history, are discussed. CASI

NASA SYSTEMS ENGINEERING HANDBOOK. DRAFT

Robert Shishko (Jet Propulsion Lab., California Inst. of Tech., Pasadena.), Robert G. Chamberlain (Jet Propulsion Lab., California Inst. of Tech., Pasadena.), Robert Aster (Jet Propulsion Lab., California Inst. of Tech., Pasadena.), Vincent Bilardo (National Aeronautics and Space Administration. Ames Research Center, Moffett Field, CA.), Kevin Forsberg (Center for Systems Management, Santa Clara, CA.), Walter E. Hammond (Sverdrup Technology, Inc., Huntsville, AL.), Harold Mooz (Center for Systems Management, Santa Clara, CA.), Lou Polaski (Center for Systems Management, Santa Clara, CA.), Ron Wade (Center for Systems Management, Santa Clara, CA.), and Randy Cassingham, ed. (Jet Propulsion Lab., California Inst. of Tech., Pasadena.) Sep. 1992 129 p

(NASA-TM-108702; NAS 1.15:108702) Avail: CASI HC A07/MF A02

This handbook is intended to provide information on systems engineering that will be useful to NASA system engineers, especially new ones. Its primary objective is to provide a generic description of systems engineering as it should be applied throughout NASA. Field Center Handbooks are encouraged to provide center-specific details of implementation. For NASA system engineers to choose to keep a copy of this handbook at their elbows, it must provide answers that cannot be easily found elsewhere. Consequently, it provides NASA-relevant perspectives and NASA-particular data. NASA management instructions (NMI's) are referenced when applicable. This handbook's secondary objective is to serve as a useful companion to all of the various courses in systems engineering that are being offered under NASA's auspices. The coverage of systems engineering is general to techniques, concepts, and generic descriptions of processes, tools, and techniques. It provides good systems engineering practices, and pitfalls to avoid. This handbook describes systems engineering as it should be applied to the development of major NASA product and producing systems. Derived from text

BY THE YEAR 2000: FIRST IN THE WORLD. FY 1993 BUDGET SUMMARY

Jan. 1992 67 p

(PB93-108512) Avail: CASI HC A04/MF A01

In April 1991, President Bush announced a comprehensive national strategy for achieving the six National Education Goals, including the improvement of mathematics, science and technology education. Entitled 'AMERICA 2000', the strategy identifies four tracks for accomplishing national education reform: making better and more accountable schools for today's students; creating a new generation of American schools for tomorrow's students; becoming a 'nation of students'; and making communities places where learning can happen. Because the focal point of AMERICA 2000 is the National Education Goals, and because CEHR priorities are based on those goals as they relate to mathematics, science, and technology, the committee has a well-established programmatic and budgetary framework to help further the goals and objectives of AMERICA 2000. The report summarizes the President's FY 1993 budget request for mathematics, science, and technology education in support of AMERICA 2000; provides budget highlights by agency; provides background on the committee and its role in implementing the AMERICA 2000 education strategy; and outlines the committee's future course of work. CONTINUOUS IMPROVEMENT ON A RESEARCH AND DEVELOPMENT ENVIRONMENT

F. C. Hood Sep. 1992 9 p Presented at the 19th Annual American Society for Quality Control (ASQC) National Energy Division Conference, Orlando, FL, 20-23 Sep. 1992

(Contract DE-AC06-76RL-01830)

(DE93-001561; PNL-SA-21253; CONF-9209141-4) Avail: CASI HC A02/MF A01

At Pacific Northwest Laboratory (PNL), continuous improvement (CI) concepts are integrated into research and development (R&D) program and project management. Major management initiatives have been established to promote cultural acceptance of CI and foster a working environment for excellence. Laboratory management are committed to CI tailored to specific R&D, functional, and staff needs to ensure PNL's integrated management system provides the means to quality in performance and customer satisfaction. Continuous improvement philosophy applies to R&D as well as more conventional engineering and administrative activities. It is a value-added process for excellence and success. DOE

GODDARD SPACE FLIGHT CENTER: DECISION TO CONTRACT FOR PLANT OPERATIONS AND MAINTENANCE. REPORT TO THE CHAIR, SUBCOMMITTEE ON VA, HUD, AND INDEPENDENT AGENCIES, COMMITTEE ON APPROPRIATIONS, US SENATE

Jan. 1993 10 p

(GAO/NSIAD-93-92; B-251323) Avail: CASI HC A02/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

We reviewed certain impacts of Goddard Space Flight Center's decision to contract out the operations and maintenance of its plant facilities. Specifically, we compared the cost of the current mixed work force of civil service and contractor employees who perform these functions with the cost of (1) an all civil service work force and (2) an all contractor work force. We also reviewed the benefits realized, and the problems encountered, by Goddard as a result of the contracting decision and the transitioning of some of the functions from a civil service staff to a contractor staff. In addition, we obtained information from Langley Research Center, which has a similar mix of contractor and civil service staff performing operations and maintenance functions, to see if any lessons could be learned that might apply to Goddard. Performing plant operations and maintenance functions with an all contractor work force would be the least costly of the three staffing patterns we examined. Continuing the current mixed work force would be the most expensive. Although completing the transition to an all contractor work force would be the least costly, Goddard officials told us that this option would not result in immediate savings because of the center's commitment not to involuntarily separate any of the current civil service employees. NASA SBIR ABSTRACTS OF 1990 PHASE 1 PROJECTS
F. C. Schwenk (Futron Corp., Bethesda, MD.), J. A. Gilman (Futron Corp., Bethesda, MD.), and J. B. Paige (Futron Corp., Bethesda, MD.) Aug. 1991 112 p
(NASA-TM-108145; NASA-SBIR-PC-90; NAS 1.15:108145) Avail: CASI HC A06/MF A02

The research objectives of the 280 projects placed under contract in the National Aeronautics and Space Administration (NASA) 1990 Small Business Innovation Research (SBIR) Phase 1 program are described. The basic document consists of edited, non-proprietary abstracts of the winning proposals submitted by small businesses in response to NASA's 1990 SBIR Phase 1 Program Solicitation. The abstracts are presented under the 15 technical topics within which Phase 1 proposals were solicited. Each project was assigned a sequential identifying number from 001 to 280, in order of its appearance in the body of the report. The document also includes Appendixes to provide additional information about the SBIR program and permit cross-reference in the 1990 Phase 1 projects by company name, location by state, principal investigator, NASA field center responsible for management of each project, and NASA contract number. INTERNATIONAL ENVIRONMENTAL RESEARCH AND ASSESSMENT: PROPOSALS FOR BETTER ORGANIZATION AND DECISION MAKING
Jesse H. Ausubel, Thomas F. Malone, John F. Ahearne, Harvey Brooks, Philip W. Hemily, Rodney W. Nichols, Walter A. Rosenblith, Eugene B. Skolnikoff, H. Guyford Stever, and David G. Victor et al Jul. 1992 83 p
(ISBN-1-881054-01-2) Avail: CASI HC A05/MF A01

Many countries have developed sophisticated mechanisms to advise and assist governmental decision making as it is affected by and affects science and technology at the national level. In the United States such mechanisms include the White House Office of Science and Technology Policy (OSTP)--which is directed by the President's Science Advisor, the Congressional Office of Technology Assessment (OTA), and the National Research Council (NRC). In this age of interdependence it is natural that the question of science advising at the international level also arises. This report focuses on international needs for science advice in the field of the Environment. Environment and health are among the fields in which the need for information and advice, developed and provided in a multilateral way, are most obvious and pressing. One need only mention such problems as stratospheric ozone depletion, climate change, loss of biological diversity, AIDS, and tuberculosis, to see the large number of opportunities for international cooperation. Derived from text

82 DOCUMENTATION AND INFORMATION SCIENCE

Includes information management; information storage and retrieval technology; technical writing; graphic arts; and micrography.

ON THE TYPOGRAPHY OF FLIGHT-DECK DOCUMENTATION
Asaf Degani Dec. 1992 40 p
(Contract NCC2-327)
(NASA-CR-177605; A-93049; NAS 1.26:177605) Avail: CASI HC A03/MF A01

Many types of paper documentation are employed on the flight-deck. They range from a simple checklist card to a bulky Aircraft Flight Manual (AFM). Some of these documentations have typographical and graphical deficiencies; yet, many cockpit tasks such as conducting checklists, way-point entry, limitations and performance calculations, and many more, require the use of these documents. Moreover, during emergency and abnormal situations, the flight crews' effectiveness in combating the situation is highly dependent on such documentation; accessing and reading procedures has a significant impact on flight safety. Although flight-deck documentation are an important (and sometimes critical) form of display in the modern cockpit, there is a dearth of information on how to effectively design these displays. The object of this report is to provide a summary of the available literature regarding the design and typographical aspects of printed matter. The report attempts 'to bridge' the gap between basic research about typography, and the kind of information needed by designers of flight-deck documentation. The report focuses on typographical factors such as type-faces, character height, use of lower- and upper-case characters, line length, and spacing. Some graphical aspects such as layout, color coding, fonts, and character contrast are also discussed. In addition, several aspects of cockpit reading conditions such as glare, angular alignment, and paper quality are addressed. Finally, a list of recommendations for the graphical design of flight-deck documentation is provided. Author (revised)

Ada IMPLEMENTATION OF AN OBJECT DATA REPOSITORY M.S. Thesis
Stephen P. Perucca Dec. 1992 196 p
(AD-A259144; AFIT/GCS/ENG/92D-11) Avail: CASI HC A09/MF A03

The many benefits of object-oriented software development such as encapsulation and extendibility have inspired numerous models of the object-oriented paradigm. Rumbaugh's Object Modeling Technique (OMT) is an object-oriented model that uses three submodels. The object, dynamic, and functional submodels of the OMT describe the data, behavioral, and processing aspects of a system by using entity-relationship, state-transition, and data flow models. Cross-links relate how the three submodels tie together. Two metamodels (models of models) of the OMT are developed using the OMT methodology and notation. The essential data elements of the OMT are abstracted into a data metamodel, and the graphical elements are abstracted into a drawing metamodel. Visual programming concepts and examples are briefly discussed. The OMT model is analyzed and designed using OMT object models. The data and drawing elements are modeled and implemented in standard Ada as object classes, associations, and aggregations. An object manager is developed to provide a generic core class, to maintain an object data repository, and to assert unique object identities. Instantiated examples (instance diagrams) verify the correctness of the metamodel designs. Problems encountered during development are discussed and recommendations are made to improve the OMT. Possible future research areas are presented. GRA

RESEARCH IN TEXT PROCESSING Final Report
Jerry R. Hobbs 21 Dec. 1992 26 p
(Contract N00014-90-C-0220; APRA Order 7331)
(AD-A259434; SRI-ECU-1592) Avail: CASI HC A03/MF A01

SRI's DARPA-sponsored project on text processing has consisted of a broad range of efforts, from near-term practical system implementation to advanced theoretical research. The research was carried out between Sep. 1990 - Nov. 1992. Two distinct text processing tasks were perforemd: information extraction and text understanding. In information extraction, only a fraction of the text is relevant; in the case of the MUC-4 terrorist reports, probably only about 10 percent of the text is relevant. Information is mapped into a predefined, relatively simple, rigid target representation; this condition holds whenever entry of information into a database is the task. The subtle nuances of meaning and the writer's goals in writing the text are of no interest. In text understanding, the aim is to make sense of the entire text; the target representation must accommodate the full complexities of langauge. The nuances of meaning and the writer's goals are to be recognized. GRA

FASTUS: A SYSTEM FOR EXTRACTING INFORMATION FROM NATURAL-LANGUAGE TEXT
Jerry R. Hobbs, Douglas Appelt, Sr., John S. Bear, David Israel, Sr., and

W. M. Tyson 19 Nov. 1992 36 p
(Contract N00014-90-C-0220)
(AD-A259435; SRI-TN-519) Avail: CASI HC A03/MF A01

FASTUS is a system for extracting information from free text in English, and potentially other languages as well, for entry into a database, and potentially for other applications. It works essentially as a cascaded, nondeterministic finite state automaton. There are four steps in the operation of FASTUS. In step 1 sentences are scanned for certain trigger words to determine whether further processing should be done. In step 2 noun groups, verb groups, and prepositions and some other particles are recognized. The input to step 3 is the sequence of phrases recognized in step 2; patterns of interest are identified in step 3 and corresponding incident structures are built up. In step 4 incident structures that derive from the same incident are identified and merged, and these are used in generating database entries. FASTUS is an order of magnitude faster than any comparable system; it can process a news report in an average of less than eleven seconds. This translates directly into fast development time. In the three and a half weeks between its first use and the MUC-4 evaluation in May 1992, we were able to build up its domain knowledge to a point where it was among the leaders in the evaluation. GRA

MANAGEMENT OF AUTOMATIC DATA PROCESSING (ADP) SYSTEM DOCUMENTATION IN THE DEPARTMENT OF DEFENSE
Tammy P. Campbell 1992 17 p
(Contract N00123-89-G-0549)
(AD-A258507) Avail: CASI HC A03/MF A01

One aspect of management of ADP (Automated Data Processing) in the Federal Government is system documentation. Good system documentation is the backbone to the success of any automated system, for only through complete and thorough documentation can the user fully understand and utilize a system's capability. The system reviewed is the Naval Air Logistics Command Management Information System (NALCOMIS). The review is approached from the user's aspect. The review of this system involves the level of ability required for the user to understand and properly use the functionality provided by the system, the documentation requirements, and the problems associated with the user's interface to the system. Many problems exist with computer manuals that contained an inappropriate level of technical detail, style, format, and content. The positive and negative aspects of the user documentation and recommendations or suggestions to improve the documentation for the user's benefit are demonstrated. GRA

Federal involvement in simulating economic growth through the development and application of technology policy is currently the subject of serious debate. A recession and the recognition that an internationally competitive economy is a prerequisite for the attainment of national goals have fostered a number of technology policy initiatives aimed at improving the economic competitiveness of American industry. This paper suggests that the successful implementation of U.S. technology policy will require the adoption of a knowledge diffusion model, the development of user oriented information products and services, and a more 'activist' approach on the part of sci/tech librarians in the provision of scientific and technical information (STI). These changes will have a dramatic impact on the sci/tech library of the future and the preparation of sci/tech librarians. Author

NASA/DOD AEROSPACE KNOWLEDGE DIFFUSION RESEARCH PROJECT. PAPER 26: THE RELATIONSHIP BETWEEN TECHNOLOGY POLICY AND SCIENTIFIC AND TECHNICAL INFORMATION WITHIN THE US AND JAPANESE AEROSPACE INDUSTRIES
Thomas E. Pinelli, Rebecca O. Barclay (Rensselaer Polytechnic Inst., Troy, NY.), and John M. Kennedy (Indiana Univ., Bloomington.) 1993 29 p Presented at the Third Annual JICST/NTIS Conference on How to Locate and Acquire Japanese Scientific and Technical Information, San Francisco, CA, 18 Mar. 1993
(NASA-TM-108679; NAS 1.15:108679) Avail: CASI HC A03/MF A01

Government technology policy has nurtured the growth of the aerospace industry which is vital to both the U.S. and Japanese economies. Japanese technology policy differs significantly from U.S. technology policy, however, particularly with respect to the production, transfer, and use of scientific and technical information (STI). In this paper, we discuss the unique position of the aerospace industry in the U.S. and Japan, U.S. and Japanese aerospace policy, and the role of STI in the process of aerospace innovation. The information-seeking behaviors of U.S. and Japanese aerospace engineers and scientists are compared. The authors advocate the development of innovation-adoption technology and STI policy goals for U.S. aerospace and the inclusion of an aerospace knowledge diffusion transfer system with an 'active' component for scanning and acquiring foreign aerospace technology and STI. PERFORMANCE EVALUATION OF PLATFORM DATA MANAGEMENTSYSTEM UNDER VARIOUS DEGREES OF PROTOCOL IMPLEMENTATION Final Report, 1 Oct. 1989 - 30 Nov. 1990
Mohammed Arozullah 8 Feb. 1991 78 p
(Grant NAG5-1285)
(NASA-CR-192408; NAS 1.26:192408) Avail: CASI HC A05/MF A01

The Platform Data Management System (DMS) collects Housekeeping (H/K), Payload (P/L) Engineering, and Payload Science data from various subsystems and payloads on the platform for transmission to the ground through the downlink via TDRSS. The DMS also distributes command data received from the ground to various subsystems and payloads. In addition, DMS distributes timing and safemode data. The function of collection and distribution of various types of data is performed by the Command and Data Handling (C&DH) subsystem of DMS. The C&DH subsystem uses for this purpose a number of data buses namely, Housekeeping, Payload Engineering, Payload Science, and Time and Safemode buses. Out of these buses, the H/K, P/L Engineering, and P/L Science buses are planned to be implemented by using MIL-STD 1553 bus. Most of the period covered was spent in developing a queue theoretic model of the 1553 Bus as used in the DMS. The aim is to use this model to test the performance and suitability of the 1553 Bus to the DMS under a number of alternative design scenarios. Derived from text

CASE/SIMULATION SYSTEMS Ph.D. Thesis
James Roy Warren 1992 325 p
Avail: Univ. Microfilms Order No. DA9302744

To aid information systems (IS) developers in the design of systems meeting the dynamic aspects of system requirements, a prototype simulation environment for IS design performance modeling has been implemented. The prototype uses data flow diagrams (DFDs) augmented with the performance rates of system components to specify the structure of IS designs. The DEF-based representation is automatically mapped to a queuing network simulation. Knowledge-based help supports formulation of simulation run parameters and interpretation of output. A within-subjects experimental design tests the prototype's impact on accuracy of IS design dynamics assessment. IS professionals answer eight questions on each of four cases; simulation capability is available for two of the cases. Half of the questions involve throughput, service and operating times, and utilization, and can be answered via relatively simple analytic reasoning. The other half, emergent questions, involve waiting times, system times, and queue lengths of jobs or customers. Emergent questions require simulation results or complex analytic analysis to formulate responses. Accuracy of responses is scored objectively in terms of the factor of error from pre-determined values. The

prototype's simulation capability has an effect on accuracy scores of emergent questions significant at the 0.04 percent level, and insensitive over a variety of possible accuracy-scoring methods. The observed positive effect is equivalent to correcting one factor-of-two error and one factor-of-1.27 error on the four emergent questions of each case. Subjects conducting more simulation runs score significantly higher. The best-scoring group of subjects can be distinguished by the larger total number of weeks simulated. Simulation capability as delivered by the prototype leads to more accurate assessments of IS design dynamics. This finding provides a basis for claiming that embedding the prototype's capabilities in a computer-aided software engineering (CASE) workbench would result in better-designed systems. The finding that more extensive use of simulation is strongly correlated with accuracy of decisions is suggestive for all applications of computer simulation to decision support. Further experiments are needed to determine the interaction of simulation capability with the IS design process, the invariance of results for larger problems, and which aspects of simulation use affect the accuracy of decisions. FORMALIZING STRUCTURED FILE SERVICES FOR THE DATA STORAGE AND RETRIEVAL SUBSYSTEM OF THE DATA MANAGEMENT SYSTEM FOR SPACESTATION FREEDOM Final Report

Damir A. Jamsek (Odyssey Research Associates, Inc., Ithaca, NY.) 8 Feb. 1993 23 p

(Contract NCC9-16; RICIS Proj. IR-04)

(NASA-CR-192293; NAS 1.26:192293) Avail: CASI HC A03/MF A01

A brief example of the use of formal methods techniques in the specification of a software system is presented. The report is part of a larger effort targeted at defining a formal methods pilot project for NASA. One possible application domain that may be used to demonstrate the effective use of formal methods techniques within the NASA environment is presented. It is not intended to provide a tutorial on either formal methods techniques or the application being addressed. It should, however, provide an indication that the application being considered is suitable for a formal methods by showing how such a task may be started. The particular system being addressed is the Structured File Services (SFS), which is a part of the Data Storage and Retrieval Subsystem (DSAR), which in turn is part of the Data Management System (DMS) onboard Spacestation Freedom. This is a software system that is currently under development for NASA. An informal mathematical development is presented. Section 3 contains the same development using Penelope (23), an Ada specification and verification system. The complete text of the English version Software Requirements Specification (SRS) is reproduced in Appendix A.

SURVEY OF SPACE ENVIRONMENT SERVICES CENTER USERS AND SERVICES

Larry Combs, Thomas Niichel, and Norman Cohen May 1992 10 p

(AD-A258672; AFSFC/CP-92/001) Avail: CASI HC A02/MF A01

The Space Environment Services Center (SESC) provides various products and services in support of users of solar-terrestrial information. In the past, representation by users of solar-terrestrial and predictions services has been regrettably low at the Solar Terrestrial Predictions (STP) Workshops. For users of solar-terrestrial information, and especially those who would be unable to attend the workshop, a survey was designed to help present their views. The survey presents a statistical study of the types of users surveyed, the SESC products and services used, how SESC is meeting user needs, and how SESC can improve products and services to the user. Results of this survey will enable SESC to provide more useful and effective products and services to the user. GRA

BUILDING A KNOWLEDGE BASE FOR THE KNOWLEDGE WORKER SYSTEM Interim Report

Beverly E. Thomas and Wayne J. Schmidt Aug. 1992 24 p

(DA Proj. 4A1-62784-AT-41)

(AD-A258544; CERL-IR-FF-92/102) Avail: CASI HC A03/MF A01

Every daily activity of the U.S. Army depends in part on the work of knowledge workers--action officers who gather, process, and pass on information essential for mission accomplishment. The effectiveness of knowledge workers is often impaired by constantly shifting schedules, information overload, lack of standard automated tools, and the requirements of accomplishing necessary-but-mundane tasks such as scheduling, coordinating with others, and reporting. USACERL is developing a computer-based performance support environment called the Knowledge Worker System (KWS), which is intended to substantially reduce the problems and inefficiencies inherent in knowledge work. The objective of this phase of the research was to identify the information needed to establish the rich database required to support KWS applications. It has been found that any knowledge work task may be characterized by one (or more) of 13 attributes. Similarly, the work of any functional knowledge work group may be characterized by some or all of these 13 task attributes. The information to be collected depends on the objectives of the specific application--not all applications will require data pertaining to all 13 task attributes. GRA

ARMY MEDICAL IMAGING SYSTEM - ARMIS Final Report

Melvin P. Siedband, James R. Gray, Frank C. Grenzow, Huilian Zhang, and Craig A. Heilman 8 Aug. 1992 76 p

(Contract DAMD17-89-C-8058; DA Proj. 3M4-63807-D-836)

(AD-A258685) Avail: CASI HC A05/MF A01

The Army Medical Imaging System (ARMIS) would use optical data cards, discs and small computers to perform the required functions of image acquisition, archiving, duplicating, reporting and scheduling. A study done under a previous contract, DAMD17-86-C-6039, determined the optimal configuration of a filmless medical imaging system based on stimulable x-ray phosphors and optical data cards. Advantages of the system would be elimination of film, development chemicals, and the need for water; reduction of power requirements, bulk media, archive volume and cost per image. Items to be delivered are demonstration models of a stimulable phosphor screen laser scanner, an image acquisition workstation, and an optical digital data card based independent viewer. Subcontractor bids for the stimulable phosphor scanner were far higher than original estimates solicited from potential bidders prior to the award of this contract. As a result, the scope of this contract was limited to the development of an imaging workstation-based on the Apple Macintosh, an independent viewer to display the contents of optical data cards and software techniques for image data compression and transmission. INFORMATION BASE PROCEDURES FOR GENERATION OF SYNTHETIC THERMAL SCENES Final Report
M. R. Kress Sep. 1992 36 p
(AD-A259202; WES-TR-EL-92-31) Avail: CASI HC A03/MF A01

Procedures are being developed for computer generation of thermal images that depict realistic landscape perspective and are radiometrically correct. Digital three-dimensional (3-D) representations of thermal terrain conditions can be used for software and hardware in the loop testing by weapons system designers, developers, and evaluators. The procedure has four components: (1) environmental information bases that characterize the static and dynamic aspects of the landscape, (2) physics-based numerical thermal prediction models, (3) radiance prediction models, and (4) computer graphics system for generating a 3-D thermal landscape perspective. The information base content, structure, and analysis methods developed to store and access 3-D terrain, weather, physical, thermal, and spectral property data required to support all procedure components are described. Methods for characterizing and quantifying environmental information as a 3-D dynamic landscape; formatting, managing, and retrieving diverse environmental information for numerical modeling purposes; environment, relational database, geographic information system, synthetic image, radiance, thermal, and analyzing terrain data are discussed. The spatial elements of the landscape are configured in a geographic information system and define the 3-D aspects of the environment. Physical, spectral, and thermal properties of the spatial elements are configured in a relational database management system integrated with the geographic information system. GRA

NASA THESAURUS COMBINED FILE POSTINGS STATISTICS Cumulative Report, Jan. 1968 - Jan. 1993
Jan. 1993 352 p
(NASA-CR-192259; NAS 1.26:192259) Avail: CASI HC A16/MF A03

The NASA Thesaurus Combined File Postings Statistics is published semiannually (January and July). This alphabetical listing of postable subject terms contained in the NASA Thesaurus is used to display the number of postings (documents) indexed by each subject term from 1968 to date. The postings totals per item are separated by announcement of other media into STAR, IAA, COSMIC, and OTHER, columnar entries covering the NASA document collection (1968 to date). This is a cumulative publication, and except for special cases, no reference is needed to previous issuances. Retention of the January 1992 issue could be helpful for book information. With the July 1992 issue, NALNET book statistics have been replaced by COSMIC statistics for NASA funded software. File postings statistics for the Alternate Data Base covering NASA collection from 1962 through 1967 were published on a one-time basis in September 1975. Subject terms for the Alternate Data Base are derived from the subject Authority List, reprinted 1985, which is available upon request. The distribution of 19,697,748 postings among the 17,446 NASA Thesaurus terms is tabulated on the last page of the NASA Thesaurus Combined File Postings Statistics. Derived from text

DESIGN RECOVERY FOR SOFTWARE LIBRARY POPULATION M.S. Thesis
Chester A. Wright, Jr. Dec. 1992 92 p
(AD-A259292; AFIT/GCS/ENG/92D-23) Avail: CASI HC A05/MF A01

This thesis research investigated design recovery as a means of populating a reuse library. The targeted library was part of the Automatic Programming Technologies for Avionics Systems (APTAS). APTAS uses a knowledge base of forms, to present questions to a user, and rules, to select the forms to present and choose existing library modules to use in composing a new system. The approach applied the reengineering model developed in earlier work to accomplish planning for the project, expanded the renovation phase of this model to cover the actual design recovery, and applied the expanded model to populating the library. Using the model in the project showed that design recovery is feasible in populating the library. However, if the recovered design could not be used directly, it could be used as a guide in developing new components. Additionally, certain modules make better candidates than others. Ideal candidates are self-contained in that they receive a value, perform a computation, and return a value. Once the module starts performing too many operations, expertise is required in the module behavior in order to separate the component for reuse. GRA

MODELLING KNOWLEDGE IN ELECTRONIC STUDY BOOKS

Cornelis Hoede Jan. 1992 14 p

(MEMO-1029; ETN-93-92457) Avail: CASI HC A03/MF A01

The theory of knowledge graphs is outlined. Knowledge graphs are a new form of knowledge representation. They are closely related to semantic networks and can be looked upon as in line with Schank's conceptual dependency theory and Sowa's conceptual graphs. The special feature of knowledge graphs is the use of a very restricted set of types of relations, that is considered to be the basic set of primitive relations. The possibilities of knowledge graphs for solving problems arising around electronic (study) books are discussed. ESA

(PB93-116614; NOAA-TM-ERL-WPL-226) Avail: CASI HC A03/MF A01

The authors discuss in general the relation between the 'true' spectrum of stationary times series of infinite duration and that obtained by digital computation from discretely sampled, real time-series of finite duration. In particular, the authors investigate the effect of an arbitrary time weighting function h(t) applied to the time series (tapering) and illustrate the results by comparing the effect of Hanning tapering with the effect of no tapering in the idealized case of a time series with a power-law spectrum. The main conclusion is that the spectrum will be seriously distorted without tapering if it falls off with a power greater than 2, and that a Hanning window will restore most of the true spectrum, with the exception of perhaps the first few harmonics, for powers in the interval from +1 to -3, provided the computed spectrum is renormalized by the area under the square of h(t). The authors also found that in the case when the spectrum falls off with a power greater than 1 the renormalization will be different from the ratio between the variance calculated with and without Hanning tapering. The authors' predictions are verified using synthetic time series. GRA

CURRENT INFORMATION TECHNOLOGY RESOURCE REQUIREMENTS OF THE FEDERAL GOVERNMENT, FY 1993

Aug. 1992 447 p

(PB92-233238; ISBN-0-16-037894-X) Avail: CASI HC A19/MF A04; SOD HC

The document is based on information submitted in support of the Budget of the United States Government--Fiscal Year 1993, and consists of a compilation of individual Federal Agency information technology acquisition plans for the fiscal years 1992 through 1997. A government-wide summary of agency spending data on information technology (IT) was added to this year's report. The summary highlights those agencies that proposed significant IT investments in the Fiscal Year 1993 Budget and also includes a historical examination of Federal IT spending trends. GRA

EXPANDED USER'S DOCUMENTATION FOR SHIMS Technical Memo

David B. Reed Oct. 1992 71 p

(PB93-101905; NOAA-TM-NWS-SR-143) Avail: CASI HC A04/MF A01

The publication is intended to provide a user-oriented instruction set for NWS-SR application of the Service Hydrologist Information Management System (SHIMS) Version 3.11. SHIMS is a hydrologic database and accompanying database management system. SHIMS, running under the commercial database management system Paradox, can store information on cooperative observer sites, river gaging sites, and river forecast sites and print out forms needed for the hydrologic program at offices with hydrologic service area (HSA) responsibility. SHIMS was developed in Central Region by Mike Callahan, Service Hydrologist at WSFO Louisville, KY. It is an outstanding example of contemporary software applications. All furnished SHIMS software loads include documentation for which this document is intended to be a supplement. GRA

STATUS OF DOCUMENT SEARCH AND DATA QUALITY OBJECTIVE EFFORTS Letter Report

S. P. Gydesen Oct. 1992 20 p

(Contract DE-AC06-76RL-01830)

(DE93-003216; PNWD-2047-HEDR) Avail: CASI HC A03/MF A01

The purpose of this report is to document the status of the identification, search, retrieval, evaluation, declassification, and availability of the following: (1) Hanford-Site-originated operating information necessary to reconstruct radiation doses; and (2) monitoring information indicating concentrations of radioactive materials in the environment. All information needed to date to reconstruct the radiation doses has been identified, sought, retrieved, evaluated, declassified, and made available. Any data needed in the future that have not yet been found will be sought using the same search tree method used to identify the Hanford-Site-originated documents up to now. This search tree method has ensured that the data quality objective of completeness is met. Because there was a centralized list of documents for which we have technical indices, the documents through 1964 have been identified, and the document collections are considered as complete as possible. The collection of documents from 1965-1972 is complete for monthly average data but not to the same extent as for the years 1944-1964 where daily and sometimes hourly data are often available and for which a subject index is readily available. From 1965-1972 there were multiple contractors, each maintaining a separate document system with no detailed subject index for retrieval purposes. A HEDR Information Resources Tracking System (HIRTS) database was established of all documents identified as being of potential interest and/or use to dose reconstruction. The HIRTS contains more than 6000 citations with bibliographic information on each report, document number(s), author(s), title, date, document form (hard copy or microfilm), number of pages, location, public availability, and names of HEDR Project and TSP staff who have requested copies. THE CHEETAH DATA MANAGEMENT SYSTEM

P. F. Kunz and G. B. Word Sep. 1992 4 p Presented at the 10th Conference on Computing in High Energy Physics, Annecy, France, 21-25 Sep. 1992

(Contract DE-AC03-76SF-00515)

(DE93-004010; SU-SLAC-PUB-5930; CONF-920966-3) Avail: CASI HC A01/MF A01

Cheetah is a data management system based on the C programming language, with support for other languages. Its main goal is to transfer data between memory and I/O streams in a general way. The streams are either associated with disk files or are network data stems. Cheetah provides optional convenience functions to assist in the management of C structures. Cheetah streams are self-describing so that general purpose applications can fully understand an incoming stream. This information can be used to display the data in an incoming stream to the user of an interactive general application, complete with variable names and optional comments. DOE

83 ECONOMICS AND COST ANALYSIS

NASA PROGRAM COSTS: SPACE MISSIONS REQUIRE SUBSTANTIALLY MORE FUNDING THAN INITIALLY ESTIMATED. REPORT TO THE CHAIRMAN, SUBCOMMITTEE ON INVESTIGATIONS AND OVERSIGHT, COMMITTEE ON SCIENCE, SPACE, AND TECHNOLOGY, HOUSE OF REPRESENTATIVES
Dec. 1992 22 p
(GAO/NSIAD-93-97; B-251430) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

This report responds to a request to provide information on the National Aeronautics and Space Administration's (NASA) historical experience at estimating space program costs. The Subcommittee was concerned that at the time Congress is asked to authorize the start of new programs estimated to cost hundreds of millions or even billions of dollars, NASA may not have reasonably accurate estimates of their total funding requirements. Specifically, we reviewed the changes from initial to current estimates for major space programs initiated in the past 15 years and studied the reasons for those changes. Almost all of the 29 programs we reviewed required substantially more funding than the initial estimates provided to Congress. Changes in estimates ranged from a 44-percent decrease to a 426-percent increase over the initial estimates. The median change was a 77-percent increase. General reasons NASA gave for differences between the initial and current estimates included insufficient definition studies, program and funding instability, overoptimism by program officials, and unrealistic contractor estimates. Specific reasons for changes in estimates included program redesigns, technical complexities, budget constraints, incomplete estimates, shuttle launch delays, and inflationary effects. As a result of these factors, the content and schedule of many programs changed substantially between the initial and current cost estimates.

PRESENT WORTH FACTORS FOR LIFE-CYCLE COST STUDIES IN THE DEPARTMENT OF DEFENSE Final Report
Stephen R. Petersen Oct. 1992 61 p Sponsored by Assistant Secretary of Defense (Production and Logistics), Washington, DC
(PB93-120772; NISTIR-4942) Avail: CASI HC A04/MF A01

The document provides 45 tables of present worth factors to be used in computing the present worth of future costs (or cost reductions) in economic analyses of design decisions for projects in the DoD Military Construction Program. These factors are especially useful for the life-cycle cost analysis of investments in buildings or building systems which are intended to reduce future operating, maintenance, repair, replacement, and energy costs over the life of the facility. The tables include present worth factors for both one-time costs and annually recurring costs, based on the FEMP discount rate of 4.0 percent (FY 1993) for energy-related studies and on the OMB discount rate of 10.0 percent for non-energy studies. Forecasts of future energy prices used in the calculation of present worth factors for energy costs were provided by the Energy Information Administration. GRA

SCIENCE AND TECHNOLOGY IN US INTERNATIONAL AFFAIRS
Rodney W. Nichols, Jesse H. Ausubel, and Jeannette Lindsay Aspden, ed. Jan. 1992 125 p
(ISBN-1-881054-00-4) Avail: CASI HC A06/MF A02

Publication of this report is one of several activities of the Carnegie Commission aimed at strengthening the institutions and decision-making processes through which science and technology are wisely and effectively applied to world affairs. On the one hand, these activities address the way in which the United States is organized within its own government for improving the applications of science and technology in international affairs. On the other hand, these activities also seek to renew a positive, long-range vision of the international institutional infrastructure for science and engineering in which the United States is a partner. In the forthcoming reports the Commission will emphasize two major areas of concern: development of the less-advanced nations of the world, and how all countries work together multilaterally on matters of common interest involving science and technology, such as global environmental change. VERY HIGH ENERGY GAMMA RAY EXTENSION OF GRO OBSERVATIONS Semiannual Status Report No. 3, 1 Jul. - 31 Dec. 1991
Trevor C. Weekes Feb. 1992 46 p
(Grant NAG5-1381)
(NASA-CR-192407; NAS 1.26:192407) Avail: CASI HC A03/MF A01

This has been an exiciting year for high energy gamma-ray astronomy, both from space and from ground-based observatories. It has been a particularly active period for the Whipple Observatory gamma-ray group. In phase 1 of the Compton Gamma Ray Observatory (GRO), there has not been too much opportunity for overlapping observations with the Energetic Gamma Ray Experiment Telescope (EGRET) and the other GRO telescopes; however, significant progress was made in the development of data analysis techniques and in improving the sensitivity of the technique which will have direct application in correlative observations in phase 2. Progress

made during the period 1 Jul. 1991 - 31 Dec. 1991 is presented.

THIRTEEN NEW BL LACERTAE OBJECTS DISCOVERED BY AN EFFICIENT X RAY/RADIO/OPTICAL TECHNIQUE
Jonathan F. Schachter, John T. Stocke (Colorado Univ., Boulder.), Eric Perlman (Colorado Univ., Boulder.), Martin S. Elvis, Jane Luu, John P. Huchra, Roberta Humphreys (Minnesota Univ., Minneapolis.), Ron Remillard (Massachusetts Inst. of Tech., Cambridge.), and John Wallin (Naval Research Lab., Washington, DC.) *In* Smithsonian Astrophysical Observatory, The Einstein All-Sky Slew Survey May 1992 18 p (For primary document see N93-20793 07-89)
Avail: CASI HC A03/MF A01

The discovery of 13 serendipitous BL Lac objects in the Einstein IPC Slew Survey by means of x ray/radio vs. x ray/optical color-color diagrams and confirmation by optical spectroscopy are reported. These 13 BL Lacs were discovered using a technique which exploits the characteristic broad band spectra of BL Lacs. New VLA detections provide accurate fluxes (f(6 cm) is approximately 0.5 mJy) and 2 in. positions, facilitating the determination of an optical counterpart. All 13 new BL Lacs show essentially featureless optical spectra. Nine of these lie within the range of colors of known x ray selected BL Lacs. Of the remaining four, one is apparently x ray louder (by a factor of 1.5) or optically quieter (by 0.8 mags); and three are optically louder (by 1-1.3 mags) than x ray selected BL Lacs. Approximately 50 new BL Lacs in total are expected from VLA work and upcoming Australia Telescope observations, yielding a complete Slew Survey sample of approximately 90 BL Lacs. Author

(MPE-236; ETN-93-92594) Copyright Avail: CASI HC A13/MF A03

The development of methods for the mapping of stellar surface structures, in particular the mapping of photospheric star spot distributions on active cool stars is dealt with. Procedures of extracting information from the observational data are studied. Major attention is given to the 'Doppler imaging Method,' which enables the observer to produce detailed two dimensional images of the photospheres of rapidly rotating stars. The basis of the method is the deprojection and deconvolution of rotationally broadened profiles of stellar absorption lines. The constraint adopted consists of trying to find a 'two temperature model' of the stellar photosphere. The developed method is applied to recent observations of the rapidly rotating premain sequence star AB Doradus. ESA

CORRECTIONS TO THE LUNI-SOLAR PRECESSION DERIVED FROM A COMPILATION CATALOGUE OF EXTRAGALACTIC RADIO SOURCES
H. G. Walter 1991 10 p Repr. from Celestial Mechanics and Dynamical Astronomy (Netherlands, Kluwer Academic Publishers), v. 53, 1992 p 71-80 Previously announced in IAA as A92-41069
(Mitt-Ser-A-233; ETN-93-93404) Avail: CASI HC A02/MF A01

Setting up a compilation catalog of positions from observation catalogs of extragalactic radio sources by simultaneous solution of systematic catalog corrections and source coordinate corrections was proved to be a feasible method. This method was compared with the independent Very Long Baseline Interferometry (VLBI) compilation catalog of the International Earth Rotation Service (IERS) and deviations of 2 to 3 mas in Right Ascension (RA) and Declination (Dec) were found. The average external accuracy is reflected by the weighted rms differences amounting to about 1 mas in both coordinates. By including terms of general precession in RA and Dec in the method of simultaneous solution, uncertainties of the standard model of precession could be made evident. Corrections to the luni-solar precession of -1 and -3 mas/yr were derived which are compatible with results obtained by other methods of data analysis. ESA

IMPROVING THE DETECTION OF NEAR-EARTH ASTEROIDS Final Report
Gregg E. Maryniak Dec. 1992 15 p
(Contract N00014-92-J-2007)
(AD-A259383) Avail: CASI HC A03/MF A01

Recent discoveries of near-Earth asteroids and growing validation of the asteroid theory of dinosaur extinction through mounting geological evidence have made the general public aware of the potential threat that these objects pose. Two recent NASA workshops have been conducted on how to detect potentially threatening celestrial objects and what to do, if and when, one is detected. Interest in detecting near-Earth asteroids goes beyond concerns of defense of our planet, however. These bodies, located outside of the deep gravity wells of planetary systems and large

moons are known to contain a variety of elements which could be used as building blocks for future space missions, at a fraction of the cost of Earth launch costs. Given the interest and utility of detecting these objects, the logical question is how to get from the present condition where a few individuals and organizations detect a dozen or so objects each year, to a comprehensive understanding of the locations and characteristics of the asteroid population in near-Earth space. Most importantly what steps can be taken immediately and with modest funding, prior to creating new large networks of asteroid search systems. Prospects for increasing our information significantly with modest funding are good. Modern techniques described within the report, as well as the zealous efforts of several observes, notably Helin and Gehrels, have produced many of the recent asteroid discoveries. For example, over two thirds of the known near-Earth asteroids have been found in the last fifteen years. GRA

FIELD STAR INTERACTIONS WITH GLOBULAR CLUSTERS Ph.D. Thesis
Wei Peng 1992 137 p
Avail: Univ. Microfilms Order No. DA9234443

We investigate a new interaction of globular clusters with galactic field stars. By dynamical friction, high-velocity field stars passing through individual globular clusters are decelerated. This frictional interaction contributes to cluster heating, and, in conjunction with disk shocking and other mechanisms, it helps regulate the evolution of globular clusters. Moreover, penetrating field stars with low relative velocities can even be captured by globular clusters. Our calculated rate of captures suggest that there is a substantial population of stars having an origin external to the globulars in which they now reside. Intriguing candidates for this 'immigrant' population include some blue straggler stars and short-period pulsars. Dissert. Abstr.

THEORETICAL STUDIES IN INTERSTELLAR CLOUD CHEMISTRY Final Report
Y. T. Chiu and S. S. Prasad 15 Jan. 1993 12 p
(Contract NASw-4638)
(NASA-CR-192010; NAS 1.26:192010) Avail: CASI HC A03/MF A01

This final report represents the completion of the three tasks under the purchase order no. SCPDE5620,1,2F. Chemical composition of gravitationally contracting, but otherwise quiescent, interstellar clouds and of interstellar clouds traversed by high velocity shocks, were modeled in a comprehensive manner that represents a significant progress in modeling these objects. The evolutionary chemical modeling, done under this NASA contract, represents a notable advance over the 'classical' fixed condition equilibrium models because the evolutionary models consider not only the chemical processes but also the dynamical processes by which the dark interstellar clouds may have assumed their present state. The shock calculations, being reported here, are important because they extend the limited chemical composition derivable from dynamical calculations for the total density and temperature structures behind the shock front. In order to be tractable, the dynamical calculations must severely simplify the chemistry. The present shock calculations take the shock profiles from the dynamical calculations and derive chemical composition in a comprehensive manner. The results of the present modeling study are still to be analyzed with reference to astronomical observational data and other contemporary model predictions. As far as humanly possible, this analysis will be continued with CRE's (Creative Research Enterprises's) IR&D resources, until a sponsor is found. Author

NON-TOPOLOGICAL SOLITONS IN ASTROPHYSICS AND COSMOLOGY Ph.D. Thesis
David Abraham Hochron 1992 58 p
Avail: Univ. Microfilms Order No. DA9234106

When evaluating the consequences of a field theory for the early universe or for present-day astrophysics, one must consider not only the elementary particles predicted by the theory, but also extended objects. Bulk solutions to classical field theories - solitons - arise naturally in many theories, including nuclear models. In the first part of this thesis I explore the evolution of non-topological solitons in the early universe, with application to the QCD phase transition. In the second part I examine a non-topological soliton model of neutron stars - the Q-star model - and restrict the model parameters from the existence of the fast pulsar and rotating fluid stability considerations. Dissert. Abstr.

THE STRUCTURE OF CIRCUMSTELLAR SHELLS Final Technical Report, 1 Aug. 1989 - 31 Jan. 1992
John D. Fix 10 Mar. 1993 10 p
(Grant NAG5-1174)
(NASA-CR-192337; NAS 1.26:192337) Avail: CASI HC A02/MF A01

This document provides a report on research activities carried out with the support of NASA grant NAG 5-1174, the Structure of Circumstellar Shells, funded under the Astrophysics Data Program. The research carried out with the support of this grant is a study of the properties of circumstellar dust shells for which spectra are available through IRAS low resolution spectrometry (LRS). This research consisted of the development and application of models of axisymmetric circumstellar shells and a preliminary survey of the applicability of neural nets for analysis of the IRAS LRS spectra of circumstellar dust shells. GRAVITATIONAL METRIC DEVIATION BY SUPERNOVA NEUTRINO BURSTS
Daniele Fargion 22 Feb. 1991 11 p Submitted for publication
(Preprint-789; ETN-93-92899) Avail: CASI HC A03/MF A01

A small decaying blueshift in the photon frequencies emitted inside an expanding spherical symmetric energy shell is discussed. It can be considered as the gravitational signature of a supernova explosion and its neutrino burst propagation. Intersections near the supernova relic, such as collapse of the pulsar and doppler shifts, may influence and hide this gravitational effect. The effect might be observable as a heating process in the relic star temperature and as a speeding up evolution in its pulsar period at earliest stages. ESA

A simulation program which solves the hydrodynamic fundamental equations and the Poisson equation of the gravitational field in a two dimensional field in time is presented. An analytical approximation and a simulation show that shear flows are unstable in these conditions for adiabatic perturbations. The development of the Kelvin-Helmholtz instability is examined without hydrodynamic pressure with regard to astrophysical applications in interstellar and intergalactic fields. Shear flows are examined in a Universe in expansion. It is shown that the Universe expansion exerts an attenuating influence on the development of small velocity perturbations which are perpendicular to shear flow. The examinations confirm the theory that small structures at first and greater structures, such as galaxies, later on, are formed. ESA

(ESA-SP-1153-Vol-A; ISBN-92-9092-049-1; ETN-93-93500) Copyright Avail: CASI HC A19/MF A04

The ULDA access guide (volumes 4A and 4B) treats the data of Active Galactic Nuclei (AGN). An overview of the spectra of all AGN from narrow line emission line galaxies to quasars and BL Lacertae objects observed with IUE is presented. The sample of such objects presently included in the IUE archive and the variability characteristics of the objects are illustrated. Information on the data obtained of these objects with the various X-ray satellites operated in conjunction with the IUE science observing program is given. Both volumes explain the data processing, bibliography, discuss related X-ray observations, describe the displayed information and give notes on the problems related to a few individual objects encountered. Volume A presents the spectra of AGN for right ascension from 0:00 to 13:00. ESA

RESEARCH RELATIVE TO THE HEAVY ISOTOPE SPECTROMETER TELESCOPE EXPERIMENT Final Report, 1 Dec. 1985 - 30 Nov. 1992
Edward C. Stone and Richard A. Mewaldt 12 Mar. 1993 14 p
(Grant NAG5-722)
(NASA-CR-192357; NAS 1.26:192357) Avail: CASI HC A03/MF A01

The Heavy Isotope Spectrometer Telescope (HIST) was launched during August 1978 on ISEE-3 (ICE). HIST was designed to measure the isotopic composition of solar, galactic, and interplanetary cosmic ray nuclei for the elements from H to Ni (1 less than or equal to Z less than or equal to 28) in the energy range from approximately 5 to approximately 200 MeV/nucleon. The results of these measurements have been used in studies of the composition of solar matter and galactic cosmic ray sources, the study of nucleosynthesis processes, studies of particle acceleration and propagation, and studies of the life-history of cosmic rays in the heliosphere and in the galaxy. On December 1, 1978, after 110 days in orbit, HIST suffered an electronic failure in its readout system. After that point, only one-half of the telemetry bits associated with the pulse heights measured by HIST were transmitted to Earth. As a result, the resolution of HIST was significantly degraded, and it served as an element rather than an isotope spectrometer. Fortunately, HIST was able to measure the isotopic composition of heavy nuclei in the 9/23/78 solar event (the largest solar energetic particle event since 1972) during the brief period that it operated at full resolution. This grant funded the analysis of data from the HIST instrument over the period from 12/1/85 to 11/30/92. In section 2 of this final report, we summarize the scientific accomplishments that have resulted from HIST measurements during this time period. A bibliography of tasks and papers that resulted is attached. Derived from text

DISSOLUTION OF TIDALLY LIMITED STAR CLUSTERS IN GALAXIES BY PASSING GIANT MOLECULAR CLOUDS OR OTHER MASSIVE OBJECTS
Roland Wielen 1991 7 p Repr. from Astronomical Society of the Pacific Conference Series: The Formation and Evolution of Star Clusters (Astronomical Society of the Pacific), v. 13, 1991 p 343-349
(Mitt-Ser-A-232; ETN-93-93406) Avail: CASI HC A02/MF A01

A procedure to predict theoretically the total lifetime of a star cluster in a galaxy is presented. This procedure improves upon earlier results in so far as the effect of the stationary tidal field of the parent galaxy is also included into the process of the disruption of a cluster by passing massive objects, such as giant molecular clouds or massive black holes. While the stationary tidal field was already taken into account for the process of the evaporation of a star cluster due to its internal relaxation (encounters between cluster stars), the star cluster was treated, for simplicity, as an isolated system when the disruption of the cluster by passing objects was studied. The improved procedure gives more homogeneous results by taking into account the galactic tidal field for both internal and external processes of cluster dissolution. ESA

RECURRENT SWING AMPLIFICATION INDUCED BY NONLINEAR AMPLITUDE EFFECTS
Burkhard Fuchs 1991 5 p Repr. from Dynamics of Disc Galaxies (Goteborg, Sweden), 1991 p 359-363
(Mitt-Ser-A-230; ETN-93-93407) Avail: CASI HC A01/MF A01

First results of a study of the role of nonlinear amplitude effects of spiral density waves in the dynamics of disk galaxies are reported. The basic galactic model adapted is the stellar dynamical analogue of the Goldreich and Lynden Bell sheet which describes the local dynamics of a patch of a thin differentially rotating stellar disk. The disk is subjected to potential perturbations, and the response of the disk is calculated in linear approximation from linearized Boltzmann equation where H(sub 0) denotes the Hamiltonian of stellar orbits in the basic disk model. A Fourier Laplace transform of the potential perturbation leads to the disk response. In order to obtain self consistent perturbations the response density is inserted into the Poisson equation. Further details of the calculation are given. ESA

THE CRAB NEBULA'S WISPS AS SHOCKED PULSAR WIND
Y. A. Gallant, J. Arons, and A. B. Langdon 20 Jul. 1992 11 p Presented at the Physics of Isolated Pulsars Workshop, Taos, NM, 23-28 Feb. 1992
(Contract W-7405-eng-48)
(DE93-003466; UCRL-JC-111254; CONF-9202117-8) Avail: CASI HC A03/MF A01

The Crab synchrotron nebula has been successfully modelled as the post-shock region of a relativistic, magnetized wind carrying most of the spindown luminosity from the central pulsar. While the Crab is the best-studied example, most of the highest spindown luminosity pulsars are also surrounded by extended synchrotron nebulae, and several additional supernova remnants with 'plerionic' morphologies similar to the Crab are known where the central object is not seen. All these objects have nonthermal, power-law spectra attributable to accelerated high-energy particles thought to originate in a Crab-like relativistic pulsar wind. However, proposed models have so far treated the wind shock as an infinitesimally thin discontinuity, with an arbitrarily ascribed particle acceleration efficiency. To make further progress, investigations resolving the shock structure seemed in order. Motivated by these considerations, we have performed particle-in-cell (PIC) simulations of perpendicularly magnetized shocks in

electron-positron and electron-positron-ion plasmas. The shocks in pure electron-positron plasmas were found to produce only thermal distributions downstream, and are thus poor candidates as particle acceleration sites. When the upstream plasma flow also contained a smaller population of positive ions, however, efficient acceleration of positrons, and to a lesser extent of electrons, was observed in the simulations. DOE

Though it often appears daunting in its complexity, nuclear data frequently exhibits remarkable simplicities when viewed from the appropriate perspectives. This realization, which is becoming more and more apparent, is one of the fruits of the vast amount of nuclear data that has been accumulated over many years but, surprisingly, has never been completely digested. This emerging, unified, and simple macroscopic phenomenology, aided by microscopic underpinnings and physical arguments, appears in many guises and often simplifies semi-empirical estimates of structure far from stability in the critical realms where nuclear astrophysics takes place and where it is in need for improved nuclear input. The generality of simple phenomenological relationships begs both for a sound theoretical basis and for the advent of Radioactive Nuclear Beams so that the reliability of their extrapolations can be assessed and tested. These issues will be discussed, and illustrated with a number of specific examples. DOE

LUNAR AND ASTEROID COMPOSITION ASSESSMENT USING REMOTE SECONDARY ION MASS SPECTROMETRY
H. O. Funsten, R. C. Elphic, B. L. Barraclough, D. J. McComas, K. R. Moore, and J. E. Nordholt 1992 8 p Presented at the International Symposium on Spectral Sensing Research, Maui, HI, 15-20 Nov. 1992
(Contract W-7405-eng-36)
(DE93-003839; LA-UR-92-3789; CONF-9211130-2) Avail: CASI HC A02/MF A01

Compositional analysis of the Moon and asteroids is of scientific importance as a window into the formation and evolution of the solar system. Additionally, global geochemical surveys can be utilized to examine available resources for further exploration of the solar system. A quantitative analysis of a technique of elemental composition of planetary surfaces using remote secondary ion mass spectrometry (SIMS) is presented. Remote SIMS, in principle identical to laboratory SIMS, utilizes solar wind ions to sputter secondary ions from a planetary surface. The trajectories of these secondary ions are governed by local electric and magnetic fields. An ion mass spectrometer located on an orbiting platform detects these ions and evaluates their mass and velocity. The origin at the planetary surface of a detected ion is determined by its velocity at the orbiter and knowledge of the solar wind electric and magnetic fields. The elemental composition of the planetary surface is determined by comparison of the detected amounts of various elements. DOE

HIGH RESOLUTION HI OBSERVATIONS OF HII REGIONS. 3: PHOTODISSOCIATION REGIONS AND THE MAGNETIC FIELD NEAR ORION B
P. P. Vanderwerf, W. M. Goss (National Radio Astronomy Observatory, Socorro, NM.), C. Heiles (California Univ., Berkeley.), R. M. Crutcher (Illinois Univ., Urbana.), and T. H. Troland (Kentucky Univ., Lexington.) May 1992 52 p Submitted for publication
(MPE-Preprint-214; ETN-93-93528) Copyright Avail: Fachinformationszentrum Karlsruhe, 7514 Leopoldschafen-Eggenstein 2, Germany

H1 observations of the H2 region Orion B are presented with an angular resolution of 50 inches (0.1 pc) and velocity resolution of 0.64 km/s. Three kinematically distinct H1 layers are detected in absorption. It is argued that one of these H1 components originates in a Photodissociation Region (PDR) directly abutting the ionization front in front of the H2 region. In addition to the H1 absorption, H1 emission is detected, most likely originating in a PDR behind the H2 region. Combining the H1 emission and absorption data yields the conclusion that a range of temperatures exists in the PDRs, a conclusion corroborated by existing (C2) 158 micrometer line measurements of the PDRs. While the H1 'absorption' data show the presence of gas colder than approximately 20K (which is too cold to contribute significantly to the (C2) emission), the H1 and (C2) data can be brought in agreement if the 'emitting' H1 is at a temperature of at least several hundred degrees. These results are interpreted in terms of a clumpy PDR model, where the colder gas is located in dense clumps, which are embedded in a warmer, low density interclump medium. Structural features in the absorbing H1 are consistent with the presence of a stellar wind shell from an O9 ZAMS star located in the H2 region core, in agreement with the ionization requirements of hydrogen and helium. An analysis of the Zeeman effect as determined from the observed circular polarization yields line of sight magnetic fields of 28 and 63 micro-g for two of the H1 layers, at a reduced angular resolution of 100 inches. The magnetic field strength and the total pressure in the dense PDR are concluded to be higher than in the more tenuous cloud envelope. However, in the cloud envelope the pressure is dominated by the magnetic field, while in the PDR turbulent pressure dominates. ESA

NUMERICAL MODELS OF PLANETARY DYNAMOS
G. A. Glatzmaier and P. H. Roberts 1992 24 p Presented at the 1992 Studies of the Earth's Deep Interior Symposium, Mizusawa, Japan, 5-10 Jul. 1992
(Contract W-7405-eng-36)
(DE93-003848; LA-UR-92-3819; CONF-9207166-1) Avail: CASI HC A03/MF A01

A nonlinear, axisymmetric, spherical-shell model of planetary dynamos is described. This intermediate-type dynamo model requires a prescribed helicity field (the alpha effect) and a prescribed buoyancy force or thermal wind (the omega effect) and solves for the axisymmetric time-dependent magnetic and velocity fields. Three very different time dependent solutions are obtained from different prescribed sets of alpha and omega fields. DOE

This is the fifth semi-annual progress report describing research on dissociative recombination reactions in planetary and comet atmospheres. The Appendix has two papers that describe NASA supported research. Both papers have been recently accepted for publication. The first paper, 'The Generation of O(S-1) from the Dissociative Recombination of O2(+)', describes in detail the Multichannel Quantum Defect (MQDT) theory used for the calculation of dissociative recombination (DR) cross sections and rates. The application to the generation of the upper state of the atomic oxygen green line emission is of great importance to the modelling of planetary atmospheres. The second paper in the Appendix, 'Dissociative Recombination of the Ground State of N2(+)', applies the methods described in the first paper to N2(+). We find remarkable agreement with the prior microwave afterglow experiments for both the total recombination rate and for its electron temperature dependence. However, the results disagree with recent merged beams results which gave cross sections that are a factor of five below the microwave afterglow experiments and the current results. DR of N2(+) is an important mechanism for generating energetic N atoms which can escape the atmosphere of Mars. Currently we are

also continuing additional work on the DR of O2(+) which is aimed at calculating both the total DR rate as a function of ion vibrational level and the rate for production of O(D-1). I.I.C.

INTERPRETATION OF VOYAGER UVS OBSERVATIONS OF OCCULTATIONS BY THE ATMOSPHERE OF NEPTUNE Annual Progress Report, period ending 31 Dec. 1991
Bill R. Sandel, F. Herbert, and R. V. Yelle Dec. 1991 10 p
(Grant NAGw-2441)
(NASA-CR-192131; NAS 1.26:192131) Avail: CASI HC A02/MF A01

We propose to continue our investigation of the upper atmosphere of Neptune based primarily on the solar occultation measurements made by the Voyager Ultraviolet Spectrometer (UVS). The ultimate goal of this research is to understand the structure and composition of Neptune's upper atmosphere as encoded in the data base obtained by the UVS during the Voyager 2 encounter with Neptune. The UVS occultations provide information essential to studies of atmospheric composition and structure, energy balance, photochemistry, global transport, ionospheric structure, and airglow production mechanisms. In conjunction with other research in progress at the University of Arizona and by our colleagues at other institutions, we not only analyze and interpret individual measurements or observations by the UVS, but also construct models of the upper atmosphere which are consistent with all available data obtained by the UVS. We derive constraints from measurements of the atmospheric emissions and we combine these with constraints derived from the occultation measurements. Principal sources for the atmospheric emissions include dayglow, resonance scattering and, at long wavelengths, the reflected solar spectrum. On the dark side of the planet, a weak H Ly alpha emission is due to resonance scattering of the sky background and perhaps another source. Thus a wide range of physical processes are at work, and each provides its own constraints on the atmosphere. Derived from text

MISSION TO THE MOON: EUROPE'S PRIORITIES FOR THE SCIENTIFIC EXPLORATION AND UTILISATION OF THE MOON
Bruce Battrick, ed. and C. Barron, ed. Jun. 1992 205 p Original contains color illustrations
(ESA-SP-1150; ISBN-92-9092-037-8; ETN-93-93499) Copyright Avail: CASI HC A10/MF A03

A study to determine Europe's potential role in the future exploration and utilization of the Moon is presented. To establish the scientific justifications the Lunar Study Steering Group (LSSG) was established reflecting all scientific disciplines benefitting from a lunar base (Moon studies, astronomy, fusion, life sciences, etc.). Scientific issues were divided into three main areas: science of the Moon, including all investigations concerning the Moon as a planetary body; science from the Moon, using the Moon as a platform and therefore including observatories in the broadest sense; science on the Moon, including not only questions relating to human activities in space, but also the development of artificial ecosystems beyond the Earth. Science of the Moon focuses on geographical, geochemical and geological observations of the Earth-Moon system. Science from the Moon takes advantage of the stable lunar ground, its atmosphere free sky and, on the far side, its radio quiet environment. The Moon provides an attractive platform for the observation and study of the Universe. Two techniques that can make unique cause of the lunar platform are ultraviolet to submillimeter interferometric imaging, and very low frequency astronomy. One of the goals of life sciences studies (Science on the Moon) is obviously to provide the prerequisite information for establishing a manned lunar base. This includes studies of human physiology under reduced gravity, radiation protection and life support systems, and feasibility studies based on existing hardware. The overall recommendations are essentially to set up specific study teams for those fields judged to be the most promising for Europe, with the aim of providing more detailed scientific and technological specifications. It is also suggested that the scope of the overall study activities be expanded in order to derive mission scenarios for a viable ESA lunar exploration program and to consider economic, legal and policy matters. The need for international coordination early in the study phase is emphasized. ESA

In 1987, responding to widespread concern about America's competitiveness and future in the development of space technology and the academic preparation of our next generation of space professionals, NASA initiated a program to establish Space Engineering Research Centers (SERC's) at universities with strong doctoral programs in engineering. The goal was to create a national infrastructure for space exploration and development, and sites for the Centers would be selected on the basis of originality of proposed research, the potential for near-term utilization of technologies developed, and the impact these technologies could have on the U.S. space program. The Centers would also be charged with a major academic mission: the recruitment of topnotch students and their training as space professionals. This document describes the goals, accomplishments, and benefits of the research activities of the University of Arizona/NASA SERC. This SERC has become recognized as the premier center in the area known as In-Situ Resource Utilization or Indigenous Space Materials Utilization. Derived from text

PLANETARY ATMOSPHERES: MICROWAVE SPECTROSCOPIC STUDIES OF PLANETARY ATMOSPHERES Final Report
R. Todd Clancy [1991] 15 p
(Grant NAGw-1228)
(NASA-CR-192145; NAS 1.26:192145) Avail: CASI HC A03/MF A01

Ground-based spectroscopic observations of isotopes of CO in the atmospheres of Mars, Venus, and Titan have been collected over the 1982-1990 period. These observations have been analyzed to obtain information on the photochemistry, dynamics, and thermal profiles of these planetary atmospheres. In the cases of the mesosphere (80-100 km altitude) of Venus and the lower atmosphere (0-70 km altitude) of Mars, the primary conclusion of this research is that significant interannual variations in the global thermal and compositional structures of these atmospheres occur over 10 year periods. The Titan studies have focussed on pinning down the true atmospheric CO abundance. A more detailed summary of the results for each of these planetary atmospheres is provided.

This catalog compiles every available grain size distribution for Apollo surface soils, trench samples, cores, and Luna 24 soils. Original laboratory data are tabled, and cumulative weight distribution curves and histograms are plotted. Standard statistical parameters are calculated using the method of moments. Photos and location comments describe the sample environment and geological setting. This catalog can help researchers describe the geotechnical conditions and site variability of the lunar surface essential to the design of a lunar base. Author

Remote sensing of the earth's surface features involves the measurement of reflected solar radiation and the interpretation of the data in biophysical terms. Reflected radiation is a function of the surface properties and incident solar irradiance. The amount of radiation reflected from a surface is compared to the amount of solar radiation received at the surface as a means of comparing information from different times of day as well as for different days of the year. Thus, it is imperative to calibrate the instruments used to measure the incoming and reflected radiation. Author

X RAY SPECTRA FROM HINOTORI SATELLITE AND SUPRATHERMAL ELECTRONS
Takako Kato and Kuniaki Masai Oct. 1992 31 p Submitted for publication
(NIFS-197; AD-B169725L) Avail: CASI HC A03/MF A01

The X-ray spectra of H-like and He-like iron ions from a solar flare observed by Hinotori satellite, taking into account a possible contribution of high energy electrons is analyzed. The time behavior of the relative densities of iron ions was calculated for a plasma of non-equilibrium ionization in the presence of suprathermal electrons of a few percent fraction. This model can reproduce the time evolution of the H-like and He-like spectra consistently. Author (revised)

THE DETECTION AND CHARACTERIZATION OF HIGH FREQUENCY AND HIGH-WAVENUMBER SOLAR OSCILLATIONS Ph.D. Thesis
David Neil Fernandes 1992 130 p
Avail: Univ. Microfilms Order No. DA9234094

Doppler shift measurements of the Na D(sub 1) absorption line have revealed solar oscillations in a new regime of frequency and wavenumber. Oscillations of vertical velocities in the temperature minimum and low chromosphere of the Sun are observed with frequencies ranging up to 9.5 mHz. There is no evidence for chromospheric modes of 3 minute period. This indicates that the chromosphere does not form a good cavity for acoustic waves. The fundamental-modes appear with wavenumbers up to 5.57 Mm(exp -1) (equivalent spherical harmonic degree, 3877). The frequencies lie below the predicted values at wavenumbers above 1 Mm(exp -1). The values are in agreement with previous measurements that exist for wavenumbers up to 2.67 Mm(exp -1). Spatial maps of velocity power show that high wavenumber oscillations are suppressed in active regions. The shape of the power depression indicates that wave motion is affected in the layer of atmosphere where the measurement is made. The f-modes are suppressed in the same way as p-modes, indicating that the mechanism for wave suppression affects velocity fluctuations. Mode frequencies are not affected by the magnetic fields by more than 50 micro-Hz, the precision of the measurement. Dissert. Abstr.

(Grant NAGw-1706)
(NASA-CR-192135; NAS 1.26:192135) Avail: CASI HC A02/MF A01

In studies of solar active regions and bursts, the ability to obtain spatially resolved radio spectra (brightness temperature spectra) opens a whole new range of possibilities for study of the solar corona. For active regions, two-dimensional maps of brightness temperature over a wide range of frequencies allows one to determine temperature, column density, and magnetic field strength over the entire region in a straightforward, unambiguous way. For flares, the time-dependent electron energy distribution, number of accelerated electrons, and magnetic field strength and direction can be found. In practice, obtaining complete radio images at a large number of frequencies is a significant technical challenge, especially while keeping costs down. Our instrument at Owens Valley Radio Observatory provided the starting point for a modest attempt at meeting this goal. We proposed to build three additional, very low-cost 2-m antennas which, when combined with our existing two 27-m dishes, expands the array to 5 elements. This modest increase in number of solar dedicated antennas, from 2 to 5, increases our maximum number of physical baselines from 1 to 10 and allows the instrument to do true imaging of solar microwave sources, both bursts and active regions. Combined with the technique of frequency synthesis, the new array has up to 450 effective baselines, giving imaging capability that approaches that of a sub-arrayed VLA. The prototype antenna design was finalized and the antenna was put into operation in Nov. 1989. Author (revised)

This report describes recent results of our theoretical and observational work on dynamical phenomena in sunspots. The overall goal of this research has been a better understanding of the various oscillatory, transient, and steady motions in a sunspot and their relation to the basic structure of the sunspot. The principal topics of the research reported here are the following: (1) sunspot seismology, i.e., the study of the interaction of solar p-modes with a sunspot as a probe of the subsurface structure of a sunspot; (2) local sources of acoustic waves in the solar photosphere; and (3) siphon flows in isolated magnetic flux tubes and their relation to the photospheric Evershed flow and to intense magnetic elements outside of sunspots. PROCEEDINGS OF THE WORKSHOP ON THE SOLAR ELECTROMAGNETIC RADIATION STUDY FOR SOLAR CYCLE 22

Richard F. Donnelly, ed. Jul. 1992 483 p Workshop held in Boulder, CO, 3-7 Jun. 1991 Sponsored in part by Colorado Univ.; NSF; and International Council of Scientific Unions
(PB93-121846) Avail: CASI HC A21/MF A04

The Solar Electromagnetic Radiation Study for Solar Cycle 22 (SOLERS22) is an international program for collaborative research of long-term changes in the solar total and spectral irradiance. SOLERS22 is project 1.2 of STEP Working Group 1, The Sun as a Source of Energy and Disturbance. Temporal variations (0.1 percent) in the total solar irradiance (S) are important because of their possible effects on climate. Changes in the solar ultraviolet (UV) flux (10 percent) modulate the ozone density and temperature in the stratosphere and mesosphere. Large-percentage fluctuations (100 percent) in the solar extreme-ultraviolet flux induce sizable changes in the ionosphere and thermosphere. Huge enhancements (X10, X100) in solar soft x-ray flux cause enhancements in ionization and heating in the ionospheric D and E regions. It is, therefore, important to know what these solar electromagnetic fluxes are, as a function of time, to determine the main solar energy inputs to the terrestrial atmosphere. The Workshop had 5 major topics (Parts): Total Solar Irradiance and Near-UV, Visible and Infrared Spectral Irradiance; Solar Activity and Proxy Measurements; Solar UV Spectral Irradiance; Solar EUV Spectral Irradiance; Solar X-Ray Spectral Irradiance. SOLAR RADIO FLARES 1989-1991. SOLAR MICROWAVE FLARES OBSERVED AT METSAEHOVI RADIO RESEARCH STATION IN 1989-1991

Seppo Urpo, Silja Pohjolainen, and Harri Teraesranta 1992 125 p
(PB93-111896; ISBN-951-22-1183-1; SER-A-11) Avail: CASI HC A06/MF A02

The Metsaehovi Radio Research Station, a separate research institute of the Helsinki University of Technology since May 1988, operates a 14 m diameter radio telescope at Metsaehovi, Kylmala. Annually the telescope has been reserved for solar measurements for 4-10 weeks, typically during

the summer months. Measurements include maps of the whole or part of the Sun, tracking of active regions and solar oscillation monitoring. Most of the solar observations have been done using receivers operating at 22.2 GHz or at 36.8 GHz. The sensitivity of receivers is good enough for 0.1 sfu resolution. In the temperature scale the resolution is better than 100 K and it is limited by short term changes in the atmospheric attenuation. Solar maps are measured by scanning the solar disk in right ascension and by changing the declination in small steps between the subsequent scans. The volume contains a list of radio flares observed at Metsaehovi Radio Research Station in 1989-1991 and a selection of time profiles of the bursts. GRA

THE GALLEX SOLAR NEUTRINO EXPERIMENT
R. L. Hahn 1992 4 p Presented at the Meeting of the Division of Particles and Fields of the American Physics Society, Batavia, IL, 10-14 Nov. 1992
(Contract DE-AC02-76CH-00016)
(DE93-003357; BNL-48171; CONF-921122-5) Avail: CASI HC A01/MF A01

The recently published GALLEX result, 83 +/- 19 (stat.) +/- 8 (syst.) SNU (1(sigma)), was obtained from data accumulated from 14 solar runs (with counting done to May 1992). This value, while 2 standard deviations below the predictions of solar models, provided the first direct evidence for solar pp neutrinos. The signature for neutrino capture in the aqueous gallium-chloride detector was the observation of the characteristic energy spectrum (K and L X-rays/Auger electrons), decaying with the half-life of the chemically isolated radioactive product, Ge-71. By adding to the data set 1 more solar run plus 4 additional months of counting (to Sep. 1992), an updated value of the GALLEX production rate was obtained, which, interestingly, does not differ perceptibly from our published value. DOE

THEORY OF CORONAL STREAMER FORMATION
R. A. Kopp 1992 9 p Presented at the Solar and Heliospheric Observatory Workshop, Annapolis, MD, 25-28 Aug. 1992
(Contract W-7405-eng-36)
(DE93-003736; LA-UR-92-3336; CONF-9208187-1) Avail: CASI HC A02/MF A01

Conceptually, coronal streamers can form (and disappear) by either of two distinct processes: (1) plasma 'filling' and outward distention of a preexisting closed magnetic structure; and (2) magnetic reconnection, for whatever reason, of an open bipolar field configuration. We argue that the majority of stable-appearing streamers on the Sun at any time are in fact of the latter category - namely, open-field structures undergoing gradual reconnection. Quasi-steady (i.e., 'convectively relaxed') reconnection models may be required to explain the narrow high-density cores exhibited by most streamers out to distances of many solar radii. Some of the observational signatures of reconnection within streamers, which the instrumentation aboard SOHO may be capable of detecting are discussed. DOE

CAN THE COSMIC X RAY AND GAMMA RAY BACKGROUND BE DUE TO REFLECTION OF A STEEP POWER LAW SPECTRUM AND COMPTON SCATTERING BY RELATIVISTIC ELECTRONS?
Piotr T. Zycki, Andrzej A. Zdziarski, and Roland Svensson (Stockholm Observatory, Sweden.) 1991 9 p Sponsored in part by NATO and the Polish State Committee for Scientific Research
(Grant NAG5-1570)
(NASA-CR-192255; NAS 1.26:192255) Avail: CASI HC A02/MF A01

We reconsider the recent model for the origin in the cosmic X-ray and gamma-ray background by Rogers and Field. The background in the model is due to an unresolved population of AGNs. An individual AGN spectrum contains three components: a power law with the energy index of alpha = 1.1, an enhanced reflection component, and a component from Compton scattering by relativistic electrons with a low energy cutoff at some minimum Lorentz factor, gamma(sub min) much greater than 1. The MeV bump seen in the gamma-ray background is then explained by inverse Compton emission by the electrons. We show that the model does not reproduce the shape of the observed X-ray and gamma-ray background below 10 MeV and that it overproduces the background at larger energies. Furthermore, we find the assumptions made for the Compton component to be physically inconsistent. Relaxing the inconsistent assumptions leads to model spectra even more different from that of the observed cosmic background. Thus, we can reject the hypothesis that the high-energy cosmic background is due to the described model. Author

(NASA-CR-192253; NAS 1.26:192253) Avail: CASI HC A03/MF A01; 1 functional color page

The principal goal of our phase 1 investigation was the development of techniques and data analysis tools for pulsar searches and timing. After the launch of the Compton Observatory, we received from the Burst and Transient Source Experiment (BATSE) team one day of discriminator large area (DISCLA) data for use in the development and testing of data analysis techniques. Using this first day of data for testing and optimizing our timing tools we detected four x-ray binary pulsars, Vela X-1, Cen X-3, 4U 0115+63, and GX 301-2. Subsequently, we received four more days of data, allowing us to test our timing tools with data from a variety of days. In summary, using the tools we developed based on the first day of data that we received, we have detected 8 pulsars in 5 days of data, or roughly one quarter of the approximately 30 known x-ray binary pulsars. In addition to the pulsars listed above, we detected GX 1+4, 4U 1626-67, OAO 1657-415, and Her X-1. Many of the data analysis tools that we developed have been ported to MSFC and are being used for the analysis of BATSE data. This appendix describes some of the timing tools and presents preliminary pulse period and phase profile results.

ANALYSIS AND SYNTHESIS OF CATALOGUES OF EXTRAGALACTIC RADIO SOURCES
H. G. Walter 1990 5 p Repr. from Reference Systems. Proceedings of the 127th Colloquium of the IAU (Naval Observatory), 1991 p 376-380
(Mitt-Ser-A-231; ETN-93-93408) Avail: CASI HC A01/MF A01

Recent observation catalogs of extragalactic radio sources obtained by Very Long Baseline Interferometry (VLBI) agree in the mean to a few milliarcseconds (mas). Within this range the position differences show constant, linear, and periodic offsets. To cast light on these offsets the differences between some of the representative observation catalogs are plotted. Especially, the periodic variations of declination differences of observation catalogs having significantly different epochs are tentatively explained by an uncertainty of the general precession in declination. In terms of luni-solar precession this uncertainty is estimated to be of the order of -1 to -2 mas per year. ESA

THIRTY YEARS TOGETHER: A CHRONOLOGY OF U.S.-SOVIET SPACE COOPERATION
David S. F. Portree Feb. 1993 51 p
(NASA-CR-185707; NAS 1.26:185707) Avail: CASI HC A04/MF A01

The chronology covers 30 years of cooperation between the U.S. and the Soviet Union (and its successor, the Commonwealth of Independent

States, of which the Russian Federation is the leading space power). It tracks successful cooperative projects and failed attempts at space cooperation. Included are the Dryden-Blagonravov talks; the UN Space Treaties; the Apollo Soyuz Test Project; COSPAS-SARSAT; the abortive Shuttle-Salyut discussions; widespread calls for joint manned and unmanned exploration of Mars; conjectural plans to use Energia and other Russian space hardware in ambitious future joint missions; and contemporary plans involving the U.S. Shuttle, Russian Mir, and Soyuz-TM. The chronology also includes events not directly related to space cooperation to provide context. A bibliography lists works and individuals consulted in compiling the chronology, plus works not used but relevant to the topic of space cooperation. Author

[ACTIVITIES OF THE SEIBERSDORF RESEARCH CENTER] Annual Report, 1991 [JAHRESBERICHT 1991, FORSCHUNGSZENTRUM SEIBERSDORF]

Harald Thurnher 1992 39 p In GERMAN

(ETN-93-92597) Avail: CASI HC A03/MF A01

The organization structure of the research center was fundamentally modified and adapted to the requirements of the future. Important research and development projects were carried out with international partners. Interdisciplinary solutions were found in the fields of measurement technology and information processing with regard to production rationalization and insurance quality. Special miniaturized liquid metal ion sources were developed for use in international space missions for the stabilization of the electric potential of research satellites. Instruments for in situ material analyses were developed in space stations with regard to corrosion. Work was carried out in the field of drinking water and sewage purification. High duty components were developed for the homogeneity of phosphorus doping of the monocrystals of pure silicon. Projects were developed in the field of environment and forest protection, and research was conducted with international partners on the project 'steels for high temperature steam turbines'. ESA

DEFENSE SCIENCE AND TECHNOLOGY STRATEGY: EXECUTIVE SUMMARY. 1: BACKGROUND AND OVERVIEW. 2: THE SEVEN THRUSTS

Jul. 1992 112 p

(PB92-217785) Avail: CASI HC A06/MF A02

The document presents the strategic plan for the Defense Department's Science and Technology program. It forms the basis for decisions and actions and provides the foundations for long- and short-range planning. Section 1 explains how changes in the world security environment have affected the requirements placed on the S&T program through changes in U.S. force structure and military and operational strategies. In particular, it explains how the S&T program is affected by the following: (1) improvements in the information and communications flow between the S&T and 'user' (warfighting) communities; (2) the revolution in information technology; and (3) the increased role of Advanced Technology Demonstrations (ATD's). NASA SPACE ENGINEERING RESEARCH CENTER FOR UTILIZATION OF LOCAL PLANETARY RESOURCES Annual Executive Report, 1989-1990

1990 25 p Original contains color illustrations

(Grant NAGw-1332)

(NASA-CR-191992; NAS 1.26:191992) Avail: CASI HC A03/MF A01; 6 functional color pages

In 1987, responding to widespread concerns about both the health of American space technology development and the academic preparation of 21st-century space professionals, NASA announced a nationwide competition to establish a number of Space Engineering Research Centers. These centers were to be founded on the campuses of nine Universities with strong Doctoral programs in Engineering. Over 115 proposals were received by NASA in November 1987. The University of Arizona's proposal was selected in May as one of the winners, with a budget of approximately $7 million guaranteed by NASA for a minimum funding period of five years. The role of the University of Arizona SERC is to develop the technologies necessary to produce a wide variety of useful products using the materials and sources of energy that occur naturally in near-Earth space. An additional purpose is to lower the cost and extend the scope of large-scale activities. A brief description of the Center's activities for the 1989-1990 period is presented. Derived from text

MIT SPACE ENGINEERING RESEARCH CENTER TESTBED PROGRAMS Semiannual Report, period ending Jan. 1991

Edward F. Crawley and David W. Miller May 1991 340 p

(Grant NAGw-1335)

(NASA-CR-192115; NAS 1.26:192115; SERC-4-91-R) Avail: CASI HC A15/MF A03

The Space Engineering Research Center (SERC) at M.I.T., started in July 1988, has completed two and one-half years of research. This Semi-Annual Report presents annotated viewgraph material presented at the January 1991 Steering Committee and Technical Representative Review. The objective of the Space Engineering Research Center is to develop and disseminate a unified technology of controlled structures. There has been continued evolution of the concept of intelligent structures (including in this past year the first successful embedding of a microelectronic component into a structural element). Development programs concerning the scientific missions, Earth and environment observation, telecommunications, space transportation system, space stations, microgravity research, and the European astronaut center are described. Basic activities in scientific research, research and

development technology, data processing and archiving, and technical infrastructure are described. Installations for information systems and ESANET, space systems, mission support, and satellite operations are described. The administration of ESA establishments, structure and organization, finance and contracts, and external relations is described. During 1991, five ESA scientific satellites operated in orbit: the long lifetime IUE; Giotto to its second cometary encounter; Hipparcos, which along with the Hubble Space Telescope, transmits astronomical data, and Ulysses, which gave solar system information on its way to Jupiter. Technical problems affecting the launch date were encountered with ISO (Infrared Space Observatory). The launch of ERS marked a step in global Earth observation, and the apparently lost Olympus satellite was recovered. The Eureca platform for microgravity experiments was prepared for takeoff. ESA

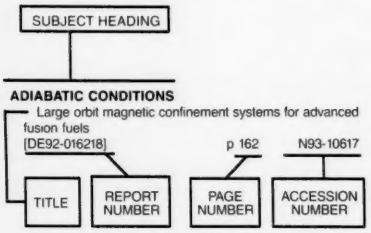
JOURNAL OF RESEARCH OF THE NATIONAL INSTITUTE OF STANDARDS AND TECHNOLOGY, JULY-AUGUST 1992. VOLUME 97, NUMBER 4
Barry N. Taylor, ed. 1992 107 p
(PB93-124246) Avail: CASI HC A06/MF A02; SOD HC

The contents of this document are divided into the following two sections: (1) articles--new wavenumber calibration tables from heterodyne frequency measurements and symmetric level index arithmetic in simulation and modeling; and (2) conference reports--workshop on polymer blends and news briefs. GRA

SUBJECT INDEX

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

A

A-7 AIRCRAFT
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255

ABLATION
Solution of a one-dimensional ablation model
[INPE-5357-TDI/464] p 1900 N93-20321

ABSORPTANCE
Protective coating development for Space Station Freedom at McDonnell Douglas p 1849 N93-20820

ABSORPTION SPECTRA
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides
[AD-A259136] p 1847 N93-20595

In-situ determination of optical properties of sea water and particle characteristics in the Corfu Sea (Mediterranean): Report on the first joint campaign of the Mito project
[BCRS-92-04] p 2018 N93-20741

ABSORPTION SPECTROSCOPY
Application of magnetic resonance to explosives detection p 1771 N93-21901

ABSTRACTS
International geodetic bibliography
p 1974 N93-20995

Summaries of the 1991 publications of DLR research reports and DLR communications
[ETN-93-92588] p 2103 N93-21022

Electronics and Electrical Engineering Laboratory technical publications announcements covering laboratory programs, January to March 1992, with 1992/1993 EEEL events calendar
[PB93-120715] p 1893 N93-21256

Electronics and Electrical Engineering Laboratory technical publications announcements covering laboratory programs, October to December 1991, with 1992/1993 EEEL events calendar
[PB93-120723] p 1893 N93-21257

Publications of the National Institute of Standards and Technology 1991 catalog
[PB92-217579] p 2091 N93-21344

List of US Army Research Institute research and technical publications, October 1, 1990 to September 30, 1991 with author and subject index
[PB93-108611] p 2103 N93-21381

NASA Automated Rendezvous and Capture Review. Executive summary
[NASA-TM-108597] p 1812 N93-21407

Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765

NASA SBIR abstracts of 1990 phase 1 projects
[NASA-TM-108145] p 2087 N93-21794

ACCELERATED LIFE TESTS
Air Force Ni-Cd cell qualification program update
p 1984 N93-20505

Electrical characterization of the Magellan batteries after storage p 1984 N93-20506

ACCELERATION (PHYSICS)
Acceleration levels on the KC-135
p 1784 N93-21124

ACCELEROMETERS
Rarefied-flow Shuttle aerodynamics model
[NASA-TM-107698] p 1759 N93-19976

Analysis of Space Shuttle accelerometer data
[NLR-TP-90141-U] p 1821 N93-20744

ACCEPTABILITY
Research and development of K-band intersatellite communication experiment equipment onboard ETS-6
p 1793 N93-20434

ACCEPTOR MATERIALS
Interface properties of wide bandgap semiconductor structures
[AD-A259416] p 2078 N93-20131

ACCIDENT INVESTIGATION
Report at a glance: Report of the Presidential Commission on the Space Shuttle Challenger Accident
p 1820 N93-20036

ACCIDENTS
Report at a glance: Report of the Presidential Commission on the Space Shuttle Challenger Accident
p 1820 N93-20036

Upper interior head protection. Volume 2: Fleet characterization and countermeasure evaluation
[PB93-113777] p 2027 N93-21795

ACCOUNTING
Integrated cost accounting system
[AD-A258587] p 2093 N93-21755

ACCURACY
Simulation and calculation of the APEX attitude
[AD-A258716] p 1824 N93-20382

On improving accuracy of machining centers
[PAPER-C-3-1] p 2036 N93-20835

Accurate procedure for calibrating the CAO optical hygrometer
[AP-30] p 1906 N93-20927

Investigation of the real-time accuracy of the DGPS method
[AD-A257692] p 1780 N93-21222

ACETYLENE
Study of multi jet burner for gases
[INPE-5416-TDI/480] p 1846 N93-20320

ACID RAIN
Technologies options for acid rain control
[PB93-106854] p 1991 N93-21473

Summary report for the National Atmospheric Deposition Program National Trends Network (NADP/NTN) site visitation program
[PB92-219823] p 1991 N93-21494

ACOUSTIC EMISSION
Naval research reviews, volume 44, no. 1, 1992
[PB93-129682] p 2104 N93-21808

ACOUSTIC EXCITATION
Fluid/structure interactions. Internal flows
p 1905 N93-20629

ACOUSTIC MEASUREMENT
System for determining the angle of impact of an object on a structure
[NASA-CASE-LAR-14817-1] p 1906 N93-20569

Fluid/structure interactions. Internal flows
p 1905 N93-20629

Embedded fiber optic acoustic sensors
[AD-D015568] p 2060 N93-21249

Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990)
[PB93-116598] p 2019 N93-21389

Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652

Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957

ACOUSTIC PROPERTIES
Multidisciplinary tailoring of hot composite structures
[NASA-TM-106027] p 1920 N93-19971

ACOUSTIC SCATTERING
Theory and numerical modeling of low-frequency acoustic scattering from bubble plumes near the sea surface
[AD-A259199] p 2018 N93-20564

ACOUSTIC VELOCITY
CONPLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649

ACOUSTICS
Acoustophoresis separation method
[NASA-CASE-LAR-13388-2] p 1846 N93-20570

ACQUIRED IMMUNODEFICIENCY SYNDROME
Rapid susceptibility testing of mycobacterium avium complex and mycobacterium tuberculosis isolated from AIDS patients
[NASA-CR-192382] p 2023 N93-20736

ACRYLATES
Dual cure solventless coating process
[DE93-001351] p 1845 N93-20021

ACTIVATED CARBON
Activated carbon fibers in composites, chemically protective clothing and air purification
p 1837 N93-21152

ACTIVATION ENERGY
Relaxation of radiation damages in a-Si:H layers
[MBB-Z-0317-90-PUB] p 2081 N93-21403

Effective activation energy in the Bi-Sr-Ca-Cu-O systems
[DE93-002996] p 2083 N93-21983

Critical current density, irreversibility line, and flux creep activation energy in silver-sheathed Bi2Sr2Ca2Cu3O(sub x) superconducting tapes
[DE93-002998] p 2083 N93-21984

ACTIVE CONTROL
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210

ACTIVE GALACTIC NUCLEI
IUE-ULDA access guide no. 4A: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume A
[ESA-SP-1153-VOL-A] p 2096 N93-21007

IUE-ULDA access guide no. 4B: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume B
[ESA-SP-1153-VOL-B] p 2097 N93-21015

ACTIVE GALAXIES
IUE-ULDA access guide no. 4A: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume A
[ESA-SP-1153-VOL-A] p 2096 N93-21007

Dissolution of tidally limited star clusters in galaxies by passing giant molecular clouds or other massive objects
[MITT-SER-A-232] p 2097 N93-21301

ACTS
Lewis Research Center battery overview
p 1983 N93-20493

ACTUATORS
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
Determination of pyrotechnic functional margin p 1863 N93-20134
Pyrotechnically actuated systems database and applications catalog p 1864 N93-20136
Development and testing of hermetic, laser-ignited pyrotechnic and explosive components p 1865 N93-20149
Pyrotechnic modeling for the NSI and pin puller p 1866 N93-20153
Analytical and experimental investigation of flutter suppression by piezoelectric actuation
[NASA-TP-3241] p 1781 N93-20584
Polynomial solution of the direct geometric problem of a parallel spherical manipulator p 1918 N93-20718
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210
Autonomous pre-alignment of a docking mechanism p 1814 N93-21418

ADA (PROGRAMMING LANGUAGE)
Ada implementation of an object data repository
[AD-A259144] p 2087 N93-20002
Software design document for the generic avionics data bus tool kit
[AD-A259329] p 1784 N93-21259

ADAPTERS
Cable connector/adapter support for multi-terminal data processors
[AD-D015572] p 1889 N93-20309

ADAPTIVE CONTROL
A contribution to the adaptive control of servo-drives with direct current motor
[ETN-93-92562] p 2047 N93-20876
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210
Robust controller design: A bounded-input-bounded-output worst-case approach
[AD-A259367] p 2047 N93-21246
Adaptive control with an expert system based supervisory level
[NASA-CR-192742] p 2048 N93-21372

ADVANCED LAUNCH SYSTEM (STS)
Optimal guidance law development for an advanced launch system
[NASA-CR-192189] p 1820 N93-20313

ADVANCED SOLID ROCKET MOTOR (STS)
Introduction of laser initiation for the 48-inch Advanced Solid Rocket Motor (ASRM) test motors at Marshall Space Flight Center (MSFC) p 1830 N93-20141
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477

ADVANCED VERY HIGH RESOLUTION RADIOMETER
Preparation of AVHRR GAC data sets for global change studies p 1954 N93-21573
The 8 years monthly vegetation index of central Europe p 1954 N93-21574
Influence of terrain elevation on vegetation indices derived from NOAA AVHRR and EOS MODIS data p 1954 N93-21576
Vegetation cover mapping over France using NOAA-11/AVHRR p 1955 N93-21582
Estimating the vertical dimension of convective cloudiness over the polar ocean from AVHRR data p 1956 N93-21590
Detecting new-ice in the Arctic from multispectral satellite data p 1957 N93-21594
Improved use of passive microwave data for sea ice detection p 1957 N93-21597
Lake remote sensing for global climate research p 1958 N93-21602
Use of AVHRR-derived cloudiness and precipitation in operational weather forecasting and in model studies p 1959 N93-21608
SST monitoring of the European seas with AVHRR data p 1963 N93-21629
Mapping of satellite-derived sea surface temperatures at high resolution in cloudy regions p 1963 N93-21630
A comprehensive comparison between skin and multi-channel sea surface temperatures as derived from AVHRR p 1963 N93-21632
Surface circulation in the Adriatic Sea as observed by AVHRR p 1964 N93-21634
A study of the thermal bar in Lake Ladoga (Russia) using NOAA-AVHRR data p 1964 N93-21635
Advanced very high resolution radiometer data to update forest area change for midsouth states
[PB93-121416] p 1979 N93-21685

AERIAL PHOTOGRAPHY
Quantitative registration of tree vitality and physiological changes with colour-infrared and multispectral photography
[BCRS-91-44] p 1968 N93-20740
Multispectral and multitemporal aerial photography as an aid for the evaluation of land in regions of the Limagne Rift Valley (France)
[BCRS-91-29] p 1968 N93-20953

AEROACOUSTICS
Numerical simulation of a high Mach number jet flow
[NASA-TM-105985] p 1898 N93-20057
Multidisciplinary computational aerosciences
[NASA-TM-103946] p 1759 N93-20323

AERODYNAMIC CHARACTERISTICS
Rarefied-flow Shuttle aerodynamics model
[NASA-TM-107698] p 1759 N93-19976
Application of a flush airdata sensing system to a wing leading edge (LE-FADS)
[NASA-TM-104267] p 1784 N93-20163
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis. Computer program user's manual
[NASA-CR-187125] p 1784 N93-20583
Experimental and analytical investigation of dynamic characteristics of extension-twist-coupled composite tubular spars
[NASA-TP-3225] p 1925 N93-20585
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
The aerodynamic performance of laser drilled sheets
[AERO-REPT-9204] p 1761 N93-20806
Program of research in flight dynamics in the JIAFS at NASA-Langley Research Center
[NASA-CR-191885] p 1762 N93-21562
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual
[NASA-CR-191017] p 1953 N93-22005

AERODYNAMIC COEFFICIENTS
Shock-dependent, optimum thrust wings in supersonic flow p 1760 N93-20169

AERODYNAMIC CONFIGURATIONS
Aerodynamic surface tip vortex attenuation system
[AD-D015606] p 1760 N93-20017
Computational analysis of hypersonic flows past generalized cone-derived waveriders p 1761 N93-20288
Improved empirical model for base drag prediction on missile configurations based on new wind tunnel data
[AD-A258753] p 1761 N93-20405
Experimental results in aerodynamic stability and control of a TSTO configuration
[MBB-FE-211-S-PUB-0482-A] p 1787 N93-21057

AERODYNAMIC DRAG
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
Improved empirical model for base drag prediction on missile configurations based on new wind tunnel data
[AD-A258753] p 1761 N93-20405

AERODYNAMIC FORCES
Rarefied-flow Shuttle aerodynamics model
[NASA-TM-107698] p 1759 N93-19976
Fluid/structures interactions. Aircraft considerations p 1787 N93-20628
Development of a non-linear simulation for generic hypersonic vehicles - ASUHS1
[NASA-CR-192710] p 1783 N93-22003

AERODYNAMIC HEATING
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728

AERODYNAMIC LOADS
Experiments on smooth cantilevered circular cylinders in a low-turbulence uniform flow. Part 2: Fluctuating loads on a cantilever of aspect ratio 30
[PB93-110500] p 1903 N93-21382
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766

AERODYNAMIC STABILITY
Experimental results in aerodynamic stability and control of a TSTO configuration
[MBB-FE-211-S-PUB-0482-A] p 1787 N93-21057

AERODYNAMIC STALLING
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766

AERODYNAMICS
Guidance and flight control law development for hypersonic vehicles
[NASA-CR-192102] p 1786 N93-19960
Adaptivity-fluids-localization. The challenge to computational mechanics p 1905 N93-20618
Aeronautical engineering: A continuing bibliography with indexes (supplement 286)

Aeronautical engineering: A continuing bibliography with indexes (supplement 286)
[NASA-SP-7037(286)] p 1759 N93-21026
Modelisation and computation of composite materials p 1842 N93-21518

AERONAUTICS
The 1992 Research/Technology report
[NASA-TM-105924] p 1759 N93-20902

AEROSOLS
Aerosol chemistry in GLOBE p 2009 N93-20102
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project
[FOA-C-40296-4.5] p 1901 N93-20858
Can measurements in the O2A- and B-bands be used for atmospheric correction of satellite measurements over the ocean? p 1955 N93-21581
Ozone as a sink for atmospheric carbon aerosols
[PB93-118594] p 1993 N93-21790
Efficient collection of explosive vapors, particles and aerosols p 1772 N93-21909

AEROSPACE ENGINEERING
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 27: Knowledge diffusion and US government technology policy: Issues and opportunities for sci/tech librarians
[NASA-TM-108680] p 2088 N93-20110
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 26: The relationship between technology policy and scientific and technical information within the US and Japanese aerospace industries
[NASA-TM-108679] p 2088 N93-20111
Metals combustion in normal gravity and microgravity p 1854 N93-20211
The 1992 Research/Technology report
[NASA-TM-105924] p 1759 N93-20902
Spacebound 1991
[CTN-93-60604] p 1802 N93-21070

AEROSPACE ENVIRONMENTS
Contamination signatures observed during the CIRRIS-1A mission
[AD-A258596] p 1820 N93-19982
Radiological assessment for Space Station Freedom
[NASA-TM-104758] p 2022 N93-20303
An overview of space qualification requirements for new materials p 1830 N93-20815
Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445

AEROSPACE INDUSTRY
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 26: The relationship between technology policy and scientific and technical information within the US and Japanese aerospace industries
[NASA-TM-108679] p 2088 N93-20111
Activities of the Seibersdorf Research Center
[ETN-93-92597] p 2103 N93-20857
Coatings on composites: New developments and applications in the aerospace industry
[MBB-Z-0443-92-PUB] p 1840 N93-21404

AEROSPACE MEDICINE
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
Physiological responses to wearing the space shuttle launch and entry suit and the prototype advanced crew escape suit compared to the unsuited condition
[NASA-TP-3297] p 2026 N93-20319
Bibliography of scientific publications 1977-1991
[AD-A259084] p 2090 N93-20393
Aerospace medicine and biology: A cumulative index to a continuing bibliography (supplement 371)
[NASA-SP-7011(371)] p 2024 N93-20889
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 372)
[NASA-SP-7011(372)] p 2024 N93-21044
Guide for aviation medical examiners
[PB92-219690] p 2024 N93-21047
Environmental health discipline science plan
[NASA-TM-108042] p 2024 N93-21369
Space human factors discipline science plan
[NASA-TM-108023] p 2026 N93-21370

AEROSPACE PLANES
Turbulence modeling for hypersonic flight
[NASA-CR-192288] p 1760 N93-20235
Research on HOPE p 1791 N93-20423
HOPE information system review p 1791 N93-20425
Research on heat-resistance technology for HOPE p 1791 N93-20426
Research on HOPE flight control technology p 1787 N93-20427
Research on combined HOPE navigation technology p 1792 N93-20428
Research on HOPE communication and data processing equipment p 1792 N93-20429
Research on HOPE actuator power unit p 1792 N93-20430
Research on HOPE heat sink device p 1792 N93-20431

AEROSPACE SAFETY
Implementation of the recommendations of the Presidential Commission on the Space Shuttle Challenger Accident
[NASA-TM-108646] p 1820 N93-19990
Overview of NASA's microgravity combustion science and fire safety program p 1868 N93-20180
Priorities for microgravity combustion research and goals for workshop discussions p 1869 N93-20186
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions p 1853 N93-20192
Fire safety practices in the Shuttle and the Space Station Freedom p 1825 N93-20204
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
Safety validation test equipment operation p 1801 N93-20487
Review on safety validation test p 1802 N93-20488
Future space transportation systems. Part 1: Safety aspects. Part 2: Technical aspects
[MBB-UK-0180-90-PUB-PT-1-2] p 1821 N93-20847
Report of the SSME assessment team
[NASA-TM-108217] p 1830 N93-21645

AEROSPACE SCIENCES
Multidisciplinary computational aerosciences
[NASA-TM-103946] p 1759 N93-20323
Spacebound 1991
[CTN-93-60604] p 1802 N93-21070
Space science overview p 1802 N93-21071
Space life sciences overview p 1802 N93-21074

AEROSPACE SYSTEMS
A prototype novel sensor for autonomous, space based robots, phase 2
[NASA-CR-191344] p 1913 N93-19978
The future of the US Space Industrial Base p 1789 N93-20044
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
NASA pyrotechnically actuated systems program p 1863 N93-20133
Determination of pyrotechnic functional margin p 1863 N93-20134
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 6: Controls and guidance
[NASA-TM-108654] p 2085 N93-20774
CTOS course
[NASA-CR-191866] p 2047 N93-21204
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831
Space Station ECLSS integration analysis
[NASA-CR-192470] p 2027 N93-22002

AEROSPACE TECHNOLOGY TRANSFER
Development of first generation aerospace NiMH cells p 1986 N93-20520
Development of nickel-metal hydride cell p 1986 N93-20521
Space science overview p 1802 N93-21071

AEROTHERMODYNAMICS
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 8: Aerothermodynamics Automation and Robotics (A/R) systems sensors, high-temperature superconductivity
[NASA-TM-108655] p 2085 N93-20775
Heat loads as key problem of hypersonic flight
[MBB-FE-202-S-PUB-0486] p 1762 N93-21054
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles
[MBB-FE-211-S-PUB-0481] p 1781 N93-21056
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728
Aerothermodynamic properties of hypersonic flows over radiation-adiabatic surfaces
[DLR-FB-91-42] p 1763 N93-21761

AFRICA
Global change data base training exercise manual. Exploring Earth's environment: Africa as an example
[PB92-224682] p 1990 N93-21211
Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields p 1955 N93-21580
Seasonal SST and upwelling indices along the northwest African coast p 1964 N93-21633
Global Change Data Base Pilot (Diskette) Project for Africa. Dase base documentation version 1.1
[PB93-117927] p 2000 N93-21686

AGGLOMERATION
Agglomeration of fractals in simulated reduced gravity p 1806 N93-21093

AGGREGATES
Ordering of aggregating particle suspensions undergoing simple shear p 1805 N93-21092

AGING (MATERIALS)
Microstructural development in a spray formed aluminum-silicon carbide based metal matrix composite
[AD-A259414] p 1832 N93-20124
Outline of SCM data processing system onboard ETS-5 p 1802 N93-20489

AIR
Fatigue performance of nine bolt materials in air and in sea water with cathodic protection p 1924 N93-20349

AIR BREATHING ENGINES
Propulsion/weapon system interaction model
[AD-A259291] p 1785 N93-20610

AIR CONDITIONING
Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development)
[PB92-227891] p 1878 N93-21465

AIR CURRENTS
Mean seasonal cycles and interannual variations at 0 deg, 110 deg W and 0 deg, 140 deg W during 1980-1991
[PB93-114726] p 2014 N93-21388

AIR MASSES
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302

AIR NAVIGATION
Current and planned use of the Navstar Global Positioning System by NASA
[NASA-TM-108190] p 1779 N93-21190
Effect of personal and situational variables on noise annoyance: With special reference to implications for en route noise
[NASA-CR-189676] p 2060 N93-21317

AIR POLLUTION
State air pollution control programs: A profile report
[PB93-122364] p 1990 N93-21216
Relationship between ozone concentrations and air transport over western Arizona
[PB93-114007] p 1990 N93-21238
Summary report for the National Atmospheric Deposition Program National Trends Network (NADP/NTN) site visitation program
[PB92-219823] p 1991 N93-21494
Atlanta ozone precursor monitoring study data report
[PB92-220656] p 1991 N93-21495
Human exposure assessment for airborne pollutants: Advances and opportunities
[PB92-223247] p 1991 N93-21496
National Center for Atmospheric Research, Fiscal Year 1991
[PB93-129914] p 2000 N93-21547
Surface-coating-free materials workshop
[PB93-101160] p 1861 N93-21683
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783
Technical comparison between Hythane, GNG and gasoline fueled vehicles
[DE93-005608] p 1994 N93-21834

AIR PURIFICATION
Activated carbon fibers in composites, chemically protective clothing and air purification p 1837 N93-21152

AIR QUALITY
Survey of protocols for conducting indoor air quality investigations in large buildings
[PB93-119865] p 2026 N93-21215
Technical comparison between Hythane, GNG and gasoline fueled vehicles
[DE93-005608] p 1994 N93-21834

AIR SAMPLING
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783

Extraction, transportation and processing of explosives vapor in detection systems p 1772 N93-21907
Vapor sampling using controlled heating p 1772 N93-21908
Efficient collection of explosive vapors, particles and aerosols p 1772 N93-21909
Negative-ion formation in the explosives RDX, PETN, and TNT using the Reversal Electron Attachment Detection (READ) technique p 1773 N93-21910
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer p 1773 N93-21915

AIR TO AIR MISSILES
Laser-initiated ordnance for air-to-air missiles p 1864 N93-20139

AIR TO AIR REFUELING
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities, volume 11
[AGARD-AG-300-VOL-11] p 1781 N93-21305

AIR TRAFFIC
Domain engineering validation case study: Synthesis for the air traffic display/collision warning monitor domain version 01.00.03
[AD-A259407] p 1780 N93-21671

AIR TRAFFIC CONTROL
A simulation study of the effects of communication delay on air traffic control
[AD-A258593] p 1778 N93-19966
National Airspace System: Air traffic control and airspace management operational concept NAS-SR-132
[DOT/FAA/SE-92/5] p 1779 N93-20164
Comparison of performance on the Shipley Institute of Living Scale, Air Traffic Control Specialist Selection Test, and FAA Academy Screen
[AD-A259249] p 1779 N93-20582
Data Multiplexing Network (DMN). Phase 3: Equipment Operational Test and Evaluation (OT/E) integration test report
[DOT/FAA/CT-TN92/49] p 1779 N93-20612
Fundamentals of adaptive anticipation techniques for the detection of threatening air traffic conflicts: Investigation of the horizontal proximity situation in the case of expected heading changes
[DLR-MITT-91-21] p 1779 N93-21004
Poland civil aviation master plan and investment program
[PB92-213693] p 1759 N93-21343
Definitional mission for civil aviation master plan for Poland
[PB92-213974] p 1760 N93-21713
Preliminary studies of planning and flight strip use as air traffic controller memory aids
[DOT/FAA/CT-TN92/22] p 1780 N93-21759

AIR TRAFFIC CONTROLLERS (PERSONNEL)
Preliminary studies of planning and flight strip use as air traffic controller memory aids
[DOT/FAA/CT-TN92/22] p 1780 N93-21759

AIR TRANSPORTATION
Summaries of the 1991 publications of DLR research reports and DLR communications
[ETN-93-92588] p 2103 N93-21022
Definitional mission for civil aviation master plan for Poland
[PB92-213974] p 1760 N93-21713

AIR WATER INTERACTIONS
A modeling study of marine boundary layer clouds p 2010 N93-20105
Geostationary earth climate sensor: Scientific utility and feasibility, phase A
[NASA-CR-191919] p 1996 N93-20248
Activities of South Dakota School of Mines and Technology
[AD-A259282] p 2012 N93-20607
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990)
[PB93-116598] p 2019 N93-21389
Remote sensing of latent heat fluxes at the air-sea interface p 1959 N93-21603
Air/sea latent heat flux measurements with microwave radiometers p 1959 N93-21604
Remote sensing: Environmental effects of surface films
[AD-A258571] p 1980 N93-21754
Proceedings of the International COADS workshop
[PB93-123552] p 1993 N93-21800

AIRBORNE EQUIPMENT
Airborne full polarization radiometry using the MSFC Advanced Microwave Precipitation Radiometer (AMPR) p 2007 N93-20089
Multi-center Airborne Coherent Atmospheric Wind Sensor (MACAWS) p 1913 N93-20101
On the size dependence of the chemical properties of cloud droplets: Exploratory studies by aircraft p 2011 N93-20281

AIRBORNE LASERS
Measurement and interpretation of the sunlight backscattered from clouds within the oxygen-A absorption band p 1963 N93-21627

AIRBORNE RADAR
An airborne millimeter-wave FM-CW radar for thickness profiling of freshwater ice
[AD-A259368] p 1886 N93-21669

AIRBORNE/SPACEBORNE COMPUTERS
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
Environmental assessment for the brilliant pebbles tether test at the Nevada test site
[DE93-003869] p 1952 N93-21839

AIRCRAFT ACCIDENTS
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579
The effectiveness of hand-held fire extinguishers on cargo container fires
[DOT/FAA/CT-TN92/42] p 1764 N93-21821

AIRCRAFT BRAKES
Analysis of aircraft noise levels in the vicinity of start-of-takeoff roll at Baltimore-Washington International Airport
[PB92-221605] p 1991 N93-21501

AIRCRAFT COMPARTMENTS
A model study of the aircraft cabin environment resulting from in-flight fires
[DOT/FAA/CT-90/22] p 1764 N93-21557
The effectiveness of hand-held fire extinguishers on cargo container fires
[DOT/FAA/CT-TN92/42] p 1764 N93-21821

AIRCRAFT CONFIGURATIONS
Apparatus and method for improving spin recovery on aircraft
[NASA-CASE-LAR-14747-1] p 1786 N93-20039
Application of the Euler method EUFLEX to a fighter-type airplane configuration at transonic speed
[MBB-FE-211-S-PUB-0489-A] p 1762 N93-21059

AIRCRAFT CONSTRUCTION MATERIALS
Supersonic transport: Which material for the engine
[DS-2023] p 1786 N93-21459
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479

AIRCRAFT CONTROL
Experimental results in aerodynamic stability and control of a TSTO configuration
[MBB-FE-211-S-PUB-0482-A] p 1787 N93-21057
Controller partitioning for integrated flight/propulsion control implementation
[NASA-TM-105804] p 1787 N93-21197

AIRCRAFT DESIGN
Apparatus and method for improving spin recovery on aircraft
[NASA-CASE-LAR-14747-1] p 1786 N93-20039
YIDOYU and its application to aircraft design
[AD-A259262] p 1781 N93-20605
Fluid/structures interactions. Aircraft considerations p 1787 N93-20628
Heat loads as key problem of hypersonic flight
[MBB-FE-202-S-PUB-0486] p 1762 N93-21054
The integrated design and manufacturing of composite structures for aircraft using an advanced tape layering technology
[MBB-LME-251-S-PUB-0491-A] p 1783 N93-21401
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831

AIRCRAFT ENGINES
Propulsion/weapon system interaction model
[AD-A259291] p 1785 N93-20610
Handling and using information systems with new technology
[PNR-90910] p 2090 N93-20734
Satisfying the customer's requirements
[PNR-90988] p 1785 N93-20735
Optimization and sensitivity computations for the conception of internal ventilation system in the aircraft engine
[ETN-93-93375] p 1785 N93-20913
Supersonic transport: Which material for the engine
[DS-2023] p 1786 N93-21459

AIRCRAFT EQUIPMENT
The effectiveness of hand-held fire extinguishers on cargo container fires
[DOT/FAA/CT-TN92/42] p 1764 N93-21821

AIRCRAFT ICING
Capacities of the DLR polarization diversity radar for determining icing relevant cloudphysical parameters
[DLR-MITT-91-14] p 2014 N93-21367

AIRCRAFT INSTRUMENTS
Topological approach for the study of electromagnetic coupling
[ONERA-P-1992-2] p 1881 N93-20230

AIRCRAFT MAINTENANCE
Nondestructive inspection of in-service aircraft
[ETN-93-93059] p 1763 N93-20928

AIRCRAFT MODELS
Rarefied-flow Shuttle aerodynamics model
[NASA-TM-107698] p 1759 N93-19976
Improved ceramic slip casting technique --- application to aircraft model fabrication
[NASA-CASE-LAR-14471-1] p 1858 N93-20041

AIRCRAFT NOISE
Effect of personal and situational variables on noise annoyance: With special reference to implications for en route noise
[NASA-CR-189676] p 2060 N93-21317
Calculation of noise emission caused by jet aircraft during takeoff, approach and horizontal flyover
[DLR-MITT-91-15] p 2061 N93-21368
Analysis of aircraft noise levels in the vicinity of start-of-takeoff roll at Baltimore-Washington International Airport
[PB92-221605] p 1991 N93-21501

AIRCRAFT PERFORMANCE
Apparatus and method for improving spin recovery on aircraft
[NASA-CASE-LAR-14747-1] p 1786 N93-20039
Failure identification using multiple model adaptive estimation for the LAMBDA flight vehicle
[AD-A259137] p 1787 N93-20596
Propulsion/weapon system interaction model
[AD-A259291] p 1785 N93-20610

AIRCRAFT PILOTS
Effects of microclimate cooling on physiology and performance while flying the UH-60 helicopter simulator in NBC conditions in a controlled heat environment
[AD-A258502] p 2023 N93-20400
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580

AIRCRAFT RELIABILITY
Nondestructive inspection of in-service aircraft
[ETN-93-93059] p 1763 N93-20928

AIRCRAFT SAFETY
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580
Nondestructive inspection of in-service aircraft
[ETN-93-93059] p 1763 N93-20928
Proceedings of the First International Symposium on Explosive Detection Technology
[DOT/FAA/CT-92/11] p 1764 N93-21856
The UK perspective on aviation security p 1764 N93-21858
Principles of nuclear-based explosive detection systems p 1765 N93-21861
A review of the development of a luggage explosive detection system p 1765 N93-21862

AIRCRAFT SPIN
Apparatus and method for improving spin recovery on aircraft
[NASA-CASE-LAR-14747-1] p 1786 N93-20039

AIRCRAFT STABILITY
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities, volume 11
[AGARD-AG-300-VOL-11] p 1781 N93-21305

AIRCRAFT STRUCTURES
Topological approach for the study of electromagnetic coupling
[ONERA-P-1992-2] p 1881 N93-20230
YIDOYU and its application to aircraft design
[AD-A259262] p 1781 N93-20605
MSC/NASTRAN structure optimization test module version 67 (preliminary)
[REPT-5-191025] p 1945 N93-20907
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
Damage detection by Acousto-Ultrasonic Location (AUL) p 1843 N93-21529

AIRCRAFT WAKES
Proceedings of the Aircraft Wake Vortices conference, volume 1
[PB93-126449] p 1763 N93-21796
Proceedings of the Aircraft Wake Vortices conference, volume 2
[PB93-127728] p 2015 N93-21799

AIRFOILS
The semi-discrete Galerkin finite element modelling of compressible viscous flow past an airfoil
[NASA-CR-192161] p 1760 N93-20018
Fatigue in single crystal nickel superalloys
[AD-A259191] p 1856 N93-20275
Unsteady Navier-Stokes method for accelerated moving airfoils with separation
[DLR-FB-92-03] p 1763 N93-21763
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766
La Recherche Aerospatiale Bimonthly Bulletin, no. 250, May - June
[ONERA-1989-3] p 2060 N93-21948

AIRFRAMES
Heat loads as key problem of hypersonic flight
[MBB-FE-202-S-PUB-0486] p 1762 N93-21054
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: A government overview
p 1782 N93-21311
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program : Bell Helicopter Textron accomplishments p 1782 N93-21312
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Boeing Helicopters airframe finite element modeling p 1782 N93-21313
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: McDonnell-Douglas Helicopter Company achievements
p 1782 N93-21314
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Sikorsky Aircraft: Advances toward interacting with the airframe design process p 1782 N93-21315

AIRLINE OPERATIONS
Airline quality issues 1992: Proceedings of the International Forum on Airline Quality
[NIAR-92-10] p 1764 N93-21561
Principles of nuclear-based explosive detection systems p 1765 N93-21861
PFNA technique for the detection of explosives
p 1765 N93-21865
A pulsed fast-thermal neutron interrogation system
p 1765 N93-21866
Explosive detection system based on Electronic Neutron Generator (ENG) p 1766 N93-21870
Airport testing of a new thermal neutron analysis explosives detection system p 1769 N93-21892
Assessing the operational impacts of checked luggage screening p 1777 N93-21936
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941
A systems approach to the explosive detection problem p 1778 N93-21942
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943
Impact on the air carrier of explosive detection systems p 1778 N93-21945

AIRPORT SECURITY
Insights into US domestic aviation
p 1764 N93-21859
Role of advanced technology within a broad security approach p 1765 N93-21860
A review of the development of a luggage explosive detection system p 1765 N93-21862
Three dimensional x ray systems and image enhancement techniques p 1767 N93-21876
An explosive detection system for screening luggage with high energy x rays p 1767 N93-21877
Detection of objects concealed under persons' clothing using the SECURE system p 1767 N93-21879
Explosive detection using x rays and thermal neutron activation p 1768 N93-21884
Fusion of the nuclear and different x ray technologies for explosives detection p 1768 N93-21885
Explosive detection for checked luggage by DETEX, a combined x ray and positron-tomograph system
p 1768 N93-21886
A general protocol for operational testing and evaluation of bulk explosive detection systems
p 1769 N93-21888
A framework for the objective test and evaluation of explosive detection technology p 1769 N93-21890
Airport testing of a new thermal neutron analysis explosives detection system p 1769 N93-21892
Radiological safety aspects of TNA deployment
p 1770 N93-21893
Experience with explosive detection systems in airports p 1770 N93-21895
Sampling explosives on airline passengers
p 1770 N93-21896
Explosives detection by pure N-14 NQR
p 1770 N93-21897
Application of magnetic resonance to explosives detection p 1771 N93-21901
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943
Impact on the air carrier of explosive detection systems p 1778 N93-21945

AIRPORTS
Poland civil aviation master plan and investment program: Executive summary
[PB92-213685] p 1759 N93-21342
Poland civil aviation master plan and investment program
[PB92-213693] p 1759 N93-21343
Calculation of noise emission caused by jet aircraft during takeoff, approach and horizontal flyover
[DLR-MITT-91-15] p 2061 N93-21368
Analysis of aircraft noise levels in the vicinity of start-of-takeoff roll at Baltimore-Washington International Airport
[PB92-221605] p 1991 N93-21501
Proceedings of the Aircraft Wake Vortices conference, volume 1
[PB93-126449] p 1763 N93-21796
Proceedings of the Aircraft Wake Vortices conference, volume 2
[PB93-127728] p 2015 N93-21799
Insights into US domestic aviation
p 1764 N93-21859
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863

AIRSPACE
National Airspace System: Air traffic control and airspace management operational concept NAS-SR-132
[DOT/FAA/SE-92/5] p 1779 N93-20164
Poland civil aviation master plan and investment program: Executive summary
[PB92-213685] p 1759 N93-21342
Poland civil aviation master plan and investment program
[PB92-213693] p 1759 N93-21343

ALBEDO
End-to-end tests of satellite data
p 1953 N93-21571

ALDEHYDES
Kynol (TM) Novoloid fibers: Survivable fibers for tough times p 1837 N93-21150

ALGEBRA
Linear algebra applied to physics determining small vibrations in conservative elastic systems
[AD-A259114] p 2050 N93-20589
PAC: Parallel Algebraic Computations: Current researches and perspectives
[RR-876-M] p 2044 N93-20949
An order-theoretic model for the algebra of communicating processes
[RUU-CS-92-02] p 2054 N93-21034
Sketches and computation
[RR-871-I-IMAG-123-LIFIA] p 2041 N93-21451

ALGORITHMS
Global rainfall monitoring by SSM/I
p 2003 N93-20069
Improvement and further development of SSM/I overland parameter algorithms using the WetNet workstation p 2005 N93-20083
Airborne full polarization radiometry using the MSFC Advanced Microwave Precipitation Radiometer (AMPR)
p 2007 N93-20089
Synoptic/planetary-scale interactions and blocking over the North Atlantic Ocean p 2007 N93-20091
Investigation of cloud/water vapor motion winds from geostationary satellite p 2008 N93-20094
A finite-difference multigrid algorithm for the direct numerical simulation of transition and turbulence in incompressible flow p 1898 N93-20168
Geometric aspects of visual object recognition
[AD-A259454] p 2046 N93-20239
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
Nonmonotonic temporal reasoning
[AD-A258699] p 2032 N93-20377
Simulation and calculation of the APEX attitude
[AD-A258716] p 1824 N93-20382
Least square methods for solving systems of inequalities with application to an assignment problem
[AD-A258682] p 2050 N93-20391
Kernel Optimum Nearly-analytical Discretization (KOND) algorithm applied to parabolic and hyperbolic equations
[NIFS-191] p 2033 N93-20548
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
Further developments in shape optimization of stress concentration regions. Part 1: General theory
p 1927 N93-20630
Further developments in shape optimization of stress concentration regions. Part 2: Applications
p 1928 N93-20631
On the extension of asymptotic analysis techniques to geometrically complicated stress concentration regions
p 1928 N93-20632
Viscoelastic analysis of bonded connections
p 1929 N93-20638
Nonhomogeneous interface stress analysis in composite media using a mixed finite element formulation
p 1929 N93-20640
Nonlinear analysis of plates by the finite element method p 1939 N93-20698
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application
p 1940 N93-20706
The linear invariants of the composition of two rotations p 1941 N93-20711
Research in computational fluid dynamics and analysis of algorithms
[NASA-CR-192309] p 1901 N93-20748
Calculation of the Jordan form of a matrix with rational coefficients (using the formal computation system Axiom)
[RR-882-M] p 2051 N93-20782
Plane multiflows with a fixed number of demands
[RR-885-M] p 2034 N93-20788
Optimal broadcasting algorithms on torus
[RR-872-I] p 2043 N93-20789
Evaluation and comparative study of combinatorial optimization algorithms: Application to the problem of process placement
[RR-886-I] p 2043 N93-20798
Development of algorithms for composite positional tolerance measurement using coordinate measuring machines
[PAPER-C-1-6] p 2035 N93-20829
A canonical calculus of residuals
[INRIA-RR-1542] p 2052 N93-20861
A build-up variant of the path-following method for LP
[REPT-91-47] p 2037 N93-20863
Local edge grouping by simple process iteration
[INRIA-RR-1559] p 2043 N93-20866
Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872
Contribution to computer arithmetic
[ETN-93-92680] p 2053 N93-20901
PAC: Parallel Algebraic Computations: Current researches and perspectives
[RR-876-M] p 2044 N93-20949
GGADS: A library independent layout synthesis system for user adaptive gate array master structures
[ETN-93-92571] p 1892 N93-21021
An O(n squared) maximal planarization algorithm based on PQ-trees
[RUU-CS-92-03] p 2038 N93-21035
Generalized 3D Voronoi diagram: First results
[RR-879-M] p 2039 N93-21051
Verification methods of the behavioral specifications: Study and implementation
[ETN-93-92687] p 2044 N93-21064
Proximal techniques for convex programming
[RR-877-M] p 2039 N93-21167
The Weyl method for simultaneous calculation of polynomial roots (first part)
[RR-881-M] p 2055 N93-21169
The complexity of the free space for a robot moving amidst fat obstacles
[RUU-CS-92-05] p 1915 N93-21171
Hexagonal grid drawings
[RUU-CS-92-06] p 2055 N93-21172
Guide to microwave weighting function calculations
[NASA-CR-192719] p 1885 N93-21201
Command generator tracker based direct model reference adaptive control of a PUMA 560 manipulator
[NASA-CR-192756] p 2048 N93-21306
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371
The generalized Voronoi diagram for a set of polygons: Algorithms, operation and applications to shape analysis
[ETN-93-92689] p 2056 N93-21392
Geometric approaches of image generation using Voronoi models
[ETN-93-92690] p 2041 N93-21393
Joint parameters estimation and symbols detection for digital communication over linear or nonlinear unknown channels
[TELECOM-PARIS-91-D-013] p 1885 N93-21394
Autonomous rendezvous and capture system design
p 1815 N93-21427
Transient dynamics capability at Sandia National Laboratories
[DE93-002285] p 2041 N93-21549

Earth radiation and cloud cover analysis using NOAA satellite data p 1956 N93-21587
Copper Mountain conference on interative methods, volume 1
[DE93-004993] p 2056 N93-21706
Unsteady Navier-Stokes method for accelerated moving airfoils with separation
[DLR-FB-92-03] p 1763 N93-21763
One-class classifiers and their application to synthetic aperture radar target recognition
[DE93-000716] p 1886 N93-21769
Research in models for massively parallel computing
[DE93-003748] p 2045 N93-21852
Experiences with the ACPMAPS 50 GFLOP system
[DE93-004418] p 2042 N93-21855
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940
Variational nodal solution algorithms for multigroup criticality problems
[DE93-003462] p 2042 N93-21964
Extension of high-resolution schemes for systems to multiple dimensions
[DE93-003734] p 2057 N93-21966

ALIGNMENT
Theory of grain alignment in molecular clouds
[NASA-CR-192307] p 2077 N93-20037
Optimizing positioning of mechanical parts
[PAPER-C-1-5] p 2035 N93-20828
TRAC based sensing for autonomous rendezvous p 1813 N93-21412
Autonomous pre-alignment of a docking mechanism p 1814 N93-21418

ALKALINE EARTH METALS
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803

ALKENES
Features in PO fibre applications p 1837 N93-21148

ALKYL COMPOUNDS
Metalloradical and electrophilic activation of methane
[PB93-123693] p 1851 N93-21813

ALLOYING
High temperature alloys p 1858 N93-20626
The Xu-Tec process of introducing normally solid materials into substrate surfaces
[DE93-005124] p 1861 N93-21708

ALPHA PARTICLES
Effect of alpha particles on radial electric field structure in Torsatron/Heliotron reactor
[NIFS-182] p 2071 N93-20265
Effect of alpha particles on toroidal Alfven eigenmodes
[DE93-003635] p 2076 N93-21830

ALTERNATING CURRENT
Characterization and snubbing of a bidirectional MCT in a resonant ac link converter
[NASA-CR-192230] p 1889 N93-20258

ALUMINUM
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231
Review on aluminum electrolytic condensers development p 1797 N93-20457

ALUMINUM ALLOYS
Microstructural development in a spray formed aluminum-silicon carbide based metal matrix composite
[AD-A259414] p 1832 N93-20124
Dynamic stress-strain behavior in shear of SiCwhisker reinforced aluminum alloy composites p 1930 N93-20643
Experimental and theoretical study of the elastic and microplastic properties of particles reinforced metal matrix composites
[ISAL-92-0014] p 1833 N93-20942
Grain refinement of Al-Cu-Ti alloys in microgravity p 1810 N93-21120
Ripening of immiscible liquid droplets in microgravity with constrained Marangoni drift p 1810 N93-21122
Fatigue life prediction for 6261-T6 aluminium alloy I-beams with welded cover plates p 1949 N93-21328
The improvement of fatigue life of aluminum alloy structure by laser radiation p 1950 N93-21336

ALUMINUM BORON COMPOSITES
Some factors influencing the fatigue properties of boron strengthened aluminum based composite materials p 1924 N93-20355

ALUMINUM COATINGS
Protection of Radarsat SAR antenna graphite/epoxy support structure p 1848 N93-20819
Protective coating development for Space Station Freedom at McDonnell Douglas p 1849 N93-20820

ALUMINUM COMPOUNDS
Growth and doping of Al(x)Ga(1-x) films by electron cyclotron resonance assisted molecular beam epitaxy
[AD-A258722] p 2079 N93-20367

ALUMINUM OXIDES
Stabilized zirconia/CoCrAlY high temperature coating
[AD-D015573] p 1859 N93-20276
Microgravity processing of ceramic composites p 1809 N93-21115
Finite element analytical techniques for ceramic production in microgravity-2 p 1809 N93-21116
Oxide protective coatings on carbon composites for medium and high-temperature thermal cycling: New opportunities for the United Europe p 1838 N93-21160

ALUMINUM SILICATES
Fiber-reinforced monoclinic celsian matrix composite material
[NASA-CASE-LEW-15269-1] p 1831 N93-20040

AMBIPOLAR DIFFUSION
Theory of grain alignment in molecular clouds
[NASA-CR-192307] p 2077 N93-20037

AMORPHOUS MATERIALS
Thin film processing of photorefractive BaTiO3
[NASA-CR-192169] p 2079 N93-20311
Kynol (TM) Novoloid fibers: Survivable fibers for tough times p 1837 N93-21150

AMORPHOUS SEMICONDUCTORS
Defects and impurities in amorphous semiconductors and in liquid electrolytes
[MBB-Z-0386-91-PUB] p 2080 N93-20842
Bias-annealing experiments for doped a-Si:H layers
[MBB-Z-0316-90-PUB] p 2081 N93-21464

AMORPHOUS SILICON
Laser scribing system for amorphous silicon solar cells
[AD-A259287] p 1910 N93-20608
Amorphous Mo/Si multilayers: Interdiffusion and structural relaxation; crystallization
[ETN-93-92992] p 1859 N93-20909
Relaxation of radiation damages in a-Si:H layers
[MBB-Z-0317-90-PUB] p 2081 N93-21403

AMPLIFICATION
Study of the gain factor (G/T) of an active antenna
[CNES-NT-130] p 1884 N93-21036

AMPLIFIERS
Injection seeded, diode pumped regenerative ring Nd:YAG amplifier for spaceborne laser ranging technology development
[NASA-CR-192171] p 1910 N93-20298

AMPLITUDES
Recurrent swing amplification induced by nonlinear amplitude effects
[MITT-SER-A-230] p 2097 N93-21302

ANALOG TO DIGITAL CONVERTERS
Calibration of the imaging conditions for the retransformation of digitized images obtained from laser light sheets
[DLR-MITT-92-04] p 1910 N93-20745

ANALOGIES
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 1
[RR-874-M] p 2053 N93-20873
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 2
[RR-875-M] p 2056 N93-21395

ANALYSIS (MATHEMATICS)
Non standard analysis and ordinary differential equations
[RR-884-M] p 2051 N93-20787
Proximal techniques for convex programming
[RR-877-M] p 2039 N93-21167

ANALYSIS OF VARIANCE
Interactive graphics system for the study of variance/covariance structures of bivariate and multivariate normal populations
[AD-A259449] p 2030 N93-20058
Variance-covariance estimation and statistical testing of satellite networks
[PB92-225358] p 1824 N93-21048

ANEMOMETERS
Comparison of the measurements of temperature and sensible heat flow with an ultrasonic anemometer-thermometer and a temporal high resolution platinum wire-resistance thermometer
[GKSS-92/E/11] p 1907 N93-21461

ANGLE OF ATTACK
Application of a flush airdata sensing system to a wing leading edge (LE-FADS)
[NASA-TM-104267] p 1784 N93-20163
Research in robust control for hypersonic vehicles
[NASA-CR-192127] p 1786 N93-20296

ANGLES (GEOMETRY)
System for determining the angle of impact of an object on a structure
[NASA-CASE-LAR-14817-1] p 1906 N93-20569

ANGULAR DISTRIBUTION
Angular distributions of charge exchange collisions at very low energies
[DE93-002338] p 2064 N93-21751

ANGULAR MOMENTUM
Poloidal rotation, density asymmetries, and momentum confinement in tokamak experiments
[DE93-002319] p 2069 N93-20026
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263
SSG 5.98: Atmospheric excitation of the Earth's rotation p 1974 N93-20991

ANGULAR VELOCITY
TREND field test report
[AD-A258568] p 2067 N93-20372
Buckling of columns: Allowance for axial shortening
[PB93-110484] p 1947 N93-21234
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265

ANILINE
The polyanilines: A novel class of conducting polymers
[AD-A259386] p 1860 N93-21266

ANIMALS
Environmental health discipline science plan
[NASA-TM-108042] p 2024 N93-21369

ANISOTROPIC MEDIA
Full wave characterization of microstrip open end discontinuities patterned on anisotropic substrates using potential theory
[NASA-TM-106037] p 1889 N93-20259
A variational approach for torsion of multiply connected composite sections p 1845 N93-20633
Time dependent formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20691
Multilayered elastoplastic homogeneization and anisotropic plasticity
[ECL-92-24] p 1839 N93-21359

ANISOTROPY
Studying the kinetics of magnetization in high Tc superconductors
[NASA-CR-192159] p 1890 N93-20572
An acousto-ultrasonic NDE technique for monitoring material anisotropy
[DE93-002994] p 1919 N93-21982

ANNEALING
Growth and doping of Al(x)Ga(1-x) films by electron cyclotron resonance assisted molecular beam epitaxy
[AD-A258722] p 2079 N93-20367
Radiation resistance evaluation test on parts and materials: Solar battery cell p 1800 N93-20482
Structural equilibration in intrinsic, single-doped, and compensated TFT's: Experiments and calculations
[MBB-Z-0377-91-PUB] p 1891 N93-20841
Amorphous Mo/Si multilayers: Interdiffusion and structural relaxation; crystallization
[ETN-93-92992] p 1859 N93-20909
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140
Development of superconducting thin films with a critical temperature greater than 110 K
[AD-A257988] p 2080 N93-21224
Relaxation of radiation damages in a-Si:H layers
[MBB-Z-0317-90-PUB] p 2081 N93-21403
Bias-annealing experiments for doped a-Si:H layers
[MBB-Z-0316-90-PUB] p 2081 N93-21464
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres
[DE93-002999] p 2082 N93-21757
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy
[DE93-002980] p 2083 N93-21981

ANNOTATIONS
MIT Space Engineering Research Center testbed programs
[NASA-CR-192115] p 2103 N93-21660
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784

ANNUAL VARIATIONS
Cloud radiative forcing effects on observed and simulated global energetics p 2003 N93-20072
Mean seasonal cycles and interannual variations at 0 deg, 110 deg W and 0 deg, 140 deg W during 1980-1991
[PB93-114726] p 2014 N93-21388
The 8 years monthly vegetation index of central Europe p 1954 N93-21574
Vegetation cover mapping over France using NOAA-11/AVHRR p 1955 N93-21582
Model profiles of atmospheric temperatures, pressures and densities in south-eastern Europe during maximum and mimimum solar activity p 1961 N93-21615

ANNULAR FLOW
Natural axisymmetric frequencies of cylindrical liquid column with anchored free surface
[LRT-WE-9-FB-3-1991] p 1903 N93-21297
ANODIC COATINGS
Protective coating development for Space Station Freedom at McDonnell Douglas p 1849 N93-20820
ANODIC STRIPPING
Review of modelling of environment-assisted cracking
[NPL-DMM(A)-44] p 1951 N93-21566
ANOMALIES
Preliminary results: Root cause investigation of orbital anomalies and failures in NASA standard 50 ampere-hour nickel-cadmium batteries p 1985 N93-20508
ANTARCTIC REGIONS
Satellite monitoring of giant tabular icebergs
p 1957 N93-21595
ANTENNA ARRAYS
Real time data reformatting using the TMS320C25 development system
[AD-A259187] p 1882 N93-20273
Research on phased array antenna
p 1795 N93-20446
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars
[AD-A259168] p 1884 N93-20597
Study of the gain factor (G/T) of an active antenna
[CNES-NT-130] p 1884 N93-21036
Simulation of the merged spectrum technique for aligning planar phased-array antennas, part 1
[PB93-113629] p 1885 N93-21237
Certification plan for a planar near-field range used for high-performance phased-array testing
[PB92-213305] p 1885 N93-21493
ANTENNA COMPONENTS
Research on HOPE communication and data processing equipment p 1792 N93-20429
ANTENNA DESIGN
Research on HOPE communication and data processing equipment p 1792 N93-20429
Research on phased array antenna
p 1795 N93-20446
Research on beam compression technology
p 1795 N93-20447
Study of the gain factor (G/T) of an active antenna
[CNES-NT-130] p 1884 N93-21036
Simulation of the merged spectrum technique for aligning planar phased-array antennas, part 1
[PB93-113629] p 1885 N93-21237
ANTENNA RADIATION PATTERNS
Real time data reformatting using the TMS320C25 development system
[AD-A259187] p 1882 N93-20273
Research on beam compression technology
p 1795 N93-20447
ANTENNAS
Research on HOPE communication and data processing equipment p 1792 N93-20429
ANTIBODIES
The flow immunosensor: An antibody-based system for explosives detection p 1776 N93-21932
ANTICYCLONES
Synoptic/planetary-scale interactions and blocking over the North Atlantic Ocean p 2007 N93-20091
A procedure to reduce northward drift of tropical storms in a numerical model
[PB92-226406] p 2013 N93-21290
ANTIFERROMAGNETISM
High-energy spin-density-wave correlated fluctuations in paramagnetic Cr + 5 at. percent V
[DE93-003165] p 1857 N93-21958
ANTIINFECTIVES AND ANTIBACTERIALS
Rapid susceptibility testing of mycobacterium avium complex and mycobacterium tuberculosis isolated from AIDS patients
[NASA-CR-192382] p 2023 N93-20736
ANTIMISSILE DEFENSE
Environmental assessment for the brilliant pebbles tether test at the Nevada test site
[DE93-003869] p 1952 N93-21839
APOLLO SOYUZ TEST PROJECT
Thirty years together: A chronology of U.S.-Soviet space cooperation
[NASA-CR-185707] p 2102 N93-19975
APPLICATION SPECIFIC INTEGRATED CIRCUITS
Contribution to the development of an ISFET type integrated sensor using an ASIC thread in CMOS technology
[ECL-91-09] p 1892 N93-21006
A semi-custom dual channel peak hold circuit for spaceborne instrumentation
[DE93-003801] p 1828 N93-21777
APPLICATIONS PROGRAMS (COMPUTERS)
Projectile base bleed technology. Part 2: User's guide CMINT computer code, version 5.04-BRL
[AD-A258630] p 1897 N93-19999
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices
p 1865 N93-20150
Multidisciplinary computational aerosciences
[NASA-TM-103946] p 1759 N93-20323
Improved models of the inner and outer radiation belts
[AD-A258708] p 1998 N93-20379
Design of a laboratory computer interface
[AD-A259126] p 2028 N93-20594
The search for differential equations for orthogonal polynomials by using computers
[REPT-91-55] p 2052 N93-20865
Introduction to graphical user interfaces and their use by CITIS
[PB92-213404] p 2040 N93-21348
Further development of the CANAERO computer code to include a time-stepping capability
[DREA-CR-91-478] p 2042 N93-21820
Development of a non-linear simulation for generic hypersonic vehicles - ASUHS1
[NASA-CR-192710] p 1783 N93-22003
APPROACH CONTROL
Controller partitioning for integrated flight/propulsion control implementation
[NASA-TM-105804] p 1787 N93-21197
APPROPRIATIONS
Current information technology resource requirements of the Federal Government, FY 1993
[PB92-233238] p 2092 N93-21500
Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for Fiscal Year 1993. Part 3: Nondepartmental Witnesses
[S-HRG-102-716-PT-3] p 2093 N93-21676
National Aeronautics and Space Administration: Statement of Chester Lee, Spacehab, Inc.
p 2093 N93-21677
National Aeronautics and Space Administration: Statement of Joanne Padron, American Institute of Aeronautics and Astronautics p 2093 N93-21678
National Aeronautics and Space Administration: Statement of Miguel A. Hernandez, Jr., Hernandez Engineering Co. p 2094 N93-21680
National Aeronautics and Space Administration: Statement of Len Ricks, Council of Engineers and Scientists Organizations p 2094 N93-21681
APPROXIMATION
The practical application of computational fluid mechanics p 1905 N93-20622
On the extension of asymptotic analysis techniques to geometrically complicated stress concentration regions
p 1928 N93-20632
Denumerable constrained Markov decision problems and finite approximations
[INRIA-RR-1568] p 2058 N93-20867
Asymptotic behaviour of some bilinear functionals of the empirical process
[MEMO-1031] p 2059 N93-20956
SSG 4.91: Local gravity field approximation
p 1972 N93-20979
Proximal techniques for convex programming
[RR-877-M] p 2039 N93-21167
AQUEOUS SOLUTIONS
Study and development of ohmic contacts on n and p type indium phosphide by autocatalytic chemical deposition of metals and alloys
[ECL-92-23] p 1856 N93-20062
ARAMID FIBER COMPOSITES
Aramids in high performance protective clothing
p 1837 N93-21155
ARAMID FIBERS
Twaron in composites and protective clothing
p 1837 N93-21153
Aramids in high performance protective clothing
p 1837 N93-21155
ARC DISCHARGES
Pulse discharge laser with passive arc protection
[AD-D015601] p 1909 N93-20262
ARC SPRAYING
Surface modification using a cascade arc plasma source
[ETN-93-93065] p 2074 N93-20936
ARCHITECTURE (COMPUTERS)
User interface of complex interactive computer systems
[ECL-92-05] p 2030 N93-20059
A coupled multi-ALU processing node for a highly parallel computer
[AD-A259455] p 2043 N93-20240
Design of a laboratory computer interface
[AD-A259126] p 2028 N93-20594
CRAY mini manual. Revision D
[NASA-TM-107599-REV-D] p 2028 N93-21027
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
STEP development methods: Specification of semantics for information sharing
[PB93-113686] p 2091 N93-21218
A distributed Petri Net controller for a dual arm testbed
[NASA-CR-192733] p 2048 N93-21373
A phase one AR/C system design
p 1816 N93-21435
ARCTIC OCEAN
Remote sensing of Arctic sea ice using the ERS-1 SAR p 1957 N93-21593
Detecting new-ice in the Arctic from multispectral satellite data p 1957 N93-21594
ARGON
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres
[DE93-002999] p 2082 N93-21757
ARGON PLASMA
Surface modification using a cascade arc plasma source
[ETN-93-93065] p 2074 N93-20936
ARID LANDS
Deforestation in African dry lands: Assessment of changes in woody vegetation in semi arid Sudan
p 1956 N93-21585
ARITHMETIC
Contribution to computer arithmetic
[ETN-93-92680] p 2053 N93-20901
ARITHMETIC AND LOGIC UNITS
A coupled multi-ALU processing node for a highly parallel computer
[AD-A259455] p 2043 N93-20240
ARIZONA
Meteorological events in Arizona and New Mexico during Swamp
[PB93-100410] p 2013 N93-21227
Relationship between ozone concentrations and air transport over western Arizona
[PB93-114007] p 1990 N93-21238
ARM (ANATOMY)
Aimed arm movements under changed gravity
p 1809 N93-21113
ARMED FORCES (FOREIGN)
The German national industry as a source of logistic support for armed forces facing new requirements
[MBB-UL-0002-91-PUB] p 1877 N93-21463
ARMED FORCES (UNITED STATES)
List of US Army Research Institute research and technical publications, October 1, 1990 to September 30, 1991 with author and subject index
[PB93-108611] p 2103 N93-21381
ARRAYS
Space transfer with ground-based laser/electric propulsion
[NASA-TM-106060] p 1829 N93-20615
Gravitational synchrotron radiation and gravitrons by lights
[PREPRINT-821] p 1999 N93-20951
GGADS: A library independent layout synthesis system for user adaptive gate array master structures
[ETN-93-92571] p 1892 N93-21021
ARSENIDES
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides
[AD-A259136] p 1847 N93-20595
ARTIFICIAL INTELLIGENCE
Probabilistic student modeling with knowledge space theory
[AD-A258622] p 2045 N93-19997
Upside-down meta-interpretation of the model elimination theorem-proving procedure for deduction and abduction
[AD-A259436] p 2046 N93-20012
Geometric aspects of visual object recognition
[AD-A259454] p 2046 N93-20239
An investigation of discovery-based learning in the route planning domain
[AD-A259141] p 1780 N93-20560
A VHDL interpreter for model-based diagnoses
[AD-A259122] p 2046 N93-20590
The ARK (Autonomous Robot for a Known environment) project p 1917 N93-20621
Basic and evolutive concepts of pattern recognition: Pluridiscipline approach. Approximation concept
[ISAL-91-0098] p 2047 N93-20941
Intelligent processing equipment within the Environmental Protection Agency
[PB92-217330] p 1989 N93-21011
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
CTOS course
[NASA-CR-191866] p 2047 N93-21204
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307

Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371
Intelligent systems technology infrastructure for integrated systems p 1815 N93-21424
Non-US artificial neural network research
[PB93-111508] p 2049 N93-21802

ARTIFICIAL SATELLITES
COLD-SAT dynamic model
[NASA-TM-105185] p 1822 N93-19988
A horizontal refractivity depiction product: An evaluation
[AD-A258738] p 1966 N93-20401
Satellite situation report, volume 32, no. 4
[NASA-TM-108203] p 1824 N93-20999

ASPECT RATIO
Experiments on smooth cantilevered circular cylinders in low-turbulence uniform flow. Part 1: Mean loading with aspect ratios in the range 4 to 30
[PB93-111763] p 1903 N93-21383

ASPHALT
Use of radar technology for pavement layer evaluation
[PB92-226166] p 1912 N93-21744

ASSEMBLING
Robot friendly probe and socket assembly
[NASA-CASE-MSC-22028-1] p 1917 N93-22007

ASSIMILATION
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620

ASTEROIDS
Improving the detection of near-Earth asteroids
[AD-A259383] p 2095 N93-21670
Lunar and asteroid composition assessment using remote secondary ion mass spectrometry
[DE93-003839] p 2098 N93-21849

ASTRODYNAMICS
Recurrent swing amplification induced by nonlinear amplitude effects
[MITT-SER-A-230] p 2097 N93-21302

ASTROGRAPHY
A new deconvolution method for the Doppler cartography of cool star surfaces and its use on AB Doradus
[MPE-236] p 2095 N93-21025

ASTROMETRY
Corrections to the luni-solar precession derived from a compilation catalogue of extragalactic radio sources
[MITT-SER-A-233] p 2095 N93-21052
Analysis and synthesis of catalogues of extragalactic radio sources
[MITT-SER-A-231] p 2102 N93-21053
Present status of work on the FK5 extension
[MITT-SER-B-229] p 2095 N93-21299

ASTRONOMICAL CATALOGS
IUE-ULDA access guide no. 3: International Ultraviolet Explorer-Uniform Low Dispersion Archive: Normal galaxies
[ESA-SP-1152] p 2094 N93-20541
The Einstein All-Sky Slew Survey
[NASA-CR-192323] p 2095 N93-20793
Identifications of Einstein Slew Survey sources
p 2095 N93-20794
Einstein Slew Survey: Data analysis innovations
p 2095 N93-20795
IUE-ULDA access guide no. 4A: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume A
[ESA-SP-1153-VOL-A] p 2096 N93-21007
IUE-ULDA access guide no. 4B: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume B
[ESA-SP-1153-VOL-B] p 2097 N93-21015
Corrections to the luni-solar precession derived from a compilation catalogue of extragalactic radio sources
[MITT-SER-A-233] p 2095 N93-21052
Analysis and synthesis of catalogues of extragalactic radio sources
[MITT-SER-A-231] p 2102 N93-21053
Present status of work on the FK5 extension
[MITT-SER-B-229] p 2095 N93-21299

ASTRONOMICAL MODELS
Theoretical studies in interstellar cloud chemistry
[NASA-CR-192010] p 2096 N93-20269
SSG 4.118: Inverse geodetic problems
p 1973 N93-20984

ASTRONOMICAL PHOTOGRAPHY
Planetary astronomy research
[NASA-CR-192134] p 2099 N93-21643

ASTRONOMICAL SPECTROSCOPY
Microwave spectroscopy of the active sun
[NASA-CR-192135] p 2100 N93-20571
The structure of circumstellar shells
[NASA-CR-192337] p 2096 N93-20757
Planetary atmospheres: Microwave spectroscopic studies of planetary atmospheres
[NASA-CR-192145] p 2099 N93-21642

ASTRONOMY
A cryogenic shutter for the VLT NIR camera
[MPE-237] p 1906 N93-20855

ASTROPHYSICS
Non-topological solitons in astrophysics and cosmology p 2096 N93-20292
Numerical examination of Kelvin-Helmholtz instability with self gravitation and cosmologic expansion: A contribution to the formation of structure in the Universe
[MPE-238] p 2096 N93-20856

ASYMMETRY
Poloidal rotation, density asymmetries, and momentum confinement in tokamak experiments
[DE93-002319] p 2069 N93-20026
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263
Predicting structure in nonsymmetric sparse matrix factorizations
[DE93-003365] p 2057 N93-21963

ASYMPTOTIC METHODS
Studies of droplet burning and extinction
p 1854 N93-20212
Computational/experimental studies of isolated, single component droplet combustion p 1854 N93-20213
On homogenization method and large deformations
p 1845 N93-20634
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 1
[RR-874-M] p 2053 N93-20873

ASYMPTOTIC PROPERTIES
On the extension of asymptotic analysis techniques to geometrically complicated stress concentration regions
p 1928 N93-20632
Research in computational fluid dynamics and analysis of algorithms
[NASA-CR-192309] p 1901 N93-20748
Asymptotic behaviour of some bilinear functionals of the empirical process
[MEMO-1031] p 2059 N93-20956
An estimating function for a scalar parameter in a covariance operator
[RR-878-M] p 2054 N93-21050
A family of asymptotically stable control laws for flexible robots based on a passivity approach
[NASA-CR-191870] p 2048 N93-21354

ASYMPTOTIC SERIES
Optimal guidance law development for an advanced launch system
[NASA-CR-192189] p 1820 N93-20313

ATLANTIC OCEAN
Synoptic/planetary-scale interactions and blocking over the North Atlantic Ocean p 2007 N93-20091
Meteorological conditions over the South Atlantic Ocean during July and August of 1991
[PB92-235738] p 2015 N93-21503
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641

ATMOSPHERIC ATTENUATION
Solar radio flares 1989-1991. Solar microwave flares observed at Metsaehovi Radio Research Station in 1989-1991
[PB93-111896] p 2101 N93-21786

ATMOSPHERIC BOUNDARY LAYER
A modeling study of marine boundary layer clouds
p 2010 N93-20105
Activities of South Dakota School of Mines and Technology
[AD-A259282] p 2012 N93-20607
Gust forecasting
[MISC-SER-A-125] p 2012 N93-20887
Climatological study of ozone in the boundary layer above Belgium
[MISC-SER-A-127] p 1989 N93-20925
Contribution to the study of the atmospheric surface layer in stable conditions, simulated in a wind tunnel
[ECL-91-15] p 2012 N93-21010
Modelling the skin-bulk temperature difference near the sea-atmosphere interface for remote sensing applications p 1963 N93-21631

ATMOSPHERIC CHEMISTRY
ER-2 investigations of lightning and thunderstorms
p 2006 N93-20088
On the size dependence of the chemical properties of cloud droplets: Exploratory studies by aircraft
p 2011 N93-20281
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302
Interpretation of Voyager UVS observations of occultations by the atmosphere of Neptune
[NASA-CR-192131] p 2099 N93-20732
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783
Ozone as a sink for atmospheric carbon aerosols
[PB93-118594] p 1993 N93-21790

ATMOSPHERIC CIRCULATION
Stratiform clouds and their interaction with atmospheric motion
[NASA-CR-192280] p 2002 N93-20038
Cloud radiative forcing effects on observed and simulated global energetics p 2003 N93-20072
An investigation of low-frequency planetary wave forcing and predictability in a simple global atmospheric circulation model p 1996 N93-20279
Nocturnal temperature forecasting
[MISC-SER-A-126] p 2012 N93-20888
SSG 5.98: Atmospheric excitation of the Earth's rotation p 1974 N93-20991
Relationship between ozone concentrations and air transport over western Arizona
[PB93-114007] p 1990 N93-21238
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics
[NASA-CR-192720] p 2014 N93-21492
National Center for Atmospheric Research, Fiscal Year 1991
[PB93-129914] p 2000 N93-21547
Climatological use of long time series of data from the water vapour channel of Meteosat p 1958 N93-21601

ATMOSPHERIC COMPOSITION
Microwave radiative transfer studies of precipitation
p 2008 N93-20095
On the size dependence of the chemical properties of cloud droplets: Exploratory studies by aircraft
p 2011 N93-20281
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302
Interpretation of Voyager UVS observations of occultations by the atmosphere of Neptune
[NASA-CR-192131] p 2099 N93-20732
Relationship between ozone concentrations and air transport over western Arizona
[PB93-114007] p 1990 N93-21238
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292
Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698
Screening analysis of CO2 utilization and fixation
[DE93-004313] p 1994 N93-21850

ATMOSPHERIC CORRECTION
SSG 4.93: Wave propagation in refractive media
p 1972 N93-20980
End-to-end tests of satellite data
p 1953 N93-21571
Influence of terrain elevation on vegetation indices derived from NOAA AVHRR and EOS MODIS data
p 1954 N93-21576
Estimating chlorophyll concentrations from Thematic Mapper data p 1954 N93-21577
Can measurements in the O2A- and B-bands be used for atmospheric correction of satellite measurements over the ocean? p 1955 N93-21581

ATMOSPHERIC ENTRY
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728

ATMOSPHERIC GENERAL CIRCULATION MODELS
Multiresolution feature analysis and wavelet decomposition of atmospheric flows
[AD-A259420] p 1996 N93-20003
Observational and modeling studies of heat, moisture, precipitation, and global-scale circulation patterns
p 2007 N93-20092
A modeling study of marine boundary layer clouds
p 2010 N93-20105
An investigation of low-frequency planetary wave forcing and predictability in a simple global atmospheric circulation model p 1996 N93-20279
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758
Comparison of monthly precipitation analyses derived from conventional measurements, satellite estimates and model results p 1958 N93-21599
Monthly precipitation and runoff data for validation of climate models p 1959 N93-21605
Pinatubo eruption winter climate effects: Model versus observations
[NASA-CR-191955] p 1994 N93-21946

ATMOSPHERIC HEATING
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
ATMOSPHERIC MODELS
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
A new software tool for computing Earth's atmospheric transmission of near- and far-infrared radiation
[NASA-TM-103957] p 1996 N93-20066
NASA/MSFC FY92 Earth Science and Applications Program Research Review
[NASA-CP-3184] p 2002 N93-20067
Nonlinear dynamics of global atmospheric and Earth system processes p 2001 N93-20076
Global water cycle p 2004 N93-20078
Nonhydrostatic effects in numerical modeling of mesoscale convective systems and baroclinic waves p 2007 N93-20090
Microwave radiative transfer studies of precipitation p 2008 N93-20095
A satellite-borne radar wind sensor (RAWS) p 2008 N93-20096
Simulations of satellite Doppler wind observations p 2010 N93-20104
Magnetospheric and auroral processes
[NASA-CR-192138] p 1996 N93-20250
A numerical investigation of squall lines
[ISBN-0-315-69244-8] p 2011 N93-20280
Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359
Manual on climate of the USSR. Issue 16: Armenian SSR. Part 5: Cloud cover and atmospheric phenomena-translation
[AD-A259288] p 2012 N93-20609
Guide to microwave weighting function calculations
[NASA-CR-192719] p 1885 N93-21201
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990)
[PB93-116598] p 2019 N93-21389
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics
[NASA-CR-192720] p 2014 N93-21492
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting
[ESA-ISY-1-VOL-1] p 1953 N93-21569
Cloud-generated radiative heating determined from satellite measurements p 1956 N93-21589
Estimating the vertical dimension of convective cloudiness over the polar ocean from AVHRR data p 1956 N93-21590
A 2 x CO2 experiment with prescribed changes in sea surface temperature p 1958 N93-21598
Air/sea latent heat flux measurements with microwave radiometers p 1959 N93-21604
Use of AVHRR-derived cloudiness and precipitation in operational weather forecasting and in model studies p 1959 N93-21608
Transmittance coefficients generation for fast radiative transfer models: Application to new satellite sounding systems p 1960 N93-21612
Retrieval of cloud liquid water and precipitation from polarized microwave simulations and SSM/I measurements p 1960 N93-21613
Model profiles of atmospheric temperatures, pressures and densities in south-eastern Europe during maximum and mimimum solar activity p 1961 N93-21615
Empirical model of winds in south-eastern Europe in connection with solar activity p 1961 N93-21619
CONPLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783
ATMOSPHERIC MOISTURE
Investigation of the role of thermal boundary layer processes in initiating convection under the NASA SPACE Field Program p 2005 N93-20080
A comparison of intense extratropical cyclone life cycles from diverse geographical locations p 2011 N93-20278
Microwave radiometry for monitoring the diverse cloudiness regimes on Earth: A review p 1958 N93-21600
Routine validation of TOVS retrievals: Lessons learned from a pilot experiment p 1960 N93-21611
ATMOSPHERIC PHYSICS
Summaries of the 1991 publications of DLR research reports and DLR communications
[ETN-93-92588] p 2103 N93-21022
ATMOSPHERIC RADIATION
Geostationary earth climate sensor: Scientific utility and feasibility, phase A
[NASA-CR-191919] p 1996 N93-20248
ATMOSPHERIC SOUNDING
A documentation of icing-relevant cloud-physical parameters on vertical soundings of stratiform clouds (continuation)
[DLR-MITT-91-19] p 2012 N93-21040
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present
[PB93-112225] p 2013 N93-21229
Meteorological conditions over the South Atlantic Ocean during July and August of 1991
[PB92-235738] p 2015 N93-21503
Requirements and projects for high-resolution atmospheric sounding p 1959 N93-21607
Routine validation of TOVS retrievals: Lessons learned from a pilot experiment p 1960 N93-21611
ATMOSPHERIC STRATIFICATION
Contribution to the study of the atmospheric surface layer in stable conditions, simulated in a wind tunnel
[ECL-91-15] p 2012 N93-21010
ATMOSPHERIC TEMPERATURE
The role of conditional symmetric instability in the development of moderate to heavy frozen precipitation bands
[AD-A258575] p 2002 N93-20031
Global temperature variations p 2003 N93-20068
Nocturnal temperature forecasting
[MISC-SER-A-126] p 2012 N93-20888
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292
Routine validation of TOVS retrievals: Lessons learned from a pilot experiment p 1960 N93-21611
Comparison of the efficiencies of lidar techniques for atmospheric-temperature measurement based on rotational Raman, and Rayleigh scattering p 1960 N93-21614
ATMOSPHERIC TIDES
SSG 5.99: Tidal friction and the Earth's rotation p 1974 N93-20992
ATMOSPHERIC TURBULENCE
Contribution to the study of the atmospheric surface layer in stable conditions, simulated in a wind tunnel
[ECL-91-15] p 2012 N93-21010
ATOLLS
Tracking radar advanced signal processing and computing for Kwajalein Atoll (KA) application
[AD-A259066] p 1886 N93-21756
ATOMIC CLOCKS
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193)
[PB92-227073] p 1893 N93-21350
ATOMIC COLLISIONS
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems
[DE93-004531] p 2064 N93-21742
Differential electron emission in multi-charged ion atom collisions: Systematics for distant and close collisions
[DE93-004324] p 2064 N93-21851
Electron impact ionization of highly charged lithiumlike ions
[DE93-002895] p 2065 N93-21954
ATOMIC ENERGY LEVELS
Theoretical studies of important processes in planetary and comet atmospheres
[NASA-CR-192114] p 2098 N93-19959
Improved NMR signatures of explosives p 1771 N93-21900
ATOMIC EXCITATIONS
Photoionization experiments by multistage excitation in the zone of the second ionization threshold of CuI
[ETN-93-92569] p 2062 N93-20883
ATOMIC STRUCTURE
Atomic and electronic structure of ultrathin films p 2078 N93-20287
Growth and doping of Al(x)Ga(1-x) films by electron cyclotron resonance assisted molecular beam epitaxy
[AD-A258722] p 2079 N93-20367
High frequency spectroscopy for collision excited helium atom fine structure of 1s4f configuration
[ETN-93-92560] p 2062 N93-20875
New developments in the 'ab initio' determination of transition metal alloy phase diagrams
[DE93-002540] p 1856 N93-21488
Oxygen configurations and their effect on charge transfer in YBa2Cu3O(z)
[DE93-002543] p 2081 N93-21489
Semiempirical studies of atomic structure
[DE93-005117] p 2063 N93-21707
Angular distributions of charge exchange collisions at very low energies
[DE93-002338] p 2064 N93-21751
ATOMIZING
The electrospray: Fundamentals and combustion applications p 1855 N93-20218
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231
ATTITUDE (INCLINATION)
Simulation and calculation of the APEX attitude
[AD-A258716] p 1824 N93-20382
Approach range and velocity determination using laser sensors and retroreflector targets p 1812 N93-21410
TRAC based sensing for autonomous rendezvous p 1813 N93-21412
Proximity operations considerations affecting spacecraft design p 1815 N93-21428
Experimental validation of docking and capture using space robotics testbeds p 1817 N93-21441
ATTITUDE CONTROL
Simulation and calculation of the APEX attitude
[AD-A258716] p 1824 N93-20382
Low cost attitude control system scanwheel development
[NASA-CR-191324] p 1824 N93-21003
Office of Spaceflight Standard Spaceborne Global Positioning System (GPS) user equipment project p 1780 N93-21417
Robust on-off pulse control of flexible space vehicles
[NASA-CR-192174] p 1824 N93-21644
ATTITUDE STABILITY
An investigation of the unexpected attitude dynamics experienced by the OEDIPUS-A tethered sounding rocket payload p 1830 N93-20724
Frequency ratio lock up in the attitude drift of a dissipative axisymmetric gyrostat p 1908 N93-20725
AUDITORY SIGNALS
Modeling and simulation of a formal neural network: Implementation on a 'Hypercube FPS T-40' parallel machine
[ETN-93-92688] p 2045 N93-21065
AUGMENTATION
Acquisition and production of skilled behavior in dynamic decision-making tasks
[NASA-CR-192361] p 2025 N93-20908
An approach to improving TNA EDS p 1765 N93-21864
AURORAL ARCS
Formation of auroral arcs via magnetosphere-ionosphere coupling
[AD-A258641] p 1998 N93-20363
Comprehensive simulation study on local and global development of auroral arcs and field-aligned potentials
[NIFS-195] p 2073 N93-20764
AURORAS
Particle simulation of auroral double layers
[AD-A258577] p 1996 N93-20032
Magnetospheric and auroral processes
[NASA-CR-192138] p 1996 N93-20250
Electron acceleration in the magnetosphere p 1997 N93-20283
Studies of interactive plasma processes in the polar cusp
[NASA-CR-192137] p 1999 N93-21364
AUSTENITIC STAINLESS STEELS
A modified Miner rule to predict crack initiation p 1948 N93-21325
AUSTRALIAN SPACE PROGRAM
National space program in Australia p 1977 N93-21283
AUSTRIA
Activities of the Seibersdorf Research Center
[ETN-93-92597] p 2103 N93-20857
AUTOCORRELATION
Higher order crossings
[AD-A258727] p 2050 N93-20327
AUTOIONIZATION
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems
[DE93-004531] p 2064 N93-21742
AUTOMATA THEORY
Efficient compilation of a synchronous declarative language: LUSTRE-V3 code generator
[ETN-93-92679] p 2038 N93-20899
Advancing automation and robotics technology for the Space Station Freedom and for the U.S. economy
[NASA-TM-103992] p 2027 N93-21807
AUTOMATIC CONTROL
RASSP final technical report
[AD-A258562] p 1882 N93-20371
Research on data handling technology p 1795 N93-20448

HELITRAK: A helicopter-tracking receiver system for television outside broadcast links
[BBC-RD-1992/5] p 1883 N93-20573
Tolerancing in the context of the automated manufacturing and the design axioms
[PAPER-C-2-6] p 2036 N93-20834
Testing of ROMPS robot mechanical interfaces and compliant device
[NASA-CR-192617] p 1915 N93-20918
Crystal growth through a computer controlled, eight zone thermal gradient freeze furnace p 1811 N93-21123
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
NASA Automated Rendezvous and Capture Review. Executive summary
[NASA-TM-108597] p 1812 N93-21407
Autonomous pre-alignment of a docking mechanism p 1814 N93-21418
Demonstration of automated proximity and docking technologies p 1814 N93-21423
MMU applications for automated rendezvous and capture p 1817 N93-21438
NASA MSFC hardware in the loop simulations of automatic rendezvous and capture systems p 1818 N93-21448

AUTOMATIC FLIGHT CONTROL
Research on HOPE flight control technology p 1787 N93-20427
Research on combined HOPE navigation technology p 1792 N93-20428

AUTOMATIC FREQUENCY CONTROL
A high-speed auto-tuning PID regulator based on programmable logic devices
[REPT-92-042] p 2047 N93-21186

AUTOMATIC LANDING CONTROL
Research on HOPE flight control technology p 1787 N93-20427

AUTOMATIC TEST EQUIPMENT
The use of phase-stepping in the photoelastic analysis of complex components p 1928 N93-20636

AUTOMATION
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 8: Aerothermodynamics Automation and Robotics (A/R) systems sensors, high-temperature superconductivity
[NASA-TM-108655] p 2085 N93-20775
Microelectronics packaging automation
[DE93-004822] p 1894 N93-21725

AUTOMOBILE FUELS
Evaluation of a Schatz heat battery on a flexible-fueled vehicle. Phase 2
[PB92-204585] p 1893 N93-21377
The Natural Gas Vehicle Challenge 1992: Exhaust emissions testing and results
[DE93-002997] p 1917 N93-21974

AUTOMOBILES
Upper interior head protection. Volume 1. The development of a research test procedure
[PB93-113769] p 2026 N93-21537
First international alternative fueled vehicle round-up
[DE93-002779] p 1916 N93-21667
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789
Upper interior head protection. Volume 2: Fleet characterization and countermeasure evaluation
[PB93-113777] p 2027 N93-21795
The Natural Gas Vehicle Challenge 1992: Exhaust emissions testing and results
[DE93-002997] p 1917 N93-21974

AUTONOMOUS NAVIGATION
The ARK (Autonomous Robot for a Known environment) project p 1917 N93-20621
Autonomous reconfigurable GPS/INS navigation and pointing system for rendezvous and docking p 1780 N93-21426
Autonomous rendezvous and capture system design p 1815 N93-21427
Autonomous docking ground demonstration p 1816 N93-21430
An overview of autonomous rendezvous and docking system technology development p 1816 N93-21431
An autonomous rendezvous and docking system using cruise missile technology p 1816 N93-21432
A phase one AR/C system design p 1816 N93-21435
MMU applications for automated rendezvous and capture p 1817 N93-21438
Autonomous rendezvous and docking: A commercial approach to on-orbit technology validation p 1817 N93-21440
Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445

AUTONOMY
Towards autonomous motion vision
[AD-A259339] p 2068 N93-21263
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265
TRAC based sensing for autonomous rendezvous p 1813 N93-21412
Autonomous pre-alignment of a docking mechanism p 1814 N93-21418
Demonstration of automated proximity and docking technologies p 1814 N93-21423
Autonomous rendezvous and capture system design p 1815 N93-21427
On-orbit demonstrations of automated closure and capture using ESA-developed proximity operations technologies and an existing serviceable NASA Explorer platform spacecraft p 1816 N93-21433
Autonomous rendezvous and docking: A commercial approach to on-orbit technology validation p 1817 N93-21440
Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445
Autonomous rendezvous and capture development infrastructure p 1818 N93-21446

AUTOREGRESSIVE PROCESSES
A necessary and sufficient condition for the existence of the maximum likelihood estimate in autoregressive models
[RR-866-M] p 2058 N93-20944
Evaluation and detection of a signal containing an autoregressive noise
[ETN-93-92684] p 1885 N93-21061
Estimation methods for parameters of multivariate autoregressive models
[ETN-93-92685] p 2059 N93-21062

AVALANCHE DIODES
Improvement of voltage reference Zener diode (1SZ48A) p 1797 N93-20462

AVIATION METEOROLOGY
Capacities of the DLR polarization diversity radar for determining icing relevant cloudphysical parameters
[DLR-MITT-91-14] p 2014 N93-21367

AVIONICS
USA aviation digest index, 1989, volume 11
[AD-A258673] p 2089 N93-20388
Index to USA aviation digest, 1990
[AD-A258678] p 2089 N93-20389
Index to USA aviation digest, 1991
[AD-A258679] p 2089 N93-20390
Software design document for the generic avionics data bus tool kit
[AD-A259329] p 1784 N93-21259
An overview of autonomous rendezvous and docking system technology development p 1816 N93-21431
An autonomous rendezvous and docking system using cruise missile technology p 1816 N93-21432

AXES OF ROTATION
Method and apparatus for controlling internal rotation of principal axes in fabrication of birefringent fibers
[AD-D015611] p 2067 N93-20397

AXIAL COMPRESSION LOADS
Effect of phase lag on cyclic durability of laminated composite p 1922 N93-20333

AXIAL FLOW
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977

AXIAL LOADS
Design against high cycle multiaxial fatigue p 1922 N93-20335
The predicting crack growth for mixed mode fracture under biaxial loads p 1922 N93-20336
Prebuckling deflections and lateral buckling: Theory
[PB92-225382] p 1946 N93-21018
Buckling of columns: Allowance for axial shortening
[PB93-110484] p 1947 N93-21234
Microcomputer system for measurements and analysis of signals for fatigue life calculations under biaxial random stress state p 1948 N93-21320
Theoretical analysis of plastic moment capacity of an inclined yield line under axial force
[PB93-118784] p 1951 N93-21689
Experimental verification of the theory of plastic moment capacity of an inclined yield line under axial force
[PB93-118792] p 1952 N93-21798

AXISYMMETRIC BODIES
Frequency ratio lock up in the attitude drift of a dissipative axisymmetric gyrostat p 1908 N93-20725
The structure of circumstellar shells
[NASA-CR-192337] p 2096 N93-20757

AXISYMMETRIC FLOW
Numerical simulation of a high Mach number jet flow
[NASA-TM-105985] p 1898 N93-20057
Experiments on the impingement of an underexpanded jet on a flat plate p 1937 N93-20685
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977

AZIDES (INORGANIC)
New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986

B

B STARS
A study of the large-scale infrared emission from a selected dark cloud
[NASA-CR-192263] p 1998 N93-20755

BACKGROUND RADIATION
Can the cosmic x ray and gamma ray background be due to reflection of a steep power law spectrum and Compton scattering by relativistic electrons?
[NASA-CR-192255] p 2102 N93-20601

BACKSCATTERING
A prototype novel sensor for autonomous, space based robots, phase 2
[NASA-CR-191344] p 1913 N93-19978
Remote sensing of earth terrain
[NASA-CR-192139] p 1966 N93-19979
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984
Infrared backscatter climatology and MACAWS p 2009 N93-20098
Aerosol chemistry in GLOBE p 2009 N93-20102
CO2 lidar backscatter experiment p 2009 N93-20103
Method and apparatus for controlling internal rotation of principal axes in fabrication of birefringent fibers
[AD-D015611] p 2067 N93-20397
Multifrequency backscatter modelling of bare soil: Attema, Kats, and Krul model applied in Agriscatt 1987 data
[BCRS-91-43] p 1884 N93-20739
Stimulated Brillouin backscattering for nonlinear ionic sound waves in laser plasmas
[ETN-93-93415] p 2074 N93-21208
Sampling properties of a spaceborne lidar (ATLID) p 1961 N93-21618
Measurement and interpretation of the sunlight backscattered from clouds within the oxygen-A absorption band p 1963 N93-21627
Detection of objects concealed under persons' clothing using the SECURE system p 1767 N93-21879
Explosive detection using microwave imaging p 1771 N93-21902

BACTERIA
Rapid susceptibility testing of mycobacterium avium complex and mycobacterium tuberculosis isolated from AIDS patients
[NASA-CR-192382] p 2023 N93-20736

BAGGAGE
A review of the development of a luggage explosive detection system p 1765 N93-21862
An explosive detection system for screening luggage with high energy x rays p 1767 N93-21877
Explosives detection limitations using dual-energy radiography and computed tomography p 1767 N93-21878
A general protocol for operational testing and evaluation of bulk explosive detection systems p 1769 N93-21888
Consideration of untried magnetic resonance techniques for possible baggage analysis p 1771 N93-21903
Assessing the operational impacts of checked luggage screening p 1777 N93-21936
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941
A systems approach to the explosive detection problem p 1778 N93-21942
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943
Impact on the air carrier of explosive detection systems p 1778 N93-21945

BALANCE
Force balance near an X line along which E (dot) is less than 0
[NASA-CR-192341] p 2071 N93-20362

BALLOON FLIGHT
Solar cell calibration by balloon flight p 1800 N93-20479

BALLOONING MODES
Model of the L-mode confinement in tokamaks
[NIFS-187] p 2072 N93-20545

L-mode confinement model based on transport-MHD theory in tokamaks
[NIFS-192] p 2074 N93-21192
Simulation models for tokamak plasmas
[DE93-002876] p 2076 N93-21988
BANACH SPACE
On homogeneous quasilinear evolution equation
[REPT-91-65] p 2052 N93-20854
Solution of quadratic distributed control problems by optimization methods
[ETN-93-93409] p 2040 N93-21303
BANDPASS FILTERS
Variable phase sine wave generator for active phased arrays
[AD-D015558] p 1888 N93-20028
BANDWIDTH
High-bandwidth, high-dynamic-range, analog optical guided-wave systems for physics instrumentation
[DE93-001619] p 2066 N93-20022
An analytical and experimental investigation of FM-by-noise jamming
[AD-A259124] p 1883 N93-20592
Delivery of very high bandwidth with ATM switches and SONET
[DE93-004274] p 2045 N93-21721
BARIUM COMPOUNDS
Fiber-reinforced monoclinic celsian matrix composite material
[NASA-CASE-LEW-15269-1] p 1831 N93-20040
BARIUM OXIDES
Low loss glass and optical fibers therefrom
[AD-D015567] p 1862 N93-21829
BARIUM TITANATES
Thin film processing of photorefractive BaTiO3
[NASA-CR-192169] p 2079 N93-20311
BAROCLINIC WAVES
Laboratory and theoretical models of planetary-scale instabilities and waves p 2004 N93-20074
Nonhydrostatic effects in numerical modeling of mesoscale convective systems and baroclinic waves p 2007 N93-20090
BAROCLINITY
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
Basic studies of baroclinic flows p 2003 N93-20073
BARRIERS
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project
[FOA-C-40296-4.5] p 1901 N93-20858
BARYONS
Aspects of the electroweak phase transition
[DE93-004629] p 2063 N93-21723
BASE FLOW
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237
Improved empirical model for base drag prediction on missile configurations based on new wind tunnel data
[AD-A258753] p 1761 N93-20405
BAYES THEOREM
Flexible prior models in Bayesian image analysis
[DE93-003728] p 2059 N93-21736
BAYS (TOPOGRAPHIC FEATURES)
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536
BEAM CURRENTS
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809
BEAM INJECTION
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
BEAM PLASMA AMPLIFIERS
High power microwave generator
[AD-D015560] p 1891 N93-20783
BEAMS (SUPPORTS)
Fatigue experiments of microconcrete beams under a running load p 1923 N93-20346
Large amplitude free vibrations of cross-ply composite beams p 1930 N93-20646
Dynamic simulation of flexible body systems by the vector solution method p 1933 N93-20666
Transverse vibrations of an elastically restrained rod carrying a tip mass p 1934 N93-20669
Buckling and dynamic instability phenomena of tapered bar with localized flaw subjected to an intermediate periodic axial load p 1935 N93-20675
Prebuckling deflections and lateral buckling: Theory
[PB92-225382] p 1946 N93-21018
Energy equation for beam lateral buckling
[PB92-225390] p 1946 N93-21019
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307
A comparison of force reconstruction methods for a lumped mass beam
[DE93-002461] p 1951 N93-21484
Identification of delamination by eigenfrequency degradation: An inverse problem p 1843 N93-21526
BED REST
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
BEDROCK
Cokriging surface elevation and seismic refraction data for bedrock topography
[DE93-001369] p 1999 N93-21225
BEHAVIOR
How do zooplankton feed? A critical microgravity experiment p 1806 N93-21097
Gravity as a factor in the orientation and vertical migration of marine zooplankton p 1806 N93-21098
Studying the effects of microgravity on lower vertebrate development and behavior p 1807 N93-21099
BELGIUM
Climatological study of ozone in the boundary layer above Belgium
[MISC-SER-A-127] p 1989 N93-20925
BEND TESTS
Testing rig for low cycle fatigue tests in combined bending and torsion p 1923 N93-20345
BENDING
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates
[NASA-TM-106016] p 1832 N93-20317
An experimental approach to size effect in rotating bending fatigue p 1922 N93-20339
Reduction of bend losses for titanium diffused waveguides in lithium niobate
[ETN-93-92558] p 1884 N93-20750
Spectroscopic investigations of bending and microbending effects in single mode optical fibre: A feasibility study
[NPL-QU-90] p 1946 N93-20930
The flexural behaviour of thin-walled singly symmetric columns
[PB92-225408] p 1946 N93-21020
Buckling of restrained columns with shear deformation and axial shortening
[PB93-110476] p 1946 N93-21233
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 1844 N93-21531
BENDING FATIGUE
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates
[NASA-TM-106016] p 1832 N93-20317
BENDING MOMENTS
Theoretical analysis of plastic moment capacity of an inclined yield line under axial force
[PB93-118784] p 1951 N93-21689
BIAS
Bias-annealing experiments for doped a-Si:H layers
[MBB-Z-0316-90-PUB] p 2081 N93-21464
BIBLIOGRAPHIES
Bibliography of scientific publications 1977-1991
[AD-A259084] p 2090 N93-20393
Aerospace medicine and biology: A cumulative index to a continuing bibliography (supplement 371)
[NASA-SP-7011(371)] p 2024 N93-20889
National report of the Federal Republic of Germany on the geodetic activities in the years 1987-1991
[SER-B-294] p 1969 N93-20960
Commission 5: Earth tides p 1973 N93-20987
International geodetic bibliography p 1974 N93-20995
Aeronautical engineering: A continuing bibliography with indexes (supplement 286)
[NASA-SP-7037(286)] p 1759 N93-21026
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 372)
[NASA-SP-7011(372)] p 2024 N93-21044
Publications of the Executive Office of the President
[PB92-233204] p 2091 N93-21226
Publications of the National Institute of Standards and Technology 1991 catalog
[PB92-217579] p 2091 N93-21344
List of US Army Research Institute research and technical publications, October 1, 1990 to September 30, 1991 with author and subject index
[PB93-108611] p 2103 N93-21381
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784
A literature review of time-deterioration prediction techniques
[PB92-229202] p 1919 N93-21822
Polarization effects in coherent and incoherent photon scattering: Survey of measurements and theory relevant to radiation transport calculations
[PB93-126092] p 2064 N93-21828
Status of document search and data quality objective efforts
[DE93-003216] p 2092 N93-21959
BICRYSTALS
The roles of slip geometry and hardening behavior in intergranular toughness
[DE93-005647] p 2081 N93-21712
BIDIRECTIONAL REFLECTANCE
Data analysis for bark and leaf reflectance measurements
[AD-A258598] p 1966 N93-19983
A radiosity approach realistic image synthesis system
[AD-A259082] p 2032 N93-20406
BILLETS
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies
[DE93-002906] p 1919 N93-21956
BIMETALS
Vibrational spectroscopic studies of adsorbates on bimetallic surfaces
[AD-A258578] p 1855 N93-19963
BINARY ALLOYS
Interfacial wave theory on formation of dendritic structure in binary alloy system p 1810 N93-21121
Ripening of immiscible liquid droplets in microgravity with constrained Marangoni drift p 1810 N93-21122
New developments in the 'ab initio' determination of transition metal alloy phase diagrams
[DE93-002540] p 1856 N93-21488
BINARY MIXTURES
Interfacial wave theory on formation of dendritic structure in binary alloy system p 1810 N93-21121
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653
BINARY PHASE SHIFT KEYING
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788
BINARY SYSTEMS (MATERIALS)
Effect of microstructure on the strength and fracture energy of bimaterial interfaces
[AD-A259181] p 1921 N93-20271
Growth and characterization of binary and pseudo-binary 3-5 compounds exhibiting non-linear optical behavior. Undergraduate research opportunities in microgravity science and technology
[NASA-CR-192143] p 2068 N93-21363
BINAURAL HEARING
Real image visual display system
[AD-A259125] p 2033 N93-20593
BINDERS (MATERIALS)
Polyorganosilazane preceramic binder development for reaction bonded silicon nitride composites
[DE93-004063] p 1844 N93-21842
BINOCULAR VISION
A binocular stereo approach to AR/C at the Johnson Space Center p 1814 N93-21421
BIOASSAY
Rapid susceptibility testing of mycobacterium avium complex and mycobacterium tuberculosis isolated from AIDS patients
[NASA-CR-192382] p 2023 N93-20736
The flow immunosensor: An antibody-based system for explosives detection p 1776 N93-21932
BIOASTRONAUTICS
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
Physiological responses to wearing the space shuttle launch and entry suit and the prototype advanced crew escape suit compared to the unsuited condition
[NASA-TP-3297] p 2026 N93-20319
Aerospace medicine and biology: A cumulative index to a continuing bibliography (supplement 371)
[NASA-SP-7011(371)] p 2024 N93-20889
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 372)
[NASA-SP-7011(372)] p 2024 N93-21044
BIOCHEMISTRY
Biochemically active layers for selective material detection sensors
[MBB-Z-0440-92-PUB] p 2021 N93-20959
BIODEGRADATION
Cationically polymerizable monomers derived from renewable sources
[DE93-005926] p 1861 N93-21731

BIODYNAMICS
Global models of ecosystem change
p 1953 N93-21570
BIOELECTRICITY
Explosives search dogs p 1776 N93-21933
BIOINSTRUMENTATION
Biochemically active layers for selective material detection sensors
[MBB-Z-0440-92-PUB] p 2021 N93-20959
Dry immunochemical sensor for the detection of PETN vapor p 1776 N93-21930
The challenge of biodetection for screening persons carrying explosives p 1776 N93-21931
The flow immunosensor: An antibody-based system for explosives detection p 1776 N93-21932
Explosives search dogs p 1776 N93-21933
BIOLOGICAL EFFECTS
Aerospace medicine and biology: A cumulative index to a continuing bibliography (supplement 371)
[NASA-SP-7011(371)] p 2024 N93-20889
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 372)
[NASA-SP-7011(372)] p 2024 N93-21044
Studying the effects of microgravity on lower vertebrate development and behavior p 1807 N93-21099
Human exposure assessment for airborne pollutants: Advances and opportunities
[PB92-223247] p 1991 N93-21496
Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California
[PB93-118495] p 1994 N93-21805
BIOLOGICAL MODELS (MATHEMATICS)
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
Global models of ecosystem change
p 1953 N93-21570
BIOMASS
Estimation of carbon storage and organic matter in boreal forests using optical remote sensing data
p 1955 N93-21583
The potential for biomass to mitigate greenhouse gas emissions in the Northeastern US
[DE93-002800] p 1992 N93-21666
BIOMASS ENERGY PRODUCTION
The potential for biomass to mitigate greenhouse gas emissions in the Northeastern US
[DE93-002800] p 1992 N93-21666
BIOPOLYMERS
The effect of lamination angle on polymer retention
[DE93-004304] p 1861 N93-21722
BIOSPHERE
Earth observation in the TIGER programme of the UK Natural Environment Research Council
p 1953 N93-21572
BIPOLARITY
Bipolar rechargeable lithium battery for high power applications p 1987 N93-20526
BIRD-AIRCRAFT COLLISIONS
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579
BIREFRINGENCE
Birefringent polarization ray tracing: Theory and applications p 2067 N93-20285
Method and apparatus for controlling internal rotation of principal axes in fabrication of birefringent fibers
[AD-D015611] p 2067 N93-20397
BISMALEIMIDE
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517
Barely visible damage threshold in a BMI
p 1843 N93-21524
BIT ERROR RATE
Computer simulation of a general purpose satellite modem
[AD-A259083] p 1882 N93-20392
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788
BL LACERTAE OBJECTS
Thirteen new BL Lacertae objects discovered by an efficient x ray/radio/optical technique
p 2095 N93-20796
IUE-ULDA access guide no. 4A: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume A
[ESA-SP-1153-VOL-A] p 2096 N93-21007
BLOCK COPOLYMERS
Oxygen plasma resistant phosphine oxide containing imide/arylene copolymers
[NASA-TM-107712] p 1859 N93-20300
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
BLOCKING
Synoptic/planetary-scale interactions and blocking over the North Atlantic Ocean p 2007 N93-20091
BLOOD
Monitoring human tissues for toxic substances
[PB92-223239] p 2024 N93-21498
BODIES OF REVOLUTION
Experimental investigations on wing-body combinations and their components at high angles of attack in the subsonic and transonic speed range
[DLR-FB-91-43] p 1783 N93-21762
BODY TEMPERATURE
Measurement of behavioral thermoregulation
[PB92-217033] p 2024 N93-21046
BOEING 747 AIRCRAFT
The effectiveness of hand-held fire extinguishers on cargo container fires
[DOT/FAA/CT-TN92/42] p 1764 N93-21821
BOLOMETERS
A two-stage magnetic refrigerator for astronomical applications with reservoir temperatures above 4 K
[NASA-CR-192365] p 1878 N93-21815
BOLTED JOINTS
Robot-friendly connector --- space truss structures
[NASA-CASE-MSC-21864-1] p 1914 N93-20117
Improving the selection of bolted joint parameters by using results from finite-element analysis
[DE93-002243] p 1951 N93-21774
BOLTS
Improving the selection of bolted joint parameters by using results from finite-element analysis
[DE93-002243] p 1951 N93-21774
BOMBS (ORDNANCE)
Assessing the operational impacts of checked luggage screening p 1777 N93-21936
BOND GRAPHS
Bond graph based modelling using MACROS: An introduction to the program BAMMS
[MEMT-18] p 2034 N93-20808
BONDED JOINTS
Predicting the failure load of adhesive joints
p 1932 N93-20655
Peak stresses in adhesive step lap joints with voids
p 1932 N93-20656
The design of bonded structural assemblies
[REPT-921-430-116] p 1824 N93-20934
An expert system to study bonded joints
[REPT-921-430-113] p 1833 N93-20937
Investigation of the bond strength of a discrete skin-stiffener interface p 1843 N93-21527
BONDING
Metalloradical and electrophilic activation of methane
[PB93-123693] p 1851 N93-21813
BOOLEAN FUNCTIONS
Efficient compilation of a synchronous declarative language: LUSTRE-V3 code generator
[ETN-93-92679] p 2038 N93-20899
BOOSTER ROCKET ENGINES
Research on advanced transportation systems
p 1789 N93-20414
BORIDES
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362
BORON
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362
BORON COMPOUNDS
New compounds obtained by LPCVD in the B-C-N chemical system
[REPT-921-430-111] p 1849 N93-20933
BORON NITRIDES
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A259177] p 2079 N93-20561
BOSONS
Study of electroweak interactions
[DE93-004367] p 2061 N93-20385
Anomalous WWZ couplings at future e(+)e(-) colliders
[PREPRINT-814] p 2066 N93-21177
BOTSWANA
Botswana water and surface energy balance research program. Part 1: Integrated approach and field campaign results
[NASA-TM-108607] p 2018 N93-20891
BOUNDARY CONDITIONS
Stability of mixing layers
[NASA-CR-192225] p 1897 N93-19980
Numerical solution of three-dimensional unsteady viscous flows
[AD-A259464] p 1899 N93-20244
Joint services electronics program
[AD-A259179] p 1890 N93-20562
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697
BOUNDARY ELEMENT METHOD
Further developments in shape optimization of stress concentration regions. Part 1: General theory
p 1927 N93-20630
Boundary element fracture mechanics analysis in plane orthotropic elasticity p 1939 N93-20700
Boundary element shape function for bimaterial interface cracks p 1939 N93-20701
Application of the BEM to the crack growth problem by the coupling of damage-deformation
p 1940 N93-20702
A boundary element formulation for thermo-hydrodynamic lubrication problem
p 1918 N93-20704
Boundary element formulation for thermoelastohydrodynamic contact problems
p 1918 N93-20705
Modeling the growth and interaction of fractures
[NASA-CR-192185] p 1945 N93-20733
Use of the boundary element method in the resolution of the quasi-elliptic Navier-Stokes equations: Application to the calculation of a turbine flow
[ECL-91-13] p 1902 N93-20893
Direct second kind boundary integral formulation for Stokes flow problems
[DE93-004069] p 1904 N93-22000
BOUNDARY INTEGRAL METHOD
Theory and numerical modeling of low-frequency acoustic scattering from bubble plumes near the sea surface
[AD-A259199] p 2018 N93-20564
Boundary element fracture mechanics analysis in plane orthotropic elasticity p 1939 N93-20700
A recent boundary integral procedure on determining shear centers, warping constant and other cross sectional properties of a turbine blade p 1918 N93-20703
Multi-axial fatigue damage analysis using the boundary element method p 1950 N93-21339
Direct second kind boundary integral formulation for Stokes flow problems
[DE93-004069] p 1904 N93-22000
BOUNDARY LAYER CONTROL
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
BOUNDARY LAYER EQUATIONS
Stability of mixing layers
[NASA-CR-192225] p 1897 N93-19980
The semi-discrete Galerkin finite element modelling of compressible viscous flow past an airfoil
[NASA-CR-192161] p 1760 N93-20018
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles
[MBB-FE-211-S-PUB-0481] p 1781 N93-21056
Calculation of hypersonic, viscous, non-equilibrium flows around reentry bodies using a coupled boundary layer/Euler method
[MBB-LME-211-S-PUB-0487] p 1762 N93-21058
BOUNDARY LAYER FLOW
Stability of mixing layers
[NASA-CR-192225] p 1897 N93-19980
Crossflow stability and transition experiments in a swept-wing flow
[NASA-TM-108650] p 1904 N93-21819
BOUNDARY LAYER SEPARATION
The structures and the sensitivity of an incompressible turbulent boundary layer in the vicinity of the separation
[ETN-93-92557] p 1902 N93-20892
BOUNDARY LAYER STABILITY
Stability and transition of hypersonic boundary layer
p 1763 N93-20687
BOUNDARY LAYER TRANSITION
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles
[AD-A258592] p 1897 N93-19965
Stability and transition of hypersonic boundary layer
p 1763 N93-20687
The effect of surface suction near the leading edge of a swept-back wing
[AERO-REPT-9205] p 1761 N93-20807
BOUNDARY VALUE PROBLEMS
Process modelling for materials preparation experiments
[NASA-CR-192319] p 2078 N93-20236
Study of free vibration of orthotropic rectangular plates p 1935 N93-20674

A review on application of MHD theory to plasma boundary problems in tokamaks
[NIFS-163] p 2073 N93-20762
SSG 4.115: Mathematical analysis of geodetic boundary value problem p 1972 N93-20981
Buckling of columns: Allowance for axial shortening
[PB93-110484] p 1947 N93-21234
Effect of quark-gluon plasma boundary on the momentum distribution of quarks
[DE93-004166] p 2064 N93-21740

BOXES (CONTAINERS)
Explosives detection limitations using dual-energy radiography and computed tomography p 1767 N93-21878

BRAIDED COMPOSITES
Production of highly integrated FRP parts in the braiding technology p 1835 N93-21136

BRAIN CIRCULATION
Cerebral autoregulation in microgravity p 1809 N93-21112

BRANCHING (MATHEMATICS)
Inclusive beauty decays and the spectator model
[PREPRINT-790] p 2061 N93-20850

BRAZIL
The distribution of green areas in urban areas: Cartography and comparative analysis of LANDSAT TM and HRV/SPOT data
[INPE-5262-PRE/1686] p 1979 N93-21560

BRAZING
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738

BREADBOARD MODELS
Development of a measurement of upper MID frequency errors on arbitrary grazing incidence optics
[NASA-CR-191333] p 2067 N93-20731
Data handling in telescience experiments using the Prototype Optical Diagnostic Instrument (PODI)
[NLR-TP-90327-U] p 2090 N93-20917
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-191989] p 1850 N93-21564
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652

BREMSSTRAHLUNG
Neutron-proton bremsstrahlung experiments
[DE93-003737] p 2065 N93-21968

BRIDGES (STRUCTURES)
Fracture-mechanical analysis of the residual service life of the welded main girders of the highway bridges of Ruedersdorf p 1949 N93-21329
Fatigue of old metallic railroad bridges p 1949 N93-21330
Fatigue life assessment of service damaged and corroded members of structural steel p 1949 N93-21331

BRIDGMAN METHOD
Process modelling for materials preparation experiments
[NASA-CR-192319] p 2078 N93-20236

BRIGHTNESS
Robot motion vision by fixation
[AD-A259456] p 2046 N93-20241
Towards autonomous motion vision
[AD-A259339] p 2068 N93-21263

BRIGHTNESS TEMPERATURE
Airborne full polarization radiometry using the MSFC Advanced Microwave Precipitation Radiometer (AMPR) p 2007 N93-20089
Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360
Microwave spectroscopy of the active sun
[NASA-CR-192135] p 2100 N93-20571

BRILLOUIN EFFECT
Stimulated Brillouin backscattering for nonlinear ionic sound waves in laser plasmas
[ETN-93-93415] p 2074 N93-21208
Comparison of the efficiencies of lidar techniques for atmospheric-temperature measurement based on rotational Raman, and Rayleigh scattering p 1960 N93-21614

BRITTLE MATERIALS
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520

BRITTLENESS
Effect of microstructure on the strength and fracture energy of bimaterial interfaces
[AD-A259181] p 1921 N93-20271
Thermal/chemical stability of ceramic cross flow filter materials
[DE93-002710] p 1860 N93-21491

BROADBAND
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788

BROADCASTING
HELITRAK: A helicopter-tracking receiver system for television outside broadcast links
[BBC-RD-1992/5] p 1883 N93-20573
Selected worldwide Marine weather broadcasts
[PB93-118164] p 2013 N93-21294
Review of the Year 1991 p 1886 N93-21558

BROKEN SYMMETRY
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263

BROMINE
Analysis strategy for organic bromine flame-retardant compounds as environmental contaminants p 1839 N93-21164

BSCCO SUPERCONDUCTORS
Development of elements of a high T(sub c) superconducting cable
[AD-A259415] p 1888 N93-20130
Method of producing Bi-Sr-Ca-Cu-O superconducting materials in cast form
[AD-D015532] p 2080 N93-20777
Effective activation energy in the Bi-Sr-Ca-Cu-O systems
[DE93-002996] p 2083 N93-21983
Critical current density, irreversibility line, and flux creep activation energy in silver-sheathed Bi2Sr2Ca2Cu3O(sub x) superconducting tapes
[DE93-002998] p 2083 N93-21984

BUBBLES
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles
[AD-A258592] p 1897 N93-19965
Theory and numerical modeling of low-frequency acoustic scattering from bubble plumes near the sea surface
[AD-A259199] p 2018 N93-20564
Gas bubble generation in low gravity p 1805 N93-21090
An experiment on producing foam metals in a microgravity environment aboard NASA KC-135 aircraft p 1808 N93-21109
Gas bubbles in liquid metals p 1808 N93-21110
A numerical simulation of two-phase jet spreading using an Euler-Lagrangian technique
[AD-A259326] p 1902 N93-21258
Effect of surface active materials on bubble dynamics in two-phase flow
[AD-A259340] p 1902 N93-21264

BUCKLING
Delamination buckling in circular plates p 1931 N93-20653
Buckling of clamped angle-ply laminated plates under inplane loads p 1931 N93-20654
Instability and variation analysis using a parallel substructuring procedure p 1932 N93-20659
Buckling and dynamic instability phenomena of tapered bar with localized flaw subjected to an intermediate periodic axial load p 1935 N93-20675
Semi-numerical approach to the buckling of composite panel p 1935 N93-20676
Prebuckling deflections and lateral buckling: Applications
[PB92-225366] p 1946 N93-21017
Energy equation for beam lateral buckling
[PB92-225390] p 1946 N93-21019
The flexural behaviour of thin-walled singly symmetric columns
[PB92-225408] p 1946 N93-21020
Buckling of restrained columns with shear deformation and axial shortening
[PB93-110476] p 1946 N93-21233
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 1841 N93-21514
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516

BUCKMINSTERFULLERENE
Fullerenes formation in flames p 1853 N93-20187

BUDGETING
Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for Fiscal Year 1993. Part 3: Nondepartmental Witnesses
[S-HRG-102-716-PT-3] p 2093 N93-21676
National Aeronautics and Space Administration: Statement of Joanne Padron, American Institute of Aeronautics and Astronautics p 2093 N93-21678

BUFFETING
Fluid/structures interactions. Aircraft considerations p 1787 N93-20628

BUILDINGS
Survey of protocols for conducting indoor air quality investigations in large buildings
[PB93-119865] p 2026 N93-21215
Present worth factors for life-cycle cost studies in the Department of Defense
[PB93-120772] p 2093 N93-21690

BUMPERS
Hypervelocity impact tests and simulations of single Whipple bumper shield concepts at 10 km/s
[DE93-003999] p 1917 N93-21841

BUOYANCY
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
Structure and soot properties of non-buoyant laminar round-jet diffusion flames p 1853 N93-20190
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
Flame spread across liquid pools p 1854 N93-20209
Combustion experiments in reduced gravity with two-component miscible droplets p 1854 N93-20214
Neutral buoyancy test evaluation of hardware and extravehicular activity procedures for on-orbit assembly of a 14 meter precision reflector
[NASA-TM-107735] p 1824 N93-20922

BURNERS
Study of multi jet burner for gases
[INPE-5416-TDI/480] p 1846 N93-20320
Adiabatic radiant hot air burner
[PB93-114486] p 1987 N93-21220

BURNING RATE
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976

BUS CONDUCTORS
Study and development of a multiprocessor interface circuit, volume 1
[ECL-91-11-VOL-1] p 2044 N93-21000
Software design document for the generic avionics data bus tool kit
[AD-A259329] p 1784 N93-21259

BUTT JOINTS
A review of probabilistic fatigue life analyses for welded plate and tubular joints p 1944 N93-20728

C

C (PROGRAMMING LANGUAGE)
The Cheetah data management system
[DE93-004010] p 2092 N93-21973

C BAND
Remotely controlled C band signal generator
[AD-D015602] p 1880 N93-20014

C-135 AIRCRAFT
Float zone processing of germanium crystals on the KC-135 microgravity aircraft p 1803 N93-21077
Acceleration levels on the KC-135 p 1784 N93-21124

CABIN ATMOSPHERES
A model study of the aircraft cabin environment resulting from in-flight fires
[DOT/FAA/CT-90/22] p 1764 N93-21557

CABLES (ROPES)
Numerical stabilities aspects of cable dynamics simulation p 1931 N93-20650

CADMIUM
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497

CADMIUM SELENIDES
Electrochemical deposition of thin film semiconductors in microgravity: A feasibility study p 1803 N93-21079

CADMIUM TELLURIDES
GEODE 2: Manufacturing large area format cadmium-mercury-telluride crystals in a microgravity environment. Pressure sensor proof of concept p 1803 N93-21078

CALCULUS
A canonical calculus of residuals
[INRIA-RR-1542] p 2052 N93-20861
The origins of lambda-calculus and term rewriting systems
[INRIA-RR-1543] p 2053 N93-20870

CALIBRATING
Calibration of field reference panel and radiometers used in FIFE 1989
[NASA-CR-192198] p 2100 N93-20045

Investigation of the role of thermal boundary layer processes in initiating convection under the NASA SPACE Field Program p 2005 N93-20080
AMPR/SSMI data comparisons p 2005 N93-20081
Geometry and photometry in 3D visual recognition [AD-A259443] p 2066 N93-20126
Solar cell calibration by balloon flight p 1800 N93-20479
Calibration of the imaging conditions for the retransformation of digitized images obtained from laser light sheets [DLR-MITT-92-04] p 1910 N93-20745
On improving accuracy of machining centers [PAPER-C-3-1] p 2036 N93-20835
Accurate procedure for calibrating the CAO optical hygrometer [AP-30] p 1906 N93-20927
Principles and applications of measurement and uncertainty analysis in research and calibration [DE93-000034] p 1907 N93-21251
Creep Laboratory manual [NPL-DMM(A)-37] p 1951 N93-21565
The WAM model and ERS-1 p 1960 N93-21609
Calibration methods for explosives detectors p 1773 N93-21911

CALIFORNIA
Lithospheric dynamics near plate boundaries [NASA-CR-192108] p 1997 N93-20310
Relationship between ozone concentrations and air transport over western Arizona [PB93-114007] p 1990 N93-21238
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California [PB93-120053] p 2019 N93-21536
Public transportation alternative fuels: A perspective for small transportation operations [PB92-120120] p 1866 N93-21716
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary [PB92-182567] p 1867 N93-21717

CALIFORNIUM ISOTOPES
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863
Explosive detection system based on Electronic Neutron Generator (ENG) p 1766 N93-21870

CALORIC REQUIREMENTS
Nutrition and hydration status of aircrew members consuming the food packet, survival, general purpose, improved during a simulated survival scenario [AD-A258744] p 2022 N93-20384

CALORIMETERS
The electromagnetic calorimeter for the STAR experiment at RHIC [DE93-002780] p 2062 N93-21480

CAMERA SHUTTERS
A cryogenic shutter for the VLT NIR camera [MPE-237] p 1906 N93-20855

CAMERAS
Geometry and photometry in 3D visual recognition [AD-A259443] p 2066 N93-20126
A cryogenic shutter for the VLT NIR camera [MPE-237] p 1906 N93-20855
Reliable fusion of control and sensing in intelligent machines [NASA-CR-192780] p 2048 N93-21371
Video guidance sensor p 1812 N93-21409
A binocular stereo approach to AR/C at the Johnson Space Center p 1814 N93-21421
The nitrogen camera: A new explosive detector p 1766 N93-21867

CANADA
The ARK (Autonomous Robot for a Known environment) project p 1917 N93-20621

CANADIAN SPACE PROGRAM
Spacebound 1991 [CTN-93-60604] p 1802 N93-21070
Space science overview p 1802 N93-21071
Space station user development program: Future prospects p 1802 N93-21072
Space life sciences overview p 1802 N93-21074
Microgravity science activities in Canada p 1803 N93-21075
UDP sponsored opportunities for microgravity environment p 1803 N93-21076
Canadian microgravity experiments flown in 1990-1991 p 1807 N93-21101
CSAR-1: The first Canadian microgravity sounding rocket flight p 1807 N93-21103
Canada's longterm space plan and ISY activities p 1819 N93-21284

CANONICAL FORMS
A canonical calculus of residuals [INRIA-RR-1542] p 2052 N93-20861

CANTILEVER BEAMS
Green's function method for vibration of structures p 1934 N93-20667
Edge delamination of composite laminates p 1842 N93-21519

CAPACITANCE
Conducting polymers as potential active materials in electrochemical supercapacitors [DE93-003827] p 1861 N93-21675

CAPACITORS
Review on aluminum electrolytic condensers development p 1797 N93-20457
Conducting polymers as potential active materials in electrochemical supercapacitors [DE93-003827] p 1861 N93-21675

CAPE KENNEDY LAUNCH COMPLEX
Toxic substances registry system: Index of material safety data sheets [NASA-TM-108582] p 2024 N93-20998

CAPILLARY FLOW
A study of heat flux induced dryout in capillary grooves [AD-A259175] p 1899 N93-20270

CAPTURE EFFECT
Detector selection for nuclear-based explosive detection system p 1766 N93-21869

CARBOHYDRATES
Nutrition and hydration status of aircrew members consuming the food packet, survival, general purpose, improved during a simulated survival scenario [AD-A258744] p 2022 N93-20384

CARBON
Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields p 1955 N93-21580

CARBON COMPOUNDS
Fullerenes formation in flames p 1853 N93-20187
New compounds obtained by LPCVD in the B-C-N chemical system [REPT-921-430-111] p 1849 N93-20933

CARBON CYCLE
Earth observation in the TIGER programme of the UK Natural Environment Research Council p 1953 N93-21572

CARBON DIOXIDE
Screening analysis of CO2 utilization and fixation [DE93-004313] p 1994 N93-21850
The impact of electric vehicles on CO2 emissions [DE93-003719] p 1995 N93-21965

CARBON DIOXIDE CONCENTRATION
A 2 x CO2 experiment with prescribed changes in sea surface temperature p 1958 N93-21598

CARBON DIOXIDE LASERS
Computer modeling of pulsed CO2 lasers for lidar applications p 1913 N93-20106
Frequency conversion of a CO2 laser with ZnGeP2 [PB92-222785] p 1911 N93-21016

CARBON DIOXIDE REMOVAL
A membrane-based subsystem for water-vapor recovery from plant-growth chambers [NASA-CR-177602] p 2025 N93-20065

CARBON FIBER REINFORCED PLASTICS
Creep damage of carbon fiber reinforced PEEK p 1862 N93-20639
Creep of PEEK-graphite fibre composite material p 1930 N93-20644
Contribution to the study of composite material behavior in space environment [REPT-921-430-112] p 1833 N93-20869
Knitted carbon fiber reinforced thermoplastics: Structural characterization with image analysis p 1839 N93-21163
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test [MBB-FE-221-S-PUB-0483] p 1840 N93-21462
Debonding/Delamination of Composites [AGARD-CP-530] p 1840 N93-21507
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 1841 N93-21513
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
Delamination development under fatigue loading p 1842 N93-21521
Mode 2 damage development in carbon fibre reinforced plastics p 1842 N93-21523
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 1844 N93-21531
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 1844 N93-21534

CARBON FIBERS
Heat transfer device [NASA-CASE-LEW-14162-4] p 1832 N93-20568
Contribution to the study of composite material behavior in space environment [REPT-921-430-112] p 1833 N93-20869
The effect of fiber concentration, length and orientation on the thermal conductivity of a polycarbonate/pitch-based carbon fiber composite p 1834 N93-21133
Near net shape knitting of fiber glass and carbon for composites p 1836 N93-21145
Kynol (TM) Novoloid fibers: Survivable fibers for tough times p 1837 N93-21150
Activated carbon fibers in composites, chemically protective clothing and air purification p 1837 N93-21152
Oxide protective coatings on carbon composites for medium and high-temperature thermal cycling: New opportunities for the United Europe p 1838 N93-21160
The integrated design and manufacturing of composite structures for aircraft using an advanced tape layering technology [MBB-LME-251-S-PUB-0491-A] p 1783 N93-21401

CARBON MONOXIDE
Vibrational spectroscopic studies of adsorbates on bimetallic surfaces [AD-A258578] p 1855 N93-19963
Adiabatic radiant hot air burner [PB93-114486] p 1987 N93-21220
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry [PB92-218650] p 2001 N93-21783

CARBON STEELS
An experimental approach to size effect in rotating bending fatigue p 1922 N93-20339
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335

CARBON 13
NMR study of triazone compound formation p 1839 N93-21165

CARBON-CARBON COMPOSITES
Research on heat-resistance technology for HOPE p 1791 N93-20426
Traction and shearing dynamics of a three dimensional carbon/carbon composite [REPT-921-430-109] p 1833 N93-20931
Carbon/carbon and ceramic composites made by Aerospatiale [REPT-921-430-106] p 1840 N93-21457

CARBON-PHENOLIC COMPOSITES
Nuclear thermal rocket entry heating and thermal response preliminary analysis [DE93-002460] p 1830 N93-21728

CARBONATES
Gasifiers optimized for fuel cell applications [DE93-003486] p 1988 N93-21781

CARBONYL COMPOUNDS
NASA Space Engineering Research Center for utilization of local planetary resources [NASA-CR-191989] p 1850 N93-21564

CARGO
NASA Automated Rendezvous and Capture Review. Executive summary [NASA-TM-108597] p 1812 N93-21407

CARGO SPACECRAFT
Thruster configurations for maneuvering heavy payloads p 1813 N93-21415
Collision avoidance for CTV: Requirements and capabilities p 1817 N93-21437
On-orbit operational scenarios, tools, and techniques p 1817 N93-21442

CARRIER DENSITY (SOLID STATE)
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development [AD-A259177] p 2079 N93-20561

CARTESIAN COORDINATES
Variational nodal solution algorithms for multigroup criticality problems [DE93-003462] p 2042 N93-21964

CARTRIDGES
Determination of pyrotechnic functional margin p 1863 N93-20134
Development of a NASA standard gas generator p 1863 N93-20135

CASCADES
Surface modification using a cascade arc plasma source [ETN-93-93065] p 2074 N93-20936

CASSINI MISSION
GPHS-RTGs in support of the Cassini mission [DE93-002035] p 1825 N93-21702

CAST ALLOYS
On the drag of model dendrite fragments at low Reynolds number
[NASA-TM-105916] p 1855 N93-19974
The application of quality criteria for the prediction of porosity in the design of casting processes
[DE93-001719] p 1857 N93-21773

CASTING
Method of producing Bi-Sr-Ca-Cu-O superconducting materials in cast form
[AD-D015532] p 2080 N93-20777
The application of quality criteria for the prediction of porosity in the design of casting processes
[DE93-001719] p 1857 N93-21773

CASTINGS
Fatigue assessment of a cast component for a timber crane p 1924 N93-20353
The application of quality criteria for the prediction of porosity in the design of casting processes
[DE93-001719] p 1857 N93-21773
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies
[DE93-002906] p 1919 N93-21956

CASUALTIES
World Data Center A for Solid Earth Geophysics. Catalog of significant earthquakes 2150 B.C.-1991 A.D. including quantitative casualties and damage
[PB93-118198] p 2000 N93-21693

CATALOGS (PUBLICATIONS)
Pyrotechnically actuated systems database and applications catalog p 1864 N93-20136
Satellite situation report, volume 32, no. 4
[NASA-TM-108203] p 1824 N93-20999
Publications of the National Institute of Standards and Technology 1991 catalog
[PB92-217579] p 2091 N93-21344
NASA space geodesy program: Catalogue of site information
[NASA-TM-4482] p 1999 N93-21374
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663
World Data Center A for Solid Earth Geophysics. Catalog of significant earthquakes 2150 B.C.-1991 A.D. including quantitative casualties and damage
[PB93-118198] p 2000 N93-21693

CATALYSIS
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803

CATALYSTS
Dual cure solventless coating process
[DE93-001351] p 1845 N93-20021
Atomic oxygen protective coating with resistance to undercutting at defect sites
[NASA-CASE-LEW-15306-1] p 1859 N93-20566
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
Mechanisms and controlling characteristics of the catalytic oxidation of methane
[DE93-005719] p 1852 N93-21835

CATHODES
An electrocatalytic cathode device and a method for making such a cathode
[AD-D015586] p 1890 N93-20396
Cathodes for molten-salt batteries p 1987 N93-20525
Pyrite cathode material for a thermal battery
[AD-D015600] p 1891 N93-20792

CATHODIC COATINGS
An electrocatalytic cathode device and a method for making such a cathode
[AD-D015586] p 1890 N93-20396
Fundamental advances for characterizing cathodic protection systems
[PB93-125003] p 1851 N93-21825

CAUCHY PROBLEM
On homogeneous quasilinear evolution equation
[REPT-91-65] p 2052 N93-20854

CAVITATION FLOW
Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957

CAVITIES
Injection seeded, diode pumped regenerative ring Nd:YAG amplifier for spaceborne laser ranging technology development
[NASA-CR-192171] p 1910 N93-20298
A variational approach for torsion of multiply connected composite sections p 1845 N93-20633
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734
Magnetron sputtering on 3D components with less accessible areas
[MBB-Z-0360-91-B-PUB] p 1878 N93-21745

CEILINGS (ARCHITECTURE)
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions
[PB92-238690] p 1878 N93-21650

CEILINGS (METEOROLOGY)
The influence of high clouds on climate p 1956 N93-21588

CELESTIAL MECHANICS
On the normalized Hamiltonian formulation of the restricted three-body problem p 1944 N93-20727

CELL ANODES
The electrochemical oxidation of methane for fuel cells
[PB93-110120] p 1987 N93-21353

CELLULOSE
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
Special fibres from natural polymers p 1837 N93-21151
Applications of Visil fibres in functional textiles p 1837 N93-21154

CELLULOSE NITRATE
Ignition of nitrocellulose in various atmospheres
[AD-A257987] p 1849 N93-21223

CEMENTATION
Numerical validation of a constitutive theory for an arbitrarily fractured solid
[DE93-003863] p 2064 N93-21739

CENTAUR LAUNCH VEHICLE
NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492
An overview of autonomous rendezvous and docking system technology development p 1816 N93-21431

CENTRAL PROCESSING UNITS
Bottom-up parallelization of Tomita's algorithm p 2031 N93-20229
Review on radiation resistant 32 bit MPU p 1799 N93-20474

CENTROIDS
An analogue of Philon's line in n dimensions
[MEMO-1032] p 2054 N93-20957

CEPSTRAL ANALYSIS
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409

CERAMIC BONDING
Method to produce ceramic superconducting filaments bonded to metals
[AD-D015595] p 1859 N93-20786
Polyorganosilazane preceramic binder development for reaction bonded silicon nitride composites
[DE93-004063] p 1844 N93-21842

CERAMIC COATINGS
Stabilized zirconia/CoCrAlY high temperature coating
[AD-D015573] p 1859 N93-20276
Oxide protective coatings on carbon composites for medium and high-temperature thermal cycling: New opportunities for the United Europe p 1838 N93-21160
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335

CERAMIC FIBERS
Fiber-reinforced monoclinic celsian matrix composite material
[NASA-CASE-LEW-15269-1] p 1831 N93-20040

CERAMIC MATRIX COMPOSITES
Fiber-reinforced monoclinic celsian matrix composite material
[NASA-CASE-LEW-15269-1] p 1831 N93-20040
Adherence and reactivity of graphite base multimaterials
[ECL-92-04] p 1859 N93-20542
The overall response of composite materials undergoing large deformations
[AD-A259278] p 1832 N93-20606
Advanced industrial materials. An overview p 1845 N93-20623
Microgravity processing of ceramic composites p 1809 N93-21115
Toughness of Si3N4-SiC whisker composites
[REPT-921-430-118] p 1839 N93-21295
Carbon/carbon and ceramic composites made by Aerospatiale
[REPT-921-430-106] p 1840 N93-21457
Evolution of materials used in liquid propellant rocket engines
[DS-2025] p 1830 N93-21460
Erosion of composite ceramics
[DE93-004254] p 1862 N93-21853

CERAMICS
Improved ceramic slip casting technique --- application to aircraft model fabrication
[NASA-CASE-LAR-14471-1] p 1858 N93-20041
Principles of gas phase processing of ceramics during combustion p 1862 N93-20188
Combustion synthesis of ceramic and metal-matrix composites p 1854 N93-20203
Advanced industrial materials. An overview p 1845 N93-20623
Advanced structural ceramics p 1862 N93-20627
Probabilistic design procedures for load bearing ceramic components p 1930 N93-20647
Method to produce ceramic superconducting filaments bonded to metals
[AD-D015595] p 1859 N93-20786
High-temperature flexure fixture for advanced ceramics
[PB92-222959] p 1860 N93-21030
Finite element analytical techniques for ceramic production in microgravity-2 p 1809 N93-21116
Advanced lightweight ceramic candle filter module
[DE93-000211] p 1860 N93-21252
Thermal/chemical stability of ceramic cross flow filter materials
[DE93-002710] p 1860 N93-21491
Advanced ceramic component development for high temperature indirect gas-fired heating systems
[PB93-127033] p 1862 N93-21817
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies
[DE93-002906] p 1919 N93-21956
The high temperature materials laboratory: A research and user facility at the Oak Ridge National Laboratory
[DE93-003592] p 1953 N93-21994

CERTIFICATION
Guide for aviation medical examiners
[PB92-219690] p 2024 N93-21047
Certification plan for a planar near-field range used for high-performance phased-array testing
[PB92-213305] p 1885 N93-21493

CHAINS
Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714

CHALLENGER (ORBITER)
Implementation of the recommendations of the Presidential Commission on the Space Shuttle Challenger Accident
[NASA-TM-108646] p 1820 N93-19990
Report at a glance: Report of the Presidential Commission on the Space Shuttle Challenger Accident p 1820 N93-20036

CHANGE DETECTION
Dual difference filtering: A replacement for interpolation and subtraction to detect changes in misregistered signals
[AD-A259440] p 1880 N93-20013
Inverse sequential detection of parameter changes in developing time series
[NASA-CR-191996] p 2059 N93-21191
The global climate system. Climate system monitoring p 2014 N93-21450
Evaluation of the international directory network for location of data sets useful in global vegetation change assessment p 1954 N93-21575

CHANNEL FLOW
Use of the boundary element method in the resolution of the quasi-elliptic Navier-Stokes equations: Application to the calculation of a turbine flow
[ECL-91-13] p 1902 N93-20893
La Recherche Aerospatiale Bimonthly Bulletin, no. 250, May - June
[ONERA-1989-3] p 2060 N93-21948

CHANNELS (DATA TRANSMISSION)
Performance evaluation of Platform Data ManagementSystem under various degrees of protocol implementation
[NASA-CR-192408] p 2088 N93-20161
Error control techniques for satellite and space communications
[NASA-CR-192368] p 1884 N93-20613
Study and development of a multiprocessor interface circuit, volume 1
[ECL-91-11-VOL-1] p 2044 N93-21000
Software design document for the generic avionics data bus tool kit
[AD-A259329] p 1784 N93-21259

CHAOS
Physics-like mathematical model for chaos and ergodic criticality in four dimensions p 1944 N93-20729
Nonlinear ocean waves
[AD-A259335] p 2019 N93-21260

CHARACTER RECOGNITION
Research in text processing
[AD-A259434] p 2087 N93-20010
FASTUS: A system for extracting information from natural-language text
[AD-A259435] p 2087 N93-20011

The first Census Optical Character Recognition System Conference
[PB92-238542] p 2092 N93-21504
CHARACTERIZATION
Eagle-Picher Industries Sodium Sulfur Program
p 1987 N93-20523
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A259247] p 2080 N93-20581
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
Upper interior head protection. Volume 2: Fleet characterization and countermeasure evaluation
[PB93-113777] p 2027 N93-21795
CHARGE CARRIERS
Doping induced insulator-metal transition in the platinum based MX complexes
[DE93-003690] p 2083 N93-21996
CHARGE COUPLED DEVICES
IRCCD research p 1790 N93-20417
CHARGE DISTRIBUTION
Development and utilization of a semi-analytic alternative charge process for the rapid calculation of potential distributions and electron orbits
[ETN-93-93416] p 2062 N93-21209
CHARGE EFFICIENCY
Mechanisms for capacity fading in the NiH2 cell and its effects on cycle life p 1983 N93-20496
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497
CHARGE EXCHANGE
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
Selfconsistent analysis of radial electric field and fast ion losses in CHS Torsatron/Heliotron
[NIFS-178] p 2071 N93-20264
Angular distributions of charge exchange collisions at very low energies
[DE93-002338] p 2064 N93-21751
CHARGED PARTICLES
Optical tracking of charged particle beams
[AD-D015592] p 2061 N93-20802
Radiation from moving charged particles with spin
[DE93-004633] p 2063 N93-21703
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments
[DE93-002897] p 1912 N93-21955
CHASSIS
Higher frequency transmission properties of motor car-chassis systems
[ETN-93-92563] p 1915 N93-20877
CHEBYSHEV APPROXIMATION
Research in computational fluid dynamics and analysis of algorithms
[NASA-CR-192309] p 1901 N93-20748
CHECKOUT
On the typography of flight-deck documentation
[NASA-CR-177605] p 2087 N93-19970
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: McDonnell-Douglas Helicopter Company achievements
p 1782 N93-21314
CHEMICAL ANALYSIS
A review of the associated particle imaging technique
[DE93-002238] p 2061 N93-20023
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
CHEMICAL BONDS
Vibrational spectroscopic studies of adsorbates on bimetallic surfaces
[AD-A258578] p 1855 N93-19963
Molecular theory and computer simulation studies of natural and synthetic gas mixtures
[PB92-235696] p 1850 N93-21651
Numerical validation of a constitutive theory for an arbitrarily fractured solid
[DE93-003863] p 2064 N93-21739
CHEMICAL CLEANING
ASRM process development in aqueous cleaning
[NASA-CR-191949] p 1829 N93-21355
CHEMICAL COMPOSITION
Controlled nucleation and growth of semiconducting diamond
[AD-A258541] p 2078 N93-20056
Theoretical studies in interstellar cloud chemistry
[NASA-CR-192010] p 2096 N93-20269
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049
Lunar and asteroid composition assessment using remote secondary ion mass spectrometry
[DE93-003839] p 2098 N93-21849
PFNA technique for the detection of explosives
p 1765 N93-21865
CHEMICAL DEFENSE
Activated carbon fibers in composites, chemically protective clothing and air purification
p 1837 N93-21152
CHEMICAL ELEMENTS
Thermodynamic data for fifty reference elements
[NASA-TP-3287] p 2084 N93-19977
Principles of nuclear-based explosive detection systems p 1765 N93-21861
CHEMICAL PROPERTIES
Aerosol chemistry in GLOBE p 2009 N93-20102
On the size dependence of the chemical properties of cloud droplets: Exploratory studies by aircraft
p 2011 N93-20281
CHEMICAL PROPULSION
Advanced expander test bed program
[NASA-CR-191049] p 1828 N93-19991
Atomic hydrogen propellants: Historical perspectives and future possibilities
[NASA-TM-106053] p 1829 N93-20614
CHEMICAL REACTION CONTROL
Mechanisms and controlling characteristics of the catalytic oxidation of methane
[DE93-005719] p 1852 N93-21835
CHEMICAL REACTIONS
Low-pressure diamond growth using a secondary radical source
[AD-A258539] p 2077 N93-20055
Theoretical studies in interstellar cloud chemistry
[NASA-CR-192010] p 2096 N93-20269
Competitive pairing and the chemistry of coadsorbed hydrogen and halogens on Ge(100)
[AD-A258538] p 1846 N93-20386
CHEMICAL REACTORS
Recent results and new hardware developments for protein crystal growth in microactivity
[NASA-CR-191994] p 1875 N93-21356
CHEMILUMINESCENCE
Analysis of explosives using high speed gas chromatography with chemiluminescent detection
p 1775 N93-21923
CHEMISORPTION
Mechanisms and controlling characteristics of the catalytic oxidation of methane
[DE93-005719] p 1852 N93-21835
CHEMOTHERAPY
Rapid susceptibility testing of mycobacterium avium complex and mycobacterium tuberculosis isolated from AIDS patients
[NASA-CR-192382] p 2023 N93-20736
CHESAPEAKE BAY (US)
Trends in nitrogen in the Chesapeake Bay, 1984-1990
[PB93-122174] p 1990 N93-21217
CHINESE SPACE PROGRAM
International Space Year in China
p 1975 N93-21272
CHIPS (ELECTRONICS)
Analysis and measurement of thermal resistance in a 3-dimensional silicon multichip module populated with assembly test chips
[DE93-000743] p 1888 N93-20029
Review on surface mounting components (wire wound chip resistors) development p 1797 N93-20459
Improvement of voltage reference Zener diode (1SZ48A) p 1797 N93-20462
Review on Schottky barrier diode development
p 1798 N93-20464
CMOS circuit technique for integrated Viterbi decoders
[ETN-93-92568] p 1892 N93-20882
Microelectronics packaging automation
[DE93-004822] p 1894 N93-21725
CHIRP SIGNALS
High range resolution radar target identification using the Prony model and hidden Markov models
[AD-A259210] p 1883 N93-20553
CHLORINE
Cathodes for molten-salt batteries
p 1987 N93-20525
CHLOROPHYLLS
Estimating chlorophyll concentrations from Thematic Mapper data p 1954 N93-21577
Marine productivity along the northwest coast of Africa (Mauritania): Estimation from satellite data
p 1955 N93-21578
Development of a multi-sensor in situ fiber optic fluorometer
[DE93-004646] p 1995 N93-21975
CHROMIUM
Electron impact ionization of highly charged lithiumlike ions
[DE93-002895] p 2065 N93-21954
CHROMIUM ALLOYS
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H
[DE93-004064] p 1876 N93-21999
CHROMOSPHERE
The detection and characterization of high frequency and high-wavenumber solar oscillations
p 2100 N93-20291
CHRONOLOGY
Thirty years together: A chronology of U.S.-Soviet space cooperation
[NASA-CR-185707] p 2102 N93-19975
CIRCUIT BOARDS
Development of high heat radiation printed boards
p 1796 N93-20456
Vacuum multilayer lamination of printed wiring boards
[DE93-004912] p 1894 N93-21727
CIRCUIT PROTECTION
Pulse discharge laser with passive arc protection
[AD-D015601] p 1909 N93-20262
CIRCUITS
The M68HC11 gripper controller electronics
[NASA-CR-192732] p 1893 N93-21309
CIRCULAR CYLINDERS
Experiments on smooth cantilevered circular cylinders in a low-turbulence uniform flow. Part 2: Fluctuating loads on a cantilever of aspect ratio 30
[PB93-110500] p 1903 N93-21382
Experiments on smooth cantilevered circular cylinders in low-turbulence uniform flow. Part 1: Mean loading with aspect ratios in the range 4 to 30
[PB93-111763] p 1903 N93-21383
CIRCULAR PLATES
Delamination buckling in circular plates
p 1931 N93-20653
CIRRUS CLOUDS
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984
The effects of small ice crystals on the infrared radiative properties of cirrus clouds
[NASA-CR-192181] p 2002 N93-20046
CITIES
Atlanta ozone precursor monitoring study data report
[PB92-220656] p 1991 N93-21495
Proceedings of the First International Symposium on Explosive Detection Technology
[DOT/FAA/CT-92/11] p 1764 N93-21856
CIVIL AVIATION
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 1: Plenary Session
[NASA-TM-108651] p 2085 N93-20329
Poland civil aviation master plan and investment program: Executive summary
[PB92-213685] p 1759 N93-21342
Poland civil aviation master plan and investment program
[PB92-213693] p 1759 N93-21343
Airline quality issues 1992: Proceedings of the International Forum on Airline Quality
[NIAR-92-10] p 1764 N93-21561
Definitional mission for civil aviation master plan for Poland
[PB92-213974] p 1760 N93-21713
Proceedings of the First International Symposium on Explosive Detection Technology
[DOT/FAA/CT-92/11] p 1764 N93-21856
The UK perspective on aviation security
p 1764 N93-21858
Insights into US domestic aviation
p 1764 N93-21859
CLADDING
Optical fiber fluorosensor
[NASA-CASE-LAR-14525-1-CU] p 2069 N93-22008
CLAMPS
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006
CLASSIFICATIONS
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 1
[RR-874-M] p 2053 N93-20873
Basic and evolutive concepts of pattern recognition: Pluridiscipline approach. Approximation concept
[ISAL-91-0098] p 2047 N93-20941
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 2
[RR-875-M] p 2056 N93-21395
The influence of high clouds on climate
p 1956 N93-21588

Use of AVHRR-derived cloudiness and precipitation in operational weather forecasting and in model studies p 1959 N93-21608
Operational cloud classification with Meteosat data p 1962 N93-21622
Use of ecoregions in biological monitoring [PB93-106730] p 1992 N93-21656
Advanced very high resolution radiometer data to update forest area change for midsouth states [PB93-121416] p 1979 N93-21685

CLASSIFIERS
Acoustophoresis separation method [NASA-CASE-LAR-13388-2] p 1846 N93-20570
One-class classifiers and their application to synthetic aperture radar target recognition [DE93-000716] p 1886 N93-21769

CLATHRATES
The sensitivity of seismic responses to gas hydrates [DE93-000216] p 1999 N93-21253

CLEAN FUELS
First international alternative fueled vehicle round-up [DE93-002779] p 1916 N93-21667
Public transportation alternative fuels: A perspective for small transportation operations [PB92-120120] p 1866 N93-21716
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary [PB92-182567] p 1867 N93-21717

CLEANERS
ASRM process development in aqueous cleaning [NASA-CR-191949] p 1829 N93-21355

CLEANING
Macroscopic surface cleaning using a high repetition rate ultraviolet laser [DE93-002545] p 1912 N93-21770

CLIMATE
Global temperature variations p 2003 N93-20068
Nonlinear dynamics of global atmospheric and Earth system processes p 2001 N93-20076
Life cycles of transient planetary waves p 2004 N93-20077
A modeling study of marine boundary layer clouds p 2010 N93-20105
Manual on climate of the USSR. Issue 16: Armenian SSR. Part 5: Cloud cover and atmospheric phenomena-translation [AD-A259288] p 2012 N93-20609
Climate of Salt Lake City, Utah [PB92-228402] p 2013 N93-21200
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990) [PB93-116598] p 2019 N93-21389
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics [NASA-CR-192720] p 2014 N93-21492
The influence of high clouds on climate p 1956 N93-21588
Remote sensing of Arctic sea ice using the ERS-1 SAR p 1957 N93-21593
Monthly precipitation and runoff data for validation of climate models p 1959 N93-21605
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project [PB93-129815] p 1994 N93-21827
Pinatubo eruption winter climate effects: Model versus observations [NASA-CR-191955] p 1994 N93-21946

CLIMATE CHANGE
Global change data base training exercise manual. Exploring Earth's environment: Africa as an example [PB92-224682] p 1990 N93-21211
Space program in Indonesia p 1975 N93-21273
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22 [PB93-121846] p 2101 N93-21292
The global climate system. Climate system monitoring p 2014 N93-21450
National Oceanographic Data Center inventory of physical oceanographic profiles: Global distributions by year for all countries [PB93-116531] p 2019 N93-21476
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting [ESA-ISY-1-VOL-1] p 1953 N93-21569
Global models of ecosystem change p 1953 N93-21570
Earth observation in the TIGER programme of the UK Natural Environment Research Council p 1953 N93-21572
Preparation of AVHRR GAC data sets for global change studies p 1954 N93-21573
Monitoring wetland hydrology by remote sensing: A case study of the Sudd using infra-red imagery and radar altimetry p 1955 N93-21584
A 2 x CO2 experiment with prescribed changes in sea surface temperature p 1958 N93-21598
Comparison of monthly precipitation analyses derived from conventional measurements, satellite estimates and model results p 1958 N93-21599
Lake remote sensing for global climate research p 1958 N93-21602
Global Change Data Base Pilot (Diskette) Project for Africa. Dase base documentation version 1.1 [PB93-117927] p 2000 N93-21686
US Global Change Data and Information Management Program Plan: A report by the Committee on Earth and Environmental Sciences [PB93-101293] p 1993 N93-21695
Economics and global change: The FY 1993 research program on the economics of global change. A supplement to the US President's FY 1993 budget and a companion document to out changing planet [PB93-101244] p 1993 N93-21696
Proceedings of the International COADS workshop [PB93-123552] p 1993 N93-21800
Screening analysis of CO2 utilization and fixation [DE93-004313] p 1994 N93-21850

CLIMATOLOGY
Surface observation climatic summaries [AD-A258589] p 2001 N93-19964
Global rainfall monitoring by SSM/I p 2003 N93-20069
Planetary circulations in the presence of transient and self-induced heating p 2003 N93-20071
Improvement and further development of SSM/I overland parameter algorithms using the WetNet workstation p 2005 N93-20083
Climatic variation of storms p 2006 N93-20084
OLS data system/global survey of lightning p 2006 N93-20085
Atmospheric electricity/meteorology analysis p 2006 N93-20086
A satellite-borne radar wind sensor (RAWS) p 2008 N93-20096
Infrared backscatter climatology and MACAWS p 2009 N93-20098
CO2 lidar backscatter experiment p 2009 N93-20103
Remote sensing of water vapor features p 2010 N93-20107
A horizontal refractivity depiction product: An evaluation [AD-A258738] p 1966 N93-20401
Reports on cartography and geodesy, series 1, number 106 [ETN-93-92583] p 1967 N93-20528
Tasks and construction of the geo-information system within the regional climatic project (REKLIP) in the Upper Rhine Valley (Germany) p 1968 N93-20538
Manual on climate of the USSR. Issue 16: Armenian SSR. Part 5: Cloud cover and atmospheric phenomena-translation [AD-A259288] p 2012 N93-20609
Climatological study of ozone in the boundary layer above Belgium [MISC-SER-A-127] p 1989 N93-20925
Climate of Salt Lake City, Utah [PB92-228402] p 2013 N93-21200
Meteorological events in Arizona and New Mexico during Swamp [PB93-100410] p 2013 N93-21227
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present [PB93-112225] p 2013 N93-21229
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990) [PB93-116598] p 2019 N93-21389
The global climate system. Climate system monitoring p 2014 N93-21450
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics [NASA-CR-192720] p 2014 N93-21492
Monitoring wetland hydrology by remote sensing: A case study of the Sudd using infra-red imagery and radar altimetry p 1955 N93-21584
Earth radiation and cloud cover analysis using NOAA satellite data p 1956 N93-21587
Cloud-generated radiative heating determined from satellite measurements p 1956 N93-21589
Sampling properties of a spaceborne lidar (ATLID) p 1961 N93-21618
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project [PB93-129815] p 1994 N93-21827

CLOSED ECOLOGICAL SYSTEMS
Study on environment control and life support technology p 1789 N93-20413

CLOTHING
Textiles and Composites 1992 [VTT-SYMPOSIUM-133] p 1834 N93-21129

CLOUD COVER
Manual on climate of the USSR. Issue 16: Armenian SSR. Part 5: Cloud cover and atmospheric phenomena-translation [AD-A259288] p 2012 N93-20609
Earth radiation and cloud cover analysis using NOAA satellite data p 1956 N93-21587
Estimating the vertical dimension of convective cloudiness over the polar ocean from AVHRR data p 1956 N93-21590
Use of AVHRR-derived cloudiness and precipitation in operational weather forecasting and in model studies p 1959 N93-21608
Bispectral cloud analysis for the Atlantic-European region using digital Meteosat images p 1962 N93-21624
A comparative study of estimation of partial cloud coverage within a pixel: Proposed adaptive least square method with constraints p 1962 N93-21626
Mapping of satellite-derived sea surface temperatures at high resolution in cloudy regions p 1963 N93-21630

CLOUD PHYSICS
The effects of small ice crystals on the infrared radiative properties of cirrus clouds [NASA-CR-192181] p 2002 N93-20046
A documentation of icing-relevant cloud-physical parameters on vertical soundings of stratiform clouds (continuation) [DLR-MITT-91-19] p 2012 N93-21040
Capacities of the DLR polarization diversity radar for determining icing relevant cloudphysical parameters [DLR-MITT-91-14] p 2014 N93-21367
CLEOPATRA: A step towards GEWEX on the regional scale p 1963 N93-21628

CLOUDS (METEOROLOGY)
Cloud radiative forcing effects on observed and simulated global energetics p 2003 N93-20072
On the size dependence of the chemical properties of cloud droplets: Exploratory studies by aircraft p 2011 N93-20281
A documentation of icing-relevant cloud-physical parameters on vertical soundings of stratiform clouds (continuation) [DLR-MITT-91-19] p 2012 N93-21040
The influence of high clouds on climate p 1956 N93-21588
Cloud-generated radiative heating determined from satellite measurements p 1956 N93-21589
Estimating the vertical dimension of convective cloudiness over the polar ocean from AVHRR data p 1956 N93-21590
Detection of polar stratospheric clouds from satellite p 1957 N93-21591
Microwave radiometry for monitoring the diverse cloudiness regimes on Earth: A review p 1958 N93-21600
Sampling properties of a spaceborne lidar (ATLID) p 1961 N93-21618
Operational cloud classification with Meteosat data p 1962 N93-21622
Qualitative and quantitative diagnosis of cloud images for use in weather forecast p 1962 N93-21623
Bispectral cloud analysis for the Atlantic-European region using digital Meteosat images p 1962 N93-21624
Measurement and interpretation of the sunlight backscattered from clouds within the oxygen-A absorption band p 1963 N93-21627

CLUSTER ANALYSIS
Oxygen configurations and their effect on charge transfer in YBa2Cu3O(z) [DE93-002543] p 2081 N93-21489
Operational cloud classification with Meteosat data p 1962 N93-21622

CLUSTERS
Stable clusters in the condensed state and some possibilities for gas phase clusters [DE93-004446] p 2064 N93-21846

CMOS
Development of radiation resistant HCMOSIC p 1798 N93-20467
Development of 256 kbit PROM p 1799 N93-20470
CMOS circuit technique for integrated Viterbi decoders [ETN-93-92568] p 1892 N93-20882
Contribution to the development of an ISFET type integrated sensor using an ASIC thread in CMOS technology [ECL-91-09] p 1892 N93-21006

Design and characterization of the BVX: An 8-channel CMOS preamplifier-shaper for silicon strips
[DE93-003619] p 1894 N93-21733
A semi-custom dual channel peak hold circuit for spaceborne instrumentation
[DE93-003801] p 1828 N93-21777

COAL
Technologies options for acid rain control
[PB93-106854] p 1991 N93-21473

COAL GASIFICATION
Gasifiers optimized for fuel cell applications
[DE93-003486] p 1988 N93-21781

COALESCING
Effect of surface active materials on bubble dynamics in two-phase flow
[AD-A259340] p 1902 N93-21264

COANDA EFFECT
Aerodynamic surface tip vortex attenuation system
[AD-D015606] p 1760 N93-20017

COARSENESS
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978

COASTAL WATER
Protecting the nation's wetlands, oceans, and watersheds: An overview of programs and activities
[PB93-105609] p 1992 N93-21655

COASTAL ZONE COLOR SCANNER
Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields
p 1955 N93-21580

COASTS
Hurricane experience levels of coastal county populations from Texas to Maine, August 1992
[PB93-105971] p 2013 N93-21228
Relationship between ozone concentrations and air transport over western Arizona
[PB93-114007] p 1990 N93-21238
Marine productivity along the northwest coast of Africa (Mauritania): Estimation from satellite data
p 1955 N93-21578
Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields
p 1955 N93-21580
Seasonal SST and upwelling indices along the northwest African coast p 1964 N93-21633

COATING
Dual cure solventless coating process
[DE93-001351] p 1845 N93-20021
Surface-coating-free materials workshop
[PB93-101160] p 1861 N93-21683

COATINGS
Examination of laser conditioning using atomic force microscopy
[DE93-001328] p 1909 N93-20020
Surface-coating-free materials workshop
[PB93-101160] p 1861 N93-21683

COBALT
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792

COBOL
Conformance test specification for COBOL intrinsic function module
[PB92-229178] p 2040 N93-21351

COCKPIT SIMULATORS
A synthetic environment flight simulator: The AFIT virtual cockpit
[AD-A259220] p 1788 N93-20576
Results of prototype software development for automation of shuttle proximity operations
p 1815 N93-21425

COCKPITS
On the typography of flight-deck documentation
[NASA-CR-177605] p 2087 N93-19970
A synthetic environment flight simulator: The AFIT virtual cockpit
[AD-A259220] p 1788 N93-20576

CODERS
A joint source/channel coder design
p 1881 N93-20177
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409

CODING
Multi-stage decoding for multi-level block modulation codes
[NASA-CR-192363] p 1880 N93-20043
A robust coding scheme for packet video
p 1881 N93-20174
Compressing subbanded image data with Lempel-Ziv-based coders
[NASA-TM-105998] p 1882 N93-20257
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409
Error control techniques for satellite and space communications
[NASA-CR-192368] p 1884 N93-20613
Efficient implementation of a functional language for the definition of practicable, denotational semantics
[ETN-93-93413] p 2055 N93-21176

COEFFICIENTS
Thermodynamic data for fifty reference elements
[NASA-TP-3287] p 2084 N93-19977
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409
Transmittance coefficients generation for fast radiative transfer models: Application to new satellite sounding systems p 1960 N93-21612

COGENERATION
An evaluation of R/D needs based on cogeneration system operational experience
[PB93-114494] p 1987 N93-21455

COGNITION
The central executive component of working memory
[AD-A258724] p 2025 N93-20326
Basic and evolutive concepts of pattern recognition: Pluridiscipline approach. Approximation concept
[ISAL-91-0098] p 2047 N93-20941
Modelling knowledge in electronic study books
[MEMO-1029] p 2091 N93-21032

COGNITIVE PSYCHOLOGY
The central executive component of working memory
[AD-A258724] p 2025 N93-20326
Correlates of creative problem solving
[AD-A258720] p 2085 N93-20369

COHERENT LIGHT
Optical correlators for automated rendezvous and capture p 1813 N93-21416

COHERENT RADIATION
IDA gamma ray laser: Investigation of the feasibility of developing a laser using nuclear transitions
[AD-A259476] p 1909 N93-20246

COHERENT SCATTERING
Polarization effects in coherent and incoherent photon scattering: Survey of measurements and theory relevant to radiation transport calculations
[PB93-126092] p 2064 N93-21828

COLD FRONTS
Estimating the vertical dimension of convective cloudiness over the polar ocean from AVHRR data
p 1956 N93-21590

COLLISION AVOIDANCE
Fundamentals of adaptive anticipation techniques for the detection of threatening air traffic conflicts: Investigation of the horizontal proximity situation in the case of expected heading changes
[DLR-MITT-91-21] p 1779 N93-21004
Distance estimation and collision prediction for on-line robotic motion planning
[NASA-CR-192737] p 2049 N93-21390
Collision avoidance for CTV: Requirements and capabilities p 1817 N93-21437
On-orbit operational scenarios, tools, and techniques
p 1817 N93-21442
Domain engineering validation case study: Synthesis for the air traffic display/collision warning monitor domain version 01.00.03
[AD-A259407] p 1780 N93-21671
Avoiding space robot collisions utilizing the NASA/GSFC tri-mode skin sensor
[NASA-CR-192292] p 2049 N93-21812

COLLISIONAL PLASMAS
Ion trapping in dusty plasmas
[MPE-PREPRINT-219] p 2075 N93-21405

COLLOCATION
Linear passive impedance p 1943 N93-20719

COLLOIDS
Thermodynamic modeling for organic solid precipitation
[DE93-000104] p 1851 N93-21767

COLOR
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119
Forcing colorations, intervals and the perfect graph conjecture (an extended abstract)
[RR-867-M] p 2053 N93-20945

COLOR CODING
Compression of color-mapped images
p 1881 N93-20173

COLOR-COLOR DIAGRAM
Thirteen new BL Lacertae objects discovered by an efficient x ray/radio/optical technique
p 2095 N93-20796

COLORIMETRY
Estimating chlorophyll concentrations from Thematic Mapper data p 1954 N93-21577

COLUMNS (PROCESS ENGINEERING)
Axial response and pulse behavior of a cylindrical liquid column. Part 2
[LRT-WE-9-FB-2-1991-PT-2] p 1903 N93-21296
Natural axisymmetric frequencies of cylindrical liquid column with anchored free surface
[LRT-WE-9-FB-3-1991] p 1903 N93-21297
Natural frequencies and response of spinning liquid column with partially sliding contact line
[LRT-WE-9-FB-24-1991] p 1903 N93-21298

COLUMNS (SUPPORTS)
Prebuckling deflections and lateral buckling: Theory
[PB92-225382] p 1946 N93-21018
The flexural behaviour of thin-walled singly symmetric columns
[PB92-225408] p 1946 N93-21020
Ultimate strength of geometrically imperfect angle columns
[PB93-111771] p 1947 N93-21235

COMBAT
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580

COMBINATORIAL ANALYSIS
Evaluation and comparative study of combinatorial optimization algorithms: Application to the problem of process placement
[RR-886-I] p 2043 N93-20798

COMBUSTIBLE FLOW
Projectile base bleed technology. Part 2: User's guide CMINT computer code, version 5.04-BRL
[AD-A258630] p 1897 N93-19999
Numerical simulation of the internal aerodynamic in the combustion chamber of the reciprocating engines using a finite element method
[ECL-90-014] p 1915 N93-21005

COMBUSTION
The Second International Microgravity Combustion Workshop
[NASA-CP-10113] p 1868 N93-20178
Overview of NASA's microgravity combustion science and fire safety program p 1868 N93-20180
An overview of European activities on microgravity combustion p 1868 N93-20181
Japan's microgravity combustion science program
p 1868 N93-20182
Capabilities and constraints of typical space flight hardware p 1868 N93-20183
Capabilities and constraints of combustion diagnostics in microgravity p 1869 N93-20185
Priorities for microgravity combustion research and goals for workshop discussions p 1869 N93-20186
Principles of gas phase processing of ceramics during combustion p 1862 N93-20188
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions
p 1853 N93-20192
Visualization and imaging methods for flames in microgravity p 1853 N93-20193
Selected microgravity combustion diagnostic techniques p 1853 N93-20194
Laser diagnostics for microgravity droplet studies
p 1853 N93-20195
Studies of premixed laminar and turbulent flames at microgravity p 1853 N93-20196
Modeling of microgravity combustion experiments
p 1853 N93-20197
Structure and dynamics of premixed flames in microgravity p 1853 N93-20198
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
Microgravity combustion of dust suspensions
p 1853 N93-20201
Combustion synthesis of ceramic and metal-matrix composites p 1854 N93-20203
Fire safety practices in the Shuttle and the Space Station Freedom p 1825 N93-20204
Opposed-flow flame spreading in reduced gravity
p 1854 N93-20206
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
A fundamental study of smoldering combustion in microgravity p 1854 N93-20208
A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210

Metals combustion in normal gravity and microgravity
p 1854 N93-20211
Computational/experimental studies of isolated, single component droplet combustion p 1854 N93-20213
Combustion experiments in reduced gravity with two-component miscible droplets p 1854 N93-20214
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
High-pressure droplet combustion studies
p 1854 N93-20216
Combustion of interacting droplet arrays in a microgravity environment p 1854 N93-20217
The electrospray: Fundamentals and combustion applications p 1855 N93-20218
Ignition of nitrocellulose in various atmospheres
[AD-A257987] p 1849 N93-21223

COMBUSTION CHAMBERS
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114
Characterizing droplet combustion of pure and multi-component liquid fuels in a microgravity environment p 1855 N93-20219
Thermodynamic flow description of a ramjet for determination of engine forces and moments
[ESA-TT-1266] p 1786 N93-21288
Evolution of materials used in liquid propellant rocket engines
[DS-2025] p 1830 N93-21460

COMBUSTION CHEMISTRY
Modeling of microgravity combustion experiments
p 1853 N93-20197

COMBUSTION PHYSICS
Overview of NASA's microgravity combustion science and fire safety program p 1868 N93-20180
Visualization and imaging methods for flames in microgravity p 1853 N93-20193
Modeling of microgravity combustion experiments
p 1853 N93-20197
A fundamental study of smoldering combustion in microgravity p 1854 N93-20208
Computational/experimental studies of isolated, single component droplet combustion p 1854 N93-20213
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237

COMBUSTION PRODUCTS
Material and method for fast generation of hydrogen gas and steam
[AD-D015559] p 1847 N93-20781
Adiabatic radiant hot air burner
[PB93-114486] p 1987 N93-21220
Technologies options for acid rain control
[PB93-106854] p 1991 N93-21473
National Center for Atmospheric Research, Fiscal Year 1991
[PB93-129914] p 2000 N93-21547

COMET RENDEZVOUS ASTEROID FLYBY MISSION
National Aeronautics and Space Administration: Statement of the Space Science Working Group
p 2094 N93-21682

COMMAND AND CONTROL
Packet telecommand standard
[ESA-PSS-04-107-ISSUE-2] p 1884 N93-21001
Ground segment infrastructure standards
[ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187

COMMERCE
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128
Textiles and Composites 1992
[VTT-SYMPOSIUM-133] p 1834 N93-21129
Small business profiles, 1992
[PB93-110914] p 2086 N93-21548
National Aeronautics and Space Administration: Statement of Miguel A. Hernandez, Jr., Hernandez Engineering Co. p 2094 N93-21680

COMMITTEE ON SPACE RESEARCH
Pakistan Space and Upper Atmosphere Research Commission p 1819 N93-21285

COMMUNICATING
Nonmonotonic temporal reasoning
[AD-A258699] p 2032 N93-20377
An order-theoretic model for the algebra of communicating processes
[RUU-CS-92-02] p 2054 N93-21034

COMMUNICATION
Deterministic communication complexity of the Hamming distance
[MEMO-1026] p 2056 N93-21399

COMMUNICATION EQUIPMENT
Crustal deformation measurements in the vicinity of Vandenberg Air Force Base
[AD-A258536] p 1996 N93-20053
Research on HOPE communication and data processing equipment p 1792 N93-20429
Research and development of K-band intersatellite communication experiment equipment onboard ETS-6
p 1793 N93-20434
Review of the Year 1991 p 1886 N93-21558

COMMUNICATION NETWORKS
Microwave vs optical crosslink study
[NASA-CR-192207] p 1879 N93-19989
Research on data relay and tracking satellite systems
p 1790 N93-20418
PARTNERS p 1978 N93-21287

COMMUNICATION SATELLITES
NASA Center update: Goddard Space Flight Center
p 1983 N93-20491

COMMUNICATION THEORY
Reduced electrical bandwidth receivers for direct detection 4-ary PPM optical communication intersatellite links
[NASA-CR-192310] p 1880 N93-19993
Joint parameters estimation and symbols detection for digital communication over linear or nonlinear unknown channels
[TELECOM-PARIS-91-D-013] p 1885 N93-21394

COMMUNICATIONS TECHNOLOGY SATELLITE
Research and development of K-band intersatellite communication experiment equipment onboard ETS-6
p 1793 N93-20434
Overview of KITSAT p 1976 N93-21275
PARTNERS p 1978 N93-21287

COMPARISON
SSG 5.98: Atmospheric excitation of the Earth's rotation p 1974 N93-20991
Analysis and synthesis of catalogues of extragalactic radio sources
[MITT-SER-A-231] p 2102 N93-21053
Comparison of the measurements of temperature and sensible heat flow with an ultrasonic anemometer-thermometer and a temporal high resolution platinum wire-resistance thermometer
[GKSS-92/E/11] p 1907 N93-21461

COMPILERS
Tomita's algorithm in practical applications
p 2031 N93-20227
Bottom-up parallelization of Tomita's algorithm
p 2031 N93-20229
MODULA-2* and its compilation
[INRIA-RR-1421] p 2037 N93-20859
Efficient compilation of a synchronous declarative language: LUSTRE-V3 code generator
[ETN-93-92679] p 2038 N93-20899
A relocatable compiler for mathematical expressions
[REPT-92-035] p 2028 N93-21183
Conformance test specification for COBOL intrinsic function module
[PB92-229178] p 2040 N93-21351

COMPLETENESS
Resolution in modal propositional logic
[REPT-91-59] p 2052 N93-20853

COMPLEX NUMBERS
Contribution to computer arithmetic
[ETN-93-92680] p 2053 N93-20901

COMPLEX SYSTEMS
Computer aided reliability, availability, and safety modeling for fault-tolerant computer systems with commentary on the HARP program
[NASA-CR-192405] p 2029 N93-19981
The 1991 lectures in complex systems
[AD-A259428] p 2050 N93-20008
Acquisition and production of skilled behavior in dynamic decision-making tasks
[NASA-CR-192361] p 2025 N93-20908
Use of neural networks in the analysis of complex systems
[DE93-003554] p 2049 N93-21847
Monitoring of vibrating machinery using artificial neural networks
[DE93-003566] p 2050 N93-21848

COMPLEXITY
Fast theorem proving in intuitionistic propositional logic
[CWI-CS-R9157] p 2051 N93-20840
The complexity of the free space for a robot moving amidst fat obstacles
[RUU-CS-92-05] p 1915 N93-21171
Deterministic communication complexity of the Hamming distance
[MEMO-1026] p 2056 N93-21399

COMPOSITE MATERIALS
Nondestructive evaluation of composites using infrared imaging
[AD-A259412] p 1831 N93-20123
Adherence and reactivity of graphite base multimaterials
[ECL-92-04] p 1859 N93-20542
Compression-after-impact behavior of ARALL(trade name)-1 laminates
[AD-A259203] p 1832 N93-20550
Heat transfer device
[NASA-CASE-LEW-14162-4] p 1832 N93-20568
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2
[ISBN-0920049-04] p 1925 N93-20616
Smart materials p 1845 N93-20624
A variational approach for torsion of multiply connected composite sections p 1845 N93-20633
On homogenization method and large deformations
p 1845 N93-20634
Nonhomogeneous interface stress analysis in composite media using a mixed finite element formulation
p 1929 N93-20640
Reliability of failure envelopes for composite materials
p 1929 N93-20642
Two-D to three-D global/local finite element analysis of symmetric finite composite laminates with holes
p 1930 N93-20645
Large amplitude free vibrations of cross-ply composite beams p 1930 N93-20646
Semi-numerical approach to the buckling of composite panel p 1935 N93-20676
Nondestructive evaluation of surface-breaking cracks in composite plates p 1936 N93-20680
Boundary element fracture mechanics analysis in plane orthotropic elasticity p 1939 N93-20700
An expert system to study bonded joints
[REPT-921-430-113] p 1833 N93-20937
Measurement of the expansion coefficient between -150 C and +150 C for material composites for space applications
[REPT-921-430-115] p 1833 N93-20939
Influence of reinforcing fibers on the capacity for resistance to impact load, of composite materials
[MBB-FE-202-S-PUB-0496] p 1834 N93-21055
Textiles and Composites 1992
[VTT-SYMPOSIUM-133] p 1834 N93-21129
Thermoplastic composites for structural applications: Past and future p 1834 N93-21131
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140
Oxide protective coatings on carbon composites for medium and high-temperature thermal cycling: New opportunities for the United Europe
p 1838 N93-21160
Prediction of damage of laminated composite structures under quasi-static and cyclic loadings
[ESA-TT-1282] p 1839 N93-21289
Multilayered elastoplastic homogeneization and anisotropic plasticity
[ECL-92-24] p 1839 N93-21359
Testing and characterization of composite materials by Compton tomodensitometry
[REPT-921-430-107] p 1840 N93-21458
Supersonic transport: Which material for the engine
[DS-2023] p 1786 N93-21459
Initiation and prevention of edge delamination with and without residual stresses p 1841 N93-21510
Modelisation and computation of composite materials
p 1842 N93-21518
Damage detection by Acousto-Ultrasonic Location (AUL) p 1843 N93-21529
La Recherche Aerospatiale Bimonthly Bulletin, no. 248, January - February
[ONERA-1989-1] p 1878 N93-21748
Role of porosity in estimates of composite elastic constants
[DE93-002887] p 1845 N93-21989

COMPOSITE STRUCTURES
Multidisciplinary tailoring of hot composite structures
[NASA-TM-106027] p 1920 N93-19971
Segmented composite cylinder assembly
[AD-D015603] p 1831 N93-20015
Nondestructive evaluation of composites using infrared imaging
[AD-A259412] p 1831 N93-20123
A non-linear phenomenon in the dynamic response of metallic and composite structures p 1926 N93-20620
Large amplitude free vibrations of cross-ply composite beams p 1930 N93-20646
Probabilistic design procedures for load bearing ceramic components p 1930 N93-20647
On the vibration of thermally stressed laminated composite cylindrical shells p 1930 N93-20648
Development of cure cycles: From laboratory analysis and testing to production of large scale composites
[MBB-Z-0442-92-PUB] p 1833 N93-20845
The design of bonded structural assemblies
[REPT-921-430-116] p 1824 N93-20934

The behavior of elastic anisotropic laminated composite flat structures subjected to deterministic and random loadings
[NASA-CR-192197] p 1950 N93-21366
The integrated design and manufacturing of composite structures for aircraft using an advanced tape layering technology
[MBB-LME-251-S-PUB-0491-A] p 1783 N93-21401
Coatings on composites: New developments and applications in the aerospace industry
[MBB-Z-0443-92-PUB] p 1840 N93-21404
Predicting failure by debonding/delamination p 1841 N93-21512
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516
Modelisation and computation of composite materials p 1842 N93-21518
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789

COMPOSITE WRAPPING
Production of highly integrated FRP parts in the braiding technology p 1835 N93-21136

COMPRESSED GAS
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789

COMPRESSIBILITY
Turbulence modeling for hypersonic flight
[NASA-CR-192288] p 1760 N93-20235
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 1844 N93-21534

COMPRESSIBLE FLOW
The semi-discrete Galerkin finite element modelling of compressible viscous flow past an airfoil
[NASA-CR-192161] p 1760 N93-20018
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence
[NASA-CR-189640] p 1899 N93-20253
Large eddy simulations and direct numerical simulations of high speed turbulent reacting flows
[NASA-CR-192654] p 1903 N93-21662

COMPRESSION LOADS
Improvements to a method for the geometrically nonlinear analysis of compressively loaded stiffened composite panels
[NASA-CR-192183] p 1920 N93-20034
Two-D to three-D global/local finite element analysis of symmetric finite composite laminates with holes p 1930 N93-20645
Plastic mechanism analysis of T-joints in RHS under concentrated force
[PB92-225374] p 1946 N93-21029
Delamination development under fatigue loading p 1842 N93-21521

COMPRESSION TESTS
Compression-after-impact behavior of ARALL(trade name)-1 laminates
[AD-A259203] p 1832 N93-20550
Ultimate strength of geometrically imperfect angle columns
[PB93-111771] p 1947 N93-21235
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test
[MBB-FE-221-S-PUB-0483] p 1840 N93-21462

COMPRESSIVE STRENGTH
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test
[MBB-FE-221-S-PUB-0483] p 1840 N93-21462
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 1844 N93-21531
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533

COMPRESSOR ROTORS
Single screw interrupted thread positive displacement mechanism
[AD-D015596] p 1915 N93-20790

COMPRESSORS
Apparatus for reduction of vibration in liquid-injected gas compressor system
[AD-D015607] p 1914 N93-20772
Single screw interrupted thread positive displacement mechanism
[AD-D015596] p 1915 N93-20790

COMPTON EFFECT
Can the cosmic x ray and gamma ray background be due to reflection of a steep power law spectrum and Compton scattering by relativistic electrons?
[NASA-CR-192255] p 2102 N93-20601
Testing and characterization of composite materials by Compton tomodensitometry
[REPT-921-430-107] p 1840 N93-21458
Polarization effects in coherent and incoherent photon scattering: Survey of measurements and theory relevant to radiation transport calculations
[PB93-126092] p 2064 N93-21828
New x ray technology for the detection of explosives p 1767 N93-21880

COMPUTATION
Calculation of the Jordan form of a matrix with rational coefficients (using the formal computation system Axiom)
[RR-882-M] p 2051 N93-20782
A Gentzen-system for CTL
[RR-865-I-IMAG-122-LIFIA] p 2051 N93-20803
PAC: Parallel Algebraic Computations: Current researches and perspectives
[RR-876-M] p 2044 N93-20949
History of geodesy p 1975 N93-20997
Development and utilization of a semi-analytic alternative charge process for the rapid calculation of potential distributions and electron orbits
[ETN-93-93416] p 2062 N93-21209
Deterministic communication complexity of the Hamming distance
[MEMO-1026] p 2056 N93-21399
Sketches and computation
[RR-871-I-IMAG-123-LIFIA] p 2041 N93-21451
Advantages of tapering finite data records for spectral analysis
[PB93-116614] p 2092 N93-21475
Many-body effects in Cu(2+)(H2O)(sub m) clusters
[DE93-002988] p 2082 N93-21752
Tracking radar advanced signal processing and computing for Kwajalein Atoll (KA) application
[AD-A259066] p 1886 N93-21756

COMPUTATIONAL FLUID DYNAMICS
A gridless Euler/Navier-Stokes solution algorithm for complex-aircraft applications
[NASA-TM-107727] p 1760 N93-19973
Projectile base bleed technology. Part 2: User's guide CMINT computer code, version 5.04-BRL
[AD-A258630] p 1897 N93-19999
Study of a turbulent boundary layer modified by the insertion of a Large Eddy Break Up (LEBU) device
[ECL-92-11] p 1898 N93-20061
Hierarchical Poly Tree configurations for the solution of dynamically refined finte element models
[NASA-CR-191054] p 1921 N93-20232
Multiple-body simulation with emphasis on integrated Space Shuttle vehicle
[NASA-CR-192289] p 1821 N93-20234
Numerical solution of three-dimensional unsteady viscous flows
[AD-A259464] p 1899 N93-20244
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
Computational analysis of hypersonic flows past generalized cone-derived waveriders p 1761 N93-20288
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
Computational parametric study of sidewall-compression scramjet inlet performance at Mach 10
[NASA-TM-4411] p 1900 N93-20299
Multidisciplinary computational aerosciences
[NASA-TM-103946] p 1759 N93-20323
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2
[ISBN-0920049-04] p 1925 N93-20616
Computational fluid flow and heat transfer. An engineering tool p 1905 N93-20617
Adaptivity-fluids-localization. The challenge to computational mechanics p 1905 N93-20618
The practical application of computational fluid mechanics p 1905 N93-20622
On the disturbances development in the supersonic boundary layer p 1763 N93-20686
Stability and transition of hypersonic boundary layer p 1763 N93-20687
Research in computational fluid dynamics and analysis of algorithms
[NASA-CR-192309] p 1901 N93-20748
Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753
Numerical simulation of the internal aerodynamic in the combustion chamber of the reciprocating engines using a finite element method
[ECL-90-014] p 1915 N93-21005
Thermodynamic flow description of a ramjet for determination of engine forces and moments
[ESA-TT-1266] p 1786 N93-21288
HSCT mission analysis of waverider designs
[NASA-CR-192193] p 1783 N93-21646
Large eddy simulations and direct numerical simulations of high speed turbulent reacting flows
[NASA-CR-192654] p 1903 N93-21662
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760
Further development of the CANAERO computer code to include a time-stepping capability
[DREA-CR-91-478] p 2042 N93-21820
Extension of high-resolution schemes for systems to multiple dimensions
[DE93-003734] p 2057 N93-21966

COMPUTATIONAL GEOMETRY
Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872
Generalized 3D Voronoi diagram: First results
[RR-879-M] p 2039 N93-21051
The Weyl method for simultaneous calculation of polynomial roots (first part)
[RR-881-M] p 2055 N93-21169
The generalized Voronoi diagram for a set of polygons: Algorithms, operation and applications to shape analysis
[ETN-93-92689] p 2056 N93-21392

COMPUTATIONAL GRIDS
A gridless Euler/Navier-Stokes solution algorithm for complex-aircraft applications
[NASA-TM-107727] p 1760 N93-19973
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
Solution of a one-dimensional ablation model
[INPE-5357-TDI/464] p 1900 N93-20321
Computational fluid flow and heat transfer. An engineering tool p 1905 N93-20617
Adaptivity-fluids-localization. The challenge to computational mechanics p 1905 N93-20618
The practical application of computational fluid mechanics p 1905 N93-20622
Performances of finite element solution for crack problem p 1936 N93-20682
TC curves and TS surfaces and their applications in CAD/CAM p 1943 N93-20723
Some 2D test examples for the ISNaS incompressible code
[REPT-91-44] p 1901 N93-20752
Numerical computation of complex multi-body Navier-Stokes flows with applications for the integrated Space Shuttle launch vehicle
[NASA-CR-192297] p 1901 N93-20767
Numerical simulation of the internal aerodynamic in the combustion chamber of the reciprocating engines using a finite element method
[ECL-90-014] p 1915 N93-21005

COMPUTER AIDED DESIGN
Computer aided reliability, availability, and safety modeling for fault-tolerant computer systems with commentary on the HARP program
[NASA-CR-192405] p 2029 N93-19981
CASE/simulation systems p 2088 N93-20165
Design and analysis of a fast, two-mirror soft-x-ray microscope
[NASA-CR-191440] p 2067 N93-20316
An object-oriented computer aided design program for modern control systems analysis
[AD-A259139] p 2033 N93-20559
An investigation of discovery-based learning in the route planning domain
[AD-A259141] p 1780 N93-20560
Version and transaction management in OSMagic: An object-oriented database implementation of the Magic VLSI layout design tool
[AD-A259138] p 2033 N93-20574
ProperCAD: A portable object-oriented parallel environment for VLSI CAD
[NASA-CR-192308] p 2033 N93-20603
Parallel axes gear set optimization in two-parameter space p 1917 N93-20637
Analysis of structurally-varying systems using component-mode synthesis technique p 1932 N93-20658
The next revolution in computer-aided engineering p 1943 N93-20722
TC curves and TS surfaces and their applications in CAD/CAM p 1943 N93-20723

Numerical computation of complex multi-body Navier-Stokes flows with applications for the integrated Space Shuttle launch vehicle
[NASA-CR-192297] p 1901 N93-20767
Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment
[ITN-92-85128] p 2034 N93-20823
Tolerancing for function in a CAD/CAM environment
[PAPER-C-1-1] p 2034 N93-20824
New methodologies toward the integration of tolerancing in CAD/CAM systems
[PAPER-C-1-2] p 2035 N93-20825
Elements of computer-aided tolerance analysis
[PAPER-C-1-3] p 2035 N93-20826
Vectorial tolerancing
[PAPER-C-1-4] p 2035 N93-20827
Optimizing positioning of mechanical parts
[PAPER-C-1-5] p 2035 N93-20828
Functional tolerancing in CAD/CAM
[PAPER-C-2-1] p 2035 N93-20830
Validity and well-formedness of dimension and tolerance information in solid modeling systems
[PAPER-C-2-2] p 2035 N93-20831
Toward a computer aided functional tolerancing model
[PAPER-C-2-4] p 2036 N93-20832
Tolerancing in the context of the automated manufacturing and the design axioms
[PAPER-C-2-6] p 2036 N93-20834
Statistical Process Control (SPC) in FMS/CIM systems
[PAPER-C-3-4] p 2037 N93-20838
CIME of microsystems
[MBB-Z-0428-92-PUB] p 2037 N93-20844
Object-oriented design. MECANO: A method and an environment for object-oriented applications construction
[ETN-93-92682] p 2038 N93-20921
Surface/surface intersection on a processor mesh
[RR-864-M] p 2038 N93-20943
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO
p 1950 N93-21337
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831

COMPUTER AIDED MANUFACTURING

Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment
[ITN-92-85128] p 2034 N93-20823
Tolerancing for function in a CAD/CAM environment
[PAPER-C-1-1] p 2034 N93-20824
New methodologies toward the integration of tolerancing in CAD/CAM systems
[PAPER-C-1-2] p 2035 N93-20825
Elements of computer-aided tolerance analysis
[PAPER-C-1-3] p 2035 N93-20826
Vectorial tolerancing
[PAPER-C-1-4] p 2035 N93-20827
Optimizing positioning of mechanical parts
[PAPER-C-1-5] p 2035 N93-20828
Functional tolerancing in CAD/CAM
[PAPER-C-2-1] p 2035 N93-20830
Validity and well-formedness of dimension and tolerance information in solid modeling systems
[PAPER-C-2-2] p 2035 N93-20831
Toward a computer aided functional tolerancing model
[PAPER-C-2-4] p 2036 N93-20832
Tolerance, chains and setting of machines: Three dimensional statistical model of machined dimensions
[PAPER-C-2-5] p 2036 N93-20833
Tolerancing in the context of the automated manufacturing and the design axioms
[PAPER-C-2-6] p 2036 N93-20834
Statistical Process Control (SPC) in FMS/CIM systems
[PAPER-C-3-4] p 2037 N93-20838
Task sequence planning in a robot workcell using AND/OR nets
[NASA-CR-192735] p 2049 N93-21391
The integrated design and manufacturing of composite structures for aircraft using an advanced tape layering technology
[MBB-LME-251-S-PUB-0491-A] p 1783 N93-21401
Manufacturing innovations and small business: How flexible manufacturing systems affect tooling and machining enterprises
[PB92-216258] p 2086 N93-21743

COMPUTER AIDED MAPPING

Feature mapping in a photogrammetric GIS
[AD-A258595] p 1965 N93-19967
Automatized cartography, using the Mitteldeutschen Kartographie and Druck GmbH system
p 1967 N93-20529
Development of an automated cartographic system
p 1967 N93-20530
Application possibilities for automated digitizing
p 1967 N93-20531
Computer aided cartographic generalization for the DCM derivation, with regard to feature displacement
p 1967 N93-20532
ATKIS: The introduction phase at IfAG
p 1967 N93-20533
The economic use of PC for cartographic distributed tasks p 1967 N93-20534
The importance of the PC in the cartographic-photogrammetric service field
p 1967 N93-20535
Thematic maps as data bank objects
p 1968 N93-20536
Documentation and bibliographic analysis in the framework of the ATKIS generalization
p 1968 N93-20537

COMPUTER AIDED TOMOGRAPHY

Explosives detection limitations using dual-energy radiography and computed tomography
p 1767 N93-21878
The evolution of Computed Tomography (CT) as an explosives detection modality p 1768 N93-21883
Fusion of the nuclear and different x ray technologies for explosives detection p 1768 N93-21885
Explosive detection for checked luggage by DETEX, a combined x ray and positron-tomograph system
p 1768 N93-21886
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies
[DE93-002906] p 1919 N93-21956

COMPUTER ASSISTED INSTRUCTION

Probabilistic student modeling with knowledge space theory
[AD-A258622] p 2045 N93-19997
Application possibilities for automated digitizing
p 1967 N93-20531
On the comparison of sequences: Analyzing behavioural aspects of courseware development and use
[MEMO-1030] p 2038 N93-21033
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test
p 1844 N93-21531

COMPUTER DESIGN

Formal verification of a microcoded VIPER microprocessor using HOL
[NASA-CR-4489] p 2044 N93-21043
Non-US artificial neural network research
[PB93-111508] p 2049 N93-21802

COMPUTER GRAPHICS

Interactive graphics system for the study of variance/covariance structures of bivariate and multivariate normal populations
[AD-A259449] p 2030 N93-20058
Real image visual display system
[AD-A259125] p 2033 N93-20593
TC curves and TS surfaces and their applications in CAD/CAM p 1943 N93-20723
MAPPER: A personal computer map projection tool
[NASA-TM-4445] p 2034 N93-20778
Specifying and modifying the Graphics Manager and the Graphic Calculator in D2M2edit
[REPT-91-56] p 2037 N93-20851
Three dimensional representation and 3D reconstruction using two dimensional sections
[ETN-93-92686] p 2039 N93-21063
Reference model for the description of graphic data processing and for the integration of graphic systems with other data processing fields
[ETN-93-93417] p 2039 N93-21066
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
A novel approach to graphics
[AD-A259337] p 2040 N93-21262
Measurement of modulation transfer functions of simulator displays
[AD-A259401] p 1788 N93-21268
Interactive graphics intersection design system: First-stage development
[PB92-227693] p 2040 N93-21291
Introduction to graphical user interfaces and their use by CITIS
[PB92-213404] p 2040 N93-21348
The generalized Voronoi diagram for a set of polygons: Algorithms, operation and applications to shape analysis
[ETN-93-92689] p 2056 N93-21392
Geometric approaches of image generation using Voronoi models
[ETN-93-92690] p 2041 N93-21393
Transient dynamics capability at Sandia National Laboratories
[DE93-002285] p 2041 N93-21549

COMPUTER INFORMATION SECURITY

Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
Computer Security Bulletin Board System: User's guide
[PB93-113553] p 2029 N93-21255

COMPUTER NETWORKS

WetNet: Using SSM/I data interactively for global distribution of tropical rainfall and precipitable water
p 2005 N93-20082
Data Multiplexing Network (DMN). Phase 3: Equipment Operational Test and Evaluation (OT/E) integration test report
[DOT/FAA/CT-TN92/49] p 1779 N93-20612
CRAY mini manual. Revision D
[NASA-TM-107599-REV-D] p 2028 N93-21027
Redesigning the window protocol: The block acknowledgement revisited
[RUU-CS-92-04] p 2039 N93-21170
Delivery of very high bandwidth with ATM switches and SONET
[DE93-004274] p 2045 N93-21721
Integrated FASTBUS, VME and CAMAC diagnostic software at Fermilab
[DE93-004424] p 2042 N93-21845
Research in models for massively parallel computing
[DE93-003748] p 2045 N93-21852

COMPUTER PROGRAM INTEGRITY

Software quality measurement: A framework for counting problems and defects
[AD-A258556] p 2032 N93-20387
Software quality assurance: Documentation and reviews
[PB93-113694] p 2040 N93-21221
High integrity software standards and guidelines
[PB93-114619] p 2042 N93-21687

COMPUTER PROGRAMMING

Upside-down meta-interpretation of the model elimination theorem-proving procedure for deduction and abduction
[AD-A259436] p 2046 N93-20012
Explicit polymorphism and CPS conversion
[AD-A258635] p 2029 N93-20033
Neural-network dedicated processor for solving competitive assignment problems
[NASA-CASE-NPO-17781-1-CU] p 2028 N93-20116
A unified model of program behavior
[AD-A259142] p 2030 N93-20128
Two-dimensional planar geosystems subjected to three-dimensional dynamic loads
[AD-A258723] p 1921 N93-20325
Building a knowledge base for the knowledge worker system
[AD-A258544] p 2089 N93-20370
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374
Nonmonotonic temporal reasoning
[AD-A258699] p 2032 N93-20377
A framework for corporate implementation of object-oriented software development
[AD-A258717] p 2032 N93-20383
Software quality measurement: A framework for counting problems and defects
[AD-A258556] p 2032 N93-20387
Software development risk: Opportunity, not problem
[AD-A258743] p 2032 N93-20402
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409
An object-oriented computer aided design program for modern control systems analysis
[AD-A259139] p 2033 N93-20559
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL
[AD-A259224] p 2033 N93-20577
A VHDL interpreter for model-based diagnoses
[AD-A259122] p 2046 N93-20590
Design recovery for software library population
[AD-A259292] p 2090 N93-20611
Interactive graphics intersection design system: First-stage development
[PB92-227693] p 2040 N93-21291
Introduction to graphical user interfaces and their use by CITIS
[PB92-213404] p 2040 N93-21348
Results of prototype software development for automation of shuttle proximity operations
p 1815 N93-21425
Multiversion software reliability through fault-avoidance and fault-tolerance
[NASA-CR-192191] p 2041 N93-21647

COMPUTER PROGRAMS

Interactive access and management for four-dimensional environmental data sets using McIDAS
p 1965 N93-20070
Analysis of the Space Shuttle main engine simulation
[NASA-CR-191063] p 1820 N93-20251

Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255
Two-dimensional planar geosystems subjected to three-dimensional dynamic loads
[AD-A258723] p 1921 N93-20325
Fatigue design of earthmoving machines p 1924 N93-20350
Computer aided planning of laboratory tests of excavator attachments p 1924 N93-20352
Software quality measurement: A framework for counting problems and defects
[AD-A258556] p 2032 N93-20387
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409
Research on HOPE flight control technology p 1787 N93-20427
Construction of evaluation test equipment for 16 bit space MPU p 1801 N93-20486
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis. Computer program user's manual
[NASA-CR-187125] p 1784 N93-20583
Joint Typhoon Warning Center (JTWC92) model
[AD-A258646] p 2011 N93-20586
Propulsion/weapon system interaction model
[AD-A259291] p 1785 N93-20610
Design recovery for software library population
[AD-A259292] p 2090 N93-20611
Parallel axes gear set optimization in two-parameter space p 1917 N93-20637
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application p 1940 N93-20706
Some 2D test examples for the ISNaS incompressible code
[REPT-91-44] p 1901 N93-20752
MAPPER: A personal computer map projection tool
[NASA-TM-4445] p 2034 N93-20778
Bond graph based modelling using MACROS: An introduction to the program BAMMS
[MEMT-18] p 2034 N93-20808
Specifying and modifying the Graphics Manager and the Graphic Calculator in D2M2edit
[REPT-91-56] p 2037 N93-20851
MSC/NASTRAN structure optimization test module version 67 (preliminary)
[REPT-5-191025] p 1945 N93-20907
Detection of incipient defects in cables by partial discharge signal analysis
[PB92-222744] p 1919 N93-21199
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307
Microcomputer system for measurements and analysis of signals for fatigue life calculations under biaxial random stress state p 1948 N93-21320
A distributed Petri Net controller for a dual arm testbed
[NASA-CR-192733] p 2048 N93-21373
Review of initial experiments using the Hawk model, dynamic rig facility, and the CED 1401 digital data acquisition equipment
[CRANFIELD-AERO-9017] p 1788 N93-21406
CONFLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649
High integrity software standards and guidelines
[PB93-114619] p 2042 N93-21687
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual
[NASA-CR-191017] p 1953 N93-22005

COMPUTER STORAGE DEVICES
PL/GPD DMSP data archiving from VAX to exabyte tapes
[AD-A258607] p 2002 N93-19994
Level 3 BLAS for distributed memory concurrent computers
[DE93-003613] p 2029 N93-21730

COMPUTER SYSTEMS DESIGN
The performance of cache-based error recovery in multiprocessors
[NASA-CR-192142] p 2029 N93-20006
User interface of complex interactive computer systems
[ECL-92-05] p 2030 N93-20059
Neural-network dedicated processor for solving competitive assignment problems
[NASA-CASE-NPO-17781-1-CU] p 2028 N93-20116
Construction of evaluation test equipment for 16 bit space MPU p 1801 N93-20486
CIME of microsystems
[MBB-Z-0428-92-PUB] p 2037 N93-20844
GaAs computer technology
[AD-A259259] p 2080 N93-21241
Interactive graphics intersection design system: First-stage development
[PB92-227693] p 2040 N93-21291
Intelligent systems technology infrastructure for integrated systems p 1815 N93-21424

COMPUTER SYSTEMS PERFORMANCE
Computer aided reliability, availability, and safety modeling for fault-tolerant computer systems with commentary on the HARP program
[NASA-CR-192405] p 2029 N93-19981
Expert system verification and validation study
[NASA-CR-192175] p 2034 N93-20779
Contribution to computer arithmetic
[ETN-93-92680] p 2053 N93-20901
CRAY mini manual. Revision D
[NASA-TM-107599-REV-D] p 2028 N93-21027
Formal verification of a microcoded VIPER microprocessor using HOL
[NASA-CR-4489] p 2044 N93-21043
Conformance test specification for COBOL intrinsic function module
[PB92-229178] p 2040 N93-21351
Expert system verification and validation study: Workshop and presentation material
[NASA-CR-192176] p 2041 N93-21661

COMPUTER SYSTEMS PROGRAMS
(Generalized) LR parsing: From Knuth to Tomita p 2030 N93-20221
Multidisciplinary computational aerosciences
[NASA-TM-103946] p 1759 N93-20323
Distributed database management evaluation software
[AD-A259215] p 2090 N93-20565
Interactive graphics intersection design system: First-stage development
[PB92-227693] p 2040 N93-21291

COMPUTER TECHNIQUES
PDES application protocol suite for composite (PAS-C). Functional needs/state/of-the-art comparison for the PAS-C program
[AD-A258613] p 1831 N93-19986
PDES application protocol suite for composites (PAS-C) 1992 annual report for the PAS-C program
[AD-A258625] p 1831 N93-19998
Human-computer interaction in the school of computer science
[AD-A258634] p 2028 N93-20001
Multidisciplinary computational aerosciences
[NASA-TM-103946] p 1759 N93-20323
Building a knowledge base for the knowledge worker system
[AD-A258544] p 2089 N93-20370
Information base procedures for generation of synthetic thermal scenes
[AD-A259202] p 2090 N93-20549
Real image visual display system
[AD-A259125] p 2033 N93-20593
Design recovery for software library population
[AD-A259292] p 2090 N93-20611
The search for differential equations for orthogonal polynomials by using computers
[REPT-91-55] p 2052 N93-20865
Autonomous reconfigurable GPS/INS navigation and pointing system for rendezvous and docking p 1780 N93-21426
Microelectronics packaging automation
[DE93-004822] p 1894 N93-21725
Computational mechanics at Los Alamos National Laboratory
[DE93-003725] p 2042 N93-21735

COMPUTER VISION
Geometric aspects of visual object recognition
[AD-A259454] p 2046 N93-20239
Robot motion vision by fixation
[AD-A259456] p 2046 N93-20241
Implementation and evaluation of a three-dimensional photometric sampler
[AD-A258636] p 1905 N93-20361
The ARK (Autonomous Robot for a Known environment) project p 1917 N93-20621
Reflections on segmentation
[RR-873-I] p 2034 N93-20791
Local edge grouping by simple process iteration
[INRIA-RR-1559] p 2043 N93-20866
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
Multi-aperture vision system coupled to neural network processors
[AD-A259353] p 2047 N93-21243
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371

COMPUTERIZED SIMULATION
Multidisciplinary tailoring of hot composite structures
[NASA-TM-106027] p 1920 N93-19971
COLD-SAT dynamic model
[NASA-TM-105185] p 1822 N93-19988
Nonhydrostatic effects in numerical modeling of mesoscale convective systems and baroclinic waves p 2007 N93-20090
Simulations of satellite Doppler wind observations p 2010 N93-20104
Computer modeling of pulsed CO2 lasers for lidar applications p 1913 N93-20106
A finite-difference multigrid algorithm for the direct numerical simulation of transition and turbulence in incompressible flow p 1898 N93-20168
Introduction to study and simulation of low rate video coding schemes p 1880 N93-20171
Structure and dynamics of premixed flames in microgravity p 1853 N93-20198
Computational/experimental studies of isolated, single component droplet combustion p 1854 N93-20213
IDA gamma ray laser: Investigation of the feasibility of developing a laser using nuclear transitions
[AD-A259476] p 1909 N93-20246
Analysis of the Space Shuttle main engine simulation
[NASA-CR-191063] p 1820 N93-20251
Mission and Safety Critical (MASC): An EVACS simulation with nested transactions
[NASA-CR-192295] p 2026 N93-20314
Probabilistic chain fatigue model p 1922 N93-20338
A simulation method of determination of construction parts fatigue life distribution p 1923 N93-20342
Simulation and calculation of the APEX attitude
[AD-A258716] p 1824 N93-20382
Computer simulation of a general purpose satellite modem
[AD-A259083] p 1882 N93-20392
Tasks and construction of the geo-information system within the regional climatic project (REKLIP) in the Upper Rhine Valley (Germany) p 1968 N93-20538
On the evaluation of coherent structures using computer programs p 1937 N93-20688
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application p 1940 N93-20706
Comprehensive simulation study on local and global development of auroral arcs and field-aligned potentials
[NIFS-195] p 2073 N93-20764
Bond graph based modelling using MACROS: An introduction to the program BAMMS
[MEMT-18] p 2034 N93-20808
Three dimensional representation and 3D reconstruction using two dimensional sections
[ETN-93-92686] p 2039 N93-21063
Knowledge-based consulting system for dynamic network security control
[ETN-93-93420] p 2028 N93-21069
A novel approach to graphics
[AD-A259337] p 2040 N93-21262
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO p 1950 N93-21337
Research in LMSS propagation
[NASA-CR-191915] p 1885 N93-21400
Current-drive and plasma-formation experiments on the Versator-2 tokamak using lower-hybrid and electron-cyclotron waves
[DE93-002333] p 2075 N93-21482
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515
Transient dynamics capability at Sandia National Laboratories
[DE93-002285] p 2041 N93-21549
Simulation of clear-sky outgoing longwave radiation over the oceans using operational analyses p 1956 N93-21586
Molecular theory and computer simulation studies of natural and synthetic gas mixtures
[PB92-235696] p 1850 N93-21651
Analytic formulation of unsteady profile aerodynamics and its application to simulation of rotors
[ESA-TT-1244] p 1762 N93-21659
Simulation method for stationary Gaussian random functions based on the sampling theorem
[PB93-127496] p 2059 N93-21818
Hypervelocity impact tests and simulations of single Whipple bumper shield concepts at 10 km/s
[DE93-003999] p 1917 N93-21841
Applications of neural networks in polymer simulations
[DE93-004110] p 1862 N93-21843

An approach to improving TNA EDS
p 1765 N93-21864
New x ray technology for the detection of explosives
p 1767 N93-21880
Computer simulations and performance predictions for explosive detection systems p 1777 N93-21938
A systems approach to the explosive detection problem p 1778 N93-21942
Theory of coronal streamer formation
[DE93-003736] p 2102 N93-21967
Simulation models for tokamak plasmas
[DE93-002876] p 2076 N93-21988
Development of visual programming techniques to integrate theoretical modeling into the scientific planning and instrument operations environment of ISTP
[NASA-CR-192707] p 2042 N93-22004

COMPUTERS
International Symposium on Applications of Laser Techniques to Fluid Mechanics and Workshop on Computers in Flow Measurements No. 6
[AD-A258510] p 1897 N93-20049
Anytime declarativism
[AD-A258698] p 2032 N93-20376
GaAs computer technology
[AD-A259259] p 2080 N93-21241

CONCENTRATION (COMPOSITION)
Injection of drag-reducing additives into turbulent water flows. Investigation of laser-induced fluorescence for concentration measurements
[AD-A259459] p 1898 N93-20243
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project
[FOA-C-40296-4.5] p 1901 N93-20858

CONCENTRATORS
Flux concentrations on solar dynamic components due to mispointing
[NASA-TM-105756] p 1982 N93-20261

CONCORDE AIRCRAFT
Supersonic transport: Which material for the engine
[DS-2023] p 1786 N93-21459

CONCRETE STRUCTURES
Fatigue experiments of microconcrete beams under a running load p 1923 N93-20346

CONCRETES
A literature review of time-deterioration prediction techniques
[PB92-229202] p 1919 N93-21822

CONCURRENT PROCESSING
Level 3 BLAS for distributed memory concurrent computers
[DE93-003613] p 2029 N93-21730

CONDITIONS
A generalized cut condition for multiflows in matroids
[RR-869-M] p 2054 N93-20947

CONDUCTING POLYMERS
Polymers of bis(ethynylstyryl)benzene and related monomers
[AD-D015612] p 1859 N93-20398
The polyanilines: A novel class of conducting polymers
[AD-A259386] p 1860 N93-21266
Conducting polymers as potential active materials in electrochemical supercapacitors
[DE93-003827] p 1861 N93-21675

CONDUCTIVE HEAT TRANSFER
Analysis and measurement of thermal resistance in a 3-dimensional silicon multichip module populated with assembly test chips
[DE93-000743] p 1888 N93-20029

CONDUCTIVITY
The JPL/NASA/TAMU nickel-cadmium battery model development status p 1985 N93-20509

CONDUCTORS
Flex-Gears
[NASA-CR-192364] p 1914 N93-20759

CONFERENCES
International Symposium on Applications of Laser Techniques to Fluid Mechanics and Workshop on Computers in Flow Measurements No. 6
[AD-A258510] p 1897 N93-20049
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
Proceedings of the International Workshop on Quantum Effect Physics, Electronics, and Applications
[AD-A259457] p 2084 N93-20242
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 1: Plenary Session
[NASA-TM-108651] p 2085 N93-20329
The 1992 NASA Aerospace Battery Workshop
[NASA-CP-3192] p 1983 N93-20490
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2
[ISBN-0920049-04] p 1925 N93-20616
Spacebound 1991
[CTN-93-60604] p 1802 N93-21070
Textiles and Composites 1992
[VTT-SYMPOSIUM-133] p 1834 N93-21129
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292
Fatigue Design 1992, volume 1
[VTT-SYMPOSIUM-130-VOL-1] p 1947 N93-21318
Open forum on recommendations of the White House Conference on Library and Information Services
[PB93-107639] p 2091 N93-21379
The first Census Optical Character Recognition System Conference
[PB92-238542] p 2092 N93-21504
Technical digest-symposium on optical fiber measurements, 1992
[PB93-102259] p 2068 N93-21505
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536
Surface-coating-free materials workshop
[PB93-101160] p 1861 N93-21683
The 6th Conference Proceedings of the Pacific OCS Region Information Transfer Meeting
[PB93-119600] p 1992 N93-21684
Copper Mountain conference on interative methods, volume 1
[DE93-004993] p 2056 N93-21706
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
Proceedings of the Aircraft Wake Vortices conference, volume 1
[PB93-126449] p 1763 N93-21796
Science and Engineering programs: On target for women
[PB93-116499] p 2084 N93-21797
Proceedings of the Aircraft Wake Vortices conference, volume 2
[PB93-127728] p 2015 N93-21799
Proceedings of the International COADS workshop
[PB93-123552] p 1993 N93-21800
Wind and seismic effects. Proceedings of the 24th Joint Meeting of the US-Japan Cooperative Program in Natural Resources Panel on Wind and Seismic Effects
[PB93-120152] p 2001 N93-21801
Journal of research of the National Institute of Standards and Technology, July-August 1992. Volume 97, number 4
[PB93-124246] p 2104 N93-21814
Proceedings of the First International Symposium on Explosive Detection Technology
[DOT/FAA/CT-92/11] p 1764 N93-21856

CONFIGURATION INTERACTION
An investigation of the unexpected attitude dynamics experienced by the OEDIPUS-A tethered sounding rocket payload p 1830 N93-20724

CONFINEMENT
Dimensionless scaling of confinement in ATF
[DE93-001705] p 2069 N93-20030
Effect of alpha particles on radial electric field structure in Torsatron/Heliotron reactor
[NIFS-182] p 2071 N93-20265
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions
[PB92-238690] p 1878 N93-21650
Vacuum structure of pure gauge theories on the lattice
[DE93-001920] p 2081 N93-21701

CONFORMAL MAPPING
The effective transverse resistivity in multifilamentary conductors
[MEMO-1027] p 1892 N93-21008
Conformal length of graphs
[ETN-93-93419] p 2054 N93-21068

CONGRESSIONAL REPORTS
Report to the Chairman, Legislation, and National Security Subcommittee, Committee on Goverment Operations, House of Representatives. Unmanned aerial vehicles: More testing needed before production of short-range system
[AD-A259473] p 1780 N93-20245
Report on environmental requirements and priorities
[PB92-208198] p 1989 N93-21028
Goddard Space Flight Center: Decision to contract for plant operations and maintenance. Report to the Chair, Subcommittee on VA, HUD, and Independent Agencies, Committee on Appropriations, US Senate
[GAO/NSIAD-93-92] p 2086 N93-21357
NASA program costs: Space missions require substantially more funding than initially estimated. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/NSIAD-93-97] p 2093 N93-21358
Report of the SSME assessment team
[NASA-TM-108217] p 1830 N93-21645
Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for Fiscal Year 1993. Part 3: Nondepartmental Witnesses
[S-HRG-102-716-PT-3] p 2093 N93-21676
National Aeronautics and Space Administration: Statement of Chester Lee, Spacehab, Inc.
p 2093 N93-21677
National Aeronautics and Space Administration: Statement of Joanne Padron, American Institute of Aeronautics and Astronautics p 2093 N93-21678
National Aeronautics and Space Administration: Statement of Ralph J. Strnad, Sr., Secretary, Washington Area Metal Trades Council/Chief Steward, Goddard Space Flight Center p 2093 N93-21679
National Aeronautics and Space Administration: Statement of Miguel A. Hernandez, Jr., Hernandez Engineering Co. p 2094 N93-21680
National Aeronautics and Space Administration: Statement of Len Ricks, Council of Engineers and Scientists Organizations p 2094 N93-21681
National Aeronautics and Space Administration: Statement of the Space Science Working Group
p 2094 N93-21682
Advancing automation and robotics technology for the Space Station Freedom and for the U.S. economy
[NASA-TM-103992] p 2027 N93-21807

CONGRUENCES
Local and global properties of curve congruencies in Euclidean three dimensional space
[ETN-93-93411] p 2055 N93-21174

CONICAL BODIES
Application of silicone fluid rheogoniometer measurements to despin moment studies in a spinning and coning cylinder
[AD-A259270] p 1901 N93-20599

CONIFERS
Estimation of carbon storage and organic matter in boreal forests using optical remote sensing data
p 1955 N93-21583

CONNECTORS
Robot-friendly connector --- space truss structures
[NASA-CASE-MSC-21864-1] p 1914 N93-20117

CONSERVATION EQUATIONS
On the structure of gaseous confined laminar diffusion flames: Numerical investigation
[NASA-TM-106039] p 1902 N93-21198

CONSISTENCY
A VHDL interpreter for model-based diagnoses
[AD-A259122] p 2046 N93-20590

CONSTITUTIVE EQUATIONS
The role of least squares in variational principles of elasticity p 1926 N93-20619
The practical application of computational fluid mechanics p 1905 N93-20622
On homogenization method and large deformations
p 1845 N93-20634
Analysis of hysteresis in shape memory alloys during thermal cyclic loading p 1858 N93-20694

CONSTRAINTS
On the formulation of linear homogeneous velocity constraints in mechanical systems p 1941 N93-20712
Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714
Effect of design selection on response surface performance
[NASA-CR-192275] p 2038 N93-20895
Stochastic scheduling with variable profile and precedence constraints
[INRIA-RR-1525] p 2059 N93-21396
The Shapley value for cooperative games under precedence constraints
[MEMO-1025] p 2056 N93-21398

CONSTRUCTION
Physics and engineering design studies on large helical device
[NIFS-161] p 2070 N93-20157
Present worth factors for life-cycle cost studies in the Department of Defense
[PB93-120772] p 2093 N93-21690

CONTACT LOADS
A method for modeling contact dynamics for automated capture mechanisms p 1816 N93-21434

CONTACT RESISTANCE
Study and development of ohmic contacts on n and p type indium phosphide by autocatalytic chemical deposition of metals and alloys
[ECL-92-23] p 1856 N93-20062

CONTAMINANTS
Analysis strategy for organic bromine flame-retardant compounds as environmental contaminants
p 1839 N93-21164

Hybrid single-particle Lagrangian integrated trajectories (HY-SPLIT): Version 3.0: User's guide and model description
[PB92-218114] p 2056 N93-21341
Preserving our future today: Your guide to the United States Environmental Protection Agency
[PB92-226190] p 1990 N93-21345
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536
Field screening for environmental pollutants: Defining user instrumentation needs
[PB93-117885] p 1993 N93-21791
Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California
[PB93-118495] p 1994 N93-21805
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977

CONTAMINATION
Contamination signatures observed during the CIRRIS-1A mission
[AD-A258596] p 1820 N93-19982
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977

CONTEXT
Reflections on segmentation
[RR-873-I] p 2034 N93-20791

CONTINENTAL SHELVES
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049
Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields
p 1955 N93-21580
The 6th Conference Proceedings of the Pacific OCS Region Information Transfer Meeting
[PB93-119600] p 1992 N93-21684

CONTINUOUS RADIATION
Assessment of single-pulse laser damage to structural materials for spacecraft
[AD-A259387] p 1911 N93-21267
Application of radiofrequency superconductivity to accelerators for high-current ion beams
[DE93-002925] p 2066 N93-21979

CONTINUOUS WAVE LASERS
A high efficiency CW holmium-doped fluorozirconate fibre laser at 1.19 micrometers
[MBB-Z-0414-91-PUB] p 1911 N93-20843
Efficient CW operation of a 2.75 micrometer Er(3+)-doped fluorozirconate fibre laser pumped at 650 and 795 nm
[MBB-Z-0384-91-PUB] p 1911 N93-20916

CONTINUOUS WAVE RADAR
An airborne millimeter-wave FM-CW radar for thickness profiling of freshwater ice
[AD-A259368] p 1886 N93-21669

CONTINUUM MECHANICS
A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649
Application of the BEM to the crack growth problem by the coupling of damage-deformation
p 1940 N93-20702

CONTINUUM MODELING
Improvement to the higher order finite strip method
p 1939 N93-20697
Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698

CONTINUUMS
Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698

CONTOURS
CONPLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649

CONTRACT MANAGEMENT
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128

CONTRACTORS
The FY 1992 scientific and technical reports, articles, papers, and presentations
[NASA-TM-108392] p 2091 N93-20920
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128
Introduction to graphical user interfaces and their use by CITIS
[PB92-213404] p 2040 N93-21348
Goddard Space Flight Center: Decision to contract for plant operations and maintenance. Report to the Chair, Subcommittee on VA, HUD, and Independent Agencies, Committee on Appropriations, US Senate
[GAO/NSIAD-93-92] p 2086 N93-21357

CONTRACTS
Defining contract terms
[AD-A259088] p 2085 N93-20394

CONTRAROTATING PROPELLERS
Mean flow interactions of a counter-rotating propeller
p 1899 N93-20289

CONTROL EQUIPMENT
Method and apparatus for controlling internal rotation of principal axes in fabrication of birefringent fibers
[AD-D015611] p 2067 N93-20397
In-line hydraulic dashpot
[AD-D015528] p 1914 N93-20776

CONTROL SIMULATION
Identification of propulsion systems
[NASA-TM-106007] p 1784 N93-20109
Guided Weapons Division Spin Table Facility: Spin table control system
[AD-A259214] p 1788 N93-20555
Elimination of resonance with a switching support
p 1933 N93-20664
NASA MSFC hardware in the loop simulations of automatic rendezvous and capture systems
p 1818 N93-21448

CONTROL STABILITY
Global stabilization of linear analytic systems
[RR-403] p 2051 N93-20738
A family of asymptotically stable control laws for flexible robots based on a passivity approach
[NASA-CR-191870] p 2048 N93-21354

CONTROL SURFACES
Aerodynamic surface tip vortex attenuation system
[AD-D015606] p 1760 N93-20017
Failure identification using multiple model adaptive estimation for the LAMBDA flight vehicle
[AD-A259137] p 1787 N93-20596
Review of initial experiments using the Hawk model, dynamic rig facility, and the CED 1401 digital data acquisition equipment
[CRANFIELD-AERO-9017] p 1788 N93-21406
Development of a non-linear simulation for generic hypersonic vehicles - ASUHS1
[NASA-CR-192710] p 1783 N93-22003

CONTROL SYSTEMS DESIGN
Mission and Safety Critical (MASC): An EVACS simulation with nested transactions
[NASA-CR-192295] p 2026 N93-20314
URV flight test of an Ada implemented self-repairing flight control system
[AD-A259205] p 1787 N93-20551
Guided Weapons Division Spin Table Facility: Spin table control system
[AD-A259214] p 1788 N93-20555
An object-oriented computer aided design program for modern control systems analysis
[AD-A259139] p 2033 N93-20559
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713
Grasp admittance center. A concept
p 1918 N93-20720
Controller partitioning for integrated flight/propulsion control implementation
[NASA-TM-105804] p 1787 N93-21197
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210
Robust controller design: A bounded-input-bounded-output worst-case approach
[AD-A259367] p 2047 N93-21246
Automatic design of a Maglev controller in state space
[AD-A259336] p 2047 N93-21261
Command generator tracker based direct model reference adaptive control of a PUMA 560 manipulator
[NASA-CR-192756] p 2048 N93-21306
The M68HC11 gripper controller electronics
[NASA-CR-192732] p 1893 N93-21309
A family of asymptotically stable control laws for flexible robots based on a passivity approach
[NASA-CR-191870] p 2048 N93-21354
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371
Adaptive control with an expert system based supervisory level
[NASA-CR-192742] p 2048 N93-21372
A distributed Petri Net controller for a dual arm testbed
[NASA-CR-192733] p 2048 N93-21373
A decomposition approach to suboptimal control of discrete-time systems
[REPT-92-027] p 2049 N93-21552

CONTROL THEORY
Guidance and flight control law development for hypersonic vehicles
[NASA-CR-192102] p 1786 N93-19960
Mission and Safety Critical (MASC): An EVACS simulation with nested transactions
[NASA-CR-192295] p 2026 N93-20314
An object-oriented computer aided design program for modern control systems analysis
[AD-A259139] p 2033 N93-20559
Distributed database management evaluation software
[AD-A259215] p 2090 N93-20565
Analytical and experimental investigation of flutter suppression by piezoelectric actuation
[NASA-TP-3241] p 1781 N93-20584
A family of asymptotically stable control laws for flexible robots based on a passivity approach
[NASA-CR-191870] p 2048 N93-21354
Adaptive control with an expert system based supervisory level
[NASA-CR-192742] p 2048 N93-21372

CONTROLLABILITY
Solution of quadratic distributed control problems by optimization methods
[ETN-93-93409] p 2040 N93-21303

CONTROLLED ATMOSPHERES
Effects of microclimate cooling on physiology and performance while flying the UH-60 helicopter simulator in NBC conditions in a controlled heat environment
[AD-A258502] p 2023 N93-20400

CONTROLLED FUSION
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
Physics and engineering design studies on large helical device
[NIFS-161] p 2070 N93-20157
A synergetic treatment of the vortices behaviour of a plasma with viscosity
[NIFS-166] p 2070 N93-20249
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263
Review of Japanese results on heating and current drive
[NIFS-193] p 2071 N93-20294
Design study on divertor plates of Large Helical Device (LHD)
[NIFS-190] p 2074 N93-21361
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809

CONTROLLERS
Guidance and flight control law development for hypersonic vehicles
[NASA-CR-192102] p 1786 N93-19960
A simulation study of the effects of communication delay on air traffic control
[AD-A258593] p 1778 N93-19966
An electromagnetically-controlled Precision Orbital Tracking Vehicle (POTV)
[AD-A259143] p 1823 N93-20129
Controller partitioning for integrated flight/propulsion control implementation
[NASA-TM-105804] p 1787 N93-21197
CTOS course
[NASA-CR-191866] p 2047 N93-21204
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210
Robust controller design: A bounded-input-bounded-output worst-case approach
[AD-A259367] p 2047 N93-21246
Automatic design of a Maglev controller in state space
[AD-A259336] p 2047 N93-21261
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307
The M68HC11 gripper controller electronics
[NASA-CR-192732] p 1893 N93-21309
Adaptive control with an expert system based supervisory level
[NASA-CR-192742] p 2048 N93-21372
A distributed Petri Net controller for a dual arm testbed
[NASA-CR-192733] p 2048 N93-21373

CONVECTION
The role of conditional symmetric instability in the development of moderate to heavy frozen precipitation bands
[AD-A258575] p 2002 N93-20031

Planetary circulations in the presence of transient and self-induced heating p 2003 N93-20071
Coordinated field study for CaPE: Analysis of energy and water budgets p 2005 N93-20079
Investigation of the role of thermal boundary layer processes in initiating convection under the NASA SPACE Field Program p 2005 N93-20080
WetNet: Using SSM/I data interactively for global distribution of tropical rainfall and precipitable water p 2005 N93-20082
Nonhydrostatic effects in numerical modeling of mesoscale convective systems and baroclinic waves p 2007 N93-20090
Observational and modeling studies of heat, moisture, precipitation, and global-scale circulation patterns p 2007 N93-20092
MAMS: High resolution atmospheric/surface properties p 2008 N93-20097
Estimating the vertical dimension of convective cloudiness over the polar ocean from AVHRR data p 1956 N93-21590

CONVECTIVE FLOW
Magnetospheric and auroral processes
[NASA-CR-192138] p 1996 N93-20250

CONVECTIVE HEAT TRANSFER
Quenching of a tube and filling of a vessel under microgravity p 1806 N93-21096
Correlation of results of radiant heat test and convective heat test for three layered protective clothing p 1838 N93-21161

CONVEXITY
Proximal techniques for convex programming
[RR-877-M] p 2039 N93-21167

CONVOLUTION INTEGRALS
CMOS circuit technique for integrated Viterbi decoders
[ETN-93-92568] p 1892 N93-20882
A new deconvolution method for the Doppler cartography of cool star surfaces and its use on AB Doradus
[MPE-236] p 2095 N93-21025

COOLING
Evaluation of two microclimate cooling air vests on a heated mannequin
[AD-A259410] p 2026 N93-21269

COOLING SYSTEMS
Effects of microclimate cooling on physiology and performance while flying the UH-60 helicopter simulator in NBC conditions in a controlled heat environment
[AD-A258502] p 2023 N93-20400
Research on two phase fluid loop type heat rejection technology p 1791 N93-20421
Research on HOPE heat sink device p 1792 N93-20431
Research on space coolers p 1794 N93-20442
Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development)
[PB92-227891] p 1878 N93-21465
A two-stage magnetic refrigerator for astronomical applications with reservoir temperatures above 4 K
[NASA-CR-192365] p 1878 N93-21815

COORDINATE TRANSFORMATIONS
Comparison of the efficiency of the various methods for rigid-body displacement analyses p 1941 N93-20709

COORDINATES
On relation between Hamada and Boozer magnetic coordinate system
[NIFS-173] p 2075 N93-21568

COPPER
A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270
Analysis of surfaces from the LDEF A0114, phase 2
[NASA-CR-192306] p 1847 N93-20756
Fracture at Cu/sapphire interfaces
[DE93-003816] p 1857 N93-21779

COPPER ALLOYS
Grain refinement of Al-Cu-Ti alloys in microgravity p 1810 N93-21120
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738

COPPER COMPOUNDS
Photoionization experiments by multistage excitation in the zone of the second ionization threshold of CuI
[ETN-93-92569] p 2062 N93-20883
Many-body effects in Cu(2+)(H2O)(sub m) clusters
[DE93-002988] p 2082 N93-21752

CORRECTION
Development of a realtime DGPS system
[DLR-MITT-92-06] p 1779 N93-20749

CORRELATION
Comparison of performance on the Shipley Institute of Living Scale, Air Traffic Control Specialist Selection Test, and FAA Academy Screen
[AD-A259249] p 1779 N93-20582
Phenomenological correlations in nuclear structure: An opportunity for nuclear astrophysics and a challenge to theory
[DE93-003470] p 2098 N93-21775

CORRELATORS
An extended length digital correlator threshold circuit
[AD-D015610] p 1889 N93-20328

CORROSION
Fatigue life assessment of service damaged and corroded members of structural steel p 1949 N93-21331
Fundamental advances for characterizing cathodic protection systems
[PB93-125003] p 1851 N93-21825

CORROSION PREVENTION
Coatings on composites: New developments and applications in the aerospace industry
[MBB-Z-0443-92-PUB] p 1840 N93-21404
Fundamental advances for characterizing cathodic protection systems
[PB93-125003] p 1851 N93-21825

CORROSION RESISTANCE
Stabilized zirconia/CoCrAlY high temperature coating
[AD-D015573] p 1859 N93-20276
Advanced turbine design for coal-fueled engines
[DE93-000224] p 1915 N93-21254
Field evaluation of six protective coatings applied to T-56 turbine blades after 2000 hours of engine use
[ARL-TR-2] p 1786 N93-21316
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H
[DE93-004064] p 1876 N93-21999

CORROSION TESTS
Application of new experimental methods to pipeline stress corrosion cracking
[PB92-224575] p 1951 N93-21499

COSMIC DUST
The structure of circumstellar shells
[NASA-CR-192337] p 2096 N93-20757

COSMIC RAYS
Can the cosmic x ray and gamma ray background be due to reflection of a steep power law spectrum and Compton scattering by relativistic electrons?
[NASA-CR-192255] p 2102 N93-20601
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469

COSMOLOGY
Non-topological solitons in astrophysics and cosmology p 2096 N93-20292
Numerical examination of Kelvin-Helmholtz instability with self gravitation and cosmologic expansion: A contribution to the formation of structure in the Universe
[MPE-238] p 2096 N93-20856

COST ANALYSIS
Tolerancing for function in a CAD/CAM environment
[PAPER-C-1-1] p 2034 N93-20824
Total quality assurance
[PAPER-C-3-5] p 1920 N93-20839
Goddard Space Flight Center: Decision to contract for plant operations and maintenance. Report to the Chair, Subcommittee on VA, HUD, and Independent Agencies, Committee on Appropriations, US Senate
[GAO/NSIAD-93-92] p 2086 N93-21357
Present worth factors for life-cycle cost studies in the Department of Defense
[PB93-120772] p 2093 N93-21690
Integrated cost accounting system
[AD-A258587] p 2093 N93-21755

COST EFFECTIVENESS
An overview of autonomous rendezvous and docking system technology development p 1816 N93-21431
First international alternative fueled vehicle round-up
[DE93-002779] p 1916 N93-21667

COST ESTIMATES
NASA program costs: Space missions require substantially more funding than initially estimated. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/NSIAD-93-97] p 2093 N93-21358
Integrated cost accounting system
[AD-A258587] p 2093 N93-21755

COST REDUCTION
Total quality assurance
[PAPER-C-3-5] p 1920 N93-20839

COSTS
NASA issues
[GAO/OCG-93-27TR] p 2085 N93-20904

COULOMB POTENTIAL
A preliminary study of the Gribov ambiguity in lattice SU(3) Coulomb gauge
[PREPRINT-816] p 2055 N93-21179

COUNTER ROTATION
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis. Computer program user's manual
[NASA-CR-187125] p 1784 N93-20583
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760

COUNTERS
Compressing subbanded image data with Lempel-Ziv-based coders
[NASA-TM-105998] p 1882 N93-20257
Uninterrupted, enhanced-rate, event-time recorder with mixed-speed counter modules
[AD-D015578] p 1906 N93-20769

COUNTING
Stochastic orderings on partial sums of random variables and on counting measures of random intervals
[INRIA-RR-1422] p 2052 N93-20860
The GALLEX solar neutrino experiment
[DE93-003357] p 2102 N93-21962

COUNTING CIRCUITS
A semi-custom dual channel peak hold circuit for spaceborne instrumentation
[DE93-003801] p 1828 N93-21777

COUPLED MODES
A non-linear phenomenon in the dynamic response of metallic and composite structures p 1926 N93-20620

COUPLING
Anomalous WWZ couplings at future e(+)e(-) colliders
[PREPRINT-814] p 2066 N93-21177

COUPLING COEFFICIENTS
Ultrametricity in an inhomogeneous simplest spin glass model
[PREPRINT-819] p 2055 N93-21181

COVARIANCE
Interactive graphics system for the study of variance/covariance structures of bivariate and multivariate normal populations
[AD-A259449] p 2030 N93-20058
Variance-covariance estimation and statistical testing of satellite networks
[PB92-225358] p 1824 N93-21048
An estimating function for a scalar parameter in a covariance operator
[RR-878-M] p 2054 N93-21050

CRAB NEBULA
The Crab nebula's wisps as shocked pulsar wind
[DE93-003466] p 2097 N93-21673
Weibel instabilities in relativistic electron-positron plasmas
[DE93-003468] p 2077 N93-21990

CRACK ARREST
For a better fatigue strength of welded steel structures p 1949 N93-21333

CRACK INITIATION
An engineering tool for solving multiaxial fatigue problems p 1922 N93-20334
Prediction of fracture initiation in surface flaws p 1935 N93-20678
Influence of reinforcing fibers on the capacity for resistance to impact load, of composite materials
[MBB-FE-202-S-PUB-0496] p 1834 N93-21055
A modified Miner rule to predict crack initiation p 1948 N93-21325
For a better fatigue strength of welded steel structures p 1949 N93-21333
A comment on the role of machining induced residual stresses on fatigue crack initiation p 1949 N93-21334
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335
Application of new experimental methods to pipeline stress corrosion cracking
[PB92-224575] p 1951 N93-21499
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515

CRACK PROPAGATION
Elevated temperature crack growth
[NASA-CR-189191] p 1920 N93-19992
Fatigue Design 1992, volume 2
[VTT-SYMPOSIUM-131-VOL-2] p 1921 N93-20330

The predicting crack growth for mixed mode fracture under biaxial loads p 1922 N93-20336
Probabilistic chain fatigue model p 1922 N93-20338
Discrete statistical model of fatigue crack growth in a Ni-base superalloy, capable of life prediction p 1923 N93-20344
Mixed mode fatigue crack propagation in a crankshaft p 1923 N93-20347
Probabilistic aspects of growth of the fatigue cracks in the railroad axles p 1924 N93-20348
Fatigue performance of nine bolt materials in air and in sea water with cathodic protection p 1924 N93-20349
Prediction of fracture initiation in surface flaws p 1935 N93-20678
Application of the BEM to the crack growth problem by the coupling of damage-deformation p 1940 N93-20702
Modeling the growth and interaction of fractures [NASA-CR-192185] p 1945 N93-20733
Damage tolerance and arrest characteristics of pressurized graphite/epoxy tape cylinders [NASA-CR-192618] p 1945 N93-20915
Toughness of Si3N4-SiC whisker composites [REPT-921-430-118] p 1839 N93-21295
Damage tolerance of a helicopter rotor high-strength steel p 1948 N93-21322
Modelling of fatigue crack growth in flat plate weldments and tubular welded joints p 1948 N93-21326
Fatigue of old metallic railroad bridges p 1949 N93-21330
Fatigue crack propagation of titanium alloys in salt water [GKSS-91/E/46] p 1856 N93-21551
Review of modelling of environment-assisted cracking [NPL-DMM(A)-44] p 1951 N93-21566
Fracture at Cu/sapphire interfaces [DE93-003816] p 1857 N93-21779
Naval research reviews, volume 44, no. 1, 1992 [PB93-129682] p 2104 N93-21808

CRACK TIPS
Fracture toughness using circular discs p 1935 N93-20677
Performances of finite element solution for crack problem p 1936 N93-20682
Boundary element shape function for bimaterial interface cracks p 1939 N93-20701
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites p 1843 N93-21525

CRACKING (FRACTURING)
Effect of microstructure on the strength and fracture energy of bimaterial interfaces [AD-A259181] p 1921 N93-20271
SRB frustrum 'smiley' cracking phenomenon study [NASA-CR-192621] p 1829 N93-20912
Prediction of damage of laminated composite structures under quasi-static and cyclic loadings [ESA-TT-1282] p 1839 N93-21289
Review of modelling of environment-assisted cracking [NPL-DMM(A)-44] p 1951 N93-21566
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H [DE93-004064] p 1876 N93-21999

CRACKS
Analysis of mixed mode cracks in a cylindrical shell p 1936 N93-20683
Main crack-microvoid interaction. The antiplane problem p 1937 N93-20684
Modeling the growth and interaction of fractures [NASA-CR-192185] p 1945 N93-20733
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
Fracture at Cu/sapphire interfaces [DE93-003816] p 1857 N93-21779

CRANES
Fatigue assessment of a cast component for a timber crane p 1924 N93-20353

CRAY COMPUTERS
CRAY mini manual. Revision D [NASA-TM-107599-REV-D] p 2028 N93-21027

CREATIVITY
Correlates of creative problem solving [AD-A258720] p 2085 N93-20369

CREEP ANALYSIS
Creep Laboratory manual [NPL-DMM(A)-37] p 1951 N93-21565

CREEP PROPERTIES
Creep fatigue life prediction for engine hot section materials (isotropic) [NASA-CR-189220] p 1784 N93-20252
The overall response of composite materials undergoing large deformations [AD-A259278] p 1832 N93-20606
High temperature alloys p 1858 N93-20626
Creep damage of carbon fiber reinforced PEEK p 1862 N93-20639
Creep of PEEK-graphite fibre composite material p 1930 N93-20644
Critical current density, irreversibility line, and flux creep activation energy in silver-sheathed Bi2Sr2Ca2Cu3O(sub x) superconducting tapes [DE93-002998] p 2083 N93-21984

CREEP RUPTURE STRENGTH
Creep damage of carbon fiber reinforced PEEK p 1862 N93-20639
Creep of PEEK-graphite fibre composite material p 1930 N93-20644

CREEP STRENGTH
The overall response of composite materials undergoing large deformations [AD-A259278] p 1832 N93-20606
Creep damage of carbon fiber reinforced PEEK p 1862 N93-20639

CREEP TESTS
Creep Laboratory manual [NPL-DMM(A)-37] p 1951 N93-21565

CRETACEOUS PERIOD
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii [PB93-120848] p 2019 N93-21792

CRITICAL LOADING
Predicting the failure load of adhesive joints p 1932 N93-20655
Prebuckling deflections and lateral buckling: Applications [PB92-225366] p 1946 N93-21017
Prebuckling deflections and lateral buckling: Theory [PB92-225382] p 1946 N93-21018

CRITICAL TEMPERATURE
Development of superconducting thin films with a critical temperature greater than 110 K [AD-A257988] p 2080 N93-21224

CROSS CORRELATION
Thought analysis on self-organization theories of MHD plasma [NIFS-164] p 2070 N93-20159

CROSS FLOW
An experimental investigation of a round turbulent jet in a cross-flow p 1905 N93-20689
The effect of surface suction near the leading edge of a swept-back wing [AERO-REPT-9205] p 1761 N93-20807
Thermal/chemical stability of ceramic cross flow filter materials [DE93-002710] p 1860 N93-21491
Crossflow stability and transition experiments in a swept-wing flow [NASA-TM-108650] p 1904 N93-21819

CROSSINGS
Higher order crossings [AD-A258727] p 2050 N93-20327

CROSSTALK
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars [AD-A259168] p 1884 N93-20597
Certification plan for a planar near-field range used for high-performance phased-array testing [PB92-213305] p 1885 N93-21493

CRUSTAL FRACTURES
Crustal deformation measurements in the vicinity of Vandenberg Air Force Base [AD-A258536] p 1996 N93-20053
Measurement and interpretation of crustal deformation rates associated with postglacial rebound [NASA-CR-192245] p 1996 N93-20238

CRYOGENIC EQUIPMENT
A cryogenic shutter for the VLT NIR camera [MPE-237] p 1906 N93-20855
A two-stage magnetic refrigerator for astronomical applications with reservoir temperatures above 4 K [NASA-CR-192365] p 1878 N93-21815

CRYOGENIC FLUID STORAGE
COLD-SAT dynamic model [NASA-TM-105185] p 1822 N93-19988

CRYSTAL DEFECTS
Radiation resistance evaluation test on parts and materials: Solar battery cell p 1800 N93-20482
Defects and impurities in amorphous semiconductors and in liquid electrolytes [MBB-Z-0386-91-PUB] p 2080 N93-20842
Defect characterization by means of positron annihilation p 1804 N93-21081
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon [DE93-003104] p 2080 N93-21240
Magnetization and flux pinning in high-Tc cuprates: Irradiated and oxygen deficient materials [DE93-004169] p 2082 N93-21844

CRYSTAL FIELD THEORY
Neutron study of crystal-field transitions in ErPO4 [DE93-004131] p 2081 N93-21719

CRYSTAL GROWTH
A study of TRIGLYCINE SULFATE (TGS) crystals from the International Microgravity Laboratory Mission (IML-1) [NASA-CR-191956] p 2078 N93-20127
Process modelling for materials preparation experiments [NASA-CR-192319] p 2078 N93-20236
Computational fluid flow and heat transfer. An engineering tool p 1905 N93-20617
Spacebound 1991 [CTN-93-60604] p 1802 N93-21070
Float zone processing of germanium crystals on the KC-135 microgravity aircraft p 1803 N93-21077
Crystallization of a protein aboard the US Space Shuttle flight STS-31 p 1804 N93-21086
Elucidation of the role of gravity and gravity driven convection in the formation of silicon carbide/silicon nitride whiskers p 1808 N93-21107
Liquid/liquid phase separation and crystallization of materials in microgravity aboard NASA KC-135 flights p 1810 N93-21119
Crystal growth through a computer controlled, eight zone thermal gradient freeze furnace p 1811 N93-21123
Growth and defects of explosives crystals [DE93-003866] p 2082 N93-21780

CRYSTAL LATTICES
Quantum dynamics of shock waves in molecular crystals [AD-A258749] p 2079 N93-20404
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon [DE93-003104] p 2080 N93-21240

CRYSTAL OSCILLATORS
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193) [PB92-227073] p 1893 N93-21350

CRYSTAL STRUCTURE
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides [AD-A259136] p 1847 N93-20595
Diffraction peaks in x ray spectroscopy: Friend or foe? [DE93-002482] p 2081 N93-21486

CRYSTALLINITY
Surface modification using a cascade arc plasma source [ETN-93-93065] p 2074 N93-20936

CRYSTALLIZATION
Amorphous Mo/Si multilayers: Interdiffusion and structural relaxation; crystallization [ETN-93-92992] p 1859 N93-20909
Crystallization of a protein aboard the US Space Shuttle flight STS-31 p 1804 N93-21086
Effect of gravity on phase separation and crystallization in a heavy metal fluoride glass p 1810 N93-21118
Liquid/liquid phase separation and crystallization of materials in microgravity aboard NASA KC-135 flights p 1810 N93-21119

CRYSTALS
The effects of small ice crystals on the infrared radiative properties of cirrus clouds [NASA-CR-192181] p 2002 N93-20046
High temperature substrate mount for chemical vapor deposition of diamond [AD-D015563] p 1858 N93-20122
Cluster formation and evolution on semiconductor surface [AD-A259190] p 2078 N93-20274
Studying the kinetics of magnetization in high Tc superconductors [NASA-CR-192159] p 1890 N93-20572
Frequency conversion of a CO2 laser with ZnGeP2 [PB92-222785] p 1911 N93-21016
Neutron study of crystal-field transitions in ErPO4 [DE93-004131] p 2081 N93-21719
Solution of large, sparse systems of linear equations in massively parallel applications [DE93-004243] p 2045 N93-21741

CUES
Real image visual display system [AD-A259125] p 2033 N93-20593

CULTURE TECHNIQUES
The development of an automated cell culture system for use in space life science research p 1804 N93-21085

CUMULATIVE DAMAGE
Retinal information processing for minimum laser lesion detection and cumulative damage [AD-A259195] p 2023 N93-20563
Synoptic approach to cumulative impact assessment: A proposed methodology [PB93-100147] p 1992 N93-21654

CUMULUS CLOUDS
Activities of South Dakota School of Mines and Technology
[AD-A259282] p 2012 N93-20607
CURING
Dual cure solventless coating process
[DE93-001351] p 1845 N93-20021
Development of cure cycles: From laboratory analysis and testing to production of large scale composites
[MBB-Z-0442-92-PUB] p 1833 N93-20845
CURRENT ALGEBRA
On the origin of SL(nC) current algebra in generalized two dimensional gravity
[PREPRINT-818] p 2055 N93-21180
CURRENT AMPLIFIERS
A semi-custom dual channel peak hold circuit for spaceborne instrumentation
[DE93-003801] p 1828 N93-21777
CURRENT DENSITY
Cathodes for molten-salt batteries
p 1987 N93-20525
Electrochemical characteristics of acid electrolytes for fuel cells
[PB93-124907] p 1988 N93-21826
Magnetization and flux pinning in high-Tc cuprates: Irradiated and oxygen deficient materials
[DE93-004169] p 2082 N93-21844
Effective activation energy in the Bi-Sr-Ca-Cu-O systems
[DE93-002996] p 2083 N93-21983
Critical current density, irreversibility line, and flux creep activation energy in silver-sheathed Bi2Sr2Ca2Cu3O(sub x) superconducting tapes
[DE93-002998] p 2083 N93-21984
CURRENT REGULATORS
Regulatable field emitter device and method of production thereof
[AD-D015614] p 1893 N93-21250
CURRENT SHEETS
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697
CURVATURE
TC curves and TS surfaces and their applications in CAD/CAM p 1943 N93-20723
Umbilici, lines of curvature, focal surfaces and their metamorphosis
[ETN-93-93414] p 2055 N93-21207
CURVED PANELS
The behavior of elastic anisotropic laminated composite flat structures subjected to deterministic and random loadings
[NASA-CR-192197] p 1950 N93-21366
CURVES (GEOMETRY)
Local and global properties of curve congruencies in Euclidean three dimensional space
[ETN-93-93411] p 2055 N93-21174
CUTTING
A generalized cut condition for multiflows in matroids
[RR-869-M] p 2054 N93-20947
CYCLES
Air Force Ni-Cd cell qualification program update
p 1984 N93-20505
Cycle life status of SAFT VOS nickel-cadmium cells
p 1985 N93-20511
CYCLIC LOADS
Cyclic behavior modelling
[ECL-92-09] p 1920 N93-20060
Fatigue Design 1992, volume 2
[VTT-SYMPOSIUM-131-VOL-2] p 1921 N93-20330
Discriminating experiments for multiaxial fatigue damage models p 1921 N93-20331
Effect of phase lag on cyclic durability of laminated composite p 1922 N93-20333
Design against high cycle multiaxial fatigue
p 1922 N93-20335
Testing rig for low cycle fatigue tests in combined bending and torsion p 1923 N93-20345
Thermal plastic strain fatigue life of the roll
p 1924 N93-20354
Cyclic material properties at high strain ranges beyond the standard design codes p 1925 N93-20357
On the extension of asymptotic analysis techniques to geometrically complicated stress concentration regions
p 1928 N93-20632
Load experience variability of fighter aircraft
[NLR-TP-89172-U] p 1781 N93-20742
Analysis of Space Shuttle accelerometer data
[NLR-TP-90141-U] p 1821 N93-20744
Simplified analysis of elastic-plastic strain concentration in notched components under cyclic loading
p 1950 N93-21338
The use of finite element codes for cyclic stress-strain analysis p 1950 N93-21340
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
Fatigue of fiberglass wind turbine blade materials
[DE93-005381] p 1951 N93-21711
CYCLOGENESIS
The Split Window Microwave Radiometer (SWMR) for hurricane wind speed measurement from space
[NASA-CR-192316] p 2002 N93-19987
A procedure to reduce northward drift of tropical storms in a numerical model
[PB92-226406] p 2013 N93-21290
Naval research reviews, volume 44, no. 1, 1992
[PB93-129682] p 2104 N93-21808
CYCLONES
Synoptic/planetary-scale interactions and blocking over the North Atlantic Ocean p 2007 N93-20091
A comparison of intense extratropical cyclone life cycles from diverse geographical locations
p 2011 N93-20278
Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360
Diagnostic Report of the National Hurricane Center. October and November 1991, volume 4, number 3
[PB93-126464] p 2014 N93-21478
CYCLOTRON FREQUENCY
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
Review of Japanese results on heating and current drive
[NIFS-193] p 2071 N93-20294
CYCLOTRON RESONANCE
Growth and doping of Al(x)Ga(1-x) films by electron cyclotron resonance assisted molecular beam epitaxy
[AD-A258722] p 2079 N93-20367
CYCLOTRON RESONANCE DEVICES
Long pulse discharges sustained by second harmonic electron cyclotron heating using a 35 GHz gyrotron in the Advanced Toroidal Facility
[NIFS-183] p 2072 N93-20544
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668
CYCLOTRONS
An H(-) ion source for resonant gamma production
p 1766 N93-21874
CYLINDRICAL BODIES
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
Damage tolerance and arrest characteristics of pressurized graphite/epoxy tape cylinders
[NASA-CR-192618] p 1945 N93-20915
CYLINDRICAL SHELLS
Segmented composite cylinder assembly
[AD-D015603] p 1831 N93-20015
On the vibration of thermally stressed laminated composite cylindrical shells p 1930 N93-20648
Analysis of mixed mode cracks in a cylindrical shell
p 1936 N93-20683
The structure of circumstellar shells
[NASA-CR-192337] p 2096 N93-20757
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516
CYLINDRICAL TANKS
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789
Liquid oscillations under strong surface tension in a circular cylindrical container
[LRT-WE-9-FB-26-1991] p 1904 N93-21953
CZOCHRALSKI METHOD
Growth and characterization of binary and pseudo-binary 3-5 compounds exhibiting non-linear optical behavior. Undergraduate research opportunities in microgravity science and technology
[NASA-CR-192143] p 2068 N93-21363

D

DAMAGE
Discriminating experiments for multiaxial fatigue damage models p 1921 N93-20331
An engineering tool for solving multiaxial fatigue problems p 1922 N93-20334
Damage tolerance and arrest characteristics of pressurized graphite/epoxy tape cylinders
[NASA-CR-192618] p 1945 N93-20915
Numerical finite element analysis of damage using Monte Carlo techniques p 1842 N93-21522
Damage detection by Acousto-Ultrasonic Location (AUL) p 1843 N93-21529
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533
DAMAGE ASSESSMENT
Modeling the growth and interaction of fractures
[NASA-CR-192185] p 1945 N93-20733
Noncontact nondestructive tests
[ETN-93-93060] p 1919 N93-20929
Assessment of single-pulse laser damage to structural materials for spacecraft
[AD-A259387] p 1911 N93-21267
Prediction of damage of laminated composite structures under quasi-static and cyclic loadings
[ESA-TT-1282] p 1839 N93-21289
The least and most damaging histories which can be constructed from a specific from-to matrix
p 1948 N93-21321
Damage tolerance of a helicopter rotor high-strength steel p 1948 N93-21322
A local approach for fatigue strength evaluation on ship structures p 1948 N93-21327
Fatigue life assessment of service damaged and corroded members of structural steel
p 1949 N93-21331
A comparative study of ship hull structures fatigue assessment methods p 1949 N93-21332
Multi-axial fatigue damage analysis using the boundary element method p 1950 N93-21339
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
Delamination development under fatigue loading
p 1842 N93-21521
Synoptic approach to cumulative impact assessment: A proposed methodology
[PB93-100147] p 1992 N93-21654
World Data Center A for Solid Earth Geophysics. Catalog of significant earthquakes 2150 B.C.-1991 A.D. including quantitative casualties and damage
[PB93-118198] p 2000 N93-21693
DAMPING
Some observations of chaotic motion of satellites with damping in an elliptic orbit p 1826 N93-20726
DATA ACQUISITION
Radar Ocean Wave Spectrometer (ROWS) preprocessing program (PREROWS2.EXE). User's manual and program description
[NASA-TM-104579] p 2017 N93-20160
Manufacture of ADEOS borne technical data acquisition equipment p 1796 N93-20451
Application possibilities for automated digitizing
p 1967 N93-20531
Tasks and construction of the geo-information system within the regional climatic project (REKLIP) in the Upper Rhine Valley (Germany) p 1968 N93-20538
Scanner technology as an alternative to manual digitizing. The data acquisition of the 1990s
p 1968 N93-20539
Design of a laboratory computer interface
[AD-A259126] p 2028 N93-20594
Acquisition and production of skilled behavior in dynamic decision-making tasks
[NASA-CR-192361] p 2025 N93-20908
Database language SQL: Integrator of CALS data repositories
[PB93-113637] p 2040 N93-21239
Review of initial experiments using the Hawk model, dynamic rig facility, and the CED 1401 digital data acquisition equipment
[CRANFIELD-AERO-9017] p 1788 N93-21406
Principles and application tendency of remote sensing: Its principle, function, and utilization
p 1978 N93-21540
Delineate subsurface structures with ground penetrating radar
[DE93-000474] p 1886 N93-21664
An airborne millimeter-wave FM-CW radar for thickness profiling of freshwater ice
[AD-A259368] p 1886 N93-21669
Advanced design for a seafloor Gamma Measurement Data Collection System
[PB93-105013] p 2020 N93-21793
DATA BASE MANAGEMENT SYSTEMS
Information base procedures for generation of synthetic thermal scenes
[AD-A259202] p 2090 N93-20549
Distributed database management evaluation software
[AD-A259215] p 2090 N93-20565
Version and transaction management in OSMagic: An object-oriented database implementation of the Magic VLSI layout design tool
[AD-A259138] p 2033 N93-20574
Database language SQL: Integrator of CALS data repositories
[PB93-113637] p 2040 N93-21239
Expanded user's documentation for SHIMS
[PB93-101905] p 2092 N93-21694
The Cheetah data management system
[DE93-004010] p 2092 N93-21973

DATA BASES
Ada implementation of an object data repository
[AD-A259144] p 2087 N93-20002
NASA pyrotechnically actuated systems program
p 1863 N93-20133
Pyrotechnically actuated systems database and applications catalog p 1864 N93-20136
Building a knowledge base for the knowledge worker system
[AD-A258544] p 2089 N93-20370
Thematic maps as data bank objects
p 1968 N93-20536
Tasks and construction of the geo-information system within the regional climatic project (REKLIP) in the Upper Rhine Valley (Germany) p 1968 N93-20538
Geographic data model: A survey
p 1968 N93-20540
Version and transaction management in OSMagic: An object-oriented database implementation of the Magic VLSI layout design tool
[AD-A259138] p 2033 N93-20574
Toxic substances registry system: Index of material safety data sheets
[NASA-TM-108582] p 2024 N93-20998
Design and implementation of LOGRES
[REPT-92-040] p 2039 N93-21184
Global change data base training exercise manual. Exploring Earth's environment: Africa as an example
[PB92-224682] p 1990 N93-21211
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present
[PB93-112225] p 2013 N93-21229
Interactive graphics intersection design system: First-stage development
[PB92-227693] p 2040 N93-21291
Public Access: A How To Guide
[PB93-111029] p 1990 N93-21378
Databases available in the Research Information Center of the National Institute of Standards and Technology
[PB93-114478] p 2092 N93-21387
Automated technologies needed to prevent radioactive materials from reentering the atmosphere
p 1818 N93-21447
Analysis of aircraft noise levels in the vicinity of start-of-takeoff roll at Baltimore-Washington International Airport
[PB92-221605] p 1991 N93-21501
Preparation of AVHRR GAC data sets for global change studies p 1954 N93-21573
Evaluation of the international directory network for location of data sets useful in global vegetation change assessment p 1954 N93-21575
Documentation of the status of international geothermal power plants and a list by country of selected geothermally active governmental and private sector entities
[DE93-002273] p 1988 N93-21665
Global Change Data Base Pilot (Diskette) Project for Africa. Dase base documentation version 1.1
[PB93-117927] p 2000 N93-21686
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784
Status of document search and data quality objective efforts
[DE93-003216] p 2092 N93-21959

DATA COMPRESSION
Study and simulation of low rate video coding schemes
[NASA-CR-191908] p 1880 N93-20170
Introduction to study and simulation of low rate video coding schemes p 1880 N93-20171
Data compression in remote sensing applications
p 1881 N93-20172
Compression of color-mapped images
p 1881 N93-20173
A robust coding scheme for packet video
p 1881 N93-20174
Recursively indexed differential pulse code modulation
p 1881 N93-20175
An image compression technique for use on token ring networks p 1881 N93-20176
Compressing subbanded image data with Lempel-Ziv-based coders
[NASA-TM-105998] p 1882 N93-20257
Data handling in telescience experiments using the Prototype Optical Diagnostic Instrument (PODI)
[NLR-TP-90327-U] p 2090 N93-20917

DATA FLOW ANALYSIS
Efficient compilation of a synchronous declarative language: LUSTRE-V3 code generator
[ETN-93-92679] p 2038 N93-20899

DATA INTEGRATION
Research on data handling technology
p 1795 N93-20448

DATA LINKS
Microwave vs optical crosslink study
[NASA-CR-192207] p 1879 N93-19989
Reduced electrical bandwidth receivers for direct detection 4-ary PPM optical communication intersatellite links
[NASA-CR-192310] p 1880 N93-19993
Development of a realtime DGPS system
[DLR-MITT-92-06] p 1779 N93-20749
Interferometric optical fiber data link
[AD-D015581] p 2067 N93-20797

DATA MANAGEMENT
PL/GPD DMSP data archiving from VAX to exabyte tapes
[AD-A258607] p 2002 N93-19994
Performance evaluation of Platform Data ManagementSystem under various degrees of protocol implementation
[NASA-CR-192408] p 2088 N93-20161
Formalizing structured file services for the data storage and retrieval subsystem of the data management system for Spacestation Freedom
[NASA-CR-192293] p 2089 N93-20315
Survey of space environment services center users and services
[AD-A258672] p 2089 N93-20366
Review on parts test data analyzing system
p 1800 N93-20480
Distributed database management evaluation software
[AD-A259215] p 2090 N93-20565
International Gravimetric Bureau p 1971 N93-20977
International Centre on Recent Crustal movements
p 1973 N93-20989
CTOS course
[NASA-CR-191866] p 2047 N93-21204
STEP development methods: Specification of semantics for information sharing
[PB93-113686] p 2091 N93-21218
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present
[PB93-112225] p 2013 N93-21229
National Oceanographic Data Center inventory of physical oceanographic profiles: Global distributions by year for all countries
[PB93-116531] p 2019 N93-21476
US Global Change Data and Information Management Program Plan: A report by the Committee on Earth and Environmental Sciences
[PB93-101293] p 1993 N93-21695
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784

DATA PROCESSING
PDES application protocol suite for composite (PAS-C). Functional needs/state/of-the-art comparison for the PAS-C program
[AD-A258613] p 1831 N93-19986
PL/GPD DMSP data archiving from VAX to exabyte tapes
[AD-A258607] p 2002 N93-19994
PDES application protocol suite for composites (PAS-C) 1992 annual report for the PAS-C program
[AD-A258625] p 1831 N93-19998
Ada implementation of an object data repository
[AD-A259144] p 2087 N93-20002
Research in text processing
[AD-A259434] p 2087 N93-20010
Management of Automatic Data Processing (ADP) system documentation in the Department of Defense
[AD-A258507] p 2088 N93-20048
Development and use of data analysis procedures for the CRRES payloads AFGL-701-2/Dosimeter and AFGL-701-4/Fluxmeter and application of the data analysis results to improve the static and dynamic models of the earth's radiation belts
[AD-A258710] p 1823 N93-20380
Application possibilities for automated digitizing
p 1967 N93-20531
ATKIS: The introduction phase at IfAG
p 1967 N93-20533
Neural networks for real-time sensory data processing and sensorimotor control
[AD-A259120] p 2046 N93-20557
Retinal information processing for minimum laser lesion detection and cumulative damage
[AD-A259195] p 2023 N93-20563
International Centre on Recent Crustal movements
p 1973 N93-20989
An order-theoretic model for the algebra of communicating processes
[RUU-CS-92-02] p 2054 N93-21034
Reference model for the description of graphic data processing and for the integration of graphic systems with other data processing fields
[ETN-93-93417] p 2039 N93-21066
STEP development methods: Specification of semantics for information sharing
[PB93-113686] p 2091 N93-21218
Conformance test specification for COBOL intrinsic function module
[PB92-229178] p 2040 N93-21351
Program of research in flight dynamics in the JIAFS at NASA-Langley Research Center
[NASA-CR-191885] p 1762 N93-21562
Earth radiation and cloud cover analysis using NOAA satellite data p 1956 N93-21587
Comparison of monthly precipitation analyses derived from conventional measurements, satellite estimates and model results p 1958 N93-21599
How real-time data assimilation benefits weather and climate studies through the validation, quality control and synthesis of remotely sensed data p 1960 N93-21610
Routine validation of TOVS retrievals: Lessons learned from a pilot experiment p 1960 N93-21611
Delineate subsurface structures with ground penetrating radar
[DE93-000474] p 1886 N93-21664
Non-US artificial neural network research
[PB93-111508] p 2049 N93-21802

DATA PROCESSING EQUIPMENT
Cable connector/adapter support for multi-terminal data processors
[AD-D015572] p 1889 N93-20309
Design of a laboratory computer interface
[AD-A259126] p 2028 N93-20594
The first Census Optical Character Recognition System Conference
[PB92-238542] p 2092 N93-21504

DATA RECORDERS
Research on satellite-borne high speed data recorder
p 1795 N93-20449

DATA REDUCTION
A study of TRIGLYCINE SULFATE (TGS) crystals from the International Microgravity Laboratory Mission (IML-1)
[NASA-CR-191956] p 2078 N93-20127
Evaluation and analysis of long term satellite operation data p 1796 N93-20454
Outline of SCM data processing system onboard ETS-5 p 1802 N93-20489
Analysis of Space Shuttle accelerometer data
[NLR-TP-90141-U] p 1821 N93-20744
Program of research in flight dynamics in the JIAFS at NASA-Langley Research Center
[NASA-CR-191885] p 1762 N93-21562

DATA RETRIEVAL
Interactive access and management for four-dimensional environmental data sets using McIDAS
p 1965 N93-20070
AMPR/SSMI data comparisons p 2005 N93-20081
Atmospheric electricity/meteorology analysis
p 2006 N93-20086
Electrification in winter storms and the analysis of thunderstorm overflight data p 2006 N93-20087
Formalizing structured file services for the data storage and retrieval subsystem of the data management system for Spacestation Freedom
[NASA-CR-192293] p 2089 N93-20315
Outline of SCM data processing system onboard ETS-5 p 1802 N93-20489

DATA SAMPLING
Optimal sampling plans for items representing two population groups
[AD-A259429] p 2057 N93-20009
On the evaluation of coherent structures using computer programs p 1937 N93-20688

DATA STORAGE
Formalizing structured file services for the data storage and retrieval subsystem of the data management system for Spacestation Freedom
[NASA-CR-192293] p 2089 N93-20315
Research on satellite-borne high speed data recorder
p 1795 N93-20449
Tasks and construction of the geo-information system within the regional climatic project (REKLIP) in the Upper Rhine Valley (Germany) p 1968 N93-20538
Geographic data model: A survey
p 1968 N93-20540
Handling and using information systems with new technology
[PNR-90910] p 2090 N93-20734

DATA STRUCTURES
Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872
An O(n squared) maximal planarization algorithm based on PQ-trees
[RUU-CS-92-03] p 2038 N93-21035
STEP development methods: Specification of semantics for information sharing
[PB93-113686] p 2091 N93-21218

The Cheetah data management system
[DE93-004010] p 2092 N93-21973

DATA SYSTEMS
An investigation of the role of current and future remote sensing data systems in numerical meteorology p 2010 N93-20108
Research on data handling technology p 1795 N93-20448
Manufacture of ADEOS borne technical data acquisition equipment p 1796 N93-20451
Review on parts test data analyzing system p 1800 N93-20480
Outline of SCM data processing system onboard ETS-5 p 1802 N93-20489

DATA TRANSFER (COMPUTERS)
Analysis of timed-token ring protocols
[INRIA-RR-1570] p 2044 N93-20894

DATA TRANSMISSION
High-bandwidth, high-dynamic-range, analog optical guided-wave systems for physics instrumentation
[DE93-001619] p 2066 N93-20022
An image compression technique for use on token ring networks p 1881 N93-20176
Research on data relay and tracking satellite systems p 1790 N93-20418
Research on data handling technology p 1795 N93-20448
Redesigning the window protocol: The block acknowledgement revisited
[RUU-CS-92-04] p 2039 N93-21170
Software design document for the generic avionics data bus tool kit
[AD-A259329] p 1784 N93-21259
Joint parameters estimation and symbols detection for digital communication over linear or nonlinear unknown channels
[TELECOM-PARIS-91-D-013] p 1885 N93-21394
Delivery of very high bandwidth with ATM switches and SONET
[DE93-004274] p 2045 N93-21721

DEBONDING (MATERIALS)
SRB frustrum 'smiley' cracking phenomenon study
[NASA-CR-192621] p 1829 N93-20912
Debonding/Delamination of Composites
[AGARD-CP-530] p 1840 N93-21507
Predicting failure by debonding/delamination p 1841 N93-21512
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites p 1843 N93-21525
An acousto-ultrasonic NDE technique for monitoring material anisotropy
[DE93-002994] p 1919 N93-21982

DECISION MAKING
Upside-down meta-interpretation of the model elimination theorem-proving procedure for deduction and abduction
[AD-A259436] p 2046 N93-20012
Correlates of creative problem solving
[AD-A258720] p 2085 N93-20369
Acquisition and production of skilled behavior in dynamic decision-making tasks
[NASA-CR-192361] p 2025 N93-20908
Opportunities in applied environmental research and development
[PB92-223189] p 1990 N93-21347
Fuzzy set methods for object recognition in space applications
[NASA-CR-191986] p 2041 N93-21563
International environmental research and assessment: Proposals for better organization and decision making
[ISBN-1-881054-01-2] p 2087 N93-21949

DECISION THEORY
Denumerable constrained Markov decision problems and finite approximations
[INRIA-RR-1568] p 2058 N93-20867
The linear program approach in Markov decision processes revisited
[INRIA-RR-1569] p 2058 N93-20868
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934

DECISIONS
Reflections on segmentation
[RR-873-I] p 2034 N93-20791

DECODERS
A joint source/channel coder design p 1881 N93-20177

DECODING
Multi-stage decoding for multi-level block modulation codes
[NASA-CR-192363] p 1880 N93-20043
Error control techniques for satellite and space communications
[NASA-CR-192368] p 1884 N93-20613

DECOMPOSITION
Multiresolution feature analysis and wavelet decomposition of atmospheric flows
[AD-A259420] p 1996 N93-20003
Proximal techniques for convex programming
[RR-877-M] p 2039 N93-21167
Ignition of nitrocellulose in various atmospheres
[AD-A257987] p 1849 N93-21223

DECOMPRESSION SICKNESS
Statistically based decompression tables. 7: Selection and treatment of primary air and N2O2 data
[AD-A259090] p 2023 N93-20587

DECONTAMINATION
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770

DEDUCTION
A Gentzen-system for CTL
[RR-865-I-IMAG-122-LIFIA] p 2051 N93-20803

DEFECTS
Peak stresses in adhesive step lap joints with voids p 1932 N93-20656
Electron optical defect inspection in x ray lithography masks
[ETN-93-92570] p 1919 N93-20884
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 1843 N93-21528
Damage detection by Acousto-Ultrasonic Location (AUL) p 1843 N93-21529
Growth and defects of explosives crystals
[DE93-003866] p 2082 N93-21780
An acousto-ultrasonic NDE technique for monitoring material anisotropy
[DE93-002994] p 1919 N93-21982
ESR spectra of photoinduced defects in MX chain solids
[DE93-003692] p 2083 N93-21997

DEFENSE INDUSTRY
Defense science and technology strategy: Executive summary. 1: Background and overview. 2: The seven thrusts
[PB92-217785] p 2103 N93-21349
The German national industry as a source of logistic support for armed forces facing new requirements
[MBB-UL-0002-91-PUB] p 1877 N93-21463

DEFENSE PROGRAM
Report on environmental requirements and priorities
[PB92-208198] p 1989 N93-21028
Defense science and technology strategy: Executive summary. 1: Background and overview. 2: The seven thrusts
[PB92-217785] p 2103 N93-21349
Present worth factors for life-cycle cost studies in the Department of Defense
[PB93-120772] p 2093 N93-21690

DEFINITION
Defining contract terms
[AD-A259088] p 2085 N93-20394
Efficient implementation of a functional language for the definition of practicable, denotational semantics
[ETN-93-93413] p 2055 N93-21176

DEFLECTION
Prebuckling deflections and lateral buckling: Applications
[PB92-225366] p 1946 N93-21017
Prebuckling deflections and lateral buckling: Theory
[PB92-225382] p 1946 N93-21018

DEFORESTATION
Deforestation in African dry lands: Assessment of changes in woody vegetation in semi arid Sudan p 1956 N93-21585

DEFORMATION
Development of elements of a high T(sub c) superconducting cable
[AD-A259415] p 1888 N93-20130
Explosive component acceptance tester using laser interferometer technology
[SAND-92-0324C] p 1866 N93-20152
Experimental and analytical investigation of dynamic characteristics of extension-twist-coupled composite tubular spars
[NASA-TP-3225] p 1925 N93-20585
The overall response of composite materials undergoing large deformations
[AD-A259278] p 1832 N93-20606
On homogenization method and large deformations p 1845 N93-20634
Energy equation for beam lateral buckling
[PB92-225390] p 1946 N93-21019
Buckling of restrained columns with shear deformation and axial shortening
[PB93-110476] p 1946 N93-21233
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691
The behavior of intermetallic compounds at large plastic strains
[DE93-003820] p 1857 N93-21772

DEGENERATION
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352

DEGRADATION
Special tests and destructive physical analyses as used by the Aerospace Corporation with nickel-hydrogen cells
[NASA-CR-192318] p 1888 N93-20162
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515
Identification of delamination by eigenfrequency degradation: An inverse problem p 1843 N93-21526
La Recherche Aerospatiale Bimonthly Bulletin, no. 249, March - April
[ONERA-1989-2] p 1762 N93-21747

DEGREES OF FREEDOM
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265
Thruster configurations for maneuvering heavy payloads p 1813 N93-21415
Six-Degree-of-Freedom Test Facility p 1817 N93-21443

DELAMINATING
Nondestructive evaluation of composites using infrared imaging
[AD-A259412] p 1831 N93-20123
Delamination buckling in circular plates p 1931 N93-20653
Buckling of clamped angle-ply laminated plates under inplane loads p 1931 N93-20654
Prediction of damage of laminated composite structures under quasi-static and cyclic loadings
[ESA-TT-1282] p 1839 N93-21289
Debonding/Delamination of Composites
[AGARD-CP-530] p 1840 N93-21507
Free edge delamination prevention in composite laminates p 1840 N93-21508
Delamination and fatigue of composite materials: A review p 1840 N93-21509
Initiation and prevention of edge delamination with and without residual stresses p 1841 N93-21510
Predicting failure by debonding/delamination p 1841 N93-21512
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 1841 N93-21513
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 1841 N93-21514
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517
Edge delamination of composite laminates p 1842 N93-21519
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
Delamination development under fatigue loading p 1842 N93-21521
Identification of delamination by eigenfrequency degradation: An inverse problem p 1843 N93-21526
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 1844 N93-21530
Repairing delaminations with low viscosity epoxy resins p 1844 N93-21532
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533
Fracture at Cu/sapphire interfaces
[DE93-003816] p 1857 N93-21779

DELAY CIRCUITS
Variable phase sine wave generator for active phased arrays
[AD-D015558] p 1888 N93-20028

DELTA WINGS
La Recherche Aerospatiale Bimonthly Bulletin, no. 249, March - April
[ONERA-1989-2] p 1762 N93-21747
Experimental investigations on wing-body combinations and their components at high angles of attack in the subsonic and transonic speed range
[DLR-FB-91-43] p 1783 N93-21762

DEMOGRAPHY
Hurricane experience levels of coastal county populations from Texas to Maine, August 1992
[PB93-105971] p 2013 N93-21228
Effect of personal and situational variables on noise annoyance: With special reference to implications for en route noise
[NASA-CR-189676] p 2060 N93-21317
DENDRITIC CRYSTALS
On the drag of model dendrite fragments at low Reynolds number
[NASA-TM-105916] p 1855 N93-19974
Interfacial wave theory on formation of dendritic structure in binary alloy system p 1810 N93-21121
DENSE PLASMAS
Dense plasma focus powered by flux compression generators
[DE93-003781] p 2076 N93-21837
DENSITY MEASUREMENT
Dry immunochemical sensor for the detection of PETN vapor p 1776 N93-21930
DENSITY WAVE MODEL
Recurrent swing amplification induced by nonlinear amplitude effects
[MITT-SER-A-230] p 2097 N93-21302
DEPLOYMENT
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580
DEPOSITION
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119
Studies of ozone deposition p 1989 N93-20166
Surface modification using a cascade arc plasma source
[ETN-93-93065] p 2074 N93-20936
Summary report for the National Atmospheric Deposition Program National Trends Network (NADP/NTN) site visitation program
[PB92-219823] p 1991 N93-21494
DEPOSITS
Interferometric JFTOT tube deposit measuring device
[AD-D015599] p 1866 N93-20247
DEPTH MEASUREMENT
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 1843 N93-21528
DERIVATION
Computer aided cartographic generalization for the DCM derivation, with regard to feature displacement p 1967 N93-20532
DESIGN ANALYSIS
Identification of propulsion systems
[NASA-TM-106007] p 1784 N93-20109
Design considerations for an astronaut monorail system for large space structures and the structural characterization of its positioning arm p 1823 N93-20167
Shock-dependent, optimum thrust wings in supersonic flow p 1760 N93-20169
Space Shuttle: Status of advanced solid rocket motor program. Report to the Chair, Subcommittee on Government Activities and Transportation, Committee on Government Operations, House of Representatives
[GAO/NSIAD-93-26] p 1829 N93-20293
Development of first generation aerospace NiMH cells p 1986 N93-20520
Design considerations for rechargeable lithium batteries p 1987 N93-20527
HELITRAK: A helicopter-tracking receiver system for television outside broadcast links
[BBC-RD-1992/5] p 1883 N93-20573
YIDOYU and its application to aircraft design
[AD-A259262] p 1781 N93-20605
Probabilistic design procedures for load bearing ceramic components p 1930 N93-20647
Structural shape optimization of robotic links p 1918 N93-20717
The next revolution in computer-aided engineering p 1943 N93-20722
A review of probabilistic fatigue life analyses for welded plate and tubular joints p 1944 N93-20728
Proceedings of the International Conference on CAD/CAM and AMT. Volume 2: CIRP Sessions on Tolerancing, for Function in a CAD/CAM Environment
[ITN-92-85128] p 2034 N93-20823
Optimization and sensitivity computations for the conception of internal ventilation system in the aircraft engine
[ETN-93-93375] p 1785 N93-20913
Formal verification of a microcoded VIPER microprocessor using HOL
[NASA-CR-4489] p 2044 N93-21043
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles
[MBB-FE-211-S-PUB-0481] p 1781 N93-21056
Predesign of the tubular braiding process using a mathematical process description p 1836 N93-21143
Buckling of restrained columns with shear deformation and axial shortening
[PB93-110476] p 1946 N93-21233
A Government/Industry Summary of the Design Analysis Methods for Vibrations (DAMVIBS) Program
[NASA-CP-10114] p 1782 N93-21310
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: A government overview p 1782 N93-21311
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program : Bell Helicopter Textron accomplishments p 1782 N93-21312
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Boeing Helicopters airframe finite element modeling p 1782 N93-21313
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: McDonnell-Douglas Helicopter Company achievements p 1782 N93-21314
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Sikorsky Aircraft: Advances toward interacting with the airframe design process p 1782 N93-21315
The integrated design and manufacturing of composite structures for aircraft using an advanced tape layering technology
[MBB-LME-251-S-PUB-0491-A] p 1783 N93-21401
Autonomous rendezvous and capture system design p 1815 N93-21427
ROMPS critical design review data package
[NASA-CR-191612] p 2041 N93-21472
Investigation of the bond strength of a discrete skin-stiffener interface p 1843 N93-21527
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831
Space Station ECLSS integration analysis
[NASA-CR-192470] p 2027 N93-22002
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual
[NASA-CR-191017] p 1953 N93-22005
DESORPTION
Surface pi bonding and the near-first-order desorption kinetics of hydrogen from Ge(100)2x1
[AD-A258534] p 1845 N93-20051
Pairing and clustering of hydrogen on Si(100)2x1: Monte Carlo studies
[AD-A258537] p 1846 N93-20054
Competitive pairing and the chemistry of coadsorbed hydrogen and halogens on Ge(100)
[AD-A258538] p 1846 N93-20386
Wetting of fibers measured by LPR-90 equipment p 1835 N93-21139
DESTRUCTIVE TESTS
Special tests and destructive physical analyses as used by the Aerospace Corporation with nickel-hydrogen cells
[NASA-CR-192318] p 1888 N93-20162
COMSAT's destructive physical analysis of aerospace nickel-cadmium cells for NASA/Goddard Space Flight Center p 1983 N93-20495
Batman-cracks. Observations and numerical simulations p 1936 N93-20681
DESULFURIZING
Technologies options for acid rain control
[PB93-106854] p 1991 N93-21473
DETECTION
Biochemically active layers for selective material detection sensors
[MBB-Z-0440-92-PUB] p 2021 N93-20959
Fundamentals of adaptive anticipation techniques for the detection of threatening air traffic conflicts: Investigation of the horizontal proximity situation in the case of expected heading changes
[DLR-MITT-91-21] p 1779 N93-21004
Detection of incipient defects in cables by partial discharge signal analysis
[PB92-222744] p 1919 N93-21199
Damage detection by Acousto-Ultrasonic Location (AUL) p 1843 N93-21529
Improving the detection of near-Earth asteroids
[AD-A259383] p 2095 N93-21670
Role of advanced technology in the security of surface transportation p 1764 N93-21857
The UK perspective on aviation security p 1764 N93-21858
Insights into US domestic aviation p 1764 N93-21859
Principles of nuclear-based explosive detection systems p 1765 N93-21861
A review of the development of a luggage explosive detection system p 1765 N93-21862
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863
An approach to improving TNA EDS p 1765 N93-21864
PFNA technique for the detection of explosives p 1765 N93-21865
A pulsed fast-thermal neutron interrogation system p 1765 N93-21866
Neutron Elastic Scatter (NES) for Explosives Detection Systems (EDS) p 1766 N93-21868
Detector selection for nuclear-based explosive detection system p 1766 N93-21869
Explosive detection system based on Electronic Neutron Generator (ENG) p 1766 N93-21870
The RFQ LINAC: A high-current compact ion accelerator for explosive detection p 1766 N93-21872
An H(-) ion source for resonant gamma production p 1766 N93-21874
An explosive detection system for screening luggage with high energy x rays p 1767 N93-21877
Explosives detection limitations using dual-energy radiography and computed tomography p 1767 N93-21878
The evolution of Computed Tomography (CT) as an explosives detection modality p 1768 N93-21883
Explosive detection using x rays and thermal neutron activation p 1768 N93-21884
Fusion of the nuclear and different x ray technologies for explosives detection p 1768 N93-21885
Selective gamma ray resonant absorption for explosives detection p 1769 N93-21887
A general protocol for operational testing and evaluation of bulk explosive detection systems p 1769 N93-21888
Performance testing of explosives and weapons detection systems p 1769 N93-21889
Validation of simulated explosives for testing TNA explosives detection systems p 1769 N93-21891
Airport testing of a new thermal neutron analysis explosives detection system p 1769 N93-21892
Radiological safety aspects of TNA deployment p 1770 N93-21893
Radiological safety regulation and licensing of nuclear-based explosive detection systems p 1770 N93-21894
Experience with explosive detection systems in airports p 1770 N93-21895
Sampling explosives on airline passengers p 1770 N93-21896
Explosive detection using dielectrometry p 1770 N93-21898
Liquid explosives screening system p 1771 N93-21899
Application of magnetic resonance to explosives detection p 1771 N93-21901
Explosive detection using microwave imaging p 1771 N93-21902
Consideration of untried magnetic resonance techniques for possible baggage analysis p 1771 N93-21903
Dichotomous key approach for high confidence level identification of selected explosive vapors p 1771 N93-21904
Explosive vapor emission p 1772 N93-21905
Extraction, transportation and processing of explosives vapor in detection systems p 1772 N93-21907
Vapor sampling using controlled heating p 1772 N93-21908
Efficient collection of explosive vapors, particles and aerosols p 1772 N93-21909
Negative-ion formation in the explosives RDX, PETN, and TNT using the Reversal Electron Attachment Detection (READ) technique p 1773 N93-21910
Calibration methods for explosives detectors p 1773 N93-21911
Vapor detection using SAW sensors p 1773 N93-21912
Fourier-transform infrared spectroscopy applied to explosive vapor detection p 1773 N93-21913
Atmospheric pressure ionization time-of-flight mass spectrometer for real-time explosives vapor detection p 1773 N93-21914
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer p 1773 N93-21915
Detection of explosives material on single microparticles p 1774 N93-21916
Tandem mass spectrometry for explosives vapor detection p 1774 N93-21917
Modifications to the ionization process to enhance the detection of explosives by API/MS/MS p 1774 N93-21918

The role of mass spectrometry in the detection of explosives p 1774 N93-21919
Modification to the ionization process to enhance the detection of explosives by IMS p 1774 N93-21920
Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives p 1774 N93-21921
Detection of trace explosive evidence by ion mobilty spectrometry p 1774 N93-21922
Analysis of explosives using high speed gas chromatography with chemiluminescent detection p 1775 N93-21923
Marking of German plastic explosive for the enhancement of vapor detection p 1775 N93-21925
Program to tag military plastic/sheet explosives p 1775 N93-21926
Detection of taggant in modified composition C-4 tagged with a taggant p 1776 N93-21929
The challenge of biodetection for screening persons carrying explosives p 1776 N93-21931
The flow immunosensor: An antibody-based system for explosives detection p 1776 N93-21932
Explosives search dogs p 1776 N93-21933
A novel approach to design optimization of nuclear-based explosive detection systems p 1777 N93-21935
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937
Computer simulations and performance predictions for explosive detection systems p 1777 N93-21938
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941
A systems approach to the explosive detection problem p 1778 N93-21942
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943
Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944
Impact on the air carrier of explosive detection systems p 1778 N93-21945

DETECTORS
Role of advanced technology in the security of surface transportation p 1764 N93-21857
Principles of nuclear-based explosive detection systems p 1765 N93-21861
A review of the development of a luggage explosive detection system p 1765 N93-21862
An approach to improving TNA EDS p 1765 N93-21864
The nitrogen camera: A new explosive detector p 1766 N93-21867
Explosive detection system based on Electronic Neutron Generator (ENG) p 1766 N93-21870

DETERIORATION
A literature review of time-deterioration prediction techniques
[PB92-229202] p 1919 N93-21822

DETONATION
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices p 1865 N93-20150

DETONATION WAVES
Portable fiber optic coupled Doppler interferometer system for detonation and shock wave diagnostics
[SAND-92-1359C] p 1865 N93-20148

DETONATORS
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
Laser-initiated ordnance for air-to-air missiles p 1864 N93-20139
Laser-based firing systems for prompt initiation of secondary explosives p 1864 N93-20143
Laser diode ignition characteristics of Zirconium Potassium Perchlorate (ZPP) p 1865 N93-20145
Laser diode initiated detonators for space applications p 1865 N93-20147
Portable fiber optic coupled Doppler interferometer system for detonation and shock wave diagnostics
[SAND-92-1359C] p 1865 N93-20148
Development and testing of hermetic, laser-ignited pyrotechnic and explosive components p 1865 N93-20149
Explosive component acceptance tester using laser interferometer technology
[SAND-92-0324C] p 1866 N93-20152
Growth and defects of explosives crystals
[DE93-003866] p 2082 N93-21780

DEUTERONS
Survey of nuclear activations for intense proton and deuteron beams
[AD-A259258] p 2061 N93-20604

DIAGNOSIS
Capabilities and constraints of combustion diagnostics in microgravity p 1869 N93-20185
Selected microgravity combustion diagnostic techniques p 1853 N93-20194
Laser diagnostics for microgravity droplet studies p 1853 N93-20195
Flame spread across liquid pools p 1854 N93-20209
A VHDL interpreter for model-based diagnoses
[AD-A259122] p 2046 N93-20590
Integrated FASTBUS, VME and CAMAC diagnostic software at Fermilab
[DE93-004424] p 2042 N93-21845

DIAGRAMS
Generalized 3D Voronoi diagram: First results
[RR-879-M] p 2039 N93-21051
The generalized Voronoi diagram for a set of polygons: Algorithms, operation and applications to shape analysis
[ETN-93-92689] p 2056 N93-21392

DIAMAGNETISM
Refined theory of diamagnetic effect in stellarators
[NIFS-162] p 2070 N93-20158

DIAMOND FILMS
Interaction of hydrogen and water with diamond (100): Infrared spectroscopy
[AD-A258535] p 1846 N93-20052
Controlled nucleation and growth of semiconducting diamond
[AD-A258541] p 2078 N93-20056
Interface properties of wide bandgap semiconductor structures
[AD-A259416] p 2078 N93-20131
Growth, characterization and device development in monocrystalline diamond films
[AD-A259099] p 2079 N93-20407

DIAMONDS
Controlled nucleation and growth of semiconducting diamond
[AD-A258541] p 2078 N93-20056
High temperature substrate mount for chemical vapor deposition of diamond
[AD-D015563] p 1858 N93-20122
Construction of a channeling radiation source and production of intensive channeling radiation at the Darmstadt (Germany) superconductive electron accelerator
[ETN-93-93410] p 2066 N93-21206

DICTIONARIES
Defining contract terms
[AD-A259088] p 2085 N93-20394

DIELECTRIC PROPERTIES
Joint services electronics program
[AD-A259179] p 1890 N93-20562

DIELECTRICS
High-frequency techniques for RCS prediction of plate geometries and a physical optics/equivalent currents model for the RCS of trihedral corner reflectors
[NASA-CR-192302] p 1881 N93-20233
The resonator handbook
[NASA-CR-192217] p 1894 N93-21559
Explosive detection using dielectrometry p 1770 N93-21898

DIFFERENTIAL AMPLIFIERS
A semi-custom dual channel peak hold circuit for spaceborne instrumentation
[DE93-003801] p 1828 N93-21777

DIFFERENTIAL EQUATIONS
Dynamic systems and normal forms
[RR-883-M] p 2051 N93-20784
Non standard analysis and ordinary differential equations
[RR-884-M] p 2051 N93-20787
Singular points at infinity of quadratic systems of differential equations
[REPT-91-58] p 2052 N93-20852
On homogeneous quasilinear evolution equation
[REPT-91-65] p 2052 N93-20854
The search for differential equations for orthogonal polynomials by using computers
[REPT-91-55] p 2052 N93-20865
On a fundamental notion of equivalence in linear systems theory
[MATHS-REPT-A-162] p 2053 N93-20890
Well-posedness and stabilizability of a viscoelastic equation in energy space
[PB93-111920] p 2056 N93-21474

DIFFERENTIAL GEOMETRY
Umbilici, lines of curvature, focal surfaces and their metamorphosis
[ETN-93-93414] p 2055 N93-21207

DIFFERENTIAL PULSE CODE MODULATION
Compression of color-mapped images p 1881 N93-20173
Recursively indexed differential pulse code modulation p 1881 N93-20175
An image compression technique for use on token ring networks p 1881 N93-20176

DIFFRACTION
High-frequency techniques for RCS prediction of plate geometries and a physical optics/equivalent currents model for the RCS of trihedral corner reflectors
[NASA-CR-192302] p 1881 N93-20233
Design and analysis of a fast, two-mirror soft-x-ray microscope
[NASA-CR-191440] p 2067 N93-20316
Joint services electronics program
[AD-A259179] p 1890 N93-20562

DIFFRACTION PATTERNS
Method and apparatus for controlling internal rotation of principal axes in fabrication of birefringent fibers
[AD-D015611] p 2067 N93-20397

DIFFRACTOMETERS
Solutions for implementing time-of-flight techniques in low-angle neutron scattering, as realized on the Low-Q Diffractometer at Los Alamos
[DE93-003702] p 2065 N93-21998

DIFFUSE RADIATION
A radiosity approach realistic image synthesis system
[AD-A259082] p 2032 N93-20406

DIFFUSION
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497
The ignition diffusion concerning contacted and non contacted n(+) emitter interruptions
[ETN-93-92564] p 1891 N93-20878

DIFFUSION FLAMES
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
Structure and soot properties of non-buoyant laminar round-jet diffusion flames p 1853 N93-20190
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions p 1853 N93-20192
Selected microgravity combustion diagnostic techniques p 1853 N93-20194
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
On the structure of gaseous confined laminar diffusion flames: Numerical investigation
[NASA-TM-106039] p 1902 N93-21198
Diffusion and reaction layer structure and NOx reduction in turbulent gas flames
[PB93-114353] p 1850 N93-21456

DIFFUSION WELDING
Role of atomic size and valence in bonding and diffusion at metal surfaces
[DE93-003994] p 1857 N93-21972

DIFFUSIVITY
Steady state tokamak sustained by bootstrap current without seed current
[NIFS-159] p 2070 N93-20155
Mechanisms of gas permeation through polymer membranes
[DE93-005960] p 1852 N93-21836

DIGITAL DATA
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374
Joint parameters estimation and symbols detection for digital communication over linear or nonlinear unknown channels
[TELECOM-PARIS-91-D-013] p 1885 N93-21394
National Oceanographic Data Center inventory of physical oceanographic profiles: Global distributions by year for all countries
[PB93-116531] p 2019 N93-21476
Delineate subsurface structures with ground penetrating radar
[DE93-000474] p 1886 N93-21664

DIGITAL ELECTRONICS
Precision digital phase lock loop circuit
[AD-D015594] p 1891 N93-20785

DIGITAL FILTERS
Dual difference filtering: A replacement for interpolation and subtraction to detect changes in misregistered signals
[AD-A259440] p 1880 N93-20013

DIGITAL SIMULATION
Analysis of the Space Shuttle main engine simulation
[NASA-CR-191063] p 1820 N93-20251
Reports on cartography and geodesy, series 1, number 106
[ETN-93-92583] p 1967 N93-20528
Aerothermodynamic properties of hypersonic flows over radiation-adiabatic surfaces
[DLR-FB-91-42] p 1763 N93-21761

DIGITAL SYSTEMS
An extended length digital correlator threshold circuit
[AD-D015610] p 1889 N93-20328
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374

Automatized cartography, using the Mitteldeutschen Kartographie and Druck GmbH system p 1967 N93-20529
Development of an automated cartographic system p 1967 N93-20530
Application possibilities for automated digitizing p 1967 N93-20531
Computer aided cartographic generalization for the DCM derivation, with regard to feature displacement p 1967 N93-20532
A binocular stereo approach to AR/C at the Johnson Space Center p 1814 N93-21421

DIGITAL TECHNIQUES
Digital topographic approach to modeling: The distribution of precipitation to mountainous terrain [PB93-106649] p 2015 N93-21535

DIGITAL TELEVISION
Introduction to study and simulation of low rate video coding schemes p 1880 N93-20171

DIMENSIONAL ANALYSIS
Physics-like mathematical model for chaos and ergodic criticality in four dimensions p 1944 N93-20729

DIMENSIONAL MEASUREMENT
Development of algorithms for composite positional tolerance measurement using coordinate measuring machines [PAPER-C-1-6] p 2035 N93-20829
Problems of quality inspection and diagnosing in modern manufacturing systems [PAPER-C-3-2] p 2036 N93-20836

DIMENSIONLESS NUMBERS
Dimensionless scaling of confinement in ATF [DE93-001705] p 2069 N93-20030
On the thermoelastohydrodynamic lubrication dimensionless problem formulations p 1917 N93-20693

DIODES
Laser diode ordnance design p 1864 N93-20140
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
Magnetically insulated ion diodes for synthesis of advanced materials [DE93-003747] p 2076 N93-21776

DIRECT CURRENT
A contribution to the adaptive control of servo-drives with direct current motor [ETN-93-92562] p 2047 N93-20876

DIRECTION FINDING
Method and apparatus for passive direction finding with sideband determination [AD-D015546] p 1882 N93-20306

DIRECTORIES
Access EPA [PB92-147438] p 1994 N93-21811

DISCONTINUITY
Full wave characterization of microstrip open end discontinuities patterned on anisotropic substrates using potential theory [NASA-TM-106037] p 1889 N93-20259

DISCOVERY (ORBITER)
Contamination signatures observed during the CIRRIS-1A mission [AD-A258596] p 1820 N93-19982

DISCRIMINANT ANALYSIS (STATISTICS)
Discriminant analysis of plasma fusion data [NIFS-156] p 2073 N93-20761

DISK GALAXIES
Dynamics of stellar populations in galactic disks [MITT-SER-A-234] p 2097 N93-21300
Recurrent swing amplification induced by nonlinear amplitude effects [MITT-SER-A-230] p 2097 N93-21302

DISKS (SHAPES)
Fracture toughness using circular discs p 1935 N93-20677

DISPERSIONS
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project [FOA-C-40296-4.5] p 1901 N93-20858
Ordering of aggregating particle suspensions undergoing simple shear p 1805 N93-21092

DISPLACEMENT
Explosive component acceptance tester using laser interferometer technology [SAND-92-0324C] p 1866 N93-20152
Two-dimensional planar geosystems subjected to three-dimensional dynamic loads [AD-A258723] p 1921 N93-20325
Analysis of mixed mode cracks in a cylindrical shell p 1936 N93-20683
Comparison of the efficiency of the various methods for rigid-body displacement analyses p 1941 N93-20709
Prebuckling deflections and lateral buckling: Theory [PB92-225382] p 1946 N93-21018
Buckling of columns: Allowance for axial shortening [PB93-110484] p 1947 N93-21234
Improving the selection of bolted joint parameters by using results from finite-element analysis [DE93-002243] p 1951 N93-21774

DISPLAY DEVICES
On the typography of flight-deck documentation [NASA-CR-177605] p 2087 N93-19970
Multiple projector small dome display [AD-A258621] p 2077 N93-19996
Interactive graphics system for the study of variance/covariance structures of bivariate and multivariate normal populations [AD-A259449] p 2030 N93-20058
Improved visual aid for VLF MSK signals [AD-D015576] p 1882 N93-20277
Real image visual display system [AD-A259125] p 2033 N93-20593
Measurement of modulation transfer functions of simulator displays [AD-A259401] p 1788 N93-21268
Three dimensional x ray systems and image enhancement techniques p 1767 N93-21876
A systems approach to the explosive detection problem p 1778 N93-21942

DISRUPTING
A simulation study of the effects of communication delay on air traffic control [AD-A258593] p 1778 N93-19966

DISSIPATION
Thought analysis on self-organization theories of MHD plasma [NIFS-164] p 2070 N93-20159
Eigenfunction for dissipative dynamics operator and attractor of dissipative structure [NIFS-194] p 2050 N93-20267

DISSOCIATION
Theoretical studies of important processes in planetary and comet atmospheres [NASA-CR-192114] p 2098 N93-19959

DISSOLVING
Effect of surface active materials on bubble dynamics in two-phase flow [AD-A259340] p 1902 N93-21264

DISTANCE
Distance estimation and collision prediction for on-line robotic motion planning [NASA-CR-192737] p 2049 N93-21390
Deterministic communication complexity of the Hamming distance [MEMO-1026] p 2056 N93-21399

DISTANCE MEASURING EQUIPMENT
SSG 1.79: Optical interferometry and short range distance measurement (EDM) p 1969 N93-20965

DISTORTION
On improving accuracy of machining centers [PAPER-C-3-1] p 2036 N93-20835

DISTRIBUTED PROCESSING
The economic use of PC for cartographic distributed tasks p 1967 N93-20534
Distributed database management evaluation software [AD-A259215] p 2090 N93-20565
Optimal broadcasting algorithms on torus [RR-872-I] p 2043 N93-20789
A contribution to the study of OR-parallel in PROLOG over distributed memory machines [ETN-93-92681] p 2044 N93-20886
Level 3 BLAS for distributed memory concurrent computers [DE93-003613] p 2029 N93-21730

DISTRIBUTION
Hurricane experience levels of coastal county populations from Texas to Maine, August 1992 [PB93-105971] p 2013 N93-21228

DISTRIBUTION FUNCTIONS
Prediction of the random load fatigue life distribution p 1922 N93-20337
Statistical analysis of fatigue tests p 1923 N93-20343
A radiosity approach realistic image synthesis system [AD-A259082] p 2032 N93-20406

DIVERGENT NOZZLES
Evolution of materials used in liquid propellant rocket engines [DS-2025] p 1830 N93-21460

DIVERTERS
Apparatus for reduction of vibration in liquid-injected gas compressor system [AD-D015607] p 1914 N93-20772
Design study on divertor plates of Large Helical Device (LHD) [NIFS-190] p 2074 N93-21361

DIVING (UNDERWATER)
Statistically based decompression tables. 7: Selection and treatment of primary air and N2O2 data [AD-A259090] p 2023 N93-20587

DMSP SATELLITES
PL/GPD DMSP data archiving from VAX to exabyte tapes [AD-A258607] p 2002 N93-19994

DOCUMENTATION
On the typography of flight-deck documentation [NASA-CR-177605] p 2087 N93-19970
Documentation and bibliographic analysis in the framework of the ATKIS generalization p 1968 N93-20537
International Centre on Recent Crustal movements p 1973 N93-20989

DOCUMENTS
Bibliography of scientific publications 1977-1991 [AD-A259084] p 2090 N93-20393
The FY 1992 scientific and technical reports, articles, papers, and presentations [NASA-TM-108392] p 2091 N93-20920
Publications of the National Institute of Standards and Technology 1991 catalog [PB92-217579] p 2091 N93-21344
Databases available in the Research Information Center of the National Institute of Standards and Technology [PB93-114478] p 2092 N93-21387
Geographic index of environmental articles 1990 [PB93-116184] p 1994 N93-21806
Journal of research of the National Institute of Standards and Technology, July-August 1992. Volume 97, number 4 [PB93-124246] p 2104 N93-21814

DOGS
Explosives search dogs p 1776 N93-21933
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943

DOMAINS
An investigation of discovery-based learning in the route planning domain [AD-A259141] p 1780 N93-20560

DOMES (STRUCTURAL FORMS)
Multiple projector small dome display [AD-A258621] p 2077 N93-19996

DOPED CRYSTALS
Controlled nucleation and growth of semiconducting diamond [AD-A258541] p 2078 N93-20056
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
Growth and doping of Al(x)Ga(1-x) films by electron cyclotron resonance assisted molecular beam epitaxy [AD-A258722] p 2079 N93-20367
Conducting polymers as potential active materials in electrochemical supercapacitors [DE93-003827] p 1861 N93-21675
Monolithic preamplifier employing epitaxial N-channel JFETs [DE93-002951] p 1894 N93-21980

DOPES
Structural equilibration in intrinsic, single-doped, and compensated TFT's: Experiments and calculations [MBB-Z-0377-91-PUB] p 1891 N93-20841
A high efficiency CW holmium-doped fluorozirconate fibre laser at 1.19 micrometers [MBB-Z-0414-91-PUB] p 1911 N93-20843
Efficient CW operation of a 2.75 micrometer Er(3+)-doped fluorozirconate fibre laser pumped at 650 and 795 nm [MBB-Z-0384-91-PUB] p 1911 N93-20916

DOPPLER EFFECT
Explosive component acceptance tester using laser interferometer technology [SAND-92-0324C] p 1866 N93-20152
A new deconvolution method for the Doppler cartography of cool star surfaces and its use on AB Doradus [MPE-236] p 2095 N93-21025
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990) [PB93-116598] p 2019 N93-21389

DOPPLER RADAR
Multi-center Airborne Coherent Atmospheric Wind Sensor (MACAWS) p 1913 N93-20101
Computer modeling of pulsed CO2 lasers for lidar applications p 1913 N93-20106
Capacities of the DLR polarization diversity radar for determining icing relevant cloudphysical parameters [DLR-MITT-91-14] p 2014 N93-21367
Coherent Doppler lidar for automated space vehicle rendezvous, stationkeeping and capture p 1812 N93-21408
Rendezvous radar for the orbital maneuvering vehicle p 1814 N93-21419
Representativity of wind measurement from space p 1961 N93-21617

DOSIMETERS
Direct-reading dosimeters for space life science experiments p 1804 N93-21083
The development of an automated cell culture system for use in space life science research p 1804 N93-21085
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193)
[PB92-227073] p 1893 N93-21350
DRAFTING (DRAWING)
Tolerancing for function in a CAD/CAM environment
[PAPER-C-1-1] p 2034 N93-20824
DRAG
On the drag of model dendrite fragments at low Reynolds number
[NASA-TM-105916] p 1855 N93-19974
DRAG REDUCTION
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237
Injection of drag-reducing additives into turbulent water flows. Investigation of laser-induced fluorescence for concentration measurements
[AD-A259459] p 1898 N93-20243
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
DRILLING
Vectorial tolerancing
[PAPER-C-1-4] p 2035 N93-20827
DRONE AIRCRAFT
Report to the Chairman, Legislation, and National Security Subcommittee, Committee on Goverment Operations, House of Representatives. Unmanned aerial vehicles: More testing needed before production of short-range system
[AD-A259473] p 1780 N93-20245
DROP SIZE
On the size dependence of the chemical properties of cloud droplets: Exploratory studies by aircraft p 2011 N93-20281
Drop sizing with thermal anemometry: A review
[DLR-MITT-91-18] p 1906 N93-21039
DROP TOWERS
Capabilities and constraints of NASA's ground-based reduced gravity facilities p 1819 N93-20184
Capabilities and constraints of combustion diagnostics in microgravity p 1869 N93-20185
Opposed-flow flame spreading in reduced gravity p 1854 N93-20206
Metals combustion in normal gravity and microgravity p 1854 N93-20211
Computational/experimental studies of isolated, single component droplet combustion p 1854 N93-20213
High-pressure droplet combustion studies p 1854 N93-20216
Characterizing droplet combustion of pure and multi-component liquid fuels in a microgravity environment p 1855 N93-20219
NIST impact test facility
[PB92-226315] p 1788 N93-21467
DROPS (LIQUIDS)
Japan's microgravity combustion science program p 1868 N93-20182
Laser diagnostics for microgravity droplet studies p 1853 N93-20195
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
The structure of particle cloud premixed flames p 1853 N93-20202
Studies of droplet burning and extinction p 1854 N93-20212
Computational/experimental studies of isolated, single component droplet combustion p 1854 N93-20213
Combustion experiments in reduced gravity with two-component miscible droplets p 1854 N93-20214
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
High-pressure droplet combustion studies p 1854 N93-20216
Combustion of interacting droplet arrays in a microgravity environment p 1854 N93-20217
The electrospray: Fundamentals and combustion applications p 1855 N93-20218
Characterizing droplet combustion of pure and multi-component liquid fuels in a microgravity environment p 1855 N93-20219
Drop sizing with thermal anemometry: A review
[DLR-MITT-91-18] p 1906 N93-21039
Dynamics of sessile droplets distortion and disruption by electric field in microgravity conditions p 1805 N93-21091
Ripening of immiscible liquid droplets in microgravity with constrained Marangoni drift p 1810 N93-21122
DRUGS
Explosive detection using microwave imaging p 1771 N93-21902
DRYING
S. G. Romanovskiy method of thermal treatment and drying of nonconducting materials (Description of an invention for an author's certificate)
[AD-A258631] p 1831 N93-20000
DUCTED FANS
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
DUCTED FLOW
An experimental investigation of S-duct flow control using arrays of low-profile vortex generators
[NASA-TM-106030] p 1760 N93-19968
Film condensation in a horizontal rectangular duct
[NASA-CR-191061] p 1898 N93-20063
DUCTILITY
High temperature alloys p 1858 N93-20626
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691
DUCTS
An experimental investigation of S-duct flow control using arrays of low-profile vortex generators
[NASA-TM-106030] p 1760 N93-19968
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis. Computer program user's manual
[NASA-CR-187125] p 1784 N93-20583
Enhanced heat transfer in ribbed ducts using vortex generators
[PB93-114320] p 1902 N93-21219
DUMP COMBUSTORS
Numerical solution of three-dimensional unsteady viscous flows
[AD-A259464] p 1899 N93-20244
DURABILITY
Issues/considerations and performance prediction of LEO protective coatings p 1847 N93-20813
DUST
Microgravity combustion of dust suspensions p 1853 N93-20201
A study of the large-scale infrared emission from a selected dark cloud
[NASA-CR-192263] p 1998 N93-20755
Ion trapping in dusty plasmas
[MPE-PREPRINT-219] p 2075 N93-21405
DYNAMIC CHARACTERISTICS
Experimental and analytical investigation of dynamic characteristics of extension-twist-coupled composite tubular spars
[NASA-TP-3225] p 1925 N93-20585
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application p 1940 N93-20706
An investigation of the unexpected attitude dynamics experienced by the OEDIPUS-A tethered sounding rocket payload p 1830 N93-20724
Sunspot dynamics
[NASA-CR-192284] p 2100 N93-20754
Higher frequency transmission properties of motor car-chassis systems
[ETN-93-92563] p 1915 N93-20877
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
DYNAMIC CONTROL
Green's function method for vibration of structures p 1934 N93-20667
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Advanced booster guidance studies
[NASA-CR-192336] p 1829 N93-20896
DYNAMIC LOADS
Two-dimensional planar geosystems subjected to three-dimensional dynamic loads
[AD-A258723] p 1921 N93-20325
DYNAMIC MODELS
COLD-SAT dynamic model
[NASA-TM-105185] p 1822 N93-19988
Research in robust control for hypersonic vehicles
[NASA-CR-192127] p 1786 N93-20296
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Experiment and modeling of the noise reduction for a turbulent supersonic jet by means of a nozzle with a sudden enlargement
[MPIS-15/1991] p 2060 N93-21024
A method for modeling contact dynamics for automated capture mechanisms p 1816 N93-21434
DYNAMIC PRESSURE
Application of a flush airdata sensing system to a wing leading edge (LE-FADS)
[NASA-TM-104267] p 1784 N93-20163
DYNAMIC PROGRAMMING
The linear program approach in Markov decision processes revisited
[INRIA-RR-1569] p 2058 N93-20868
Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872
Sketches and computation
[RR-871-I-IMAG-123-LIFIA] p 2041 N93-21451
A decomposition approach to suboptimal control of discrete-time systems
[REPT-92-027] p 2049 N93-21552
DYNAMIC RESPONSE
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Dynamic analysis of a variable-mass multibody system p 1934 N93-20671
A modular structure for the control of an autonomous mobile robot
[LAAS-92137] p 1915 N93-20958
A Government/Industry Summary of the Design Analysis Methods for Vibrations (DAMVIBS) Program
[NASA-CP-10114] p 1782 N93-21310
The behavior of elastic anisotropic laminated composite flat structures subjected to deterministic and random loadings
[NASA-CR-192197] p 1950 N93-21366
DYNAMIC STRUCTURAL ANALYSIS
Hierarchical Poly Tree configurations for the solution of dynamically refined finte element models
[NASA-CR-191054] p 1921 N93-20232
Structural dynamics branch research and accomplishments to FY 1992
[NASA-TM-105824] p 1925 N93-20368
Large amplitude free vibrations of cross-ply composite beams p 1930 N93-20646
A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649
Numerical stabilities aspects of cable dynamics simulation p 1931 N93-20650
An efficient method for the reliability analysis of geometric nonlinear frame structures p 1931 N93-20651
Multimodal optimization of vibrating space frames p 1931 N93-20652
A method of continuous coordinate condensation p 1932 N93-20657
Analysis of structurally-varying systems using component-mode synthesis technique p 1932 N93-20658
Instability and variation analysis using a parallel substructuring procedure p 1932 N93-20659
Peano-like dynamics as a model for strange nonchaotic behaviour p 1933 N93-20661
Resonant response analysis of a high speed gear p 1917 N93-20662
Elimination of resonance with a switching support p 1933 N93-20664
Dynamic simulation of flexible body systems by the vector solution method p 1933 N93-20666
Green's function method for vibration of structures p 1934 N93-20667
Forced vibration of non-selfadjoint elastic systems p 1934 N93-20668
Transverse vibrations of an elastically restrained rod carrying a tip mass p 1934 N93-20669
On oscillatory motion of a spring-mass system subjected to piecewise constant forces p 1934 N93-20670
Dynamic analysis of a variable-mass multibody system p 1934 N93-20671
Vibration of a multi-guided rotating string p 1934 N93-20672
The free vibration of isotropic and specially orthotropic triangular plates p 1935 N93-20673
Buckling and dynamic instability phenomena of tapered bar with localized flaw subjected to an intermediate periodic axial load p 1935 N93-20675
Performances of finite element solution for crack problem p 1936 N93-20682
Stochastic finite element analysis for high speed rotors p 1918 N93-20696
The flexural behaviour of thin-walled singly symmetric columns
[PB92-225408] p 1946 N93-21020

Integrated view of methods in buckling analysis
[PB93-110468] p 1946 N93-21232
A Government/Industry Summary of the Design Analysis Methods for Vibrations (DAMVIBS) Program
[NASA-CP-10114] p 1782 N93-21310
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Boeing Helicopters airframe finite element modeling p 1782 N93-21313
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: McDonnell-Douglas Helicopter Company achievements p 1782 N93-21314
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Sikorsky Aircraft: Advances toward interacting with the airframe design process p 1782 N93-21315
The behavior of elastic anisotropic laminated composite flat structures subjected to deterministic and random loadings
[NASA-CR-192197] p 1950 N93-21366
NIST impact test facility
[PB92-226315] p 1788 N93-21467
Transient dynamics capability at Sandia National Laboratories
[DE93-002285] p 2041 N93-21549
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual
[NASA-CR-191017] p 1953 N93-22005

DYNAMIC TESTS
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: McDonnell-Douglas Helicopter Company achievements p 1782 N93-21314
Contact dynamics testing of automated three-point docking mechanism p 1812 N93-21411
Autonomous docking ground demonstration p 1816 N93-21430

DYNAMICAL SYSTEMS
Eigenfunction for dissipative dynamics operator and attractor of dissipative structure
[NIFS-194] p 2050 N93-20267
Peano-like dynamics as a model for strange nonchaotic behaviour p 1933 N93-20661
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application p 1940 N93-20706
Dynamic systems and normal forms
[RR-883-M] p 2051 N93-20784
Estimates of cycle times in stochastic Petri nets
[INRIA-RR-1572] p 2058 N93-20897
SSG 4.116: Kinematic and dynamic system modelling in geodesy p 1972 N93-20982
Nonlinear ocean waves
[AD-A259335] p 2019 N93-21260

DYNAMO THEORY
Numerical models of planetary dynamos
[DE93-003848] p 2098 N93-21970

E

E GLASS
What's a Parabeam 3D? p 1835 N93-21137

EARLY WARNING SYSTEMS
Domain engineering validation case study: Synthesis for the air traffic display/collision warning monitor domain version 01.00.03
[AD-A259407] p 1780 N93-21671

EARTH ATMOSPHERE
A new software tool for computing Earth's atmospheric transmission of near- and far-infrared radiation
[NASA-TM-103957] p 1996 N93-20066
Basic studies of baroclinic flows p 2003 N93-20073
Laboratory and theoretical models of planetary-scale instabilities and waves p 2004 N93-20074
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting
[ESA-ISY-1-VOL-1] p 1953 N93-21569
Screening analysis of CO2 utilization and fixation
[DE93-004313] p 1994 N93-21850

EARTH CRUST
Crustal deformation measurements in the vicinity of Vandenberg Air Force Base
[AD-A258536] p 1996 N93-20053
Lithospheric dynamics near plate boundaries
[NASA-CR-192108] p 1997 N93-20310
NASA Space Geodesy Program: GSFC data analysis, 1992. Crustal Dynamics Project VLBI geodetic results, 1979 - 1991
[NASA-TM-104572] p 1999 N93-20900
Commission 7: Recent crustal movements p 1973 N93-20988
International Centre on Recent Crustal movements p 1973 N93-20989
Attenuation and source studies in Northern Eurasia
[AD-A259323] p 2000 N93-21700
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792

EARTH ENVIRONMENT
Global change data base training exercise manual. Exploring Earth's environment: Africa as an example
[PB92-224682] p 1990 N93-21211
Russian space system for the Earth remote sensing p 1977 N93-21280
Sun-synchronous and geo-synchronous satellite data utilization for environmental studies p 1977 N93-21281
Opportunities in applied environmental research and development
[PB92-223189] p 1990 N93-21347
Proceedings of the 14th Earth Observation Symposium
[JTN-93-80414] p 1978 N93-21539
Present status and tendency of satellite Earth observing systems p 1978 N93-21541
Study for natural environment in Okinawa Islands by using remote sensing p 1978 N93-21542
Earth observation in the TIGER programme of the UK Natural Environment Research Council p 1953 N93-21572
Preparation of AVHRR GAC data sets for global change studies p 1954 N93-21573
Key problems of global ecology and the International Space Year p 1955 N93-21579
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784

EARTH GRAVITATION
SSG 2.107: Gravity field determination by satelli te gravity-gradiometry p 1971 N93-20974
SSG 5.122: Geodynamic effects of global gravity field variations p 1974 N93-20993

EARTH IONOSPHERE
Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359

EARTH MAGNETOSPHERE
Magnetospheric and auroral processes
[NASA-CR-192138] p 1996 N93-20250
Electron acceleration in the magnetosphere p 1997 N93-20283
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-192141] p 1997 N93-20295
Studies of interactive plasma processes in the polar cusp
[NASA-CR-192137] p 1999 N93-21364
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782

EARTH MANTLE
Measurement and interpretation of crustal deformation rates associated with postglacial rebound
[NASA-CR-192245] p 1996 N93-20238
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785

EARTH MOVEMENTS
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691

EARTH OBSERVATIONS (FROM SPACE)
NASA/MSFC FY92 Earth Science and Applications Program Research Review
[NASA-CP-3184] p 2002 N93-20067
Measurement and interpretation of crustal deformation rates associated with postglacial rebound
[NASA-CR-192245] p 1996 N93-20238
Report of the NERC Unit for Thematic Information Systems
[REPT-1989/91] p 1968 N93-20846
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting

Key problems of global ecology and the International Space Year p 1955 N93-21579

EARTH OBSERVING SYSTEM (EOS)
Research on diabatic initialization p 2004 N93-20075
ER-2 investigations of lightning and thunderstorms p 2006 N93-20088
An investigation of the role of current and future remote sensing data systems in numerical meteorology p 2010 N93-20108
Report to Congress on the restructuring of the Earth Observing System
[PB93-108587] p 1978 N93-21506

EARTH ORBITAL ENVIRONMENTS
Space environment model construction technology p 1795 N93-20450
Cycle life status of SAFT VOS nickel-cadmium cells p 1985 N93-20511
Protection of Materials and Surface Finishes from the Low Earth Orbit Space Environment
[CTN-93-60605] p 1847 N93-20810
The LDEF experience. Materials p 1847 N93-20811
Protection of composite materials in space. The LDEF experience p 1847 N93-20812
Issues/considerations and performance prediction of LEO protective coatings p 1847 N93-20813
Recommended practices for in-space and ground laboratory. Atomic oxygen exposure and analysis p 1848 N93-20814
Materials Exposure in Low Earth Orbit (MELEO) experiment p 1848 N93-20817
Atomic oxygen resistant SiOx coated Kapton for Space Station Freedom, and alternate coatings p 1849 N93-20821
Multipurpose protective coatings for spacecraft applications p 1849 N93-20822
Autonomous rendezvous and capture development infrastructure p 1818 N93-21446
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006

EARTH ORBITS
Satellite situation report, volume 32, no. 4
[NASA-TM-108203] p 1824 N93-20999

EARTH ORIENTATION
Activity report of the IRIS subcommission in the period 1987-1991 p 1970 N93-20970

EARTH RADIATION BUDGET
Geostationary earth climate sensor: Scientific utility and feasibility, phase A
[NASA-CR-191919] p 1996 N93-20248
NASA Center update: Goddard Space Flight Center p 1983 N93-20491
Simulation of clear-sky outgoing longwave radiation over the oceans using operational analyses p 1956 N93-21586

EARTH RADIATION BUDGET EXPERIMENT
Simulation of clear-sky outgoing longwave radiation over the oceans using operational analyses p 1956 N93-21586

EARTH RESOURCES
Report of the NERC Unit for Thematic Information Systems
[REPT-1989/91] p 1968 N93-20846
Report on environmental requirements and priorities
[PB92-208198] p 1989 N93-21028
Panel discussion: Roles of space program in the Asia Pacific region p 1819 N93-21286
Preserving our future today: Your guide to the United States Environmental Protection Agency
[PB92-226190] p 1990 N93-21345
Synoptic approach to cumulative impact assessment: A proposed methodology
[PB93-100147] p 1992 N93-21654
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784

EARTH RESOURCES PROGRAM
International Space Year in China p 1975 N93-21272
Status of remote sensing and Geographic Information System (GIS) applications in the Environment and Natural Resources (ENR) sector p 1976 N93-21279

EARTH ROTATION
NASA Space Geodesy Program: GSFC data analysis, 1992. Crustal Dynamics Project VLBI geodetic results, 1979 - 1991
[NASA-TM-104572] p 1999 N93-20900
SSG 4.119: Relativistic effects in geodesy p 1973 N93-20985
International Earth Rotation Service p 1974 N93-20990
SSG 5.98: Atmospheric excitation of the Earth's rotation p 1974 N93-20991
SSG 5.99: Tidal friction and the Earth's rotation p 1974 N93-20992
SSG 5.123: Definition and realization of terrestrial reference systems p 1974 N93-20994

EARTH SCIENCES
NASA/MSFC FY92 Earth Science and Applications Program Research Review
[NASA-CP-3184] p 2002 N93-20067

Global water cycle p 2004 N93-20078
Opportunities in applied environmental research and development
[PB92-223189] p 1990 N93-21347
US Global Change Data and Information Management Program Plan: A report by the Committee on Earth and Environmental Sciences
[PB93-101293] p 1993 N93-21695

EARTH SURFACE
Determination of longwave radiation reaching the surface from Meteosat images and radiation model calculations p 1962 N93-21625

EARTH TIDES
Commission 5: Earth tides p 1973 N93-20987
SSG 5.99: Tidal friction and the Earth's rotation p 1974 N93-20992

EARTH-MOON SYSTEM
SSG 5.99: Tidal friction and the Earth's rotation p 1974 N93-20992

EARTHQUAKES
Lithospheric dynamics near plate boundaries
[NASA-CR-192108] p 1997 N93-20310
World Data Center A for Solid Earth Geophysics. Catalog of significant earthquakes 2150 B.C.-1991 A.D. including quantitative casualties and damage
[PB93-118198] p 2000 N93-21693
Simulation method for stationary Gaussian random functions based on the sampling theorem
[PB93-127496] p 2059 N93-21818

EATING
Nutrition and hydration status of aircrew members consuming the food packet, survival, general purpose, improved during a simulated survival scenario
[AD-A258744] p 2022 N93-20384

ECCENTRIC ORBITS
Some observations of chaotic motion of satellites with damping in an elliptic orbit p 1826 N93-20726

ECOLOGY
Key problems of global ecology and the International Space Year p 1955 N93-21579

ECONOMIC ANALYSIS
Small business profiles, 1992
[PB93-110914] p 2086 N93-21548
Present worth factors for life-cycle cost studies in the Department of Defense
[PB93-120772] p 2093 N93-21690
Economics and global change: The FY 1993 research program on the economics of global change. A supplement to the US President's FY 1993 budget and a companion document to out changing planet
[PB93-101244] p 1993 N93-21696
Impact on the air carrier of explosive detection systems p 1778 N93-21945

ECONOMIC FACTORS
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128
Economics and global change: The FY 1993 research program on the economics of global change. A supplement to the US President's FY 1993 budget and a companion document to out changing planet
[PB93-101244] p 1993 N93-21696

ECONOMICS
Economics and global change: The FY 1993 research program on the economics of global change. A supplement to the US President's FY 1993 budget and a companion document to out changing planet
[PB93-101244] p 1993 N93-21696

ECOSYSTEMS
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536
Global models of ecosystem change p 1953 N93-21570
Use of ecoregions in biological monitoring
[PB93-106730] p 1992 N93-21656

EDGE DETECTION
An image compression technique for use on token ring networks p 1881 N93-20176
Local edge grouping by simple process iteration
[INRIA-RR-1559] p 2043 N93-20866
Automatic modeling of nonpolyhedral objects by monocular observation
[ETN-93-92678] p 2068 N93-20898

EDGE DISLOCATIONS
Modeling the growth and interaction of fractures
[NASA-CR-192185] p 1945 N93-20733
The roles of slip geometry and hardening behavior in intergranular toughness
[DE93-005647] p 2081 N93-21712

EDGES
Edge delamination of composite laminates p 1842 N93-21519
Magnetron sputtering on 3D components with less accessible areas
[MBB-Z-0360-91-B-PUB] p 1878 N93-21745

EDUCATION
Probabilistic student modeling with knowledge space theory
[AD-A258622] p 2045 N93-19997
Human-computer interaction in the school of computer science
[AD-A258634] p 2028 N93-20001
Night vision goggle training: Development and production of six video programs
[AD-A258529] p 2025 N93-20050
Interactive graphics system for the study of variance/covariance structures of bivariate and multivariate normal populations
[AD-A259449] p 2030 N93-20058
Correlates of creative problem solving
[AD-A258720] p 2085 N93-20369
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579
Education in geodesy p 1975 N93-20996
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128
Global change data base training exercise manual. Exploring Earth's environment: Africa as an example
[PB92-224682] p 1990 N93-21211
Prologue to Action. Life Sciences Education and Science Literacy
[PB93-107514] p 2021 N93-21230
By the year 2000: First in the world. FY 1993 budget summary
[PB93-108512] p 2086 N93-21231
Instructions and advance training measures for the improvement of human reliability
[MBB-FE-313-S-PUB-0500] p 2025 N93-21402
The first Census Optical Character Recognition System Conference
[PB92-238542] p 2092 N93-21504
Pathways to excellence: A Federal strategy for science, mathematics, engineering, and technology education
[NASA-EP-288] p 1819 N93-21538
Production of teaching materials from Geostationary Meteorological Satellite Himawari images p 1978 N93-21544
Requirements for an automated human factors, manpower, personnel, and training (HMPT) planning tool
[AD-A258531] p 2026 N93-21753
Science and Engineering programs: On target for women
[PB93-116499] p 2084 N93-21797
Burst of energy
[DE93-005058] p 1988 N93-21833

EFFERENT NERVOUS SYSTEMS
Neural networks for real-time sensory data processing and sensorimotor control
[AD-A259120] p 2046 N93-20557

EFFICIENCY
Adaptivity-fluids-localization. The challenge to computational mechanics p 1905 N93-20618
The influence of high clouds on climate p 1956 N93-21588

EIGENVALUES
Direct and inverse unitary eigenproblems in signal processing: An overview
[AD-A259348] p 2055 N93-21242
Copper Mountain conference on interative methods, volume 1
[DE93-004993] p 2056 N93-21706
Effect of alpha particles on toroidal Alfven eigenmodes
[DE93-003635] p 2076 N93-21830
Variational nodal solution algorithms for multigroup criticality problems
[DE93-003462] p 2042 N93-21964
Kinetic theory of toroidicity and ellipticity-induced Alfven eigenmodes
[DE93-003634] p 2077 N93-21995

EIGENVECTORS
Modal ring method for the scattering of electromagnetic waves
[NASA-TM-105966] p 1882 N93-20260
Eigenfunction for dissipative dynamics operator and attractor of dissipative structure
[NIFS-194] p 2050 N93-20267

EJECTORS
A semiconductor bridge ignited hot gas piston ejector p 1864 N93-20137

EL NINO
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics
[NASA-CR-192720] p 2014 N93-21492
National Center for Atmospheric Research, Fiscal Year 1991
[PB93-129914] p 2000 N93-21547

ELASTIC BODIES
Forced vibration of non-selfadjoint elastic systems p 1934 N93-20668
Higher frequency transmission properties of motor car-chassis systems
[ETN-93-92563] p 1915 N93-20877

ELASTIC BUCKLING
Prebuckling deflections and lateral buckling: Theory
[PB92-225382] p 1946 N93-21018
Integrated view of methods in buckling analysis
[PB93-110468] p 1946 N93-21232
Buckling of columns: Allowance for axial shortening
[PB93-110484] p 1947 N93-21234
Post-buckling analysis of thin-walled channel sections undergoing local and distortional buckling
[PB93-112928] p 1947 N93-21236

ELASTIC DEFORMATION
Application of the BEM to the crack growth problem by the coupling of damage-deformation p 1940 N93-20702
Simplified analysis of elastic-plastic strain concentration in notched components under cyclic loading p 1950 N93-21338

ELASTIC PROPERTIES
Linear algebra applied to physics determining small vibrations in conservative elastic systems
[AD-A259114] p 2050 N93-20589
The role of least squares in variational principles of elasticity p 1926 N93-20619
A variational approach for torsion of multiply connected composite sections p 1845 N93-20633
Experimental and theoretical study of the elastic and microplastic properties of particles reinforced metal matrix composites
[ISAL-92-0014] p 1833 N93-20942

ELASTIC SCATTERING
Neutron Elastic Scatter (NES) for Explosives Detection Systems (EDS) p 1766 N93-21868
Monte Carlo studies of positron implantation in elemental metallic and multilayer systems
[DE93-003474] p 2065 N93-21991

ELASTOHYDRODYNAMICS
On the thermoelastohydrodynamic lubrication dimensionless problem formulations p 1917 N93-20693
Boundary element formulation for thermoelastohydrodynamic contact problems p 1918 N93-20705

ELASTOPLASTICITY
Cyclic behavior modelling
[ECL-92-09] p 1920 N93-20060
Multilayered elastoplastic homogeneization and anisotropic plasticity
[ECL-92-24] p 1839 N93-21359

ELECTRIC BATTERIES
An electrocatalytic cathode device and a method for making such a cathode
[AD-D015586] p 1890 N93-20396
The 1992 NASA Aerospace Battery Workshop
[NASA-CP-3192] p 1983 N93-20490
NASA Center update: Goddard Space Flight Center p 1983 N93-20491
NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492
Lewis Research Center battery overview p 1983 N93-20493
Marshall Space Flight Center battery activity p 1983 N93-20494
Electrical characterization of the Magellan batteries after storage p 1984 N93-20506
TOPEX/Poseidon battery performance p 1984 N93-20507
Eagle-Picher SPV development p 1986 N93-20517
Nickel-hydrogen CPV battery update p 1986 N93-20518
Battery Review Board p 1986 N93-20519
Development of first generation aerospace NiMH cells p 1986 N93-20520
Cathodes for molten-salt batteries p 1987 N93-20525
Evaluation of a Schatz heat battery on a flexible-fueled vehicle. Phase 2
[PB92-204585] p 1893 N93-21377
Advanced design for a seafloor Gamma Measurement Data Collection System
[PB93-105013] p 2020 N93-21793

ELECTRIC BRIDGES
A semiconductor bridge ignited hot gas piston ejector p 1864 N93-20137

ELECTRIC CELLS
Development of first generation aerospace NiMH cells p 1986 N93-20520

Eagle-Picher Industries Sodium Sulfur Program p 1987 N93-20523
Bipolar rechargeable lithium battery for high power applications p 1987 N93-20526

ELECTRIC CHARGE
Nickel hydrogen battery cell storage matrix test p 1984 N93-20502
Capacity recovery after storage negatively precharged nickel hydrogen cells p 1984 N93-20503
Charge retention test experiences on Hubble Space Telescope nickel-hydrogen battery cells p 1984 N93-20504
TOPEX/Poseidon battery performance p 1984 N93-20507
Reliability study of the NiH2 strain gage p 1908 N93-20515
Ion trapping in dusty plasmas [MPE-PREPRINT-219] p 2075 N93-21405

ELECTRIC CONDUCTORS
Modal ring method for the scattering of electromagnetic waves [NASA-TM-105966] p 1882 N93-20260

ELECTRIC CONNECTORS
Cable connector/adapter support for multi-terminal data processors [AD-D015572] p 1889 N93-20309
Measurement of the dielectric constant of polymeric films at high fields [PB92-238625] p 1860 N93-21471
Automated connector force testing [DE93-004634] p 1907 N93-21704

ELECTRIC CONTACTS
Study and development of ohmic contacts on n and p type indium phosphide by autocatalytic chemical deposition of metals and alloys [ECL-92-23] p 1856 N93-20062
Flex-Gears [NASA-CR-192364] p 1914 N93-20759
Automated connector force testing [DE93-004634] p 1907 N93-21704
Covalent nitrides for maskless laser writing of microscopic metal lines [DE93-004105] p 1858 N93-22001

ELECTRIC CURRENT
Interfacial tension studies of electrified liquid/liquid interfaces: Classical techniques for new data [AD-A259213] p 1846 N93-20554

ELECTRIC DISCHARGES
Air Force Ni-Cd cell qualification program update p 1984 N93-20505
Electrical characterization of the Magellan batteries after storage p 1984 N93-20506
TOPEX/Poseidon battery performance p 1984 N93-20507
Cycle life status of SAFT VOS nickel-cadmium cells p 1985 N93-20511
Nickel-hydrogen CPV battery update p 1986 N93-20518
Nickel metal hydride, a flight experiment p 1986 N93-20522
Cathodes for molten-salt batteries p 1987 N93-20525
Detection of incipient defects in cables by partial discharge signal analysis [PB92-222744] p 1919 N93-21199

ELECTRIC EQUIPMENT TESTS
Development of high heat radiation printed boards p 1796 N93-20456
Review on aluminum electrolytic condensers development p 1797 N93-20457
Review on surface mounting components (wire wound chip resistors) development p 1797 N93-20459
Development of transistors (equivalent to 2SC3321) p 1797 N93-20460

ELECTRIC FIELDS
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron [NIFS-160] p 2069 N93-20112
Transition to H-mode by energetic electrons [NIFS-158] p 2070 N93-20156
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems [NIFS-172] p 2070 N93-20263
Selfconsistent analysis of radial electric field and fast ion losses in CHS Torsatron/Heliotron [NIFS-178] p 2071 N93-20264
Effect of alpha particles on radial electric field structure in Torsatron/Heliotron reactor [NIFS-182] p 2071 N93-20265
Force balance near an X line along which E (dot) is less than 0 [NASA-CR-192341] p 2071 N93-20362
Improved models of the inner and outer radiation belts [AD-A258708] p 1998 N93-20379
Dynamics of sessile droplets distortion and disruption by electric field in microgravity conditions p 1805 N93-21091
Measurement of the dielectric constant of polymeric films at high fields [PB92-238625] p 1860 N93-21471
Neoclassical theory of the plasma edge [PB93-123586] p 2075 N93-21668
Numerical models of planetary dynamos [DE93-003848] p 2098 N93-21970

ELECTRIC FILTERS
Improvement of LC feedthrough filters p 1797 N93-20458

ELECTRIC FURNACES
Crystal growth through a computer controlled, eight zone thermal gradient freeze furnace p 1811 N93-21123

ELECTRIC GENERATORS
Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development) [PB92-227891] p 1878 N93-21465

ELECTRIC IGNITION
Development of a NASA standard gas generator p 1863 N93-20135

ELECTRIC MOTOR VEHICLES
First international alternative fueled vehicle round-up [DE93-002779] p 1916 N93-21667
The impact of electric vehicles on CO2 emissions [DE93-003719] p 1995 N93-21965

ELECTRIC POTENTIAL
Apparatus and method for non-contact surface voltage probing by scanning photoelectron emission [AD-D015583] p 1891 N93-20799
The Xu-Tec process of introducing normally solid materials into substrate surfaces [DE93-005124] p 1861 N93-21708
An overview of Sandia National Laboratories' plasma switched, gigawatt, ultra-wideband impulse transmitter program [DE93-003249] p 1886 N93-21960

ELECTRIC POWER PLANTS
Technologies options for acid rain control [PB93-106854] p 1991 N93-21473
Documentation of the status of international geothermal power plants and a list by country of selected geothermally active governmental and private sector entities [DE93-002273] p 1988 N93-21665

ELECTRIC PROPULSION
H2 arcjet performance mapping program [NASA-CR-191073] p 1828 N93-20064
Space transfer with ground-based laser/electric propulsion [NASA-TM-106060] p 1829 N93-20615
Ion source AHKS-30 [DLR-MITT-91-20] p 1860 N93-21041

ELECTRIC WIRE
Development of elements of a high T(sub c) superconducting cable [AD-A259415] p 1888 N93-20130

ELECTRICAL ENGINEERING
Software quality assurance: Documentation and reviews [PB93-113694] p 2040 N93-21221
Electronics and Electrical Engineering Laboratory technical publications announcements covering laboratory programs, January to March 1992, with 1992/1993 EEEL events calendar [PB93-120715] p 1893 N93-21256
Electronics and Electrical Engineering Laboratory technical publications announcements covering laboratory programs, October to December 1991, with 1992/1993 EEEL events calendar [PB93-120723] p 1893 N93-21257

ELECTRICAL FAULTS
Measurement of the dielectric constant of polymeric films at high fields [PB92-238625] p 1860 N93-21471

ELECTRICAL IMPEDANCE
Joint services electronics program [AD-A259179] p 1890 N93-20562
Measurement of the dielectric constant of polymeric films at high fields [PB92-238625] p 1860 N93-21471

ELECTRICAL MEASUREMENT
Nickel metal hydride, a flight experiment p 1986 N93-20522
Dielectric constant measurement probe assembly and apparatus and method [AD-D015537] p 1890 N93-20766
Apparatus and method for non-contact surface voltage probing by scanning photoelectron emission [AD-D015583] p 1891 N93-20799
Electronics and Electrical Engineering Laboratory technical publications announcements covering laboratory programs, January to March 1992, with 1992/1993 EEEL events calendar [PB93-120715] p 1893 N93-21256
Measurement of the dielectric constant of polymeric films at high fields [PB92-238625] p 1860 N93-21471

ELECTRICAL PROPERTIES
Structure and reliability metal contacts to GaAs [AD-A259184] p 1889 N93-20272
Polymers of bis(ethynylstyryl)benzene and related monomers [AD-D015612] p 1859 N93-20398
Review on upgrading efficiency of silicon solar battery cells p 1798 N93-20466
Development of radiation resistant HCMOSIC p 1798 N93-20467
Development of radiation resistant linear IC (equivalent to mu PC 806) p 1798 N93-20468
Development of 256 kbit SRAM p 1799 N93-20471
Development of 10 k gate-gate array p 1799 N93-20472
Research on large capacity Ni-Cd batteries p 1799 N93-20476
Research on Ni-H2 batteries p 1800 N93-20477
Solar cell calibration by balloon flight p 1800 N93-20479

ELECTRICAL RESISTIVITY
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon [DE93-003104] p 2080 N93-21240

ELECTRIFICATION
Electrification in winter storms and the analysis of thunderstorm overflight data p 2006 N93-20087
ER-2 investigations of lightning and thunderstorms p 2006 N93-20088

ELECTRO-OPTICS
Development of a 100 mJ, 5 Hz, flashlamp-pumped, Cr,Tm:YAG coherent lidar transmitter p 1912 N93-20100
Advances in laser diodes for pyrotechnic applications p 1865 N93-20146
TREND field test report [AD-A258568] p 2067 N93-20372
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars [AD-A259168] p 1884 N93-20597
Development of a measurement of upper MID frequency errors on arbitrary grazing incidence optics [NASA-CR-191333] p 2067 N93-20731
Optoelectronics research in the former Soviet Union [PB93-111516] p 2069 N93-21804

ELECTROACOUSTIC TRANSDUCERS
Pressure compensated transducer system with constrained diaphragm [AD-D015580] p 1906 N93-20771

ELECTROCHEMICAL CELLS
Special tests and destructive physical analyses as used by the Aerospace Corporation with nickel-hydrogen cells [NASA-CR-192318] p 1888 N93-20162
Lewis Research Center battery overview p 1983 N93-20493
Battery Review Board p 1986 N93-20519

ELECTROCHEMICAL MACHINING
Study on photochemical and photoelectrochemical etching of gallium arsenide [ECL-91-25] p 1851 N93-21824

ELECTROCHEMICAL OXIDATION
The electrochemical oxidation of methane for fuel cells [PB93-110120] p 1987 N93-21353
Cationically polymerizable monomers derived from renewable sources [DE93-005926] p 1861 N93-21731

ELECTRODE MATERIALS
An electrocatalytic cathode device and a method for making such a cathode [AD-D015586] p 1890 N93-20396
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497
Pyrite cathode material for a thermal battery [AD-D015600] p 1891 N93-20792
The electrochemical oxidation of methane for fuel cells [PB93-110120] p 1987 N93-21353

ELECTRODEPOSITION
Electrochemical deposition of thin film semiconductors in microgravity: A feasibility study p 1803 N93-21079
The Xu-Tec process of introducing normally solid materials into substrate surfaces [DE93-005124] p 1861 N93-21708

ELECTRODES
Special tests and destructive physical analyses as used by the Aerospace Corporation with nickel-hydrogen cells [NASA-CR-192318] p 1888 N93-20162
Pulse discharge laser with passive arc protection [AD-D015601] p 1909 N93-20262
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497

Preliminary results: Root cause investigation of orbital anomalies and failures in NASA standard 50 ampere-hour nickel-cadmium batteries p 1985 N93-20508
The JPL/NASA/TAMU nickel-cadmium battery model development status p 1985 N93-20509
Method of making composite field-emitting arrays [AD-D015541] p 1832 N93-20780
Development and utilization of a semi-analytic alternative charge process for the rapid calculation of potential distributions and electron orbits [ETN-93-93416] p 2062 N93-21209
Conducting polymers as potential active materials in electrochemical supercapacitors [DE93-003827] p 1861 N93-21675
The Xu-Tec process of introducing normally solid materials into substrate surfaces [DE93-005124] p 1861 N93-21708
Electrochemical characteristics of acid electrolytes for fuel cells [PB93-124907] p 1988 N93-21826

ELECTROHYDRODYNAMICS
Electrostatic enhancement of heat transfer in a gas-to-gas heat exchanger [PB93-114338] p 1903 N93-21454

ELECTROLYSIS
Defects and impurities in amorphous semiconductors and in liquid electrolytes [MBB-Z-0386-91-PUB] p 2080 N93-20842

ELECTROLYTES
Eagle-Picher Industries Sodium Sulfur Program p 1987 N93-20523
Bipolar rechargeable lithium battery for high power applications p 1987 N93-20526
Interfacial tension studies of electrified liquid/liquid interfaces: Classical techniques for new data [AD-A259213] p 1846 N93-20554
Defects and impurities in amorphous semiconductors and in liquid electrolytes [MBB-Z-0386-91-PUB] p 2080 N93-20842
Electrochemical characteristics of acid electrolytes for fuel cells [PB93-124907] p 1988 N93-21826

ELECTROLYTIC CELLS
Bipolar rechargeable lithium battery for high power applications p 1987 N93-20526
Electrochemical characteristics of acid electrolytes for fuel cells [PB93-124907] p 1988 N93-21826

ELECTROMAGNETIC ABSORPTION
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides [AD-A259136] p 1847 N93-20595

ELECTROMAGNETIC COUPLING
Topological approach for the study of electromagnetic coupling [ONERA-P-1992-2] p 1881 N93-20230

ELECTROMAGNETIC FIELDS
Vacuum structure of pure gauge theories on the lattice [DE93-001920] p 2081 N93-21701
Application of magnetic resonance to explosives detection p 1771 N93-21901

ELECTROMAGNETIC INTERACTIONS
The N* program at CEBAF [DE93-000829] p 1880 N93-20019
Formation of auroral arcs via magnetosphere-ionosphere coupling [AD-A258641] p 1998 N93-20363
Study of electroweak interactions [DE93-004367] p 2061 N93-20385

ELECTROMAGNETIC INTERFERENCE
Topological approach for the study of electromagnetic coupling [ONERA-P-1992-2] p 1881 N93-20230

ELECTROMAGNETIC MEASUREMENT
Electromagnetic characterization measurements at 1000 C in Aerospatiale Microwave Department [REPT-921-430-114] p 1884 N93-20938
SSG 4.93: Wave propagation in refractive media p 1972 N93-20980

ELECTROMAGNETIC NOISE
Research on space communication equipment technology: Study on relay system p 1790 N93-20420

ELECTROMAGNETIC PROPULSION
An electromagnetically-controlled Precision Orbital Tracking Vehicle (POTV) [AD-A259143] p 1823 N93-20129

ELECTROMAGNETIC RADIATION
Modal ring method for the scattering of electromagnetic waves [NASA-TM-105966] p 1882 N93-20260
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22 [PB93-121846] p 2101 N93-21292

ELECTROMAGNETIC SCATTERING
High-frequency techniques for RCS prediction of plate geometries and a physical optics/equivalent currents model for the RCS of trihedral corner reflectors [NASA-CR-192302] p 1881 N93-20233
Modal ring method for the scattering of electromagnetic waves [NASA-TM-105966] p 1882 N93-20260
Study of electroweak interactions [DE93-004367] p 2061 N93-20385
Joint services electronics program [AD-A259179] p 1890 N93-20562

ELECTROMAGNETIC WAVE TRANSMISSION
SSG 4.93: Wave propagation in refractive media p 1972 N93-20980
SSG 4.119: Relativistic effects in geodesy p 1973 N93-20985

ELECTROMECHANICAL DEVICES
Derating requirements applicable to electronic, electrical, and electro-mechanical components for ESA space systems [ESA-PSS-01-301-ISSUE-2] p 1893 N93-21194

ELECTRON ACCELERATION
Electron acceleration in the magnetosphere p 1997 N93-20283

ELECTRON ACCELERATORS
Configuration and construction of a free electron laser in near infrared at the superconducting electron accelerator in Darmstadt (Germany) [ETN-93-93412] p 1911 N93-21175
Construction of a channeling radiation source and production of intensive channeling radiation at the Darmstadt (Germany) superconductive electron accelerator [ETN-93-93410] p 2066 N93-21206

ELECTRON ATTACHMENT
Negative-ion formation in the explosives RDX, PETN, and TNT using the Reversal Electron Attachment Detection (READ) technique p 1773 N93-21910

ELECTRON BEAMS
The N* program at CEBAF [DE93-000829] p 1880 N93-20019
Research on single event resistance evaluation technology: Single event resistance evaluation by SEM p 1801 N93-20484
Pumping experiment of water on B and LaB6 films with electron beam evaporator [NIFS-196] p 2074 N93-21362
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments [DE93-002897] p 1912 N93-21955

ELECTRON CAPTURE
Angular distributions of charge exchange collisions at very low energies [DE93-002338] p 2064 N93-21751
A GC/ECD approach for the detection of explosives and taggants p 1775 N93-21924
An improved vapor taggant detector p 1775 N93-21927

ELECTRON CYCLOTRON HEATING
Long pulse discharges sustained by second harmonic electron cyclotron heating using a 35 GHz gyrotron in the Advanced Toroidal Facility [NIFS-183] p 2072 N93-20544

ELECTRON DIFFRACTION
Atomic and electronic structure of ultrathin films p 2078 N93-20287
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development [AD-A259177] p 2079 N93-20561

ELECTRON DISTRIBUTION
Current-drive and plasma-formation experiments on the Versator-2 tokamak using lower-hybrid and electron-cyclotron waves [DE93-002333] p 2075 N93-21482

ELECTRON EMISSION
Method of making composite field-emitting arrays [AD-D015541] p 1832 N93-20780
Regulatable field emitter device and method of production thereof [AD-D015614] p 1893 N93-21250
Differential electron emission in multi-charged ion atom collisions: Systematics for distant and close collisions [DE93-004324] p 2064 N93-21851

ELECTRON ENERGY
Theoretical studies of important processes in planetary and comet atmospheres [NASA-CR-192114] p 2098 N93-19959

ELECTRON IMPACT
Electron impact ionization of highly charged lithiumlike ions [DE93-002895] p 2065 N93-21954

ELECTRON MICROSCOPY
Research on single event resistance evaluation technology: Single event resistance evaluation by SEM p 1801 N93-20484

ELECTRON MOBILITY
Construction of a channeling radiation source and production of intensive channeling radiation at the Darmstadt (Germany) superconductive electron accelerator [ETN-93-93410] p 2066 N93-21206

ELECTRON OPTICS
Electron optical defect inspection in x ray lithography masks [ETN-93-92570] p 1919 N93-20884
Development and utilization of a semi-analytic alternative charge process for the rapid calculation of potential distributions and electron orbits [ETN-93-93416] p 2062 N93-21209

ELECTRON ORBITALS
Development and utilization of a semi-analytic alternative charge process for the rapid calculation of potential distributions and electron orbits [ETN-93-93416] p 2062 N93-21209

ELECTRON PARAMAGNETIC RESONANCE
ESR spectra of photoinduced defects in MX chain solids [DE93-003692] p 2083 N93-21997

ELECTRON PLASMA
A synergetic treatment of the vortices behaviour of a plasma with viscosity [NIFS-166] p 2070 N93-20249

ELECTRON SCATTERING
The N* program at CEBAF [DE93-000829] p 1880 N93-20019
Can the cosmic x ray and gamma ray background be due to reflection of a steep power law spectrum and Compton scattering by relativistic electrons? [NASA-CR-192255] p 2102 N93-20601
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems [DE93-004531] p 2064 N93-21742
Polarization effects in coherent and incoherent photon scattering: Survey of measurements and theory relevant to radiation transport calculations [PB93-126092] p 2064 N93-21828

ELECTRON SOURCES
Microchannel electron source [AD-D015555] p 1891 N93-20768

ELECTRON-POSITRON PLASMAS
The Crab nebula's wisps as shocked pulsar wind [DE93-003466] p 2097 N93-21673
Weibel instabilities in relativistic electron-positron plasmas [DE93-003468] p 2077 N93-21990

ELECTRONIC EQUIPMENT
Microstructured diode lasers and pumped solid state lasers [MBB-Z-0369-91-PUB] p 1910 N93-20804
Naval research reviews, volume 44, no. 1, 1992 [PB93-129682] p 2104 N93-21808

ELECTRONIC EQUIPMENT TESTS
Improvement of LC feedthrough filters p 1797 N93-20458
Development of transistors (equivalent to 2SC3321) p 1797 N93-20460

ELECTRONIC FILTERS
Improvement of LC feedthrough filters p 1797 N93-20458
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937

ELECTRONIC PACKAGING
Improvement of voltage reference Zener diode (1SZ48A) p 1797 N93-20462
Microelectronics packaging automation [DE93-004822] p 1894 N93-21725
Vacuum multilayer lamination of printed wiring boards [DE93-004912] p 1894 N93-21727

ELECTRONIC TRANSDUCERS
Contribution to the development of an ISFET type integrated sensor using an ASIC thread in CMOS technology [ECL-91-09] p 1892 N93-21006

ELECTRONIC WARFARE
An analytical and experimental investigation of FM-by-noise jamming [AD-A259124] p 1883 N93-20592

ELECTRONS
Stable clusters in the condensed state and some possibilities for gas phase clusters [DE93-004446] p 2064 N93-21846
The GALLEX solar neutrino experiment [DE93-003357] p 2102 N93-21962

ELECTROPLATING
An electrocatalytic cathode device and a method for making such a cathode [AD-D015586] p 1890 N93-20396

ELECTROSTATICS
The electrospray: Fundamentals and combustion applications p 1855 N93-20218
Neoclassical theory of the plasma edge [PB93-123586] p 2075 N93-21668
ELEVATION
Cokriging surface elevation and seismic refraction data for bedrock topography [DE93-001369] p 1999 N93-21225
ELEVATION ANGLE
Influence of terrain elevation on vegetation indices derived from NOAA AVHRR and EOS MODIS data p 1954 N93-21576
ELLIPTIC DIFFERENTIAL EQUATIONS
Use of the boundary element method in the resolution of the quasi-elliptic Navier-Stokes equations: Application to the calculation of a turbine flow [ECL-91-13] p 1902 N93-20893
EMBEDDING
MIT Space Engineering Research Center testbed programs [NASA-CR-192115] p 2103 N93-21660
EMISSION
Explosive vapor emission p 1772 N93-21905
EMISSION SPECTRA
Timing analysis of low-energy gamma ray emission from galactic compact objects using the Gamma Ray Observatory [NASA-CR-192253] p 2102 N93-20747
Modification and evaluation of a microwave plasma/atomic emission detector system [PB92-217959] p 2074 N93-21203
EMISSIVITY
Protective coating development for Space Station Freedom at McDonnell Douglas p 1849 N93-20820
EMITTANCE
Radiation from moving charged particles with spin [DE93-004633] p 2063 N93-21703
EMITTERS
Method of making composite field-emitting arrays [AD-D015541] p 1832 N93-20780
The ignition diffusion concerning contacted and non contacted n(+) emitter interruptions [ETN-93-92564] p 1891 N93-20878
Regulatable field emitter device and method of production thereof [AD-D015614] p 1893 N93-21250
Low-temperature emitter-passivation for silicon solar cells [DE93-002483] p 1987 N93-21487
ENCAPSULATING
Isopycnic systems as models for the behavior of liquids in a microgravity environment p 1805 N93-21089
END EFFECTORS
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Modelling robot trajectory errors using time series p 1942 N93-20716
Linear passive impedance p 1943 N93-20719
Grasp admittance center. A concept p 1918 N93-20720
Testing of ROMPS robot mechanical interfaces and compliant device [NASA-CR-192617] p 1915 N93-20918
The M68HC11 gripper controller electronics [NASA-CR-192732] p 1893 N93-21309
Experimental validation of docking and capture using space robotics testbeds p 1817 N93-21441
Avoiding space robot collisions utilizing the NASA/GSFC tri-mode skin sensor [NASA-CR-192292] p 2049 N93-21812
ENERGETIC PARTICLES
Research on single event resistance evaluation technology: Research by heavy ion irradiation p 1801 N93-20483
ENERGY BUDGETS
Coordinated field study for CaPE: Analysis of energy and water budgets p 2005 N93-20079
Interpretation of Voyager UVS observations of occultations by the atmosphere of Neptune [NASA-CR-192131] p 2099 N93-20732
Botswana water and surface energy balance research program. Part 1: Integrated approach and field campaign results [NASA-TM-108607] p 2018 N93-20891
ENERGY CONSERVATION
The potential for biomass to mitigate greenhouse gas emissions in the Northeastern US [DE93-002800] p 1992 N93-21666
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project [PB93-129815] p 1994 N93-21827
ENERGY CONVERSION
Energy utilization and greenhouse gas emissions: Transportation sector [PB93-110161] p 1991 N93-21384
ENERGY CONVERSION EFFICIENCY
Conversion efficiency in solar thermal systems p 1982 N93-20301
Review on upgrading efficiency of silicon solar battery cells p 1798 N93-20466
Gasifiers optimized for fuel cell applications [DE93-003486] p 1988 N93-21781
ENERGY DISSIPATION
Explosive detection using dielectrometry p 1770 N93-21898
ENERGY DISTRIBUTION
Effect of quark-gluon plasma boundary on the momentum distribution of quarks [DE93-004166] p 2064 N93-21740
ENERGY GAPS (SOLID STATE)
Interface properties of wide bandgap semiconductor structures [AD-A259416] p 2078 N93-20131
ENERGY LEVELS
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides [AD-A259136] p 1847 N93-20595
Semiempirical studies of atomic structure [DE93-005117] p 2063 N93-21707
ENERGY METHODS
Thermochemical evaluation of proposed electrothermal-chemical propellants [AD-A259110] p 1866 N93-20588
Improvement to the higher order finite strip method p 1939 N93-20697
Modelling of multi-link spatial flexible manipulators employing the finite element method p 1941 N93-20707
ENERGY POLICY
International energy outlook 1992 [PB93-107951] p 1988 N93-21550
The potential for biomass to mitigate greenhouse gas emissions in the Northeastern US [DE93-002800] p 1992 N93-21666
First international alternative fueled vehicle round-up [DE93-002779] p 1916 N93-21667
Public transportation alternative fuels: A perspective for small transportation operations [PB92-120120] p 1866 N93-21716
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary [PB92-182567] p 1867 N93-21717
ENERGY SOURCES
Burst of energy [DE93-005058] p 1988 N93-21833
ENERGY SPECTRA
The GALLEX solar neutrino experiment [DE93-003357] p 2102 N93-21962
ENERGY STORAGE
Phase-change composites TES for nickel-hydrogen batteries p 1987 N93-20524
ENERGY TECHNOLOGY
Summaries of FY 1992 geosciences research [DE93-004826] p 1965 N93-21726
Burst of energy [DE93-005058] p 1988 N93-21833
ENERGY TRANSFER
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence [NASA-CR-189640] p 1899 N93-20253
Electron impact ionization of highly charged lithiumlike ions [DE93-002895] p 2065 N93-21954
ENGINE AIRFRAME INTEGRATION
Propulsion/weapon system interaction model [AD-A259291] p 1785 N93-20610
ENGINE ANALYZERS
Analysis of the Space Shuttle main engine simulation [NASA-CR-191063] p 1820 N93-20251
ENGINE DESIGN
Advanced expander test bed program [NASA-CR-191049] p 1828 N93-19991
Research in robust control for hypersonic vehicles [NASA-CR-192127] p 1786 N93-20296
Satisfying the customer's requirements [PNR-90988] p 1785 N93-20735
Applications of active adaptive noise control to jet engines [NASA-CR-192277] p 1785 N93-21210
Thermodynamic flow description of a ramjet for determination of engine forces and moments [ESA-TT-1266] p 1786 N93-21288
Supersonic transport: Which material for the engine [DS-2023] p 1786 N93-21459
Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development) [PB92-227891] p 1878 N93-21465
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual [NASA-CR-191017] p 1953 N93-22005
ENGINE INLETS
Computational parametric study of sidewall-compression scramjet inlet performance at Mach 10 [NASA-TM-4411] p 1900 N93-20299
ENGINE MONITORING INSTRUMENTS
The Galileo PPS expert monitoring and diagnostic prototype [NASA-CR-191914] p 1828 N93-21823
ENGINE PARTS
Multidisciplinary tailoring of hot composite structures [NASA-TM-106027] p 1920 N93-19971
Advanced expander test bed program [NASA-CR-191049] p 1828 N93-19991
Creep fatigue life prediction for engine hot section materials (isotropic) [NASA-CR-189220] p 1784 N93-20252
Damped vibration of engine valve train by recent transfer matrix and matrix procedures p 1933 N93-20665
Supersonic transport: Which material for the engine [DS-2023] p 1786 N93-21459
ENGINE TESTS
Advanced expander test bed program [NASA-CR-191049] p 1828 N93-19991
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket [NASA-CR-191014] p 1829 N93-20114
ENGINEERING
Science and Engineering programs: On target for women [PB93-116499] p 2084 N93-21797
ENGINEERS
Science and Engineering programs: On target for women [PB93-116499] p 2084 N93-21797
ENTHALPY
Thermodynamic data for fifty reference elements [NASA-TP-3287] p 2084 N93-19977
ENTRAINMENT
A numerical simulation of two-phase jet spreading using an Euler-Lagrangian technique [AD-A259326] p 1902 N93-21258
Growth and defects of explosives crystals [DE93-003866] p 2082 N93-21780
ENTROPY
Thermodynamic data for fifty reference elements [NASA-TP-3287] p 2084 N93-19977
ENVIRONMENT EFFECTS
Space environment model construction technology p 1795 N93-20450
Evaluation and analysis of long term satellite operation data p 1796 N93-20454
Operational support for ETS-5 secondary operational phase p 1796 N93-20455
Review on aluminum electrolytic condensers development p 1797 N93-20457
Review on parts test data analyzing system p 1800 N93-20480
Analysis strategy for organic bromine flame-retardant compounds as environmental contaminants p 1839 N93-21164
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22 [PB93-121846] p 2101 N93-21292
Review of modelling of environment-assisted cracking [NPL-DMM(A)-44] p 1951 N93-21566
Synoptic approach to cumulative impact assessment: A proposed methodology [PB93-100147] p 1992 N93-21654
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990 [PB93-116622] p 2019 N93-21688
Remote sensing: Environmental effects of surface films [AD-A258571] p 1980 N93-21754
ENVIRONMENT MANAGEMENT
Report on environmental requirements and priorities [PB92-208198] p 1989 N93-21028
Enforcement in the 1990's project: Recommendations of the analytical workgroups [PB92-224286] p 1991 N93-21466
Use of ecoregions in biological monitoring [PB93-106730] p 1992 N93-21656
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project [PB93-129815] p 1994 N93-21827
ENVIRONMENT MODELS
Interactive access and management for four-dimensional environmental data sets using McIDAS p 1965 N93-20070

Space environment model construction technology
p 1795 N93-20450
Information base procedures for generation of synthetic thermal scenes
[AD-A259202] p 2090 N93-20549
CONPLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649

ENVIRONMENT POLLUTION
Technologies options for acid rain control
[PB93-106854] p 1991 N93-21473
Field screening for environmental pollutants: Defining user instrumentation needs
[PB93-117885] p 1993 N93-21791

ENVIRONMENT PROTECTION
Intelligent processing equipment within the Environmental Protection Agency
[PB92-217330] p 1989 N93-21011
Report on environmental requirements and priorities
[PB92-208198] p 1989 N93-21028
State air pollution control programs: A profile report
[PB93-122364] p 1990 N93-21216
Trends in nitrogen in the Chesapeake Bay, 1984-1990
[PB93-122174] p 1990 N93-21217
Preserving our future today: Your guide to the United States Environmental Protection Agency

Summary report for the National Atmospheric Deposition Program National Trends Network (NADP/NTN) site visitation program
[PB92-219823] p 1991 N93-21494
Monitoring human tissues for toxic substances
[PB92-223239] p 2024 N93-21498
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536
Synoptic approach to cumulative impact assessment: A proposed methodology
[PB93-100147] p 1992 N93-21654
Protecting the nation's wetlands, oceans, and watersheds: An overview of programs and activities
[PB93-105609] p 1992 N93-21655
The 6th Conference Proceedings of the Pacific OCS Region Information Transfer Meeting
[PB93-119600] p 1992 N93-21684
Geographic index of environmental articles 1990
[PB93-116184] p 1994 N93-21806
Access EPA
[PB92-147438] p 1994 N93-21811
International environmental research and assessment: Proposals for better organization and decision making
[ISBN-1-881054-01-2] p 2087 N93-21949

ENVIRONMENT SIMULATION
Space environment model construction technology
p 1795 N93-20450
Environmental assessment for the brilliant pebbles tether test at the Nevada test site
[DE93-003869] p 1952 N93-21839

ENVIRONMENT SIMULATORS
A synthetic environment flight simulator: The AFIT virtual cockpit
[AD-A259220] p 1788 N93-20576

ENVIRONMENTAL CONTROL
Space Station ECLSS integration analysis
[NASA-CR-192470] p 2027 N93-22002

ENVIRONMENTAL MONITORING
Pre Asia Pacific ISY Conference
[NASDA-CM-174] p 1975 N93-21270
Space research and remote sensing programs in Bangladesh p 1975 N93-21271
International Space Year in China
p 1975 N93-21272
Status of remote sensing and Geographic Information System (GIS) applications in the Environment and Natural Resources (ENR) sector p 1976 N93-21279
Russian space system for the Earth remote sensing
p 1977 N93-21280
Sun-synchronous and geo-synchronous satellite data utilization for environmental studies
p 1977 N93-21281
Panel discussion: Roles of space program in the Asia Pacific region p 1819 N93-21286
The global climate system. Climate system monitoring
p 2014 N93-21450
Proceedings of the 14th Earth Observation Symposium
[JTN-93-80414] p 1978 N93-21539
Principles and application tendency of remote sensing: Its principle, function, and utilization
p 1978 N93-21540
Present status and tendency of satellite Earth observing systems p 1978 N93-21541
Study for natural environment in Okinawa Islands by using remote sensing p 1978 N93-21542
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting
[ESA-ISY-1-VOL-1] p 1953 N93-21569
Use of ecoregions in biological monitoring
[PB93-106730] p 1992 N93-21656
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784

ENVIRONMENTAL QUALITY
Geographic index of environmental articles 1990
[PB93-116184] p 1994 N93-21806
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project
[PB93-129815] p 1994 N93-21827

ENVIRONMENTAL SURVEYS
Enforcement in the 1990's project: Recommendations of the analytical workgroups
[PB92-224286] p 1991 N93-21466

ENVIRONMENTAL TESTS
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189220] p 1784 N93-20252
Improvement of LC feedthrough filters
p 1797 N93-20458
Review on parts test data analyzing system
p 1800 N93-20480
Industrial IC evaluation test: 256 kbit EEPROM
p 1800 N93-20481
The LDEF experience. Materials p 1847 N93-20811
Protection of composite materials in space. The LDEF experience p 1847 N93-20812
Issues/considerations and performance prediction of LEO protective coatings p 1847 N93-20813
Recommended practices for in-space and ground laboratory. Atomic oxygen exposure and analysis
p 1848 N93-20814
An overview of space qualification requirements for new materials p 1830 N93-20815
Space station protective coating development
p 1848 N93-20816
Materials Exposure in Low Earth Orbit (MELEO) experiment p 1848 N93-20817
LEO resistant thermal control materials and dry lubricants for the mobile servicing system
p 1848 N93-20818
Atomic oxygen resistant SiOx coated Kapton for Space Station Freedom, and alternate coatings
p 1849 N93-20821
Multipurpose protective coatings for spacecraft applications p 1849 N93-20822
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006

ENZYMES
Biochemically active layers for selective material detection sensors
[MBB-Z-0440-92-PUB] p 2021 N93-20959

EPITAXY
Low-pressure diamond growth using a secondary radical source
[AD-A258539] p 2077 N93-20055
Atomic and electronic structure of ultrathin films
p 2078 N93-20287
Thin film processing of photorefractive BaTiO3
[NASA-CR-192169] p 2079 N93-20311
Monolithic preamplifier employing epitaxial N-channel JFETs
[DE93-002951] p 1894 N93-21980

EPITHELIUM
Explosives search dogs p 1776 N93-21933

EPOXY MATRIX COMPOSITES
Effect of phase lag on cyclic durability of laminated composite p 1922 N93-20333
Contribution to the study of composite material behavior in space environment
[REPT-921-430-112] p 1833 N93-20869
Effect of the reinforcement finish in the mechanical performances of epoxy-glass composites
p 1836 N93-21146
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations
p 1841 N93-21513
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 1841 N93-21514
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning
p 1843 N93-21528
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 1844 N93-21530

EPOXY RESINS
Repairing delaminations with low viscosity epoxy resins p 1844 N93-21532

EQUATIONS OF MOTION
Dynamic analysis of a variable-mass multibody system
p 1934 N93-20671
Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714
Operator-assisted planning and execution of proximity operations subject to operational constraints
p 1817 N93-21436

EQUATIONS OF STATE
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653

EQUILIBRIUM EQUATIONS
The role of least squares in variational principles of elasticity p 1926 N93-20619

EQUIVALENCE
On a fundamental notion of equivalence in linear systems theory
[MATHS-REPT-A-162] p 2053 N93-20890

ERBIUM
Neutron study of crystal-field transitions in ErPO4
[DE93-004131] p 2081 N93-21719

ERGODIC PROCESS
Physics-like mathematical model for chaos and ergodic criticality in four dimensions p 1944 N93-20729
Long range percolation in stationary point processes
[REPT-91-54] p 2058 N93-20864

EROSION
Analysis of surfaces from the LDEF A0114, phase 2
[NASA-CR-192306] p 1847 N93-20756
Erosion of composite ceramics
[DE93-004254] p 1862 N93-21853

ERROR ANALYSIS
Multi-stage decoding for multi-level block modulation codes
[NASA-CR-192363] p 1880 N93-20043
The development of the Navy's multivariate optimum interpolation analysis system
[AD-A258569] p 2058 N93-20358
Error control techniques for satellite and space communications
[NASA-CR-192368] p 1884 N93-20613
Modelling robot trajectory errors using time series
p 1942 N93-20716
On improving accuracy of machining centers
[PAPER-C-3-1] p 2036 N93-20835
Problems of quality inspection and diagnosing in modern manufacturing systems
[PAPER-C-3-2] p 2036 N93-20836
Principles and applications of measurement and uncertainty analysis in research and calibration
[DE93-000034] p 1907 N93-21251
Measurement of the dielectric constant of polymeric films at high fields
[PB92-238625] p 1860 N93-21471
Diagnostic Report of the National Hurricane Center. October and November 1991, volume 4, number 3
[PB93-126464] p 2014 N93-21478

ERROR CORRECTING CODES
Multi-stage decoding for multi-level block modulation codes
[NASA-CR-192363] p 1880 N93-20043
Detection and correction of morpho-syntactic errors in shift-reduce parsing p 2031 N93-20226
Modelling robot trajectory errors using time series
p 1942 N93-20716
MSC/NASTRAN structure optimization test module version 67 (preliminary)
[REPT-5-191025] p 1945 N93-20907

ERROR CORRECTING DEVICES
The performance of cache-based error recovery in multiprocessors
[NASA-CR-192142] p 2029 N93-20006

ERROR DETECTION CODES
Incipient failure detection using wavelets
[AD-A259423] p 1913 N93-20004
Wavelet features for failure detection and identification in vibration systems
[AD-A259427] p 1914 N93-20007
Detection and correction of morpho-syntactic errors in shift-reduce parsing p 2031 N93-20226

ERRORS
Development of a measurement of upper MID frequency errors on arbitrary grazing incidence optics
[NASA-CR-191333] p 2067 N93-20731
ERS-1 (ESA SATELLITE)
Use of ERS-1 SAR data in numerical sea ice modeling p 1957 N93-21592
Remote sensing of Arctic sea ice using the ERS-1 SAR p 1957 N93-21593
Satellite monitoring of giant tabular icebergs p 1957 N93-21595
Lake remote sensing for global climate research p 1958 N93-21602
The WAM model and ERS-1 p 1960 N93-21609
Validation of ERS-1 synthetic aperture radar for imaging ocean waves: First results p 1961 N93-21616
Space radar altimetry development from ocean monitoring to land topography p 1965 N93-21640
ESA SATELLITES
ESA's report to the 29th COSPAR Meeting
[ESA-SP-1154] p 1811 N93-21360
ESA SPACECRAFT
Derating requirements applicable to electronic, electrical, and electro-mechanical components for ESA space systems
[ESA-PSS-01-301-ISSUE-2] p 1893 N93-21194
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195
ESTIMATES
An estimating function for a scalar parameter in a covariance operator
[RR-878-M] p 2054 N93-21050
Coherent interference tests for wind profilers
[PB92-227248] p 2013 N93-21202
Numerical validation of a constitutive theory for an arbitrarily fractured solid
[DE93-003863] p 2064 N93-21739
ESTIMATING
Simulation and calculation of the APEX attitude
[AD-A258716] p 1824 N93-20382
Failure identification using multiple model adaptive estimation for the LAMBDA flight vehicle
[AD-A259137] p 1787 N93-20596
SSG 4.120: Non-linear adjustment p 1973 N93-20986
A comparative study of estimation of partial cloud coverage within a pixel: Proposed adaptive least square method with constraints p 1962 N93-21626
ESTUARIES
Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California
[PB93-118495] p 1994 N93-21805
ETA-MESONS
Semi-leptonic decays of D-mesons in lattice QCD
[PREPRINT-808] p 2062 N93-20905
ETCHING
Study on photochemical and photoelectrochemical etching of gallium arsenide
[ECL-91-25] p 1851 N93-21824
ETHERS
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
ETHYL ALCOHOL
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary
[PB92-182567] p 1867 N93-21717
EUCLIDEAN GEOMETRY
An analogue of Philon's line in n dimensions
[MEMO-1032] p 2054 N93-20957
Local and global properties of curve congruencies in Euclidean three dimensional space
[ETN-93-93411] p 2055 N93-21174
EULER EQUATIONS OF MOTION
A gridless Euler/Navier-Stokes solution algorithm for complex-aircraft applications
[NASA-TM-107727] p 1760 N93-19973
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles
[MBB-FE-211-S-PUB-0481] p 1781 N93-21056
Calculation of hypersonic, viscous, non-equilibrium flows around reentry bodies using a coupled boundary layer/Euler method
[MBB-LME-211-S-PUB-0487] p 1762 N93-21058
EULER-LAGRANGE EQUATION
Stochastic finite element analysis for high speed rotors p 1918 N93-20696
A numerical simulation of two-phase jet spreading using an Euler-Lagrangian technique
[AD-A259326] p 1902 N93-21258
Hybrid single-particle Lagrangian integrated trajectories (HY-SPLIT): Version 3.0: User's guide and model description
[PB92-218114] p 2056 N93-21341
EUROPE
Commission 10: Continental networks. Subcommission for the European Reference Frame (EUREF) p 1969 N93-20961
Commission 10: Continental networks. Subcommission United European Levelling Network (UELN) p 1969 N93-20962
The 8 years monthly vegetation index of central Europe p 1954 N93-21574
EUROPEAN SPACE AGENCY
Packet telecommand standard
[ESA-PSS-04-107-ISSUE-2] p 1884 N93-21001
Ground segment infrastructure standards
[ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002
Mission to the Moon: Europe's priorities for the scientific exploration and utilisation of the Moon
[ESA-SP-1150] p 2099 N93-21013
Experiments aboard the Caravelle for the 3 ESA campaigns in 1990 p 1807 N93-21102
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195
ESA's report to the 29th COSPAR Meeting
[ESA-SP-1154] p 1811 N93-21360
On-orbit demonstrations of automated closure and capture using ESA-developed proximity operations technologies and an existing serviceable NASA Explorer platform spacecraft p 1816 N93-21433
Activities report of the European Space Agency
[ETN-93-93509] p 2103 N93-21764
EUROPEAN SPACE PROGRAMS
Future space transportation systems. Part 1: Safety aspects. Part 2: Technical aspects
[MBB-UK-0180-90-PUB-PT-1-2] p 1821 N93-20847
Experiments aboard the Caravelle for the 3 ESA campaigns in 1990 p 1807 N93-21102
ESA's report to the 29th COSPAR Meeting
[ESA-SP-1154] p 1811 N93-21360
Activities report of the European Space Agency
[ETN-93-93509] p 2103 N93-21764
EUTECTIC ALLOYS
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738
EVALUATION
Performance evaluation of Platform Data ManagementSystem under various degrees of protocol implementation
[NASA-CR-192408] p 2088 N93-20161
Test techniques for evaluating flight displays
[NASA-TM-103947] p 1783 N93-21810
A framework for the objective test and evaluation of explosive detection technology p 1769 N93-21890
EVAPORATION
The electrospray: Fundamentals and combustion applications p 1855 N93-20218
EVAPORATORS
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362
EVENTS
On the evaluation of coherent structures using computer programs p 1937 N93-20688
EVOLUTION (DEVELOPMENT)
Two strikes against perfect phylogeny
[RUU-CS-92-08] p 2021 N93-20848
EXCAVATION
Computer aided planning of laboratory tests of excavator attachments p 1924 N93-20352
EXCIMER LASERS
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770
EXCITATION
Nonlinearization of nonlinear systems under external and parametric random excitations p 1945 N93-20730
High frequency spectroscopy for collision excited helium atom fine structure of 1s4f configuration
[ETN-93-92560] p 2062 N93-20875
Neutron study of crystal-field transitions in ErPO4
[DE93-004131] p 2081 N93-21719
Relativistic shock waves and the excitation of plerions
[DE93-003469] p 2066 N93-21729
EXCITONS
ESR spectra of photoinduced defects in MX chain solids
[DE93-003692] p 2083 N93-21997
EXHAUST EMISSION
Dual cure solventless coating process
[DE93-001351] p 1845 N93-20021
Energy utilization and greenhouse gas emissions: Transportation sector
[PB93-110161] p 1991 N93-21384
Technical comparison between Hythane, GNG and gasoline fueled vehicles
[DE93-005608] p 1994 N93-21834
The impact of electric vehicles on CO2 emissions
[DE93-003719] p 1995 N93-21965
The Natural Gas Vehicle Challenge 1992: Exhaust emissions testing and results
[DE93-002997] p 1917 N93-21974
EXHAUST GASES
Energy utilization and greenhouse gas emissions: Transportation sector
[PB93-110161] p 1991 N93-21384
The impact of electric vehicles on CO2 emissions
[DE93-003719] p 1995 N93-21965
The Natural Gas Vehicle Challenge 1992: Exhaust emissions testing and results
[DE93-002997] p 1917 N93-21974
EXOBIOLOGY
Aerospace medicine and biology: A cumulative index to a continuing bibliography (supplement 371)
[NASA-SP-7011(371)] p 2024 N93-20889
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 372)
[NASA-SP-7011(372)] p 2024 N93-21044
Spacebound 1991
[CTN-93-60604] p 1802 N93-21070
Long duration human exposure to microgravity p 1802 N93-21073
Space life sciences overview p 1802 N93-21074
EXPANDABLE STRUCTURES
Research on large structure assembly technology: Research on deployable assembly structure p 1795 N93-20444
EXPANSION
Numerical examination of Kelvin-Helmholtz instability with self gravitation and cosmologic expansion: A contribution to the formation of structure in the Universe
[MPE-238] p 2096 N93-20856
EXPERIMENT DESIGN
Capabilities and constraints of typical space flight hardware p 1868 N93-20183
Growth, characterization and device development in monocrystalline diamond films
[AD-A259099] p 2079 N93-20407
Development of the Aquatic Research Facility p 1807 N93-21100
EXPERIMENTATION
Stability and transition of hypersonic boundary layer p 1763 N93-20687
Canadian microgravity experiments flown in 1990-1991 p 1807 N93-21101
Experiments aboard the Caravelle for the 3 ESA campaigns in 1990 p 1807 N93-21102
Studies of dispersed phase systems: Ostwald ripening and metal matrix composites p 1808 N93-21106
EXPERT SYSTEMS
User interface of complex interactive computer systems
[ECL-92-05] p 2030 N93-20059
Building a knowledge base for the knowledge worker system
[AD-A258544] p 2089 N93-20370
A horizontal refractivity depiction product: An evaluation
[AD-A258738] p 1966 N93-20401
An investigation of discovery-based learning in the route planning domain
[AD-A259141] p 1780 N93-20560
A VHDL interpreter for model-based diagnoses
[AD-A259122] p 2046 N93-20590
Expert system verification and validation study
[NASA-CR-192175] p 2034 N93-20779
The design of bonded structural assemblies
[REPT-921-430-116] p 1824 N93-20934
An expert system to study bonded joints
[REPT-921-430-113] p 1833 N93-20937
Knowledge-based consulting system for dynamic network security control
[ETN-93-93420] p 2028 N93-21069
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371
Adaptive control with an expert system based supervisory level
[NASA-CR-192742] p 2048 N93-21372
Results of prototype software development for automation of shuttle proximity operations p 1815 N93-21425
Expert system verification and validation study: Workshop and presentation material
[NASA-CR-192176] p 2041 N93-21661
The Galileo PPS expert monitoring and diagnostic prototype
[NASA-CR-191914] p 1828 N93-21823
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831

EXPLORER SATELLITES
On-orbit demonstrations of automated closure and capture using ESA-developed proximity operations technologies and an existing serviceable NASA Explorer platform spacecraft p 1816 N93-21433
EXPLOSIONS
Priorities for microgravity combustion research and goals for workshop discussions p 1869 N93-20186
A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210
EXPLOSIVE DEVICES
Determination of pyrotechnic functional margin p 1863 N93-20134
Pyrotechnically actuated systems database and applications catalog p 1864 N93-20136
A semiconductor bridge ignited hot gas piston ejector p 1864 N93-20137
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices p 1865 N93-20150
Pyrotechnic modeling for the NSI and pin puller p 1866 N93-20153
Proceedings of the First International Symposium on Explosive Detection Technology [DOT/FAA/CT-92/11] p 1764 N93-21856
The UK perspective on aviation security p 1764 N93-21858
A general protocol for operational testing and evaluation of bulk explosive detection systems p 1769 N93-21888
Performance testing of explosives and weapons detection systems p 1769 N93-21889
A framework for the objective test and evaluation of explosive detection technology p 1769 N93-21890
EXPLOSIVES
Laser-based firing systems for prompt initiation of secondary explosives p 1864 N93-20143
Growth and defects of explosives crystals [DE93-003866] p 2082 N93-21780
Proceedings of the First International Symposium on Explosive Detection Technology [DOT/FAA/CT-92/11] p 1764 N93-21856
Role of advanced technology in the security of surface transportation p 1764 N93-21857
Insights into US domestic aviation p 1764 N93-21859
Role of advanced technology within a broad security approach p 1765 N93-21860
Principles of nuclear-based explosive detection systems p 1765 N93-21861
A review of the development of a luggage explosive detection system p 1765 N93-21862
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863
An approach to improving TNA EDS p 1765 N93-21864
PFNA technique for the detection of explosives p 1765 N93-21865
A pulsed fast-thermal neutron interrogation system p 1765 N93-21866
The nitrogen camera: A new explosive detector p 1766 N93-21867
Neutron Elastic Scatter (NES) for Explosives Detection Systems (EDS) p 1766 N93-21868
Detector selection for nuclear-based explosive detection system p 1766 N93-21869
Explosive detection system based on Electronic Neutron Generator (ENG) p 1766 N93-21870
Associated particle imaging p 1766 N93-21871
The RFQ LINAC: A high-current compact ion accelerator for explosive detection p 1766 N93-21872
An H(-) ion source for resonant gamma production p 1766 N93-21874
Photons in - photons out: Non-destructive inspection of containers using x ray and gamma ray techniques p 1767 N93-21875
An explosive detection system for screening luggage with high energy x rays p 1767 N93-21877
Explosives detection limitations using dual-energy radiography and computed tomography p 1767 N93-21878
New x ray technology for the detection of explosives p 1767 N93-21880
Advanced dual energy x ray for explosives detection p 1767 N93-21881
Three-dimensional x ray imaging for the detection of contraband p 1768 N93-21882
The evolution of Computed Tomography (CT) as an explosives detection modality p 1768 N93-21883
Explosive detection using x rays and thermal neutron activation p 1768 N93-21884
Fusion of the nuclear and different x ray technologies for explosives detection p 1768 N93-21885
Explosive detection for checked luggage by DETEX, a combined x ray and positron-tomograph system p 1768 N93-21886
Selective gamma ray resonant absorption for explosives detection p 1769 N93-21887
A general protocol for operational testing and evaluation of bulk explosive detection systems p 1769 N93-21888
A framework for the objective test and evaluation of explosive detection technology p 1769 N93-21890
Validation of simulated explosives for testing TNA explosives detection systems p 1769 N93-21891
Airport testing of a new thermal neutron analysis explosives detection system p 1769 N93-21892
Radiological safety aspects of TNA deployment p 1770 N93-21893
Experience with explosive detection systems in airports p 1770 N93-21895
Sampling explosives on airline passengers p 1770 N93-21896
Explosives detection by pure N-14 NQR p 1770 N93-21897
Explosive detection using dielectrometry p 1770 N93-21898
Liquid explosives screening system p 1771 N93-21899
Improved NMR signatures of explosives p 1771 N93-21900
Application of magnetic resonance to explosives detection p 1771 N93-21901
Explosive detection using microwave imaging p 1771 N93-21902
Consideration of untried magnetic resonance techniques for possible baggage analysis p 1771 N93-21903
Dichotomous key approach for high confidence level identification of selected explosive vapors p 1771 N93-21904
Explosive vapor emission p 1772 N93-21905
A thermodynamic study of the vapor pressures of C-4 and pure RDX p 1772 N93-21906
Extraction, transportation and processing of explosives vapor in detection systems p 1772 N93-21907
Vapor sampling using controlled heating p 1772 N93-21908
Efficient collection of explosive vapors, particles and aerosols p 1772 N93-21909
Negative-ion formation in the explosives RDX, PETN, and TNT using the Reversal Electron Attachment Detection (READ) technique p 1773 N93-21910
Calibration methods for explosives detectors p 1773 N93-21911
Vapor detection using SAW sensors p 1773 N93-21912
Fourier-transform infrared spectroscopy applied to explosive vapor detection p 1773 N93-21913
Atmospheric pressure ionization time-of-flight mass spectrometer for real-time explosives vapor detection p 1773 N93-21914
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer p 1773 N93-21915
Detection of explosives material on single microparticles p 1774 N93-21916
Tandem mass spectrometry for explosives vapor detection p 1774 N93-21917
Modifications to the ionization process to enhance the detection of explosives by API/MS/MS p 1774 N93-21918
The role of mass spectrometry in the detection of explosives p 1774 N93-21919
Modification to the ionization process to enhance the detection of explosives by IMS p 1774 N93-21920
Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives p 1774 N93-21921
Detection of trace explosive evidence by ion mobilty spectrometry p 1774 N93-21922
Analysis of explosives using high speed gas chromatography with chemiluminescent detection p 1775 N93-21923
A GC/ECD approach for the detection of explosives and taggants p 1775 N93-21924
Marking of German plastic explosive for the enhancement of vapor detection p 1775 N93-21925
Program to tag military plastic/sheet explosives p 1775 N93-21926
An improved vapor taggant detector p 1775 N93-21927
Plant laboratory scale preparation and complete characterization of modified composition C-4 containing a taggant p 1775 N93-21928
Detection of taggant in modified composition C-4 tagged with a taggant p 1776 N93-21929
The challenge of biodetection for screening persons carrying explosives p 1776 N93-21931
The flow immunosensor: An antibody-based system for explosives detection p 1776 N93-21932
Explosives search dogs p 1776 N93-21933
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
Assessing the operational impacts of checked luggage screening p 1777 N93-21936
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941
A systems approach to the explosive detection problem p 1778 N93-21942
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943
Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944
Impact on the air carrier of explosive detection systems p 1778 N93-21945
EXPOSURE
Human exposure assessment for airborne pollutants: Advances and opportunities [PB92-223247] p 1991 N93-21496
EXTINCTION
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
Studies of droplet burning and extinction p 1854 N93-20212
Combustion experiments in reduced gravity with two-component miscible droplets p 1854 N93-20214
Improving the detection of near-Earth asteroids [AD-A259383] p 2095 N93-21670
EXTINGUISHING
Ignition of nitrocellulose in various atmospheres [AD-A257987] p 1849 N93-21223
EXTRACTION
FASTUS: A system for extracting information from natural-language text [AD-A259435] p 2087 N93-20011
Optical correlators for automated rendezvous and capture p 1813 N93-21416
Hydrophobic effects from cavity statistics [DE93-003698] p 1904 N93-21734
EXTRAGALACTIC RADIO SOURCES
Corrections to the luni-solar precession derived from a compilation catalogue of extragalactic radio sources [MITT-SER-A-233] p 2095 N93-21052
Analysis and synthesis of catalogues of extragalactic radio sources [MITT-SER-A-231] p 2102 N93-21053
EXTRAPOLATION
Phenomenological correlations in nuclear structure: An opportunity for nuclear astrophysics and a challenge to theory [DE93-003470] p 2098 N93-21775
EXTRATERRESTRIAL ENVIRONMENTS
Evaluation and analysis of long term satellite operation data p 1796 N93-20454
Operational support for ETS-5 secondary operational phase p 1796 N93-20455
Review on aluminum electrolytic condensers development p 1797 N93-20457
EXTRATERRESTRIAL RADIATION
Radiological assessment for Space Station Freedom [NASA-TM-104758] p 2022 N93-20303
Direct-reading dosimeters for space life science experiments p 1804 N93-21083
Bubble detectors for the measurement of space radiation p 1804 N93-21084
EXTRATERRESTRIAL RESOURCES
Research on lunar and planet development and utilization p 1789 N93-20412
NASA Space Engineering Research Center for utilization of local planetary resources [NASA-CR-191991] p 2099 N93-21553
NASA Space Engineering Research Center for utilization of local planetary resources [NASA-CR-191992] p 2103 N93-21554
EXTRAVEHICULAR ACTIVITY
Mission and Safety Critical (MASC): An EVACS simulation with nested transactions [NASA-CR-192295] p 2026 N93-20314
Neutral buoyancy test evaluation of hardware and extravehicular activity procedures for on-orbit assembly of a 14 meter precision reflector [NASA-TM-107735] p 1824 N93-20922
EXTREME ULTRAVIOLET EXPLORER SATELLITE
NASA Center update: Goddard Space Flight Center p 1983 N93-20491
EXTREMUM VALUES
An analogue of Philon's line in n dimensions [MEMO-1032] p 2054 N93-20957

F

F REGION
The mid-latitude trough. A review [AD-A258606] p 1995 N93-19985

Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359
Observation of ionospheric modification using high power oblique HF transmissions
[AD-A258706] p 1998 N93-20378

F-104 AIRCRAFT
Load experience variability of fighter aircraft
[NLR-TP-89172-U] p 1781 N93-20742

F-18 AIRCRAFT
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255

FABRICATION
Planar monolithic Schottky varactor diode millimeter-wave frequency multipliers
[AD-A258616] p 1887 N93-19995
Segmented composite cylinder assembly
[AD-D015603] p 1831 N93-20015
Fiber-reinforced monoclinic celsian matrix composite material
[NASA-CASE-LEW-15269-1] p 1831 N93-20040
Improved ceramic slip casting technique --- application to aircraft model fabrication
[NASA-CASE-LAR-14471-1] p 1858 N93-20041
Processing, fabrication, and demonstration of HTS integrated microwave circuits
[AD-A259441] p 1888 N93-20125
Development and testing of hermetic, laser-ignited pyrotechnic and explosive components
p 1865 N93-20149
Method and apparatus for controlling internal rotation of principal axes in fabrication of birefringent fibers
[AD-D015611] p 2067 N93-20397
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars
[AD-A259168] p 1884 N93-20597
Laser scribing system for amorphous silicon solar cells
[AD-A259287] p 1910 N93-20608
Method of producing Bi-Sr-Ca-Cu-O superconducting materials in cast form
[AD-D015532] p 2080 N93-20777
Textiles and Composites 1992
[VTT-SYMPOSIUM-133] p 1834 N93-21129
Near net shape knitting of fiber glass and carbon for composites p 1836 N93-21145
New special chemical fibres p 1836 N93-21147
The production of fibres from polypropylene and liquid crystal polymer blends p 1837 N93-21149
Applications of Visil fibres in functional textiles
p 1837 N93-21154
The total quality approach in the development of technical textiles p 1838 N93-21156
Microelectronics packaging automation
[DE93-004822] p 1894 N93-21725
Vacuum multilayer lamination of printed wiring boards
[DE93-004912] p 1894 N93-21727
Covalent nitrides for maskless laser writing of microscopic metal lines
[DE93-004105] p 1858 N93-22001

FABRICS
Experimental and analytical investigation of dynamic characteristics of extension-twist-coupled composite tubular spars
[NASA-TP-3225] p 1925 N93-20585
Textiles and Composites 1992
[VTT-SYMPOSIUM-133] p 1834 N93-21129
What's a Parabeam 3D? p 1835 N93-21137
New types of textile fabrics for fibre composites
p 1836 N93-21142
Relationships between layer linkage and mechanical properties of 3D woven textile structures
p 1836 N93-21144
Twaron in composites and protective clothing
p 1837 N93-21153
Developments in heat and flame resistant textiles for protective clothing and barrier fabrics
p 1838 N93-21157
Silicone softeners: Today p 1838 N93-21159
Correlation of results of radiant heat test and convective heat test for three layered protective clothing
p 1838 N93-21161
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977

FACTORIZATION
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
Predicting structure in nonsymmetric sparse matrix factorizations
[DE93-003365] p 2057 N93-21963

FADING
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497

FAILURE
Preliminary results: Root cause investigation of orbital anomalies and failures in NASA standard 50 ampere-hour nickel-cadmium batteries p 1985 N93-20508
NiCd cell reliability in the mission environment
p 1985 N93-20510
Failure identification using multiple model adaptive estimation for the LAMBDA flight vehicle
[AD-A259137] p 1787 N93-20596
SRB frustrum 'smiley' cracking phenomenon study
[NASA-CR-192621] p 1829 N93-20912
Debonding/Delamination of Composites
[AGARD-CP-530] p 1840 N93-21507
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 1844 N93-21530
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use
p 1844 N93-21534
The behavior of intermetallic compounds at large plastic strains
[DE93-003820] p 1857 N93-21772
Fundamental advances for characterizing cathodic protection systems
[PB93-125003] p 1851 N93-21825

FAILURE ANALYSIS
Incipient failure detection using wavelets
[AD-A259423] p 1913 N93-20004
Wavelet features for failure detection and identification in vibration systems
[AD-A259427] p 1914 N93-20007
Determination of pyrotechnic functional margin
p 1863 N93-20134
Pyrotechnic modeling for the NSI and pin puller
p 1866 N93-20153
Special tests and destructive physical analyses as used by the Aerospace Corporation with nickel-hydrogen cells
[NASA-CR-192318] p 1888 N93-20162
Multiaxial fatigue life prediction using a shear stress based critical plane failure criterion
p 1921 N93-20332
Probabilistic assessment of machine parts from Kymenite, austempered ductile iron
p 1923 N93-20341
Reliability of failure envelopes for composite materials
p 1929 N93-20642
Main crack-microvoid interaction. The antiplane problem p 1937 N93-20684
Damage tolerance and arrest characteristics of pressurized graphite/epoxy tape cylinders
[NASA-CR-192618] p 1945 N93-20915
A comparative study of ship hull structures fatigue assessment methods p 1949 N93-21332
The behavior of elastic anisotropic laminated composite flat structures subjected to deterministic and random loadings
[NASA-CR-192197] p 1950 N93-21366
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517
Analysis of failure and maintenance experiences of motor operated valves in a Finnish nuclear power plant
[VTT-TIED-1322] p 1916 N93-21658
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728

FAILURE MODES
Proposed system safety design and test requirements for the microlaser ordnance system
p 1864 N93-20144
Contact dynamics testing of automated three-point docking mechanism p 1812 N93-21411
Collision avoidance for CTV: Requirements and capabilities p 1817 N93-21437
Debonding/Delamination of Composites
[AGARD-CP-530] p 1840 N93-21507
Predicting failure by debonding/delamination
p 1841 N93-21512
Analysis of failure and maintenance experiences of motor operated valves in a Finnish nuclear power plant
[VTT-TIED-1322] p 1916 N93-21658

FALSE ALARMS
Fusion of the nuclear and different x ray technologies for explosives detection p 1768 N93-21885

FAR FIELDS
Numerical computation of complex multi-body Navier-Stokes flows with applications for the integrated Space Shuttle launch vehicle
[NASA-CR-192297] p 1901 N93-20767

FAR INFRARED RADIATION
A new software tool for computing Earth's atmospheric transmission of near- and far-infrared radiation
[NASA-TM-103957] p 1996 N93-20066
Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698

FAST FOURIER TRANSFORMATIONS
SSG 3.113: Spectral gravity field modelling methods
p 1971 N93-20978

FAST NEUTRONS
PFNA technique for the detection of explosives
p 1765 N93-21865
Detector selection for nuclear-based explosive detection system p 1766 N93-21869
Associated particle imaging p 1766 N93-21871
Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944

FATIGUE (MATERIALS)
Fatigue Design 1992, volume 2
[VTT-SYMPOSIUM-131-VOL-2] p 1921 N93-20330
Discriminating experiments for multiaxial fatigue damage models p 1921 N93-20331
Multiaxial fatigue life prediction using a shear stress based critical plane failure criterion
p 1921 N93-20332
Effect of phase lag on cyclic durability of laminated composite p 1922 N93-20333
An engineering tool for solving multiaxial fatigue problems p 1922 N93-20334
Design against high cycle multiaxial fatigue
p 1922 N93-20335
Probabilistic chain fatigue model p 1922 N93-20338
An experimental approach to size effect in rotating bending fatigue p 1922 N93-20339
Statistical analysis of fatigue tests
p 1923 N93-20343
Probabilistic aspects of growth of the fatigue cracks in the railroad axles p 1924 N93-20348
Fatigue performance of nine bolt materials in air and in sea water with cathodic protection
p 1924 N93-20349
Some factors influencing the fatigue properties of boron strengthened aluminum based composite materials
p 1924 N93-20355
Aspects of good design practice for fatigue-loaded welded components p 1925 N93-20356
Cyclic material properties at high strain ranges beyond the standard design codes p 1925 N93-20357
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2
[ISBN-0920049-04] p 1925 N93-20616
Application of the BEM to the crack growth problem by the coupling of damage-deformation
p 1940 N93-20702
Prediction of damage of laminated composite structures under quasi-static and cyclic loadings
[ESA-TT-1282] p 1839 N93-21289
Delamination and fatigue of composite materials: A review p 1840 N93-21509
Delamination development under fatigue loading
p 1842 N93-21521
Fatigue crack propagation of titanium alloys in salt water
[GKSS-91/E/46] p 1856 N93-21551
Fatigue of fiberglass wind turbine blade materials
[DE93-005381] p 1951 N93-21711
Advanced control strategies for wind turbines
[DE93-003252] p 1989 N93-21961

FATIGUE LIFE
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189220] p 1784 N93-20252
Fatigue Design 1992, volume 2
[VTT-SYMPOSIUM-131-VOL-2] p 1921 N93-20330
Multiaxial fatigue life prediction using a shear stress based critical plane failure criterion
p 1921 N93-20332
Effect of phase lag on cyclic durability of laminated composite p 1922 N93-20333
An engineering tool for solving multiaxial fatigue problems p 1922 N93-20334
Prediction of the random load fatigue life distribution
p 1922 N93-20337
An experimental approach to size effect in rotating bending fatigue p 1922 N93-20339
A simulation of corrosion fatigue life distribution in low alloy steel p 1922 N93-20340
A simulation method of determination of construction parts fatigue life distribution p 1923 N93-20342
Discrete statistical model of fatigue crack growth in a Ni-base superalloy, capable of life prediction
p 1923 N93-20344
Fatigue experiments of microconcrete beams under a running load p 1923 N93-20346
Fatigue performance of nine bolt materials in air and in sea water with cathodic protection
p 1924 N93-20349
Fatigue design of earthmoving machines
p 1924 N93-20350

Service loading of work attachments of hydraulic excavators p 1924 N93-20351
Computer aided planning of laboratory tests of excavator attachments p 1924 N93-20352
Fatigue assessment of a cast component for a timber crane p 1924 N93-20353
Thermal plastic strain fatigue life of the roll p 1924 N93-20354
A review of probabilistic fatigue life analyses for welded plate and tubular joints p 1944 N93-20728
Load experience variability of fighter aircraft [NLR-TP-89172-U] p 1781 N93-20742
Analysis of Space Shuttle accelerometer data [NLR-TP-90141-U] p 1821 N93-20744
Smart Integrated Microsensor System (SIMS) [AD-A259430] p 1907 N93-21247
Fatigue Design 1992, volume 1 [VTT-SYMPOSIUM-130-VOL-1] p 1947 N93-21318
The significance of service load data for fatigue life analysis p 1947 N93-21319
Microcomputer system for measurements and analysis of signals for fatigue life calculations under biaxial random stress state p 1948 N93-21320
The least and most damaging histories which can be constructed from a specific from-to matrix p 1948 N93-21321
Fatigue life of two steels under variable amplitude loading p 1948 N93-21323
Spectrum fatigue data in comparison to design curves in the long life regime p 1948 N93-21324
Modelling of fatigue crack growth in flat plate weldments and tubular welded joints p 1948 N93-21326
A local approach for fatigue strength evaluation on ship structures p 1948 N93-21327
Fatigue life prediction for 6261-T6 aluminium alloy I-beams with welded cover plates p 1949 N93-21328
Fracture-mechanical analysis of the residual service life of the welded main girders of the highway bridges of Ruedersdorf p 1949 N93-21329
Fatigue of old metallic railroad bridges p 1949 N93-21330
Fatigue life assessment of service damaged and corroded members of structural steel p 1949 N93-21331
A comparative study of ship hull structures fatigue assessment methods p 1949 N93-21332
For a better fatigue strength of welded steel structures p 1949 N93-21333
A comment on the role of machining induced residual stresses on fatigue crack initiation p 1949 N93-21334
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335
The improvement of fatigue life of aluminum alloy structure by laser radiation p 1950 N93-21336
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO p 1950 N93-21337
Multi-axial fatigue damage analysis using the boundary element method p 1950 N93-21339
Debonding/Delamination of Composites [AGARD-CP-530] p 1840 N93-21507
The effects of surface treatment on torsional fatigue failure in recoil springs [AD-A259345] p 1952 N93-21987

FATIGUE TESTS

Creep fatigue life prediction for engine hot section materials (isotropic) [NASA-CR-189220] p 1784 N93-20252
Fatigue Design 1992, volume 2 [VTT-SYMPOSIUM-131-VOL-2] p 1921 N93-20330

For a better fatigue strength of welded steel structures p 1949 N93-21333
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 1841 N93-21513
Creep Laboratory manual [NPL-DMM(A)-37] p 1951 N93-21565
Fatigue of fiberglass wind turbine blade materials [DE93-005381] p 1951 N93-21711
The effects of surface treatment on torsional fatigue failure in recoil springs [AD-A259345] p 1952 N93-21987

FAULT TOLERANCE

Computer aided reliability, availability, and safety modeling for fault-tolerant computer systems with commentary on the HARP program [NASA-CR-192405] p 2029 N93-19981
The performance of cache-based error recovery in multiprocessors [NASA-CR-192142] p 2029 N93-20006
Multiversion software reliability through fault-avoidance and fault-tolerance [NASA-CR-192191] p 2041 N93-21647
Use of neural networks in the analysis of complex systems [DE93-003554] p 2049 N93-21847

FEASIBILITY

Task sequence planning in a robot workcell using AND/OR nets [NASA-CR-192735] p 2049 N93-21391

FEASIBILITY ANALYSIS

Incipient failure detection using wavelets [AD-A259423] p 1913 N93-20004
Application of a flush airdata sensing system to a wing leading edge (LE-FADS) [NASA-TM-104267] p 1784 N93-20163
Review on optical elements for intersatellite laser communication p 1798 N93-20465

FEDERAL BUDGETS

By the year 2000: First in the world. FY 1993 budget summary [PB93-108512] p 2086 N93-21231
Current information technology resource requirements of the Federal Government, FY 1993 [PB92-233238] p 2092 N93-21500
Federal plan for meteorological services and supporting research, FY 1993 [PB92-233188] p 2014 N93-21502
Pathways to excellence: A Federal strategy for science, mathematics, engineering, and technology education [NASA-EP-288] p 1819 N93-21538
Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for Fiscal Year 1993. Part 3: Nondepartmental Witnesses [S-HRG-102-716-PT-3] p 2093 N93-21676
National Aeronautics and Space Administration: Statement of Chester Lee, Spacehab, Inc. p 2093 N93-21677
National Aeronautics and Space Administration: Statement of Joanne Padron, American Institute of Aeronautics and Astronautics p 2093 N93-21678
National Aeronautics and Space Administration: Statement of Ralph J. Strnad, Sr., Secretary, Washington Area Metal Trades Council/Chief Steward, Goddard Space Flight Center p 2093 N93-21679
National Aeronautics and Space Administration: Statement of Miguel A. Hernandez, Jr., Hernandez Engineering Co. p 2094 N93-21680
National Aeronautics and Space Administration: Statement of Len Ricks, Council of Engineers and Scientists Organizations p 2094 N93-21681
National Aeronautics and Space Administration: Statement of the Space Science Working Group p 2094 N93-21682
Economics and global change: The FY 1993 research program on the economics of global change. A supplement to the US President's FY 1993 budget and a companion document to out changing planet [PB93-101244] p 1993 N93-21696

FEEDBACK

Proceedings of the International COADS workshop [PB93-123552] p 1993 N93-21800

FEEDBACK CONTROL

Modulation behavior of semiconductor lasers with optical feedback [ETN-93-92567] p 1911 N93-20881
Advanced booster guidance studies [NASA-CR-192336] p 1829 N93-20896
Controller partitioning for integrated flight/propulsion control implementation [NASA-TM-105804] p 1787 N93-21197
Automatic design of a Maglev controller in state space [AD-A259336] p 2047 N93-21261
Single link flexible beam testbed project [NASA-CR-192743] p 1947 N93-21307

FEMALES

Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females [NASA-TP-3298] p 2022 N93-20318
Science and Engineering programs: On target for women [PB93-116499] p 2084 N93-21797

FERMI SURFACES

Cluster formation and evolution on semiconductor surface [AD-A259190] p 2078 N93-20274

FERROELECTRICITY

Oriented, single-phase thin films of potassium tantalate-niobate [AD-D015543] p 2077 N93-20027
Calorimetric examination of the polarization cluster of the beginning ferroelectric material KTaO3 [ETN-93-93418] p 2084 N93-21067

FIBER COMPOSITES

Mass loaded composite rotor for vibro-acoustic application [AD-D015604] p 1831 N93-20016
Fiber-reinforced monoclinic celsian matrix composite material [NASA-CASE-LEW-15269-1] p 1831 N93-20040
Nondestructive evaluation of composites using infrared imaging [AD-A259412] p 1831 N93-20123
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates [NASA-TM-106016] p 1832 N93-20317
The overall response of composite materials undergoing large deformations [AD-A259278] p 1832 N93-20606
Material nonlinear analysis of composites p 1929 N93-20641
Nonlinear probabilistic finite element models of laminated composite shells [NASA-CR-191069] p 1833 N93-20919
Fabrication of uniaxially oriented composites from as-spun and heat-treated thermotropic liquid crystalline polymer fibers p 1834 N93-21132
The effect of fiber concentration, length and orientation on the thermal conductivity of a polycarbonate/pitch-based carbon fiber composite p 1834 N93-21133
Manufacturing of high quality polypropylene/glass fibre prepreg tape p 1834 N93-21134
Continuous fiber reinforced thermoplastic composites p 1835 N93-21138
Manufacture and application of biaxial and multiaxial knits as textile reinforcements in composite materials p 1836 N93-21141
New types of textile fabrics for fibre composites p 1836 N93-21142
Relationships between layer linkage and mechanical properties of 3D woven textile structures p 1836 N93-21144
Near net shape knitting of fiber glass and carbon for composites p 1836 N93-21145
Fatigue of fiberglass wind turbine blade materials [DE93-005381] p 1951 N93-21711
Polyorganosilazane preceramic binder development for reaction bonded silicon nitride composites [DE93-004063] p 1844 N93-21842
La Recherche Aerospatiale Bimonthly Bulletin, no. 250, May - June [ONERA-1989-3] p 2060 N93-21948
An acousto-ultrasonic NDE technique for monitoring material anisotropy [DE93-002994] p 1919 N93-21982

FIBER OPTICS

The First NASA Aerospace Pyrotechnic Systems Workshop [NASA-CP-3169] p 1863 N93-20132
Small ICBM Laser Firing Unit (LFU) p 1864 N93-20138
Laser-initiated ordnance for air-to-air missiles p 1864 N93-20139
Laser diode ordnance design p 1864 N93-20140
Portable fiber optic coupled Doppler interferometer system for detonation and shock wave diagnostics [SAND-92-1359C] p 1865 N93-20148
The semiconductor laser applied to fibre optic sensors p 1910 N93-20286
Smart materials p 1845 N93-20624
Interferometric optical fiber data link [AD-D015581] p 2067 N93-20797

Spectroscopic investigations of bending and microbending effects in single mode optical fibre: A feasibility study
[NPL-QU-90] p 1946 N93-20930
Nonlinear fiber optics
[AD-A259363] p 2068 N93-21245
Embedded fiber optic acoustic sensors
[AD-D015568] p 2060 N93-21249
Technical digest-symposium on optical fiber measurements, 1992
[PB93-102259] p 2068 N93-21505
Delivery of very high bandwidth with ATM switches and SONET
[DE93-004274] p 2045 N93-21721
Naval research reviews, volume 44, no. 1, 1992
[PB93-129682] p 2104 N93-21808
Development of a multi-sensor in situ fiber optic fluorometer
[DE93-004646] p 1995 N93-21975

FIBER ORIENTATION
The effect of fiber concentration, length and orientation on the thermal conductivity of a polycarbonate/pitch-based carbon fiber composite p 1834 N93-21133
Continuous fiber reinforced thermoplastic composites p 1835 N93-21138
Knitted carbon fiber reinforced thermoplastics: Structural characterization with image analysis p 1839 N93-21163

FIBER STRENGTH
Some factors influencing the fatigue properties of boron strengthened aluminum based composite materials p 1924 N93-20355

FIBERS
Textiles and Composites 1992
[VTT-SYMPOSIUM-133] p 1834 N93-21129
Wetting of fibers measured by LPR-90 equipment p 1835 N93-21139

FIELD ALIGNED CURRENTS
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760
Comprehensive simulation study on local and global development of auroral arcs and field-aligned potentials
[NIFS-195] p 2073 N93-20764

FIELD EFFECT TRANSISTORS
Development of power MOSFET (150 W class) p 1797 N93-20461
Research on single event resistance evaluation technology: Research by heavy ion irradiation p 1801 N93-20483
Contribution to the development of an ISFET type integrated sensor using an ASIC thread in CMOS technology
[ECL-91-09] p 1892 N93-21006
Analysis of parametric drift of a MESFET-based GaAs MMIC due to 125 C storage
[DE93-000715] p 1894 N93-21768

FIELD EMISSION
Controlled nucleation and growth of semiconducting diamond
[AD-A258541] p 2078 N93-20056
Method of making composite field-emitting arrays
[AD-D015541] p 1832 N93-20780

FIELD OF VIEW
Multiple projector small dome display
[AD-A258621] p 2077 N93-19996
TREND field test report
[AD-A258568] p 2067 N93-20372

FIELD THEORY (PHYSICS)
Non-topological solitons in astrophysics and cosmology p 2096 N93-20292
Two loop calculation of the anomalous dimension of the axial current with static heavy quarks
[PREPRINT-813] p 2062 N93-20924

FIGHTER AIRCRAFT
Application of the Euler method EUFLEX to a fighter-type airplane configuration at transonic speed
[MBB-FE-211-S-PUB-0489-A] p 1762 N93-21059
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test
[MBB-FE-221-S-PUB-0483] p 1840 N93-21462
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 1844 N93-21531

FILAMENTS
Method to produce ceramic superconducting filaments bonded to metals
[AD-D015595] p 1859 N93-20786

FILM CONDENSATION
Film condensation in a horizontal rectangular duct
[NASA-CR-191061] p 1898 N93-20063

FILM COOLING
Computational fluid flow and heat transfer. An engineering tool p 1905 N93-20617

FILM THICKNESS
Magnetron sputtering on 3D components with less accessible areas
[MBB-Z-0360-91-B-PUB] p 1878 N93-21745

FINANCE
Poland civil aviation master plan and investment program: Executive summary
[PB92-213685] p 1759 N93-21342

FINE STRUCTURE
High frequency spectroscopy for collision excited helium atom fine structure of 1s4f configuration
[ETN-93-92560] p 2062 N93-20875

FINISHES
Effect of the reinforcement finish in the mechanical performances of epoxy-glass composites p 1836 N93-21146

FINITE DIFFERENCE THEORY
Numerical simulation of a high Mach number jet flow
[NASA-TM-105985] p 1898 N93-20057
Basic studies of baroclinic flows p 2003 N93-20073
Synoptic/planetary-scale interactions and blocking over the North Atlantic Ocean p 2007 N93-20091
A finite-difference multigrid algorithm for the direct numerical simulation of transition and turbulence in incompressible flow p 1898 N93-20168
Research in computational fluid dynamics and analysis of algorithms
[NASA-CR-192309] p 1901 N93-20748
Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753
Aerothermodynamic properties of hypersonic flows over radiation-adiabatic surfaces
[DLR-FB-91-42] p 1763 N93-21761

FINITE ELEMENT METHOD
Multidisciplinary tailoring of hot composite structures
[NASA-TM-106027] p 1920 N93-19971
Elevated temperature crack growth
[NASA-CR-189191] p 1920 N93-19992
The semi-discrete Galerkin finite element modelling of compressible viscous flow past an airfoil
[NASA-CR-192161] p 1760 N93-20018
Hierarchical Poly Tree configurations for the solution of dynamically refined finte element models
[NASA-CR-191054] p 1921 N93-20232
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
Modal ring method for the scattering of electromagnetic waves
[NASA-TM-105966] p 1882 N93-20260
Optimal guidance law development for an advanced launch system
[NASA-CR-192189] p 1820 N93-20313
Solution of a one-dimensional ablation model
[INPE-5357-TDI/464] p 1900 N93-20321
Mixed mode fatigue crack propagation in a crankshaft p 1923 N93-20347
Fatigue assessment of a cast component for a timber crane p 1924 N93-20353
Acoustic wave propagation in an adhesive bond model with degrading interfacial layers
[AD-A258684] p 1918 N93-20373
Adaptivity-fluids-localization. The challenge to computational mechanics p 1905 N93-20618
Viscoelastic analysis of bonded connections p 1929 N93-20638
Nonhomogeneous interface stress analysis in composite media using a mixed finite element formulation p 1929 N93-20640
Two-D to three-D global/local finite element analysis of symmetric finite composite laminates with holes p 1930 N93-20645
Large amplitude free vibrations of cross-ply composite beams p 1930 N93-20646
An efficient method for the reliability analysis of geometric nonlinear frame structures p 1931 N93-20651
A method of continuous coordinate condensation p 1932 N93-20657
Instability and variation analysis using a parallel substructuring procedure p 1932 N93-20659
Resonant response analysis of a high speed gear p 1917 N93-20662
Buckling and dynamic instability phenomena of tapered bar with localized flaw subjected to an intermediate periodic axial load p 1935 N93-20675
Performances of finite element solution for crack problem p 1936 N93-20682
Analysis of mixed mode cracks in a cylindrical shell p 1936 N93-20683
Spatial formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20690
Time dependent formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20691
Stochastic finite element analysis for high speed rotors p 1918 N93-20696
Improvement to the higher order finite strip method p 1939 N93-20697
Nonlinear analysis of plates by the finite element method p 1939 N93-20698
Exact finite element method p 1939 N93-20699
Modelling of multi-link spatial flexible manipulators employing the finite element method p 1941 N93-20707
Structural shape optimization of robotic links p 1918 N93-20717
Description of wrinkles in membranes using nonlinear finite plate elements
[ETN-93-92565] p 1945 N93-20879
Nonlinear probabilistic finite element models of laminated composite shells
[NASA-CR-191069] p 1833 N93-20919
Numerical simulation of the internal aerodynamic in the combustion chamber of the reciprocating engines using a finite element method
[ECL-90-014] p 1915 N93-21005
Prebuckling deflections and lateral buckling: Applications
[PB92-225366] p 1946 N93-21017
Prebuckling deflections and lateral buckling: Theory
[PB92-225382] p 1946 N93-21018
Energy equation for beam lateral buckling
[PB92-225390] p 1946 N93-21019
Finite element analytical techniques for ceramic production in microgravity-2 p 1809 N93-21116
Buckling of restrained columns with shear deformation and axial shortening
[PB93-110476] p 1946 N93-21233
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Boeing Helicopters airframe finite element modeling p 1782 N93-21313
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: McDonnell-Douglas Helicopter Company achievements p 1782 N93-21314
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Sikorsky Aircraft: Advances toward interacting with the airframe design process p 1782 N93-21315
Fatigue Design 1992, volume 1
[VTT-SYMPOSIUM-130-VOL-1] p 1947 N93-21318
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO p 1950 N93-21337
Simplified analysis of elastic-plastic strain concentration in notched components under cyclic loading p 1950 N93-21338
The use of finite element codes for cyclic stress-strain analysis p 1950 N93-21340
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 1841 N93-21513
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 1841 N93-21514
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515
Edge delamination of composite laminates p 1842 N93-21519
Numerical finite element analysis of damage using Monte Carlo techniques p 1842 N93-21522
Electromagnetic finite element analysis of a solenoid
[DE93-004635] p 1894 N93-21724
Computational mechanics at Los Alamos National Laboratory
[DE93-003725] p 2042 N93-21735
La Recherche Aerospatiale Bimonthly Bulletin, no. 249, March - April
[ONERA-1989-2] p 1762 N93-21747
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760
Improving the selection of bolted joint parameters by using results from finite-element analysis
[DE93-002243] p 1951 N93-21774
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual
[NASA-CR-191017] p 1953 N93-22005

FINITE VOLUME METHOD
Application of the Euler method EUFLEX to a fighter-type airplane configuration at transonic speed
[MBB-FE-211-S-PUB-0489-A] p 1762 N93-21059

FIRE CONTROL CIRCUITS
Small ICBM Laser Firing Unit (LFU) p 1864 N93-20138
Laser diode ordnance design p 1864 N93-20140
Safety and arming system for tube launched projectile
[AD-D015557] p 1889 N93-20307

FIRE EXTINGUISHERS
Fire safety practices in the Shuttle and the Space Station *Freedom* p 1825 N93-20204
The effectiveness of hand-held fire extinguishers on cargo container fires
[DOT/FAA/CT-TN92/42] p 1764 N93-21821
FIRE FIGHTING
The effectiveness of hand-held fire extinguishers on cargo container fires
[DOT/FAA/CT-TN92/42] p 1764 N93-21821
FIRE PREVENTION
Overview of NASA's microgravity combustion science and fire safety program p 1868 N93-20180
Fire safety practices in the Shuttle and the Space Station *Freedom* p 1825 N93-20204
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
FIRES
Japan's microgravity combustion science program p 1868 N93-20182
Priorities for microgravity combustion research and goals for workshop discussions p 1869 N93-20186
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
Opposed-flow flame spreading in reduced gravity p 1854 N93-20206
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
A fundamental study of smoldering combustion in microgravity p 1854 N93-20208
National Center for Atmospheric Research, Fiscal Year 1991
[PB93-129914] p 2000 N93-21547
A model study of the aircraft cabin environment resulting from in-flight fires
[DOT/FAA/CT-90/22] p 1764 N93-21557
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions
[PB92-238690] p 1878 N93-21650
The effectiveness of hand-held fire extinguishers on cargo container fires
[DOT/FAA/CT-TN92/42] p 1764 N93-21821
FIRING (IGNITING)
A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210
FISHERIES
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536
Finding fish way by using remote sensing p 1979 N93-21546
FISHES
Use of ecoregions in biological monitoring
[PB93-106730] p 1992 N93-21656
Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California
[PB93-118495] p 1994 N93-21805
FIXED WINGS
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities, volume 11
[AGARD-AG-300-VOL-11] p 1781 N93-21305
La Recherche Aerospatiale Bimonthly Bulletin, no. 249, March - April
[ONERA-1989-2] p 1762 N93-21747
FLAME PROPAGATION
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
Opposed-flow flame spreading in reduced gravity p 1854 N93-20206
A fundamental study of smoldering combustion in microgravity p 1854 N93-20208
Flame spread across liquid pools p 1854 N93-20209
Microgravity combustion of dust clouds p 1806 N93-21094
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976
FLAME RETARDANTS
Developments in heat and flame resistant textiles for protective clothing and barrier fabrics p 1838 N93-21157
Correlation of results of radiant heat test and convective heat test for three layered protective clothing p 1838 N93-21161
Analysis strategy for organic bromine flame-retardant compounds as environmental contaminants p 1839 N93-21164
FLAME STABILITY
Studies of premixed laminar and turbulent flames at microgravity p 1853 N93-20196
FLAMES
Fullerenes formation in flames p 1853 N93-20187
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
Structure and soot properties of non-buoyant laminar round-jet diffusion flames p 1853 N93-20190
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions p 1853 N93-20192
Visualization and imaging methods for flames in microgravity p 1853 N93-20193
Selected microgravity combustion diagnostic techniques p 1853 N93-20194
Laser diagnostics for microgravity droplet studies p 1853 N93-20195
Studies of premixed laminar and turbulent flames at microgravity p 1853 N93-20196
Modeling of microgravity combustion experiments p 1853 N93-20197
Structure and dynamics of premixed flames in microgravity p 1853 N93-20198
The effects of gravity on wrinkled laminar flames p 1853 N93-20200
Microgravity combustion of dust suspensions p 1853 N93-20201
The structure of particle cloud premixed flames p 1853 N93-20202
Fire safety practices in the Shuttle and the Space Station *Freedom* p 1825 N93-20204
Opposed-flow flame spreading in reduced gravity p 1854 N93-20206
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
Flame spread across liquid pools p 1854 N93-20209
Metals combustion in normal gravity and microgravity p 1854 N93-20211
Studies of droplet burning and extinction p 1854 N93-20212
Computational/experimental studies of isolated, single component droplet combustion p 1854 N93-20213
Combustion experiments in reduced gravity with two-component miscible droplets p 1854 N93-20214
High-pressure droplet combustion studies p 1854 N93-20216
Characterizing droplet combustion of pure and multi-component liquid fuels in a microgravity environment p 1855 N93-20219
Study of multi jet burner for gases
[INPE-5416-TDI/480] p 1846 N93-20320
FLAMMABILITY
Metals combustion in normal gravity and microgravity p 1854 N93-20211
Review on safety validation test p 1802 N93-20488
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195
FLAT PLATES
Buckling of clamped angle-ply laminated plates under inplane loads p 1931 N93-20654
FLAVOR (PARTICLE PHYSICS)
Two loop calculation of the anomalous dimension of the axial current with static heavy quarks
[PREPRINT-813] p 2062 N93-20924
FLEXIBILITY
Flexible prior models in Bayesian image analysis
[DE93-003728] p 2059 N93-21736
FLEXIBLE BODIES
A non-linear phenomenon in the dynamic response of metallic and composite structures p 1926 N93-20620
Free vibrations of a flexible tapered arm attached to a compliant hub p 1932 N93-20660
Dynamic simulation of flexible body systems by the vector solution method p 1933 N93-20666
Modelling of multi-link spatial flexible manipulators employing the finite element method p 1941 N93-20707
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Flex-Gears
[NASA-CR-192364] p 1914 N93-20759
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307
FLEXIBLE SPACECRAFT
Robust on-off pulse control of flexible space vehicles
[NASA-CR-192174] p 1824 N93-21644
FLEXING
High-temperature flexure fixture for advanced ceramics
[PB92-222959] p 1860 N93-21030
FLIGHT CHARACTERISTICS
Failure identification using multiple model adaptive estimation for the LAMBDA flight vehicle
[AD-A259137] p 1787 N93-20596
FLIGHT CONTROL
Guidance and flight control law development for hypersonic vehicles
[NASA-CR-192102] p 1786 N93-19960
Research in robust control for hypersonic vehicles
[NASA-CR-192127] p 1786 N93-20296
URV flight test of an Ada implemented self-repairing flight control system
[AD-A259205] p 1787 N93-20551
Controller partitioning for integrated flight/propulsion control implementation
[NASA-TM-105804] p 1787 N93-21197
FLIGHT CREWS
On the typography of flight-deck documentation
[NASA-CR-177605] p 2087 N93-19970
Nutrition and hydration status of aircrew members consuming the food packet, survival, general purpose, improved during a simulated survival scenario
[AD-A258744] p 2022 N93-20384
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580
Evaluation of two microclimate cooling air vests on a heated mannequin
[AD-A259410] p 2026 N93-21269
FLIGHT FATIGUE
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580
FLIGHT MECHANICS
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities, volume 11
[AGARD-AG-300-VOL-11] p 1781 N93-21305
Program of research in flight dynamics in the JIAFS at NASA-Langley Research Center
[NASA-CR-191885] p 1762 N93-21562
FLIGHT SAFETY
On the typography of flight-deck documentation
[NASA-CR-177605] p 2087 N93-19970
A pulsed fast-thermal neutron interrogation system p 1765 N93-21866
FLIGHT SIMULATION
A synthetic environment flight simulator: The AFIT virtual cockpit
[AD-A259220] p 1788 N93-20576
A simulator study into low speed longitudinal handling qualities of ACT transport aircraft
[NLR-TP-89387-U] p 1787 N93-20743
FLIGHT SIMULATORS
A synthetic environment flight simulator: The AFIT virtual cockpit
[AD-A259220] p 1788 N93-20576
Measurement of modulation transfer functions of simulator displays
[AD-A259401] p 1788 N93-21268
Preliminary studies of planning and flight strip use as air traffic controller memory aids
[DOT/FAA/CT-TN92/22] p 1780 N93-21759
FLIGHT TEST VEHICLES
Laser-initiated ordnance for air-to-air missiles p 1864 N93-20139
FLIGHT TESTS
URV flight test of an Ada implemented self-repairing flight control system
[AD-A259205] p 1787 N93-20551
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities, volume 11
[AGARD-AG-300-VOL-11] p 1781 N93-21305
Autonomous rendezvous and capture development infrastructure p 1818 N93-21446
Space shuttle program: Automatic rendezvous, proximity operations, and capture p 1818 N93-21449
Program of research in flight dynamics in the JIAFS at NASA-Langley Research Center
[NASA-CR-191885] p 1762 N93-21562
FLIGHT TRAINING
Measurement of modulation transfer functions of simulator displays
[AD-A259401] p 1788 N93-21268
FLOAT ZONES
Float zone processing of germanium crystals on the KC-135 microgravity aircraft p 1803 N93-21077
FLOODS
Meteorological events in Arizona and New Mexico during Swamp
[PB93-100410] p 2013 N93-21227

FLOW CHARACTERISTICS
Mean flow interactions of a counter-rotating propeller
p 1899 N93-20289
On the evaluation of coherent structures using computer programs p 1937 N93-20688
The influence of the rotor test facilities ROTEST and ROTOS on the rotor inflow
[DLR-MITT-91-16] p 1785 N93-21173
Internal structure and interfacial area in two-phase flow systems
[DE93-000921] p 1903 N93-21672
The effect of lamination angle on polymer retention
[DE93-004304] p 1861 N93-21722
FLOW DISTRIBUTION
Assessment of higher order turbulence models for complex two- and three-dimensional flowfields
[NASA-TM-103944] p 1897 N93-20035
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237
Numerical solution of three-dimensional unsteady viscous flows
[AD-A259464] p 1899 N93-20244
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
An experimental investigation of a round turbulent jet in a cross-flow p 1905 N93-20689
Thermodynamic flow description of a ramjet for determination of engine forces and moments
[ESA-TT-1266] p 1786 N93-21288
Experiments on smooth cantilevered circular cylinders in a low-turbulence uniform flow. Part 2: Fluctuating loads on a cantilever of aspect ratio 30
[PB93-110500] p 1903 N93-21382
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760
Aerothermodynamic properties of hypersonic flows over radiation-adiabatic surfaces
[DLR-FB-91-42] p 1763 N93-21761
Experimental investigations on wing-body combinations and their components at high angles of attack in the subsonic and transonic speed range
[DLR-FB-91-43] p 1783 N93-21762
FLOW EQUATIONS
Application of the Euler method EUFLEX to a fighter-type airplane configuration at transonic speed
[MBB-FE-211-S-PUB-0489-A] p 1762 N93-21059
FLOW GEOMETRY
On the disturbances development in the supersonic boundary layer p 1763 N93-20686
Use of the boundary element method in the resolution of the quasi-elliptic Navier-Stokes equations: Application to the calculation of a turbine flow
[ECL-91-13] p 1902 N93-20893
FLOW MEASUREMENT
International Symposium on Applications of Laser Techniques to Fluid Mechanics and Workshop on Computers in Flow Measurements No. 6
[AD-A258510] p 1897 N93-20049
An assessment of laser velocimetry in hypersonic flow
[NASA-CR-190895] p 1762 N93-21556
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions
[PB92-238690] p 1878 N93-21650
Internal structure and interfacial area in two-phase flow systems
[DE93-000921] p 1903 N93-21672
FLOW REGULATORS
Modification and evaluation of a microwave plasma/atomic emission detector system
[PB92-217959] p 2074 N93-21203
FLOW STABILITY
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
Stability of mixing layers
[NASA-CR-192225] p 1897 N93-19980
On the stability of nonlinear viscous vortices in three-dimensional boundary layers
[NASA-CR-189637] p 1899 N93-20254
Crossflow stability and transition experiments in a swept-wing flow
[NASA-TM-108650] p 1904 N93-21819
FLOW VELOCITY
Visualization of turbulent flows with simultaneous velocity and vorticity measurements
p 1900 N93-20290
Experiments on the impingement of an underexpanded jet on a flat plate p 1937 N93-20685
Modification and evaluation of a microwave plasma/atomic emission detector system
[PB92-217959] p 2074 N93-21203
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions
[PB92-238690] p 1878 N93-21650
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697
FLOW VISUALIZATION
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles
[AD-A258592] p 1897 N93-19965
Visualization and imaging methods for flames in microgravity p 1853 N93-20193
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255
Visualization of turbulent flows with simultaneous velocity and vorticity measurements
p 1900 N93-20290
Fluid/structure interactions. Internal flows
p 1905 N93-20629
Experiments on the impingement of an underexpanded jet on a flat plate p 1937 N93-20685
A visualization study of the diffusion process between two liquids of different densities under microgravity conditions p 1806 N93-21095
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760
Aerothermodynamic properties of hypersonic flows over radiation-adiabatic surfaces
[DLR-FB-91-42] p 1763 N93-21761
FLUE GASES
Technologies options for acid rain control
[PB93-106854] p 1991 N93-21473
FLUENCE
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels
[DE93-003005] p 1857 N93-21985
FLUID DYNAMICS
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles
[AD-A258592] p 1897 N93-19965
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255
Microgravity science activities in Canada
p 1803 N93-21075
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
FLUID FILLED SHELLS
Liquid oscillations under strong surface tension in a circular cylindrical container
[LRT-WE-9-FB-26-1991] p 1904 N93-21953
FLUID FILTERS
Advanced lightweight ceramic candle filter module
[DE93-000211] p 1860 N93-21252
Thermal/chemical stability of ceramic cross flow filter materials
[DE93-002710] p 1860 N93-21491
FLUID FLOW
International Symposium on Applications of Laser Techniques to Fluid Mechanics and Workshop on Computers in Flow Measurements No. 6
[AD-A258510] p 1897 N93-20049
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2
[ISBN-0920049-04] p 1925 N93-20616
Computational fluid flow and heat transfer. An engineering tool p 1905 N93-20617
The practical application of computational fluid mechanics p 1905 N93-20622
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
FLUID INJECTION
Injection of drag-reducing additives into turbulent water flows. Investigation of laser-induced fluorescence for concentration measurements
[AD-A259459] p 1898 N93-20243
FLUID JETS
A numerical simulation of two-phase jet spreading using an Euler-Lagrangian technique
[AD-A259326] p 1902 N93-21258
FLUID MANAGEMENT
COLD-SAT dynamic model
[NASA-TM-105185] p 1822 N93-19988
FLUID MECHANICS
International Symposium on Applications of Laser Techniques to Fluid Mechanics and Workshop on Computers in Flow Measurements No. 6
[AD-A258510] p 1897 N93-20049
On the thermoelastohydrodynamic lubrication dimensionless problem formulations
p 1917 N93-20693
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
FLUID-SOLID INTERACTIONS
Fluid/structure interactions. Internal flows
p 1905 N93-20629
Boundary element formulation for thermoelastohydrodynamic contact problems
p 1918 N93-20705
FLUIDIZED BED PROCESSORS
Advanced turbine design for coal-fueled engines
[DE93-000224] p 1915 N93-21254
FLUORESCENCE
Development of a multi-sensor in situ fiber optic fluorometer
[DE93-004646] p 1995 N93-21975
FLUORO COMPOUNDS
Optical fiber fluorosensor
[NASA-CASE-LAR-14525-1-CU] p 2069 N93-22008
FLUTTER
The influence of structural optimization on the aeroelastic properties of a vertical tail
[AD-A259140] p 1781 N93-20575
Analytical and experimental investigation of flutter suppression by piezoelectric actuation
[NASA-TP-3241] p 1781 N93-20584
FLUTTER ANALYSIS
Fluid/structures interactions. Aircraft considerations
p 1787 N93-20628
FLUX (RATE)
Computer simulations and performance predictions for explosive detection systems p 1777 N93-21938
FLUX DENSITY
Studying the kinetics of magnetization in high Tc superconductors
[NASA-CR-192159] p 1890 N93-20572
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668
Vacuum structure of pure gauge theories on the lattice
[DE93-001920] p 2081 N93-21701
Electromagnetic finite element analysis of a solenoid
[DE93-004635] p 1894 N93-21724
FLUX PINNING
Studying the kinetics of magnetization in high Tc superconductors
[NASA-CR-192159] p 1890 N93-20572
Properties of aligned YBa2Cu3O(7-delta) superconductor as a function of oxygen deficiency delta
[DE93-001707] p 2082 N93-21750
Magnetization and flux pinning in high-Tc cuprates: Irradiated and oxygen deficient materials
[DE93-004169] p 2082 N93-21844
Effective activation energy in the Bi-Sr-Ca-Cu-O systems
[DE93-002996] p 2083 N93-21983
FLY BY WIRE CONTROL
A simulator study into low speed longitudinal handling qualities of ACT transport aircraft
[NLR-TP-89387-U] p 1787 N93-20743
FOAMING
Polymer foam cell growth in microgravity
p 1808 N93-21108
FOCI
Umbilici, lines of curvature, focal surfaces and their metamorphosis
[ETN-93-93414] p 2055 N93-21207
FOCUSING
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770
FOKKER-PLANCK EQUATION
Current-drive and plasma-formation experiments on the Versator-2 tokamak using lower-hybrid and electron-cyclotron waves
[DE93-002333] p 2075 N93-21482
FOLDING STRUCTURES
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
FORCE DISTRIBUTION
Force balance near an X line along which E (dot) is less than 0
[NASA-CR-192341] p 2071 N93-20362
A comparison of force reconstruction methods for a lumped mass beam
[DE93-002461] p 1951 N93-21484
FORCED VIBRATION
A method of continuous coordinate condensation
p 1932 N93-20657

Dynamic simulation of flexible body systems by the vector solution method p 1933 N93-20666
Forced vibration of non-selfadjoint elastic systems p 1934 N93-20668
Stochastic finite element analysis for high speed rotors p 1918 N93-20696

FORECASTING
Poland civil aviation master plan and investment program: Executive summary [PB92-213685] p 1759 N93-21342
Poland civil aviation master plan and investment program [PB92-213693] p 1759 N93-21343

FOREST MANAGEMENT
Remote sensing data application on forests in Okinawa Islands focusing on mangrove forests p 1978 N93-21543
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project [PB93-129815] p 1994 N93-21827

FORESTS
Use of features derived from class proportions in a pixel for the multispectral classification of remote sensing images [INPE-5306-TDI/456] p 1966 N93-20322
Estimation of carbon storage and organic matter in boreal forests using optical remote sensing data p 1955 N93-21583
Rate of heating of the forest interior [INPE-5235-RPQ/647] p 1979 N93-21648
The potential for biomass to mitigate greenhouse gas emissions in the Northeastern US [DE93-002800] p 1992 N93-21666
Advanced very high resolution radiometer data to update forest area change for midsouth states [PB93-121416] p 1979 N93-21685
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project [PB93-129815] p 1994 N93-21827

FORM FACTORS
Semi-leptonic decays of D-mesons in lattice QCD [PREPRINT-808] p 2062 N93-20905
Optical correlators for automated rendezvous and capture p 1813 N93-21416

FORMALISM
Formalizing structured file services for the data storage and retrieval subsystem of the data management system for Spacestation Freedom [NASA-CR-192293] p 2089 N93-20315
Formal specification and timing analysis of high-integrity real-time systems [REPT-92-041] p 2028 N93-21185

FORMING TECHNIQUES
Fabrication of uniaxially oriented composites from as-spun and heat-treated thermotropic liquid crystalline polymer fibers p 1834 N93-21132

FORTRAN
Design of a laboratory computer interface [AD-A259126] p 2028 N93-20594

FORWARD SCATTERING
New x ray technology for the detection of explosives p 1767 N93-21880

FOUR-WAVE MIXING
Laser probes of natural gas ignition chemistry [PB92-227776] p 1911 N93-21352
Perturbative nearly-degenerate four-wave mixing lineshapes in gases [DE93-002673] p 1850 N93-21490

FRACTALS
Multiresolution feature analysis and wavelet decomposition of atmospheric flows [AD-A259420] p 1996 N93-20003
Peano-like dynamics as a model for strange nonchaotic behaviour p 1933 N93-20661
Physics-like mathematical model for chaos and ergodic criticality in four dimensions p 1944 N93-20729
Agglomeration of fractals in simulated reduced gravity p 1806 N93-21093

FRACTIONATION
Acoustophoresis separation method [NASA-CASE-LAR-13388-2] p 1846 N93-20570

FRACTURE MECHANICS
Elevated temperature crack growth [NASA-CR-189191] p 1920 N93-19992
Fatigue Design 1992, volume 2 [VTT-SYMPOSIUM-131-VOL-2] p 1921 N93-20330
Fatigue design of earthmoving machines p 1924 N93-20350
Thermal plastic strain fatigue life of the roll p 1924 N93-20354
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2 [ISBN-0920049-04] p 1925 N93-20616
Batman-cracks. Observations and numerical simulations p 1936 N93-20681
Main crack-microvoid interaction. The antiplane problem p 1937 N93-20684
Boundary element fracture mechanics analysis in plane orthotropic elasticity p 1939 N93-20700
Modeling the growth and interaction of fractures [NASA-CR-192185] p 1945 N93-20733
Fracture-mechanical analysis of the residual service life of the welded main girders of the highway bridges of Ruedersdorf p 1949 N93-21329
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 1841 N93-21514
Edge delamination of composite laminates p 1842 N93-21519
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533
Computational mechanics at Los Alamos National Laboratory [DE93-003725] p 2042 N93-21735
Numerical validation of a constitutive theory for an arbitrarily fractured solid [DE93-003863] p 2064 N93-21739
Fracture at Cu/sapphire interfaces [DE93-003816] p 1857 N93-21779

FRACTURE STRENGTH
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates [NASA-TM-106016] p 1832 N93-20317
Predicting the failure load of adhesive joints p 1932 N93-20655
Fracture toughness using circular discs p 1935 N93-20677
Fatigue Design 1992, volume 1 [VTT-SYMPOSIUM-130-VOL-1] p 1947 N93-21318
Damage tolerance of a helicopter rotor high-strength steel p 1948 N93-21322
For a better fatigue strength of welded steel structures p 1949 N93-21333
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335
The improvement of fatigue life of aluminum alloy structure by laser radiation p 1950 N93-21336
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO p 1950 N93-21337
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515
Mode 2 damage development in carbon fibre reinforced plastics p 1842 N93-21523
Erosion of composite ceramics [DE93-004254] p 1862 N93-21853

FRACTURES (MATERIALS)
The predicting crack growth for mixed mode fracture under biaxial loads p 1922 N93-20336
Modeling the growth and interaction of fractures [NASA-CR-192185] p 1945 N93-20733

FRACTURING
Effect of microstructure on the strength and fracture energy of bimaterial interfaces [AD-A259181] p 1921 N93-20271
Fatigue in single crystal nickel superalloys [AD-A259191] p 1856 N93-20275
Modeling the growth and interaction of fractures [NASA-CR-192185] p 1945 N93-20733
Damage tolerance and arrest characteristics of pressurized graphite/epoxy tape cylinders [NASA-CR-192618] p 1945 N93-20915
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517
The behavior of intermetallic compounds at large plastic strains [DE93-003820] p 1857 N93-21772
Fracture at Cu/sapphire interfaces [DE93-003816] p 1857 N93-21779
Polyorganosilazane preceramic binder development for reaction bonded silicon nitride composites [DE93-004063] p 1844 N93-21842

FRAGMENTATION
Batman-cracks. Observations and numerical simulations p 1936 N93-20681

FRAMES
An efficient method for the reliability analysis of geometric nonlinear frame structures p 1931 N93-20651
Multimodal optimization of vibrating space frames p 1931 N93-20652

FRAMES (DATA PROCESSING)
A framework for corporate implementation of object-oriented software development [AD-A258717] p 2032 N93-20383

FRANCE
Multispectral and multitemporal aerial photography as an aid for the evaluation of land in regions of the Limagne Rift Valley (France) [BCRS-91-29] p 1968 N93-20953

FRAUNHOFER LINES
Method and apparatus for generating Fraunhofer line laser source using stimulated Raman scattering [AD-D015579] p 1910 N93-20770

FREE ELECTRON LASERS
Configuration and construction of a free electron laser in near infrared at the superconducting electron accelerator in Darmstadt (Germany) [ETN-93-93412] p 1911 N93-21175
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments [DE93-002897] p 1912 N93-21955
Simultaneous operation of a free-electron laser on two harmonically related wavelengths [DE93-003745] p 1912 N93-21969

FREE FALL
Capabilities and constraints of NASA's ground-based reduced gravity facilities p 1819 N93-20184
High-pressure droplet combustion studies p 1854 N93-20216

FREE JETS
Experiment and modeling of the noise reduction for a turbulent supersonic jet by means of a nozzle with a sudden enlargement [MPIS-15/1991] p 2060 N93-21024

FREE MOLECULAR FLOW
Rarefied-flow Shuttle aerodynamics model [NASA-TM-107698] p 1759 N93-19976

FREE VIBRATION
Large amplitude free vibrations of cross-ply composite beams p 1930 N93-20646
On the vibration of thermally stressed laminated composite cylindrical shells p 1930 N93-20648
A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649
Instability and variation analysis using a parallel substructuring procedure p 1932 N93-20659
Free vibrations of a flexible tapered arm attached to a compliant hub p 1932 N93-20660
On oscillatory motion of a spring-mass system subjected to piecewise constant forces p 1934 N93-20670
The free vibration of isotropic and specially orthotropic triangular plates p 1935 N93-20673
Study of free vibration of orthotropic rectangular plates p 1935 N93-20674
Stochastic finite element analysis for high speed rotors p 1918 N93-20696
Buckling of columns: Allowance for axial shortening [PB93-110484] p 1947 N93-21234
Identification of delamination by eigenfrequency degradation: An inverse problem p 1843 N93-21526

FREQUENCIES
Higher frequency transmission properties of motor car-chassis systems [ETN-93-92563] p 1915 N93-20877

FREQUENCY CONVERTERS
Frequency conversion of a CO2 laser with ZnGeP2 [PB92-222785] p 1911 N93-21016

FREQUENCY DISTRIBUTION
An overview of Sandia National Laboratories' plasma switched, gigawatt, ultra-wideband impulse transmitter program [DE93-003249] p 1886 N93-21960

FREQUENCY MEASUREMENT
Development of a measurement of upper MID frequency errors on arbitrary grazing incidence optics [NASA-CR-191333] p 2067 N93-20731

FREQUENCY MODULATION
An analytical and experimental investigation of FM-by-noise jamming [AD-A259124] p 1883 N93-20592
Modulation behavior of semiconductor lasers with optical feedback [ETN-93-92567] p 1911 N93-20881

FREQUENCY MULTIPLIERS
Planar monolithic Schottky varactor diode millimeter-wave frequency multipliers [AD-A258616] p 1887 N93-19995

FREQUENCY RANGES
Discrete orthogonal wavelets [REPT-91-45] p 2052 N93-20862

FREQUENCY SHIFT KEYING
Improved visual aid for VLF MSK signals [AD-D015576] p 1882 N93-20277

FREQUENCY STANDARDS
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193) [PB92-227073] p 1893 N93-21350

FRICTION
SSG 5.99: Tidal friction and the Earth's rotation p 1974 N93-20992

FRICTION DRAG
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
FRICTION FACTOR
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713
FRICTION REDUCTION
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
FROGS
Studying the effects of microgravity on lower vertebrate development and behavior p 1807 N93-21099
FUEL CELLS
NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492
The electrochemical oxidation of methane for fuel cells
[PB93-110120] p 1987 N93-21353
Gasifiers optimized for fuel cell applications
[DE93-003486] p 1988 N93-21781
Electrochemical characteristics of acid electrolytes for fuel cells
[PB93-124907] p 1988 N93-21826
FUEL COMBUSTION
Characterizing droplet combustion of pure and multi-component liquid fuels in a microgravity environment p 1855 N93-20219
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
First international alternative fueled vehicle round-up
[DE93-002779] p 1916 N93-21667
FUEL FLOW
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
FUEL PRODUCTION
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
FUEL PUMPS
Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753
FUEL SYSTEMS
The electrospray: Fundamentals and combustion applications p 1855 N93-20218
FUEL TANKS
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789
FUEL TESTS
Interferometric JFTOT tube deposit measuring device
[AD-D015599] p 1866 N93-20247
FUEL-AIR RATIO
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976
FUELS
Japan's microgravity combustion science program p 1868 N93-20182
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
FULLERENES
Fullerenes formation in flames p 1853 N93-20187
FUNCTIONAL DESIGN SPECIFICATIONS
Tolerancing for function in a CAD/CAM environment
[PAPER-C-1-1] p 2034 N93-20824
Functional tolerancing in CAD/CAM
[PAPER-C-2-1] p 2035 N93-20830
Tolerancing in the context of the automated manufacturing and the design axioms
[PAPER-C-2-6] p 2036 N93-20834
FUNCTIONS (MATHEMATICS)
Conformal length of graphs
[ETN-93-93419] p 2054 N93-21068
Efficient implementation of a functional language for the definition of practicable, denotational semantics
[ETN-93-93413] p 2055 N93-21176
Deterministic communication complexity of the Hamming distance
[MEMO-1026] p 2056 N93-21399
FUSION REACTORS
Poloidal rotation, density asymmetries, and momentum confinement in tokamak experiments
[DE93-002319] p 2069 N93-20026
TFTR experimental data analysis collaboration
[DE93-002365] p 2075 N93-21483
FUZZY SETS
Fuzzy connectivity and mathematical morphology
[TELECOM-PARIS-92-D-001] p 2053 N93-20940
Fuzzy set methods for object recognition in space applications
[NASA-CR-191986] p 2041 N93-21563
FUZZY SYSTEMS
Intelligent systems technology infrastructure for integrated systems p 1815 N93-21424

G

GALACTIC COSMIC RAYS
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196
GALAXIES
IUE-ULDA access guide no. 3: International Ultraviolet Explorer-Uniform Low Dispersion Archive: Normal galaxies
[ESA-SP-1152] p 2094 N93-20541
GALERKIN METHOD
The semi-discrete Galerkin finite element modelling of compressible viscous flow past an airfoil
[NASA-CR-192161] p 1760 N93-20018
GALILEO SPACECRAFT
The Galileo PPS expert monitoring and diagnostic prototype
[NASA-CR-191914] p 1828 N93-21823
GALLIUM ARSENIDES
Structure and reliability metal contacts to GaAs
[AD-A259184] p 1889 N93-20272
Defect characterization by means of positron annihilation p 1804 N93-21081
Development of a Knudsen cell for molecular beam epitaxial growth of GaAs films in the microgravity environment p 1804 N93-21082
GaAs computer technology
[AD-A259259] p 2080 N93-21241
Analysis of parametric drift of a MESFET-based GaAs MMIC due to 125 C storage
[DE93-000715] p 1894 N93-21768
Study on photochemical and photoelectrochemical etching of gallium arsenide
[ECL-91-25] p 1851 N93-21824
GALLIUM COMPOUNDS
Growth and doping of Al(x)Ga(1-x) films by electron cyclotron resonance assisted molecular beam epitaxy
[AD-A258722] p 2079 N93-20367
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A259177] p 2079 N93-20561
GALLIUM OXIDES
Low loss glass and optical fibers therefrom
[AD-D015567] p 1862 N93-21829
GAME THEORY
The Shapley value for cooperative games under precedence constraints
[MEMO-1025] p 2056 N93-21398
GAMMA RAY ABSORPTION
Design of a high current proton accelerator p 1766 N93-21873
An H(-) ion source for resonant gamma production p 1766 N93-21874
Selective gamma ray resonant absorption for explosives detection p 1769 N93-21887
GAMMA RAY ASTRONOMY
Very high energy gamma ray extension of GRO observations
[NASA-CR-192407] p 2094 N93-20746
Timing analysis of low-energy gamma ray emission from galactic compact objects using the Gamma Ray Observatory
[NASA-CR-192253] p 2102 N93-20747
GAMMA RAY LASERS
IDA gamma ray laser: Investigation of the feasibility of developing a laser using nuclear transitions
[AD-A259476] p 1909 N93-20246
GAMMA RAY OBSERVATORY
NASA Center update: Goddard Space Flight Center p 1983 N93-20491
Preliminary results: Root cause investigation of orbital anomalies and failures in NASA standard 50 ampere-hour nickel-cadmium batteries p 1985 N93-20508
Very high energy gamma ray extension of GRO observations
[NASA-CR-192407] p 2094 N93-20746
Timing analysis of low-energy gamma ray emission from galactic compact objects using the Gamma Ray Observatory
[NASA-CR-192253] p 2102 N93-20747
GAMMA RAY SPECTRA
A review of the associated particle imaging technique
[DE93-002238] p 2061 N93-20023
Timing analysis of low-energy gamma ray emission from galactic compact objects using the Gamma Ray Observatory
[NASA-CR-192253] p 2102 N93-20747
GAMMA RAY SPECTROMETERS
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863
PFNA technique for the detection of explosives p 1765 N93-21865
GAMMA RAY TELESCOPES
Very high energy gamma ray extension of GRO observations
[NASA-CR-192407] p 2094 N93-20746
GAMMA RAYS
Can the cosmic x ray and gamma ray background be due to reflection of a steep power law spectrum and Compton scattering by relativistic electrons?
[NASA-CR-192255] p 2102 N93-20601
Advanced design for a seafloor Gamma Measurement Data Collection System
[PB93-105013] p 2020 N93-21793
A review of the development of a luggage explosive detection system p 1765 N93-21862
A pulsed fast-thermal neutron interrogation system p 1765 N93-21866
The nitrogen camera: A new explosive detector p 1766 N93-21867
Detector selection for nuclear-based explosive detection system p 1766 N93-21869
Associated particle imaging p 1766 N93-21871
Design of a high current proton accelerator p 1766 N93-21873
Photons in - photons out: Non-destructive inspection of containers using x ray and gamma ray techniques p 1767 N93-21875
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937
Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944
GAS ANALYSIS
La Recherche Aerospatiale Bimonthly Bulletin, no. 249, March - April
[ONERA-1989-2] p 1762 N93-21747
Dichotomous key approach for high confidence level identification of selected explosive vapors p 1771 N93-21904
Explosive vapor emission p 1772 N93-21905
Extraction, transportation and processing of explosives vapor in detection systems p 1772 N93-21907
Vapor sampling using controlled heating p 1772 N93-21908
Efficient collection of explosive vapors, particles and aerosols p 1772 N93-21909
Negative-ion formation in the explosives RDX, PETN, and TNT using the Reversal Electron Attachment Detection (READ) technique p 1773 N93-21910
Calibration methods for explosives detectors p 1773 N93-21911
Vapor detection using SAW sensors p 1773 N93-21912
Fourier-transform infrared spectroscopy applied to explosive vapor detection p 1773 N93-21913
Atmospheric pressure ionization time-of-flight mass spectrometer for real-time explosives vapor detection p 1773 N93-21914
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer p 1773 N93-21915
Tandem mass spectrometry for explosives vapor detection p 1774 N93-21917
Modifications to the ionization process to enhance the detection of explosives by API/MS/MS p 1774 N93-21918
The role of mass spectrometry in the detection of explosives p 1774 N93-21919
Modification to the ionization process to enhance the detection of explosives by IMS p 1774 N93-21920
Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives p 1774 N93-21921
Analysis of explosives using high speed gas chromatography with chemiluminescent detection p 1775 N93-21923
Explosives search dogs p 1776 N93-21933
GAS CHROMATOGRAPHY
Modification and evaluation of a microwave plasma/atomic emission detector system
[PB92-217959] p 2074 N93-21203
Analysis of explosives using high speed gas chromatography with chemiluminescent detection p 1775 N93-21923
A GC/ECD approach for the detection of explosives and taggants p 1775 N93-21924

An improved vapor taggant detector
p 1775 N93-21927

GAS COMPOSITION
Ozone as a sink for atmospheric carbon aerosols
[PB93-118594] p 1993 N93-21790

GAS DETECTORS
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652
Role of advanced technology within a broad security approach p 1765 N93-21860
Calibration methods for explosives detectors
p 1773 N93-21911
Vapor detection using SAW sensors
p 1773 N93-21912
Atmospheric pressure ionization time-of-flight mass spectrometer for real-time explosives vapor detection
p 1773 N93-21914
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer
p 1773 N93-21915
Tandem mass spectrometry for explosives vapor detection p 1774 N93-21917
Modification to the ionization process to enhance the detection of explosives by IMS p 1774 N93-21920
Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives
p 1774 N93-21921
A GC/ECD approach for the detection of explosives and taggants p 1775 N93-21924
Marking of German plastic explosive for the enhancement of vapor detection p 1775 N93-21925
Program to tag military plastic/sheet explosives
p 1775 N93-21926
An improved vapor taggant detector
p 1775 N93-21927
Plant laboratory scale preparation and complete characterization of modified composition C-4 containing a taggant p 1775 N93-21928
Detection of taggant in modified composition C-4 tagged with a taggant p 1776 N93-21929
Dry immunochemical sensor for the detection of PETN vapor p 1776 N93-21930
The challenge of biodetection for screening persons carrying explosives p 1776 N93-21931
The flow immunosensor: An antibody-based system for explosives detection p 1776 N93-21932

GAS DYNAMICS
Fundamental processes in partially ionized plasmas
[AD-A259272] p 2072 N93-20600
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785

GAS FLOW
Sunspot dynamics
[NASA-CR-192284] p 2100 N93-20754
Modification and evaluation of a microwave plasma/atomic emission detector system
[PB92-217959] p 2074 N93-21203
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652

GAS GENERATORS
NASA pyrotechnically actuated systems program
p 1863 N93-20133
Development of a NASA standard gas generator
p 1863 N93-20135

GAS GIANT PLANETS
Planetary astronomy research
[NASA-CR-192134] p 2099 N93-21643

GAS GUNS
Nondestructive evaluation of composites using infrared imaging
[AD-A259412] p 1831 N93-20123

GAS INJECTION
Projectile base bleed technology. Part 2: User's guide CMINT computer code, version 5.04-BRL
[AD-A258630] p 1897 N93-19999
Gas bubble generation in low gravity
p 1805 N93-21090

GAS JETS
Selected microgravity combustion diagnostic techniques p 1853 N93-20194

GAS MIXTURES
Microgravity combustion of dust suspensions
p 1853 N93-20201
Molecular theory and computer simulation studies of natural and synthetic gas mixtures
[PB92-235696] p 1850 N93-21651
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976

GAS PIPES
Fundamental advances for characterizing cathodic protection systems
[PB93-125003] p 1851 N93-21825

GAS PRESSURE
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653

GAS TEMPERATURE
A study of the large-scale infrared emission from a selected dark cloud
[NASA-CR-192263] p 1998 N93-20755
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653

GAS TRANSPORT
Mechanisms of gas permeation through polymer membranes
[DE93-005960] p 1852 N93-21836

GAS TUNGSTEN ARC WELDING
For a better fatigue strength of welded steel structures
p 1949 N93-21333

GAS TURBINE ENGINES
Advanced turbine design for coal-fueled engines
[DE93-000224] p 1915 N93-21254

GAS TURBINES
An evaluation of R/D needs based on cogeneration system operational experience
[PB93-114494] p 1987 N93-21455

GAS-LIQUID INTERACTIONS
Gas bubbles in liquid metals p 1808 N93-21110

GAS-METAL INTERACTIONS
Mechanisms and controlling characteristics of the catalytic oxidation of methane
[DE93-005719] p 1852 N93-21835

GAS-SOLID INTERACTIONS
Experiment and modeling of air-coupled ultrasonic excitation of plate waves p 1936 N93-20679

GASEOUS DIFFUSION
On the structure of gaseous confined laminar diffusion flames: Numerical investigation
[NASA-TM-106039] p 1902 N93-21198
Diffusion and reaction layer structure and NOx reduction in turbulent gas flames
[PB93-114353] p 1850 N93-21456

GASES
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project
[FOA-C-40296-4.5] p 1901 N93-20858
Molecular theory and computer simulation studies of natural and synthetic gas mixtures
[PB92-235696] p 1850 N93-21651

GASOLINE
Technical comparison between Hythane, GNG and gasoline fueled vehicles
[DE93-005608] p 1994 N93-21834

GATES (CIRCUITS)
Development of radiation resistant HCMOSIC
p 1798 N93-20467
Development of 10 k gate-gate array
p 1799 N93-20472
Development of 32 bit MPU p 1799 N93-20473
GGADS: A library independent layout synthesis system for user adaptive gate array master structures
[ETN-93-92571] p 1892 N93-21021

GAUGE THEORY
A preliminary study of the Gribov ambiguity in lattice SU(3) Coulomb gauge
[PREPRINT-816] p 2055 N93-21179
Vacuum structure of pure gauge theories on the lattice
[DE93-001920] p 2081 N93-21701
Aspects of the electroweak phase transition
[DE93-004629] p 2063 N93-21723
Experiences with the ACPMAPS 50 GFLOP system
[DE93-004418] p 2042 N93-21855

GEARS
Parallel axes gear set optimization in two-parameter space p 1917 N93-20637
Resonant response analysis of a high speed gear
p 1917 N93-20662
Flex-Gears
[NASA-CR-192364] p 1914 N93-20759

GENETIC ALGORITHMS
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721

GEOCHEMISTRY
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990
[PB93-116622] p 2019 N93-21688
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin
[PB93-115640] p 2000 N93-21692
Summaries of FY 1992 geosciences research
[DE93-004826] p 1965 N93-21726

GEOCHRONOLOGY
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin
[PB93-115640] p 2000 N93-21692

GEODESY
ATKIS: The introduction phase at IfAG
p 1967 N93-20533
NASA Space Geodesy Program: GSFC data analysis, 1992. Crustal Dynamics Project VLBI geodetic results, 1979 - 1991
[NASA-TM-104572] p 1999 N93-20900
National report of the Federal Republic of Germany on the geodetic activities in the years 1987-1991
[SER-B-294] p 1969 N93-20960
Commission 10: Continental networks. Subcommission for the European Reference Frame (EUREF)
p 1969 N93-20961
Commission 10: Continental networks. Subcommission United European Levelling Network (UELN)
p 1969 N93-20962
SSG 1.73: Integrated geodesy p 1969 N93-20963
SSG 1.77: Utilization of inertial techniques for geodesy and surveying p 1969 N93-20964
SSG 1.102: Vertical reference systems
p 1970 N93-20966
IAG commission 8 and COSPAR ISSC B2: International Coordination of Space Techniques for Geodesy and Geodynamics (CSTG). Introduction
p 1970 N93-20968
CSTG subcommission on Space Geodetic Measurement Sites (SGMS) p 1970 N93-20969
German participation in the activities of the CSTG Subcommission on Satellite Laser Ranging (SLRS)
p 1971 N93-20971
CSTG subcommission GPS: GPS in Germany (1988-1991)91) p 1971 N93-20972
SSG 2.106: Determination of orbits to cm-accuracy
p 1971 N93-20973
Commission 12: International Geoid Commission
p 1971 N93-20976

GEOELECTRICITY
Report of the Kakioka Magnetic Observatory. Geoelectricity: Kakioka, Memambetsu, Kanoya
[REPT-160] p 2001 N93-21947

GEOGRAPHIC INFORMATION SYSTEMS
Feature mapping in a photogrammetric GIS
[AD-A258595] p 1965 N93-19967
Reports on cartography and geodesy, series 1, number 106
[ETN-93-92583] p 1967 N93-20528
Tasks and construction of the geo-information system within the regional climatic project (REKLIP) in the Upper Rhine Valley (Germany) p 1968 N93-20538
Scanner technology as an alternative to manual digitizing. The data acquisition of the 1990s
p 1968 N93-20539
Geographic data model: A survey
p 1968 N93-20540
Information base procedures for generation of synthetic thermal scenes
[AD-A259202] p 2090 N93-20549
Product development of a user interface for Geographic Information Systems (GIS) and remote sensing for training purposes
[BCRS-90-32] p 2091 N93-20952
Global change data base training exercise manual. Exploring Earth's environment: Africa as an example
[PB92-224682] p 1990 N93-21211
Status of remote sensing and Geographic Information System (GIS) applications in the Environment and Natural Resources (ENR) sector p 1976 N93-21279
Geographic index of environmental articles 1990
[PB93-116184] p 1994 N93-21806

GEOGRAPHY
Geographic index of environmental articles 1990
[PB93-116184] p 1994 N93-21806

GEOIDS
Commission 12: International Geoid Commission
p 1971 N93-20976
SSG 4.91: Local gravity field approximation
p 1972 N93-20979

GEOLOGICAL FAULTS
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990
[PB93-116622] p 2019 N93-21688

GEOLOGY
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin
[PB93-115640] p 2000 N93-21692
Summaries of FY 1992 geosciences research
[DE93-004826] p 1965 N93-21726

GEOMAGNETIC TAIL
Force balance near an X line along which E (dot) is less than 0
[NASA-CR-192341] p 2071 N93-20362

GEOMAGNETISM
Force balance near an X line along which E (dot) is less than 0
[NASA-CR-192341] p 2071 N93-20362
An investigation of the unexpected attitude dynamics experienced by the OEDIPUS-A tethered sounding rocket payload p 1830 N93-20724
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469
Report of the Kakioka Magnetic Observatory, geomagnetism, Kakioka Memambetsu Kanoya, Chichijima, 1991
[JMA-159] p 2000 N93-21746
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782
Report of the Kakioka Magnetic Observatory. Geoelectricity: Kakioka, Memambetsu, Kanoya
[REPT-160] p 2001 N93-21947

GEOMETRIC RECTIFICATION (IMAGERY)
The 8 years monthly vegetation index of central Europe p 1954 N93-21574

GEOMETRICAL OPTICS
Joint services electronics program
[AD-A259179] p 1890 N93-20562

GEOMETRY
Surface/surface intersection on a processor mesh
[RR-864-M] p 2038 N93-20943

GEOMORPHOLOGY
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin
[PB93-115640] p 2000 N93-21692
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792

GEOPHYSICAL FLUID FLOW CELLS
Laboratory and theoretical models of planetary-scale instabilities and waves p 2004 N93-20074

GEOPHYSICS
NASA/MSFC FY92 Earth Science and Applications Program Research Review
[NASA-CP-3184] p 2002 N93-20067
Basic studies of baroclinic flows p 2003 N93-20073
Laboratory and theoretical models of planetary-scale instabilities and waves p 2004 N93-20074
MAMS: High resolution atmospheric/surface properties p 2008 N93-20097
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
Solar-geophysical data number 576, August 1992. Part 2: (Comprehensive reports). Data for February 1992 and miscellaneous
[PB93-112548] p 2100 N93-21213
Solar-geophysical data number 574, June 1992. Part 2: (Comprehensive reports). Data for December 1991 and miscellaneous
[PB92-218767] p 2101 N93-21346
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 577, September 1992. Part 2: Comprehensive reports, data for March 1992 and miscellaneous
[PB93-116952] p 2101 N93-21386
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470
Summaries of FY 1992 geosciences research
[DE93-004826] p 1965 N93-21726
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782

GEOSAT SATELLITES
Satellite monitoring of giant tabular icebergs
p 1957 N93-21595
Global validation of the wave model WAM using Geosat wave height data p 1965 N93-21639

GEOSYNCHRONOUS ORBITS
Atmospheric electricity/meteorology analysis
p 2006 N93-20086
Investigation of cloud/water vapor motion winds from geostationary satellite p 2008 N93-20094
Cycle life status of SAFT VOS nickel-cadmium cells
p 1985 N93-20511

GEOTECHNICAL ENGINEERING
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663

GEOTHERMAL ENERGY CONVERSION
Documentation of the status of international geothermal power plants and a list by country of selected geothermally active governmental and private sector entities
[DE93-002273] p 1988 N93-21665

GEOTHERMAL RESOURCES
Documentation of the status of international geothermal power plants and a list by country of selected geothermally active governmental and private sector entities
[DE93-002273] p 1988 N93-21665

GERMANIUM
Surface pi bonding and the near-first-order desorption kinetics of hydrogen from Ge(100)2x1
[AD-A258534] p 1845 N93-20051
Float zone processing of germanium crystals on the KC-135 microgravity aircraft p 1803 N93-21077

GERMANIUM COMPOUNDS
Frequency conversion of a CO2 laser with ZnGeP2
[PB92-222785] p 1911 N93-21016

GERMANIUM OXIDES
Low loss glass and optical fibers therefrom
[AD-D015567] p 1862 N93-21829

GERMANY
National report of the Federal Republic of Germany on the geodetic activities in the years 1987-1991
[SER-B-294] p 1969 N93-20960
CSTG subcommission on Space Geodetic Measurement Sites (SGMS) p 1970 N93-20969
German participation in the activities of the CSTG Subcommission on Satellite Laser Ranging (SLRS)
p 1971 N93-20971
CSTG subcommission GPS: GPS in Germany (1988-1991)91 p 1971 N93-20972

GET AWAY SPECIALS (STS)
ROMPS critical design review data package
[NASA-CR-191612] p 2041 N93-21472

GIRDERS
Fracture-mechanical analysis of the residual service life of the welded main girders of the highway bridges of Ruedersdorf p 1949 N93-21329

GLACIERS
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302

GLASS
The production of high iron glasses by RST in microgravity p 1810 N93-21117
Liquid/liquid phase separation and crystallization of materials in microgravity aboard NASA KC-135 flights
p 1810 N93-21119
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785

GLASS FIBER REINFORCED PLASTICS
Batman-cracks. Observations and numerical simulations p 1936 N93-20681
What's a Parabeam 3D? p 1835 N93-21137
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 1844 N93-21530

GLASS FIBERS
Fiber-reinforced monoclinic celsian matrix composite material
[NASA-CASE-LEW-15269-1] p 1831 N93-20040
A high efficiency CW holmium-doped fluorozirconate fibre laser at 1.19 micrometers
[MBB-Z-0414-91-PUB] p 1911 N93-20843
Effect of gravity on phase separation and crystallization in a heavy metal fluoride glass p 1810 N93-21118
Manufacturing of high quality polypropylene/glass fibre prepreg tape p 1834 N93-21134
What's a Parabeam 3D? p 1835 N93-21137
Near net shape knitting of fiber glass and carbon for composites p 1836 N93-21145
Effect of the reinforcement finish in the mechanical performances of epoxy-glass composites
p 1836 N93-21146
Fatigue of fiberglass wind turbine blade materials
[DE93-005381] p 1951 N93-21711
Low loss glass and optical fibers therefrom
[AD-D015567] p 1862 N93-21829

GLASS LASERS
A high efficiency CW holmium-doped fluorozirconate fibre laser at 1.19 micrometers
[MBB-Z-0414-91-PUB] p 1911 N93-20843
GLOBAL POSITIONING SYSTEM
Crustal deformation measurements in the vicinity of Vandenberg Air Force Base
[AD-A258536] p 1996 N93-20053
Research on GPS utilization in space p 1780 N93-20453
Development of a realtime DGPS system
[DLR-MITT-92-06] p 1779 N93-20749
National report of the Federal Republic of Germany on the geodetic activities in the years 1987-1991
[SER-B-294] p 1969 N93-20960
Commission 10: Continental networks. Subcommission for the European Reference Frame (EUREF) p 1969 N93-20961
SSG 1.77: Utilization of inertial techniques for geodesy and surveying p 1969 N93-20964
SSG 1.105: GPS kinematic positioning methods and applications p 1970 N93-20967
CSTG subcommission GPS: GPS in Germany (1988-1991)91) p 1971 N93-20972
Commission 12: International Geoid Commission p 1971 N93-20976
SSG 4.116: Kinematic and dynamic system modelling in geodesy p 1972 N93-20982
SSG 4.117: Optimization of modern positioning techniques p 1972 N93-20983
Commission 7: Recent crustal movements p 1973 N93-20988
International Earth Rotation Service p 1974 N93-20990
SSG 5.123: Definition and realization of terrestrial reference systems p 1974 N93-20994
Current and planned use of the Navstar Global Positioning System by NASA
[NASA-TM-108190] p 1779 N93-21190
Investigation of the real-time accuracy of the DGPS method
[AD-A257692] p 1780 N93-21222
Applicability of relative GPS to automated rendezvous between the space shuttle and Space Station p 1780 N93-21413
Office of Spaceflight Standard Spaceborne Global Positioning System (GPS) user equipment project p 1780 N93-21417
Autonomous reconfigurable GPS/INS navigation and pointing system for rendezvous and docking p 1780 N93-21426
Autonomous rendezvous and docking: A commercial approach to on-orbit technology validation p 1817 N93-21440
GLOBAL TRACKING NETWORK
German participation in the activities of the CSTG Subcommission on Satellite Laser Ranging (SLRS) p 1971 N93-20971
GLOBAL WARMING
Global temperature variations p 2003 N93-20068
Energy utilization and greenhouse gas emissions: Transportation sector
[PB93-110161] p 1991 N93-21384
A 2 x CO2 experiment with prescribed changes in sea surface temperature p 1958 N93-21598
Global Change Data Base Pilot (Diskette) Project for Africa. Dase base documentation version 1.1
[PB93-117927] p 2000 N93-21686
GLOBULAR CLUSTERS
Field star interactions with globular clusters p 2096 N93-20047
GLUONS
Effect of quark-gluon plasma boundary on the momentum distribution of quarks
[DE93-004166] p 2064 N93-21740
Multi-jet production rates in deep-inelastic muon-proton scattering
[DE93-004410] p 2065 N93-21854
GOGGLES
Night vision goggle training: Development and production of six video programs
[AD-A258529] p 2025 N93-20050
GOVERNMENT PROCUREMENT
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128
GOVERNMENTS
Opportunities in applied environmental research and development
[PB92-223189] p 1990 N93-21347
Metric transition plans and activities of Federal Government Agencies
[PB92-222249] p 1878 N93-21468
Current information technology resource requirements of the Federal Government, FY 1993
[PB92-233238] p 2092 N93-21500
Pathways to excellence: A Federal strategy for science, mathematics, engineering, and technology education
[NASA-EP-288] p 1819 N93-21538
International energy outlook 1992
[PB93-107951] p 1988 N93-21550
GRADIENTS
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668
GRAIN BOUNDARIES
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978
GRAIN SIZE
Grain refinement of Al-Cu-Ti alloys in microgravity p 1810 N93-21120
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy
[DE93-002980] p 2083 N93-21981
GRAINS
Theory of grain alignment in molecular clouds
[NASA-CR-192307] p 2077 N93-20037
GRAMMARS
(Generalized) LR parsing: From Knuth to Tomita p 2030 N93-20221
Recursive ascent parsing p 2030 N93-20222
A parsing algorithm for non-deterministic context-sensitive languages p 2031 N93-20223
Unrestricted on-line parsing and transduction with graph structured stacks p 2031 N93-20224
Substring parsing for arbitrary context-free grammars p 2031 N93-20225
Detection and correction of morpho-syntactic errors in shift-reduce parsing p 2031 N93-20226
Tomita's algorithm in practical applications p 2031 N93-20227
On the comparison of sequences: Analyzing behavioural aspects of courseware development and use
[MEMO-1030] p 2038 N93-21033
GRANULAR MATERIALS
Numerical validation of a constitutive theory for an arbitrarily fractured solid
[DE93-003863] p 2064 N93-21739
GRAPH THEORY
Plane multiflows with a fixed number of demands
[RR-885-M] p 2034 N93-20788
On the existence of (0,2)-graph of order 18
[RR-887-I] p 2051 N93-20800
Two strikes against perfect phylogeny
[RUU-CS-92-08] p 2021 N93-20848
Forcing colorations, intervals and the perfect graph conjecture (an extended abstract)
[RR-867-M] p 2053 N93-20945
General antifactors of graphs
[RR-868-M] p 2054 N93-20946
A generalized cut condition for multiflows in matroids
[RR-869-M] p 2054 N93-20947
Counterexamples to three conjectures concerning perfect graphs
[RR-870-M] p 2054 N93-20948
Triangulating planar graphs while minimizing the maximum degree
[RUU-CS-92-07] p 2054 N93-20950
On semantics: The case of knowledge graphs
[MEMO-1028] p 2091 N93-20955
An O(n squared) maximal planarization algorithm based on PQ-trees
[RUU-CS-92-03] p 2038 N93-21035
Graphs with maximum number of minimum cuts
[RR-880-M] p 2054 N93-21168
Predicting structure in nonsymmetric sparse matrix factorizations
[DE93-003365] p 2057 N93-21963
GRAPHITE
Adherence and reactivity of graphite base multimaterials
[ECL-92-04] p 1859 N93-20542
Heat transfer device
[NASA-CASE-LEW-14162-4] p 1832 N93-20568
Barely visible damage threshold in a BMI p 1843 N93-21524
GRAPHITE-EPOXY COMPOSITES
Precision linear shaped charge severance of graphite-epoxy materials
[SAND-92-0610C] p 1865 N93-20151
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Experimental and analytical investigation of dynamic characteristics of extension-twist-coupled composite tubular spars
[NASA-TP-3225] p 1925 N93-20585
Protection of Radarsat SAR antenna graphite/epoxy support structure p 1848 N93-20819
Damage tolerance and arrest characteristics of pressurized graphite/epoxy tape cylinders
[NASA-CR-192618] p 1945 N93-20915
GRAPHITE-POLYIMIDE COMPOSITES
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates
[NASA-TM-106016] p 1832 N93-20317
GRAPHS (CHARTS)
Two strikes against perfect phylogeny
[RUU-CS-92-08] p 2021 N93-20848
Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872
General antifactors of graphs
[RR-868-M] p 2054 N93-20946
Conformal length of graphs
[ETN-93-93419] p 2054 N93-21068
Hexagonal grid drawings
[RUU-CS-92-06] p 2055 N93-21172
GRAVIMETERS
Gravimetric activities in the period 1986-1990, submitted to the International Gravity Commission of IAG p 1971 N93-20975
GRAVIMETRY
Thermochemical evaluation of proposed electrothermal-chemical propellants
[AD-A259110] p 1866 N93-20588
Gravimetric activities in the period 1986-1990, submitted to the International Gravity Commission of IAG p 1971 N93-20975
International Gravimetric Bureau p 1971 N93-20977
GRAVITATION
An overview of European activities on microgravity combustion p 1868 N93-20181
Capabilities and constraints of typical space flight hardware p 1868 N93-20183
Capabilities and constraints of NASA's ground-based reduced gravity facilities p 1819 N93-20184
Structure and soot properties of non-buoyant laminar round-jet diffusion flames p 1853 N93-20190
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
Microgravity combustion of dust suspensions p 1853 N93-20201
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
A fundamental study of smoldering combustion in microgravity p 1854 N93-20208
Flame spread across liquid pools p 1854 N93-20209
A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210
Metals combustion in normal gravity and microgravity p 1854 N93-20211
Combustion experiments in reduced gravity with two-component miscible droplets p 1854 N93-20214
Combustion of interacting droplet arrays in a microgravity environment p 1854 N93-20217
Numerical examination of Kelvin-Helmholtz instability with self gravitation and cosmologic expansion: A contribution to the formation of structure in the Universe
[MPE-238] p 2096 N93-20856
On the origin of SL(nC) current algebra in generalized two dimensional gravity
[PREPRINT-818] p 2055 N93-21180
GRAVITATION THEORY
Numerical examination of Kelvin-Helmholtz instability with self gravitation and cosmologic expansion: A contribution to the formation of structure in the Universe
[MPE-238] p 2096 N93-20856
Lectures on 2D gravity and 2D string theory
[DE93-003746] p 2084 N93-21737
GRAVITATIONAL EFFECTS
An overview of European activities on microgravity combustion p 1868 N93-20181
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
Laser diagnostics for microgravity droplet studies p 1853 N93-20195
Modeling of microgravity combustion experiments p 1853 N93-20197
The effects of gravity on wrinkled laminar flames p 1853 N93-20200
Opposed-flow flame spreading in reduced gravity p 1854 N93-20206
Flame spread across liquid pools p 1854 N93-20209

A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210
Radiological assessment for Space Station Freedom [NASA-TM-104758] p 2022 N93-20303
Gravitational metric deviation by supernova neutrino bursts [PREPRINT-789] p 2096 N93-20849
SSG 5.122: Geodynamic effects of global gravity field variations p 1974 N93-20993
Spacebound 1991 [CTN-93-60604] p 1802 N93-21070
On the modelling of the dissolution and liquid phase epitaxial growth processes in a horizontal sandwich system p 1803 N93-21080
Stability of the fluid-fluid interphase in rotating systems subjected to different gravitational intensities p 1805 N93-21087
Preparation results for a Marangoni-Benard experiment with Soret effect under microgravity conditions p 1805 N93-21088
A visualization study of the diffusion process between two liquids of different densities under microgravity conditions p 1806 N93-21095
How do zooplankton feed? A critical microgravity experiment p 1806 N93-21097
Gravity as a factor in the orientation and vertical migration of marine zooplankton p 1806 N93-21098
Studying the effects of microgravity on lower vertebrate development and behavior p 1807 N93-21099
Canadian microgravity experiments flown in 1990-1991 p 1807 N93-21101
CSAR-1: The first Canadian microgravity sounding rocket flight p 1807 N93-21103
Studies of dispersed phase systems: Ostwald ripening and metal matrix composites p 1808 N93-21106
Elucidation of the role of gravity and gravity driven convection in the formation of silicon carbide/silicon nitride whiskers p 1808 N93-21107
An experiment on producing foam metals in a microgravity environment aboard NASA KC-135 aircraft p 1808 N93-21109
Gas bubbles in liquid metals p 1808 N93-21110
Eye movements under altered gravitoinertial forces p 1809 N93-21111
Aimed arm movements under changed gravity p 1809 N93-21113
Effect of gravity on phase separation and crystallization in a heavy metal fluoride glass p 1810 N93-21118
Acceleration levels on the KC-135 p 1784 N93-21124
Laser welding of plastics under low and high gravity conditions p 1811 N93-21125
Improving the detection of near-Earth asteroids [AD-A259383] p 2095 N93-21670

GRAVITATIONAL FIELDS
The world of NASA microgravity science p 1868 N93-20179
Gravitational synchrotron radiation and gravitrons by lights [PREPRINT-821] p 1999 N93-20951
SSG 2.107: Gravity field determination by satelli te gravity-gradiometry p 1971 N93-20974
SSG 3.113: Spectral gravity field modelling methods p 1971 N93-20978
SSG 4.91: Local gravity field approximation p 1972 N93-20979
SSG 4.118: Inverse geodetic problems p 1973 N93-20984
Commission 7: Recent crustal movements p 1973 N93-20988
SSG 5.122: Geodynamic effects of global gravity field variations p 1974 N93-20993

GRAVITATIONAL PHYSIOLOGY
Spacebound 1991 [CTN-93-60604] p 1802 N93-21070
Long duration human exposure to microgravity p 1802 N93-21073
Space life sciences overview p 1802 N93-21074
Cerebral autoregulation in microgravity p 1809 N93-21112
Aimed arm movements under changed gravity p 1809 N93-21113

GRAVITONS
Gravitational synchrotron radiation and gravitrons by lights [PREPRINT-821] p 1999 N93-20951

GRAVITY GRADIOMETERS
SSG 2.107: Gravity field determination by satelli te gravity-gradiometry p 1971 N93-20974

GRAVITY WAVES
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program [NASA-CR-192381] p 2099 N93-19961

GRAZING INCIDENCE
Development of a measurement of upper MID frequency errors on arbitrary grazing incidence optics [NASA-CR-191333] p 2067 N93-20731

GREAT SALT LAKE (UT)
Climate of Salt Lake City, Utah [PB92-228402] p 2013 N93-21200

GREEN'S FUNCTIONS
Green's function method for vibration of structures p 1934 N93-20667

GREENHOUSE EFFECT
Energy utilization and greenhouse gas emissions: Transportation sector [PB93-110161] p 1991 N93-21384
National Center for Atmospheric Research, Fiscal Year 1991 [PB93-129914] p 2000 N93-21547
Earth observation in the TIGER programme of the UK Natural Environment Research Council p 1953 N93-21572
Climatological use of long time series of data from the water vapour channel of Meteosat p 1958 N93-21601
The potential for biomass to mitigate greenhouse gas emissions in the Northeastern US [DE93-002800] p 1992 N93-21666
Screening analysis of CO2 utilization and fixation [DE93-004313] p 1994 N93-21850
The impact of electric vehicles on CO2 emissions [DE93-003719] p 1995 N93-21965

GREENLAND
Detecting new-ice in the Arctic from multispectral satellite data p 1957 N93-21594

GRID GENERATION (MATHEMATICS)
Hierarchical Poly Tree configurations for the solution of dynamically refined finte element models [NASA-CR-191054] p 1921 N93-20232
Multiple-body simulation with emphasis on integrated Space Shuttle vehicle [NASA-CR-192289] p 1821 N93-20234
Numerical computation of complex multi-body Navier-Stokes flows with applications for the integrated Space Shuttle launch vehicle [NASA-CR-192297] p 1901 N93-20767
Surface/surface intersection on a processor mesh [RR-864-M] p 2038 N93-20943
Application of the Euler method EUFLEX to a fighter-type airplane configuration at transonic speed [MBB-FE-211-S-PUB-0489-A] p 1762 N93-21059
Transient dynamics capability at Sandia National Laboratories [DE93-002285] p 2041 N93-21549
Computational mechanics at Los Alamos National Laboratory [DE93-003725] p 2042 N93-21735

GROOVES
A study of heat flux induced dryout in capillary grooves [AD-A259175] p 1899 N93-20270

GROUND BASED CONTROL
Ground segment infrastructure standards [ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002
Mission planning systems for tactical aircraft (pre-flight and in-flight) [AGARD-AR-313] p 1764 N93-21187

GROUND STATE
Theoretical studies of important processes in planetary and comet atmospheres [NASA-CR-192114] p 2098 N93-19959
Doping induced insulator-metal transition in the platinum based MX complexes [DE93-003690] p 2083 N93-21996

GROUND STATIONS
Ground segment infrastructure standards [ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002

GROUND SUPPORT EQUIPMENT
Ground segment infrastructure standards [ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002

GROUND TESTS
Research on advanced spacecraft testing technology p 1796 N93-20452

GROUND WIND
Mean seasonal cycles and interannual variations at 0 deg, 110 deg W and 0 deg, 140 deg W during 1980-1991 [PB93-114726] p 2014 N93-21388

GROUP THEORY
On homogeneous quasilinear evolution equation [REPT-91-65] p 2052 N93-20854

GUIDANCE (MOTION)
Advanced booster guidance studies [NASA-CR-192336] p 1829 N93-20896
Demonstration of automated proximity and docking technologies p 1814 N93-21423
Results of prototype software development for automation of shuttle proximity operations p 1815 N93-21425
Autonomous docking ground demonstration p 1816 N93-21430

GUIDANCE SENSORS
Research on equipment life extension technology p 1793 N93-20436
Video guidance sensor p 1812 N93-21409
Results of prototype software development for automation of shuttle proximity operations p 1815 N93-21425

GULF OF MEXICO
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992 [PB92-218171] p 2018 N93-21031
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992) [PB92-218155] p 2018 N93-21049
Hurricane experience levels of coastal county populations from Texas to Maine, August 1992 [PB93-105971] p 2013 N93-21228

GUN LAUNCHERS
An impact technique to accelerate flier plates to velocities over 12 km/s [DE93-002467] p 1820 N93-21485

GUN PROPELLANTS
Thermochemical evaluation of proposed electrothermal-chemical propellants [AD-A259110] p 1866 N93-20588
Ignition of nitrocellulose in various atmospheres [AD-A257987] p 1849 N93-21223

GUSTS
Gust forecasting [MISC-SER-A-125] p 2012 N93-20887

GYRES
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992) [PB92-218155] p 2018 N93-21049

GYROSCOPES
Research on equipment life extension technology p 1793 N93-20436
Frequency ratio lock up in the attitude drift of a dissipative axisymmetric gyrostat p 1908 N93-20725

H

H II REGIONS
High resolution HI observations of HII regions. 3: Photodissociation regions and the magnetic field near Orion B [MPE-PREPRINT-214] p 2098 N93-21951

HADRONS
Multi-jet production rates in deep-inelastic muon-proton scattering [DE93-004410] p 2065 N93-21854

HALF LIFE
Survey of nuclear activations for intense proton and deuteron beams [AD-A259258] p 2061 N93-20604

HALIDES
Doping induced insulator-metal transition in the platinum based MX complexes [DE93-003690] p 2083 N93-21996

HALOGENS
Competitive pairing and the chemistry of coadsorbed hydrogen and halogens on Ge(100) [AD-A258538] p 1846 N93-20386

HAMILTONIAN FUNCTIONS
On the normalized Hamiltonian formulation of the restricted three-body problem p 1944 N93-20727
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems [DE93-004531] p 2064 N93-21742

HANDBOOKS
Wright Laboratory research and development facilities handbook [AD-A258746] p 2085 N93-20403
NASA systems engineering handbook. Draft [NASA-TM-108702] p 2086 N93-21188
The resonator handbook [NASA-CR-192217] p 1894 N93-21559

HANDLING EQUIPMENT
A simulator study into low speed longitudinal handling qualities of ACT transport aircraft [NLR-TP-89387-U] p 1787 N93-20743

HARDENING
High temperature alloys p 1858 N93-20626

HARDNESS
High temperature alloys p 1858 N93-20626
Erosion of composite ceramics [DE93-004254] p 1862 N93-21853

HARMONIC EXCITATION
A non-linear phenomenon in the dynamic response of metallic and composite structures p 1926 N93-20620

Axial response and pulse behavior of a cylindrical liquid column. Part 2
[LRT-WE-9-FB-2-1991-PT-2] p 1903 N93-21296

HARMONIC OSCILLATION
Simultaneous operation of a free-electron laser on two harmonically related wavelengths
[DE93-003745] p 1912 N93-21969

HARMONICS
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113

HATCHES
Hatch securing mechanism
[AD-D015613] p 1914 N93-20399

HAWAII
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792

HAZARDS
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579
Proceedings of the Aircraft Wake Vortices conference, volume 1
[PB93-126449] p 1763 N93-21796
Proceedings of the Aircraft Wake Vortices conference, volume 2
[PB93-127728] p 2015 N93-21799

HEAD (ANATOMY)
Upper interior head protection. Volume 1. The development of a research test procedure
[PB93-113769] p 2026 N93-21537
Upper interior head protection. Volume 2: Fleet characterization and countermeasure evaluation
[PB93-113777] p 2027 N93-21795

HEAD DOWN TILT
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318

HEAD-UP DISPLAYS
Test techniques for evaluating flight displays
[NASA-TM-103947] p 1783 N93-21810

HEALTH
Quantitative registration of tree vitality and physiological changes with colour-infrared and multispectral photography
[BCRS-91-44] p 1968 N93-20740
Environmental health discipline science plan
[NASA-TM-108042] p 2024 N93-21369
Space human factors discipline science plan
[NASA-TM-108023] p 2026 N93-21370
International environmental research and assessment: Proposals for better organization and decision making
[ISBN-1-881054-01-2] p 2087 N93-21949

HEAT AFFECTED ZONE
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H
[DE93-004064] p 1876 N93-21999

HEAT EXCHANGERS
Electrostatic enhancement of heat transfer in a gas-to-gas heat exchanger
[PB93-114338] p 1903 N93-21454

HEAT FLUX
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263
A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270
Solution of a one-dimensional ablation model
[INPE-5357-TDI/464] p 1900 N93-20321
Heat loads as key problem of hypersonic flight
[MBB-FE-202-S-PUB-0486] p 1762 N93-21054
Remote sensing of latent heat fluxes at the air-sea interface p 1959 N93-21603
Air/sea latent heat flux measurements with microwave radiometers p 1959 N93-21604

HEAT MEASUREMENT
Calorimetric examination of the polarization cluster of the beginning ferroelectric material KTaO3
[ETN-93-93418] p 2084 N93-21067
Comparison of the measurements of temperature and sensible heat flow with an ultrasonic anemometer-thermometer and a temporal high resolution platinum wire-resistance thermometer
[GKSS-92/E/11] p 1907 N93-21461
Monolithic preamplifier employing epitaxial N-channel JFETs
[DE93-002951] p 1894 N93-21980

HEAT OF FORMATION
Optimizing liquid hydrogen storage systems p 1879 N93-20692

HEAT OF VAPORIZATION
Optimizing liquid hydrogen storage systems p 1879 N93-20692

HEAT PIPES
A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270

HEAT RESISTANT ALLOYS
Advanced industrial materials. An overview p 1845 N93-20623
High temperature alloys p 1858 N93-20626
Supersonic transport: Which material for the engine
[DS-2023] p 1786 N93-21459
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H
[DE93-004064] p 1876 N93-21999

HEAT SHIELDING
Research on HOPE communication and data processing equipment p 1792 N93-20429

HEAT SINKS
Research on HOPE heat sink device p 1792 N93-20431

HEAT STORAGE
Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development)
[PB92-227891] p 1878 N93-21465

HEAT TOLERANCE
Effects of microclimate cooling on physiology and performance while flying the UH-60 helicopter simulator in NBC conditions in a controlled heat environment
[AD-A258502] p 2023 N93-20400
Evaluation of two microclimate cooling air vests on a heated mannequin
[AD-A259410] p 2026 N93-21269

HEAT TRANSFER
Three-dimensional Navier-Stokes heat transfer predictions for turbine blade rows
[NASA-TM-105800] p 1897 N93-19969
Multidisciplinary tailoring of hot composite structures
[NASA-TM-106027] p 1920 N93-19971
S. G. Romanovskiy method of thermal treatment and drying of nonconducting materials (Description of an invention for an author's certificate)
[AD-A258631] p 1831 N93-20000
Film condensation in a horizontal rectangular duct
[NASA-CR-191061] p 1898 N93-20063
A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210
Development of high heat radiation printed boards p 1796 N93-20456
Heat transfer device
[NASA-CASE-LEW-14162-4] p 1832 N93-20568
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2
[ISBN-0920049-04] p 1925 N93-20616
Computational fluid flow and heat transfer. An engineering tool p 1905 N93-20617
Spatial formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20690
Time dependent formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20691
On the thermoelastohydrodynamic lubrication dimensionless problem formulations p 1917 N93-20693
Enhanced heat transfer in ribbed ducts using vortex generators
[PB93-114320] p 1902 N93-21219
Electrostatic enhancement of heat transfer in a gas-to-gas heat exchanger
[PB93-114338] p 1903 N93-21454
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions
[PB92-238690] p 1878 N93-21650
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728

HEAT TRANSMISSION
Comparison of the measurements of temperature and sensible heat flow with an ultrasonic anemometer-thermometer and a temporal high resolution platinum wire-resistance thermometer
[GKSS-92/E/11] p 1907 N93-21461

HEAT TREATMENT
S. G. Romanovskiy method of thermal treatment and drying of nonconducting materials (Description of an invention for an author's certificate)
[AD-A258631] p 1831 N93-20000
Polymers of bis(ethynylstyryl)benzene and related monomers
[AD-D015612] p 1859 N93-20398
Thermoplastic composites p 1845 N93-20625
Fabrication of uniaxially oriented composites from as-spun and heat-treated thermotropic liquid crystalline polymer fibers p 1834 N93-21132

HEATING
Method and apparatus for preloading a joint by remotely operable means
[NASA-CASE-MSC-21940-1] p 1914 N93-20120
Advanced ceramic component development for high temperature indirect gas-fired heating systems
[PB93-127033] p 1862 N93-21817

HEAVY ELEMENTS
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project
[FOA-C-40296-4.5] p 1901 N93-20858

HEAVY IONS
Research on single event resistance evaluation technology: Research by heavy ion irradiation p 1801 N93-20483

HEAVY NUCLEI
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196

HELICOPTERS
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
HELITRAK: A helicopter-tracking receiver system for television outside broadcast links
[BBC-RD-1992/5] p 1883 N93-20573
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Boeing Helicopters airframe finite element modeling p 1782 N93-21313
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: McDonnell-Douglas Helicopter Company achievements p 1782 N93-21314

HELIOTRONS
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
Physics and engineering design studies on large helical device
[NIFS-161] p 2070 N93-20157
Selfconsistent analysis of radial electric field and fast ion losses in CHS Torsatron/Heliotron
[NIFS-178] p 2071 N93-20264
Effects of net toroidal current on Mercier criterion in the Large Helical Device
[NIFS-174] p 2072 N93-20543
Long pulse discharges sustained by second harmonic electron cyclotron heating using a 35 GHz gyrotron in the Advanced Toroidal Facility
[NIFS-183] p 2072 N93-20544
Beta-limiting phenomena in high-aspect-ratio toroidal helical plasmas
[NIFS-188] p 2072 N93-20546
A role of neutral hydrogen in CHS plasmas with reheat and collapse and comparison with JIPP T-IIU tokamak plasmas
[NIFS-186] p 2073 N93-20763
Formation of H-mode like transport barrier in the CHS heliotron/torsatron
[NIFS-198] p 2074 N93-21193
Design study on divertor plates of Large Helical Device (LHD)
[NIFS-190] p 2074 N93-21361
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362

HELIUM
Experimental investigations on converging second-sound shock waves in He 2
[MPIS-103/1991] p 2060 N93-20885
Modification and evaluation of a microwave plasma/atomic emission detector system
[PB92-217959] p 2074 N93-21203

HELIUM ATOMS
High frequency spectroscopy for collision excited helium atom fine structure of 1s4f configuration
[ETN-93-92560] p 2062 N93-20875

HELMET MOUNTED DISPLAYS
Test techniques for evaluating flight displays
[NASA-TM-103947] p 1783 N93-21810

HERMES MANNED SPACEPLANE
Structures and materials technologies for hypersonic vehicles: Lessons from Hermes experience
[REPT-921-430-108] p 1824 N93-21042

HERMETIC SEALS
Development and testing of hermetic, laser-ignited pyrotechnic and explosive components p 1865 N93-20149
Microelectronics packaging automation
[DE93-004822] p 1894 N93-21725

HETEROGENEITY
Microgravity combustion of dust suspensions p 1853 N93-20201
Spatial formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20690

HEURISTIC METHODS
Comparison of artificial neural networks with a conventional heuristic technique for optimization problems
[AD-A259207] p 2046 N93-20552
Parallel axes gear set optimization in two-parameter space p 1917 N93-20637
HEXAGONS
Hexagonal grid drawings
[RUU-CS-92-06] p 2055 N93-21172
HIERARCHIES
Level 3 BLAS for distributed memory concurrent computers
[DE93-003613] p 2029 N93-21730
HIGH ASPECT RATIO
Beta-limiting phenomena in high-aspect-ratio toroidal helical plasmas
[NIFS-188] p 2072 N93-20546
HIGH CURRENT
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
Penning surface-plasma source scaling laws: Theory and practice
[DE93-003814] p 2076 N93-21778
The RFQ LINAC: A high-current compact ion accelerator for explosive detection p 1766 N93-21872
Design of a high current proton accelerator p 1766 N93-21873
Application of radiofrequency superconductivity to accelerators for high-current ion beams
[DE93-002925] p 2066 N93-21979
HIGH DEFINITION TELEVISION
Review of the Year 1991 p 1886 N93-21558
HIGH ENERGY INTERACTIONS
The electromagnetic calorimeter for the STAR experiment at RHIC
[DE93-002780] p 2062 N93-21480
HIGH FREQUENCIES
Observation of ionospheric modification using high power oblique HF transmissions
[AD-A258706] p 1998 N93-20378
High frequency spectroscopy for collision excited helium atom fine structure of 1s4f configuration
[ETN-93-92560] p 2062 N93-20875
HIGH LEVEL LANGUAGES
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL
[AD-A259224] p 2033 N93-20577
Development of semantic metamodels for object orientation
[REPT-91-83] p 2038 N93-21037
Formal verification of a microcoded VIPER microprocessor using HOL
[NASA-CR-4489] p 2044 N93-21043
HIGH POLYMERS
Fiber development in Japan p 1834 N93-21130
HIGH PRESSURE
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
High-pressure droplet combustion studies p 1854 N93-20216
Field evaluation of six protective coatings applied to T-56 turbine blades after 2000 hours of engine use
[ARL-TR-2] p 1786 N93-21316
An impact technique to accelerate flier plates to velocities over 12 km/s
[DE93-002467] p 1820 N93-21485
HIGH RESOLUTION
Airborne full polarization radiometry using the MSFC Advanced Microwave Precipitation Radiometer (AMPR) p 2007 N93-20089
MAMS: High resolution atmospheric/surface properties p 2008 N93-20097
High range resolution radar target identification using the Prony model and hidden Markov models
[AD-A259210] p 1883 N93-20553
Extension of high-resolution schemes for systems to multiple dimensions
[DE93-003734] p 2057 N93-21966
HIGH REYNOLDS NUMBER
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
HIGH SPEED
Ultrafast dynamics of quantum well lasers: Ultimate potential for high speed modulation
[AD-A258653] p 1910 N93-20365
Development of high speed rectifier diodes p 1798 N93-20463
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis. Computer program user's manual
[NASA-CR-187125] p 1784 N93-20583
HIGH STRENGTH ALLOYS
Advanced industrial materials. An overview p 1845 N93-20623
HIGH STRENGTH STEELS
Prediction of fracture initiation in surface flaws p 1935 N93-20678
HIGH TEMPERATURE
High temperature substrate mount for chemical vapor deposition of diamond
[AD-D015563] p 1858 N93-20122
Advanced ceramic component development for high temperature indirect gas-fired heating systems
[PB93-127033] p 1862 N93-21817
HIGH TEMPERATURE AIR
Adiabatic radiant hot air burner
[PB93-114486] p 1987 N93-21220
HIGH TEMPERATURE ENVIRONMENTS
Principles of gas phase processing of ceramics during combustion p 1862 N93-20188
The overall response of composite materials undergoing large deformations
[AD-A259278] p 1832 N93-20606
High-temperature flexure fixture for advanced ceramics
[PB92-222959] p 1860 N93-21030
Advanced lightweight ceramic candle filter module
[DE93-000211] p 1860 N93-21252
HIGH TEMPERATURE GASES
Fundamental processes in partially ionized plasmas
[AD-A259272] p 2072 N93-20600
Gasifiers optimized for fuel cell applications
[DE93-003486] p 1988 N93-21781
HIGH TEMPERATURE LUBRICANTS
Non-Newtonian temperature and pressure effects of a powder lubricant slurry in a rotating hydrostatic step bearing
[AD-A259325] p 1916 N93-21832
HIGH TEMPERATURE RESEARCH
Elevated temperature crack growth
[NASA-CR-189191] p 1920 N93-19992
The high temperature materials laboratory: A research and user facility at the Oak Ridge National Laboratory
[DE93-003592] p 1953 N93-21994
HIGH TEMPERATURE SUPERCONDUCTORS
Processing, fabrication, and demonstration of HTS integrated microwave circuits
[AD-A259441] p 1888 N93-20125
Advanced UHV thin-film deposition facility for research in superconductivity and superconducting electronics
[AD-A259089] p 1889 N93-20395
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 8: Aerothermodynamics Automation and Robotics (A/R) systems sensors, high-temperature superconductivity
[NASA-TM-108655] p 2085 N93-20775
Oxygen configurations and their effect on charge transfer in YBa2Cu3O(z)
[DE93-002543] p 2081 N93-21489
High temperature superconducting bearings for mechanical coolers
[AD-A259316] p 1916 N93-21699
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres
[DE93-002999] p 2082 N93-21757
Magnetically insulated ion diodes for synthesis of advanced materials
[DE93-003747] p 2076 N93-21776
HIGH TEMPERATURE TESTS
High-temperature flexure fixture for advanced ceramics
[PB92-222959] p 1860 N93-21030
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335
Evaluation of a Schatz heat battery on a flexible-fueled vehicle. Phase 2
[PB92-204585] p 1893 N93-21377
Creep Laboratory manual
[NPL-DMM(A)-37] p 1951 N93-21565
HIGH VOLTAGES
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
HILBERT SPACE
Well-posedness and stabilizability of a viscoelastic equation in energy space
[PB93-111920] p 2056 N93-21474
HINGES
Experimental verification of the theory of plastic moment capacity of an inclined yield line under axial force
[PB93-118792] p 1952 N93-21798
HISTORIES
History of geodesy p 1975 N93-20997
National Oceanographic Data Center inventory of physical oceanographic profiles: Global distributions by year for all countries
[PB93-116531] p 2019 N93-21476
The discovery of the tau lepton
[DE93-004013] p 2063 N93-21718
HOLE DISTRIBUTION (ELECTRONICS)
Oxygen configurations and their effect on charge transfer in YBa2Cu3O(z)
[DE93-002543] p 2081 N93-21489
HOLE GEOMETRY (MECHANICS)
Main crack-microvoid interaction. The antiplane problem p 1937 N93-20684
HOLES (MECHANICS)
Two-D to three-D global/local finite element analysis of symmetric finite composite laminates with holes p 1930 N93-20645
The aerodynamic performance of laser drilled sheets
[AERO-REPT-9204] p 1761 N93-20806
HOLMIUM ISOTOPES
A high efficiency CW holmium-doped fluorozirconate fibre laser at 1.19 micrometers
[MBB-Z-0414-91-PUB] p 1911 N93-20843
HOLOGRAPHIC INTERFEROMETRY
A study of TRIGLYCINE SULFATE (TGS) crystals from the International Microgravity Laboratory Mission (IML-1)
[NASA-CR-191956] p 2078 N93-20127
The holographic interferometry: An industrial tool
[REPT-921-430-110] p 1906 N93-20932
HOLOGRAPHY
Noncontact nondestructive tests
[ETN-93-93060] p 1919 N93-20929
Gravitational synchrotron radiation and gravitrons by lights
[PREPRINT-821] p 1999 N93-20951
HOMODYNE RECEPTION
Mountain top measurements of beta(9.2 microns) p 2009 N93-20099
HOMOGENEITY
On homogenization method and large deformations p 1845 N93-20634
HOMOGENEOUS TURBULENCE
Multiresolution feature analysis and wavelet decomposition of atmospheric flows
[AD-A259420] p 1996 N93-20003
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence
[NASA-CR-189640] p 1899 N93-20253
HONEYCOMB STRUCTURES
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517
HORIZONTAL FLIGHT
Fundamentals of adaptive anticipation techniques for the detection of threatening air traffic conflicts: Investigation of the horizontal proximity situation in the case of expected heading changes
[DLR-MITT-91-21] p 1779 N93-21004
HORIZONTAL TAIL SURFACES
Apparatus and method for improving spin recovery on aircraft
[NASA-CASE-LAR-14747-1] p 1786 N93-20039
HOT CORROSION
Advanced turbine design for coal-fueled engines
[DE93-000224] p 1915 N93-21254
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H
[DE93-004064] p 1876 N93-21999
HOT ELECTRONS
Transition to H-mode by energetic electrons
[NIFS-158] p 2070 N93-20156
HOT PRESSING
Some factors influencing the fatigue properties of boron strengthened aluminum based composite materials p 1924 N93-20355
HOT-FILM ANEMOMETERS
Drop sizing with thermal anemometry: A review
[DLR-MITT-91-18] p 1906 N93-21039
HOT-WIRE ANEMOMETERS
Drop sizing with thermal anemometry: A review
[DLR-MITT-91-18] p 1906 N93-21039
HUBBLE SPACE TELESCOPE
NASA Center update: Goddard Space Flight Center p 1983 N93-20491
Marshall Space Flight Center battery activity p 1983 N93-20494
Charge retention test experiences on Hubble Space Telescope nickel-hydrogen battery cells p 1984 N93-20504
Hubble Space Telescope nickel hydrogen battery system briefing p 1985 N93-20513
HULLS (STRUCTURES)
Segmented composite cylinder assembly
[AD-D015603] p 1831 N93-20015

HUMAN BEHAVIOR
Instructions and advance training measures for the improvement of human reliability
[MBB-FE-313-S-PUB-0500] p 2025 N93-21402
HUMAN BEINGS
Hurricane experience levels of coastal county populations from Texas to Maine, August 1992
[PB93-105971] p 2013 N93-21228
Environmental health discipline science plan
[NASA-TM-108042] p 2024 N93-21369
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
HUMAN FACTORS ENGINEERING
On the typography of flight-deck documentation
[NASA-CR-177605] p 2087 N93-19970
Design considerations for an astronaut monorail system for large space structures and the structural characterization of its positioning arm
p 1823 N93-20167
Physiological responses to wearing the space shuttle launch and entry suit and the prototype advanced crew escape suit compared to the unsuited condition
[NASA-TP-3297] p 2026 N93-20319
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
Space human factors discipline science plan
[NASA-TM-108023] p 2026 N93-21370
Requirements for an automated human factors, manpower, personnel, and training (HMPT) planning tool
[AD-A258531] p 2026 N93-21753
Sampling explosives on airline passengers
p 1770 N93-21896
HUMAN IMMUNODEFICIENCY VIRUS
Rapid susceptibility testing of mycobacterium avium complex and mycobacterium tuberculosis isolated from AIDS patients
[NASA-CR-192382] p 2023 N93-20736
HUMAN PERFORMANCE
Physiological responses to wearing the space shuttle launch and entry suit and the prototype advanced crew escape suit compared to the unsuited condition
[NASA-TP-3297] p 2026 N93-20319
Comparison of performance on the Shipley Institute of Living Scale, Air Traffic Control Specialist Selection Test, and FAA Academy Screen
[AD-A259249] p 1779 N93-20582
Acquisition and production of skilled behavior in dynamic decision-making tasks
[NASA-CR-192361] p 2025 N93-20908
Requirements for an automated human factors, manpower, personnel, and training (HMPT) planning tool
[AD-A258531] p 2026 N93-21753
Three dimensional x ray systems and image enhancement techniques p 1767 N93-21876
HUMAN TOLERANCES
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
HURRICANES
The Split Window Microwave Radiometer (SWMR) for hurricane wind speed measurement from space
[NASA-CR-192316] p 2002 N93-19987
Hurricane experience levels of coastal county populations from Texas to Maine, August 1992
[PB93-105971] p 2013 N93-21228
A procedure to reduce northward drift of tropical storms in a numerical model
[PB92-226406] p 2013 N93-21290
Diagnostic Report of the National Hurricane Center. October and November 1991, volume 4, number 3
[PB93-126464] p 2014 N93-21478
HYBRID CIRCUITS
Development of high density hybrid IC
p 1798 N93-20469
HYBRID COMPUTERS
Coincident pulse techniques for hybrid electronic optical computer systems
[AD-A258692] p 2028 N93-20375
HYBRID PROPULSION
Research on advanced transportation systems
p 1789 N93-20414
HYDRATES
The sensitivity of seismic responses to gas hydrates
[DE93-000216] p 1999 N93-21253
HYDRATION
Nutrition and hydration status of aircrew members consuming the food packet, survival, general purpose, improved during a simulated survival scenario
[AD-A258744] p 2022 N93-20384
HYDRAULIC CONTROL
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
In-line hydraulic dashpot
[AD-D015528] p 1914 N93-20776
HYDRAULIC EQUIPMENT
Service loading of work attachments of hydraulic excavators p 1924 N93-20351
Computer aided planning of laboratory tests of excavator attachments p 1924 N93-20352
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
In-line hydraulic dashpot
[AD-D015528] p 1914 N93-20776
HYDRAZINES
Spacecraft interaction with ambient and self-generated plasma/neutral environment
[AD-A258647] p 1823 N93-20364
HYDROCARBON COMBUSTION
Studies of droplet burning and extinction
p 1854 N93-20212
HYDROCARBON FUELS
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
HYDROCARBONS
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
HYDRODYNAMIC EQUATIONS
Hypervelocity impact tests and simulations of single Whipple bumper shield concepts at 10 km/s
[DE93-003999] p 1917 N93-21841
HYDRODYNAMICS
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices
p 1865 N93-20150
Precision linear shaped charge severance of graphite-epoxy materials
[SAND-92-0610C] p 1865 N93-20151
A boundary element formulation for thermo-hydrodynamic lubrication problem
p 1918 N93-20704
Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields
p 1955 N93-21580
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
HYDROGEN
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles
[AD-A258592] p 1897 N93-19965
Surface pi bonding and the near-first-order desorption kinetics of hydrogen from Ge(100)2x1
[AD-A258534] p 1845 N93-20051
Competitive pairing and the chemistry of coadsorbed hydrogen and halogens on Ge(100)
[AD-A258538] p 1846 N93-20386
Atomic hydrogen propellants: Historical perspectives and future possibilities
[NASA-TM-106053] p 1829 N93-20614
A role of neutral hydrogen in CHS plasmas with reheat and collapse and comparison with JIPP T-IIU tokamak plasmas
[NIFS-186] p 2073 N93-20763
Bias-annealing experiments for doped a-Si:H layers
[MBB-Z-0316-90-PUB] p 2081 N93-21464
Inverse Raman spectroscopy measurements of line-shift coefficients in hydrogen perturbed by argon
[DE93-003906] p 1852 N93-21840
HYDROGEN ATOMS
Atomic hydrogen propellants: Historical perspectives and future possibilities
[NASA-TM-106053] p 1829 N93-20614
Accurate procedure for calibrating the CAO optical hygrometer
[AP-30] p 1906 N93-20927
HYDROGEN BONDS
Surface pi bonding and the near-first-order desorption kinetics of hydrogen from Ge(100)2x1
[AD-A258534] p 1845 N93-20051
Pairing and clustering of hydrogen on Si(100)2x1: Monte Carlo studies
[AD-A258537] p 1846 N93-20054
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653
HYDROGEN EMBRITTLEMENT
Review of modelling of environment-assisted cracking
[NPL-DMM(A)-44] p 1951 N93-21566
HYDROGEN FUELS
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237
Technical comparison between Hythane, GNG and gasoline fueled vehicles
[DE93-005608] p 1994 N93-21834
HYDROGEN IONS
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
Penning surface-plasma source scaling laws: Theory and practice
[DE93-003814] p 2076 N93-21778
HYDROGEN ISOTOPES
NMR study of triazone compound formation
p 1839 N93-21165
HYDROGEN OXYGEN ENGINES
Advanced expander test bed program
[NASA-CR-191049] p 1828 N93-19991
HYDROGEN PEROXIDE
An electrocatalytic cathode device and a method for making such a cathode
[AD-D015586] p 1890 N93-20396
HYDROGEN PRODUCTION
Material and method for fast generation of hydrogen gas and steam
[AD-D015559] p 1847 N93-20781
HYDROGEN-BASED ENERGY
Phase-change composites TES for nickel-hydrogen batteries p 1987 N93-20524
HYDROGRAPHY
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049
World ocean circulation experiment. WOCE results of an oxygen/salinity comparison cruise on the R/VVernadsky
[PB93-116523] p 2018 N93-21214
HYDROLOGICAL CYCLE
A comparison of intense extratropical cyclone life cycles from diverse geographical locations
p 2011 N93-20278
CLEOPATRA: A step towards GEWEX on the regional scale p 1963 N93-21628
HYDROLOGY
Monitoring wetland hydrology by remote sensing: A case study of the Sudd using infra-red imagery and radar altimetry p 1955 N93-21584
Expanded user's documentation for SHIMS
[PB93-101905] p 2092 N93-21694
HYDROLOGY MODELS
Digital topographic approach to modeling: The distribution of precipitation to mountainous terrain
[PB93-106649] p 2015 N93-21535
Monthly precipitation and runoff data for validation of climate models p 1959 N93-21605
HYDROMECHANICS
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
Wetting of fibers measured by LPR-90 equipment
p 1835 N93-21139
HYDROPHONES
Naval research reviews, volume 44, no. 1, 1992
[PB93-129682] p 2104 N93-21808
Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957
HYDROSTATIC PRESSURE
Flame spread across liquid pools
p 1854 N93-20209
HYDROSTATICS
Nonhydrostatic effects in numerical modeling of mesoscale convective systems and baroclinic waves
p 2007 N93-20090
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present
[PB93-112225] p 2013 N93-21229
HYDROTHERMAL CRYSTAL GROWTH
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990
[PB93-116622] p 2019 N93-21688
HYDROXIDES
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497
HYDROXYL RADICALS
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783
HYGROMETERS
Accurate procedure for calibrating the CAO optical hygrometer
[AP-30] p 1906 N93-20927
HYPERBOLIC DIFFERENTIAL EQUATIONS
Kernel Optimum Nearly-analytical Discretization (KOND) algorithm applied to parabolic and hyperbolic equations
[NIFS-191] p 2033 N93-20548

HYPERCUBE MULTIPROCESSORS
Experiences with the ACPMAPS 50 GFLOP system
[DE93-004418] p 2042 N93-21855
HYPERGEOMETRIC FUNCTIONS
The search for differential equations for orthogonal polynomials by using computers
[REPT-91-55] p 2052 N93-20865
HYPERSONIC BOUNDARY LAYER
Stability and transition of hypersonic boundary layer
p 1763 N93-20687
Total temperature probes for high-temperature hypersonic boundary-layer measurements
[NASA-TM-4407] p 1908 N93-21816
HYPERSONIC FLIGHT
Turbulence modeling for hypersonic flight
[NASA-CR-192288] p 1760 N93-20235
Heat loads as key problem of hypersonic flight
[MBB-FE-202-S-PUB-0486] p 1762 N93-21054
Development of a non-linear simulation for generic hypersonic vehicles - ASUHS1
[NASA-CR-192710] p 1783 N93-22003
HYPERSONIC FLOW
Computational analysis of hypersonic flows past generalized cone-derived waveriders
p 1761 N93-20288
Calculation of hypersonic, viscous, non-equilibrium flows around reentry bodies using a coupled boundary layer/Euler method
[MBB-LME-211-S-PUB-0487] p 1762 N93-21058
An assessment of laser velocimetry in hypersonic flow
[NASA-CR-190895] p 1762 N93-21556
Aerothermodynamic properties of hypersonic flows over radiation-adiabatic surfaces
[DLR-FB-91-42] p 1763 N93-21761
HYPERSONIC NOZZLES
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
HYPERSONIC SPEED
Computational parametric study of sidewall-compression scramjet inlet performance at Mach 10
[NASA-TM-4411] p 1900 N93-20299
Experimental results in aerodynamic stability and control of a TSTO configuration
[MBB-FE-211-S-PUB-0482-A] p 1787 N93-21057
HYPERSONIC VEHICLES
Guidance and flight control law development for hypersonic vehicles
[NASA-CR-192102] p 1786 N93-19960
Rarefied-flow Shuttle aerodynamics model
[NASA-TM-107698] p 1759 N93-19976
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237
Research in robust control for hypersonic vehicles
[NASA-CR-192127] p 1786 N93-20296
Structures and materials technologies for hypersonic vehicles: Lessons from Hermes experience
[REPT-921-430-108] p 1824 N93-21042
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles
[MBB-FE-211-S-PUB-0481] p 1781 N93-21056
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
Development of a non-linear simulation for generic hypersonic vehicles - ASUHS1
[NASA-CR-192710] p 1783 N93-22003
HYPERVELOCITY GUNS
Thermochemical evaluation of proposed electrothermal-chemical propellants
[AD-A259110] p 1866 N93-20538
HYPERVELOCITY IMPACT
Hypervelocity impact tests and simulations of single Whipple bumper shield concepts at 10 km/s
[DE93-003999] p 1917 N93-21841
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006
HYPERVELOCITY LAUNCHERS
An impact technique to accelerate flier plates to velocities over 12 km/s
[DE93-002467] p 1820 N93-21485
HYPOKINESIA
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
HYPOXIA
Properties of aligned YBa2Cu3O(7-delta) superconductor as a function of oxygen deficiency delta
[DE93-001707] p 2082 N93-21750
HYSTERESIS
Analysis of hysteresis in shape memory alloys during thermal cyclic loading p 1858 N93-20694

I

I BEAMS
Fatigue life prediction for 6261-T6 aluminium alloy I-beams with welded cover plates p 1949 N93-21328
ICE
The effects of small ice crystals on the infrared radiative properties of cirrus clouds
[NASA-CR-192181] p 2002 N93-20046
Intelligent and localized weather prediction
[PB93-117992] p 2015 N93-21787
ICE CLOUDS
The effects of small ice crystals on the infrared radiative properties of cirrus clouds
[NASA-CR-192181] p 2002 N93-20046
ICE FORMATION
A documentation of icing-relevant cloud-physical parameters on vertical soundings of stratiform clouds (continuation)
[DLR-MITT-91-19] p 2012 N93-21040
Capacities of the DLR polarization diversity radar for determining icing relevant cloudphysical parameters
[DLR-MITT-91-14] p 2014 N93-21367
ICE MAPPING
Satellite monitoring of giant tabular icebergs
p 1957 N93-21595
Improved use of passive microwave data for sea ice detection p 1957 N93-21597
ERS-1 radar altimetry of ice sheets
p 1959 N93-21606
ICE REPORTING
Remote sensing of Arctic sea ice using the ERS-1 SAR p 1957 N93-21593
Improved use of passive microwave data for sea ice detection p 1957 N93-21597
ERS-1 radar altimetry of ice sheets
p 1959 N93-21606
ICEBERGS
Satellite monitoring of giant tabular icebergs
p 1957 N93-21595
IGNITERS
Role of advanced technology within a broad security approach p 1765 N93-21860
IGNITION
Laser diode ignition characteristics of Zirconium Potassium Perchlorate (ZPP) p 1865 N93-20145
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231
The ignition diffusion concerning contacted and non contacted n(+) emitter interrruptions
[ETN-93-92564] p 1891 N93-20878
Ignition of nitrocellulose in various atmospheres
[AD-A257987] p 1849 N93-21223
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
A k-omega-multivariate beta PDF for supersonic combustion
[NASA-CR-191930] p 1851 N93-21749
IGNITION SYSTEMS
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
Introduction of laser initiation for the 48-inch Advanced Solid Rocket Motor (ASRM) test motors at Marshall Space Flight Center (MSFC) p 1830 N93-20141
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
Proposed system safety design and test requirements for the microlaser ordnance system
p 1864 N93-20144
Development and testing of hermetic, laser-ignited pyrotechnic and explosive components
p 1865 N93-20149
Pyrotechnic modeling for the NSI and pin puller
p 1866 N93-20153
ILLUMINATING
Geometry and photometry in 3D visual recognition
[AD-A259443] p 2066 N93-20126
IMAGE ANALYSIS
Feature mapping in a photogrammetric GIS
[AD-A258595] p 1965 N93-19967
Knitted carbon fiber reinforced thermoplastics: Structural characterization with image analysis
p 1839 N93-21163
The generalized Voronoi diagram for a set of polygons: Algorithms, operation and applications to shape analysis
[ETN-93-92689] p 2056 N93-21392
Geometric approaches of image generation using Voronoi models
[ETN-93-92690] p 2041 N93-21393
Bispectral cloud analysis for the Atlantic-European region using digital Meteosat images
p 1962 N93-21624
Flexible prior models in Bayesian image analysis
[DE93-003728] p 2059 N93-21736
IMAGE CORRELATORS
Compression of color-mapped images
p 1881 N93-20173
IMAGE ENHANCEMENT
Local edge grouping by simple process iteration
[INRIA-RR-1559] p 2043 N93-20866
Three dimensional x ray systems and image enhancement techniques p 1767 N93-21876
Advanced dual energy x ray for explosives detection
p 1767 N93-21881
IMAGE PROCESSING
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles
[AD-A258592] p 1897 N93-19965
Dual difference filtering: A replacement for interpolation and subtraction to detect changes in misregistered signals
[AD-A259440] p 1880 N93-20013
A review of the associated particle imaging technique
[DE93-002238] p 2061 N93-20023
A robust coding scheme for packet video
p 1881 N93-20174
Recursively indexed differential pulse code modulation
p 1881 N93-20175
An image compression technique for use on token ring networks p 1881 N93-20176
A joint source/channel coder design
p 1881 N93-20177
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374
A radiosity approach realistic image synthesis system
[AD-A259082] p 2032 N93-20406
Calibration of the imaging conditions for the retransformation of digitized images obtained from laser light sheets
[DLR-MITT-92-04] p 1910 N93-20745
Local edge grouping by simple process iteration
[INRIA-RR-1559] p 2043 N93-20866
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
Automatic modeling of nonpolyhedral objects by monocular observation
[ETN-93-92678] p 2068 N93-20898
Three dimensional representation and 3D reconstruction using two dimensional sections
[ETN-93-92686] p 2039 N93-21063
Progress in the development of the laser-based R/D test-bed system p 1811 N93-21127
A novel approach to graphics
[AD-A259337] p 2040 N93-21262
Measurement of modulation transfer functions of simulator displays
[AD-A259401] p 1788 N93-21268
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371
Geometric approaches of image generation using Voronoi models
[ETN-93-92690] p 2041 N93-21393
Demonstration of automated proximity and docking technologies p 1814 N93-21423
Changing weather information: Roles of meteorological information through meteorological satellites
p 1979 N93-21545
Preparation of AVHRR GAC data sets for global change studies p 1954 N93-21573
Influence of terrain elevation on vegetation indices derived from NOAA AVHRR and EOS MODIS data
p 1954 N93-21576
Improved use of passive microwave data for sea ice detection p 1957 N93-21597
Use of AVHRR-derived cloudiness and precipitation in operational weather forecasting and in model studies
p 1959 N93-21608
Operational cloud classification with Meteosat data
p 1962 N93-21622
A comparative study of estimation of partial cloud coverage within a pixel: Proposed adaptive least square method with constraints p 1962 N93-21626
SST monitoring of the European seas with AVHRR data p 1963 N93-21629
Flexible prior models in Bayesian image analysis
[DE93-003728] p 2059 N93-21736
Recognition of partially occluded threat objects based on hybrid Hopfield neural network p 1777 N93-21939
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940
IMAGE RECONSTRUCTION
Geometric aspects of visual object recognition
[AD-A259454] p 2046 N93-20239

Compressing subbanded image data with Lempel-Ziv-based coders
[NASA-TM-105998] p 1882 N93-20257
Automatic modeling of nonpolyhedral objects by monocular observation
[ETN-93-92678] p 2068 N93-20898
Numerical modeling and optimization for the reconstruction of a polyhedron from its generalized gaussian image
[ETN-93-92683] p 2039 N93-21060
Three dimensional representation and 3D reconstruction using two dimensional sections
[ETN-93-92686] p 2039 N93-21063
Geometric approaches of image generation using Voronoi models
[ETN-93-92690] p 2041 N93-21393

IMAGE RESOLUTION
Multiresolution feature analysis and wavelet decomposition of atmospheric flows
[AD-A259420] p 1996 N93-20003

IMAGERY
Night vision goggle training: Development and production of six video programs
[AD-A258529] p 2025 N93-20050

IMAGING RADAR
Demonstration of a 532 nm direct detection imaging laser radar using a Digicon receiver
[AD-A259226] p 1883 N93-20578

IMAGING SPECTROMETERS
Radar Ocean Wave Spectrometer (ROWS) preprocessing program (PREROWS2.EXE). User's manual and program description
[NASA-TM-104579] p 2017 N93-20160

IMAGING TECHNIQUES
A review of the associated particle imaging technique
[DE93-002238] p 2061 N93-20023
Atmospheric electricity/meteorology analysis p 2006 N93-20086
ER-2 investigations of lightning and thunderstorms p 2006 N93-20088
Visualization and imaging methods for flames in microgravity p 1853 N93-20193
Robot motion vision by fixation
[AD-A259456] p 2046 N93-20241
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374
Information base procedures for generation of synthetic thermal scenes
[AD-A259202] p 2090 N93-20549
Real image visual display system
[AD-A259125] p 2033 N93-20593
Calibration of the imaging conditions for the retransformation of digitized images obtained from laser light sheets
[DLR-MITT-92-04] p 1910 N93-20745
Optical tracking of charged particle beams
[AD-D015592] p 2061 N93-20802
Data handling in telescience experiments using the Prototype Optical Diagnostic Instrument (PODI)
[NLR-TP-90327-U] p 2090 N93-20917
The acquisition of velocity fields via the automatic analysis of motion, exemplarily demonstrated in a rotating fluid
[MPIS-102/1991] p 1902 N93-21023
A new deconvolution method for the Doppler cartography of cool star surfaces and its use on AB Doradus
[MPE-236] p 2095 N93-21025
Towards autonomous motion vision
[AD-A259339] p 2068 N93-21263
Qualitative and quantitative diagnosis of cloud images for use in weather forecast p 1962 N93-21623
Bispectral cloud analysis for the Atlantic-European region using digital Meteosat images p 1962 N93-21624
Planetary astronomy research
[NASA-CR-192134] p 2099 N93-21643
Associated particle imaging p 1766 N93-21871
New x ray technology for the detection of explosives p 1767 N93-21880
Advanced dual energy x ray for explosives detection p 1767 N93-21881
Three-dimensional x ray imaging for the detection of contraband p 1768 N93-21882
The evolution of Computed Tomography (CT) as an explosives detection modality p 1768 N93-21883
Fusion of the nuclear and different x ray technologies for explosives detection p 1768 N93-21885
Explosive detection for checked luggage by DETEX, a combined x ray and positron-tomograph system p 1768 N93-21886
Explosive detection using microwave imaging p 1771 N93-21902
Computer simulations and performance predictions for explosive detection systems p 1777 N93-21938
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments
[DE93-002897] p 1912 N93-21955

IMIDES
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567

IMPACT
System for determining the angle of impact of an object on a structure
[NASA-CASE-LAR-14817-1] p 1906 N93-20569

IMPACT DAMAGE
Nondestructive evaluation of composites using infrared imaging
[AD-A259412] p 1831 N93-20123
System for determining the angle of impact of an object on a structure
[NASA-CASE-LAR-14817-1] p 1906 N93-20569
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test
[MBB-FE-221-S-PUB-0483] p 1840 N93-21462
GARTEUR damage mechanics for composite materials: Analytical/experimental research on delaminations p 1841 N93-21513
Mode 2 damage development in carbon fibre reinforced plastics p 1842 N93-21523
Barely visible damage threshold in a BMI p 1843 N93-21524
Repairing delaminations with low viscosity epoxy resins p 1844 N93-21532
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006

IMPACT LOADS
Influence of reinforcing fibers on the capacity for resistance to impact load, of composite materials
[MBB-FE-202-S-PUB-0496] p 1834 N93-21055
A comparison of force reconstruction methods for a lumped mass beam
[DE93-002461] p 1951 N93-21484

IMPACT RESISTANCE
Influence of reinforcing fibers on the capacity for resistance to impact load, of composite materials
[MBB-FE-202-S-PUB-0496] p 1834 N93-21055
Barely visible damage threshold in a BMI p 1843 N93-21524

IMPACT TESTS
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices p 1865 N93-20150
Compression-after-impact behavior of ARALL(trade name)-1 laminates
[AD-A259203] p 1832 N93-20550
NIST impact test facility
[PB92-226315] p 1788 N93-21467
An impact technique to accelerate flier plates to velocities over 12 km/s
[DE93-002467] p 1820 N93-21485
Hypervelocity impact tests and simulations of single Whipple bumper shield concepts at 10 km/s
[DE93-003999] p 1917 N93-21841

IMPACTORS
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006

IMPLANTATION
Monte Carlo studies of positron implantation in elemental metallic and multilayer systems
[DE93-003474] p 2065 N93-21991

IMPREGNATING
Production of highly integrated FRP parts in the braiding technology p 1835 N93-21136
Continuous fiber reinforced thermoplastic composites p 1835 N93-21138

IMPURITIES
Defects and impurities in amorphous semiconductors and in liquid electrolytes
[MBB-Z-0386-91-PUB] p 2080 N93-20842
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon
[DE93-003104] p 2080 N93-21240

IN SITU MEASUREMENT
Detection of incipient defects in cables by partial discharge signal analysis
[PB92-222744] p 1919 N93-21199
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652

IN-FLIGHT MONITORING
Nickel-hydrogen CPV battery update p 1986 N93-20518
Load experience variability of fighter aircraft
[NLR-TP-89172-U] p 1781 N93-20742
The Galileo PPS expert monitoring and diagnostic prototype
[NASA-CR-191914] p 1828 N93-21823

INCOHERENT SCATTER RADAR
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760

INCOHERENT SCATTERING
Polarization effects in coherent and incoherent photon scattering: Survey of measurements and theory relevant to radiation transport calculations
[PB93-126092] p 2064 N93-21828

INCOMPRESSIBLE FLOW
A finite-difference multigrid algorithm for the direct numerical simulation of transition and turbulence in incompressible flow p 1898 N93-20168
Some 2D test examples for the ISNaS incompressible code
[REPT-91-44] p 1901 N93-20752
Computation of incompressible viscous flow through turbopump components
[NASA-CR-192296] p 1901 N93-20753

INCOMPRESSIBLE FLUIDS
Axial response and pulse behavior of a cylindrical liquid column. Part 2
[LRT-WE-9-FB-2-1991-PT-2] p 1903 N93-21296

INDEXES (DOCUMENTATION)
USA aviation digest index, 1989, volume 11
[AD-A258673] p 2089 N93-20388
Index to USA aviation digest, 1990
[AD-A258678] p 2089 N93-20389
Index to USA aviation digest, 1991
[AD-A258679] p 2089 N93-20390
Aerospace medicine and biology: A cumulative index to a continuing bibliography (supplement 371)
[NASA-SP-7011(371)] p 2024 N93-20889
Toxic substances registry system: Index of material safety data sheets
[NASA-TM-108582] p 2024 N93-20998
Aeronautical engineering: A continuing bibliography with indexes (supplement 286)
[NASA-SP-7037(286)] p 1759 N93-21026
List of US Army Research Institute research and technical publications, October 1, 1990 to September 30, 1991 with author and subject index
[PB93-108611] p 2103 N93-21381
Databases available in the Research Information Center of the National Institute of Standards and Technology
[PB93-114478] p 2092 N93-21387
Geographic index of environmental articles 1990
[PB93-116184] p 1994 N93-21806
Status of document search and data quality objective efforts
[DE93-003216] p 2092 N93-21959

INDIUM ALLOYS
Ripening of immiscible liquid droplets in microgravity with constrained Marangoni drift p 1810 N93-21122

INDIUM COMPOUNDS
Low loss glass and optical fibers therefrom
[AD-D015567] p 1862 N93-21829

INDIUM PHOSPHIDES
Study and development of ohmic contacts on n and p type indium phosphide by autocatalytic chemical deposition of metals and alloys
[ECL-92-23] p 1856 N93-20062
Defect characterization by means of positron annihilation p 1804 N93-21081

INDONESIAN SPACE PROGRAM
Space program in Indonesia p 1975 N93-21273

INDOOR AIR POLLUTION
Survey of protocols for conducting indoor air quality investigations in large buildings
[PB93-119865] p 2026 N93-21215

INDUCTION MOTORS
Characterization and snubbing of a bidirectional MCT in a resonant ac link converter
[NASA-CR-192230] p 1889 N93-20258

INDUSTRIAL MANAGEMENT
Manufacturing innovations and small business: How flexible manufacturing systems affect tooling and machining enterprises
[PB92-216258] p 2086 N93-21743

INDUSTRIES
The German national industry as a source of logistic support for armed forces facing new requirements
[MBB-UL-0002-91-PUB] p 1877 N93-21463
NASA SBIR abstracts of 1990 phase 1 projects
[NASA-TM-108145] p 2087 N93-21794

INELASTIC SCATTERING
Neutron study of crystal-field transitions in ErPO4
[DE93-004131] p 2081 N93-21719
Multi-jet production rates in deep-inelastic muon-proton scattering
[DE93-004410] p 2065 N93-21854
PFNA technique for the detection of explosives p 1765 N93-21865

Detector selection for nuclear-based explosive detection system p 1766 N93-21869
Neutron-proton bremsstrahlung experiments
[DE93-003737] p 2065 N93-21968
Monte Carlo studies of positron implantation in elemental metallic and multilayer systems
[DE93-003474] p 2065 N93-21991

INEQUALITIES
Least square methods for solving systems of inequalities with application to an assignment problem
[AD-A258682] p 2050 N93-20391

INERTIA
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758

INERTIAL NAVIGATION
SSG 1.77: Utilization of inertial techniques for geodesy and surveying p 1969 N93-20964
SSG 1.105: GPS kinematic positioning methods and applications p 1970 N93-20967
SSG 4.116: Kinematic and dynamic system modelling in geodesy p 1972 N93-20982
Autonomous reconfigurable GPS/INS navigation and pointing system for rendezvous and docking p 1780 N93-21426

INFERENCE
Anytime declarativism
[AD-A258698] p 2032 N93-20376
Fast theorem proving in intuitionistic propositional logic
[CWI-CS-R9157] p 2051 N93-20840
SSG 4.120: Non-linear adjustment p 1973 N93-20986
Maximal Kripke-type semantics for modal and superintuitionistic predicate logics
[ML-92-02] p 2054 N93-21009

INFILTRATION
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977

INFORMATION TRANSFER
Handling and using information systems with new technology
[PNR-90910] p 2090 N93-20734
The 6th Conference Proceedings of the Pacific OCS Region Information Transfer Meeting
[PB93-119600] p 1992 N93-21684

INFRARED ABSORPTION
Interaction of hydrogen and water with diamond (100): Infrared spectroscopy
[AD-A258535] p 1846 N93-20052
Infrared tunable difference frequency laser source
[DE93-005128] p 1912 N93-21709

INFRARED ASTRONOMY
Planetary astronomy research
[NASA-CR-192134] p 2099 N93-21643
Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698

INFRARED DETECTORS
Data analysis for bark and leaf reflectance measurements
[AD-A258598] p 1966 N93-19983

INFRARED IMAGERY
MAMS: High resolution atmospheric/surface properties p 2008 N93-20097
Nondestructive evaluation of composites using infrared imaging
[AD-A259412] p 1831 N93-20123

INFRARED INSPECTION
Infrared imaging of fibre reinforced plastic composites p 1838 N93-21162
Sampling explosives on airline passengers p 1770 N93-21896

INFRARED INSTRUMENTS
IRCCD research p 1790 N93-20417

INFRARED LASERS
Infrared tunable difference frequency laser source
[DE93-005128] p 1912 N93-21709

INFRARED PHOTOGRAPHY
The use of thermal infrared remote sensing for water management: Report of the operational research
[BCRS-91-34] p 1969 N93-20954

INFRARED RADAR
Mountain top measurements of beta(9.2 microns) p 2009 N93-20099
Multi-center Airborne Coherent Atmospheric Wind Sensor (MACAWS) p 1913 N93-20101
CO2 lidar backscatter experiment p 2009 N93-20103

INFRARED RADIATION
The effects of small ice crystals on the infrared radiative properties of cirrus clouds
[NASA-CR-192181] p 2002 N93-20046
Infrared backscatter climatology and MACAWS p 2009 N93-20098
A study of the large-scale infrared emission from a selected dark cloud
[NASA-CR-192263] p 1998 N93-20755
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698

INFRARED RADIOMETERS
Intercomparison of satellite-derived sea surface temperatures p 1964 N93-21636

INFRARED REFLECTION
Vibrational spectroscopic studies of adsorbates on bimetallic surfaces
[AD-A258578] p 1855 N93-19963

INFRARED SIGNATURES
Contamination signatures observed during the CIRRIS-1A mission
[AD-A258596] p 1820 N93-19982

INFRARED SPECTRA
A new software tool for computing Earth's atmospheric transmission of near- and far-infrared radiation
[NASA-TM-103957] p 1996 N93-20066
Infrared tunable difference frequency laser source
[DE93-005128] p 1912 N93-21709

INFRARED SPECTROSCOPY
Interaction of hydrogen and water with diamond (100): Infrared spectroscopy
[AD-A258535] p 1846 N93-20052
Infrared tunable difference frequency laser source
[DE93-005128] p 1912 N93-21709
Fourier-transform infrared spectroscopy applied to explosive vapor detection p 1773 N93-21913

INFRARED TRACKING
Demonstration of a 532 nm direct detection imaging laser radar using a Digicon receiver
[AD-A259226] p 1883 N93-20578

INHABITANTS
Hurricane experience levels of coastal county populations from Texas to Maine, August 1992
[PB93-105971] p 2013 N93-21228

INHOMOGENEITY
Ultrametricity in an inhomogeneous simplest spin glass model
[PREPRINT-819] p 2055 N93-21181

INITIATION
Laser-based firing systems for prompt initiation of secondary explosives p 1864 N93-20143
Representation and readability of logic diagrams and aspects of their automatic generation
[ETN-93-92559] p 1890 N93-20751

INITIATORS
Laser diode initiated detonators for space applications p 1865 N93-20147
INITIATORS (EXPLOSIVES)
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
NASA pyrotechnically actuated systems program p 1863 N93-20133
Development of a NASA standard gas generator p 1863 N93-20135
Small ICBM Laser Firing Unit (LFU) p 1864 N93-20138
INJECTION
Repairing delaminations with low viscosity epoxy resins p 1844 N93-21532
INJECTION LASERS
Injection seeded, diode pumped regenerative ring Nd:YAG amplifier for spaceborne laser ranging technology development
[NASA-CR-192171] p 1910 N93-20298
INJECTION MOLDING
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies
[DE93-002906] p 1919 N93-21956
INJURIES
Upper interior head protection. Volume 1. The development of a research test procedure
[PB93-113769] p 2026 N93-21537
Upper interior head protection. Volume 2: Fleet characterization and countermeasure evaluation
[PB93-113777] p 2027 N93-21795
INNER RADIATION BELT
Improved models of the inner and outer radiation belts
[AD-A258708] p 1998 N93-20379
INPUT/OUTPUT ROUTINES
CTOS course
[NASA-CR-191866] p 2047 N93-21204
INSERTION LOSS
Certification plan for a planar near-field range used for high-performance phased-array testing
[PB92-213305] p 1885 N93-21493
INSPECTION
Tolerancing for function in a CAD/CAM environment
[PAPER-C-1-1] p 2034 N93-20824
Problems of quality inspection and diagnosing in modern manufacturing systems
[PAPER-C-3-2] p 2036 N93-20836
Electron optical defect inspection in x ray lithography masks
[ETN-93-92570] p 1919 N93-20884
Nondestructive inspection of in-service aircraft
[ETN-93-93059] p 1763 N93-20928
Damage detection by Acousto-Ultrasonic Location (AUL) p 1843 N93-21529
Automated connector force testing
[DE93-004634] p 1907 N93-21704
Photons in - photons out: Non-destructive inspection of containers using x ray and gamma ray techniques p 1767 N93-21875
A general protocol for operational testing and evaluation of bulk explosive detection systems p 1769 N93-21888
Explosive detection using microwave imaging p 1771 N93-21902
Consideration of untried magnetic resonance techniques for possible baggage analysis p 1771 N93-21903
Assessing the operational impacts of checked luggage screening p 1777 N93-21936
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943
INSTITUTIONS
ATKIS: The introduction phase at IfAG p 1967 N93-20533
INSTRUCTION SETS (COMPUTERS)
Bond graph based modelling using MACROS: An introduction to the program BAMMS
[MEMT-18] p 2034 N93-20808
INSTRUCTORS
Prologue to Action. Life Sciences Education and Science Literacy
[PB93-107514] p 2021 N93-21230
INSTRUMENT ERRORS
Principles and applications of measurement and uncertainty analysis in research and calibration
[DE93-000034] p 1907 N93-21251
INSTRUMENTS
Field screening for environmental pollutants: Defining user instrumentation needs
[PB93-117885] p 1993 N93-21791
INSULATORS
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119
INTEGRAL CALCULUS
Spatial formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20690
INTEGRAL EQUATIONS
A boundary element formulation for thermo-hydrodynamic lubrication problem p 1918 N93-20704
Well-posedness and stabilizability of a viscoelastic equation in energy space
[PB93-111920] p 2056 N93-21474
INTEGRAL ROCKET RAMJETS
Laser-initiated ordnance for air-to-air missiles p 1864 N93-20139
INTEGRATED CIRCUITS
Analysis and measurement of thermal resistance in a 3-dimensional silicon multichip module populated with assembly test chips
[DE93-000743] p 1888 N93-20029
Processing, fabrication, and demonstration of HTS integrated microwave circuits
[AD-A259441] p 1888 N93-20125
An extended length digital correlator threshold circuit
[AD-D015610] p 1889 N93-20328
Development of radiation resistant HCMOSIC p 1798 N93-20467
Development of high density hybrid IC p 1798 N93-20469
Development of 256 kbit PROM p 1799 N93-20470
Development of 256 kbit SRAM p 1799 N93-20471
Industrial IC evaluation test: 256 kbit EEPROM p 1800 N93-20481
Version and transaction management in OSMagic: An object-oriented database implementation of the Magic VLSI layout design tool
[AD-A259138] p 2033 N93-20574
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL
[AD-A259224] p 2033 N93-20577
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591
GGADS: A library independent layout synthesis system for user adaptive gate array master structures
[ETN-93-92571] p 1892 N93-21021
Microelectronics packaging automation
[DE93-004822] p 1894 N93-21725
Design and characterization of the BVX: An 8-channel CMOS preamplifier-shaper for silicon strips
[DE93-003619] p 1894 N93-21733
Analysis of parametric drift of a MESFET-based GaAs MMIC due to 125 C storage
[DE93-000715] p 1894 N93-21768
Optoelectronics research in the former Soviet Union
[PB93-111516] p 2069 N93-21804
Covalent nitrides for maskless laser writing of microscopic metal lines
[DE93-004105] p 1858 N93-22001
INTEGRATED OPTICS
Smart materials p 1845 N93-20624
INTELLIGENCE TESTS
Comparison of performance on the Shipley Institute of Living Scale, Air Traffic Control Specialist Selection Test, and FAA Academy Screen
[AD-A259249] p 1779 N93-20582
INTELLIGIBILITY
Upside-down meta-interpretation of the model elimination theorem-proving procedure for deduction and abduction
[AD-A259436] p 2046 N93-20012
INTERACTIONAL AERODYNAMICS
Mean flow interactions of a counter-rotating propeller p 1899 N93-20289
INTERCONTINENTAL BALLISTIC MISSILES
Small ICBM Laser Firing Unit (LFU) p 1864 N93-20138
INTERFACES
Reference model for the description of graphic data processing and for the integration of graphic systems with other data processing fields
[ETN-93-93417] p 2039 N93-21066
INTERFACIAL TENSION
Interfacial tension studies of electrified liquid/liquid interfaces: Classical techniques for new data
[AD-A259213] p 1846 N93-20554
Effect of surface active materials on bubble dynamics in two-phase flow
[AD-A259340] p 1902 N93-21264
Liquid oscillations under strong surface tension in a circular cylindrical container
[LRT-WE-9-FB-26-1991] p 1904 N93-21953
INTERFEROMETERS
Portable fiber optic coupled Doppler interferometer system for detonation and shock wave diagnostics
[SAND-92-1359C] p 1865 N93-20148
Explosive component acceptance tester using laser interferometer technology
[SAND-92-0324C] p 1866 N93-20152
SSG 1.79: Optical interferometry and short range distance measurement (EDM) p 1969 N93-20965
Naval research reviews, volume 44, no. 1, 1992
[PB93-129682] p 2104 N93-21808
INTERFEROMETRY
Interferometric JFTOT tube deposit measuring device
[AD-D015599] p 1866 N93-20247
Interferometric optical fiber data link
[AD-D015581] p 2067 N93-20797
INTERGALACTIC MEDIA
Numerical examination of Kelvin-Helmholtz instability with self gravitation and cosmologic expansion: A contribution to the formation of structure in the Universe
[MPE-238] p 2096 N93-20856
INTERGRANULAR CORROSION
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels
[DE93-003005] p 1857 N93-21985
INTERLAMINAR STRESS
Debonding/Delamination of Composites
[AGARD-CP-530] p 1840 N93-21507
Delamination and fatigue of composite materials: A review p 1840 N93-21509
Initiation and prevention of edge delamination with and without residual stresses p 1841 N93-21510
Edge delamination of composite laminates p 1842 N93-21519
INTERMETALLICS
High temperature alloys p 1858 N93-20626
Non-equilibrium structures induced by ion irradiation in Ni4Mo
[DE93-004193] p 2063 N93-21720
The behavior of intermetallic compounds at large plastic strains
[DE93-003820] p 1857 N93-21772
INTERMOLECULAR FORCES
Inverse Raman spectroscopy measurements of line-shift coefficients in hydrogen perturbed by argon
[DE93-003906] p 1852 N93-21840
INTERNAL COMBUSTION ENGINES
Numerical simulation of the internal aerodynamic in the combustion chamber of the reciprocating engines using a finite element method
[ECL-90-014] p 1915 N93-21005
Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development)
[PB92-227891] p 1878 N93-21465
The Natural Gas Vehicle Challenge 1992: Exhaust emissions testing and results
[DE93-002997] p 1917 N93-21974
INTERNAL FRICTION
Attenuation and source studies in Northern Eurasia
[AD-A259323] p 2000 N93-21700
INTERNAL PRESSURE
Reliability study of the NiH2 strain gage p 1908 N93-20515
SRB frustrum 'smiley' cracking phenomenon study
[NASA-CR-192621] p 1829 N93-20912
INTERNAL WAVES
Interfacial wave theory on formation of dendritic structure in binary alloy system p 1810 N93-21121
Observations of turbulence, internal waves, and background flows: An inquiry into the relationships between scales of motion
[AD-A259361] p 2019 N93-21244
INTERNATIONAL COOPERATION
Thirty years together: A chronology of U.S.-Soviet space cooperation
[NASA-CR-185707] p 2102 N93-19975
IAG commission 8 and COSPAR ISSC B2: International Coordination of Space Techniques for Geodesy and Geodynamics (CSTG). Introduction p 1970 N93-20968
German participation in the activities of the CSTG Subcommission on Satellite Laser Ranging (SLRS) p 1971 N93-20971
Space science overview p 1802 N93-21071
Space station user development program: Future prospects p 1802 N93-21072
PARTNERS p 1978 N93-21287
Key problems of global ecology and the International Space Year p 1955 N93-21579
Science and technology in US international affairs
[ISBN-1-881054-00-4] p 2094 N93-21758
Wind and seismic effects. Proceedings of the 24th Joint Meeting of the US-Japan Cooperative Program in Natural Resources Panel on Wind and Seismic Effects
[PB93-120152] p 2001 N93-21801
International environmental research and assessment: Proposals for better organization and decision making
[ISBN-1-881054-01-2] p 2087 N93-21949

INTERNATIONAL GEOSPHERE-BIOSPHERE PROGRAM
Evaluation of the international directory network for location of data sets useful in global vegetation change assessment p 1954 N93-21575
INTERNATIONAL RELATIONS
Activities of the Seibersdorf Research Center
[ETN-93-92597] p 2103 N93-20857
INTERNATIONAL SPACE YEAR
International Space Year in China
p 1975 N93-21272
Key problems of global ecology and the International Space Year p 1955 N93-21579
INTERNATIONAL SUN EARTH EXPLORER 3
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196
INTERPLANETARY MAGNETIC FIELDS
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782
INTERPLANETARY MEDIUM
Solar-geophysical data number 574, June 1992. Part 2: (Comprehensive reports). Data for December 1991 and miscellaneous
[PB92-218767] p 2101 N93-21346
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470
INTERPLANETARY SPACE
Interplanetary Program to Optimize Simulated Trajectories (IPOST). Volume 2: Analytic manual
[NASA-CR-189653-VOL-2-REV] p 1821 N93-20121
Improving the detection of near-Earth asteroids
[AD-A259383] p 2095 N93-21670
INTERPOLATION
The development of the Navy's multivariate optimum interpolation analysis system
[AD-A258569] p 2058 N93-20358
INTERPROCESSOR COMMUNICATION
Explicit probabilities for the symmetric coupled processor
[REPT-91-43] p 2058 N93-20809
Study and development of a multiprocessor interface circuit, volume 1
[ECL-91-11-VOL-1] p 2044 N93-21000
INTERRUPTION
The ignition diffusion concerning contacted and non contacted n(+) emitter interrruptions
[ETN-93-92564] p 1891 N93-20878
INTERSTELLAR CHEMISTRY
Theoretical studies in interstellar cloud chemistry
[NASA-CR-192010] p 2096 N93-20269
INTERSTELLAR MATTER
Theoretical studies in interstellar cloud chemistry
[NASA-CR-192010] p 2096 N93-20269
High resolution HI observations of HII regions. 3: Photodissociation regions and the magnetic field near Orion B
[MPE-PREPRINT-214] p 2098 N93-21951
INTERSTELLAR RADIATION
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196
INTERVALS
Stochastic orderings on partial sums of random variables and on counting measures of random intervals
[INRIA-RR-1422] p 2052 N93-20860
Forcing colorations, intervals and the perfect graph conjecture (an extended abstract)
[RR-867-M] p 2053 N93-20945
INVARIANCE
The linear invariants of the composition of two rotations p 1941 N93-20711
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-810] p 2062 N93-20923
Conformal length of graphs
[ETN-93-93419] p 2054 N93-21068
Local and global properties of curve congruencies in Euclidean three dimensional space
[ETN-93-93411] p 2055 N93-21174
INVENTORIES
Toxic substances registry system: Index of material safety data sheets
[NASA-TM-108582] p 2024 N93-20998
INVERSE KINEMATICS
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Comparison of the efficiency of the various methods for rigid-body displacement analyses
p 1941 N93-20709
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
The linear invariants of the composition of two rotations p 1941 N93-20711
On the formulation of linear homogeneous velocity constraints in mechanical systems p 1941 N93-20712
Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714
Polynomial solution of the direct geometric problem of a parallel spherical manipulator p 1918 N93-20718
Grasp admittance center. A concept
p 1918 N93-20720
INVERSIONS
Identification of delamination by eigenfrequency degradation: An inverse problem p 1843 N93-21526
Attenuation and source studies in Northern Eurasia
[AD-A259323] p 2000 N93-21700
INVISCID FLOW
Shock-dependent, optimum thrust wings in supersonic flow p 1760 N93-20169
On the stability of nonlinear viscous vortices in three-dimensional boundary layers
[NASA-CR-189637] p 1899 N93-20254
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
IODIDES
Photoionization experiments by multistage excitation in the zone of the second ionization threshold of CuI
[ETN-93-92569] p 2062 N93-20683
ION ACCELERATORS
The RFQ LINAC: A high-current compact ion accelerator for explosive detection p 1766 N93-21872
An H(-) ion source for resonant gamma production
p 1766 N93-21874
ION ATOM INTERACTIONS
Differential electron emission in multi-charged ion atom collisions: Systematics for distant and close collisions
[DE93-004324] p 2064 N93-21851
ION BEAMS
Research on single event phenomenon on semiconductor devices p 1801 N93-20485
Survey of nuclear activations for intense proton and deuteron beams
[AD-A259258] p 2061 N93-20604
Magnetically insulated ion diodes for synthesis of advanced materials
[DE93-003747] p 2076 N93-21776
Penning surface-plasma source scaling laws: Theory and practice
[DE93-003814] p 2076 N93-21778
Application of radiofrequency superconductivity to accelerators for high-current ion beams
[DE93-002925] p 2066 N93-21979
ION CURRENTS
Interfacial tension studies of electrified liquid/liquid interfaces: Classical techniques for new data
[AD-A259213] p 1846 N93-20554
Studies of interactive plasma processes in the polar cusp
[NASA-CR-192137] p 1999 N93-21364
ION CYCLOTRON RADIATION
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
Review of Japanese results on heating and current drive
[NIFS-193] p 2071 N93-20294
Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives
p 1774 N93-21921
ION DENSITY (CONCENTRATION)
X ray spectra from Hinotori satellite and suprathermal electrons
[NIFS-197] p 2100 N93-20266
Magnetically insulated ion diodes for synthesis of advanced materials
[DE93-003747] p 2076 N93-21776
ION DISTRIBUTION
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
ION EMISSION
Penning surface-plasma source scaling laws: Theory and practice
[DE93-003814] p 2076 N93-21778
ION ENGINES
Ion source AHKS-30
[DLR-MITT-91-20] p 1860 N93-21041
ION EXCHANGING
Optical waveguides by ion exchange
[AD-D015564] p 2068 N93-21248
ION IMPLANTATION
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
ION IRRADIATION
Non-equilibrium structures induced by ion irradiation in Ni4Mo
[DE93-004193] p 2063 N93-21720
Magnetization and flux pinning in high-Tc cuprates: Irradiated and oxygen deficient materials
[DE93-004169] p 2082 N93-21844
ION MOTION
Cross field ion motion at sawtooth crash
[NIFS-189] p 2072 N93-20547
ION SOURCES
Ion source AHKS-30
[DLR-MITT-91-20] p 1860 N93-21041
Associated particle imaging p 1766 N93-21871
An H(-) ion source for resonant gamma production
p 1766 N93-21874
IONIC COLLISIONS
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems
[DE93-004531] p 2064 N93-21742
Angular distributions of charge exchange collisions at very low energies
[DE93-002338] p 2064 N93-21751
Differential electron emission in multi-charged ion atom collisions: Systematics for distant and close collisions
[DE93-004324] p 2064 N93-21851
IONIC WAVES
Stimulated Brillouin backscattering for nonlinear ionic sound waves in laser plasmas
[ETN-93-93415] p 2074 N93-21208
IONIZATION
X ray spectra from Hinotori satellite and suprathermal electrons
[NIFS-197] p 2100 N93-20266
Modifications to the ionization process to enhance the detection of explosives by API/MS/MS
p 1774 N93-21918
Modification to the ionization process to enhance the detection of explosives by IMS p 1774 N93-21920
Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives
p 1774 N93-21921
IONIZATION CROSS SECTIONS
Differential electron emission in multi-charged ion atom collisions: Systematics for distant and close collisions
[DE93-004324] p 2064 N93-21851
Electron impact ionization of highly charged lithiumlike ions
[DE93-002895] p 2065 N93-21954
IONIZING RADIATION
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193)
[PB92-227073] p 1893 N93-21350
IONOSPHERIC CURRENTS
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758
Comprehensive simulation study on local and global development of auroral arcs and field-aligned potentials
[NIFS-195] p 2073 N93-20764
IONOSPHERIC DISTURBANCES
Observation of ionospheric modification using high power oblique HF transmissions
[AD-A258706] p 1998 N93-20378
IONOSPHERIC PROPAGATION
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760
IONS
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
Ion trapping in dusty plasmas
[MPE-PREPRINT-219] p 2075 N93-21405
Stable clusters in the condensed state and some possibilities for gas phase clusters
[DE93-004446] p 2064 N93-21846
IRIDIUM
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114
IRON
Electron impact ionization of highly charged lithiumlike ions
[DE93-002895] p 2065 N93-21954

IRON ALLOYS
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H
[DE93-004064] p 1876 N93-21999
IRRADIANCE
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292
IRRADIATION
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels
[DE93-003005] p 1857 N93-21985
ISOCHORIC PROCESSES
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653
ISOELECTRONIC SEQUENCE
New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986
ISOMERS
The use of 2D NMR spectroscopy in the analysis of isomeric polyamides p 1839 N93-21166
ISOMORPHISM
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 1
[RR-874-M] p 2053 N93-20873
On a fundamental notion of equivalence in linear systems theory
[MATHS-REPT-A-162] p 2053 N93-20890
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 2
[RR-875-M] p 2056 N93-21395
ISOPARAMETRIC FINITE ELEMENTS
Improving the selection of bolted joint parameters by using results from finite-element analysis
[DE93-002243] p 1951 N93-21774
ISOPYCNIC PROCESSES
Isopycnic systems as models for the behavior of liquids in a microgravity environment p 1805 N93-21089
ISOTHERMAL LAYERS
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
ISOTHERMS
A study of the thermal bar in Lake Ladoga (Russia) using NOAA-AVHRR data p 1964 N93-21635
ISOTOPES
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783
ISOTROPY
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189220] p 1784 N93-20252
ITERATIVE SOLUTION
Recursively indexed differential pulse code modulation p 1881 N93-20175
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
Local edge grouping by simple process iteration
[INRIA-RR-1559] p 2043 N93-20866
Ultimate strength of geometrically imperfect angle columns
[PB93-111771] p 1947 N93-21235
Copper Mountain conference on interative methods, volume 1
[DE93-004993] p 2056 N93-21706
Solution of large, sparse systems of linear equations in massively parallel applications
[DE93-004243] p 2045 N93-21741
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940
IUE
IUE-ULDA access guide no. 3: International Ultraviolet Explorer-Uniform Low Dispersion Archive: Normal galaxies
[ESA-SP-1152] p 2094 N93-20541
IUE-ULDA access guide no. 4A: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume A
[ESA-SP-1153-VOL-A] p 2096 N93-21007
IUE-ULDA access guide no. 4B: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume B
[ESA-SP-1153-VOL-B] p 2097 N93-21015

J

J INTEGRAL
Predicting the failure load of adhesive joints p 1932 N93-20655
JAMMERS
An analytical and experimental investigation of FM-by-noise jamming
[AD-A259124] p 1883 N93-20592
JAMMING
An analytical and experimental investigation of FM-by-noise jamming
[AD-A259124] p 1883 N93-20592
JAPAN
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 26: The relationship between technology policy and scientific and technical information within the US and Japanese aerospace industries
[NASA-TM-108679] p 2088 N93-20111
Physics and engineering design studies on large helical device
[NIFS-161] p 2070 N93-20157
Review of Japanese results on heating and current drive
[NIFS-193] p 2071 N93-20294
Report of the Kakioka Magnetic Observatory, geomagnetism, Kakioka Memambetsu Kanoya, Chichijima, 1991
[JMA-159] p 2000 N93-21746
Wind and seismic effects. Proceedings of the 24th Joint Meeting of the US-Japan Cooperative Program in Natural Resources Panel on Wind and Seismic Effects
[PB93-120152] p 2001 N93-21801
JAPANESE SPACE PROGRAM
Japanese space activities p 1976 N93-21274
JAPANESE SPACECRAFT
Research and development activities of the TsukubaSpace Center
[NASDA-TK-GC0066] p 1789 N93-20410
Research on Earth observing satellite system: Conceptual study of Advanced Earth Observing Satellite-2 (ADEOS-2) p 1790 N93-20415
Research on HOPE p 1791 N93-20423
HOPE information system review p 1791 N93-20425
Research on heat-resistance technology for HOPE p 1791 N93-20426
Research on HOPE flight control technology p 1787 N93-20427
Research on combined HOPE navigation technology p 1792 N93-20428
Research on HOPE communication and data processing equipment p 1792 N93-20429
Research on HOPE actuator power unit p 1792 N93-20430
Research on HOPE heat sink device p 1792 N93-20431
Orbit re-entry experiment vehicle development p 1792 N93-20432
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433
Research and development of K-band intersatellite communication experiment equipment onboard ETS-6 p 1793 N93-20434
Development of satellite borne nickel hydrogen battery experiment equipment for ETS-6 p 1793 N93-20435
Conceptual study of ETS-7 p 1793 N93-20437
Research on rendezvous and docking technology p 1794 N93-20438
Research on docking mechanism system test p 1794 N93-20439
Manufacture of ADEOS borne technical data acquisition equipment p 1796 N93-20451
Research on advanced spacecraft testing technology p 1796 N93-20452
Evaluation and analysis of long term satellite operation data p 1796 N93-20454
Operational support for ETS-5 secondary operational phase p 1796 N93-20455
Outline of SCM data processing system onboard ETS-5 p 1802 N93-20489
Japanese space activities p 1976 N93-21274
Report on microgravity experiment by TR-1A rocket
[NASDA-EG-920021] p 1875 N93-21950
JET AIRCRAFT
Calculation of noise emission caused by jet aircraft during takeoff, approach and horizontal flyover
[DLR-MITT-91-15] p 2061 N93-21368
JET AIRCRAFT NOISE
Numerical simulation of a high Mach number jet flow
[NASA-TM-105985] p 1898 N93-20057
JET CONTROL
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210
Robust on-off pulse control of flexible space vehicles
[NASA-CR-192174] p 1824 N93-21644
JET ENGINE FUELS
Interferometric JFTOT tube deposit measuring device
[AD-D015599] p 1866 N93-20247
JET ENGINES
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210
JET FLOW
Numerical simulation of a high Mach number jet flow
[NASA-TM-105985] p 1898 N93-20057
Structure and soot properties of non-buoyant laminar round-jet diffusion flames p 1853 N93-20190
Selected microgravity combustion diagnostic techniques p 1853 N93-20194
Study of multi jet burner for gases
[INPE-5416-TDI/480] p 1846 N93-20320
Experiments on the impingement of an underexpanded jet on a flat plate p 1937 N93-20685
An experimental investigation of a round turbulent jet in a cross-flow p 1905 N93-20689
Diffusion and reaction layer structure and NOx reduction in turbulent gas flames
[PB93-114353] p 1850 N93-21456
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions
[PB92-238690] p 1878 N93-21650
JFET
Monolithic preamplifier employing epitaxial N-channel JFETs
[DE93-002951] p 1894 N93-21980
JIGS
Research on space coolers p 1794 N93-20442
JOINTS (JUNCTIONS)
Method and apparatus for preloading a joint by remotely operable means
[NASA-CASE-MSC-21940-1] p 1914 N93-20120
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Structural shape optimization of robotic links p 1918 N93-20717
Numerical finite element analysis of damage using Monte Carlo techniques p 1842 N93-21522
Robot friendly probe and socket assembly
[NASA-CASE-MSC-22028-1] p 1917 N93-22007
JORDAN FORM
Calculation of the Jordan form of a matrix with rational coefficients (using the formal computation system Axiom)
[RR-882-M] p 2051 N93-20782
JOURNAL BEARINGS
High temperature superconducting bearings for mechanical coolers
[AD-A259316] p 1916 N93-21699
JUPITER ATMOSPHERE
Laboratory and theoretical models of planetary-scale instabilities and waves p 2004 N93-20074
Studies of interactive plasma processes in the polar cusp
[NASA-CR-192137] p 1999 N93-21364

K

K-EPSILON TURBULENCE MODEL
Study of a turbulent boundary layer modified by the insertion of a Large Eddy Break Up (LEBU) device
[ECL-92-11] p 1898 N93-20061
Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753
KALMAN FILTERS
Failure identification using multiple model adaptive estimation for the LAMBDA flight vehicle
[AD-A259137] p 1787 N93-20596
KAONS
On a possible non-Lorentzian energy-dependence of the K neutral(sub S)
[PREPRINT-807] p 2053 N93-20903
KAPTON (TRADEMARK)
Atomic oxygen resistant SiOx coated Kapton for Space Station Freedom, and alternate coatings p 1849 N93-20821
KELVIN-HELMHOLTZ INSTABILITY
Numerical examination of Kelvin-Helmholtz instability with self gravitation and cosmologic expansion: A contribution to the formation of structure in the Universe
[MPE-238] p 2096 N93-20856
KERNEL FUNCTIONS
Well-posedness and stabilizability of a viscoelastic equation in energy space
[PB93-111920] p 2056 N93-21474

KEVLAR (TRADEMARK)
Contribution to the study of composite material behavior in space environment
[REPT-921-430-112] p 1833 N93-20869
KINEMATIC EQUATIONS
The linear invariants of the composition of two rotations p 1941 N93-20711
Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714
KINEMATICS
Nonlinear probabilistic finite element models of laminated composite shells
[NASA-CR-191069] p 1833 N93-20919
SSG 1.105: GPS kinematic positioning methods and applications p 1970 N93-20967
SSG 4.116: Kinematic and dynamic system modelling in geodesy p 1972 N93-20982
KINETIC ENERGY
A comparison of intense extratropical cyclone life cycles from diverse geographical locations p 2011 N93-20278
KINETIC EQUATIONS
Analysis of hysteresis in shape memory alloys during thermal cyclic loading p 1858 N93-20694
KINETIC THEORY
Kinetic theory of toroidicity and ellipticity-induced Alfven eigenmodes
[DE93-003634] p 2077 N93-21995
KLYSTRONS
High power microwave generator
[AD-D015560] p 1891 N93-20783
KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
Research in text processing
[AD-A259434] p 2087 N93-20010
FASTUS: A system for extracting information from natural-language text
[AD-A259435] p 2087 N93-20011
Building a knowledge base for the knowledge worker system
[AD-A258544] p 2089 N93-20370
Intelligent processing equipment within the Environmental Protection Agency
[PB92-217330] p 1989 N93-21011
Knowledge-based consulting system for dynamic network security control
[ETN-93-93420] p 2028 N93-21069
KNOWLEDGE REPRESENTATION
Probabilistic student modeling with knowledge space theory
[AD-A258622] p 2045 N93-19997
On semantics: The case of knowledge graphs
[MEMO-1028] p 2091 N93-20955
Modelling knowledge in electronic study books
[MEMO-1029] p 2091 N93-21032
KNUDSEN GAGES
Development of a Knudsen cell for molecular beam epitaxial growth of GaAs films in the microgravity environment p 1804 N93-21082

L

LABORATORIES
Touchstone for success: The Materials and Processes laboratories, ESTEC
[ESA-BR-52-REV] p 1830 N93-20926
Transient dynamics capability at Sandia National Laboratories
[DE93-002285] p 2041 N93-21549
Creep Laboratory manual
[NPL-DMM(A)-37] p 1951 N93-21565
The high temperature materials laboratory: A research and user facility at the Oak Ridge National Laboratory
[DE93-003592] p 1953 N93-21994
LABORATORY EQUIPMENT
Advanced UHV thin-film deposition facility for research in superconductivity and superconducting electronics
[AD-A259089] p 1889 N93-20395
Design of a laboratory computer interface
[AD-A259126] p 2028 N93-20594
Touchstone for success: The Materials and Processes laboratories, ESTEC
[ESA-BR-52-REV] p 1830 N93-20926
International and commercial sub-orbital program for microgravity research p 1807 N93-21104
Progress in the development of the laser-based R/D test-bed system p 1811 N93-21127
LAGEOS (SATELLITE)
German participation in the activities of the CSTG Subcommission on Satellite Laser Ranging (SLRS) p 1971 N93-20971
SSG 5.123: Definition and realization of terrestrial reference systems p 1974 N93-20994
LAGRANGE MULTIPLIERS
The linear program approach in Markov decision processes revisited
[INRIA-RR-1569] p 2058 N93-20868
LAKE ICE
An airborne millimeter-wave FM-CW radar for thickness profiling of freshwater ice
[AD-A259368] p 1886 N93-21669
LAKES
Lake remote sensing for global climate research p 1958 N93-21602
A study of the thermal bar in Lake Ladoga (Russia) using NOAA-AVHRR data p 1964 N93-21635
Use of ecoregions in biological monitoring
[PB93-106730] p 1992 N93-21656
LAMB WAVES
Experiment and modeling of air-coupled ultrasonic excitation of plate waves p 1936 N93-20679
Nondestructive evaluation of surface-breaking cracks in composite plates p 1936 N93-20680
LAMBERT SURFACE
Implementation and evaluation of a three-dimensional photometric sampler
[AD-A258636] p 1905 N93-20361
LAMELLA
The effect of lamination angle on polymer retention
[DE93-004304] p 1861 N93-21722
LAMINAR BOUNDARY LAYER
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
LAMINAR FLOW
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
Structure and soot properties of non-buoyant laminar round-jet diffusion flames p 1853 N93-20190
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions p 1853 N93-20192
Studies of premixed laminar and turbulent flames at microgravity p 1853 N93-20196
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
The effects of gravity on wrinkled laminar flames p 1853 N93-20200
The structure of particle cloud premixed flames p 1853 N93-20202
Stability and transition of hypersonic boundary layer p 1763 N93-20687
On the structure of gaseous confined laminar diffusion flames: Numerical investigation
[NASA-TM-106039] p 1902 N93-21198
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977
LAMINATES
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates
[NASA-TM-106016] p 1832 N93-20317
Solution of a one-dimensional ablation model
[INPE-5357-TDI/464] p 1900 N93-20321
Adherence and reactivity of graphite base multimaterials
[ECL-92-04] p 1859 N93-20542
Compression-after-impact behavior of ARALL(trade name)-1 laminates
[AD-A259203] p 1832 N93-20550
Reliability of failure envelopes for composite materials p 1929 N93-20642
Two-D to three-D global/local finite element analysis of symmetric finite composite laminates with holes p 1930 N93-20645
On the vibration of thermally stressed laminated composite cylindrical shells p 1930 N93-20648
Delamination buckling in circular plates p 1931 N93-20653
Buckling of clamped angle-ply laminated plates under inplane loads p 1931 N93-20654
Semi-numerical approach to the buckling of composite panel p 1935 N93-20676
Nonlinear probabilistic finite element models of laminated composite shells
[NASA-CR-191069] p 1833 N93-20919
Prediction of damage of laminated composite structures under quasi-static and cyclic loadings
[ESA-TT-1282] p 1839 N93-21289
The behavior of elastic anisotropic laminated composite flat structures subjected to deterministic and random loadings
[NASA-CR-192197] p 1950 N93-21366
Debonding/Delamination of Composites
[AGARD-CP-530] p 1840 N93-21507
Free edge delamination prevention in composite laminates p 1840 N93-21508
Initiation and prevention of edge delamination with and without residual stresses p 1841 N93-21510
Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 1841 N93-21511
Predicting failure by debonding/delamination p 1841 N93-21512
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517
Edge delamination of composite laminates p 1842 N93-21519
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
Identification of delamination by eigenfrequency degradation: An inverse problem p 1843 N93-21526
Investigation of the bond strength of a discrete skin-stiffener interface p 1843 N93-21527
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 1843 N93-21528
Damage detection by Acousto-Ultrasonic Location (AUL) p 1843 N93-21529
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 1844 N93-21534
Vacuum multilayer lamination of printed wiring boards
[DE93-004912] p 1894 N93-21727
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789
LAND ICE
ERS-1 radar altimetry of ice sheets p 1959 N93-21606
LAND MANAGEMENT
Space research and remote sensing programs in Bangladesh p 1975 N93-21271
International Space Year in China p 1975 N93-21272
LAND MOBILE SATELLITE SERVICE
Research in LMSS propagation
[NASA-CR-191915] p 1885 N93-21400
LAND USE
Use of features derived from class proportions in a pixel for the multispectral classification of remote sensing images
[INPE-5306-TDI/456] p 1966 N93-20322
Multispectral and multitemporal aerial photography as an aid for the evaluation of land in regions of the Limagne Rift Valley (France)
[BCRS-91-29] p 1968 N93-20953
The distribution of green areas in urban areas: Cartography and comparative analysis of LANDSAT TM and HRV/SPOT data
[INPE-5262-PRE/1686] p 1979 N93-21560
Vegetation cover mapping over France using NOAA-11/AVHRR p 1955 N93-21582
Deforestation in African dry lands: Assessment of changes in woody vegetation in semi arid Sudan p 1956 N93-21585
Advanced very high resolution radiometer data to update forest area change for midsouth states
[PB93-121416] p 1979 N93-21685
LANDSAT SATELLITES
Deforestation in African dry lands: Assessment of changes in woody vegetation in semi arid Sudan p 1956 N93-21585
LANGUAGE PROGRAMMING
A canonical calculus of residuals
[INRIA-RR-1542] p 2052 N93-20861
The origins of lambda-calculus and term rewriting systems
[INRIA-RR-1543] p 2053 N93-20870
LANTHANUM COMPOUNDS
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362
Low loss glass and optical fibers therefrom
[AD-D015567] p 1862 N93-21829
LAP JOINTS
Viscoelastic analysis of bonded connections p 1929 N93-20638
Peak stresses in adhesive step lap joints with voids p 1932 N93-20656
Numerical finite element analysis of damage using Monte Carlo techniques p 1842 N93-21522
LARGE SCALE INTEGRATION
Development of 10 k gate-gate array p 1799 N93-20472

LARGE SPACE STRUCTURES
Design considerations for an astronaut monorail system for large space structures and the structural characterization of its positioning arm
p 1823 N93-20167
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Research on large structure assembly technology: Research on deployable assembly structure
p 1795 N93-20444
Multimodal optimization of vibrating space frames
p 1931 N93-20652
A method for modeling contact dynamics for automated capture mechanisms p 1816 N93-21434
LASER ABLATION
Magnetically insulated ion diodes for synthesis of advanced materials
[DE93-003747] p 2076 N93-21776
Detection of explosives material on single microparticles p 1774 N93-21916
LASER ANEMOMETERS
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles
[AD-A258592] p 1897 N93-19965
LASER APPLICATIONS
International Symposium on Applications of Laser Techniques to Fluid Mechanics and Workshop on Computers in Flow Measurements No. 6
[AD-A258510] p 1897 N93-20049
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
NASA pyrotechnically actuated systems program
p 1863 N93-20133
Small ICBM Laser Firing Unit (LFU)
p 1864 N93-20138
Laser-initiated ordnance for air-to-air missiles
p 1864 N93-20139
Laser diode ordnance design p 1864 N93-20140
Introduction of laser initiation for the 48-inch Advanced Solid Rocket Motor (ASRM) test motors at Marshall Space Flight Center (MSFC) p 1830 N93-20141
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
Development and testing of hermetic, laser-ignited pyrotechnic and explosive components
p 1865 N93-20149
Explosive component acceptance tester using laser interferometer technology
[SAND-92-0324C] p 1866 N93-20152
The semiconductor laser applied to fibre optic sensors
p 1910 N93-20286
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374
Research on intersatellite laser communication
p 1790 N93-20419
Laser scribing system for amorphous silicon solar cells
[AD-A259287] p 1910 N93-20608
Calibration of the imaging conditions for the retransformation of digitized images obtained from laser light sheets
[DLR-MITT-92-04] p 1910 N93-20745
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
Autonomous docking ground demonstration
p 1816 N93-21430
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770
Ultrafast laser generation of hard x rays
p 1912 N93-21952
Covalent nitrides for maskless laser writing of microscopic metal lines
[DE93-004105] p 1858 N93-22001
LASER ARRAYS
Transverse effects in a model of semiconductor laser arrays p 1909 N93-20284
LASER BEAMS
Examination of laser conditioning using atomic force microscopy
[DE93-001328] p 1909 N93-20020
Method and apparatus for generating Fraunhofer line laser source using stimulated Raman scattering
[AD-D015579] p 1910 N93-20770
Frequency conversion of a CO2 laser with ZnGeP2
[PB92-222785] p 1911 N93-21016
The improvement of fatigue life of aluminum alloy structure by laser radiation p 1950 N93-21336
LASER DAMAGE
Laser damage in thin film optical coatings
[AD-A259425] p 1909 N93-20005
Examination of laser conditioning using atomic force microscopy
[DE93-001328] p 1909 N93-20020
Laser-based firing systems for prompt initiation of secondary explosives p 1864 N93-20143
Advances in laser diodes for pyrotechnic applications
p 1865 N93-20146
Assessment of single-pulse laser damage to structural materials for spacecraft
[AD-A259387] p 1911 N93-21267
LASER DOPPLER VELOCIMETERS
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles
[AD-A258592] p 1897 N93-19965
An assessment of laser velocimetry in hypersonic flow
[NASA-CR-190895] p 1762 N93-21556
LASER DRILLING
The aerodynamic performance of laser drilled sheets
[AERO-REPT-9204] p 1761 N93-20806
LASER INDUCED FLUORESCENCE
Injection of drag-reducing additives into turbulent water flows. Investigation of laser-induced fluorescence for concentration measurements
[AD-A259459] p 1898 N93-20243
IDA gamma ray laser: Investigation of the feasibility of developing a laser using nuclear transitions
[AD-A259476] p 1909 N93-20246
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
LASER INTERFEROMETRY
Portable fiber optic coupled Doppler interferometer system for detonation and shock wave diagnostics
[SAND-92-1359C] p 1865 N93-20148
LASER OUTPUTS
Computer modeling of pulsed CO2 lasers for lidar applications p 1913 N93-20106
Method and apparatus for generating Fraunhofer line laser source using stimulated Raman scattering
[AD-D015579] p 1910 N93-20770
Environmental assessment for the brilliant pebbles tether test at the Nevada test site
[DE93-003869] p 1952 N93-21839
LASER PLASMAS
Stimulated Brillouin backscattering for nonlinear ionic sound waves in laser plasmas
[ETN-93-93415] p 2074 N93-21208
LASER POWER BEAMING
Space transfer with ground-based laser/electric propulsion
[NASA-TM-106060] p 1829 N93-20615
LASER PUMPING
Microstructured diode lasers and pumped solid state lasers
[MBB-Z-0369-91-PUB] p 1910 N93-20804
A high efficiency CW holmium-doped fluorozirconate fibre laser at 1.19 micrometers
[MBB-Z-0414-91-PUB] p 1911 N93-20843
Efficient CW operation of a 2.75 micrometer Er(3+)-doped fluorozirconate fibre laser pumped at 650 and 795 nm
[MBB-Z-0384-91-PUB] p 1911 N93-20916
LASER RANGE FINDERS
Injection seeded, diode pumped regenerative ring Nd:YAG amplifier for spaceborne laser ranging technology development
[NASA-CR-192171] p 1910 N93-20298
German participation in the activities of the CSTG Subcommission on Satellite Laser Ranging (SLRS)
p 1971 N93-20971
Commission 7: Recent crustal movements
p 1973 N93-20988
NASA space geodesy program: Catalogue of site information
[NASA-TM-4482] p 1999 N93-21374
A comparison of laser-based ranging systems for AR/C p 1814 N93-21422
Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445
LASER RANGER/TRACKER
International Earth Rotation Service
p 1974 N93-20990
A comparison of laser-based ranging systems for AR/C p 1814 N93-21422
LASER SPECTROSCOPY
Perturbative nearly-degenerate four-wave mixing lineshapes in gases
[DE93-002673] p 1850 N93-21490
LASER TARGETS
Assessment of single-pulse laser damage to structural materials for spacecraft
[AD-A259387] p 1911 N93-21267
Approach range and velocity determination using laser sensors and retroreflector targets p 1812 N93-21410
A comparison of laser-based ranging systems for AR/C p 1814 N93-21422
Magnetically insulated ion diodes for synthesis of advanced materials
[DE93-003747] p 2076 N93-21776
LASER WELDING
Laser welding of plastics under low and high gravity conditions p 1811 N93-21125
LASERS
International Symposium on Applications of Laser Techniques to Fluid Mechanics and Workshop on Computers in Flow Measurements No. 6
[AD-A258510] p 1897 N93-20049
Laser diagnostics for microgravity droplet studies
p 1853 N93-20195
Ultrafast dynamics of quantum well lasers: Ultimate potential for high speed modulation
[AD-A258653] p 1910 N93-20365
Progress in the development of the laser-based R/D test-bed system p 1811 N93-21127
LASING
Simultaneous operation of a free-electron laser on two harmonically related wavelengths
[DE93-003745] p 1912 N93-21969
LATCHES
Hatch securing mechanism
[AD-D015613] p 1914 N93-20399
Contact dynamics testing of automated three-point docking mechanism p 1812 N93-21411
LATERAL STABILITY
Prebuckling deflections and lateral buckling: Applications
[PB92-225366] p 1946 N93-21017
Prebuckling deflections and lateral buckling: Theory
[PB92-225382] p 1946 N93-21018
Energy equation for beam lateral buckling
[PB92-225390] p 1946 N93-21019
LATTICE PARAMETERS
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978
LATTICES
A preliminary study of the Gribov ambiguity in lattice SU(3) Coulomb gauge
[PREPRINT-816] p 2055 N93-21179
LATTICES (MATHEMATICS)
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 1
[RR-874-M] p 2053 N93-20873
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 2
[RR-875-M] p 2056 N93-21395
Experiences with the ACPMAPS 50 GFLOP system
[DE93-004418] p 2042 N93-21855
LAUNCH VEHICLE CONFIGURATIONS
Experimental results in aerodynamic stability and control of a TSTO configuration
[MBB-FE-211-S-PUB-0482-A] p 1787 N93-21057
LAUNCH VEHICLES
Thirty years together: A chronology of U.S.-Soviet space cooperation
[NASA-CR-185707] p 2102 N93-19975
Atomic hydrogen propellants: Historical perspectives and future possibilities
[NASA-TM-106053] p 1829 N93-20614
Experimental results in aerodynamic stability and control of a TSTO configuration
[MBB-FE-211-S-PUB-0482-A] p 1787 N93-21057
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
LAUNCHERS
Safety and arming system for tube launched projectile
[AD-D015557] p 1889 N93-20307
LAWS
Preserving our future today: Your guide to the United States Environmental Protection Agency
[PB92-226190] p 1990 N93-21345
LAYOUTS
On the typography of flight-deck documentation
[NASA-CR-177605] p 2087 N93-19970
GGADS: A library independent layout synthesis system for user adaptive gate array master structures
[ETN-93-92571] p 1892 N93-21021
LC CIRCUITS
Improvement of LC feedthrough filters
p 1797 N93-20458
LEAD ZIRCONATE TITANATES
Metal-coated, ordered void piezoelectric ceramic material
[AD-D015540] p 1859 N93-20304
LEADING EDGE SWEEP
Computational parametric study of sidewall-compression scramjet inlet performance at Mach 10
[NASA-TM-4411] p 1900 N93-20299

LEADING EDGES
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255
The effect of surface suction near the leading edge of a swept-back wing
[AERO-REPT-9205] p 1761 N93-20807
LEAKAGE
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652
LEAST SQUARES METHOD
The role of least squares in variational principles of elasticity p 1926 N93-20619
A variational approach for torsion of multiply connected composite sections p 1845 N93-20633
SSG 4.116: Kinematic and dynamic system modelling in geodesy p 1972 N93-20982
SSG 4.120: Non-linear adjustment p 1973 N93-20986
History of geodesy p 1975 N93-20997
Evaluation and detection of a signal containing an autoregressive noise
[ETN-93-92684] p 1885 N93-21061
Estimation methods for parameters of multivariate autoregressive models
[ETN-93-92685] p 2059 N93-21062
A comparative study of estimation of partial cloud coverage within a pixel: Proposed adaptive least square method with constraints p 1962 N93-21626
LEAVES
Data analysis for bark and leaf reflectance measurements
[AD-A258598] p 1966 N93-19983
LECTURES
The 1991 lectures in complex systems
[AD-A259428] p 2050 N93-20008
Lecture materials for the CTOS/MCS introductory course
[NASA-CR-192734] p 2048 N93-21308
LENS DESIGN
Birefringent polarization ray tracing: Theory and applications p 2067 N93-20285
LEPTONS
The discovery of the tau lepton
[DE93-004013] p 2063 N93-21718
LEWIS NUMBERS
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976
LIAPUNOV FUNCTIONS
Explicit representations of Lyapunov functions for stable analytic systems
[RR-402] p 2051 N93-20737
LIBRARIES
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 27: Knowledge diffusion and US government technology policy: Issues and opportunities for sci/tech librarians
[NASA-TM-108680] p 2088 N93-20110
Design recovery for software library population
[AD-A259292] p 2090 N93-20611
Open forum on recommendations of the White House Conference on Library and Information Services
[PB93-107639] p 2091 N93-21379
Access EPA
[PB92-147438] p 1994 N93-21811
LICENSING
Radiological safety regulation and licensing of nuclear-based explosive detection systems p 1770 N93-21894
LIE GROUPS
Explicit representations of Lyapunov functions for stable analytic systems
[RR-402] p 2051 N93-20737
On a possible non-Lorentzian energy-dependence of the K neutral(sub S)
[PREPRINT-807] p 2053 N93-20903
Two-parameter quantum groups
[PREPRINT-820] p 2060 N93-21182
LIFE (DURABILITY)
Research on large capacity Ni-Cd batteries p 1799 N93-20476
Research on Ni-H2 batteries p 1800 N93-20477
LIFE CYCLE COSTS
Statistical analysis of fatigue tests p 1923 N93-20343
Present worth factors for life-cycle cost studies in the Department of Defense
[PB93-120772] p 2093 N93-21690
LIFE SCIENCES
The 1991 lectures in complex systems
[AD-A259428] p 2050 N93-20008
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 372)
[NASA-SP-7011(372)] p 2024 N93-21044
Space life sciences overview p 1802 N93-21074
Direct-reading dosimeters for space life science experiments p 1804 N93-21083
Prologue to Action. Life Sciences Education and Science Literacy
[PB93-107514] p 2021 N93-21230
Environmental health discipline science plan
[NASA-TM-108042] p 2024 N93-21369
Space human factors discipline science plan
[NASA-TM-108023] p 2026 N93-21370
LIFE SPAN
Dissolution of tidally limited star clusters in galaxies by passing giant molecular clouds or other massive objects
[MITT-SER-A-232] p 2097 N93-21301
LIFE SUPPORT SYSTEMS
A membrane-based subsystem for water-vapor recovery from plant-growth chambers
[NASA-CR-177602] p 2025 N93-20065
Study on environment control and life support technology p 1789 N93-20413
Space Station ECLSS integration analysis
[NASA-CR-192470] p 2027 N93-22002
LIGANDS
New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986
LIGHT AMPLIFIERS
Optoelectronics research in the former Soviet Union
[PB93-111516] p 2069 N93-21804
LIGHT EMITTING DIODES
Review on optical elements for intersatellite laser communication p 1798 N93-20465
LIGHT MODULATION
Ultrafast dynamics of quantum well lasers: Ultimate potential for high speed modulation
[AD-A258653] p 1910 N93-20365
LIGHT SCATTERING
Method and apparatus for generating Fraunhofer line laser source using stimulated Raman scattering
[AD-D015579] p 1910 N93-20770
LIGHT SOURCES
Geometry and photometry in 3D visual recognition
[AD-A259443] p 2066 N93-20126
LIGHT TRANSMISSION
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides
[AD-A259136] p 1847 N93-20595
An iterative approach to curved ray photoelastic analysis p 1928 N93-20635
Simultaneous operation of a free-electron laser on two harmonically related wavelengths
[DE93-003745] p 1912 N93-21969
LIGHTNING
OLS data system/global survey of lightning p 2006 N93-20085
Atmospheric electricity/meteorology analysis p 2006 N93-20086
Electrification in winter storms and the analysis of thunderstorm overflight data p 2006 N93-20087
ER-2 investigations of lightning and thunderstorms p 2006 N93-20088
LIKELIHOOD RATIO
Inverse sequential detection of parameter changes in developing time series
[NASA-CR-191996] p 2059 N93-21191
LIMITS (MATHEMATICS)
Accurate test limits with estimated parameters
[MEMO-1024] p 1877 N93-21397
LINE OF SIGHT
Representativity of wind measurement from space p 1961 N93-21617
LINE SHAPE
TC curves and TS surfaces and their applications in CAD/CAM p 1943 N93-20723
Perturbative nearly-degenerate four-wave mixing lineshapes in gases
[DE93-002673] p 1850 N93-21490
Inverse Raman spectroscopy measurements of line-shift coefficients in hydrogen perturbed by argon
[DE93-003906] p 1852 N93-21840
LINE SPECTRA
IUE-ULDA access guide no. 4A: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume A
[ESA-SP-1153-VOL-A] p 2096 N93-21007
IUE-ULDA access guide no. 4B: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume B
[ESA-SP-1153-VOL-B] p 2097 N93-21015
Inverse Raman spectroscopy measurements of line-shift coefficients in hydrogen perturbed by argon
[DE93-003906] p 1852 N93-21840
High resolution HI observations of HII regions. 3: Photodissociation regions and the magnetic field near Orion B
[MPE-PREPRINT-214] p 2098 N93-21951
LINEAR ACCELERATORS
The N* program at CEBAF
[DE93-000829] p 1880 N93-20019
The RFQ LINAC: A high-current compact ion accelerator for explosive detection p 1766 N93-21872
An explosive detection system for screening luggage with high energy x rays p 1767 N93-21877
Application of radiofrequency superconductivity to accelerators for high-current ion beams
[DE93-002925] p 2066 N93-21979
LINEAR EQUATIONS
Least square methods for solving systems of inequalities with application to an assignment problem
[AD-A258682] p 2050 N93-20391
Linear algebra applied to physics determining small vibrations in conservative elastic systems
[AD-A259114] p 2050 N93-20589
The role of least squares in variational principles of elasticity p 1926 N93-20619
On homogeneous quasilinear evolution equation
[REPT-91-65] p 2052 N93-20854
LINEAR INTEGRATED CIRCUITS
Development of radiation resistant linear IC (equivalent to mu PC 806) p 1798 N93-20468
LINEAR PROGRAMMING
Optimal sampling plans for items representing two population groups
[AD-A259429] p 2057 N93-20009
Least square methods for solving systems of inequalities with application to an assignment problem
[AD-A258682] p 2050 N93-20391
Further developments in shape optimization of stress concentration regions. Part 1: General theory p 1927 N93-20630
Further developments in shape optimization of stress concentration regions. Part 2: Applications p 1928 N93-20631
A build-up variant of the path-following method for LP
[REPT-91-47] p 2037 N93-20863
Denumerable constrained Markov decision problems and finite approximations
[INRIA-RR-1568] p 2058 N93-20867
The linear program approach in Markov decision processes revisited
[INRIA-RR-1569] p 2058 N93-20868
LINEAR SYSTEMS
Global stabilization of linear analytic systems
[RR-403] p 2051 N93-20738
On a fundamental notion of equivalence in linear systems theory
[MATHS-REPT-A-162] p 2053 N93-20890
Copper Mountain conference on interative methods, volume 1
[DE93-004993] p 2056 N93-21706
LINES (GEOMETRY)
Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872
LININGS
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789
LINKAGES
Structural shape optimization of robotic links p 1918 N93-20717
LIOUVILLE EQUATIONS
Vlasov equation in the stochastic magnetic field
[NIFS-171] p 2075 N93-21567
LIQUID COOLING
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591
Advanced water-cooled phosphoric acid fuel cell development
[DE93-003490] p 1988 N93-21732
Naval research reviews, volume 44, no. 1, 1992
[PB93-129682] p 2104 N93-21808
LIQUID CRYSTALS
Multiple projector small dome display
[AD-A258621] p 2077 N93-19996
Fabrication of uniaxially oriented composites from as-spun and heat-treated thermotropic liquid crystalline polymer fibers p 1834 N93-21132
The production of fibres from polypropylene and liquid crystal polymer blends p 1837 N93-21149
LIQUID FLOW
A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270
Fluid/structure interactions. Internal flows p 1905 N93-20629
A numerical simulation of two-phase jet spreading using an Euler-Lagrangian technique
[AD-A259326] p 1902 N93-21258

LIQUID FUELS
Flame spread across liquid pools p 1854 N93-20209
The electrospray: Fundamentals and combustion applications p 1855 N93-20218
Characterizing droplet combustion of pure and multi-component liquid fuels in a microgravity environment p 1855 N93-20219
The electrochemical oxidation of methane for fuel cells
[PB93-110120] p 1987 N93-21353

LIQUID HYDROGEN
Optimizing liquid hydrogen storage systems p 1879 N93-20692

LIQUID INJECTION
Apparatus for reduction of vibration in liquid-injected gas compressor system
[AD-D015607] p 1914 N93-20772

LIQUID METALS
Gas bubbles in liquid metals p 1808 N93-21110

LIQUID PHASE EPITAXY
On the modelling of the dissolution and liquid phase epitaxial growth processes in a horizontal sandwich system p 1803 N93-21080

LIQUID PHASES
Liquid/liquid phase separation and crystallization of materials in microgravity aboard NASA KC-135 flights p 1810 N93-21119

LIQUID PROPELLANT ROCKET ENGINES
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114
Evolution of materials used in liquid propellant rocket engines
[DS-2025] p 1830 N93-21460

LIQUID ROCKET PROPELLANTS
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114
Spacecraft interaction with ambient and self-generated plasma/neutral environment
[AD-A258647] p 1823 N93-20364

LIQUID SLOSHING
Liquid oscillations under strong surface tension in a circular cylindrical container
[LRT-WE-9-FB-26-1991] p 1904 N93-21953

LIQUID SURFACES
Liquid oscillations under strong surface tension in a circular cylindrical container
[LRT-WE-9-FB-26-1991] p 1904 N93-21953

LIQUID-LIQUID INTERFACES
Interfacial tension studies of electrified liquid/liquid interfaces: Classical techniques for new data
[AD-A259213] p 1846 N93-20554
Stability of the fluid-fluid interphase in rotating systems subjected to different gravitational intensities p 1805 N93-21087
Isopycnic systems as models for the behavior of liquids in a microgravity environment p 1805 N93-21089
A visualization study of the diffusion process between two liquids of different densities under microgravity conditions p 1806 N93-21095
Natural axisymmetric frequencies of cylindrical liquid column with anchored free surface
[LRT-WE-9-FB-3-1991] p 1903 N93-21297
Internal structure and interfacial area in two-phase flow systems
[DE93-000921] p 1903 N93-21672

LIQUID-SOLID INTERFACES
Interfacial wave theory on formation of dendritic structure in binary alloy system p 1810 N93-21121
Natural frequencies and response of spinning liquid column with partially sliding contact line
[LRT-WE-9-FB-24-1991] p 1903 N93-21298

LIQUID-VAPOR INTERFACES
Stability of the fluid-fluid interphase in rotating systems subjected to different gravitational intensities p 1805 N93-21087
Quenching of a tube and filling of a vessel under microgravity p 1806 N93-21096

LIQUIDS
Defects and impurities in amorphous semiconductors and in liquid electrolytes
[MBB-Z-0386-91-PUB] p 2080 N93-20842
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734
Liquid explosives screening system p 1771 N93-21899

LITHIUM NIOBATES
Reduction of bend losses for titanium diffused waveguides in lithium niobate
[ETN-93-92558] p 1884 N93-20750

LITHIUM SULFATES
NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492

LITHIUM SULFUR BATTERIES
Bipolar rechargeable lithium battery for high power applications p 1987 N93-20526
Design considerations for rechargeable lithium batteries p 1987 N93-20527

LITHOGRAPHY
Electron optical defect inspection in x ray lithography masks
[ETN-93-92570] p 1919 N93-20884

LITHOLOGY
Advanced design for a seafloor Gamma Measurement Data Collection System
[PB93-105013] p 2020 N93-21793

LOAD TESTING MACHINES
High-temperature flexure fixture for advanced ceramics
[PB92-222959] p 1860 N93-21030

LOAD TESTS
NIST impact test facility
[PB92-226315] p 1788 N93-21467
Initiation and prevention of edge delamination with and without residual stresses p 1841 N93-21510
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
Delamination development under fatigue loading p 1842 N93-21521

LOADS (FORCES)
The significance of service load data for fatigue life analysis p 1947 N93-21319

LOCAL AREA NETWORKS
The economic use of PC for cartographic distributed tasks p 1967 N93-20534
Analysis of timed-token ring protocols
[INRIA-RR-1570] p 2044 N93-20894
Delivery of very high bandwidth with ATM switches and SONET
[DE93-004274] p 2045 N93-21721

LOCKING
Contact dynamics testing of automated three-point docking mechanism p 1812 N93-21411

LOGARITHMS
A build-up variant of the path-following method for LP
[REPT-91-47] p 2037 N93-20863

LOGIC CIRCUITS
Representation and readability of logic diagrams and aspects of their automatic generation
[ETN-93-92559] p 1890 N93-20751

LOGIC DESIGN
Anytime declarativism
[AD-A258698] p 2032 N93-20376
A VHDL interpreter for model-based diagnoses
[AD-A259122] p 2046 N93-20590

LOGIC PROGRAMMING
Fast theorem proving in intuitionistic propositional logic
[CWI-CS-R9157] p 2051 N93-20840
Design and implementation of LOGRES
[REPT-92-040] p 2039 N93-21184
A high-speed auto-tuning PID regulator based on programmable logic devices
[REPT-92-042] p 2047 N93-21186

LOGICAL ELEMENTS
A high-speed auto-tuning PID regulator based on programmable logic devices
[REPT-92-042] p 2047 N93-21186

LOGISTICS
PL/GPD DMSP data archiving from VAX to exabyte tapes
[AD-A258607] p 2002 N93-19994
The German national industry as a source of logistic support for armed forces facing new requirements
[MBB-UL-0002-91-PUB] p 1877 N93-21463
Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944

LOGISTICS MANAGEMENT
Management of Automatic Data Processing (ADP) system documentation in the Department of Defense
[AD-A258507] p 2088 N93-20048
Database language SQL: Integrator of CALS data repositories
[PB93-113637] p 2040 N93-21239

LONG DURATION EXPOSURE FACILITY
Protection of Materials and Surface Finishes from the Low Earth Orbit Space Environment
[CTN-93-60605] p 1847 N93-20810
The LDEF experience. Materials p 1847 N93-20811
Protection of composite materials in space. The LDEF experience p 1847 N93-20812
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006

LONG DURATION SPACE FLIGHT
Evaluation and analysis of long term satellite operation data p 1796 N93-20454

LONG TERM EFFECTS
Research on equipment life extension technology p 1793 N93-20436
Evaluation and analysis of long term satellite operation data p 1796 N93-20454
Operational support for ETS-5 secondary operational phase p 1796 N93-20455
Problem solving for long term, global scenarios of space traffic
[ILR-MITT-265(1991)] p 1821 N93-20906

LONGITUDINAL WAVES
An acousto-ultrasonic NDE technique for monitoring material anisotropy
[DE93-002994] p 1919 N93-21982

LORENTZ TRANSFORMATIONS
On a possible non-Lorentzian energy-dependence of the K neutral(sub S)
[PREPRINT-807] p 2053 N93-20903

LOSSES
Transition to H-mode by energetic electrons
[NIFS-158] p 2070 N93-20156
Selfconsistent analysis of radial electric field and fast ion losses in CHS Torsatron/Heliotron
[NIFS-178] p 2071 N93-20264
Reduction of bend losses for titanium diffused waveguides in lithium niobate
[ETN-93-92558] p 1884 N93-20750
Quality assurance in the future industrial plant
[PAPER-C-3-3] p 1919 N93-20837

LOW ALTITUDE
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579

LOW CARBON STEELS
Fatigue life of two steels under variable amplitude loading p 1948 N93-21323

LOW COST
Multiple projector small dome display
[AD-A258621] p 2077 N93-19996
Low cost attitude control system scanwheel development
[NASA-CR-191324] p 1824 N93-21003

LOW GRAVITY MANUFACTURING
Research on space component and material manufacturing experiments utilizing microgravity environment p 1791 N93-20422
Axial response and pulse behavior of a cylindrical liquid column. Part 2
[LRT-WE-9-FB-2-1991-PT-2] p 1903 N93-21296
Natural axisymmetric frequencies of cylindrical liquid column with anchored free surface
[LRT-WE-9-FB-3-1991] p 1903 N93-21297
Natural frequencies and response of spinning liquid column with partially sliding contact line
[LRT-WE-9-FB-24-1991] p 1903 N93-21298
Report on microgravity experiment by TR-1A rocket
[NASDA-EG-920021] p 1875 N93-21950

LOW PRESSURE
Low-pressure diamond growth using a secondary radical source
[AD-A258539] p 2077 N93-20055

LOW REYNOLDS NUMBER
On the drag of model dendrite fragments at low Reynolds number
[NASA-TM-105916] p 1855 N93-19974
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297

LOW SPEED
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207

LOW TEMPERATURE
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A259247] p 2080 N93-20581

LOW TURBULENCE
A numerical simulation of two-phase jet spreading using an Euler-Lagrangian technique
[AD-A259326] p 1902 N93-21258
Experiments on smooth cantilevered circular cylinders in a low-turbulence uniform flow. Part 2: Fluctuating loads on a cantilever of aspect ratio 30
[PB93-110500] p 1903 N93-21382
Experiments on smooth cantilevered circular cylinders in low-turbulence uniform flow. Part 1: Mean loading with aspect ratios in the range 4 to 30
[PB93-111763] p 1903 N93-21383

LOWER BODY NEGATIVE PRESSURE
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
Respiratory response to varying degrees of tilt and lower body negative pressure p 1809 N93-21114

LUBRICATION
Research on HOPE actuator power unit
p 1792 N93-20430
On the thermoelastohydrodynamic lubrication dimensionless problem formulations
p 1917 N93-20693
A boundary element formulation for thermo-hydrodynamic lubrication problem
p 1918 N93-20704
Boundary element formulation for thermoelastohydrodynamic contact problems
p 1918 N93-20705

LUBRICATION SYSTEMS
Research on HOPE actuator power unit
p 1792 N93-20430

LUMINESCENCE
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119

LUMINOSITY
Monolithic preamplifier employing epitaxial N-channel JFETs
[DE93-002951] p 1894 N93-21980

LUNAR BASES
Mission to the Moon: Europe's priorities for the scientific exploration and utilisation of the Moon
[ESA-SP-1150] p 2099 N93-21013
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663

LUNAR COMPOSITION
Mission to the Moon: Europe's priorities for the scientific exploration and utilisation of the Moon
[ESA-SP-1150] p 2099 N93-21013
Lunar and asteroid composition assessment using remote secondary ion mass spectrometry
[DE93-003839] p 2098 N93-21849

LUNAR EXPLORATION
Research on lunar and planet development and utilization p 1789 N93-20412
Mission to the Moon: Europe's priorities for the scientific exploration and utilisation of the Moon
[ESA-SP-1150] p 2099 N93-21013

LUNAR FLIGHT
Research on lunar and planet development and utilization p 1789 N93-20412

LUNAR GEOLOGY
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663

LUNAR MODULE
Research on lunar and planet development and utilization p 1789 N93-20412

LUNAR PROBES
Research on lunar and planet development and utilization p 1789 N93-20412

LUNAR RANGEFINDING
International Earth Rotation Service
p 1974 N93-20990

LUNAR RESOURCES
Mission to the Moon: Europe's priorities for the scientific exploration and utilisation of the Moon
[ESA-SP-1150] p 2099 N93-21013
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-191991] p 2099 N93-21553
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-191992] p 2103 N93-21554
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-191989] p 1850 N93-21564

LUNAR SATELLITES
Research on lunar and planet development and utilization p 1789 N93-20412

LUNAR SOIL
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663

LUNAR SURFACE
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663

M

MACH NUMBER
Research in robust control for hypersonic vehicles
[NASA-CR-192127] p 1786 N93-20296
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408

MACH-ZEHNDER INTERFEROMETERS
Interferometric optical fiber data link
[AD-D015581] p 2067 N93-20797

MACHINE LEARNING
An investigation of discovery-based learning in the route planning domain
[AD-A259141] p 1780 N93-20560

MACHINE ORIENTED LANGUAGES
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL
[AD-A259224] p 2033 N93-20577
Efficient implementation of a functional language for the definition of practicable, denotational semantics
[ETN-93-93413] p 2055 N93-21176

MACHINE TOOLS
Fatigue design of earthmoving machines
p 1924 N93-20350
On improving accuracy of machining centers
[PAPER-C-3-1] p 2036 N93-20835

MACHINERY
Service loading of work attachments of hydraulic excavators p 1924 N93-20351
Computer aided planning of laboratory tests of excavator attachments p 1924 N93-20352

MACHINING
Tolerance, chains and setting of machines: Three dimensional statistical model of machined dimensions
[PAPER-C-2-5] p 2036 N93-20833
On improving accuracy of machining centers
[PAPER-C-3-1] p 2036 N93-20835
A comment on the role of machining induced residual stresses on fatigue crack initiation p 1949 N93-21334

MAGELLAN SPACECRAFT (NASA)
Electrical characterization of the Magellan batteries after storage p 1984 N93-20506

MAGNETIC COOLING
A two-stage magnetic refrigerator for astronomical applications with reservoir temperatures above 4 K
[NASA-CR-192365] p 1878 N93-21815

MAGNETIC EFFECTS
The effects of externally imposed magnetic perturbations on plasmas in TEXT p 2071 N93-20282

MAGNETIC FIELD CONFIGURATIONS
The effects of externally imposed magnetic perturbations on plasmas in TEXT p 2071 N93-20282

MAGNETIC FIELD RECONNECTION
Particle simulation of auroral double layers
[AD-A258577] p 1996 N93-20032
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782
Theory of coronal streamer formation
[DE93-003736] p 2102 N93-21967

MAGNETIC FIELDS
Physics and engineering design studies on large helical device
[NIFS-161] p 2070 N93-20157
Refined theory of diamagnetic effect in stellarators
[NIFS-162] p 2070 N93-20158
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-192141] p 1997 N93-20295
Improved models of the inner and outer radiation belts
[AD-A258708] p 1998 N93-20379
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469
Vlasov equation in the stochastic magnetic field
[NIFS-171] p 2075 N93-21567
On relation between Hamada and Boozer magnetic coordinate system
[NIFS-173] p 2075 N93-21568
Radiation from moving charged particles with spin
[DE93-004633] p 2063 N93-21703
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 2: Appendices
[PB92-224674] p 1916 N93-21714
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 1: Analysis
[PB92-224666] p 1916 N93-21715
Selective gamma ray resonant absorption for explosives detection p 1769 N93-21887
Liquid explosives screening system
p 1771 N93-21899
High resolution HI observations of HII regions. 3: Photodissociation regions and the magnetic field near Orion B
[MPE-PREPRINT-214] p 2098 N93-21951
Simulation models for tokamak plasmas
[DE93-002876] p 2076 N93-21988

MAGNETIC FILMS
The role of microstructural phenomena in magnetic thin films
[DE93-005132] p 2081 N93-21710

MAGNETIC FLUX
Refined theory of diamagnetic effect in stellarators
[NIFS-162] p 2070 N93-20158
Microwave spectroscopy of the active sun
[NASA-CR-192135] p 2100 N93-20571
Sunspot dynamics
[NASA-CR-192284] p 2100 N93-20754
High temperature superconducting bearings for mechanical coolers
[AD-A259316] p 1916 N93-21699
Electromagnetic finite element analysis of a solenoid
[DE93-004635] p 1894 N93-21724
Dense plasma focus powered by flux compression generators
[DE93-003781] p 2076 N93-21837
Effective activation energy in the Bi-Sr-Ca-Cu-O systems
[DE93-002996] p 2083 N93-21983
Critical current density, irreversibility line, and flux creep activation energy in silver-sheathed Bi2Sr2Ca2Cu3O(sub x) superconducting tapes
[DE93-002998] p 2083 N93-21984

MAGNETIC INDUCTION
Studying the kinetics of magnetization in high Tc superconductors
[NASA-CR-192159] p 1890 N93-20572

MAGNETIC LEVITATION VEHICLES
Automatic design of a Maglev controller in state space
[AD-A259336] p 2047 N93-21261
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 2: Appendices
[PB92-224674] p 1916 N93-21714
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 1: Analysis
[PB92-224666] p 1916 N93-21715

MAGNETIC MATERIALS
The role of microstructural phenomena in magnetic thin films
[DE93-005132] p 2081 N93-21710

MAGNETIC MEASUREMENT
Development and use of data analysis procedures for the CRRES payloads AFGL-701-2/Dosimeter and AFGL-701-4/Fluxmeter and application of the data analysis results to improve the static and dynamic models of the earth's radiation belts
[AD-A258710] p 1823 N93-20380
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 2: Appendices
[PB92-224674] p 1916 N93-21714
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 1: Analysis
[PB92-224666] p 1916 N93-21715
Report of the Kakioka Magnetic Observatory, geomagnetism, Kakioka Memambetsu Kanoya, Chichijima, 1991
[JMA-159] p 2000 N93-21746

MAGNETIC PERMEABILITY
High-energy spin-density-wave correlated fluctuations in paramagnetic Cr + 5 at. percent V
[DE93-003165] p 1857 N93-21958

MAGNETIC POLES
Formation of auroral arcs via magnetosphere-ionosphere coupling
[AD-A258641] p 1998 N93-20363

MAGNETIC RECORDING
The role of microstructural phenomena in magnetic thin films
[DE93-005132] p 2081 N93-21710

MAGNETIC RELAXATION
Effective activation energy in the Bi-Sr-Ca-Cu-O systems
[DE93-002996] p 2083 N93-21983
Critical current density, irreversibility line, and flux creep activation energy in silver-sheathed Bi2Sr2Ca2Cu3O(sub x) superconducting tapes
[DE93-002998] p 2083 N93-21984

MAGNETIC SIGNATURES
Improved models of the inner and outer radiation belts
[AD-A258708] p 1998 N93-20379
Improved NMR signatures of explosives
p 1771 N93-21900

MAGNETIC STORAGE
The role of microstructural phenomena in magnetic thin films
[DE93-005132] p 2081 N93-21710

MAGNETIC STORMS
Particle simulation of auroral double layers
[AD-A258577] p 1996 N93-20032

Magnetospheric and auroral processes
[NASA-CR-192138] p 1996 N93-20250
Improved models of the inner and outer radiation belts
[AD-A258708] p 1998 N93-20379

MAGNETIC SUSPENSION
Automatic design of a Maglev controller in state space
[AD-A259336] p 2047 N93-21261

MAGNETIC SWITCHING
Magnetic switching techniques for high power pulse generation
[ISBN-90-9004705-0] p 1892 N93-20935

MAGNETICALLY TRAPPED PARTICLES
Effect of alpha particles on radial electric field structure in Torsatron/Heliotron reactor
[NIFS-182] p 2071 N93-20265

MAGNETIZATION
Studying the kinetics of magnetization in high Tc superconductors
[NASA-CR-192159] p 1890 N93-20572
Magnetization and flux pinning in high-Tc cuprates: Irradiated and oxygen deficient materials
[DE93-004169] p 2082 N93-21844
Critical current density, irreversibility line, and flux creep activation energy in silver-sheathed Bi2Sr2Ca2Cu3O(sub x) superconducting tapes
[DE93-002998] p 2083 N93-21984

MAGNETOHYDRODYNAMIC FLOW
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
Theory of coronal streamer formation
[DE93-003736] p 2102 N93-21967

MAGNETOHYDRODYNAMIC STABILITY
On a ballistic method for double layer regeneration in a Vlasov-Poisson plasma
[NIFS-153] p 2070 N93-20154
Transition to H-mode by energetic electrons
[NIFS-158] p 2070 N93-20156
Thought analysis on self-organization theories of MHD plasma
[NIFS-164] p 2070 N93-20159
The effects of externally imposed magnetic perturbations on plasmas in TEXT p 2071 N93-20282
Effects of net toroidal current on Mercier criterion in the Large Helical Device
[NIFS-174] p 2072 N93-20543
Model of the L-mode confinement in tokamaks
[NIFS-187] p 2072 N93-20545
Cross field ion motion at sawtooth crash
[NIFS-189] p 2072 N93-20547
A review on application of MHD theory to plasma boundary problems in tokamaks
[NIFS-163] p 2073 N93-20762
L-mode confinement model based on transport-MHD theory in tokamaks
[NIFS-192] p 2074 N93-21192
On relation between Hamada and Boozer magnetic coordinate system
[NIFS-173] p 2075 N93-21568
Effect of alpha particles on toroidal Alfven eigenmodes
[DE93-003635] p 2076 N93-21830

MAGNETOHYDRODYNAMIC WAVES
Electron acceleration in the magnetosphere
p 1997 N93-20283
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697
Effect of alpha particles on toroidal Alfven eigenmodes
[DE93-003635] p 2076 N93-21830

MAGNETOHYDRODYNAMICS
Thought analysis on self-organization theories of MHD plasma
[NIFS-164] p 2070 N93-20159
A review on application of MHD theory to plasma boundary problems in tokamaks
[NIFS-163] p 2073 N93-20762
TFTR experimental data analysis collaboration
[DE93-002365] p 2075 N93-21483
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771

MAGNETOPAUSE
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782

MAGNETOSHEATH
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782

MAGNETOSPHERE-IONOSPHERE COUPLING
Formation of auroral arcs via magnetosphere-ionosphere coupling
[AD-A258641] p 1998 N93-20363
Comprehensive simulation study on local and global development of auroral arcs and field-aligned potentials
[NIFS-195] p 2073 N93-20764

MAGNETOSPHERES
Magnetospheric space plasma investigations
[NASA-CR-192620] p 2074 N93-20914

MAGNETRON SPUTTERING
Magnetron sputtering on 3D components with less accessible areas
[MBB-Z-0360-91-B-PUB] p 1878 N93-21745

MAGNETS
Experimental investigations of undulator radiation compatability
[ETN-93-92566] p 2066 N93-20880
Liquid explosives screening system
p 1771 N93-21899

MAGNONS
High-energy spin-density-wave correlated fluctuations in paramagnetic Cr + 5 at. percent V
[DE93-003165] p 1857 N93-21958

MAINTAINABILITY
Operational support for ETS-5 secondary operational phase p 1796 N93-20455

MAINTENANCE
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Handling and using information systems with new technology
[PNR-90910] p 2090 N93-20734
Fundamentals of PC operation and maintenance
[PB93-117471] p 2029 N93-21453
An evaluation of R/D needs based on cogeneration system operational experience
[PB93-114494] p 1987 N93-21455
Repairing delaminations with low viscosity epoxy resins p 1844 N93-21532
Analysis of failure and maintenance experiences of motor operated valves in a Finnish nuclear power plant
[VTT-TIED-1322] p 1916 N93-21658
National Aeronautics and Space Administration: Statement of Ralph J. Strnad, Sr., Secretary, Washington Area Metal Trades Council/Chief Steward, Goddard Space Flight Center p 2093 N93-21679
Present worth factors for life-cycle cost studies in the Department of Defense
[PB93-120772] p 2093 N93-21690
Intelligent and localized weather prediction
[PB93-117992] p 2015 N93-21787
Integrated FASTBUS, VME and CAMAC diagnostic software at Fermilab
[DE93-004424] p 2042 N93-21845

MAN MACHINE SYSTEMS
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943

MAN-COMPUTER INTERFACE
Human-computer interaction in the school of computer science
[AD-A258634] p 2028 N93-20001
Management of Automatic Data Processing (ADP) system documentation in the Department of Defense
[AD-A258507] p 2088 N93-20048
User interface of complex interactive computer systems
[ECL-92-05] p 2030 N93-20059
Interactive graphics intersection design system: First-stage development
[PB92-227693] p 2040 N93-21291
Introduction to graphical user interfaces and their use by CITIS
[PB92-213404] p 2040 N93-21348

MANAGEMENT
National Airspace System: Air traffic control and airspace management operational concept NAS-SR-132
[DOT/FAA/SE-92/5] p 1779 N93-20164

MANAGEMENT INFORMATION SYSTEMS
Management of Automatic Data Processing (ADP) system documentation in the Department of Defense
[AD-A258507] p 2088 N93-20048
STEP development methods: Specification of semantics for information sharing
[PB93-113686] p 2091 N93-21218
Use of ecoregions in biological monitoring
[PB93-106730] p 1992 N93-21656
Integrated cost accounting system
[AD-A258587] p 2093 N93-21755
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784

MANAGEMENT METHODS
Airline quality issues 1992: Proceedings of the International Forum on Airline Quality
[NIAR-92-10] p 1764 N93-21561

MANAGEMENT PLANNING
Wright Laboratory research and development facilities handbook
[AD-A258746] p 2085 N93-20403
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 6: Controls and guidance
[NASA-TM-108654] p 2085 N93-20774
Report on environmental requirements and priorities
[PB92-208198] p 1989 N93-21028
Space human factors discipline science plan
[NASA-TM-108023] p 2026 N93-21370
Integrated cost accounting system
[AD-A258587] p 2093 N93-21755

MANAGEMENT SYSTEMS
Performance evaluation of Platform Data ManagementSystem under various degrees of protocol implementation
[NASA-CR-192408] p 2088 N93-20161
Formalizing structured file services for the data storage and retrieval subsystem of the data management system for Spacestation Freedom
[NASA-CR-192293] p 2089 N93-20315
Enforcement in the 1990's project: Recommendations of the analytical workgroups
[PB92-224286] p 1991 N93-21466
Integrated cost accounting system
[AD-A258587] p 2093 N93-21755
The Cheetah data management system
[DE93-004010] p 2092 N93-21973

MANEUVERS
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265

MANGANESE
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792

MANIFOLDS (MATHEMATICS)
Global stabilization of linear analytic systems
[RR-403] p 2051 N93-20738

MANIPULATORS
Free vibrations of a flexible tapered arm attached to a compliant hub p 1932 N93-20660
Modelling of multi-link spatial flexible manipulators employing the finite element method
p 1941 N93-20707
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Comparison of the efficiency of the various methods for rigid-body displacement analyses
p 1941 N93-20709
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Modelling robot trajectory errors using time series
p 1942 N93-20716
Structural shape optimization of robotic links
p 1918 N93-20717
Polynomial solution of the direct geometric problem of a parallel spherical manipulator p 1918 N93-20718
Linear passive impedance p 1943 N93-20719
Grasp admittance center. A concept
p 1918 N93-20720
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
Testing of ROMPS robot mechanical interfaces and compliant device
[NASA-CR-192617] p 1915 N93-20918
Command generator tracker based direct model reference adaptive control of a PUMA 560 manipulator
[NASA-CR-192756] p 2048 N93-21306
Lecture materials for the CTOS/MCS introductory course
[NASA-CR-192734] p 2048 N93-21308
The M68HC11 gripper controller electronics
[NASA-CR-192732] p 1893 N93-21309
Autonomous pre-alignment of a docking mechanism
p 1814 N93-21418
Experimental validation of docking and capture using space robotics testbeds p 1817 N93-21441
Avoiding space robot collisions utilizing the NASA/GSFC tri-mode skin sensor
[NASA-CR-192292] p 2049 N93-21812

MANNED MANEUVERING UNITS
MMU applications for automated rendezvous and capture p 1817 N93-21438

MANNED SPACE FLIGHT
Study on environment control and life support technology p 1789 N93-20413
Future space transportation systems. Part 1: Safety aspects. Part 2: Technical aspects
[MBB-UK-0180-90-PUB-PT-1-2] p 1821 N93-20847

Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445

MANNED SPACECRAFT

Research on advanced spacecraft p 1789 N93-20411

MANPOWER

Requirements for an automated human factors, manpower, personnel, and training (HMPT) planning tool [AD-A258531] p 2026 N93-21753

MANUAL

Fundamentals of PC operation and maintenance [PB93-117471] p 2029 N93-21453

MANUAL CONTROL

A simulator study into low speed longitudinal handling qualities of ACT transport aircraft [NLR-TP-89387-U] p 1787 N93-20743

MANUALS

Manual on climate of the USSR. Issue 16: Armenian SSR. Part 5: Cloud cover and atmospheric phenomena-translation [AD-A259288] p 2012 N93-20609

Global change data base training exercise manual. Exploring Earth's environment: Africa as an example [PB92-224682] p 1990 N93-21211

Creep Laboratory manual [NPL-DMM(A)-37] p 1951 N93-21565

MANUFACTURING

RASSP final technical report [AD-A258562] p 1882 N93-20371

Review on Schottky barrier diode development p 1798 N93-20464

Review on optical elements for intersatellite laser communication p 1798 N93-20465

Development of radiation resistant HCMOSIC p 1798 N93-20467

Development of 10 k gate-gate array p 1799 N93-20472

Review on radiation resistant 32 bit MPU p 1799 N93-20474

Survey and review on adhesives p 1799 N93-20475

Research on large capacity Ni-Cd batteries p 1799 N93-20476

Establishment of high density installation technology p 1800 N93-20478

Problems of quality inspection and diagnosing in modern manufacturing systems [PAPER-C-3-2] p 2036 N93-20836

Development of cure cycles: From laboratory analysis and testing to production of large scale composites [MBB-Z-0442-92-PUB] p 1833 N93-20845

GEODE 2: Manufacturing large area format cadmium-mercury-telluride crystals in a microgravity environment. Pressure sensor proof of concept p 1803 N93-21078

Textiles and Composites 1992 [VTT-SYMPOSIUM-133] p 1834 N93-21129

Fiber development in Japan p 1834 N93-21130

Manufacturing of high quality polypropylene/glass fibre prepreg tape p 1834 N93-21134

Thermoplastic tape winding parameters p 1835 N93-21135

Production of highly integrated FRP parts in the braiding technology p 1835 N93-21136

Manufacture and application of biaxial and multiaxial knits as textile reinforcements in composite materials p 1836 N93-21141

New types of textile fabrics for fibre composites p 1836 N93-21142

Predesign of the tubular braiding process using a mathematical process description p 1836 N93-21143

The total quality approach in the development of technical textiles p 1838 N93-21156

ASRM process development in aqueous cleaning [NASA-CR-191949] p 1829 N93-21355

An overview of autonomous rendezvous and docking system technology development p 1816 N93-21431

Magnetron sputtering on 3D components with less accessible areas [MBB-Z-0360-91-B-PUB] p 1878 N93-21745

MANY BODY PROBLEM

Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application p 1940 N93-20706

The linear invariants of the composition of two rotations p 1941 N93-20711

On the formulation of linear homogeneous velocity constraints in mechanical systems p 1941 N93-20712

Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714

Towards a time-dependent description of electron-atom/ion collisions: Two electron systems [DE93-004531] p 2064 N93-21742

Many-body effects in Cu(2+)(H2O)(sub m) clusters [DE93-002988] p 2082 N93-21752

MANY ELECTRON EFFECTS

Semiempirical studies of atomic structure [DE93-005117] p 2063 N93-21707

MAPPING

Reports on cartography and geodesy, series 1, number 106 [ETN-93-92583] p 1967 N93-20528

Computer aided cartographic generalization for the DCM derivation, with regard to feature displacement p 1967 N93-20532

The importance of the PC in the cartographic-photogrammetric service field p 1967 N93-20535

Scanner technology as an alternative to manual digitizing. The data acquisition of the 1990s p 1968 N93-20539

MAPPER: A personal computer map projection tool [NASA-TM-4445] p 2034 N93-20778

Vegetation cover mapping over France using NOAA-11/AVHRR p 1955 N93-21582

Advanced very high resolution radiometer data to update forest area change for midsouth states [PB93-121416] p 1979 N93-21685

MAPS

Dynamic location in an arrangement of line segments in the plane [INRIA-RR-1558] p 2037 N93-20872

The 8 years monthly vegetation index of central Europe p 1954 N93-21574

MARANGONI CONVECTION

Preparation results for a Marangoni-Benard experiment with Soret effect under microgravity conditions p 1805 N93-21088

MARINE BIOLOGY

How do zooplankton feed? A critical microgravity experiment p 1806 N93-21097

Gravity as a factor in the orientation and vertical migration of marine zooplankton p 1806 N93-21098

Use of ecoregions in biological monitoring [PB93-106730] p 1992 N93-21656

Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California [PB93-118495] p 1994 N93-21805

MARINE ENVIRONMENTS

Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California [PB93-120053] p 2019 N93-21536

Protecting the nation's wetlands, oceans, and watersheds: An overview of programs and activities [PB93-105609] p 1992 N93-21655

VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990 [PB93-116622] p 2019 N93-21688

Remote sensing: Environmental effects of surface films [AD-A258571] p 1980 N93-21754

MARINE METEOROLOGY

Stratiform clouds and their interaction with atmospheric motion [NASA-CR-192280] p 2002 N93-20038

A modeling study of marine boundary layer clouds p 2010 N93-20105

Activities of South Dakota School of Mines and Technology [AD-A259282] p 2012 N93-20607

Selected worldwide Marine weather broadcasts [PB93-118164] p 2013 N93-21294

Meteorological conditions over the South Atlantic Ocean during July and August of 1991 [PB92-235738] p 2015 N93-21503

Proceedings of the International COADS workshop [PB93-123552] p 1993 N93-21800

MARINE RESOURCES

Space research and remote sensing programs in Bangladesh p 1975 N93-21271

NASA Space Engineering Research Center for utilization of local planetary resources [NASA-CR-191989] p 1850 N93-21564

Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California [PB93-118495] p 1994 N93-21805

MARKET RESEARCH

Textiles and Composites 1992 [VTT-SYMPOSIUM-133] p 1834 N93-21129

International energy outlook 1992 [PB93-107951] p 1988 N93-21550

MARKING

Marking of German plastic explosive for the enhancement of vapor detection p 1775 N93-21925

Program to tag military plastic/sheet explosives p 1775 N93-21926

An improved vapor taggant detector p 1775 N93-21927

Plant laboratory scale preparation and complete characterization of modified composition C-4 containing a taggant p 1775 N93-21928

Detection of taggant in modified composition C-4 tagged with a taggant p 1776 N93-21929

MARKOV CHAINS

Denumerable constrained Markov decision problems and finite approximations [INRIA-RR-1568] p 2058 N93-20867

The linear program approach in Markov decision processes revisited [INRIA-RR-1569] p 2058 N93-20868

MARS ATMOSPHERE

Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program [NASA-CR-192381] p 2099 N93-19961

Planetary atmospheres: Microwave spectroscopic studies of planetary atmospheres [NASA-CR-192145] p 2099 N93-21642

MARS OBSERVER

NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492

MARS PROBES

Research on lunar and planet development and utilization p 1789 N93-20412

MARTENSITIC STAINLESS STEELS

Fatigue life of two steels under variable amplitude loading p 1948 N93-21323

MARTENSITIC TRANSFORMATION

Analysis of hysteresis in shape memory alloys during thermal cyclic loading p 1858 N93-20694

Deformation of TiNi shape memory alloy under thermomechanical cycles p 1858 N93-20695

MASKING

Electron optical defect inspection in x ray lithography masks [ETN-93-92570] p 1919 N93-20884

MASS FLOW

The aerodynamic performance of laser drilled sheets [AERO-REPT-9204] p 1761 N93-20806

MASS SPECTROMETERS

Atmospheric pressure ionization time-of-flight mass spectrometer for real-time explosives vapor detection p 1773 N93-21914

Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer p 1773 N93-21915

An improved vapor taggant detector p 1775 N93-21927

MASS SPECTROSCOPY

Detection of explosives material on single microparticles p 1774 N93-21916

Tandem mass spectrometry for explosives vapor detection p 1774 N93-21917

Modifications to the ionization process to enhance the detection of explosives by API/MS/MS p 1774 N93-21918

The role of mass spectrometry in the detection of explosives p 1774 N93-21919

Modification to the ionization process to enhance the detection of explosives by IMS p 1774 N93-21920

Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives p 1774 N93-21921

Detection of trace explosive evidence by ion mobilty spectrometry p 1774 N93-21922

MASS TRANSFER

Electrochemical characteristics of acid electrolytes for fuel cells [PB93-124907] p 1988 N93-21826

MASSIVELY PARALLEL PROCESSORS

Multidisciplinary computational aerosciences [NASA-TM-103946] p 1759 N93-20323

Solution of large, sparse systems of linear equations in massively parallel applications [DE93-004243] p 2045 N93-21741

Research in models for massively parallel computing [DE93-003748] p 2045 N93-21852

Experiences with the ACPMAPS 50 GFLOP system [DE93-004418] p 2042 N93-21855

MATERIALS HANDLING

ROMPS critical design review data package [NASA-CR-191612] p 2041 N93-21472

MATERIALS RECOVERY

NASA Space Engineering Research Center for utilization of local planetary resources [NASA-CR-191991] p 2099 N93-21553

NASA Space Engineering Research Center for utilization of local planetary resources [NASA-CR-191992] p 2103 N93-21554

MATERIALS SCIENCE
Application of surrogate materials in process study of actinides
[DE93-002257] p 1856 N93-20024
The LDEF experience. Materials p 1847 N93-20811
Spacebound 1991
[CTN-93-60604] p 1802 N93-21070
Microgravity science activities in Canada p 1803 N93-21075
CSAR-1: The first Canadian microgravity sounding rocket flight p 1807 N93-21103

MATERIALS TESTS
Application of surrogate materials in process study of actinides
[DE93-002257] p 1856 N93-20024
Contribution to the study of composite material behavior in space environment
[REPT-921-430-112] p 1833 N93-20869

MATHEMATICAL LOGIC
A Gentzen-system for CTL
[RR-865-I-IMAG-122-LIFIA] p 2051 N93-20803
Fast theorem proving in intuitionistic propositional logic
[CWI-CS-R9157] p 2051 N93-20840
Resolution in modal propositional logic
[REPT-91-59] p 2052 N93-20853
Maximal Kripke-type semantics for modal and superintuitionistic predicate logics
[ML-92-02] p 2054 N93-21009

MATHEMATICAL MODELS
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
The analytical representation of viscoelastic material properties using optimization techniques
[NASA-TM-108394] p 1920 N93-19972
Optimal sampling plans for items representing two population groups
[AD-A259429] p 2057 N93-20009
The semi-discrete Galerkin finite element modelling of compressible viscous flow past an airfoil
[NASA-CR-192161] p 1760 N93-20018
Theory of grain alignment in molecular clouds
[NASA-CR-192307] p 2077 N93-20037
Cyclic behavior modelling
[ECL-92-09] p 1920 N93-20060
H2 arcjet performance mapping program
[NASA-CR-191073] p 1828 N93-20064
Interactive access and management for four-dimensional environmental data sets using McIDAS p 1965 N93-20070
Planetary circulations in the presence of transient and self-induced heating p 2003 N93-20071
Basic studies of baroclinic flows p 2003 N93-20073
Laboratory and theoretical models of planetary-scale instabilities and waves p 2004 N93-20074
Life cycles of transient planetary waves p 2004 N93-20077
Global water cycle p 2004 N93-20078
Nonhydrostatic effects in numerical modeling of mesoscale convective systems and baroclinic waves p 2007 N93-20090
Tropical Pacific moisture variability p 2007 N93-20093
A modeling study of marine boundary layer clouds p 2010 N93-20105
A unified model of program behavior
[AD-A259142] p 2030 N93-20128
Pyrotechnic modeling for the NSI and pin puller p 1866 N93-20153
Modeling of microgravity combustion experiments p 1853 N93-20197
Structure and dynamics of premixed flames in microgravity p 1853 N93-20198
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
The effects of gravity on wrinkled laminar flames p 1853 N93-20200
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
Flame spread across liquid pools p 1854 N93-20209
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
Multiple-body simulation with emphasis on integrated Space Shuttle vehicle
[NASA-CR-192289] p 1821 N93-20234
Process modelling for materials preparation experiments
[NASA-CR-192319] p 2078 N93-20236
Eigenfunction for dissipative dynamics operator and attractor of dissipative structure
[NIFS-194] p 2050 N93-20267
Transverse effects in a model of semiconductor laser arrays p 1909 N93-20284
Evaluation of candidate working fluid formulations for the electrothermal - chemical wind tunnel
[NASA-CR-192196] p 1788 N93-20312
Solution of a one-dimensional ablation model
[INPE-5357-TDI/464] p 1900 N93-20321
Two-dimensional planar geosystems subjected to three-dimensional dynamic loads
[AD-A258723] p 1921 N93-20325
Discriminating experiments for multiaxial fatigue damage models p 1921 N93-20331
An engineering tool for solving multiaxial fatigue problems p 1922 N93-20334
The predicting crack growth for mixed mode fracture under biaxial loads p 1922 N93-20336
Probabilistic chain fatigue model p 1922 N93-20338
Discrete statistical model of fatigue crack growth in a Ni-base superalloy, capable of life prediction p 1923 N93-20344
Probabilistic aspects of growth of the fatigue cracks in the railroad axles p 1924 N93-20348
Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359
Acoustic wave propagation in an adhesive bond model with degrading interfacial layers
[AD-A258684] p 1918 N93-20373
Quantum dynamics of shock waves in molecular crystals
[AD-A258749] p 2079 N93-20404
Improved empirical model for base drag prediction on missile configurations based on new wind tunnel data
[AD-A258753] p 1761 N93-20405
Information base procedures for generation of synthetic thermal scenes
[AD-A259202] p 2090 N93-20549
Theory and numerical modeling of low-frequency acoustic scattering from bubble plumes near the sea surface
[AD-A259199] p 2018 N93-20564
Joint Typhoon Warning Center (JTWC92) model
[AD-A258646] p 2011 N93-20586
On homogenization method and large deformations p 1845 N93-20634
Viscoelastic analysis of bonded connections p 1929 N93-20638
Two-D to three-D global/local finite element analysis of symmetric finite composite laminates with holes p 1930 N93-20645
Large amplitude free vibrations of cross-ply composite beams p 1930 N93-20646
Numerical stabilities aspects of cable dynamics simulation p 1931 N93-20650
Resonant response analysis of a high speed gear p 1917 N93-20662
Buckling and dynamic instability phenomena of tapered bar with localized flaw subjected to an intermediate periodic axial load p 1935 N93-20675
Semi-numerical approach to the buckling of composite panel p 1935 N93-20676
Prediction of fracture initiation in surface flaws p 1935 N93-20678
Batman-cracks. Observations and numerical simulations p 1936 N93-20681
A boundary element formulation for thermo-hydrodynamic lubrication problem p 1918 N93-20704
Modeling of multi-link spatial flexible manipulators employing the finite element method p 1941 N93-20707
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
On the formulation of linear homogeneous velocity constraints in mechanical systems p 1941 N93-20712
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Modelling robot trajectory errors using time series p 1942 N93-20716
Linear passive impedance p 1943 N93-20719
The next revolution in computer-aided engineering p 1943 N93-20722
An investigation of the unexpected attitude dynamics experienced by the OEDIPUS-A tethered sounding rocket payload p 1830 N93-20724
Some observations of chaotic motion of satellites with damping in an elliptic orbit p 1826 N93-20726
Physics-like mathematical model for chaos and ergodic criticality in four dimensions p 1944 N93-20729
Multifrequency backscatter modelling of bare soil: Attema, Kats, and Krul model applied in Agriscatt 1987 data
[BCRS-91-43] p 1884 N93-20739
The effects on the ionosphere of inertia in the high latitude neutral thermosphere

Bond graph based modelling using MACROS: An introduction to the program BAMMS
[MEMT-18] p 2034 N93-20808
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project
[FOA-C-40296-4.5] p 1901 N93-20858
Long range percolation in stationary point processes
[REPT-91-54] p 2058 N93-20864
Denumerable constrained Markov decision problems and finite approximations
[INRIA-RR-1568] p 2058 N93-20867
The linear program approach in Markov decision processes revisited
[INRIA-RR-1569] p 2058 N93-20868
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
Nocturnal temperature forecasting
[MISC-SER-A-126] p 2012 N93-20888
Effect of design selection on response surface performance
[NASA-CR-192275] p 2038 N93-20895
Magnetospheric space plasma investigations
[NASA-CR-192620] p 2074 N93-20914
Fuzzy connectivity and mathematical morphology
[TELECOM-PARIS-92-D-001] p 2053 N93-20940
Basic and evolutive concepts of pattern recognition: Pluridiscipline approach. Approximation concept
[ISAL-91-0098] p 2047 N93-20941
Forcing colorations, intervals and the perfect graph conjecture (an extended abstract)
[RR-867-M] p 2053 N93-20945
SSG 4.120: Non-linear adjustment p 1973 N93-20986
Numerical simulation of the internal aerodynamic in the combustion chamber of the reciprocating engines using a finite element method
[ECL-90-014] p 1915 N93-21005
Plastic mechanism analysis of T-joints in RHS under concentrated force
[PB92-225374] p 1946 N93-21029
Calculation of hypersonic, viscous, non-equilibrium flows around reentry bodies using a coupled boundary layer/Euler method
[MBB-LME-211-S-PUB-0487] p 1762 N93-21058
Numerical modeling and optimization for the reconstruction of a polyhedron from its generalized gaussian image
[ETN-93-92683] p 2039 N93-21060
Modeling and simulation of a formal neural network: Implementation on a 'Hypercube FPS T-40' parallel machine
[ETN-93-92688] p 2045 N93-21065
Reference model for the description of graphic data processing and for the integration of graphic systems with other data processing fields
[ETN-93-93417] p 2039 N93-21066
On the modelling of the dissolution and liquid phase epitaxial growth processes in a horizontal sandwich system p 1803 N93-21080
Predesign of the tubular braiding process using a mathematical process description p 1836 N93-21143
On the structure of gaseous confined laminar diffusion flames: Numerical investigation
[NASA-TM-106039] p 1902 N93-21198
Prediction of damage of laminated composite structures under quasi-static and cyclic loadings
[ESA-TT-1282] p 1839 N93-21289
Axial response and pulse behavior of a cylindrical liquid column. Part 2
[LRT-WE-9-FB-2-1991-PT-2] p 1903 N93-21296
Natural axisymmetric frequencies of cylindrical liquid column with anchored free surface
[LRT-WE-9-FB-3-1991] p 1903 N93-21297
Recurrent swing amplification induced by nonlinear amplitude effects
[MITT-SER-A-230] p 2097 N93-21302
The Shapley value for cooperative games under precedence constraints
[MEMO-1025] p 2056 N93-21398
Research in LMSS propagation
[NASA-CR-191915] p 1885 N93-21400
Analysis of aircraft noise levels in the vicinity of start-of-takeoff roll at Baltimore-Washington International Airport
[PB92-221605] p 1991 N93-21501
Free edge delamination prevention in composite laminates p 1840 N93-21508
Initiation and prevention of edge delamination with and without residual stresses p 1841 N93-21510
Predicting failure by debonding/delamination p 1841 N93-21512
Modelisation and computation of composite materials p 1842 N93-21518
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites p 1843 N93-21525

Review of modelling of environment-assisted cracking [NPL-DMM(A)-44] p 1951 N93-21566
Marine productivity along the northwest coast of Africa (Mauritania): Estimation from satellite data p 1955 N93-21578
Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields p 1955 N93-21580
Earth radiation and cloud cover analysis using NOAA satellite data p 1956 N93-21587
Transmittance coefficients generation for fast radiative transfer models: Application to new satellite sounding systems p 1960 N93-21612
Empirical model of winds in south-eastern Europe in connection with solar activity p 1961 N93-21619
Determination of longwave radiation reaching the surface from Meteosat images and radiation model calculations p 1962 N93-21625
Modelling the skin-bulk temperature difference near the sea-atmosphere interface for remote sensing applications p 1963 N93-21631
Satellite data assimilation in the wave model 3G-WAM p 1965 N93-21638
Internal structure and interfacial area in two-phase flow systems [DE93-000921] p 1903 N93-21672
Electromagnetic finite element analysis of a solenoid [DE93-004635] p 1894 N93-21724
Flexible prior models in Bayesian image analysis [DE93-003728] p 2059 N93-21736
Numerical validation of a constitutive theory for an arbitrarily fractured solid [DE93-003863] p 2064 N93-21739
Unsteady Navier-Stokes method for accelerated moving airfoils with separation [DLR-FB-92-03] p 1763 N93-21763
Physics models and user's guide for the neutral beam module of the SuperCode [PB93-121887] p 2076 N93-21809
A literature review of time-deterioration prediction techniques [PB92-229202] p 1919 N93-21822
Non-Newtonian temperature and pressure effects of a powder lubricant slurry in a rotating hydrostatic step bearing [AD-A259325] p 1916 N93-21832
Mechanisms of gas permeation through polymer membranes [DE93-005960] p 1852 N93-21836
Applications of neural networks in polymer simulations [DE93-004110] p 1862 N93-21843
Assessing the operational impacts of checked luggage screening p 1777 N93-21936
Recognition of partially occluded threat objects based on hybrid Hopfield neural network p 1777 N93-21939
Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944
Impact on the air carrier of explosive detection systems p 1778 N93-21945
Simultaneous operation of a free-electron laser on two harmonically related wavelengths [DE93-003745] p 1912 N93-21969
Numerical models of planetary dynamos [DE93-003848] p 2098 N93-21970
Simulation models for tokamak plasmas [DE93-002876] p 2076 N93-21988
Development of visual programming techniques to integrate theoretical modeling into the scientific planning and instrument operations environment of ISTP [NASA-CR-192707] p 2042 N93-22004

MATHEMATICS
The 1991 lectures in complex systems [AD-A259428] p 2050 N93-20008

MATRICES (MATHEMATICS)
Neural-network dedicated processor for solving competitive assignment problems [NASA-CASE-NPO-17781-1-CU] p 2028 N93-20116
Higher order crossings [AD-A258727] p 2050 N93-20327
Calculation of the Jordan form of a matrix with rational coefficients (using the formal computation system Axiom) [RR-882-M] p 2051 N93-20782
A necessary and sufficient condition for the existence of the maximum likelihood estimate in autoregressive models [RR-866-M] p 2058 N93-20944
Direct and inverse unitary eigenproblems in signal processing: An overview [AD-A259348] p 2055 N93-21242
Predicting structure in nonsymmetric sparse matrix factorizations [DE93-003365] p 2057 N93-21963
Variational nodal solution algorithms for multigroup criticality problems [DE93-003462] p 2042 N93-21964

MATRIX MATERIALS
Effect of microstructure on the strength and fracture energy of bimaterial interfaces [AD-A259181] p 1921 N93-20271
Imide/arylene ether copolymers containing phosphine oxide groups [NASA-CASE-LAR-14925-1] p 1859 N93-20567
Thermoplastic composites for structural applications: Past and future p 1834 N93-21131
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520

MATRIX METHODS
A method of continuous coordinate condensation p 1932 N93-20657
Damped vibration of engine valve train by recent transfer matrix and matrix procedures p 1933 N93-20665
TC curves and TS surfaces and their applications in CAD/CAM p 1943 N93-20723

MAXIMA
Graphs with maximum number of minimum cuts [RR-880-M] p 2054 N93-21168

MAXIMUM LIKELIHOOD ESTIMATES
Multi-stage decoding for multi-level block modulation codes [NASA-CR-192363] p 1880 N93-20043
A necessary and sufficient condition for the existence of the maximum likelihood estimate in autoregressive models [RR-866-M] p 2058 N93-20944
Evaluation and detection of a signal containing an autoregressive noise [ETN-93-92684] p 1885 N93-21061
Estimation methods for parameters of multivariate autoregressive models [ETN-93-92685] p 2059 N93-21062
Joint parameters estimation and symbols detection for digital communication over linear or nonlinear unknown channels [TELECOM-PARIS-91-D-013] p 1885 N93-21394

MEASURING INSTRUMENTS
High-bandwidth, high-dynamic-range, analog optical guided-wave systems for physics instrumentation [DE93-001619] p 2066 N93-20022
Method and apparatus for determination of material residual stress [NASA-CASE-GSC-13451-1] p 1921 N93-20118
Dielectric constant measurement probe assembly and apparatus and method [AD-D015537] p 1890 N93-20766
Problems of quality inspection and diagnosing in modern manufacturing systems [PAPER-C-3-2] p 2036 N93-20836
Touchstone for success: The Materials and Processes laboratories, ESTEC [ESA-BR-52-REV] p 1830 N93-20926
Electromagnetic characterization measurements at 1000 C in Aerospatiale Microwave Department [REPT-921-430-114] p 1884 N93-20938
History of geodesy p 1975 N93-20997
Wetting of fibers measured by LPR-90 equipment p 1835 N93-21139
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414
Technical digest-symposium on optical fiber measurements, 1992 [PB93-102259] p 2068 N93-21505
Field screening for environmental pollutants: Defining user instrumentation needs [PB93-117885] p 1993 N93-21791
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941

MECHANICAL DEVICES
On the formulation of linear homogeneous velocity constraints in mechanical systems p 1941 N93-20712
Testing of ROMPS robot mechanical interfaces and compliant device [NASA-CR-192617] p 1915 N93-20918

MECHANICAL DRIVES
Higher frequency transmission properties of motor car-chassis systems [ETN-93-92563] p 1915 N93-20877

MECHANICAL ENGINEERING
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2 [ISBN-0920049-04] p 1925 N93-20616
Adaptivity-fluids-localization. The challenge to computational mechanics p 1905 N93-20618

MECHANICAL IMPEDANCE
Linear passive impedance p 1943 N93-20719

MECHANICAL PROPERTIES
Research on Ni-H2 batteries p 1800 N93-20477
Advanced structural ceramics p 1862 N93-20627
Touchstone for success: The Materials and Processes laboratories, ESTEC [ESA-BR-52-REV] p 1830 N93-20926
Textiles and Composites 1992 [VTT-SYMPOSIUM-133] p 1834 N93-21129

Fabrication of uniaxially oriented composites from as-spun and heat-treated thermotropic liquid crystalline polymer fibers p 1834 N93-21132
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140
New types of textile fabrics for fibre composites p 1836 N93-21142
Relationships between layer linkage and mechanical properties of 3D woven textile structures p 1836 N93-21144
Effect of the reinforcement finish in the mechanical performances of epoxy-glass composites p 1836 N93-21146
Special fibres from natural polymers p 1837 N93-21151
Applications of Visil fibres in functional textiles p 1837 N93-21154
Multilayered elastoplastic homogeneization and anisotropic plasticity [ECL-92-24] p 1839 N93-21359

MEDICAL PERSONNEL
Guide for aviation medical examiners [PB92-219690] p 2024 N93-21047

MELTING
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres [DE93-002999] p 2082 N93-21757

MELTING POINTS
Thermodynamic modeling for organic solid precipitation [DE93-000104] p 1851 N93-21767
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy [DE93-002980] p 2083 N93-21981

MELTS (CRYSTAL GROWTH)
On the drag of model dendrite fragments at low Reynolds number [NASA-TM-105916] p 1855 N93-19974
Process modelling for materials preparation experiments [NASA-CR-192319] p 2078 N93-20236
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres [DE93-002999] p 2082 N93-21757

MEMBRANE STRUCTURES
A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649

MEMBRANES
A membrane-based subsystem for water-vapor recovery from plant-growth chambers [NASA-CR-177602] p 2025 N93-20065
Description of wrinkles in membranes using nonlinear finite plate elements [ETN-93-92565] p 1945 N93-20879

MEMORY
The central executive component of working memory [AD-A258724] p 2025 N93-20326
Preliminary studies of planning and flight strip use as air traffic controller memory aids [DOT/FAA/CT-TN92/22] p 1780 N93-21759

MEMORY (COMPUTERS)
A unified model of program behavior [AD-A259142] p 2030 N93-20128
Level 3 BLAS for distributed memory concurrent computers [DE93-003613] p 2029 N93-21730

MENTAL PERFORMANCE
Comparison of performance on the Shipley Institute of Living Scale, Air Traffic Control Specialist Selection Test, and FAA Academy Screen [AD-A259249] p 1779 N93-20582
Preliminary studies of planning and flight strip use as air traffic controller memory aids [DOT/FAA/CT-TN92/22] p 1780 N93-21759

MERCURY (METAL)
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals [PB92-227347] p 1856 N93-21497

MERCURY CADMIUM TELLURIDES
Process modelling for materials preparation experiments [NASA-CR-192319] p 2078 N93-20236

MERCURY TELLURIDES
GEODE 2: Manufacturing large area format cadmium-mercury-telluride crystals in a microgravity environment. Pressure sensor proof of concept p 1803 N93-21078

MESONS
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-810] p 2062 N93-20923
Two loop calculation of the anomalous dimension of the axial current with static heavy quarks
[PREPRINT-813] p 2062 N93-20924
MESOSCALE PHENOMENA
Investigation of the role of thermal boundary layer processes in initiating convection under the NASA SPACE Field Program p 2005 N93-20080
Nonhydrostatic effects in numerical modeling of mesoscale convective systems and baroclinic waves p 2007 N93-20090
A numerical investigation of squall lines
[ISBN-0-315-69244-8] p 2011 N93-20280
CLEOPATRA: A step towards GEWEX on the regional scale p 1963 N93-21628
MESSAGE PROCESSING
CTOS course
[NASA-CR-191866] p 2047 N93-21204
METABOLISM
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
METAL BONDING
Method to produce ceramic superconducting filaments bonded to metals
[AD-D015595] p 1859 N93-20786
Method of bonding metal carbides in non-magnetic alloy matrix
[AD-D015591] p 1833 N93-20801
Role of atomic size and valence in bonding and diffusion at metal surfaces
[DE93-003994] p 1857 N93-21972
METAL COATINGS
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114
Cluster formation and evolution on semiconductor surface
[AD-A259190] p 2078 N93-20274
Metal-coated, ordered void piezoelectric ceramic material
[AD-D015540] p 1859 N93-20304
An electrocatalytic cathode device and a method for making such a cathode
[AD-D015586] p 1890 N93-20396
Issues/considerations and performance prediction of LEO protective coatings p 1847 N93-20813
METAL COMBUSTION
A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231
Material and method for fast generation of hydrogen gas and steam
[AD-D015559] p 1847 N93-20781
Microgravity combustion of dust clouds p 1806 N93-21094
METAL CRYSTALS
Cluster formation and evolution on semiconductor surface
[AD-A259190] p 2078 N93-20274
METAL FATIGUE
Probabilistic assessment of machine parts from Kymenite, austempered ductile iron p 1923 N93-20341
A comment on the role of machining induced residual stresses on fatigue crack initiation p 1949 N93-21334
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335
The improvement of fatigue life of aluminum alloy structure by laser radiation p 1950 N93-21336
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO p 1950 N93-21337
The effects of surface treatment on torsional fatigue failure in recoil springs
[AD-A259345] p 1952 N93-21987
METAL FILMS
Atomic and electronic structure of ultrathin films p 2078 N93-20287
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-191989] p 1850 N93-21564
METAL FLUORIDES
Effect of gravity on phase separation and crystallization in a heavy metal fluoride glass p 1810 N93-21118
METAL FOAMS
An experiment on producing foam metals in a microgravity environment aboard NASA KC-135 aircraft p 1808 N93-21109
METAL FOILS
Protection of Radarsat SAR antenna graphite/epoxy support structure p 1848 N93-20819
METAL HALIDES
Doping induced insulator-metal transition in the platinum based MX complexes
[DE93-003690] p 2083 N93-21996
ESR spectra of photoinduced defects in MX chain solids
[DE93-003692] p 2083 N93-21997
METAL HYDRIDES
Nickel metal hydride, a flight experiment p 1986 N93-20522
Metalloradical and electrophilic activation of methane
[PB93-123693] p 1851 N93-21813
METAL IONS
X ray spectra from Hinotori satellite and suprathermal electrons
[NIFS-197] p 2100 N93-20266
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides
[AD-A259136] p 1847 N93-20595
METAL MATRIX COMPOSITES
Microstructural development in a spray formed aluminum-silicon carbide based metal matrix composite
[AD-A259414] p 1832 N93-20124
Combustion synthesis of ceramic and metal-matrix composites p 1854 N93-20203
Research on space structure materials p 1794 N93-20443
Adherence and reactivity of graphite base multimaterials
[ECL-92-04] p 1859 N93-20542
Advanced industrial materials. An overview p 1845 N93-20623
Dynamic stress-strain behavior in shear of SiCwhisker reinforced aluminum alloy composites p 1930 N93-20643
Method of bonding metal carbides in non-magnetic alloy matrix
[AD-D015591] p 1833 N93-20801
Experimental and theoretical study of the elastic and microplastic properties of particles reinforced metal matrix composites
[ISAL-92-0014] p 1833 N93-20942
Studies of dispersed phase systems: Ostwald ripening and metal matrix composites p 1808 N93-21106
Free edge delamination prevention in composite laminates p 1840 N93-21508
Diffraction measurements of residual stress in titanium matrix composites
[DE93-003855] p 1844 N93-21838
METAL NITRIDES
Covalent nitrides for maskless laser writing of microscopic metal lines
[DE93-004105] p 1858 N93-22001
METAL OXIDE SEMICONDUCTORS
Characterization and snubbing of a bidirectional MCT in a resonant ac link converter
[NASA-CR-192230] p 1889 N93-20258
Development of power MOSFET (150 W class) p 1797 N93-20461
Review on radiation resistant 32 bit MPU p 1799 N93-20474
Industrial IC evaluation test: 256 kbit EEPROM p 1800 N93-20481
Research on single event resistance evaluation technology: Research by heavy ion irradiation p 1801 N93-20483
METAL OXIDES
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
Low loss glass and optical fibers therefrom
[AD-D015567] p 1862 N93-21829
METAL PARTICLES
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231
METAL PLATES
A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
An impact technique to accelerate flier plates to velocities over 12 km/s
[DE93-002467] p 1820 N93-21485
Barely visible damage threshold in a BMI p 1843 N93-21524
METAL POWDER
Agglomeration of fractals in simulated reduced gravity p 1806 N93-21093
METAL PROPELLANTS
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231
METAL SHEETS
The aerodynamic performance of laser drilled sheets
[AERO-REPT-9204] p 1761 N93-20806
METAL SURFACES
Vibrational spectroscopic studies of adsorbates on bimetallic surfaces
[AD-A258578] p 1855 N93-19963
ASRM process development in aqueous cleaning
[NASA-CR-191949] p 1829 N93-21355
Role of atomic size and valence in bonding and diffusion at metal surfaces
[DE93-003994] p 1857 N93-21972
METAL WORKING
High temperature alloys p 1858 N93-20626
Vectorial tolerancing
[PAPER-C-1-4] p 2035 N93-20827
METALLIZING
Metallization and sputtering of textiles: Preconditions for the substrate, properties and applications p 1838 N93-21158
Covalent nitrides for maskless laser writing of microscopic metal lines
[DE93-004105] p 1858 N93-22001
METALORGANIC CHEMICAL VAPOR DEPOSITION
Oriented, single-phase thin films of potassium tantalate-niobate
[AD-D015543] p 2077 N93-20027
METALS
Dissipation in adiabatic shear bands
[DE93-002280] p 1856 N93-20025
Metals combustion in normal gravity and microgravity p 1854 N93-20211
Structure and reliability metal contacts to GaAs
[AD-A259184] p 1889 N93-20272
Compression-after-impact behavior of ARALL(trade name)-1 laminates
[AD-A259203] p 1832 N93-20550
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770
Monte Carlo studies of positron implantation in elemental metallic and multilayer systems
[DE93-003474] p 2065 N93-21991
METAMORPHISM (GEOLOGY)
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691
METASTABLE STATE
Photoionization experiments by multistage excitation in the zone of the second ionization threshold of CuI
[ETN-93-92569] p 2062 N93-20883
Non-equilibrium structures induced by ion irradiation in Ni4Mo
[DE93-004193] p 2063 N93-21720
METEOROLOGICAL CHARTS
Intelligent and localized weather prediction
[PB93-117992] p 2015 N93-21787
METEOROLOGICAL INSTRUMENTS
Geostationary earth climate sensor: Scientific utility and feasibility, phase A
[NASA-CR-191919] p 1996 N93-20248
METEOROLOGICAL PARAMETERS
Surface observation climatic summaries
[AD-A258589] p 2001 N93-19964
PL/GPD DMSP data archiving from VAX to exabyte tapes
[AD-A258607] p 2002 N93-19994
Climate of Salt Lake City, Utah
[PB92-228402] p 2013 N93-21200
Guide to microwave weighting function calculations
[NASA-CR-192719] p 1885 N93-21201
Hybrid single-particle Lagrangian integrated trajectories (HY-SPLIT): Version 3.0: User's guide and model description
[PB92-218114] p 2056 N93-21341
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics
[NASA-CR-192720] p 2014 N93-21492
Meteorological conditions over the South Atlantic Ocean during July and August of 1991
[PB92-235738] p 2015 N93-21503
Production of teaching materials from Geostationary Meteorological Satellite Himawari images p 1978 N93-21544
Changing weather information: Roles of meteorological information through meteorological satellites p 1979 N93-21545
The influence of high clouds on climate p 1956 N93-21588

Microwave radiometry for monitoring the diverse cloudiness regimes on Earth: A review p 1958 N93-21600
Qualitative and quantitative diagnosis of cloud images for use in weather forecast p 1962 N93-21623
Intelligent and localized weather prediction [PB93-117992] p 2015 N93-21787

METEOROLOGICAL RADAR
A satellite-borne radar wind sensor (RAWS) p 2008 N93-20096

METEOROLOGICAL SATELLITES
Production of teaching materials from Geostationary Meteorological Satellite Himawari images p 1978 N93-21544
Changing weather information: Roles of meteorological information through meteorological satellites p 1979 N93-21545
Requirements and projects for high-resolution atmospheric sounding p 1959 N93-21607

METEOROLOGICAL SERVICES
Selected worldwide Marine weather broadcasts [PB93-118164] p 2013 N93-21294
The global climate system. Climate system monitoring p 2014 N93-21450
Federal plan for meteorological services and supporting research, FY 1993 [PB92-233188] p 2014 N93-21502
Intelligent and localized weather prediction [PB93-117992] p 2015 N93-21787

METEOROLOGY
Surface observation climatic summaries [AD-A258589] p 2001 N93-19964
The role of conditional symmetric instability in the development of moderate to heavy frozen precipitation bands [AD-A258575] p 2002 N93-20031
Stratiform clouds and their interaction with atmospheric motion [NASA-CR-192280] p 2002 N93-20038
Remote sensing of water vapor features p 2010 N93-20107
An investigation of the role of current and future remote sensing data systems in numerical meteorology p 2010 N93-20108
Meteorological events in Arizona and New Mexico during Swamp [PB93-100410] p 2013 N93-21227
Utilization of remote sensing data at the Deutscher Wetterdienst p 1962 N93-21621

METEOSAT SATELLITE
Operational cloud classification with Meteosat data p 1962 N93-21622
Bispectral cloud analysis for the Atlantic-European region using digital Meteosat images p 1962 N93-21624
Determination of longwave radiation reaching the surface from Meteosat images and radiation model calculations p 1962 N93-21625

METHANE
The electrochemical oxidation of methane for fuel cells [PB93-110120] p 1987 N93-21353
Determination of methane stability in the upper mantle and lower crust [PB93-100931] p 2001 N93-21785
Chemical and catalytic activation of methane by metal oxide surfaces [PB93-121994] p 1851 N93-21803
Metalloradical and electrophilic activation of methane [PB93-123693] p 1851 N93-21813
Mechanisms and controlling characteristics of the catalytic oxidation of methane [DE93-005719] p 1852 N93-21835

METHOD OF MOMENTS
Lunar soils grain size catalog [NASA-RP-1265] p 2100 N93-21663

METHYL ALCOHOL
The electrochemical oxidation of methane for fuel cells [PB93-110120] p 1987 N93-21353
Evaluation of a Schatz heat battery on a flexible-fueled vehicle. Phase 2 [PB92-204585] p 1893 N93-21377
Public transportation alternative fuels: A perspective for small transportation operations [PB92-120120] p 1866 N93-21716
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary [PB92-182567] p 1867 N93-21717

METRIC SPACE
A generalized cut condition for multiflows in matroids [RR-869-M] p 2054 N93-20947

METRICATION
Metric transition plans and activities of Federal Government Agencies [PB92-222249] p 1878 N93-21468

MICHELSON INTERFEROMETERS
Measurement of the expansion coefficient between -150 C and +150 C for material composites for space applications [REPT-921-430-115] p 1833 N93-20939

MICROCHANNEL PLATES
Microchannel electron source [AD-D015555] p 1891 N93-20768

MICROCLIMATOLOGY
Effects of microclimate cooling on physiology and performance while flying the UH-60 helicopter simulator in NBC conditions in a controlled heat environment [AD-A258502] p 2023 N93-20400
Climate of Salt Lake City, Utah [PB92-228402] p 2013 N93-21200
Evaluation of two microclimate cooling air vests on a heated mannequin [AD-A259410] p 2026 N93-21269

MICROELECTRONICS
CIME of microsystems [MBB-Z-0428-92-PUB] p 2037 N93-20844
Smart Integrated Microsensor System (SIMS) [AD-A259430] p 1907 N93-21247
Electronics and Electrical Engineering Laboratory technical publications announcements covering laboratory programs, January to March 1992, with 1992/1993 EEEL events calendar [PB93-120715] p 1893 N93-21256
Electronics and Electrical Engineering Laboratory technical publications announcements covering laboratory programs, October to December 1991, with 1992/1993 EEEL events calendar [PB93-120723] p 1893 N93-21257
MIT Space Engineering Research Center testbed programs [NASA-CR-192115] p 2103 N93-21660
Microelectronics packaging automation [DE93-004822] p 1894 N93-21725
Covalent nitrides for maskless laser writing of microscopic metal lines [DE93-004105] p 1858 N93-22001

MICROGRAVITY APPLICATIONS
The Second International Microgravity Combustion Workshop [NASA-CP-10113] p 1868 N93-20178
Spacebound 1991 [CTN-93-60604] p 1802 N93-21070
Space station user development program: Future prospects p 1802 N93-21072
Microgravity science activities in Canada p 1803 N93-21075
UDP sponsored opportunities for microgravity environment p 1803 N93-21076
The production of high iron glasses by RST in microgravity p 1810 N93-21117
Effect of gravity on phase separation and crystallization in a heavy metal fluoride glass p 1810 N93-21118
Liquid/liquid phase separation and crystallization of materials in microgravity aboard NASA KC-135 flights p 1810 N93-21119
Grain refinement of Al-Cu-Ti alloys in microgravity p 1810 N93-21120

MICROHARDNESS
Microstructural development in a spray formed aluminum-silicon carbide based metal matrix composite [AD-A259414] p 1832 N93-20124

MICROMECHANICS
Numerical validation of a constitutive theory for an arbitrarily fractured solid [DE93-003863] p 2064 N93-21739

MICROORGANISMS
Biochemically active layers for selective material detection sensors [MBB-Z-0440-92-PUB] p 2021 N93-20959

MICROPARTICLES
Detection of explosives material on single microparticles p 1774 N93-21916

MICROPHONES
Sensor technology for internal inspection systems [PB93-101020] p 1907 N93-21652

MICROPOROSITY
The application of quality criteria for the prediction of porosity in the design of casting processes [DE93-001719] p 1857 N93-21773

MICROPROCESSORS
Development of 32 bit MPU p 1799 N93-20473
Review on radiation resistant 32 bit MPU p 1799 N93-20474
Research on single event resistance evaluation technology: Single event resistance evaluation by SEM p 1801 N93-20484
Construction of evaluation test equipment for 16 bit space MPU p 1801 N93-20486
Formal verification of a microcoded VIPER microprocessor using HOL [NASA-CR-4489] p 2044 N93-21043

MICROPULSATIONS
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments [DE93-002897] p 1912 N93-21955

MICROSCOPES
Design and analysis of a fast, two-mirror soft-x-ray microscope [NASA-CR-191440] p 2067 N93-20316

MICROSTRIP DEVICES
Full wave characterization of microstrip open end discontinuities patterned on anisotropic substrates using potential theory [NASA-TM-106037] p 1889 N93-20259
Design and characterization of the BVX: An 8-channel CMOS preamplifier-shaper for silicon strips [DE93-003619] p 1894 N93-21733

MICROSTRUCTURE
Microstructural development in a spray formed aluminum-silicon carbide based metal matrix composite [AD-A259414] p 1832 N93-20124
Effect of microstructure on the strength and fracture energy of bimaterial interfaces [AD-A259181] p 1921 N93-20271
Structure and reliability metal contacts to GaAs [AD-A259184] p 1889 N93-20272
The overall response of composite materials undergoing large deformations [AD-A259278] p 1832 N93-20606
High temperature alloys p 1858 N93-20626
Advanced structural ceramics p 1862 N93-20627
Interfacial wave theory on formation of dendritic structure in binary alloy system p 1810 N93-21121
Modelisation and computation of composite materials p 1842 N93-21518
The Xu-Tec process of introducing normally solid materials into substrate surfaces [DE93-005124] p 1861 N93-21708
The role of microstructural phenomena in magnetic thin films [DE93-005132] p 2081 N93-21710
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres [DE93-002999] p 2082 N93-21757
Analysis of parametric drift of a MESFET-based GaAs MMIC due to 125 C storage [DE93-000715] p 1894 N93-21768
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy [DE93-002980] p 2083 N93-21981
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels [DE93-003005] p 1857 N93-21985

MICROWAVE AMPLIFIERS
Research on space communication equipment technology: Study on relay system p 1790 N93-20420

MICROWAVE ANTENNAS
Guide to microwave weighting function calculations [NASA-CR-192719] p 1885 N93-21201

MICROWAVE CIRCUITS
Processing, fabrication, and demonstration of HTS integrated microwave circuits [AD-A259441] p 1888 N93-20125
Analysis of parametric drift of a MESFET-based GaAs MMIC due to 125 C storage [DE93-000715] p 1894 N93-21768

MICROWAVE EMISSION
Full wave characterization of microstrip open end discontinuities patterned on anisotropic substrates using potential theory [NASA-TM-106037] p 1889 N93-20259
Modification and evaluation of a microwave plasma/atomic emission detector system [PB92-217959] p 2074 N93-21203
Solar radio flares 1989-1991. Solar microwave flares observed at Metsaehovi Radio Research Station in 1989-1991 [PB93-111896] p 2101 N93-21786

MICROWAVE EQUIPMENT
Processing, fabrication, and demonstration of HTS integrated microwave circuits [AD-A259441] p 1888 N93-20125
High power microwave generator [AD-D015560] p 1891 N93-20783

MICROWAVE IMAGERY
Remote sensing of earth terrain [NASA-CR-192139] p 1966 N93-19979
WetNet: Using SSM/I data interactively for global distribution of tropical rainfall and precipitable water p 2005 N93-20082
Improvement and further development of SSM/I overland parameter algorithms using the WetNet workstation p 2005 N93-20083
Atmospheric electricity/meteorology analysis p 2006 N93-20086

Airborne full polarization radiometry using the MSFC Advanced Microwave Precipitation Radiometer (AMPR) p 2007 N93-20089
Microwave radiative transfer studies of precipitation p 2008 N93-20095
Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360
Remote sensing of latent heat fluxes at the air-sea interface p 1959 N93-21603
Explosive detection using microwave imaging p 1771 N93-21902

MICROWAVE OSCILLATORS
Remotely controlled C band signal generator
[AD-D015602] p 1880 N93-20014

MICROWAVE RADIOMETERS
The Split Window Microwave Radiometer (SWMR) for hurricane wind speed measurement from space
[NASA-CR-192316] p 2002 N93-19987
Airborne full polarization radiometry using the MSFC Advanced Microwave Precipitation Radiometer (AMPR) p 2007 N93-20089
Microwave radiative transfer studies of precipitation p 2008 N93-20095
Research on advanced Earth observing sensors p 1790 N93-20416
Guide to microwave weighting function calculations
[NASA-CR-192719] p 1885 N93-21201
Detecting new-ice in the Arctic from multispectral satellite data p 1957 N93-21594
Microwave radiometry for monitoring the diverse cloudiness regimes on Earth: A review p 1958 N93-21600
Air/sea latent heat flux measurements with microwave radiometers p 1959 N93-21604
Specialist meeting on microwave radiometry and remote sensing applications, murad 92
[PB93-105757] p 1979 N93-21657

MICROWAVE SENSORS
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 8: Aerothermodynamics Automation and Robotics (A/R) systems sensors, high-temperature superconductivity
[NASA-TM-108655] p 2085 N93-20775

MICROWAVE SOUNDING
An investigation of the role of current and future remote sensing data systems in numerical meteorology p 2010 N93-20108

MICROWAVE SPECTRA
Microwave spectroscopy of the active sun
[NASA-CR-192135] p 2100 N93-20571
Planetary atmospheres: Microwave spectroscopic studies of planetary atmospheres
[NASA-CR-192145] p 2099 N93-21642

MICROWAVES
Guide to microwave weighting function calculations
[NASA-CR-192719] p 1885 N93-21201

MID-OCEAN RIDGES
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785

MIDDLE ATMOSPHERE
Model profiles of atmospheric temperatures, pressures and densities in south-eastern Europe during maximum and mimimum solar activity p 1961 N93-21615

MILITARY AIRCRAFT
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187

MILITARY OPERATIONS
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187

MILITARY TECHNOLOGY
Laser damage in thin film optical coatings
[AD-A259425] p 1909 N93-20005
RASSP final technical report
[AD-A258562] p 1882 N93-20371
Defense science and technology strategy: Executive summary. 1: Background and overview. 2: The seven thrusts
[PB92-217785] p 2103 N93-21349
The German national industry as a source of logistic support for armed forces facing new requirements
[MBB-UL-0002-91-PUB] p 1877 N93-21463

MILLIMETER WAVES
Planar monolithic Schottky varactor diode millimeter-wave frequency multipliers
[AD-A258616] p 1887 N93-19995
Retrieval of cloud liquid water and precipitation from polarized microwave simulations and SSM/I measurements p 1960 N93-21613
An airborne millimeter-wave FM-CW radar for thickness profiling of freshwater ice
[AD-A259368] p 1886 N93-21669
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788

MILLING (MACHINING)
Vectorial tolerancing
[PAPER-C-1-4] p 2035 N93-20827

MILLING MACHINES
Thermal plastic strain fatigue life of the roll p 1924 N93-20354

MIMO (CONTROL SYSTEMS)
An object-oriented computer aided design program for modern control systems analysis
[AD-A259139] p 2033 N93-20559
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210

MINERAL DEPOSITS
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792

MINERAL EXPLORATION
The 6th Conference Proceedings of the Pacific OCS Region Information Transfer Meeting
[PB93-119600] p 1992 N93-21684

MINERALS
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140
The 6th Conference Proceedings of the Pacific OCS Region Information Transfer Meeting
[PB93-119600] p 1992 N93-21684
Advanced design for a seafloor Gamma Measurement Data Collection System
[PB93-105013] p 2020 N93-21793

MINIMA
Graphs with maximum number of minimum cuts
[RR-880-M] p 2054 N93-21168

MINORITIES
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128
National Aeronautics and Space Administration: Statement of Miguel A. Hernandez, Jr., Hernandez Engineering Co. p 2094 N93-21680

MIR SPACE STATION
Soviet automated rendezvous and docking system overview p 1818 N93-21444

MIRRORS
Design and analysis of a fast, two-mirror soft-x-ray microscope
[NASA-CR-191440] p 2067 N93-20316
Real image visual display system
[AD-A259125] p 2033 N93-20593
The resonator handbook
[NASA-CR-192217] p 1894 N93-21559

MISALIGNMENT
Flux concentrations on solar dynamic components due to mispointing
[NASA-TM-105756] p 1982 N93-20261
Guideline requirements for serviceable spacecraft grasping/berthing/docking interfaces based on simulations and flight experience p 1816 N93-21429

MISSILE COMPONENTS
Small ICBM Laser Firing Unit (LFU) p 1864 N93-20138
Laser-initiated ordnance for air-to-air missiles p 1864 N93-20139
Laser diode ordnance design p 1864 N93-20140
Micro-t telemetry system
[AD-D015542] p 1822 N93-20305

MISSILE CONFIGURATIONS
Improved empirical model for base drag prediction on missile configurations based on new wind tunnel data
[AD-A258753] p 1761 N93-20405

MISSILE CONTROL
Guided Weapons Division Spin Table Facility: Spin table control system
[AD-A259214] p 1788 N93-20555

MISSILE SYSTEMS
Laser-initiated ordnance for air-to-air missiles p 1864 N93-20139

MISSION PLANNING
Implementation of the recommendations of the Presidential Commission on the Space Shuttle Challenger Accident
[NASA-TM-108646] p 1820 N93-19990
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Concept of overall operation of H-2 Orbiting Plane (HOPE) p 1791 N93-20424
Orbit re-entry experiment vehicle development p 1792 N93-20432
NASA issues
[GAO/OCG-93-27TR] p 2085 N93-20904
Ground segment infrastructure standards
[ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
ESA's report to the 29th COSPAR Meeting
[ESA-SP-1154] p 1811 N93-21360
On-orbit operational scenarios, tools, and techniques p 1817 N93-21442
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
Activities report of the European Space Agency
[ETN-93-93509] p 2103 N93-21764

MIXING
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-810] p 2062 N93-20923

MIXING LAYERS (FLUIDS)
Stability of mixing layers
[NASA-CR-192225] p 1897 N93-19980
A visualization study of the diffusion process between two liquids of different densities under microgravity conditions p 1806 N93-21095

MIXING LENGTH FLOW THEORY
Projectile base bleed technology. Part 2: User's guide CMINT computer code, version 5.04-BRL
[AD-A258630] p 1897 N93-19999

MOBILITY
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A259177] p 2079 N93-20561

MODAL RESPONSE
A non-linear phenomenon in the dynamic response of metallic and composite structures p 1926 N93-20620
Analysis of structurally-varying systems using component-mode synthesis technique p 1932 N93-20658
Forced vibration of non-selfadjoint elastic systems p 1934 N93-20668
Transverse vibrations of an elastically restrained rod carrying a tip mass p 1934 N93-20669
Study of free vibration of orthotropic rectangular plates p 1935 N93-20674
Experiment and modeling of air-coupled ultrasonic excitation of plate waves p 1936 N93-20679
A comparison of force reconstruction methods for a lumped mass beam
[DE93-002461] p 1951 N93-21484

MODEL REFERENCE ADAPTIVE CONTROL
A contribution to the adaptive control of servo-drives with direct current motor
[ETN-93-92562] p 2047 N93-20876
Command generator tracker based direct model reference adaptive control of a PUMA 560 manipulator
[NASA-CR-192756] p 2048 N93-21306

MODELS
Geographic data model: A survey p 1968 N93-20540
SSG 1.73: Integrated geodesy p 1969 N93-20963

MODEMS
Computer simulation of a general purpose satellite modem
[AD-A259083] p 1882 N93-20392

MODULATION
Multi-stage decoding for multi-level block modulation codes
[NASA-CR-192363] p 1880 N93-20043

MODULATION TRANSFER FUNCTION
Measurement of modulation transfer functions of simulator displays
[AD-A259401] p 1788 N93-21268

MODULUS OF ELASTICITY
Elastic moduli and seismic wave attenuation in dry and saturated rock. Volume 2: Modulus dispersion and attenuation
[AD-A258711] p 1998 N93-20381
Numerical validation of a constitutive theory for an arbitrarily fractured solid
[DE93-003863] p 2084 N93-21739
Role of porosity in estimates of composite elastic constants
[DE93-002887] p 1845 N93-21989

MOISTURE
Observational and modeling studies of heat, moisture, precipitation, and global-scale circulation patterns p 2007 N93-20092
Tropical Pacific moisture variability p 2007 N93-20093
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517

MOISTURE CONTENT
S. G. Romanovskiy method of thermal treatment and drying of nonconducting materials (Description of an invention for an author's certificate)
[AD-A258631] p 1831 N93-20000
Elastic moduli and seismic wave attenuation in dry and saturated rock. Volume 2: Modulus dispersion and attenuation
[AD-A258711] p 1998 N93-20381
Use of radar technology for pavement layer evaluation
[PB92-226166] p 1912 N93-21744
MOLDING MATERIALS
Improved ceramic slip casting technique --- application to aircraft model fabrication
[NASA-CASE-LAR-14471-1] p 1858 N93-20041
MOLECULAR BEAM EPITAXY
Interface properties of wide bandgap semiconductor structures
[AD-A259416] p 2078 N93-20131
Growth and doping of Al(x)Ga(1-x) films by electron cyclotron resonance assisted molecular beam epitaxy
[AD-A258722] p 2079 N93-20367
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A259177] p 2079 N93-20561
Development of a Knudsen cell for molecular beam epitaxial growth of GaAs films in the microgravity environment p 1804 N93-21082
MOLECULAR BIOLOGY
Two strikes against perfect phylogeny
[RUU-CS-92-08] p 2021 N93-20848
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734
MOLECULAR CLOUDS
Theory of grain alignment in molecular clouds
[NASA-CR-192307] p 2077 N93-20037
Theoretical studies in interstellar cloud chemistry
[NASA-CR-192010] p 2096 N93-20269
MOLECULAR GASES
Perturbative nearly-degenerate four-wave mixing lineshapes in gases
[DE93-002673] p 1850 N93-21490
MOLECULAR ORBITALS
Many-body effects in Cu(2+)(H2O)(sub m) clusters
[DE93-002988] p 2082 N93-21752
MOLECULAR RELAXATION
Relaxation of radiation damages in a-Si:H layers
[MBB-Z-0317-90-PUB] p 2081 N93-21403
MOLECULAR SPECTRA
Accurate procedure for calibrating the CAO optical hygrometer
[AP-30] p 1906 N93-20927
NMR study of triazone compound formation
p 1839 N93-21165
MOLECULAR SPECTROSCOPY
NMR study of triazone compound formation
p 1839 N93-21165
The use of 2D NMR spectroscopy in the analysis of isomeric polyamides p 1839 N93-21166
MOLECULAR STRUCTURE
Quantum dynamics of shock waves in molecular crystals
[AD-A258749] p 2079 N93-20404
NMR study of triazone compound formation
p 1839 N93-21165
The use of 2D NMR spectroscopy in the analysis of isomeric polyamides p 1839 N93-21166
MOLECULAR THEORY
Molecular theory and computer simulation studies of natural and synthetic gas mixtures
[PB92-235696] p 1850 N93-21651
MOLECULAR WEIGHT
Thermodynamic modeling for organic solid precipitation
[DE93-000104] p 1851 N93-21767
MOLECULES
Linear algebra applied to physics determining small vibrations in conservative elastic systems
[AD-A259114] p 2050 N93-20589
MOLTEN SALT ELECTROLYTES
Cathodes for molten-salt batteries
p 1987 N93-20525
MOLYBDENUM
Amorphous Mo/Si multilayers: Interdiffusion and structural relaxation; crystallization
[ETN-93-92992] p 1859 N93-20909
MOLYBDENUM ALLOYS
New developments in the 'ab initio' determination of transition metal alloy phase diagrams
[DE93-002540] p 1856 N93-21488
Non-equilibrium structures induced by ion irradiation in Ni4Mo
[DE93-004193] p 2063 N93-21720
MOLYBDENUM OXIDES
New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986
MOMENTS OF INERTIA
Review of initial experiments using the Hawk model, dynamic rig facility, and the CED 1401 digital data acquisition equipment
[CRANFIELD-AERO-9017] p 1788 N93-21406
MOMENTUM
Effect of quark-gluon plasma boundary on the momentum distribution of quarks
[DE93-004166] p 2064 N93-21740
MOMENTUM THEORY
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263
MOMENTUM TRANSFER
Effect of quark-gluon plasma boundary on the momentum distribution of quarks
[DE93-004166] p 2064 N93-21740
MONATOMIC GASES
Atomic hydrogen propellants: Historical perspectives and future possibilities
[NASA-TM-106053] p 1829 N93-20614
Perturbative nearly-degenerate four-wave mixing lineshapes in gases
[DE93-002673] p 1850 N93-21490
MONITORS
Manufacture of ADEOS borne technical data acquisition equipment p 1796 N93-20451
MONOCULAR VISION
Automatic modeling of nonpolyhedral objects by monocular observation
[ETN-93-92678] p 2068 N93-20898
MONOMERS
Polymers of bis(ethynylstyryl)benzene and related monomers
[AD-D015612] p 1859 N93-20398
Cationically polymerizable monomers derived from renewable sources
[DE93-005926] p 1861 N93-21731
MONSOONS
Meteorological events in Arizona and New Mexico during Swamp
[PB93-100410] p 2013 N93-21227
MONTE CARLO METHOD
Pairing and clustering of hydrogen on Si(100)2x1: Monte Carlo studies
[AD-A258537] p 1846 N93-20054
A simulation of corrosion fatigue life distribution in low alloy steel p 1922 N93-20340
Spacecraft interaction with ambient and self-generated plasma/neutral environment
[AD-A258647] p 1823 N93-20364
Evaluation and comparative study of combinatorial optimization algorithms: Application to the problem of process placement
[RR-886-I] p 2043 N93-20798
Oxygen configurations and their effect on charge transfer in YBa2Cu3O(z)
[DE93-002543] p 2081 N93-21489
Numerical finite element analysis of damage using Monte Carlo techniques p 1842 N93-21522
Validation of ERS-1 synthetic aperture radar for imaging ocean waves: First results p 1961 N93-21616
Many-body effects in Cu(2+)(H2O)(sub m) clusters
[DE93-002988] p 2082 N93-21752
Monte Carlo studies of positron implantation in elemental metallic and multilayer systems
[DE93-003474] p 2065 N93-21991
MOON
Mission to the Moon: Europe's priorities for the scientific exploration and utilisation of the Moon
[ESA-SP-1150] p 2099 N93-21013
MOORING
Mean seasonal cycles and interannual variations at 0 deg, 110 deg W and 0 deg, 140 deg W during 1980-1991
[PB93-114726] p 2014 N93-21388
MORPHOLOGY
Examination of laser conditioning using atomic force microscopy
[DE93-001328] p 1909 N93-20020
Fuzzy connectivity and mathematical morphology
[TELECOM-PARIS-92-D-001] p 2053 N93-20940
Polyorganosilazane preceramic binder development for reaction bonded silicon nitride composites
[DE93-004063] p 1844 N93-21842
MORSE POTENTIAL
Quantum dynamics of shock waves in molecular crystals
[AD-A258749] p 2079 N93-20404
MOSAICS
Growth and defects of explosives crystals
[DE93-003866] p 2082 N93-21780
MOTION PERCEPTION
Robot motion vision by fixation
[AD-A259456] p 2046 N93-20241
MOTION PICTURES
The acquisition of velocity fields via the automatic analysis of motion, exemplarily demonstrated in a rotating fluid
[MPIS-102/1991] p 1902 N93-21023
MOTOR VEHICLES
Higher frequency transmission properties of motor car-chassis systems
[ETN-93-92563] p 1915 N93-20877
MOUNTAINS
Mountain top measurements of beta(9.2 microns)
p 2009 N93-20099
Digital topographic approach to modeling: The distribution of precipitation to mountainous terrain
[PB93-106649] p 2015 N93-21535
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691
MULTIGRID METHODS
Copper Mountain conference on interative methods, volume 1
[DE93-004993] p 2056 N93-21706
MULTIPATH TRANSMISSION
Certification plan for a planar near-field range used for high-performance phased-array testing
[PB92-213305] p 1885 N93-21493
MULTIPROCESSING (COMPUTERS)
The performance of cache-based error recovery in multiprocessors
[NASA-CR-192142] p 2029 N93-20006
Hierarchical Poly Tree configurations for the solution of dynamically refined finte element models
[NASA-CR-191054] p 1921 N93-20232
Coincident pulse techniques for hybrid electronic optical computer systems
[AD-A258692] p 2028 N93-20375
Study and development of a multiprocessor interface circuit, volume 1
[ECL-91-11-VOL-1] p 2044 N93-21000
MULTISENSOR APPLICATIONS
Detecting new-ice in the Arctic from multispectral satellite data p 1957 N93-21594
Development of a multi-sensor in situ fiber optic fluorometer
[DE93-004646] p 1995 N93-21975
MULTISPECTRAL BAND SCANNERS
Detection of polar stratospheric clouds from satellite
p 1957 N93-21591
MULTISPECTRAL PHOTOGRAPHY
MAMS: High resolution atmospheric/surface properties p 2008 N93-20097
Remote sensing of water vapor features
p 2010 N93-20107
Multispectral and multitemporal aerial photography as an aid for the evaluation of land in regions of the Limagne Rift Valley (France)
[BCRS-91-29] p 1968 N93-20953
MULTIVARIATE STATISTICAL ANALYSIS
The development of the Navy's multivariate optimum interpolation analysis system
[AD-A258569] p 2058 N93-20358
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
MUSEUMS
Burst of energy
[DE93-005058] p 1988 N93-21833

N

N-TYPE SEMICONDUCTORS
Study and development of ohmic contacts on n and p type indium phosphide by autocatalytic chemical deposition of metals and alloys
[ECL-92-23] p 1856 N93-20062
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A259247] p 2080 N93-20581
NARCOTICS
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer
p 1773 N93-21915
NARROWBAND
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788

NASA PROGRAMS
Implementation of the recommendations of the Presidential Commission on the Space Shuttle Challenger Accident
[NASA-TM-108646] p 1820 N93-19990
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
Development of a NASA standard gas generator p 1863 N93-20135
Space Shuttle: Status of advanced solid rocket motor program. Report to the Chair, Subcommittee on Government Activities and Transportation, Committee on Government Operations, House of Representatives
[GAO/NSIAD-93-26] p 1829 N93-20293
Structural dynamics branch research and accomplishments to FY 1992
[NASA-TM-105824] p 1925 N93-20368
The 1992 NASA Aerospace Battery Workshop
[NASA-CP-3192] p 1983 N93-20490
NASA Center update: Goddard Space Flight Center p 1983 N93-20491
NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492
Battery Review Board p 1986 N93-20519
NASA issues
[GAO/OCG-93-27TR] p 2085 N93-20904
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128
NASA systems engineering handbook. Draft
[NASA-TM-108702] p 2086 N93-21188
NASA program costs: Space missions require substantially more funding than initially estimated. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/NSIAD-93-97] p 2093 N93-21358
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-191992] p 2103 N93-21554
Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for Fiscal Year 1993. Part 3: Nondepartmental Witnesses
[S-HRG-102-716-PT-3] p 2093 N93-21676
National Aeronautics and Space Administration: Statement of Chester Lee, Spacehab, Inc. p 2093 N93-21677
National Aeronautics and Space Administration: Statement of Joanne Padron, American Institute of Aeronautics and Astronautics p 2093 N93-21678
National Aeronautics and Space Administration: Statement of Ralph J. Strnad, Sr., Secretary, Washington Area Metal Trades Council/Chief Steward, Goddard Space Flight Center p 2093 N93-21679
National Aeronautics and Space Administration: Statement of Miguel A. Hernandez, Jr., Hernandez Engineering Co. p 2094 N93-21680
National Aeronautics and Space Administration: Statement of Len Ricks, Council of Engineers and Scientists Organizations p 2094 N93-21681
National Aeronautics and Space Administration: Statement of the Space Science Working Group p 2094 N93-21682
NASA SBIR abstracts of 1990 phase 1 projects
[NASA-TM-108145] p 2087 N93-21794

NASA SPACE PROGRAMS
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 1: Plenary Session
[NASA-TM-108651] p 2085 N93-20329
Long duration human exposure to microgravity p 1802 N93-21073
NASA program costs: Space missions require substantially more funding than initially estimated. Report to the Chairman, Subcommittee on Investigations and Oversight, Committee on Science, Space, and Technology, House of Representatives
[GAO/NSIAD-93-97] p 2093 N93-21358
NASA space geodesy program: Catalogue of site information
[NASA-TM-4482] p 1999 N93-21374

NASTRAN
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Boeing Helicopters airframe finite element modeling p 1782 N93-21313

NATIONAL AEROSPACE PLANE PROGRAM
Turbulence modeling for hypersonic flight
[NASA-CR-192288] p 1760 N93-20235

NATIONAL AIRSPACE SYSTEM
National Airspace System: Air traffic control and airspace management operational concept NAS-SR-132
[DOT/FAA/SE-92/5] p 1779 N93-20164
Definitional mission for civil aviation master plan for Poland
[PB92-213974] p 1760 N93-21713

NATURAL GAS
The sensitivity of seismic responses to gas hydrates
[DE93-000216] p 1999 N93-21253
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
An evaluation of R/D needs based on cogeneration system operational experience
[PB93-114494] p 1987 N93-21455
Application of new experimental methods to pipeline stress corrosion cracking
[PB92-224575] p 1951 N93-21499
Molecular theory and computer simulation studies of natural and synthetic gas mixtures
[PB92-235696] p 1850 N93-21651
Public transportation alternative fuels: A perspective for small transportation operations
[PB92-120120] p 1866 N93-21716
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary
[PB92-182567] p 1867 N93-21717
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789
Technical comparison between Hythane, GNG and gasoline fueled vehicles
[DE93-005608] p 1994 N93-21834

NATURAL LANGUAGE (COMPUTERS)
FASTUS: A system for extracting information from natural-language text
[AD-A259435] p 2087 N93-20011
A parsing algorithm for non-deterministic context-sensitive languages p 2031 N93-20223
Unrestricted on-line parsing and transduction with graph structured stacks p 2031 N93-20224
Tomita's algorithm in practical applications p 2031 N93-20227
Bottom-up parallelization of Tomita's algorithm p 2031 N93-20229

NAVIER-STOKES EQUATION
Three-dimensional Navier-Stokes heat transfer predictions for turbine blade rows
[NASA-TM-105800] p 1897 N93-19969
A gridless Euler/Navier-Stokes solution algorithm for complex-aircraft applications
[NASA-TM-107727] p 1760 N93-19973
Stability of mixing layers
[NASA-CR-192225] p 1897 N93-19980
Numerical simulation of a high Mach number jet flow
[NASA-TM-105985] p 1898 N93-20057
Turbulence modeling for hypersonic flight
[NASA-CR-192288] p 1760 N93-20235
Numerical solution of three-dimensional unsteady viscous flows
[AD-A259464] p 1899 N93-20244
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
Research in computational fluid dynamics and analysis of algorithms
[NASA-CR-192309] p 1901 N93-20748
Some 2D test examples for the ISNaS incompressible code
[REPT-91-44] p 1901 N93-20752
Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753
Numerical computation of complex multi-body Navier-Stokes flows with applications for the integrated Space Shuttle launch vehicle
[NASA-CR-192297] p 1901 N93-20767
Use of the boundary element method in the resolution of the quasi-elliptic Navier-Stokes equations: Application to the calculation of a turbine flow
[ECL-91-13] p 1902 N93-20893
Numerical simulation of the internal aerodynamic in the combustion chamber of the reciprocating engines using a finite element method
[ECL-90-014] p 1915 N93-21005
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles
[MBB-FE-211-S-PUB-0481] p 1781 N93-21056
Aerothermodynamic properties of hypersonic flows over radiation-adiabatic surfaces
[DLR-FB-91-42] p 1763 N93-21761
Unsteady Navier-Stokes method for accelerated moving airfoils with separation
[DLR-FB-92-03] p 1763 N93-21763
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977

NAVIGATION INSTRUMENTS
Research on highly functional guidance and control technology p 1795 N93-20445
Autonomous rendezvous and capture system design p 1815 N93-21427
Autonomous rendezvous and docking: A commercial approach to on-orbit technology validation p 1817 N93-21440

NAVSTAR SATELLITES
Current and planned use of the Navstar Global Positioning System by NASA
[NASA-TM-108190] p 1779 N93-21190

NAVY
Joint services electronics program
[AD-A259179] p 1890 N93-20562
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580

NEAR FIELDS
Simulation of the merged spectrum technique for aligning planar phased-array antennas, part 1
[PB93-113629] p 1885 N93-21237
Certification plan for a planar near-field range used for high-performance phased-array testing
[PB92-213305] p 1885 N93-21493
Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957

NEAR INFRARED RADIATION
A cryogenic shutter for the VLT NIR camera
[MPE-237] p 1906 N93-20855
Configuration and construction of a free electron laser in near infrared at the superconducting electron accelerator in Darmstadt (Germany)
[ETN-93-93412] p 1911 N93-21175

NEGATIVE ELECTRON AFFINITY
Interface properties of wide bandgap semiconductor structures
[AD-A259416] p 2078 N93-20131

NEGATIVE IONS
Negative-ion formation in the explosives RDX, PETN, and TNT using the Reversal Electron Attachment Detection (READ) technique p 1773 N93-21910

NEPTUNE ATMOSPHERE
Interpretation of Voyager UVS observations of occultations by the atmosphere of Neptune
[NASA-CR-192131] p 2099 N93-20732

NETHERLANDS
Application of remote sensing for the water management in Drenthe (Netherlands)
[BCRS-91-42] p 1975 N93-21038

NETHERLANDS SPACE PROGRAM
The 1991-2000 National Remote Sensing Program
[BCRS-91-35] p 1975 N93-21205

NETS
Surface/surface intersection on a processor mesh
[RR-864-M] p 2038 N93-20943
Near net shape knitting of fiber glass and carbon for composites p 1836 N93-21145

NETWORK CONTROL
Knowledge-based consulting system for dynamic network security control
[ETN-93-93420] p 2028 N93-21069

NETWORKS
Commission 10: Continental networks. Subcommission United European Levelling Network (UELN) p 1969 N93-20962

NEURAL NETS
Probabilistic student modeling with knowledge space theory
[AD-A258622] p 2045 N93-19997
Incipient failure detection using wavelets
[AD-A259423] p 1913 N93-20004
Wavelet features for failure detection and identification in vibration systems
[AD-A259427] p 1914 N93-20007
Neural-network dedicated processor for solving competitive assignment problems
[NASA-CASE-NPO-17781-1-CU] p 2028 N93-20116
Signal phase pattern sensitive neural network system and method
[AD-D015571] p 2046 N93-20308
Comparison of artificial neural networks with a conventional heuristic technique for optimization problems
[AD-A259207] p 2046 N93-20552
Signal approximation with a wavelet neural network
[AD-A259081] p 1890 N93-20556

Neural networks for real-time sensory data processing and sensorimotor control
[AD-A259120] p 2046 N93-20557
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
The structure of circumstellar shells
[NASA-CR-192337] p 2096 N93-20757
Effect of design selection on response surface performance
[NASA-CR-192275] p 2038 N93-20895
Modeling and simulation of a formal neural network: Implementation on a 'Hypercube FPS T-40' parallel machine
[ETN-93-92688] p 2045 N93-21065
Multi-aperture vision system coupled to neural network processors
[AD-A259353] p 2047 N93-21243
One-class classifiers and their application to synthetic aperture radar target recognition
[DE93-000716] p 1886 N93-21769
Non-US artificial neural network research
[PB93-111508] p 2049 N93-21802
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831
Applications of neural networks in polymer simulations
[DE93-004110] p 1862 N93-21843
Use of neural networks in the analysis of complex systems
[DE93-003554] p 2049 N93-21847
Monitoring of vibrating machinery using artificial neural networks
[DE93-003566] p 2050 N93-21848
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
Recognition of partially occluded threat objects based on hybrid Hopfield neural network p 1777 N93-21939
Vibration monitoring with artificial neural networks
[DE93-003543] p 1952 N93-21992
Vibration monitoring of EDF rotating machinery using artificial neural networks
[DE93-003557] p 1952 N93-21993

NEUROLOGY
Measurement of behavioral thermoregulation
[PB92-217033] p 2024 N93-21046

NEURONS
Neural networks for real-time sensory data processing and sensorimotor control
[AD-A259120] p 2046 N93-20557

NEUTRAL BEAMS
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809

NEUTRAL BUOYANCY SIMULATION
Agglomeration of fractals in simulated reduced gravity p 1806 N93-21093

NEUTRAL CURRENTS
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758

NEUTRAL GASES
A role of neutral hydrogen in CHS plasmas with reheat and collapse and comparison with JIPP T-IIU tokamak plasmas
[NIFS-186] p 2073 N93-20763

NEUTRINOS
Gravitational metric deviation by supernova neutrino bursts
[PREPRINT-789] p 2096 N93-20849

NEUTRON ABSORBERS
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels
[DE93-003005] p 1857 N93-21985

NEUTRON ACTIVATION ANALYSIS
A review of the development of a luggage explosive detection system p 1765 N93-21862
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863
An approach to improving TNA EDS p 1765 N93-21864
PFNA technique for the detection of explosives p 1765 N93-21865
A pulsed fast-thermal neutron interrogation system p 1765 N93-21866
Radiological safety aspects of TNA deployment p 1770 N93-21893
Experience with explosive detection systems in airports p 1770 N93-21895
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941

NEUTRON BEAMS
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112

NEUTRON COUNTERS
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
A novel approach to design optimization of nuclear-based explosive detection systems p 1777 N93-21935
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937
Computer simulations and performance predictions for explosive detection systems p 1777 N93-21938

NEUTRON DIFFRACTION
Neutron study of crystal-field transitions in ErPO4
[DE93-004131] p 2081 N93-21719
Diffraction measurements of residual stress in titanium matrix composites
[DE93-003855] p 1844 N93-21838
High-energy spin-density-wave correlated fluctuations in paramagnetic Cr + 5 at. percent V
[DE93-003165] p 1857 N93-21958
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978
Solutions for implementing time-of-flight techniques in low-angle neutron scattering, as realized on the Low-Q Diffractometer at Los Alamos
[DE93-003702] p 2065 N93-21998

NEUTRON EMISSION
TFTR experimental data analysis collaboration
[DE93-002365] p 2075 N93-21483

NEUTRON IRRADIATION
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon
[DE93-003104] p 2080 N93-21240
Computer simulations and performance predictions for explosive detection systems p 1777 N93-21938

NEUTRON SCATTERING
Neutron study of crystal-field transitions in ErPO4
[DE93-004131] p 2081 N93-21719
Solutions for implementing time-of-flight techniques in low-angle neutron scattering, as realized on the Low-Q Diffractometer at Los Alamos
[DE93-003702] p 2065 N93-21998

NEUTRON SOURCES
Explosive detection system based on Electronic Neutron Generator (ENG) p 1766 N93-21870
A novel approach to design optimization of nuclear-based explosive detection systems p 1777 N93-21935
Solutions for implementing time-of-flight techniques in low-angle neutron scattering, as realized on the Low-Q Diffractometer at Los Alamos
[DE93-003702] p 2065 N93-21998

NEUTRONS
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809
Dense plasma focus powered by flux compression generators
[DE93-003781] p 2076 N93-21837
Neutron Elastic Scatter (NES) for Explosives Detection Systems (EDS) p 1766 N93-21868
Neutron-proton bremsstrahlung experiments
[DE93-003737] p 2065 N93-21968

NEW MEXICO
Meteorological events in Arizona and New Mexico during Swamp
[PB93-100410] p 2013 N93-21227

NEWTON METHODS
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
A truncated SQP algorithm for large scale nonlinear programming problems
[PB92-226299] p 2039 N93-21045

NEWTON-RAPHSON METHOD
Spatial formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20690
Time dependent formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20691

NEWTONIAN FLUIDS
Application of silicone fluid rheogoniometer measurements to despin moment studies in a spinning and coning cylinder
[AD-A259270] p 1901 N93-20599

NICKEL
An electrocatalytic cathode device and a method for making such a cathode
[AD-D015586] p 1890 N93-20396
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497

NICKEL ALLOYS
Fatigue in single crystal nickel superalloys
[AD-A259191] p 1856 N93-20275
Deformation of TiNi shape memory alloy under thermomechanical cycles p 1858 N93-20695
Non-equilibrium structures induced by ion irradiation in Ni4Mo
[DE93-004193] p 2063 N93-21720
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H
[DE93-004064] p 1876 N93-21999

NICKEL CADMIUM BATTERIES
Research on large capacity Ni-Cd batteries p 1799 N93-20476
The 1992 NASA Aerospace Battery Workshop
[NASA-CP-3192] p 1983 N93-20490
NASA Center update: Goddard Space Flight Center p 1983 N93-20491
Marshall Space Flight Center battery activity p 1983 N93-20494
COMSAT's destructive physical analysis of aerospace nickel-cadmium cells for NASA/Goddard Space Flight Center p 1983 N93-20495
Capacity fade in nickel cadmium and nickel hydrogen cells p 1984 N93-20499
Air Force Ni-Cd cell qualification program update p 1984 N93-20505
Preliminary results: Root cause investigation of orbital anomalies and failures in NASA standard 50 ampere-hour nickel-cadmium batteries p 1985 N93-20508
The JPL/NASA/TAMU nickel-cadmium battery model development status p 1985 N93-20509
NiCd cell reliability in the mission environment p 1985 N93-20510
Cycle life status of SAFT VOS nickel-cadmium cells p 1985 N93-20511
Battery Review Board p 1986 N93-20519
Development of nickel-metal hydride cell p 1986 N93-20521

NICKEL HYDROGEN BATTERIES
Development of satellite borne nickel hydrogen battery experiment equipment for ETS-6 p 1793 N93-20435
Research on Ni-H2 batteries p 1800 N93-20477
The 1992 NASA Aerospace Battery Workshop
[NASA-CP-3192] p 1983 N93-20490
Lewis Research Center battery overview p 1983 N93-20493
Marshall Space Flight Center battery activity p 1983 N93-20494
Mechanisms for capacity fading in the NiH2 cell and its effects on cycle life p 1983 N93-20496
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497
Nickel hydrogen capacity loss p 1983 N93-20498
Capacity fade in nickel cadmium and nickel hydrogen cells p 1984 N93-20499
NiH2 capacity fade during early cycling p 1984 N93-20500
Characteristics of storage related capacity loss in Ni/H2 cells
[STD/92-118] p 1984 N93-20501
Nickel hydrogen battery cell storage matrix test p 1984 N93-20502
Capacity recovery after storage negatively precharged nickel hydrogen cells p 1984 N93-20503
Charge retention test experiences on Hubble Space Telescope nickel-hydrogen battery cells p 1984 N93-20504
The 2.5 inch nickel-hydrogen development p 1985 N93-20512
Hubble Space Telescope nickel hydrogen battery system briefing p 1985 N93-20513
An overview of eight years of activity developing French nickel-hydrogen technology p 1985 N93-20514
Reliability study of the NiH2 strain gage p 1908 N93-20515
High specific energy, high capacity nickel-hydrogen cell design p 1986 N93-20516
Nickel-hydrogen CPV battery update p 1986 N93-20518
Development of nickel-metal hydride cell p 1986 N93-20521
Nickel metal hydride, a flight experiment p 1986 N93-20522
Phase-change composites TES for nickel-hydrogen batteries p 1987 N93-20524

NICKEL OXIDES
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497
The JPL/NASA/TAMU nickel-cadmium battery model development status p 1985 N93-20509

NIGER
End-to-end tests of satellite data p 1953 N93-21571

NIGHT
Nocturnal temperature forecasting
[MISC-SER-A-126] p 2012 N93-20888

NIGHT VISION
Night vision goggle training: Development and production of six video programs
[AD-A258529] p 2025 N93-20050

NITRIDES
New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986
NITRIDING
New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986
NITROGEN
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863
The nitrogen camera: A new explosive detector p 1766 N93-21867
Neutron Elastic Scatter (NES) for Explosives Detection Systems (EDS) p 1766 N93-21868
Design of a high current proton accelerator p 1766 N93-21873
An H(-) ion source for resonant gamma production p 1766 N93-21874
Selective gamma ray resonant absorption for explosives detection p 1769 N93-21887
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
NITROGEN ATOMS
Accurate procedure for calibrating the CAO optical hygrometer
[AP-30] p 1906 N93-20927
NITROGEN COMPOUNDS
New compounds obtained by LPCVD in the B-C-N chemical system
[REPT-921-430-111] p 1849 N93-20933
NITROGEN ISOTOPES
An explosive detection system for screening luggage with high energy x rays p 1767 N93-21877
NITROGEN OXIDES
Adiabatic radiant hot air burner
[PB93-114486] p 1987 N93-21220
Diffusion and reaction layer structure and NOx reduction in turbulent gas flames
[PB93-114353] p 1850 N93-21456
NITROGLYCERIN
A GC/ECD approach for the detection of explosives and taggants p 1775 N93-21924
NOAA SATELLITES
Earth radiation and cloud cover analysis using NOAA satellite data p 1956 N93-21587
Detection of polar stratospheric clouds from satellite p 1957 N93-21591
NOISE INTENSITY
Effect of personal and situational variables on noise annoyance: With special reference to implications for en route noise
[NASA-CR-189676] p 2060 N93-21317
Analysis of aircraft noise levels in the vicinity of start-of-takeoff roll at Baltimore-Washington International Airport
[PB92-221605] p 1991 N93-21501
NOISE MEASUREMENT
Calculation of noise emission caused by jet aircraft during takeoff, approach and horizontal flyover
[DLR-MITT-91-15] p 2061 N93-21368
NOISE REDUCTION
Experiment and modeling of the noise reduction for a turbulent supersonic jet by means of a nozzle with a sudden enlargement
[MPIS-15/1991] p 2060 N93-21024
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210
Calculation of noise emission caused by jet aircraft during takeoff, approach and horizontal flyover
[DLR-MITT-91-15] p 2061 N93-21368
NOISE TEMPERATURE
Study of the gain factor (G/T) of an active antenna
[CNES-NT-130] p 1884 N93-21036
NONADIABATIC CONDITIONS
Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 1841 N93-21511
NONDESTRUCTIVE TESTS
Method and apparatus for determination of material residual stress
[NASA-CASE-GSC-13451-1] p 1921 N93-20118
Nondestructive evaluation of composites using infrared imaging
[AD-A259412] p 1831 N93-20123
Acoustic wave propagation in an adhesive bond model with degrading interfacial layers
[AD-A258684] p 1918 N93-20373
Experiment and modeling of air-coupled ultrasonic excitation of plate waves p 1936 N93-20679
Nondestructive evaluation of surface-breaking cracks in composite plates p 1936 N93-20680
Nondestructive inspection of in-service aircraft
[ETN-93-93059] p 1763 N93-20928
Noncontact nondestructive tests
[ETN-93-93060] p 1919 N93-20929
The holographic interferometry: An industrial tool
[REPT-921-430-110] p 1906 N93-20932
Infrared imaging of fibre reinforced plastic composites p 1838 N93-21162
Detection of incipient defects in cables by partial discharge signal analysis
[PB92-222744] p 1919 N93-21199
Testing and characterization of composite materials by Compton tomodensitometry
[REPT-921-430-107] p 1840 N93-21458
Photons in - photons out: Non-destructive inspection of containers using x ray and gamma ray techniques p 1767 N93-21875
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies
[DE93-002906] p 1919 N93-21956
An acousto-ultrasonic NDE technique for monitoring material anisotropy
[DE93-002994] p 1919 N93-21982
NONEQUILIBRIUM FLOW
Calculation of hypersonic, viscous, non-equilibrium flows around reentry bodies using a coupled boundary layer/Euler method
[MBB-LME-211-S-PUB-0487] p 1762 N93-21058
NONLINEAR EQUATIONS
The role of least squares in variational principles of elasticity p 1926 N93-20619
NONLINEAR FILTERS
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265
NONLINEAR OPTICS
Nonlinear fiber optics
[AD-A259363] p 2068 N93-21245
NONLINEAR PROGRAMMING
Optimal sampling plans for items representing two population groups
[AD-A259429] p 2057 N93-20009
Elements of computer-aided tolerance analysis
[PAPER-C-1-3] p 2035 N93-20826
A truncated SQP algorithm for large scale nonlinear programming problems
[PB92-226299] p 2039 N93-21045
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831
NONLINEAR SYSTEMS
The 1991 lectures in complex systems
[AD-A259428] p 2050 N93-20008
The overall response of composite materials undergoing large deformations
[AD-A259278] p 1832 N93-20606
A non-linear phenomenon in the dynamic response of metallic and composite structures p 1926 N93-20620
Numerical stabilities aspects of cable dynamics simulation p 1931 N93-20650
An efficient method for the reliability analysis of geometric nonlinear frame structures p 1931 N93-20651
Nonlinear analysis of plates by the finite element method p 1939 N93-20698
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
Some observations of chaotic motion of satellites with damping in an elliptic orbit p 1826 N93-20726
Nonlinearization of nonlinear systems under external and parametric random excitations p 1945 N93-20730
Explicit representations of Lyapunov functions for stable analytic systems
[RR-402] p 2051 N93-20737
C-integrable nonlinear PDE's. 1
[PREPRINT-787] p 2051 N93-20805
C-integrable nonlinear PDE's. 2
[PREPRINT-788] p 2053 N93-20874
Nonlinear probabilistic finite element models of laminated composite shells
[NASA-CR-191069] p 1833 N93-20919
Energy equation for beam lateral buckling
[PB92-225390] p 1946 N93-21019
Post-buckling analysis of thin-walled channel sections undergoing local and distortional buckling
[PB93-112928] p 1947 N93-21236
Robust controller design: A bounded-input-bounded-output worst-case approach
[AD-A259367] p 2047 N93-21246
Nonlinear ocean waves
[AD-A259335] p 2019 N93-21260
A family of asymptotically stable control laws for flexible robots based on a passivity approach
[NASA-CR-191870] p 2048 N93-21354
NONLINEARITY
Improvements to a method for the geometrically nonlinear analysis of compressively loaded stiffened composite panels
[NASA-CR-192183] p 1920 N93-20034
Nonlinear dynamics of global atmospheric and Earth system processes p 2001 N93-20076
On the stability of nonlinear viscous vortices in three-dimensional boundary layers
[NASA-CR-189637] p 1899 N93-20254
Material nonlinear analysis of composites p 1929 N93-20641
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713
Description of wrinkles in membranes using nonlinear finite plate elements
[ETN-93-92565] p 1945 N93-20879
SSG 4.120: Non-linear adjustment p 1973 N93-20986
Nonlinear ocean waves
[AD-A259335] p 2019 N93-21260
Automatic design of a Maglev controller in state space
[AD-A259336] p 2047 N93-21261
Operator-assisted planning and execution of proximity operations subject to operational constraints p 1817 N93-21436
Development of a non-linear simulation for generic hypersonic vehicles - ASUHS1
[NASA-CR-192710] p 1783 N93-22003
NONNEWTONIAN FLUIDS
Application of silicone fluid rheogoniometer measurements to despin moment studies in a spinning and coning cylinder
[AD-A259270] p 1901 N93-20599
Non-Newtonian temperature and pressure effects of a powder lubricant slurry in a rotating hydrostatic step bearing
[AD-A259325] p 1916 N93-21832
NONUNIFORM MAGNETIC FIELDS
A synergetic treatment of the vortices behaviour of a plasma with viscosity
[NIFS-166] p 2070 N93-20249
NORMAL DENSITY FUNCTIONS
Accurate test limits with estimated parameters
[MEMO-1024] p 1877 N93-21397
NORMS
Distance estimation and collision prediction for on-line robotic motion planning
[NASA-CR-192737] p 2049 N93-21390
NORTH AMERICA
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present
[PB93-112225] p 2013 N93-21229
NORTH SEA
Mapping of satellite-derived sea surface temperatures at high resolution in cloudy regions p 1963 N93-21630
NOTCH STRENGTH
The use of finite element codes for cyclic stress-strain analysis p 1950 N93-21340
NOTCH TESTS
Probabilistic assessment of machine parts from Kymenite, austempered ductile iron p 1923 N93-20341
Cyclic material properties at high strain ranges beyond the standard design codes p 1925 N93-20357
Simplified analysis of elastic-plastic strain concentration in notched components under cyclic loading p 1950 N93-21338
The use of finite element codes for cyclic stress-strain analysis p 1950 N93-21340
Edge delamination of composite laminates p 1842 N93-21519
NOWCASTING
Joint Typhoon Warning Center (JTWC92) model
[AD-A258646] p 2011 N93-20586
NOZZLE FLOW
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
NOZZLE GEOMETRY
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
Experiment and modeling of the noise reduction for a turbulent supersonic jet by means of a nozzle with a sudden enlargement
[MPIS-15/1991] p 2060 N93-21024
NUCLEAR ASTROPHYSICS
Experimental nuclear physics
[DE93-004950] p 2063 N93-21705
Phenomenological correlations in nuclear structure: An opportunity for nuclear astrophysics and a challenge to theory
[DE93-003470] p 2098 N93-21775

NUCLEAR DEVICES
Radiological safety regulation and licensing of nuclear-based explosive detection systems p 1770 N93-21894
A novel approach to design optimization of nuclear-based explosive detection systems p 1777 N93-21935
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937
Computer simulations and performance predictions for explosive detection systems p 1777 N93-21938
NUCLEAR FUSION
Discriminant analysis of plasma fusion data [NIFS-156] p 2073 N93-20761
Research relative to the heavy isotope spectrometer telescope experiment [NASA-CR-192357] p 2097 N93-21196
NUCLEAR MAGNETIC RESONANCE
NMR study of triazone compound formation p 1839 N93-21165
The use of 2D NMR spectroscopy in the analysis of isomeric polyamides p 1839 N93-21166
Liquid explosives screening system p 1771 N93-21899
Improved NMR signatures of explosives p 1771 N93-21900
Application of magnetic resonance to explosives detection p 1771 N93-21901
Consideration of untried magnetic resonance techniques for possible baggage analysis p 1771 N93-21903
NUCLEAR PHYSICS
Nuclear studies with intermediate energy probes [DE93-002785] p 2062 N93-21481
Experimental nuclear physics [DE93-004950] p 2063 N93-21705
Phenomenological correlations in nuclear structure: An opportunity for nuclear astrophysics and a challenge to theory [DE93-003470] p 2098 N93-21775
NUCLEAR POWER PLANTS
Detection of incipient defects in cables by partial discharge signal analysis [PB92-222744] p 1919 N93-21199
Software quality assurance: Documentation and reviews [PB93-113694] p 2040 N93-21221
Analysis of failure and maintenance experiences of motor operated valves in a Finnish nuclear power plant [VTT-TIED-1322] p 1916 N93-21658
High integrity software standards and guidelines [PB93-114619] p 2042 N93-21687
Use of neural networks in the analysis of complex systems [DE93-003554] p 2049 N93-21847
Vibration monitoring with artificial neural networks [DE93-003543] p 1952 N93-21992
Vibration monitoring of EDF rotating machinery using artificial neural networks [DE93-003557] p 1952 N93-21993
NUCLEAR POWER REACTORS
Software quality assurance: Documentation and reviews [PB93-113694] p 2040 N93-21221
NUCLEAR QUADRUPOLE RESONANCE
Explosives detection by pure N-14 NQR p 1770 N93-21897
NUCLEAR RADIATION
A prototype novel sensor for autonomous, space based robots, phase 2 [NASA-CR-191344] p 1913 N93-19978
NUCLEAR REACTIONS
The N* program at CEBAF [DE93-000829] p 1880 N93-20019
A review of the associated particle imaging technique [DE93-002238] p 2061 N93-20023
Survey of nuclear activations for intense proton and deuteron beams [AD-A259258] p 2061 N93-20604
Principles of nuclear-based explosive detection systems p 1765 N93-21861
NUCLEAR ROCKET ENGINES
Nuclear thermal rocket entry heating and thermal response preliminary analysis [DE93-002460] p 1830 N93-21728
NUCLEAR STRUCTURE
IDA gamma ray laser: Investigation of the feasibility of developing a laser using nuclear transitions [AD-A259476] p 1909 N93-20246
Nuclear studies with intermediate energy probes [DE93-002785] p 2062 N93-21481
Phenomenological correlations in nuclear structure: An opportunity for nuclear astrophysics and a challenge to theory [DE93-003470] p 2098 N93-21775
NUCLEAR WEAPONS
Precision linear shaped charge severance of graphite-epoxy materials [SAND-92-0610C] p 1865 N93-20151
NUCLEATION
Controlled nucleation and growth of semiconducting diamond [AD-A258541] p 2078 N93-20056
Cluster formation and evolution on semiconductor surface [AD-A259190] p 2078 N93-20274
Growth, characterization and device development in monocrystalline diamond films [AD-A259099] p 2079 N93-20407
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development [AD-A259177] p 2079 N93-20561
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts [AD-A259247] p 2080 N93-20581
NMR study of triazone compound formation p 1839 N93-21165
NUCLEI (NUCLEAR PHYSICS)
Improved NMR signatures of explosives p 1771 N93-21900
NUCLEONS
Multi-jet production rates in deep-inelastic muon-proton scattering [DE93-004410] p 2065 N93-21854
NUCLIDES
Survey of nuclear activations for intense proton and deuteron beams [AD-A259258] p 2061 N93-20604
NULL ZONES
Real time data reformatting using the TMS320C25 development system [AD-A259187] p 1882 N93-20273
NUMERICAL ANALYSIS
Interactive access and management for four-dimensional environmental data sets using McIDAS p 1965 N93-20070
Basic studies of baroclinic flows p 2003 N93-20073
Climatic variation of storms p 2006 N93-20084
The structure of particle cloud premixed flames p 1853 N93-20202
Acoustic wave propagation in an adhesive bond model with degrading interfacial layers [AD-A258684] p 1918 N93-20373
Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 1841 N93-21511
Numerical finite element analysis of damage using Monte Carlo techniques p 1842 N93-21522
Computational mechanics at Los Alamos National Laboratory [DE93-003725] p 2042 N93-21735
Bibliography Group T-3, 1955 - 1991 [DE93-002851] p 1904 N93-21771
NUMERICAL CONTROL
Guided Weapons Division Spin Table Facility: Spin table control system [AD-A259214] p 1788 N93-20555
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713
Modelling robot trajectory errors using time series p 1942 N93-20716
Grasp admittance center. A concept p 1918 N93-20720
Tolerancing for function in a CAD/CAM environment [PAPER-C-1-1] p 2034 N93-20824
NUMERICAL FLOW VISUALIZATION
Multiple-body simulation with emphasis on integrated Space Shuttle vehicle [NASA-CR-192289] p 1821 N93-20234
NUMERICAL STABILITY
Stability of mixing layers [NASA-CR-192225] p 1897 N93-19980
NUMERICAL WEATHER FORECASTING
NASA/MSFC FY92 Earth Science and Applications Program Research Review [NASA-CP-3184] p 2002 N93-20067
Global rainfall monitoring by SSM/I p 2003 N93-20069
Cloud radiative forcing effects on observed and simulated global energetics p 2003 N93-20072
Research on diabatic initialization p 2004 N93-20075
Nonlinear dynamics of global atmospheric and Earth system processes p 2001 N93-20076
Tropical Pacific moisture variability p 2007 N93-20093
A satellite-borne radar wind sensor (RAWS) p 2008 N93-20096
An investigation of the role of current and future remote sensing data systems in numerical meteorology p 2010 N93-20108
A procedure to reduce northward drift of tropical storms in a numerical model [PB92-226406] p 2013 N93-21290
Comparison of monthly precipitation analyses derived from conventional measurements, satellite estimates and model results p 1958 N93-21599
How real-time data assimilation benefits weather and climate studies through the validation, quality control and synthesis of remotely sensed data p 1960 N93-21610
Utilization of remote sensing data at the Deutscher Wetterdienst p 1962 N93-21621
NUSSELT NUMBER
Enhanced heat transfer in ribbed ducts using vortex generators [PB93-114320] p 1902 N93-21219
NUTRIENTS
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990 [PB93-116622] p 2019 N93-21688
NUTRITION
Nutrition and hydration status of aircrew members consuming the food packet, survival, general purpose, improved during a simulated survival scenario [AD-A258744] p 2022 N93-20384
NYQUIST FREQUENCIES
Coherent interference tests for wind profilers [PB92-227248] p 2013 N93-21202
NYSTAGMUS
Eye movements under altered gravitoinertial forces p 1809 N93-21111

O

OAO
Timing analysis of low-energy gamma ray emission from galactic compact objects using the Gamma Ray Observatory [NASA-CR-192253] p 2102 N93-20747
OBJECT PROGRAMS
Object-oriented design. MECANO: A method and an environment for object-oriented applications construction [ETN-93-92682] p 2038 N93-20921
OBJECT-ORIENTED PROGRAMMING
Ada implementation of an object data repository [AD-A259144] p 2087 N93-20002
A framework for corporate implementation of object-oriented software development [AD-A258717] p 2032 N93-20383
Geographic data model: A survey p 1968 N93-20540
Version and transaction management in OSMagic: An object-oriented database implementation of the Magic VLSI layout design tool [AD-A259138] p 2033 N93-20574
A synthetic environment flight simulator: The AFIT virtual cockpit [AD-A259220] p 1788 N93-20576
ProperCAD: A portable object-oriented parallel environment for VLSI CAD [NASA-CR-192308] p 2033 N93-20603
Object-oriented design. MECANO: A method and an environment for object-oriented applications construction [ETN-93-92682] p 2038 N93-20921
Development of semantic metamodels for object orientation [REPT-91-83] p 2038 N93-21037
Design and implementation of LOGRES [REPT-92-040] p 2039 N93-21184
Database language SQL: Integrator of CALS data repositories [PB93-113637] p 2040 N93-21239
Development of visual programming techniques to integrate theoretical modeling into the scientific planning and instrument operations environment of ISTP [NASA-CR-192707] p 2042 N93-22004
OBSERVATION
Surface observation climatic summaries [AD-A258589] p 2001 N93-19964
History of geodesy p 1975 N93-20997
OBSERVATORIES
Report of the Kakioka Magnetic Observatory. Geoelectricity: Kakioka, Memambetsu, Kanoya [REPT-160] p 2001 N93-21947
OBSTACLE AVOIDANCE
Distance estimation and collision prediction for on-line robotic motion planning [NASA-CR-192737] p 2049 N93-21390

OCCLUSION
Recognition of partially occluded threat objects based on hybrid Hopfield neural network p 1777 N93-21939
OCCULTATION
Planetary astronomy research
[NASA-CR-192134] p 2099 N93-21643
OCCUPATION
Science and Engineering programs: On target for women
[PB93-116499] p 2084 N93-21797
OCEAN BOTTOM
The sensitivity of seismic responses to gas hydrates
[DE93-000216] p 1999 N93-21253
Advanced design for a seafloor Gamma Measurement Data Collection System
[PB93-105013] p 2020 N93-21793
OCEAN CURRENTS
SSG 5.99: Tidal friction and the Earth's rotation p 1974 N93-20992
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
World ocean circulation experiment. WOCE results of an oxygen/salinity comparison cruise on the R/VVernadsky
[PB93-116523] p 2018 N93-21214
Observations of turbulence, internal waves, and background flows. An inquiry into the relationships between scales of motion
[AD-A259361] p 2019 N93-21244
Mean seasonal cycles and interannual variations at 0 deg, 110 deg W and 0 deg, 140 deg W during 1980-1991
[PB93-114726] p 2014 N93-21388
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990)
[PB93-116598] p 2019 N93-21389
Finding fish way by using remote sensing p 1979 N93-21546
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641
OCEAN DATA ACQUISITIONS SYSTEMS
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990)
[PB93-116598] p 2019 N93-21389
OCEAN DYNAMICS
National Oceanographic Data Center inventory of physical oceanographic profiles: Global distributions by year for all countries
[PB93-116531] p 2019 N93-21476
Use of ERS-1 SAR data in numerical sea ice modeling p 1957 N93-21592
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641
OCEAN MODELS
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting
[ESA-ISY-1-VOL-1] p 1953 N93-21569
Use of ERS-1 SAR data in numerical sea ice modeling p 1957 N93-21592
A 2 x CO2 experiment with prescribed changes in sea surface temperature p 1958 N93-21598
Validation of ERS-1 synthetic aperture radar for imaging ocean waves: First results p 1961 N93-21616
Satellite data assimilation in the wave model 3G-WAM p 1965 N93-21638
Global validation of the wave model WAM using Geosat wave height data p 1965 N93-21639
OCEAN SURFACE
Synoptic/planetary-scale interactions and blocking over the North Atlantic Ocean p 2007 N93-20091
Nonlinear ocean waves
[AD-A259335] p 2019 N93-21260
Meteorological conditions over the South Atlantic Ocean during July and August of 1991
[PB92-235738] p 2015 N93-21503
Can measurements in the O2A- and B-bands be used for atmospheric correction of satellite measurements over the ocean? p 1955 N93-21581
Satellite data assimilation in the wave model 3G-WAM p 1965 N93-21638
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641
Remote sensing: Environmental effects of surface films
[AD-A258571] p 1980 N93-21754
OCEAN TEMPERATURE
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
Mean seasonal cycles and interannual variations at 0 deg, 110 deg W and 0 deg, 140 deg W during 1980-1991
[PB93-114726] p 2014 N93-21388
Finding fish way by using remote sensing p 1979 N93-21546
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990
[PB93-116622] p 2019 N93-21688
OCEANOGRAPHIC PARAMETERS
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990)
[PB93-116598] p 2019 N93-21389
National Oceanographic Data Center inventory of physical oceanographic profiles: Global distributions by year for all countries
[PB93-116531] p 2019 N93-21476
OCEANOGRAPHY
A horizontal refractivity depiction product: An evaluation
[AD-A258738] p 1966 N93-20401
SSG 1.102: Vertical reference systems p 1970 N93-20966
SSG 1.105: GPS kinematic positioning methods and applications p 1970 N93-20967
SSG 5.99: Tidal friction and the Earth's rotation p 1974 N93-20992
World ocean circulation experiment. WOCE results of an oxygen/salinity comparison cruise on the R/VVernadsky
[PB93-116523] p 2018 N93-21214
National Oceanographic Data Center inventory of physical oceanographic profiles: Global distributions by year for all countries
[PB93-116531] p 2019 N93-21476
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting
[ESA-ISY-1-VOL-1] p 1953 N93-21569
Estimating chlorophyll concentrations from Thematic Mapper data p 1954 N93-21577
Validation of ERS-1 synthetic aperture radar for imaging ocean waves: First results p 1961 N93-21616
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990
[PB93-116622] p 2019 N93-21688
OCEANS
Simulation of clear-sky outgoing longwave radiation over the oceans using operational analyses p 1956 N93-21586
Protecting the nation's wetlands, oceans, and watersheds: An overview of programs and activities
[PB93-105609] p 1992 N93-21655
ODORS
Review on safety validation test p 1802 N93-20488
OFFGASSING
Review on safety validation test p 1802 N93-20488
Explosive vapor emission p 1772 N93-21905
OHMIC DISSIPATION
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758
OIL RECOVERY
The effect of lamination angle on polymer retention
[DE93-004304] p 1861 N93-21722
OIL SLICKS
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536
OLFACTORY PERCEPTION
Explosives search dogs p 1776 N93-21933
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943
OLIGOMERS
NMR study of triazone compound formation p 1839 N93-21165
ON-LINE PROGRAMMING
Unrestricted on-line parsing and transduction with graph structured stacks p 2031 N93-20224
ON-LINE SYSTEMS
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
Contribution to computer arithmetic
[ETN-93-92680] p 2053 N93-20901
User's guide to the on-line bibliographic reference system for the NIST process planning testbed
[PB92-226307] p 2091 N93-21012
Computer Security Bulletin Board System: User's guide
[PB93-113553] p 2029 N93-21255
Databases available in the Research Information Center of the National Institute of Standards and Technology
[PB93-114478] p 2092 N93-21387
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940
OPERATING COSTS
Public transportation alternative fuels: A perspective for small transportation operations
[PB92-120120] p 1866 N93-21716
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary
[PB92-182567] p 1867 N93-21717
OPERATING SYSTEMS (COMPUTERS)
CTOS course
[NASA-CR-191866] p 2047 N93-21204
OPERATING TEMPERATURE
Advanced industrial materials. An overview p 1845 N93-20623
OPERATIONAL AMPLIFIERS
Development of radiation resistant linear IC (equivalent to mu PC 806) p 1798 N93-20468
OPERATIONAL HAZARDS
Report of the SSME assessment team
[NASA-TM-108217] p 1830 N93-21645
OPERATOR PERFORMANCE
Requirements for an automated human factors, manpower, personnel, and training (HMPT) planning tool
[AD-A258531] p 2026 N93-21753
OPERATORS (MATHEMATICS)
Study of the generalized parametric oscillator
[PREPRINT-815] p 2059 N93-21178
Two-parameter quantum groups
[PREPRINT-820] p 2060 N93-21182
Fuzzy set methods for object recognition in space applications
[NASA-CR-191986] p 2041 N93-21563
OPHIUCHI CLOUDS
A study of the large-scale infrared emission from a selected dark cloud
[NASA-CR-192263] p 1998 N93-20755
OPTICAL COMMUNICATION
Microwave vs optical crosslink study
[NASA-CR-192207] p 1879 N93-19989
Reduced electrical bandwidth receivers for direct detection 4-ary PPM optical communication intersatellite links
[NASA-CR-192310] p 1880 N93-19993
Research on intersatellite laser communication p 1790 N93-20419
Review on optical elements for intersatellite laser communication p 1798 N93-20465
Interferometric optical fiber data link
[AD-D015581] p 2067 N93-20797
Optoelectronics research in the former Soviet Union
[PB93-111516] p 2069 N93-21804
OPTICAL COMPUTERS
Coincident pulse techniques for hybrid electronic optical computer systems
[AD-A258692] p 2028 N93-20375
OPTICAL CORRELATORS
Optical correlators for automated rendezvous and capture p 1813 N93-21416
Intelligent systems technology infrastructure for integrated systems p 1815 N93-21424
OPTICAL DATA PROCESSING
Coincident pulse techniques for hybrid electronic optical computer systems
[AD-A258692] p 2028 N93-20375
The first Census Optical Character Recognition System Conference
[PB92-238542] p 2092 N93-21504
OPTICAL DENSITY
Dry immunochemical sensor for the detection of PETN vapor p 1776 N93-21930

OPTICAL DISKS
Research on satellite-borne high speed data recorder p 1795 N93-20449
Handling and using information systems with new technology
[PNR-90910] p 2090 N93-20734
OPTICAL EQUIPMENT
High-bandwidth, high-dynamic-range, analog optical guided-wave systems for physics instrumentation
[DE93-001619] p 2066 N93-20022
Design and analysis of a fast, two-mirror soft-x-ray microscope
[NASA-CR-191440] p 2067 N93-20316
The first Census Optical Character Recognition System Conference
[PB92-238542] p 2092 N93-21504
OPTICAL FIBERS
Advances in laser diodes for pyrotechnic applications p 1865 N93-20146
Method and apparatus for controlling internal rotation of principal axes in fabrication of birefringent fibers
[AD-D015611] p 2067 N93-20397
Interferometric optical fiber data link
[AD-D015581] p 2067 N93-20797
Spectroscopic investigations of bending and microbending effects in single mode optical fibre: A feasibility study
[NPL-QU-90] p 1946 N93-20930
Effect of gravity on phase separation and crystallization in a heavy metal fluoride glass p 1810 N93-21118
Nonlinear fiber optics
[AD-A259363] p 2068 N93-21245
Optical waveguides by ion exchange
[AD-D015564] p 2068 N93-21248
Technical digest-symposium on optical fiber measurements, 1992
[PB93-102259] p 2068 N93-21505
Low loss glass and optical fibers therefrom
[AD-D015567] p 1862 N93-21829
Optical fiber fluorosensor
[NASA-CASE-LAR-14525-1-CU] p 2069 N93-22008
OPTICAL HETERODYNING
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars
[AD-A259168] p 1884 N93-20597
OPTICAL MATERIALS
Laser damage in thin film optical coatings
[AD-A259425] p 1909 N93-20005
Design and analysis of a fast, two-mirror soft-x-ray microscope
[NASA-CR-191440] p 2067 N93-20316
OPTICAL MEASUREMENT
Interferometric JFTOT tube deposit measuring device
[AD-D015599] p 1866 N93-20247
Embedded fiber optic acoustic sensors
[AD-D015568] p 2060 N93-21249
Technical digest-symposium on optical fiber measurements, 1992
[PB93-102259] p 2068 N93-21505
Optical constants and scattering factors from reflectivity measurements: 50 eV to 5 keV
[DE93-003750] p 2068 N93-21674
OPTICAL MEASURING INSTRUMENTS
Smart materials p 1845 N93-20624
Data handling in telescience experiments using the Prototype Optical Diagnostic Instrument (PODI)
[NLR-TP-90327-U] p 2090 N93-20917
Development of a multi-sensor in situ fiber optic fluorometer
[DE93-004646] p 1995 N93-21975
OPTICAL PATHS
Theory and performance of the WPL Crosswind Profiler Model 2
[PB93-116606] p 2014 N93-21452
OPTICAL PROPERTIES
Review on upgrading efficiency of silicon solar battery cells p 1798 N93-20466
Growth and characterization of binary and pseudo-binary 3-5 compounds exhibiting non-linear optical behavior. Undergraduate research opportunities in microgravity science and technology
[NASA-CR-192143] p 2068 N93-21363
The influence of high clouds on climate p 1956 N93-21588
Estimating the vertical dimension of convective cloudiness over the polar ocean from AVHRR data p 1956 N93-21590
OPTICAL RADAR
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984
Infrared backscatter climatology and MACAWS p 2009 N93-20098
Development of a 100 mJ, 5 Hz, flashlamp-pumped, Cr,Tm:YAG coherent lidar transmitter p 1912 N93-20100
Multi-center Airborne Coherent Atmospheric Wind Sensor (MACAWS) p 1913 N93-20101
Aerosol chemistry in GLOBE p 2009 N93-20102
Computer modeling of pulsed CO2 lasers for lidar applications p 1913 N93-20106
Research on advanced Earth observing sensors p 1790 N93-20416
Demonstration of a 532 nm direct detection imaging laser radar using a Digicon receiver
[AD-A259226] p 1883 N93-20578
Coherent Doppler lidar for automated space vehicle rendezvous, stationkeeping and capture p 1812 N93-21408
Comparison of the efficiencies of lidar techniques for atmospheric-temperature measurement based on rotational Raman, and Rayleigh scattering p 1960 N93-21614
Representativity of wind measurement from space p 1961 N93-21617
Sampling properties of a spaceborne lidar (ATLID) p 1961 N93-21618
Measurement and interpretation of the sunlight backscattered from clouds within the oxygen-A absorption band p 1963 N93-21627
OPTICAL REFLECTION
Optical constants and scattering factors from reflectivity measurements: 50 eV to 5 keV
[DE93-003750] p 2068 N93-21674
OPTICAL RESONATORS
Modulation behavior of semiconductor lasers with optical feedback
[ETN-93-92567] p 1911 N93-20881
OPTICAL SCANNERS
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374
The first Census Optical Character Recognition System Conference
[PB92-238542] p 2092 N93-21504
OPTICAL SWITCHING
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
Nonlinear fiber optics
[AD-A259363] p 2068 N93-21245
Delivery of very high bandwidth with ATM switches and SONET
[DE93-004274] p 2045 N93-21721
Optoelectronics research in the former Soviet Union
[PB93-111516] p 2069 N93-21804
OPTICAL TRACKING
Optical tracking of charged particle beams
[AD-D015592] p 2061 N93-20802
Multi-aperture vision system coupled to neural network processors
[AD-A259353] p 2047 N93-21243
Towards autonomous motion vision
[AD-A259339] p 2068 N93-21263
OPTICAL TRANSITION
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments
[DE93-002897] p 1912 N93-21955
OPTICAL WAVEGUIDES
Optical waveguides by ion exchange
[AD-D015564] p 2068 N93-21248
OPTIMAL CONTROL
Guidance and flight control law development for hypersonic vehicles
[NASA-CR-192102] p 1786 N93-19960
Interplanetary Program to Optimize Simulated Trajectories (IPOST). Volume 2: Analytic manual
[NASA-CR-189653-VOL-2-REV] p 1821 N93-20121
Optimal guidance law development for an advanced launch system
[NASA-CR-192189] p 1820 N93-20313
Structural shape optimization of robotic links p 1918 N93-20717
Linear passive impedance p 1943 N93-20719
Grasp admittance center. A concept p 1918 N93-20720
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
Advanced booster guidance studies
[NASA-CR-192336] p 1829 N93-20896
Robust controller design: A bounded-input-bounded-output worst-case approach
[AD-A259367] p 2047 N93-21246
A decomposition approach to suboptimal control of discrete-time systems
[REPT-92-027] p 2049 N93-21552
OPTIMIZATION
The analytical representation of viscoelastic material properties using optimization techniques
[NASA-TM-108394] p 1920 N93-19972
Optimal sampling plans for items representing two population groups
[AD-A259429] p 2057 N93-20009
Dual difference filtering: A replacement for interpolation and subtraction to detect changes in misregistered signals
[AD-A259440] p 1880 N93-20013
(Generalized) LR parsing: From Knuth to Tomita p 2030 N93-20221
Comparison of artificial neural networks with a conventional heuristic technique for optimization problems
[AD-A259207] p 2046 N93-20552
Further developments in shape optimization of stress concentration regions. Part 1: General theory p 1927 N93-20630
Further developments in shape optimization of stress concentration regions. Part 2: Applications p 1928 N93-20631
Reliability of failure envelopes for composite materials p 1929 N93-20642
Structural shape optimization of robotic links p 1918 N93-20717
Some 2D test examples for the ISNaS incompressible code
[REPT-91-44] p 1901 N93-20752
Optimal broadcasting algorithms on torus
[RR-872-I] p 2043 N93-20789
Evaluation and comparative study of combinatorial optimization algorithms: Application to the problem of process placement
[RR-886-I] p 2043 N93-20798
Elements of computer-aided tolerance analysis
[PAPER-C-1-3] p 2035 N93-20826
Optimizing positioning of mechanical parts
[PAPER-C-1-5] p 2035 N93-20828
Development of algorithms for composite positional tolerance measurement using coordinate measuring machines
[PAPER-C-1-6] p 2035 N93-20829
Quality assurance in the future industrial plant
[PAPER-C-3-3] p 1919 N93-20837
A canonical calculus of residuals
[INRIA-RR-1542] p 2052 N93-20861
The origins of lambda-calculus and term rewriting systems
[INRIA-RR-1543] p 2053 N93-20870
Effect of design selection on response surface performance
[NASA-CR-192275] p 2038 N93-20895
MSC/NASTRAN structure optimization test module version 67 (preliminary)
[REPT-5-191025] p 1945 N93-20907
Optimization and sensitivity computations for the conception of internal ventilation system in the aircraft engine
[ETN-93-93375] p 1785 N93-20913
Triangulating planar graphs while minimizing the maximum degree
[RUU-CS-92-07] p 2054 N93-20950
An analogue of Philon's line in n dimensions
[MEMO-1032] p 2054 N93-20957
SSG 4.117: Optimization of modern positioning techniques p 1972 N93-20983
Numerical modeling and optimization for the reconstruction of a polyhedron from its generalized gaussian image
[ETN-93-92683] p 2039 N93-21060
Estimation methods for parameters of multivariate autoregressive models
[ETN-93-92685] p 2059 N93-21062
Solution of quadratic distributed control problems by optimization methods
[ETN-93-93409] p 2040 N93-21303
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO p 1950 N93-21337
OPTOELECTRONIC DEVICES
Controlled nucleation and growth of semiconducting diamond
[AD-A258541] p 2078 N93-20056
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars
[AD-A259168] p 1884 N93-20597
Optoelectronics research in the former Soviet Union
[PB93-111516] p 2069 N93-21804
ORBIT CALCULATION
Office of Spaceflight Standard Spaceborne Global Positioning System (GPS) user equipment project p 1780 N93-21417
ORBIT TRANSFER VEHICLES
H2 arcjet performance mapping program
[NASA-CR-191073] p 1828 N93-20064
Space transfer with ground-based laser/electric propulsion
[NASA-TM-106060] p 1829 N93-20615
Robust on-off pulse control of flexible space vehicles
[NASA-CR-192174] p 1824 N93-21644

ORBITAL ASSEMBLY
Pre-integrated truss space station and method of assembly
[NASA-CASE-MSC-22015-1] p 1823 N93-20042
Robot-friendly connector --- space truss structures
[NASA-CASE-MSC-21864-1] p 1914 N93-20117
Research on large structure assembly technology: Research on deployable assembly structure
p 1795 N93-20444
Neutral buoyancy test evaluation of hardware and extravehicular activity procedures for on-orbit assembly of a 14 meter precision reflector
[NASA-TM-107735] p 1824 N93-20922
Guideline requirements for serviceable spacecraft grasping/berthing/docking interfaces based on simulations and flight experience p 1816 N93-21429
ORBITAL MANEUVERING VEHICLES
Contact dynamics testing of automated three-point docking mechanism p 1812 N93-21411
Rendezvous radar for the orbital maneuvering vehicle
p 1814 N93-21419
Collision avoidance for CTV: Requirements and capabilities p 1817 N93-21437
On-orbit operational scenarios, tools, and techniques
p 1817 N93-21442
Robust on-off pulse control of flexible space vehicles
[NASA-CR-192174] p 1824 N93-21644
ORBITAL MANEUVERS
Interplanetary Program to Optimize Simulated Trajectories (IPOST). Volume 2: Analytic manual
[NASA-CR-189653-VOL-2-REV] p 1821 N93-20121
Thruster configurations for maneuvering heavy payloads p 1813 N93-21415
Rendezvous radar for the orbital maneuvering vehicle
p 1814 N93-21419
Proximity operations considerations affecting spacecraft design p 1815 N93-21428
ORBITAL MECHANICS
Some observations of chaotic motion of satellites with damping in an elliptic orbit p 1826 N93-20726
On the normalized Hamiltonian formulation of the restricted three-body problem p 1944 N93-20727
ORBITAL POSITION ESTIMATION
German participation in the activities of the CSTG Subcommission on Satellite Laser Ranging (SLRS)
p 1971 N93-20971
SSG 2.106: Determination of orbits to cm-accuracy
p 1971 N93-20973
SSG 4.119: Relativistic effects in geodesy
p 1973 N93-20985
ORBITAL RENDEZVOUS
TRAC based sensing for autonomous rendezvous
p 1813 N93-21412
Applicability of relative GPS to automated rendezvous between the space shuttle and Space Station
p 1780 N93-21413
Rendezvous radar for the orbital maneuvering vehicle
p 1814 N93-21419
Autonomous reconfigurable GPS/INS navigation and pointing system for rendezvous and docking
p 1780 N93-21426
Autonomous rendezvous and capture system design
p 1815 N93-21427
Guideline requirements for serviceable spacecraft grasping/berthing/docking interfaces based on simulations and flight experience p 1816 N93-21429
An overview of autonomous rendezvous and docking system technology development p 1816 N93-21431
An autonomous rendezvous and docking system using cruise missile technology p 1816 N93-21432
On-orbit demonstrations of automated closure and capture using ESA-developed proximity operations technologies and an existing serviceable NASA Explorer platform spacecraft p 1816 N93-21433
A method for modeling contact dynamics for automated capture mechanisms p 1816 N93-21434
Operator-assisted planning and execution of proximity operations subject to operational constraints
p 1817 N93-21436
Autonomous rendezvous and docking: A commercial approach to on-orbit technology validation
p 1817 N93-21440
Experimental validation of docking and capture using space robotics testbeds p 1817 N93-21441
Six-Degree-of-Freedom Test Facility
p 1817 N93-21443
Soviet automated rendezvous and docking system overview p 1818 N93-21444
Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445
Autonomous rendezvous and capture development infrastructure p 1818 N93-21446
ORBITAL SERVICING
Guideline requirements for serviceable spacecraft grasping/berthing/docking interfaces based on simulations and flight experience p 1816 N93-21429
ORBITAL SPACE TESTS
The LDEF experience. Materials p 1847 N93-20811
Protection of composite materials in space. The LDEF experience p 1847 N93-20812
Recommended practices for in-space and ground laboratory. Atomic oxygen exposure and analysis
p 1848 N93-20814
ORDER-DISORDER TRANSFORMATIONS
Non-equilibrium structures induced by ion irradiation in Ni4Mo
[DE93-004193] p 2063 N93-21720
ORDNANCE
Small ICBM Laser Firing Unit (LFU)
p 1864 N93-20138
Laser-initiated ordnance for air-to-air missiles
p 1864 N93-20139
Laser diode ordnance design p 1864 N93-20140
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
Proposed system safety design and test requirements for the microlaser ordnance system
p 1864 N93-20144
Laser diode initiated detonators for space applications
p 1865 N93-20147
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices
p 1865 N93-20150
OREGON
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691
ORGANIC COMPOUNDS
Special fibres from natural polymers
p 1837 N93-21151
Analysis strategy for organic bromine flame-retardant compounds as environmental contaminants
p 1839 N93-21164
Surface-coating-free materials workshop
[PB93-101160] p 1861 N93-21683
ORGANIC MATERIALS
Special fibres from natural polymers
p 1837 N93-21151
ORGANIC SOLIDS
Thermodynamic modeling for organic solid precipitation
[DE93-000104] p 1851 N93-21767
ORGANISMS
Use of ecoregions in biological monitoring
[PB93-106730] p 1992 N93-21656
ORGANOMETALLIC COMPOUNDS
Thin film processing of photorefractive BaTiO3
[NASA-CR-192169] p 2079 N93-20311
Metalloradical and electrophilic activation of methane
[PB93-123693] p 1851 N93-21813
ORION NEBULA
High resolution HI observations of HII regions. 3: Photodissociation regions and the magnetic field near Orion B
[MPE-PREPRINT-214] p 2098 N93-21951
OROGRAPHY
Digital topographic approach to modeling: The distribution of precipitation to mountainous terrain
[PB93-106649] p 2015 N93-21535
ORTHO PARA CONVERSION
Optimizing liquid hydrogen storage systems
p 1879 N93-20692
ORTHOGONAL FUNCTIONS
Multiresolution feature analysis and wavelet decomposition of atmospheric flows
[AD-A259420] p 1996 N93-20003
Discrete orthogonal wavelets
[REPT-91-45] p 2052 N93-20862
The search for differential equations for orthogonal polynomials by using computers
[REPT-91-55] p 2052 N93-20865
ORTHOSTATIC TOLERANCE
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
ORTHOTROPIC PLATES
The free vibration of isotropic and specially orthotropic triangular plates p 1935 N93-20673
Study of free vibration of orthotropic rectangular plates p 1935 N93-20674
OSCILLATING FLOW
La Recherche Aerospatiale Bimonthly Bulletin, no. 249, March - April
[ONERA-1989-2] p 1762 N93-21747
OSCILLATIONS
On oscillatory motion of a spring-mass system subjected to piecewise constant forces p 1934 N93-20670
Liquid oscillations under strong surface tension in a circular cylindrical container
[LRT-WE-9-FB-26-1991] p 1904 N93-21953
OSCILLATORS
Study of the generalized parametric oscillator
[PREPRINT-815] p 2059 N93-21178
Simultaneous operation of a free-electron laser on two harmonically related wavelengths
[DE93-003745] p 1912 N93-21969
OSCILLOSCOPES
Improved visual aid for VLF MSK signals
[AD-D015576] p 1882 N93-20277
OXIDATION
Analysis of surfaces from the LDEF A0114, phase 2
[NASA-CR-192306] p 1847 N93-20756
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
Mechanisms and controlling characteristics of the catalytic oxidation of methane
[DE93-005719] p 1852 N93-21835
OXIDATION RESISTANCE
Atomic oxygen protective coating with resistance to undercutting at defect sites
[NASA-CASE-LEW-15306-1] p 1859 N93-20566
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
Oxide protective coatings on carbon composites for medium and high-temperature thermal cycling: New opportunities for the United Europe
p 1838 N93-21160
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
OXIDATION-REDUCTION REACTIONS
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
OXIDES
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
OXYGEN
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
World ocean circulation experiment. WOCE results of an oxygen/salinity comparison cruise on the R/VVernadsky
[PB93-116523] p 2018 N93-21214
Oxygen configurations and their effect on charge transfer in YBa2Cu3O(z)
[DE93-002543] p 2081 N93-21489
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres
[DE93-002999] p 2082 N93-21757
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785
OXYGEN ATOMS
Theoretical studies of important processes in planetary and comet atmospheres
[NASA-CR-192114] p 2098 N93-19959
Atomic oxygen protective coating with resistance to undercutting at defect sites
[NASA-CASE-LEW-15306-1] p 1859 N93-20566
Accurate procedure for calibrating the CAO optical hygrometer
[AP-30] p 1906 N93-20927
OXYGEN PLASMA
Oxygen plasma resistant phosphine oxide containing imide/arylene copolymers
[NASA-TM-107712] p 1859 N93-20300
OXYGEN PRODUCTION
A membrane-based subsystem for water-vapor recovery from plant-growth chambers
[NASA-CR-177602] p 2025 N93-20065
OXYGEN SPECTRA
Measurement and interpretation of the sunlight backscattered from clouds within the oxygen-A absorption band p 1963 N93-21627
OXYGEN SUPPLY EQUIPMENT
Study on environment control and life support technology p 1789 N93-20413
OZONE
Studies of ozone deposition p 1989 N93-20166
Relationship between ozone concentrations and air transport over western Arizona
[PB93-114007] p 1990 N93-21238
Atlanta ozone precursor monitoring study data report
[PB92-220656] p 1991 N93-21495
Ozone as a sink for atmospheric carbon aerosols
[PB93-118594] p 1993 N93-21790
OZONE DEPLETION
Studies of ozone deposition p 1989 N93-20166

Climatological study of ozone in the boundary layer above Belgium
[MISC-SER-A-127] p 1989 N93-20925

OZONOMETRY
Atlanta ozone precursor monitoring study data report
[PB92-220656] p 1991 N93-21495

P

P WAVES
The sensitivity of seismic responses to gas hydrates
[DE93-000216] p 1999 N93-21253

P-TYPE SEMICONDUCTORS
Study and development of ohmic contacts on n and p type indium phosphide by autocatalytic chemical deposition of metals and alloys
[ECL-92-23] p 1856 N93-20062
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A259247] p 2080 N93-20581

PACIFIC OCEAN
Observational and modeling studies of heat, moisture, precipitation, and global-scale circulation patterns
p 2007 N93-20092
Tropical Pacific moisture variability
p 2007 N93-20093
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
The 6th Conference Proceedings of the Pacific OCS Region Information Transfer Meeting
[PB93-119600] p 1992 N93-21684
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990
[PB93-116622] p 2019 N93-21688

PACKET SWITCHING
A robust coding scheme for packet video
p 1881 N93-20174
Packet telecommand standard
[ESA-PSS-04-107-ISSUE-2] p 1884 N93-21001

PAIR PRODUCTION
Study of electroweak interactions
[DE93-004367] p 2061 N93-20385
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-810] p 2062 N93-20923
The discovery of the tau lepton
[DE93-004013] p 2063 N93-21718

PAKISTAN SPACE PROGRAM
Pakistan Space and Upper Atmosphere Research Commission p 1819 N93-21285

PANEL METHOD (FLUID DYNAMICS)
The influence of the rotor test facilities ROTEST and ROTOS on the rotor inflow
[DLR-MITT-91-16] p 1785 N93-21173
Further development of the CANAERO computer code to include a time-stepping capability
[DREA-CR-91-478] p 2042 N93-21820

PANELS
Precision linear shaped charge severance of graphite-epoxy materials
[SAND-92-0610C] p 1865 N93-20151
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515

PARABOLIC DIFFERENTIAL EQUATIONS
Stability of mixing layers
[NASA-CR-192225] p 1897 N93-19980
Kernel Optimum Nearly-analytical Discretization (KOND) algorithm applied to parabolic and hyperbolic equations
[NIFS-191] p 2033 N93-20548

PARABOLIC FLIGHT
Acceleration levels on the KC-135
p 1784 N93-21124

PARACHUTE FABRICS
High efficiency, low weight and volume energy absorbent seam
[AD-D015531] p 1877 N93-20765

PARACHUTES
High efficiency, low weight and volume energy absorbent seam
[AD-D015531] p 1877 N93-20765

PARALLEL COMPUTERS
A coupled multi-ALU processing node for a highly parallel computer
[AD-A259455] p 2043 N93-20240

PARALLEL FLOW
On the disturbances development in the supersonic boundary layer p 1763 N93-20686

PARALLEL PROCESSING (COMPUTERS)
The performance of cache-based error recovery in multiprocessors
[NASA-CR-192142] p 2029 N93-20006
A coupled multi-ALU processing node for a highly parallel computer
[AD-A259455] p 2043 N93-20240
Multidisciplinary computational aerosciences
[NASA-TM-103946] p 1759 N93-20323
ProperCAD: A portable object-oriented parallel environment for VLSI CAD
[NASA-CR-192308] p 2033 N93-20603
Instability and variation analysis using a parallel substructuring procedure p 1932 N93-20659
PAC: Parallel Algebraic Computations: Current researches and perspectives
[RR-876-M] p 2044 N93-20949
CRAY mini manual. Revision D
[NASA-TM-107599-REV-D] p 2028 N93-21027
Verification methods of the behavioral specifications: Study and implementation
[ETN-93-92687] p 2044 N93-21064
Modeling and simulation of a formal neural network: Implementation on a 'Hypercube FPS T-40' parallel machine
[ETN-93-92688] p 2045 N93-21065
Transient dynamics capability at Sandia National Laboratories
[DE93-002285] p 2041 N93-21549
Level 3 BLAS for distributed memory concurrent computers
[DE93-003613] p 2029 N93-21730
Solution of large, sparse systems of linear equations in massively parallel applications
[DE93-004243] p 2045 N93-21741
Research in models for massively parallel computing
[DE93-003748] p 2045 N93-21852

PARALLEL PROGRAMMING
ProperCAD: A portable object-oriented parallel environment for VLSI CAD
[NASA-CR-192308] p 2033 N93-20603
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
Evaluation and comparative study of combinatorial optimization algorithms: Application to the problem of process placement
[RR-886-I] p 2043 N93-20798
MODULA-2* and its compilation
[INRIA-RR-1421] p 2037 N93-20859
Local edge grouping by simple process iteration
[INRIA-RR-1559] p 2043 N93-20866
A contribution to the study of OR-parallel in PROLOG over distributed memory machines
[ETN-93-92681] p 2044 N93-20886
PAC: Parallel Algebraic Computations: Current researches and perspectives
[RR-876-M] p 2044 N93-20949

PARAMAGNETISM
High-energy spin-density-wave correlated fluctuations in paramagnetic Cr + 5 at. percent V
[DE93-003165] p 1857 N93-21958

PARAMETER IDENTIFICATION
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
SSG 4.118: Inverse geodetic problems
p 1973 N93-20984
SSG 5.123: Definition and realization of terrestrial reference systems p 1974 N93-20994
Accurate test limits with estimated parameters
[MEMO-1024] p 1877 N93-21397

PARAMETERIZATION
Reliability of failure envelopes for composite materials
p 1929 N93-20642
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265

PARAMETRIC AMPLIFIERS
Study of the generalized parametric oscillator
[PREPRINT-815] p 2059 N93-21178

PARSING ALGORITHMS
Tomita's algorithm: Extensions and applications
[MEMO-INF-91-68] p 2030 N93-20220
(Generalized) LR parsing: From Knuth to Tomita
p 2030 N93-20221
Recursive ascent parsing p 2030 N93-20222
A parsing algorithm for non-deterministic context-sensitive languages p 2031 N93-20223
Unrestricted on-line parsing and transduction with graph structured stacks p 2031 N93-20224
Substring parsing for arbitrary context-free grammars
p 2031 N93-20225
Detection and correction of morpho-syntactic errors in shift-reduce parsing p 2031 N93-20226
Tomita's algorithm in practical applications
p 2031 N93-20227
An empirical comparison of generalized LR tables
p 2031 N93-20228
Bottom-up parallelization of Tomita's algorithm
p 2031 N93-20229

PARTIAL DIFFERENTIAL EQUATIONS
Exact finite element method p 1939 N93-20699
Global stabilization of linear analytic systems
[RR-403] p 2051 N93-20738
C-integrable nonlinear PDE's. 1
[PREPRINT-787] p 2051 N93-20805
C-integrable nonlinear PDE's. 2
[PREPRINT-788] p 2053 N93-20874

PARTIAL PRESSURE
Effect of surface active materials on bubble dynamics in two-phase flow
[AD-A259340] p 1902 N93-21264
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785

PARTICLE ACCELERATION
The Crab nebula's wisps as shocked pulsar wind
[DE93-003466] p 2097 N93-21673
Relativistic shock waves and the excitation of plerions
[DE93-003469] p 2066 N93-21729

PARTICLE ACCELERATORS
Explosive detection system based on Electronic Neutron Generator (ENG) p 1766 N93-21870
Design of a high current proton accelerator
p 1766 N93-21873

PARTICLE BEAMS
Optical tracking of charged particle beams
[AD-D015592] p 2061 N93-20802
Radiation from moving charged particles with spin
[DE93-004633] p 2063 N93-21703

PARTICLE COLLISIONS
High frequency spectroscopy for collision excited helium atom fine structure of 1s4f configuration
[ETN-93-92560] p 2062 N93-20875
The nitrogen camera: A new explosive detector
p 1766 N93-21867

PARTICLE DIFFUSION
Theory of grain alignment in molecular clouds
[NASA-CR-192307] p 2077 N93-20037

PARTICLE ENERGY
Neutron-proton bremsstrahlung experiments
[DE93-003737] p 2065 N93-21968

PARTICLE INTERACTIONS
On a possible non-Lorentzian energy-dependence of the K neutral(sub S)
[PREPRINT-807] p 2053 N93-20903

PARTICLE MASS
Hybrid single-particle Lagrangian integrated trajectories (HY-SPLIT): Version 3.0: User's guide and model description
[PB92-218114] p 2056 N93-21341

PARTICLE MOTION
Electron acceleration in the magnetosphere
p 1997 N93-20283
The acquisition of velocity fields via the automatic analysis of motion, exemplarily demonstrated in a rotating fluid
[MPIS-102/1991] p 1902 N93-21023

PARTICLE PRODUCTION
Anomalous WWZ couplings at future e(+)e(-) colliders
[PREPRINT-814] p 2066 N93-21177
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809
Multi-jet production rates in deep-inelastic muon-proton scattering
[DE93-004410] p 2065 N93-21854

PARTICLE SIZE DISTRIBUTION
Studies of dispersed phase systems: Ostwald ripening and metal matrix composites p 1808 N93-21106

PARTICLE THEORY
The discovery of the tau lepton
[DE93-004013] p 2063 N93-21718

PARTICLE TRAJECTORIES
Hybrid single-particle Lagrangian integrated trajectories (HY-SPLIT): Version 3.0: User's guide and model description
[PB92-218114] p 2056 N93-21341
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760

PARTICLES
In-situ determination of optical properties of sea water and particle characteristics in the Corfu Sea (Mediterranean): Report on the first joint campaign of the Mito project
[BCRS-92-04] p 2018 N93-20741

PARTICULATE REINFORCED COMPOSITES
Method of bonding metal carbides in non-magnetic alloy matrix
[AD-D015591] p 1833 N93-20801
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites
p 1843 N93-21525

PARTICULATES
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites
p 1843 N93-21525
Efficient collection of explosive vapors, particles and aerosols p 1772 N93-21909
PARTONS
Inclusive beauty decays and the spectator model
[PREPRINT-790] p 2061 N93-20850
PASSENGERS
Upper interior head protection. Volume 1. The development of a research test procedure
[PB93-113769] p 2026 N93-21537
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863
PASSIVITY
Low-temperature emitter-passivation for silicon solar cells
[DE93-002483] p 1987 N93-21487
PATTERN RECOGNITION
Research in text processing
[AD-A259434] p 2087 N93-20010
FASTUS: A system for extracting information from natural-language text
[AD-A259435] p 2087 N93-20011
Geometry and photometry in 3D visual recognition
[AD-A259443] p 2066 N93-20126
Geometric aspects of visual object recognition
[AD-A259454] p 2046 N93-20239
Automatized cartography, using the Mitteldeutschen Kartographie and Druck GmbH system
p 1967 N93-20529
Development of an automated cartographic system
p 1967 N93-20530
Application possibilities for automated digitizing
p 1967 N93-20531
Computer aided cartographic generalization for the DCM derivation, with regard to feature displacement
p 1967 N93-20532
Reflections on segmentation
[RR-873-I] p 2034 N93-20791
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
A new method for recognizing quadric surfaces from range data and its application to telerobotics and automation
[NASA-CR-192619] p 1892 N93-20910
Basic and evolutive concepts of pattern recognition: Pluridiscipline approach. Approximation concept
[ISAL-91-0098] p 2047 N93-20941
Fuzzy set methods for object recognition in space applications
[NASA-CR-191986] p 2041 N93-21563
Use of neural networks in the analysis of complex systems
[DE93-003554] p 2049 N93-21847
Recognition of partially occluded threat objects based on hybrid Hopfield neural network p 1777 N93-21939
PAVEMENTS
Use of radar technology for pavement layer evaluation
[PB92-226166] p 1912 N93-21744
PAYLOAD CONTROL
A berthing and fastening strategy for orbital replacement units p 1814 N93-21420
PAYLOAD RETRIEVAL (STS)
The Wakeshield Facility: Free flyer and commercial experiment transporter programs p 1807 N93-21105
PAYLOADS
Interplanetary Program to Optimize Simulated Trajectories (IPOST). Volume 2: Analytic manual
[NASA-CR-189653-VOL-2-REV] p 1821 N93-20121
Development and use of data analysis procedures for the CRRES payloads AFGL-701-2/Dosimeter and AFGL-701-4/Fluxmeter and application of the data analysis results to improve the static and dynamic models of the earth's radiation belts
[AD-A258710] p 1823 N93-20380
An investigation of the unexpected attitude dynamics experienced by the OEDIPUS-A tethered sounding rocket payload p 1830 N93-20724
Thruster configurations for maneuvering heavy payloads p 1813 N93-21415
PEEK
Creep damage of carbon fiber reinforced PEEK
p 1862 N93-20639
Creep of PEEK-graphite fibre composite material
p 1930 N93-20644
Contribution to the study of composite material behavior in space environment
[REPT-921-430-112] p 1833 N93-20869
PENETRATION
Precision linear shaped charge severance of graphite-epoxy materials
[SAND-92-0610C] p 1865 N93-20151
Wetting of fibers measured by LPR-90 equipment
p 1835 N93-21139
PENNING DISCHARGE
Penning surface-plasma source scaling laws: Theory and practice
[DE93-003814] p 2076 N93-21778
PERCHLORATES
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
PERFORATED PLATES
The aerodynamic performance of laser drilled sheets
[AERO-REPT-9204] p 1761 N93-20806
PERFORMANCE
Experience with explosive detection systems in airports p 1770 N93-21895
PERFORMANCE PREDICTION
CO2 lidar backscatter experiment
p 2009 N93-20103
Computer modeling of pulsed CO2 lasers for lidar applications p 1913 N93-20106
CASE/simulation systems p 2088 N93-20165
The JPL/NASA/TAMU nickel-cadmium battery model development status p 1985 N93-20509
Propulsion/weapon system interaction model
[AD-A259291] p 1785 N93-20610
On improving accuracy of machining centers
[PAPER-C-3-1] p 2036 N93-20835
Requirements for an automated human factors, manpower, personnel, and training (HMPT) planning tool
[AD-A258531] p 2026 N93-21753
Computer simulations and performance predictions for explosive detection systems p 1777 N93-21938
PERFORMANCE TESTS
H2 arcjet performance mapping program
[NASA-CR-191073] p 1828 N93-20064
Determination of pyrotechnic functional margin
p 1863 N93-20134
Implementation and evaluation of a three-dimensional photometric sampler
[AD-A258636] p 1905 N93-20361
Research on advanced Earth observing sensors
p 1790 N93-20416
Review on aluminum electrolytic condensers development p 1797 N93-20457
Development of transistors (equivalent to 2SC3321)
p 1797 N93-20460
Development of power MOSFET (150 W class)
p 1797 N93-20461
Improvement of voltage reference Zener diode (1SZ48A) p 1797 N93-20462
Air Force Ni-Cd cell qualification program update
p 1984 N93-20505
Nickel-hydrogen CPV battery update
p 1986 N93-20518
Design considerations for rechargeable lithium batteries p 1987 N93-20527
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195
Conformance test specification for COBOL intrinsic function module
[PB92-229178] p 2040 N93-21351
MMU applications for automated rendezvous and capture p 1817 N93-21438
Advanced water-cooled phosphoric acid fuel cell development
[DE93-003490] p 1988 N93-21732
Environmental assessment for the brilliant pebbles tether test at the Nevada test site
[DE93-003869] p 1952 N93-21839
Performance testing of explosives and weapons detection systems p 1769 N93-21889
A framework for the objective test and evaluation of explosive detection technology p 1769 N93-21890
Validation of simulated explosives for testing TNA explosives detection systems p 1769 N93-21891
Airport testing of a new thermal neutron analysis explosives detection system p 1769 N93-21892
Development of a multi-sensor in situ fiber optic fluorometer
[DE93-004646] p 1995 N93-21975
PERIDOTITE
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785
PERIODIC VARIATIONS
Observational and modeling studies of heat, moisture, precipitation, and global-scale circulation patterns
p 2007 N93-20092
PERIODICALS
USA aviation digest index, 1989, volume 11
[AD-A258673] p 2089 N93-20388
Index to USA aviation digest, 1990
[AD-A258678] p 2089 N93-20389
PERMEABILITY
Mechanisms of gas permeation through polymer membranes
[DE93-005960] p 1852 N93-21836
PERMITTIVITY
Dielectric constant measurement probe assembly and apparatus and method
[AD-D015537] p 1890 N93-20766
Electromagnetic characterization measurements at 1000 C in Aerospatiale Microwave Department
[REPT-921-430-114] p 1884 N93-20938
Measurement of the dielectric constant of polymeric films at high fields
[PB92-238625] p 1860 N93-21471
Explosive detection using dielectrometry
p 1770 N93-21898
PERMUTATIONS
Predicting structure in nonsymmetric sparse matrix factorizations
[DE93-003365] p 2057 N93-21963
PEROVSKITES
Oriented, single-phase thin films of potassium tantalate-niobate
[AD-D015543] p 2077 N93-20027
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
PEROXIDES
An electrocatalytic cathode device and a method for making such a cathode
[AD-D015586] p 1890 N93-20396
PERSONAL COMPUTERS
Reports on cartography and geodesy, series 1, number 106
[ETN-93-92583] p 1967 N93-20528
The economic use of PC for cartographic distributed tasks p 1967 N93-20534
The importance of the PC in the cartographic-photogrammetric service field
p 1967 N93-20535
On-orbit operational scenarios, tools, and techniques
p 1817 N93-21442
Fundamentals of PC operation and maintenance
[PB93-117471] p 2029 N93-21453
Integrated FASTBUS, VME and CAMAC diagnostic software at Fermilab
[DE93-004424] p 2042 N93-21845
PERSONNEL
Building a knowledge base for the knowledge worker system
[AD-A258544] p 2089 N93-20370
Comparison of performance on the Shipley Institute of Living Scale, Air Traffic Control Specialist Selection Test, and FAA Academy Screen
[AD-A259249] p 1779 N93-20582
Goddard Space Flight Center: Decision to contract for plant operations and maintenance. Report to the Chair, Subcommittee on VA, HUD, and Independent Agencies, Committee on Appropriations, US Senate
[GAO/NSIAD-93-92] p 2086 N93-21357
List of US Army Research Institute research and technical publications, October 1, 1990 to September 30, 1991 with author and subject index
[PB93-108611] p 2103 N93-21381
PERSONNEL DEVELOPMENT
Requirements for an automated human factors, manpower, personnel, and training (HMPT) planning tool
[AD-A258531] p 2026 N93-21753
PERSPIRATION
Evaluation of two microclimate cooling air vests on a heated mannequin
[AD-A259410] p 2026 N93-21269
PERTURBATION
On the stability of nonlinear viscous vortices in three-dimensional boundary layers
[NASA-CR-189637] p 1899 N93-20254
PERTURBATION THEORY
Optimal guidance law development for an advanced launch system
[NASA-CR-192189] p 1820 N93-20313
PESTICIDES
Monitoring human tissues for toxic substances
[PB92-223239] p 2024 N93-21498
PETN
Growth and defects of explosives crystals
[DE93-003866] p 2082 N93-21780
Negative-ion formation in the explosives RDX, PETN, and TNT using the Reversal Electron Attachment Detection (READ) technique p 1773 N93-21910
Detection of explosives material on single microparticles p 1774 N93-21916
Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives
p 1774 N93-21921
A GC/ECD approach for the detection of explosives and taggants p 1775 N93-21924
Dry immunochemical sensor for the detection of PETN vapor p 1776 N93-21930

PETRI NETS
Estimates of cycle times in stochastic Petri nets
[INRIA-RR-1572] p 2058 N93-20897
Formal specification and timing analysis of high-integrity real-time systems
[REPT-92-041] p 2028 N93-21185
CTOS course
[NASA-CR-191866] p 2047 N93-21204
A distributed Petri Net controller for a dual arm testbed
[NASA-CR-192733] p 2048 N93-21373
Task sequence planning in a robot workcell using AND/OR nets
[NASA-CR-192735] p 2049 N93-21391
PETROGRAPHY
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin
[PB93-115640] p 2000 N93-21692
PHARMACOLOGY
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
PHASE CONTROL
Variable phase sine wave generator for active phased arrays
[AD-D015558] p 1888 N93-20028
PHASE DETECTORS
Improved visual aid for VLF MSK signals
[AD-D015576] p 1882 N93-20277
Signal phase pattern sensitive neural network system and method
[AD-D015571] p 2046 N93-20308
PHASE DIAGRAMS
New developments in the 'ab initio' determination of transition metal alloy phase diagrams
[DE93-002540] p 1856 N93-21488
Non-equilibrium structures induced by ion irradiation in Ni4Mo
[DE93-004193] p 2063 N93-21720
PHASE LOCKED SYSTEMS
Precision digital phase lock loop circuit
[AD-D015594] p 1891 N93-20785
PHASE SEPARATION (MATERIALS)
Liquid/liquid phase separation and crystallization of materials in microgravity aboard NASA KC-135 flights
p 1810 N93-21119
PHASE SHIFT
Signal phase pattern sensitive neural network system and method
[AD-D015571] p 2046 N93-20308
Computer simulation of a general purpose satellite modem
[AD-A259083] p 1882 N93-20392
Precision digital phase lock loop circuit
[AD-D015594] p 1891 N93-20785
PHASE TRANSFORMATIONS
Amorphous Mo/Si multilayers: Interdiffusion and structural relaxation; crystallization
[ETN-93-92992] p 1859 N93-20909
Grain refinement of Al-Cu-Ti alloys in microgravity
p 1810 N93-21120
Aspects of the electroweak phase transition
[DE93-004629] p 2063 N93-21723
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785
PHASED ARRAYS
Real time data reformatting using the TMS320C25 development system
[AD-A259187] p 1882 N93-20273
Research on phased array antenna
p 1795 N93-20446
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars
[AD-A259168] p 1884 N93-20597
Simulation of the merged spectrum technique for aligning planar phased-array antennas, part 1
[PB93-113629] p 1885 N93-21237
Certification plan for a planar near-field range used for high-performance phased-array testing
[PB92-213305] p 1885 N93-21493
PHENOLIC RESINS
Polymer foam cell growth in microgravity
p 1808 N93-21108
Kynol (TM) Novoloid fibers: Survivable fibers for tough times p 1837 N93-21150
PHENOMENOLOGY
Phenomenological correlations in nuclear structure: An opportunity for nuclear astrophysics and a challenge to theory
[DE93-003470] p 2098 N93-21775
PHOSPHATES
Neutron study of crystal-field transitions in ErPO4
[DE93-004131] p 2081 N93-21719
PHOSPHIDES
Frequency conversion of a CO2 laser with ZnGeP2
[PB92-222785] p 1911 N93-21016
PHOSPHINES
Oxygen plasma resistant phosphine oxide containing imide/arylene copolymers
[NASA-TM-107712] p 1859 N93-20300
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
PHOSPHORIC ACID FUEL CELLS
Advanced water-cooled phosphoric acid fuel cell development
[DE93-003490] p 1988 N93-21732
PHOSPHORS
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374
PHOSPHORUS
Trends in nitrogen in the Chesapeake Bay, 1984-1990
[PB93-122174] p 1990 N93-21217
PHOTOACOUSTIC SPECTROSCOPY
Free radical and overtone spectroscopy
[NASA-CR-192136] p 1850 N93-21555
PHOTOCHEMICAL REACTIONS
Interpretation of Voyager UVS observations of occultations by the atmosphere of Neptune
[NASA-CR-192131] p 2099 N93-20732
Cationically polymerizable monomers derived from renewable sources
[DE93-005926] p 1861 N93-21731
PHOTODISSOCIATION
High resolution HI observations of HII regions. 3: Photodissociation regions and the magnetic field near Orion B
[MPE-PREPRINT-214] p 2098 N93-21951
PHOTOELASTIC ANALYSIS
An iterative approach to curved ray photoelastic analysis p 1928 N93-20635
The use of phase-stepping in the photoelastic analysis of complex components p 1928 N93-20636
PHOTOELECTRIC EFFECT
Apparatus and method for non-contact surface voltage probing by scanning photoelectron emission
[AD-D015583] p 1891 N93-20799
PHOTOELECTROCHEMISTRY
Study on photochemical and photoelectrochemical etching of gallium arsenide
[ECL-91-25] p 1851 N93-21824
PHOTOELECTRON SPECTROSCOPY
Space station protective coating development
p 1848 N93-20816
PHOTOELECTRONS
Apparatus and method for non-contact surface voltage probing by scanning photoelectron emission
[AD-D015583] p 1891 N93-20799
PHOTOGRAMMETRY
Feature mapping in a photogrammetric GIS
[AD-A258595] p 1965 N93-19967
Reports on cartography and geodesy, series 1, number 106
[ETN-93-92583] p 1967 N93-20528
The importance of the PC in the cartographic-photogrammetric service field
p 1967 N93-20535
PHOTOGRAPHS
Capabilities and constraints of combustion diagnostics in microgravity p 1869 N93-20185
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663
PHOTOINTERPRETATION
Quantitative registration of tree vitality and physiological changes with colour-infrared and multispectral photography
[BCRS-91-44] p 1968 N93-20740
Estimation of carbon storage and organic matter in boreal forests using optical remote sensing data
p 1955 N93-21583
PHOTOIONIZATION
Photoionization experiments by multistage excitation in the zone of the second ionization threshold of CuI
[ETN-93-92569] p 2062 N93-20883
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems
[DE93-004531] p 2064 N93-21742
PHOTOLYSIS
Infrared tunable difference frequency laser source
[DE93-005128] p 1912 N93-21709
PHOTOMECHANICAL EFFECT
Discussion of the optical effects created by a laser source on particles under microgravity
p 1811 N93-21126
PHOTOMETERS
Reduced electrical bandwidth receivers for direct detection 4-ary PPM optical communication intersatellite links
[NASA-CR-192310] p 1880 N93-19993
Optoelectronics research in the former Soviet Union
[PB93-111516] p 2069 N93-21804
PHOTOMETRY
Geometry and photometry in 3D visual recognition
[AD-A259443] p 2066 N93-20126
Implementation and evaluation of a three-dimensional photometric sampler
[AD-A258636] p 1905 N93-20361
PHOTONS
Study of electroweak interactions
[DE93-004367] p 2061 N93-20385
Gravitational synchrotron radiation and gravitrons by lights
[PREPRINT-821] p 1999 N93-20951
Polarization effects in coherent and incoherent photon scattering: Survey of measurements and theory relevant to radiation transport calculations
[PB93-126092] p 2064 N93-21828
Photons in - photons out: Non-destructive inspection of containers using x ray and gamma ray techniques
p 1767 N93-21875
A novel approach to design optimization of nuclear-based explosive detection systems
p 1777 N93-21935
Neutron-proton bremsstrahlung experiments
[DE93-003737] p 2065 N93-21968
PHOTONUCLEAR REACTIONS
Nuclear studies with intermediate energy probes
[DE93-002785] p 2062 N93-21481
PHOTOPRODUCTION
Nuclear studies with intermediate energy probes
[DE93-002785] p 2062 N93-21481
PHOTOSPHERE
Sunspot dynamics
[NASA-CR-192284] p 2100 N93-20754
PHOTOTHERMAL CONVERSION
Conversion efficiency in solar thermal systems
p 1982 N93-20301
PHOTOVOLTAIC CELLS
Lewis Research Center battery overview
p 1983 N93-20493
Space transfer with ground-based laser/electric propulsion
[NASA-TM-106060] p 1829 N93-20615
PHYSICAL EXAMINATIONS
Guide for aviation medical examiners
[PB92-219690] p 2024 N93-21047
PHYSICAL EXERCISE
Global change data base training exercise manual. Exploring Earth's environment: Africa as an example
[PB92-224682] p 1990 N93-21211
PHYSICAL OPTICS
High-frequency techniques for RCS prediction of plate geometries and a physical optics/equivalent currents model for the RCS of trihedral corner reflectors
[NASA-CR-192302] p 1881 N93-20233
An iterative approach to curved ray photoelastic analysis p 1928 N93-20635
PHYSICAL SCIENCES
The 1991 lectures in complex systems
[AD-A259428] p 2050 N93-20008
PHYSICS AND CHEMISTRY EXPERIMENT IN SPACE
Report on microgravity experiment by TR-1A rocket
[NASDA-EG-920021] p 1875 N93-21950
PHYSIOLOGICAL EFFECTS
Long duration human exposure to microgravity
p 1802 N93-21073
Space life sciences overview p 1802 N93-21074
Eye movements under altered gravitoinertial forces
p 1809 N93-21111
Cerebral autoregulation in microgravity
p 1809 N93-21112
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
PHYSIOLOGICAL RESPONSES
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
Physiological responses to wearing the space shuttle launch and entry suit and the prototype advanced crew escape suit compared to the unsuited condition
[NASA-TP-3297] p 2026 N93-20319
Cerebral autoregulation in microgravity
p 1809 N93-21112
Aimed arm movements under changed gravity
p 1809 N93-21113

Respiratory response to varying degrees of tilt and lower body negative pressure p 1809 N93-21114

PHYSIOLOGY
Quantitative registration of tree vitality and physiological changes with colour-infrared and multispectral photography
[BCRS-91-44] p 1968 N93-20740

PHYTOPLANKTON
How do zooplankton feed? A critical microgravity experiment p 1806 N93-21097

PHYTOTRONS
A membrane-based subsystem for water-vapor recovery from plant-growth chambers
[NASA-CR-177602] p 2025 N93-20065

PIEZOELECTRIC CERAMICS
Metal-coated, ordered void piezoelectric ceramic material
[AD-D015540] p 1859 N93-20304

PIEZOELECTRIC CRYSTALS
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652
Solution of large, sparse systems of linear equations in massively parallel applications
[DE93-004243] p 2045 N93-21741

PIEZOELECTRICITY
Analytical and experimental investigation of flutter suppression by piezoelectric actuation
[NASA-TP-3241] p 1781 N93-20584
Solution of large, sparse systems of linear equations in massively parallel applications
[DE93-004243] p 2045 N93-21741

PINS
Pyrotechnic modeling for the NSI and pin puller p 1866 N93-20153

PIONS
Nuclear studies with intermediate energy probes
[DE93-002785] p 2062 N93-21481

PIPE FLOW
A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270
On the evaluation of coherent structures using computer programs p 1937 N93-20688
Electrostatic enhancement of heat transfer in a gas-to-gas heat exchanger
[PB93-114338] p 1903 N93-21454
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977

PIPELINES
Application of new experimental methods to pipeline stress corrosion cracking
[PB92-224575] p 1951 N93-21499
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652
Fundamental advances for characterizing cathodic protection systems
[PB93-125003] p 1851 N93-21825

PIPELINING (COMPUTERS)
Optimal broadcasting algorithms on torus
[RR-872-I] p 2043 N93-20789

PIPES (TUBES)
Cyclic material properties at high strain ranges beyond the standard design codes p 1925 N93-20357

PISTONS
A semiconductor bridge ignited hot gas piston ejector p 1864 N93-20137
In-line hydraulic dashpot
[AD-D015528] p 1914 N93-20776

PITCH (MATERIAL)
The effect of fiber concentration, length and orientation on the thermal conductivity of a polycarbonate/pitch-based carbon fiber composite p 1834 N93-21133

PIXELS
Use of features derived from class proportions in a pixel for the multispectral classification of remote sensing images
[INPE-5306-TDI/456] p 1966 N93-20322
A comparative study of estimation of partial cloud coverage within a pixel: Proposed adaptive least square method with constraints p 1962 N93-21626
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940

PLANAR STRUCTURES
Planar monolithic Schottky varactor diode millimeter-wave frequency multipliers
[AD-A258616] p 1887 N93-19995
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars
[AD-A259168] p 1884 N93-20597

PLANE STRAIN
Peak stresses in adhesive step lap joints with voids p 1932 N93-20656

PLANETARY ATMOSPHERES
Theoretical studies of important processes in planetary and comet atmospheres
[NASA-CR-192114] p 2098 N93-19959
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
Laboratory and theoretical models of planetary-scale instabilities and waves p 2004 N93-20074
Nonlinear dynamics of global atmospheric and Earth system processes p 2001 N93-20076
Planetary atmospheres: Microwave spectroscopic studies of planetary atmospheres
[NASA-CR-192145] p 2099 N93-21642

PLANETARY MAGNETIC FIELDS
Numerical models of planetary dynamos
[DE93-003848] p 2098 N93-21970

PLANETARY RINGS
Planetary astronomy research
[NASA-CR-192134] p 2099 N93-21643

PLANETARY WAVES
Life cycles of transient planetary waves p 2004 N93-20077
An investigation of low-frequency planetary wave forcing and predictability in a simple global atmospheric circulation model p 1996 N93-20279
Determination of longwave radiation reaching the surface from Meteosat images and radiation model calculations p 1962 N93-21625

PLANNING
The complexity of the free space for a robot moving amidst fat obstacles
[RUU-CS-92-05] p 1915 N93-21171

PLANTS (BOTANY)
Global models of ecosystem change p 1953 N93-21570

PLASMA CONTROL
Poloidal rotation, density asymmetries, and momentum confinement in tokamak experiments
[DE93-002319] p 2069 N93-20026
Dimensionless scaling of confinement in ATF
[DE93-001705] p 2069 N93-20030
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
A synergetic treatment of the vortices behaviour of a plasma with viscosity
[NIFS-166] p 2070 N93-20249
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263
Selfconsistent analysis of radial electric field and fast ion losses in CHS Torsatron/Heliotron
[NIFS-178] p 2071 N93-20264
The effects of externally imposed magnetic perturbations on plasmas in TEXT p 2071 N93-20282
Force balance near an X line along which E (dot) is less than 0
[NASA-CR-192341] p 2071 N93-20362
Long pulse discharges sustained by second harmonic electron cyclotron heating using a 35 GHz gyrotron in the Advanced Toroidal Facility
[NIFS-183] p 2072 N93-20544
Model of the L-mode confinement in tokamaks
[NIFS-187] p 2072 N93-20545
Discriminant analysis of plasma fusion data
[NIFS-156] p 2073 N93-20761
A role of neutral hydrogen in CHS plasmas with reheat and collapse and comparison with JIPP T-IIU tokamak plasmas
[NIFS-186] p 2073 N93-20763
L-mode confinement model based on transport-MHD theory in tokamaks
[NIFS-192] p 2074 N93-21192
Formation of H-mode like transport barrier in the CHS heliotron/torsatron
[NIFS-198] p 2074 N93-21193
Current-drive and plasma-formation experiments on the Versator-2 tokamak using lower-hybrid and electron-cyclotron waves
[DE93-002333] p 2075 N93-21482

PLASMA CURRENTS
On a ballistic method for double layer regeneration in a Vlasov-Poisson plasma
[NIFS-153] p 2070 N93-20154
Steady state tokamak sustained by bootstrap current without seed current
[NIFS-159] p 2070 N93-20155
Review of Japanese results on heating and current drive
[NIFS-193] p 2071 N93-20294
Effects of net toroidal current on Mercier criterion in the Large Helical Device
[NIFS-174] p 2072 N93-20543
Discriminant analysis of plasma fusion data
[NIFS-156] p 2073 N93-20761
Formation of H-mode like transport barrier in the CHS heliotron/torsatron
[NIFS-198] p 2074 N93-21193

PLASMA DENSITY
Poloidal rotation, density asymmetries, and momentum confinement in tokamak experiments
[DE93-002319] p 2069 N93-20026
Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359
Spacecraft interaction with ambient and self-generated plasma/neutral environment
[AD-A258647] p 1823 N93-20364
Ion trapping in dusty plasmas
[MPE-PREPRINT-219] p 2075 N93-21405
Effect of quark-gluon plasma boundary on the momentum distribution of quarks
[DE93-004166] p 2064 N93-21740

PLASMA DIAGNOSTICS
Fundamental processes in partially ionized plasmas
[AD-A259272] p 2072 N93-20600
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760

PLASMA DIFFUSION
L-mode confinement model based on transport-MHD theory in tokamaks
[NIFS-192] p 2074 N93-21192
Vlasov equation in the stochastic magnetic field
[NIFS-171] p 2075 N93-21567

PLASMA DRIFT
The mid-latitude trough. A review
[AD-A258606] p 1995 N93-19985

PLASMA DYNAMICS
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760
Magnetospheric space plasma investigations
[NASA-CR-192620] p 2074 N93-20914
Kinetic theory of toroidicity and ellipticity-induced Alfven eigenmodes
[DE93-003634] p 2077 N93-21995

PLASMA EQUILIBRIUM
Refined theory of diamagnetic effect in stellarators
[NIFS-162] p 2070 N93-20158

PLASMA ETCHING
Surface modification using a cascade arc plasma source
[ETN-93-93065] p 2074 N93-20936

PLASMA FOCUS
Dense plasma focus powered by flux compression generators
[DE93-003781] p 2076 N93-21837

PLASMA HEATING
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
On a ballistic method for double layer regeneration in a Vlasov-Poisson plasma
[NIFS-153] p 2070 N93-20154
Refined theory of diamagnetic effect in stellarators
[NIFS-162] p 2070 N93-20158
Review of Japanese results on heating and current drive
[NIFS-193] p 2071 N93-20294
Long pulse discharges sustained by second harmonic electron cyclotron heating using a 35 GHz gyrotron in the Advanced Toroidal Facility
[NIFS-183] p 2072 N93-20544
Magnetospheric space plasma investigations
[NASA-CR-192620] p 2074 N93-20914
Formation of H-mode like transport barrier in the CHS heliotron/torsatron
[NIFS-198] p 2074 N93-21193
TFTR experimental data analysis collaboration
[DE93-002365] p 2075 N93-21483
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809
Effect of alpha particles on toroidal Alfven eigenmodes
[DE93-003635] p 2076 N93-21830

PLASMA INTERACTIONS
Evaluation of candidate working fluid formulations for the electrothermal - chemical wind tunnel
[NASA-CR-192196] p 1788 N93-20312
Spacecraft interaction with ambient and self-generated plasma/neutral environment
[AD-A258647] p 1823 N93-20364

PLASMA JETS
The electromagnetic calorimeter for the STAR experiment at RHIC
[DE93-002780] p 2062 N93-21480
PLASMA LAYERS
On a ballistic method for double layer regeneration in a Vlasov-Poisson plasma
[NIFS-153] p 2070 N93-20154
PLASMA OSCILLATIONS
Beta-limiting phenomena in high-aspect-ratio toroidal helical plasmas
[NIFS-188] p 2072 N93-20546
Cross field ion motion at sawtooth crash
[NIFS-189] p 2072 N93-20547
PLASMA PHYSICS
A review on application of MHD theory to plasma boundary problems in tokamaks
[NIFS-163] p 2073 N93-20762
Surface modification using a cascade arc plasma source
[ETN-93-93065] p 2074 N93-20936
On relation between Hamada and Boozer magnetic coordinate system
[NIFS-173] p 2075 N93-21568
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
PLASMA PRESSURE
Beta-limiting phenomena in high-aspect-ratio toroidal helical plasmas
[NIFS-188] p 2072 N93-20546
PLASMA RADIATION
Modification and evaluation of a microwave plasma/atomic emission detector system
[PB92-217959] p 2074 N93-21203
PLASMA SPRAYING
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
PLASMA TEMPERATURE
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758
PLASMA TURBULENCE
Cross field ion motion at sawtooth crash
[NIFS-189] p 2072 N93-20547
Vlasov equation in the stochastic magnetic field
[NIFS-171] p 2075 N93-21567
Bibliography Group T-3, 1955 - 1991
[DE93-002851] p 1904 N93-21771
PLASMA WAVES
On a ballistic method for double layer regeneration in a Vlasov-Poisson plasma
[NIFS-153] p 2070 N93-20154
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760
PLASMAPAUSE
The mid-latitude trough. A review
[AD-A258606] p 1995 N93-19985
PLASMAS (PHYSICS)
Thought analysis on self-organization theories of MHD plasma
[NIFS-164] p 2070 N93-20159
Force balance near an X line along which E (dot) is less than 0
[NASA-CR-192341] p 2071 N93-20362
Fundamental processes in partially ionized plasmas
[AD-A259272] p 2072 N93-20600
Magnetospheric space plasma investigations
[NASA-CR-192620] p 2074 N93-20914
Assessment of single-pulse laser damage to structural materials for spacecraft
[AD-A259387] p 1911 N93-21267
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697
Effect of quark-gluon plasma boundary on the momentum distribution of quarks
[DE93-004166] p 2064 N93-21740
An overview of Sandia National Laboratories' plasma switched, gigawatt, ultra-wideband impulse transmitter program
[DE93-003249] p 1886 N93-21960
Simulation models for tokamak plasmas
[DE93-002876] p 2076 N93-21988
PLASTIC BODIES
Plastic mechanism analysis of T-joints in RHS under concentrated force
[PB92-225374] p 1946 N93-21029
PLASTIC DEFORMATION
Application of the BEM to the crack growth problem by the coupling of damage-deformation
p 1940 N93-20702
Simplified analysis of elastic-plastic strain concentration in notched components under cyclic loading
p 1950 N93-21338
PLASTIC PLATES
Experimental verification of the theory of plastic moment capacity of an inclined yield line under axial force
[PB93-118792] p 1952 N93-21798
PLASTIC PROPELLANTS
Program to tag military plastic/sheet explosives
p 1775 N93-21926
Plant laboratory scale preparation and complete characterization of modified composition C-4 containing a taggant p 1775 N93-21928
Detection of taggant in modified composition C-4 tagged with a taggant p 1776 N93-21929
Integration of the human, canine, machine interface for explosives detection p 1778 N93-21943
PLASTIC PROPERTIES
Dissipation in adiabatic shear bands
[DE93-002280] p 1856 N93-20025
Experimental and theoretical study of the elastic and microplastic properties of particles reinforced metal matrix composites
[ISAL-92-0014] p 1833 N93-20942
Theoretical analysis of plastic moment capacity of an inclined yield line under axial force
[PB93-118784] p 1951 N93-21689
La Recherche Aerospatiale Bimonthly Bulletin, no. 248, January - February
[ONERA-1989-1] p 1878 N93-21748
The behavior of intermetallic compounds at large plastic strains
[DE93-003820] p 1857 N93-21772
Experimental verification of the theory of plastic moment capacity of an inclined yield line under axial force
[PB93-118792] p 1952 N93-21798
PLATE THEORY
Analytical and experimental investigation of flutter suppression by piezoelectric actuation
[NASA-TP-3241] p 1781 N93-20584
Material nonlinear analysis of composites
p 1929 N93-20641
Edge delamination of composite laminates
p 1842 N93-21519
Experimental verification of the theory of plastic moment capacity of an inclined yield line under axial force
[PB93-118792] p 1952 N93-21798
PLATES (STRUCTURAL MEMBERS)
Nondestructive evaluation of composites using infrared imaging
[AD-A259412] p 1831 N93-20123
Analytical and experimental investigation of flutter suppression by piezoelectric actuation
[NASA-TP-3241] p 1781 N93-20584
Material nonlinear analysis of composites
p 1929 N93-20641
Description of wrinkles in membranes using nonlinear finite plate elements
[ETN-93-92565] p 1945 N93-20879
Edge delamination of composite laminates
p 1842 N93-21519
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533
PLATINUM
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792
PLATINUM ALLOYS
Field evaluation of six protective coatings applied to T-56 turbine blades after 2000 hours of engine use
[ARL-TR-2] p 1786 N93-21316
PLATINUM COMPOUNDS
Doping induced insulator-metal transition in the platinum based MX complexes
[DE93-003690] p 2083 N93-21996
ESR spectra of photoinduced defects in MX chain solids
[DE93-003692] p 2083 N93-21997
PLOTTING
CONPLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649
PLUMES
Spacecraft interaction with ambient and self-generated plasma/neutral environment
[AD-A258647] p 1823 N93-20364
PLUTONIUM
Application of surrogate materials in process study of actinides
[DE93-002257] p 1856 N93-20024
PLY ORIENTATION
The behavior of elastic anisotropic laminated composite flat structures subjected to deterministic and random loadings
[NASA-CR-192197] p 1950 N93-21366
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
PNEUMATICS
The M68HC11 gripper controller electronics
[NASA-CR-192732] p 1893 N93-21309
POINTING CONTROL SYSTEMS
Office of Spaceflight Standard Spaceborne Global Positioning System (GPS) user equipment project
p 1780 N93-21417
POISSON RATIO
Role of porosity in estimates of composite elastic constants
[DE93-002887] p 1845 N93-21989
POLAND
Poland civil aviation master plan and investment program: Executive summary
[PB92-213685] p 1759 N93-21342
Poland civil aviation master plan and investment program
[PB92-213693] p 1759 N93-21343
Definitional mission for civil aviation master plan for Poland
[PB92-213974] p 1760 N93-21713
POLAR CAPS
Studies of interactive plasma processes in the polar cusp
[NASA-CR-192137] p 1999 N93-21364
POLAR CUSPS
Studies of interactive plasma processes in the polar cusp
[NASA-CR-192137] p 1999 N93-21364
POLAR REGIONS
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758
Detection of polar stratospheric clouds from satellite
p 1957 N93-21591
POLARIMETRY
Remote sensing of earth terrain
[NASA-CR-192139] p 1966 N93-19979
Theory of grain alignment in molecular clouds
[NASA-CR-192307] p 2077 N93-20037
POLARIZATION (CHARGE SEPARATION)
Calorimetric examination of the polarization cluster of the beginning ferroelectric material KTaO3
[ETN-93-93418] p 2084 N93-21067
POLARIZATION (SPIN ALIGNMENT)
Radiation from moving charged particles with spin
[DE93-004633] p 2063 N93-21703
POLARIZATION (WAVES)
Birefringent polarization ray tracing: Theory and applications p 2067 N93-20285
POLARIZATION CHARACTERISTICS
Theory of grain alignment in molecular clouds
[NASA-CR-192307] p 2077 N93-20037
Capacities of the DLR polarization diversity radar for determining icing relevant cloudphysical parameters
[DLR-MITT-91-14] p 2014 N93-21367
POLARIZED ELASTIC WAVES
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-192141] p 1997 N93-20295
POLARONS
Doping induced insulator-metal transition in the platinum based MX complexes
[DE93-003690] p 2083 N93-21996
ESR spectra of photoinduced defects in MX chain solids
[DE93-003692] p 2083 N93-21997
POLICIES
Report on environmental requirements and priorities
[PB92-208198] p 1989 N93-21028
Publications of the Executive Office of the President
[PB92-233204] p 2091 N93-21226
By the year 2000: First in the world. FY 1993 budget summary
[PB93-108512] p 2086 N93-21231
Opportunities in applied environmental research and development
[PB92-223189] p 1990 N93-21347
Science and technology in US international affairs
[ISBN-1-881054-00-4] p 2094 N93-21758
Proceedings of the First International Symposium on Explosive Detection Technology
[DOT/FAA/CT-92/11] p 1764 N93-21856
International environmental research and assessment: Proposals for better organization and decision making
[ISBN-1-881054-01-2] p 2087 N93-21949

POLLUTION CONTROL
State air pollution control programs: A profile report
[PB93-122364] p 1990 N93-21216
Preserving our future today: Your guide to the United States Environmental Protection Agency
[PB92-226190] p 1990 N93-21345
Enforcement in the 1990's project: Recommendations of the analytical workgroups
[PB92-224286] p 1991 N93-21466
Technologies options for acid rain control
[PB93-106854] p 1991 N93-21473
Human exposure assessment for airborne pollutants: Advances and opportunities
[PB92-223247] p 1991 N93-21496
Surface-coating-free materials workshop
[PB93-101160] p 1861 N93-21683
Cationically polymerizable monomers derived from renewable sources
[DE93-005926] p 1861 N93-21731
The Natural Gas Vehicle Challenge 1992: Exhaust emissions testing and results
[DE93-002997] p 1917 N93-21974

POLLUTION MONITORING
State air pollution control programs: A profile report
[PB93-122364] p 1990 N93-21216
Trends in nitrogen in the Chesapeake Bay, 1984-1990
[PB93-122174] p 1990 N93-21217
Monitoring human tissues for toxic substances
[PB92-223239] p 2024 N93-21498

POLLUTION TRANSPORT
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302
Relationship between ozone concentrations and air transport over western Arizona
[PB93-114007] p 1990 N93-21238
National Center for Atmospheric Research, Fiscal Year 1991
[PB93-129914] p 2000 N93-21547
Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783

POLOIDAL FLUX
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668

POLYACETYLENE
The polyanilines: A novel class of conducting polymers
[AD-A259386] p 1860 N93-21266

POLYAMIDE RESINS
Aramids in high performance protective clothing
p 1837 N93-21155
The use of 2D NMR spectroscopy in the analysis of isomeric polyamides p 1839 N93-21166

POLYCARBONATES
The effect of fiber concentration, length and orientation on the thermal conductivity of a polycarbonate/pitch-based carbon fiber composite p 1834 N93-21133

POLYCARBOSILANES
Syntheses, structures and properties of polycarbosilanes formed directly by polymerization of Alkenylsilanes
[NASA-CR-191927] p 1860 N93-21189

POLYCRYSTALS
Thin film processing of photorefractive BaTiO3
[NASA-CR-192169] p 2079 N93-20311
The roles of slip geometry and hardening behavior in intergranular toughness
[DE93-005647] p 2081 N93-21712

POLYGONS
The generalized Voronoi diagram for a set of polygons: Algorithms, operation and applications to shape analysis
[ETN-93-92689] p 2056 N93-21392

POLYHEDRONS
Numerical modeling and optimization for the reconstruction of a polyhedron from its generalized gaussian image
[ETN-93-92683] p 2039 N93-21060

POLYIMIDE RESINS
Oxygen plasma resistant phosphine oxide containing imide/arylene copolymers
[NASA-TM-107712] p 1859 N93-20300

POLYMER BLENDS
The production of fibres from polypropylene and liquid crystal polymer blends p 1837 N93-21149

POLYMER MATRIX COMPOSITES
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
Advanced industrial materials. An overview
p 1845 N93-20623
Thermoplastic composites p 1845 N93-20625
Batman-cracks. Observations and numerical simulations p 1936 N93-20681
Protection of composite materials in space. The LDEF experience p 1847 N93-20812
Fabrication of uniaxially oriented composites from as-spun and heat-treated thermotropic liquid crystalline polymer fibers p 1834 N93-21132
The effect of fiber concentration, length and orientation on the thermal conductivity of a polycarbonate/pitch-based carbon fiber composite p 1834 N93-21133
Continuous fiber reinforced thermoplastic composites
p 1835 N93-21138
New special chemical fibres p 1836 N93-21147
Twaron in composites and protective clothing
p 1837 N93-21153
Free edge delamination prevention in composite laminates p 1840 N93-21508
Delamination and fatigue of composite materials: A review p 1840 N93-21509
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515

POLYMER PHYSICS
Applications of neural networks in polymer simulations
[DE93-004110] p 1862 N93-21843

POLYMERIC FILMS
New special chemical fibres p 1836 N93-21147
Metallization and sputtering of textiles: Preconditions for the substrate, properties and applications
p 1838 N93-21158
Measurement of the dielectric constant of polymeric films at high fields
[PB92-238625] p 1860 N93-21471

POLYMERIZATION
Polymers of bis(ethynylstyryl)benzene and related monomers
[AD-D015612] p 1859 N93-20398
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
Features in PO fibre applications
p 1837 N93-21148
Applications of Visil fibres in functional textiles
p 1837 N93-21154
Syntheses, structures and properties of polycarbosilanes formed directly by polymerization of Alkenylsilanes
[NASA-CR-191927] p 1860 N93-21189
Cationically polymerizable monomers derived from renewable sources
[DE93-005926] p 1861 N93-21731

POLYMERS
Polymers of bis(ethynylstyryl)benzene and related monomers
[AD-D015612] p 1859 N93-20398
Atomic oxygen protective coating with resistance to undercutting at defect sites
[NASA-CASE-LEW-15306-1] p 1859 N93-20566

POLYMETHYL METHACRYLATE
Mechanisms of gas permeation through polymer membranes
[DE93-005960] p 1852 N93-21836

POLYMORPHISM
Explicit polymorphism and CPS conversion
[AD-A258635] p 2029 N93-20033

POLYNOMIALS
Performances of finite element solution for crack problem p 1936 N93-20682
Polynomial solution of the direct geometric problem of a parallel spherical manipulator p 1918 N93-20718
Plane multiflows with a fixed number of demands
[RR-885-M] p 2034 N93-20788
The search for differential equations for orthogonal polynomials by using computers
[REPT-91-55] p 2052 N93-20865
The Weyl method for simultaneous calculation of polynomial roots (first part)
[RR-881-M] p 2055 N93-21169

POLYPROPYLENE
Laser welding of plastics under low and high gravity conditions p 1811 N93-21125
Manufacturing of high quality polypropylene/glass fibre prepreg tape p 1834 N93-21134
The production of fibres from polypropylene and liquid crystal polymer blends p 1837 N93-21149

POPULATIONS
Hurricane experience levels of coastal county populations from Texas to Maine, August 1992
[PB93-105971] p 2013 N93-21228

POROSITY
The application of quality criteria for the prediction of porosity in the design of casting processes
[DE93-001719] p 1857 N93-21773
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy
[DE93-002980] p 2083 N93-21981
Role of porosity in estimates of composite elastic constants
[DE93-002887] p 1845 N93-21989

POROUS MATERIALS
Role of porosity in estimates of composite elastic constants
[DE93-002887] p 1845 N93-21989

PORPHYRINS
Metalloradical and electrophilic activation of methane
[PB93-123693] p 1851 N93-21813

PORTABLE EQUIPMENT
An improved vapor taggant detector
p 1775 N93-21927
The flow immunosensor: An antibody-based system for explosives detection p 1776 N93-21932

PORTS (OPENINGS)
Wind-tunnel experiments on wind effects at tunnel portals
[NLR-TP-91191-U] p 1761 N93-20911

POSEIDON SATELLITE
TOPEX/Poseidon battery performance
p 1984 N93-20507

POSITION (LOCATION)
Theory and performance of the WPL Crosswind Profiler Model 2
[PB93-116606] p 2014 N93-21452
Improving the detection of near-Earth asteroids
[AD-A259383] p 2095 N93-21670
Geographic index of environmental articles 1990
[PB93-116184] p 1994 N93-21806

POSITIONING
Research on GPS utilization in space
p 1780 N93-20453
Optimizing positioning of mechanical parts
[PAPER-C-1-5] p 2035 N93-20828
Development of algorithms for composite positional tolerance measurement using coordinate measuring machines
[PAPER-C-1-6] p 2035 N93-20829
Problems of quality inspection and diagnosing in modern manufacturing systems
[PAPER-C-3-2] p 2036 N93-20836
A new method for recognizing quadric surfaces from range data and its application to telerobotics and automation
[NASA-CR-192619] p 1892 N93-20910
SSG 1.77: Utilization of inertial techniques for geodesy and surveying p 1969 N93-20964
SSG 4.117: Optimization of modern positioning techniques p 1972 N93-20983
Investigation of the real-time accuracy of the DGPS method
[AD-A257692] p 1780 N93-21222
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371

POSITRON ANNIHILATION
Defect characterization by means of positron annihilation p 1804 N93-21081
Anomalous WWZ couplings at future e(+)e(-) colliders
[PREPRINT-814] p 2066 N93-21177

POSITRONS
Monte Carlo studies of positron implantation in elemental metallic and multilayer systems
[DE93-003474] p 2065 N93-21991

POTASSIUM PERCHLORATES
Laser diode ignition characteristics of Zirconium Potassium Perchlorate (ZPP) p 1865 N93-20145

POTENTIAL FLOW
Interfacial tension studies of electrified liquid/liquid interfaces: Classical techniques for new data
[AD-A259213] p 1846 N93-20554

POTENTIAL THEORY
Full wave characterization of microstrip open end discontinuities patterned on anisotropic substrates using potential theory
[NASA-TM-106037] p 1889 N93-20259

POWDER (PARTICLES)
Ignition of nitrocellulose in various atmospheres
[AD-A257987] p 1849 N93-21223

POWDERED ALUMINUM
Microgravity combustion of dust clouds
p 1806 N93-21094

POWER EFFICIENCY
The impact of electric vehicles on CO2 emissions
[DE93-003719] p 1995 N93-21965

POWER LOSS
Nickel hydrogen capacity loss p 1983 N93-20498
Capacity fade in nickel cadmium and nickel hydrogen cells p 1984 N93-20499
NiH2 capacity fade during early cycling
p 1984 N93-20500
Characteristics of storage related capacity loss in Ni/H2 cells
[STD/92-118] p 1984 N93-20501

Nickel hydrogen battery cell storage matrix test
p 1984 N93-20502
Capacity recovery after storage negatively precharged nickel hydrogen cells p 1984 N93-20503

PRE-MAIN SEQUENCE STARS
A new deconvolution method for the Doppler cartography of cool star surfaces and its use on AB Doradus
[MPE-236] p 2095 N93-21025

PREAMPLIFIERS
Design and characterization of the BVX: An 8-channel CMOS preamplifier-shaper for silicon strips
[DE93-003619] p 1894 N93-21733
Monolithic preamplifier employing epitaxial N-channel JFETs
[DE93-002951] p 1894 N93-21980

PRECAMBRIAN PERIOD
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin
[PB93-115640] p 2000 N93-21692

PRECESSION
Corrections to the luni-solar precession derived from a compilation catalogue of extragalactic radio sources
[MITT-SER-A-233] p 2095 N93-21052
Analysis and synthesis of catalogues of extragalactic radio sources
[MITT-SER-A-231] p 2102 N93-21053

PRECIPITATION
Microwave radiative transfer studies of precipitation
p 2008 N93-20095

PRECIPITATION (METEOROLOGY)
The role of conditional symmetric instability in the development of moderate to heavy frozen precipitation bands
[AD-A258575] p 2002 N93-20031
Global temperature variations p 2003 N93-20068
Global water cycle p 2004 N93-20078
Digital topographic approach to modeling: The distribution of precipitation to mountainous terrain
[PB93-106649] p 2015 N93-21535
Comparison of monthly precipitation analyses derived from conventional measurements, satellite estimates and model results p 1958 N93-21599
Monthly precipitation and runoff data for validation of climate models p 1959 N93-21605

PRECISION
Six-Degree-of-Freedom Test Facility
p 1817 N93-21443

PRECONDITIONING
Metallization and sputtering of textiles: Preconditions for the substrate, properties and applications
p 1838 N93-21158

PREDICTION ANALYSIS TECHNIQUES
Three-dimensional Navier-Stokes heat transfer predictions for turbine blade rows
[NASA-TM-105800] p 1897 N93-19969
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189220] p 1784 N93-20252
Damage tolerance and arrest characteristics of pressurized graphite/epoxy tape cylinders
[NASA-CR-192618] p 1945 N93-20915
SSG 4.118: Inverse geodetic problems
p 1973 N93-20984
Ultimate strength of geometrically imperfect angle columns
[PB93-111771] p 1947 N93-21235
Post-buckling analysis of thin-walled channel sections undergoing local and distortional buckling
[PB93-112928] p 1947 N93-21236
The significance of service load data for fatigue life analysis p 1947 N93-21319
The least and most damaging histories which can be constructed from a specific from-to matrix
p 1948 N93-21321
Numerical validation of a constitutive theory for an arbitrarily fractured solid
[DE93-003863] p 2064 N93-21739

PREDICTIONS
Prediction of the random load fatigue life distribution
p 1922 N93-20337
Survey of space environment services center users and services
[AD-A258672] p 2089 N93-20366
Improved empirical model for base drag prediction on missile configurations based on new wind tunnel data
[AD-A258753] p 1761 N93-20405
Comparison of performance on the Shipley Institute of Living Scale, Air Traffic Control Specialist Selection Test, and FAA Academy Screen
[AD-A259249] p 1779 N93-20582
Joint Typhoon Warning Center (JTWC92) model
[AD-A258646] p 2011 N93-20586
Fundamentals of adaptive anticipation techniques for the detection of threatening air traffic conflicts: Investigation of the horizontal proximity situation in the case of expected heading changes
[DLR-MITT-91-21] p 1779 N93-21004
Predicting structure in nonsymmetric sparse matrix factorizations
[DE93-003365] p 2057 N93-21963

PRELAUNCH TESTS
Ground segment infrastructure standards
[ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002

PREMIXED FLAMES
Studies of premixed laminar and turbulent flames at microgravity p 1853 N93-20196
Structure and dynamics of premixed flames in microgravity p 1853 N93-20198
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
The effects of gravity on wrinkled laminar flames
p 1853 N93-20200
The structure of particle cloud premixed flames
p 1853 N93-20202
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976

PREPREGS
Experimental and analytical investigation of dynamic characteristics of extension-twist-coupled composite tubular spars
[NASA-TP-3225] p 1925 N93-20585
Manufacturing of high quality polypropylene/glass fibre prepreg tape p 1834 N93-21134
Thermoplastic tape winding parameters
p 1835 N93-21135

PREPROCESSING
Radar Ocean Wave Spectrometer (ROWS) preprocessing program (PREROWS2.EXE). User's manual and program description
[NASA-TM-104579] p 2017 N93-20160

PRESIDENTIAL REPORTS
Implementation of the recommendations of the Presidential Commission on the Space Shuttle Challenger Accident
[NASA-TM-108646] p 1820 N93-19990
Report at a glance: Report of the Presidential Commission on the Space Shuttle Challenger Accident
p 1820 N93-20036
Publications of the Executive Office of the President
[PB92-233204] p 2091 N93-21226
By the year 2000: First in the world. FY 1993 budget summary
[PB93-108512] p 2086 N93-21231
Economics and global change: The FY 1993 research program on the economics of global change. A supplement to the US President's FY 1993 budget and a companion document to out changing planet
[PB93-101244] p 1993 N93-21696

PRESSURE DISTRIBUTION
The aerodynamic performance of laser drilled sheets
[AERO-REPT-9204] p 1761 N93-20806
HSCT mission analysis of waverider designs
[NASA-CR-192193] p 1783 N93-21646

PRESSURE DRAG
Experiments on smooth cantilevered circular cylinders in low-turbulence uniform flow. Part 1: Mean loading with aspect ratios in the range 4 to 30
[PB93-111763] p 1903 N93-21383

PRESSURE EFFECTS
Non-Newtonian temperature and pressure effects of a powder lubricant slurry in a rotating hydrostatic step bearing
[AD-A259325] p 1916 N93-21832

PRESSURE GRADIENTS
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence
[NASA-CR-189640] p 1899 N93-20253

PRESSURE MEASUREMENT
Reliability study of the NiH2 strain gage
p 1908 N93-20515
Wind-tunnel experiments on wind effects at tunnel portals
[NLR-TP-91191-U] p 1761 N93-20911
GEODE 2: Manufacturing large area format cadmium-mercury-telluride crystals in a microgravity environment. Pressure sensor proof of concept
p 1803 N93-21078
Experiments on smooth cantilevered circular cylinders in a low-turbulence uniform flow. Part 2: Fluctuating loads on a cantilever of aspect ratio 30
[PB93-110500] p 1903 N93-21382
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766

PRESSURE RECOVERY
An experimental investigation of S-duct flow control using arrays of low-profile vortex generators
[NASA-TM-106030] p 1760 N93-19968

PRESSURE REDUCTION
An experimental investigation of S-duct flow control using arrays of low-profile vortex generators
[NASA-TM-106030] p 1760 N93-19968
Statistically based decompression tables. 7: Selection and treatment of primary air and N2O2 data
[AD-A259090] p 2023 N93-20587

PRESSURE SENSORS
GEODE 2: Manufacturing large area format cadmium-mercury-telluride crystals in a microgravity environment. Pressure sensor proof of concept
p 1803 N93-21078

PRESSURE VESSELS
Lewis Research Center battery overview
p 1983 N93-20493
An overview of eight years of activity developing French nickel-hydrogen technology p 1985 N93-20514
Reliability study of the NiH2 strain gage
p 1908 N93-20515
Eagle-Picher SPV development p 1986 N93-20517
Nickel-hydrogen CPV battery update
p 1986 N93-20518
The holographic interferometry: An industrial tool
[REPT-921-430-110] p 1906 N93-20932

PRESTRESSING
Method and apparatus for preloading a joint by remotely operable means
[NASA-CASE-MSC-21940-1] p 1914 N93-20120

PRINCIPAL COMPONENTS ANALYSIS
Measurement and interpretation of the sunlight backscattered from clouds within the oxygen-A absorption band p 1963 N93-21627

PRINTED CIRCUITS
Development of high heat radiation printed boards
p 1796 N93-20456
Vacuum multilayer lamination of printed wiring boards
[DE93-004912] p 1894 N93-21727

PRIORITIES
Priorities for microgravity combustion research and goals for workshop discussions p 1869 N93-20186
Pathways to excellence: A Federal strategy for science, mathematics, engineering, and technology education
[NASA-EP-288] p 1819 N93-21538

PROBABILITY DENSITY FUNCTIONS
Nonlinearization of nonlinear systems under external and parametric random excitations p 1945 N93-20730

PROBABILITY THEORY
Probabilistic aspects of growth of the fatigue cracks in the railroad axles p 1924 N93-20348
Statistically based decompression tables. 7: Selection and treatment of primary air and N2O2 data
[AD-A259090] p 2023 N93-20587
A review of probabilistic fatigue life analyses for welded plate and tubular joints p 1944 N93-20728
Explicit probabilities for the symmetric coupled processor
[REPT-91-43] p 2058 N93-20809
Long range percolation in stationary point processes
[REPT-91-54] p 2058 N93-20864
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940

PROBLEM SOLVING
Higher order crossings
[AD-A258727] p 2050 N93-20327
Correlates of creative problem solving
[AD-A258720] p 2085 N93-20369
Least square methods for solving systems of inequalities with application to an assignment problem
[AD-A258682] p 2050 N93-20391
Problem solving for long term, global scenarios of space traffic
[ILR-MITT-265(1991)] p 1821 N93-20906
SSG 4.118: Inverse geodetic problems
p 1973 N93-20984

PROCEDURES
Packet telecommand standard
[ESA-PSS-04-107-ISSUE-2] p 1884 N93-21001
Ground segment infrastructure standards
[ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002
NASA systems engineering handbook. Draft
[NASA-TM-108702] p 2086 N93-21188
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195

PROCESS CONTROL (INDUSTRY)
Elements of computer-aided tolerance analysis
[PAPER-C-1-3] p 2035 N93-20826
Problems of quality inspection and diagnosing in modern manufacturing systems
[PAPER-C-3-2] p 2036 N93-20836
Statistical Process Control (SPC) in FMS/CIM systems
[PAPER-C-3-4] p 2037 N93-20838
The total quality approach in the development of technical textiles p 1838 N93-21156

PRODUCT DEVELOPMENT
Tolerancing for function in a CAD/CAM environment
[PAPER-C-1-1] p 2034 N93-20824
Quality assurance in the future industrial plant
[PAPER-C-3-3] p 1919 N93-20837
Product development of a user interface for Geographic Information Systems (GIS) and remote sensing for training purposes
[BCRS-90-32] p 2091 N93-20952
PRODUCTION COSTS
Total quality assurance
[PAPER-C-3-5] p 1920 N93-20839
PRODUCTION ENGINEERING
Functional tolerancing in CAD/CAM
[PAPER-C-2-1] p 2035 N93-20830
Tolerance, chains and setting of machines: Three dimensional statistical model of machined dimensions
[PAPER-C-2-5] p 2036 N93-20833
Tolerancing in the context of the automated manufacturing and the design axioms
[PAPER-C-2-6] p 2036 N93-20834
Problems of quality inspection and diagnosing in modern manufacturing systems
[PAPER-C-3-2] p 2036 N93-20836
Statistical Process Control (SPC) in FMS/CIM systems
[PAPER-C-3-4] p 2037 N93-20838
Predesign of the tubular braiding process using a mathematical process description p 1836 N93-21143
Manufacturing innovations and small business: How flexible manufacturing systems affect tooling and machining enterprises
[PB92-216258] p 2086 N93-21743
PRODUCTION MANAGEMENT
Statistical Process Control (SPC) in FMS/CIM systems
[PAPER-C-3-4] p 2037 N93-20838
Total quality assurance
[PAPER-C-3-5] p 1920 N93-20839
PRODUCTION PLANNING
Report to the Chairman, Legislation, and National Security Subcommittee, Committee on Goverment Operations, House of Representatives. Unmanned aerial vehicles: More testing needed before production of short-range system
[AD-A259473] p 1780 N93-20245
PRODUCTIVITY
Tolerancing in the context of the automated manufacturing and the design axioms
[PAPER-C-2-6] p 2036 N93-20834
Marine productivity along the northwest coast of Africa (Mauritania): Estimation from satellite data p 1955 N93-21578
PROGRAM VERIFICATION (COMPUTERS)
A unified model of program behavior
[AD-A259142] p 2030 N93-20128
Software quality measurement: A framework for counting problems and defects
[AD-A258556] p 2032 N93-20387
Construction of evaluation test equipment for 16 bit space MPU p 1801 N93-20486
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL
[AD-A259224] p 2033 N93-20577
Expert system verification and validation study
[NASA-CR-192175] p 2034 N93-20779
Verification methods of the behavioral specifications: Study and implementation
[ETN-93-92687] p 2044 N93-21064
Software quality assurance: Documentation and reviews
[PB93-113694] p 2040 N93-21221
Conformance test specification for COBOL intrinsic function module
[PB92-229178] p 2040 N93-21351
Certification plan for a planar near-field range used for high-performance phased-array testing
[PB92-213305] p 1885 N93-21493
Expert system verification and validation study: Workshop and presentation material
[NASA-CR-192176] p 2041 N93-21661
PROGRAMMING ENVIRONMENTS
Introduction to graphical user interfaces and their use by CITIS
[PB92-213404] p 2040 N93-21348
PROGRAMMING LANGUAGES
Explicit polymorphism and CPS conversion
[AD-A258635] p 2029 N93-20033
Tomita's algorithm: Extensions and applications
[MEMO-INF-91-68] p 2030 N93-20220
Substring parsing for arbitrary context-free grammars p 2031 N93-20225
MODULA-2* and its compilation
[INRIA-RR-1421] p 2037 N93-20859
A canonical calculus of residuals
[INRIA-RR-1542] p 2052 N93-20861
The origins of lambda-calculus and term rewriting systems
[INRIA-RR-1543] p 2053 N93-20870
Efficient compilation of a synchronous declarative language: LUSTRE-V3 code generator
[ETN-93-92679] p 2038 N93-20899
Design and implementation of LOGRES
[REPT-92-040] p 2039 N93-21184
PROJECT MANAGEMENT
HOPE information system review p 1791 N93-20425
Continuous improvement on a research and development environment
[DE93-001561] p 2086 N93-21304
GPHS-RTGs in support of the Cassini mission
[DE93-002035] p 1825 N93-21702
PROJECT PLANNING
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 1: Plenary Session
[NASA-TM-108651] p 2085 N93-20329
Study on environment control and life support technology p 1789 N93-20413
Research on HOPE p 1791 N93-20423
HOPE information system review p 1791 N93-20425
Orbit re-entry experiment vehicle development p 1792 N93-20432
Conceptual study of ETS-7 p 1793 N93-20437
Canada's longterm space plan and ISY activities p 1819 N93-21284
Predicting our weather: A strategic plan for the US Weather Research Program
[PB93-101277] p 2013 N93-21293
Federal plan for meteorological services and supporting research, FY 1993
[PB92-233188] p 2014 N93-21502
Integrated cost accounting system
[AD-A258587] p 2093 N93-21755
PROJECTILES
Projectile base bleed technology. Part 2: User's guide CMINT computer code, version 5.04-BRL
[AD-A258630] p 1897 N93-19999
Safety and arming system for tube launched projectile
[AD-D015557] p 1889 N93-20307
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533
PROJECTORS
Multiple projector small dome display
[AD-A258621] p 2077 N93-19996
PROLOG (PROGRAMMING LANGUAGE)
A contribution to the study of OR-parallel in PROLOG over distributed memory machines
[ETN-93-92681] p 2044 N93-20886
PRONY SERIES
The analytical representation of viscoelastic material properties using optimization techniques
[NASA-TM-108394] p 1920 N93-19972
PROP-FAN TECHNOLOGY
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis. Computer program user's manual
[NASA-CR-187125] p 1784 N93-20583
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual
[NASA-CR-191017] p 1953 N93-22005
PROPAGATION MODES
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760
PROPANE
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project
[FOA-C-40296-4.5] p 1901 N93-20858
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976
PROPELLANT ADDITIVES
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231
PROPELLANT CHEMISTRY
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
Marking of German plastic explosive for the enhancement of vapor detection p 1775 N93-21925
Program to tag military plastic/sheet explosives p 1775 N93-21926
Plant laboratory scale preparation and complete characterization of modified composition C-4 containing a taggant p 1775 N93-21928
PROPELLANT COMBUSTION
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976
PROPELLANT PROPERTIES
Plant laboratory scale preparation and complete characterization of modified composition C-4 containing a taggant p 1775 N93-21928
PROPELLANT STORAGE
Optimizing liquid hydrogen storage systems p 1879 N93-20692
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789
PROPELLANT TESTS
Program to tag military plastic/sheet explosives p 1775 N93-21926
PROPELLANTS
Thermochemical evaluation of proposed electrothermal-chemical propellants
[AD-A259110] p 1866 N93-20588
PROPELLER FANS
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis. Computer program user's manual
[NASA-CR-187125] p 1784 N93-20583
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual
[NASA-CR-191017] p 1953 N93-22005
PROPORTIONAL COUNTERS
The GALLEX solar neutrino experiment
[DE93-003357] p 2102 N93-21962
PROPULSION SYSTEM CONFIGURATIONS
Identification of propulsion systems
[NASA-TM-106007] p 1784 N93-20109
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
An electromagnetically-controlled Precision Orbital Tracking Vehicle (POTV)
[AD-A259143] p 1823 N93-20129
Introduction of laser initiation for the 48-inch Advanced Solid Rocket Motor (ASRM) test motors at Marshall Space Flight Center (MSFC) p 1830 N93-20141
Multidisciplinary computational aerosciences
[NASA-TM-103946] p 1759 N93-20323
Propulsion/weapon system interaction model
[AD-A259291] p 1785 N93-20610
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
Thruster configurations for maneuvering heavy payloads p 1813 N93-21415
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516
PROPULSION SYSTEM PERFORMANCE
Identification of propulsion systems
[NASA-TM-106007] p 1784 N93-20109
Propulsion/weapon system interaction model
[AD-A259291] p 1785 N93-20610
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
PROPULSIVE EFFICIENCY
H2 arcjet performance mapping program
[NASA-CR-191073] p 1828 N93-20064
PROTECTION
Upper interior head protection. Volume 1. The development of a research test procedure
[PB93-113769] p 2026 N93-21537
Upper interior head protection. Volume 2: Fleet characterization and countermeasure evaluation
[PB93-113777] p 2027 N93-21795

PROTECTIVE CLOTHING
Activated carbon fibers in composites, chemically protective clothing and air purification
p 1837 N93-21152
Twaron in composites and protective clothing
p 1837 N93-21153
Aramids in high performance protective clothing
p 1837 N93-21155
Developments in heat and flame resistant textiles for protective clothing and barrier fabrics
p 1838 N93-21157
Correlation of results of radiant heat test and convective heat test for three layered protective clothing
p 1838 N93-21161
Evaluation of two microclimate cooling air vests on a heated mannequin
[AD-A259410] p 2026 N93-21269
PROTECTIVE COATINGS
Stabilized zirconia/CoCrAlY high temperature coating
[AD-D015573] p 1859 N93-20276
Atomic oxygen protective coating with resistance to undercutting at defect sites
[NASA-CASE-LEW-15306-1] p 1859 N93-20566
Protection of Materials and Surface Finishes from the Low Earth Orbit Space Environment
[CTN-93-60605] p 1847 N93-20810
The LDEF experience. Materials p 1847 N93-20811
Issues/considerations and performance prediction of LEO protective coatings p 1847 N93-20813
Space station protective coating development
p 1848 N93-20816
Materials Exposure in Low Earth Orbit (MELEO) experiment p 1848 N93-20817
LEO resistant thermal control materials and dry lubricants for the mobile servicing system
p 1848 N93-20818
Protection of Radarsat SAR antenna graphite/epoxy support structure p 1848 N93-20819
Atomic oxygen resistant SiOx coated Kapton for Space Station Freedom, and alternate coatings
p 1849 N93-20821
Multipurpose protective coatings for spacecraft applications p 1849 N93-20822
Oxide protective coatings on carbon composites for medium and high-temperature thermal cycling: New opportunities for the United Europe
p 1838 N93-21160
Field evaluation of six protective coatings applied to T-56 turbine blades after 2000 hours of engine use
[ARL-TR-2] p 1786 N93-21316
Coatings on composites: New developments and applications in the aerospace industry
[MBB-Z-0443-92-PUB] p 1840 N93-21404
Magnetron sputtering on 3D components with less accessible areas
[MBB-Z-0360-91-B-PUB] p 1878 N93-21745
Advanced ceramic component development for high temperature indirect gas-fired heating systems
[PB93-127033] p 1862 N93-21817
PROTEIN CRYSTAL GROWTH
Recent results and new hardware developments for protein crystal growth in microactivity
[NASA-CR-191994] p 1875 N93-21356
PROTEINS
Nutrition and hydration status of aircrew members consuming the food packet, survival, general purpose, improved during a simulated survival scenario
[AD-A258744] p 2022 N93-20384
Biochemically active layers for selective material detection sensors
[MBB-Z-0440-92-PUB] p 2021 N93-20959
Crystallization of a protein aboard the US Space Shuttle flight STS-31 p 1804 N93-21086
PROTOCOL (COMPUTERS)
PDES application protocol suite for composite (PAS-C). Functional needs/state/of-the-art comparison for the PAS-C program
[AD-A258613] p 1831 N93-19986
PDES application protocol suite for composites (PAS-C) 1992 annual report for the PAS-C program
[AD-A258625] p 1831 N93-19998
Performance evaluation of Platform Data ManagementSystem under various degrees of protocol implementation
[NASA-CR-192408] p 2088 N93-20161
Analysis of timed-token ring protocols
[INRIA-RR-1570] p 2044 N93-20894
Redesigning the window protocol: The block acknowledgement revisited
[RUU-CS-92-04] p 2039 N93-21170
PROTON BEAMS
Survey of nuclear activations for intense proton and deuteron beams
[AD-A259258] p 2061 N93-20604
Design of a high current proton accelerator
p 1766 N93-21873
PROTON-PROTON REACTIONS
The electromagnetic calorimeter for the STAR experiment at RHIC
[DE93-002780] p 2062 N93-21480
PROTONS
Survey of nuclear activations for intense proton and deuteron beams
[AD-A259258] p 2061 N93-20604
Design of a high current proton accelerator
p 1766 N93-21873
PROTOTYPES
CASE/simulation systems p 2088 N93-20165
Improvement of LC feedthrough filters
p 1797 N93-20458
Low cost attitude control system scanwheel development
[NASA-CR-191324] p 1824 N93-21003
A high-speed auto-tuning PID regulator based on programmable logic devices
[REPT-92-042] p 2047 N93-21186
Results of prototype software development for automation of shuttle proximity operations
p 1815 N93-21425
An autonomous rendezvous and docking system using cruise missile technology p 1816 N93-21432
PROVING
Routine validation of TOVS retrievals: Lessons learned from a pilot experiment p 1960 N93-21611
PROXIMITY
Fundamentals of adaptive anticipation techniques for the detection of threatening air traffic conflicts: Investigation of the horizontal proximity situation in the case of expected heading changes
[DLR-MITT-91-21] p 1779 N93-21004
The realtime operations of the space shuttle orbiter during rendezvous and proximity operations
p 1817 N93-21439
Space shuttle program: Automatic rendezvous, proximity operations, and capture p 1818 N93-21449
PSYCHOLOGICAL FACTORS
Instructions and advance training measures for the improvement of human reliability
[MBB-FE-313-S-PUB-0500] p 2025 N93-21402
PSYCHOLOGY
The central executive component of working memory
[AD-A258724] p 2025 N93-20326
PUBLIC HEALTH
Prologue to Action. Life Sciences Education and Science Literacy
[PB93-107514] p 2021 N93-21230
Human exposure assessment for airborne pollutants: Advances and opportunities
[PB92-223247] p 1991 N93-21496
Monitoring human tissues for toxic substances
[PB92-223239] p 2024 N93-21498
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 2: Appendices
[PB92-224674] p 1916 N93-21714
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 1: Analysis
[PB92-224666] p 1916 N93-21715
PULSARS
Timing analysis of low-energy gamma ray emission from galactic compact objects using the Gamma Ray Observatory
[NASA-CR-192253] p 2102 N93-20747
The Crab nebula's wisps as shocked pulsar wind
[DE93-003466] p 2097 N93-21673
Relativistic shock waves and the excitation of plerions
[DE93-003469] p 2066 N93-21729
Weibel instabilities in relativistic electron-positron plasmas
[DE93-003468] p 2077 N93-21990
PULSE COMPRESSION
Magnetic switching techniques for high power pulse generation
[ISBN-90-9004705-0] p 1892 N93-20935
PULSE DURATION
An overview of Sandia National Laboratories' plasma switched, gigawatt, ultra-wideband impulse transmitter program
[DE93-003249] p 1886 N93-21960
PULSE GENERATORS
Variable phase sine wave generator for active phased arrays
[AD-D015558] p 1888 N93-20028
Magnetic switching techniques for high power pulse generation
[ISBN-90-9004705-0] p 1892 N93-20935
An overview of Sandia National Laboratories' plasma switched, gigawatt, ultra-wideband impulse transmitter program
[DE93-003249] p 1886 N93-21960
PULSE RADAR
Use of radar technology for pavement layer evaluation
[PB92-226166] p 1912 N93-21744
PULSED LASER DEPOSITION
Thin film processing of photorefractive BaTiO3
[NASA-CR-192169] p 2079 N93-20311
PULSED LASERS
Computer modeling of pulsed CO2 lasers for lidar applications p 1913 N93-20106
Pulse discharge laser with passive arc protection
[AD-D015601] p 1909 N93-20262
Injection seeded, diode pumped regenerative ring Nd:YAG amplifier for spaceborne laser ranging technology development
[NASA-CR-192171] p 1910 N93-20298
Discussion of the optical effects created by a laser source on particles under microgravity
p 1811 N93-21126
Assessment of single-pulse laser damage to structural materials for spacecraft
[AD-A259387] p 1911 N93-21267
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770
PULSED RADIATION
Ultrafast laser generation of hard x rays
p 1912 N93-21952
PULSES
A correlative investigation of the propagation of ULF wave power through the dayside magnetosphere
[NASA-CR-192141] p 1997 N93-20295
Axial response and pulse behavior of a cylindrical liquid column. Part 2
[LRT-WE-9-FB-2-1991-PT-2] p 1903 N93-21296
PUMP IMPELLERS
Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753
PUMPS
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049
PYRITES
Pyrite cathode material for a thermal battery
[AD-D015600] p 1891 N93-20792
PYROTECHNICS
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
NASA pyrotechnically actuated systems program
p 1863 N93-20133
Determination of pyrotechnic functional margin
p 1863 N93-20134
Development of a NASA standard gas generator
p 1863 N93-20135
Pyrotechnically actuated systems database and applications catalog p 1864 N93-20136
A semiconductor bridge ignited hot gas piston ejector
p 1864 N93-20137
Small ICBM Laser Firing Unit (LFU)
p 1864 N93-20138
Laser-initiated ordnance for air-to-air missiles
p 1864 N93-20139
Laser diode ordnance design p 1864 N93-20140
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
Proposed system safety design and test requirements for the microlaser ordnance system
p 1864 N93-20144
Advances in laser diodes for pyrotechnic applications
p 1865 N93-20146
Development and testing of hermetic, laser-ignited pyrotechnic and explosive components
p 1865 N93-20149
Precision linear shaped charge severance of graphite-epoxy materials
[SAND-92-0610C] p 1865 N93-20151
Pyrotechnic modeling for the NSI and pin puller
p 1866 N93-20153

Q

Q FACTORS
Airline quality issues 1992: Proceedings of the International Forum on Airline Quality
[NIAR-92-10] p 1764 N93-21561
Q SWITCHED LASERS
Laser-based firing systems for prompt initiation of secondary explosives p 1864 N93-20143
Q VALUES
Survey of nuclear activations for intense proton and deuteron beams
[AD-A259258] p 2061 N93-20604

QUADRATIC EQUATIONS
Singular points at infinity of quadratic systems of differential equations
[REPT-91-58] p 2052 N93-20852
QUADRATIC PROGRAMMING
A truncated SQP algorithm for large scale nonlinear programming problems
[PB92-226299] p 2039 N93-21045
Solution of quadratic distributed control problems by optimization methods
[ETN-93-93409] p 2040 N93-21303
QUADRATURES
Asymptotic behaviour of some bilinear functionals of the empirical process
[MEMO-1031] p 2059 N93-20956
QUADRUPOLES
Calorimetric examination of the polarization cluster of the beginning ferroelectric material KTaO3
[ETN-93-93418] p 2084 N93-21067
Application of radiofrequency superconductivity to accelerators for high-current ion beams
[DE93-002925] p 2066 N93-21979
QUALIFICATIONS
Instructions and advance training measures for the improvement of human reliability
[MBB-FE-313-S-PUB-0500] p 2025 N93-21402
QUALITY
Satisfying the customer's requirements
[PNR-90988] p 1785 N93-20735
QUALITY CONTROL
New methodologies toward the integration of tolerancing in CAD/CAM systems
[PAPER-C-1-2] p 2035 N93-20825
Vectorial tolerancing
[PAPER-C-1-4] p 2035 N93-20827
Optimizing positioning of mechanical parts
[PAPER-C-1-5] p 2035 N93-20828
Development of algorithms for composite positional tolerance measurement using coordinate measuring machines
[PAPER-C-1-6] p 2035 N93-20829
Functional tolerancing in CAD/CAM
[PAPER-C-2-1] p 2035 N93-20830
Problems of quality inspection and diagnosing in modern manufacturing systems
[PAPER-C-3-2] p 2036 N93-20836
Quality assurance in the future industrial plant
[PAPER-C-3-3] p 1919 N93-20837
Statistical Process Control (SPC) in FMS/CIM systems
[PAPER-C-3-4] p 2037 N93-20838
Total quality assurance
[PAPER-C-3-5] p 1920 N93-20839
Nondestructive inspection of in-service aircraft
[ETN-93-93059] p 1763 N93-20928
The total quality approach in the development of technical textiles p 1838 N93-21156
Infrared imaging of fibre reinforced plastic composites p 1838 N93-21162
Software quality assurance: Documentation and reviews
[PB93-113694] p 2040 N93-21221
Summary report for the National Atmospheric Deposition Program National Trends Network (NADP/NTN) site visitation program
[PB92-219823] p 1991 N93-21494
Airline quality issues 1992: Proceedings of the International Forum on Airline Quality
[NIAR-92-10] p 1764 N93-21561
QUANTITATIVE ANALYSIS
Quantitative registration of tree vitality and physiological changes with colour-infrared and multispectral photography
[BCRS-91-44] p 1968 N93-20740
Lunar and asteroid composition assessment using remote secondary ion mass spectrometry
[DE93-003839] p 2098 N93-21849
QUANTUM CHEMISTRY
Interface properties of wide bandgap semiconductor structures
[AD-A259416] p 2078 N93-20131
QUANTUM CHROMODYNAMICS
Non-topological solitons in astrophysics and cosmology p 2096 N93-20292
Semi-leptonic decays of D-mesons in lattice QCD
[PREPRINT-808] p 2062 N93-20905
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view
[PREPRINT-810] p 2062 N93-20923
Two loop calculation of the anomalous dimension of the axial current with static heavy quarks
[PREPRINT-813] p 2062 N93-20924
Two-parameter quantum groups
[PREPRINT-820] p 2060 N93-21182
Multi-jet production rates in deep-inelastic muon-proton scattering
[DE93-004410] p 2065 N93-21854
Experiences with the ACPMAPS 50 GFLOP system
[DE93-004418] p 2042 N93-21855
QUANTUM ELECTRONICS
Proceedings of the International Workshop on Quantum Effect Physics, Electronics, and Applications
[AD-A259457] p 2084 N93-20242
QUANTUM MECHANICS
Proceedings of the International Workshop on Quantum Effect Physics, Electronics, and Applications
[AD-A259457] p 2084 N93-20242
Study of the generalized parametric oscillator
[PREPRINT-815] p 2059 N93-21178
QUANTUM THEORY
Proceedings of the International Workshop on Quantum Effect Physics, Electronics, and Applications
[AD-A259457] p 2084 N93-20242
Quantum dynamics of shock waves in molecular crystals
[AD-A258749] p 2079 N93-20404
QUANTUM WELLS
Ultrafast dynamics of quantum well lasers: Ultimate potential for high speed modulation
[AD-A258653] p 1910 N93-20365
QUARKS
Inclusive beauty decays and the spectator model
[PREPRINT-790] p 2061 N93-20850
Two loop calculation of the anomalous dimension of the axial current with static heavy quarks
[PREPRINT-813] p 2062 N93-20924
Vacuum structure of pure gauge theories on the lattice
[DE93-001920] p 2081 N93-21701
Effect of quark-gluon plasma boundary on the momentum distribution of quarks
[DE93-004166] p 2064 N93-21740
QUARTZ CRYSTALS
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193)
[PB92-227073] p 1893 N93-21350
QUASARS
IUE-ULDA access guide no. 4A: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume A
[ESA-SP-1153-VOL-A] p 2096 N93-21007
QUATERNIONS
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265
QUENCHING (COOLING)
Microgravity combustion of dust clouds p 1806 N93-21094
Quenching of a tube and filling of a vessel under microgravity p 1806 N93-21096
QUEUEING THEORY
Neural-network dedicated processor for solving competitive assignment problems
[NASA-CASE-NPO-17781-1-CU] p 2028 N93-20116
Performance evaluation of Platform Data ManagementSystem under various degrees of protocol implementation
[NASA-CR-192408] p 2088 N93-20161
Explicit probabilities for the symmetric coupled processor
[REPT-91-43] p 2058 N93-20809
Stochastic orderings on partial sums of random variables and on counting measures of random intervals
[INRIA-RR-1422] p 2052 N93-20860
Analysis of timed-token ring protocols
[INRIA-RR-1570] p 2044 N93-20894
Estimates of cycle times in stochastic Petri nets
[INRIA-RR-1572] p 2058 N93-20897

R

RADAR
Delineate subsurface structures with ground penetrating radar
[DE93-000474] p 1886 N93-21664
RADAR ANTENNAS
Real time data reformatting using the TMS320C25 development system
[AD-A259187] p 1882 N93-20273
RADAR CORNER REFLECTORS
High-frequency techniques for RCS prediction of plate geometries and a physical optics/equivalent currents model for the RCS of trihedral corner reflectors
[NASA-CR-192302] p 1881 N93-20233
RADAR CROSS SECTIONS
High-frequency techniques for RCS prediction of plate geometries and a physical optics/equivalent currents model for the RCS of trihedral corner reflectors
[NASA-CR-192302] p 1881 N93-20233
RADAR DATA
Use of radar technology for pavement layer evaluation
[PB92-226166] p 1912 N93-21744
RADAR DETECTION
Rendezvous radar for the orbital maneuvering vehicle p 1814 N93-21419
RADAR IMAGERY
Radar Ocean Wave Spectrometer (ROWS) preprocessing program (PREROWS2.EXE). User's manual and program description
[NASA-TM-104579] p 2017 N93-20160
Demonstration of a 532 nm direct detection imaging laser radar using a Digicon receiver
[AD-A259226] p 1883 N93-20578
RADAR MEASUREMENT
Remote sensing of earth terrain
[NASA-CR-192139] p 1966 N93-19979
Aerosol chemistry in GLOBE p 2009 N93-20102
CO2 lidar backscatter experiment p 2009 N93-20103
An airborne millimeter-wave FM-CW radar for thickness profiling of freshwater ice
[AD-A259368] p 1886 N93-21669
RADAR SCATTERING
Multifrequency backscatter modelling of bare soil: Attema, Kats, and Krul model applied in Agriscatt 1987 data
[BCRS-91-43] p 1884 N93-20739
RADAR SIGNATURES
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
RADAR TARGETS
High range resolution radar target identification using the Prony model and hidden Markov models
[AD-A259210] p 1883 N93-20553
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
Demonstration of a 532 nm direct detection imaging laser radar using a Digicon receiver
[AD-A259226] p 1883 N93-20578
Coherent Doppler lidar for automated space vehicle rendezvous, stationkeeping and capture p 1812 N93-21408
Video guidance sensor p 1812 N93-21409
Approach range and velocity determination using laser sensors and retroreflector targets p 1812 N93-21410
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414
Rendezvous radar for the orbital maneuvering vehicle p 1814 N93-21419
A comparison of laser-based ranging systems for AR/C p 1814 N93-21422
Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445
One-class classifiers and their application to synthetic aperture radar target recognition
[DE93-000716] p 1886 N93-21769
Naval research reviews, volume 44, no. 1, 1992
[PB93-129682] p 2104 N93-21808
RADAR TRACKING
Microwave radiative transfer studies of precipitation p 2008 N93-20095
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
Tracking radar advanced signal processing and computing for Kwajalein Atoll (KA) application
[AD-A259066] p 1886 N93-21756
RADIAL DISTRIBUTION
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263
RADIANT COOLING
Heat loads as key problem of hypersonic flight
[MBB-FE-202-S-PUB-0486] p 1762 N93-21054
RADIANT HEATING
A study of ignition phenomena of bulk metals by radiant heating p 1854 N93-20210
Adiabatic radiant hot air burner
[PB93-114486] p 1987 N93-21220
Rate of heating of the forest interior
[INPE-5235-RPQ/647] p 1979 N93-21648
RADIATION BELTS
Improved models of the inner and outer radiation belts
[AD-A258708] p 1998 N93-20379
Development and use of data analysis procedures for the CRRES payloads AFGL-701-2/Dosimeter and AFGL-701-4/Fluxmeter and application of the data analysis results to improve the static and dynamic models of the earth's radiation belts
[AD-A258710] p 1823 N93-20380
RADIATION COUNTERS
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937

Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944
Impact on the air carrier of explosive detection systems p 1778 N93-21945

RADIATION DAMAGE
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon [DE93-003104] p 2080 N93-21240
Relaxation of radiation damages in a-Si:H layers [MBB-Z-0317-90-PUB] p 2081 N93-21403

RADIATION DETECTORS
A prototype novel sensor for autonomous, space based robots, phase 2 [NASA-CR-191344] p 1913 N93-19978
Bubble detectors for the measurement of space radiation p 1804 N93-21084
Modification and evaluation of a microwave plasma/atomic emission detector system [PB92-217959] p 2074 N93-21203
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon [DE93-003104] p 2080 N93-21240
Design and characterization of the BVX: An 8-channel CMOS preamplifier-shaper for silicon strips [DE93-003619] p 1894 N93-21733
Advanced design for a seafloor Gamma Measurement Data Collection System [PB93-105013] p 2020 N93-21793
Associated particle imaging p 1766 N93-21871
An explosive detection system for screening luggage with high energy x rays p 1767 N93-21877
Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944
Impact on the air carrier of explosive detection systems p 1778 N93-21945

RADIATION DOSAGE
Development of 256 kbit SRAM p 1799 N93-20471
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193) [PB92-227073] p 1893 N93-21350
Detection of objects concealed under persons' clothing using the SECURE system p 1767 N93-21879
Status of document search and data quality objective efforts [DE93-003216] p 2092 N93-21959

RADIATION EFFECTS
Studies of premixed laminar and turbulent flames at microgravity p 1853 N93-20196
Review on parts test data analyzing system p 1800 N93-20480
Industrial IC evaluation test: 256 kbit EEPROM p 1800 N93-20481
Radiation resistance evaluation test on parts and materials: Solar battery cell p 1800 N93-20482
Research on single event resistance evaluation technology: Research by heavy ion irradiation p 1801 N93-20483
Research on single event resistance evaluation technology: Single event resistance evaluation by SEM p 1801 N93-20484
Research on single event phenomenon on semiconductor devices p 1801 N93-20485
Direct-reading dosimeters for space life science experiments p 1804 N93-21083
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22 [PB93-121846] p 2101 N93-21292
The improvement of fatigue life of aluminum alloy structure by laser radiation p 1950 N93-21336
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193) [PB92-227073] p 1893 N93-21350
Non-equilibrium structures induced by ion irradiation in Ni4Mo [DE93-004193] p 2063 N93-21720
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels [DE93-003005] p 1857 N93-21985

RADIATION HAZARDS
Direct-reading dosimeters for space life science experiments p 1804 N93-21083
Radiological safety aspects of TNA deployment p 1770 N93-21893
Radiological safety regulation and licensing of nuclear-based explosive detection systems p 1770 N93-21894

RADIATION MEASUREMENT
Calibration of field reference panel and radiometers used in FIFE 1989 [NASA-CR-192198] p 2100 N93-20045
Geostationary earth climate sensor: Scientific utility and feasibility, phase A [NASA-CR-191919] p 1996 N93-20248
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941

RADIATION PROTECTION
Radiological assessment for Space Station Freedom [NASA-TM-104758] p 2022 N93-20303
Spacebound 1991 [CTN-93-60604] p 1802 N93-21070

RADIATION SOURCES
Construction of a channeling radiation source and production of intensive channeling radiation at the Darmstadt (Germany) superconductive electron accelerator [ETN-93-93410] p 2066 N93-21206
The effects of ionizing and particle radiation on precision frequency sources (proposal for IEEE standards project P1193) [PB92-227073] p 1893 N93-21350
Ultrafast laser generation of hard x rays p 1912 N93-21952

RADIATION TOLERANCE
Development of power MOSFET (150 W class) p 1797 N93-20461
Review on Schottky barrier diode development p 1798 N93-20464
Development of radiation resistant HCMOSIC p 1798 N93-20467
Development of radiation resistant linear IC (equivalent to mu PC 806) p 1798 N93-20468
Development of 256 kbit PROM p 1799 N93-20470
Development of 256 kbit SRAM p 1799 N93-20471
Development of 32 bit MPU p 1799 N93-20473
Review on radiation resistant 32 bit MPU p 1799 N93-20474
Review on parts test data analyzing system p 1800 N93-20480
Industrial IC evaluation test: 256 kbit EEPROM p 1800 N93-20481
Research on single event resistance evaluation technology: Research by heavy ion irradiation p 1801 N93-20483
Research on single event resistance evaluation technology: Single event resistance evaluation by SEM p 1801 N93-20484
Research on single event phenomenon on semiconductor devices p 1801 N93-20485
Monolithic preamplifier employing epitaxial N-channel JFETs [DE93-002951] p 1894 N93-21980

RADIATIVE HEAT TRANSFER
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions p 1853 N93-20192
Correlation of results of radiant heat test and convective heat test for three layered protective clothing p 1838 N93-21161
Cloud-generated radiative heating determined from satellite measurements p 1956 N93-21589

RADIATIVE TRANSFER
A new software tool for computing Earth's atmospheric transmission of near- and far-infrared radiation [NASA-TM-103957] p 1996 N93-20066
Microwave radiative transfer studies of precipitation p 2008 N93-20095
Guide to microwave weighting function calculations [NASA-CR-192719] p 1885 N93-21201
End-to-end tests of satellite data p 1953 N93-21571
Simulation of clear-sky outgoing longwave radiation over the oceans using operational analyses p 1956 N93-21586
Transmittance coefficients generation for fast radiative transfer models: Application to new satellite sounding systems p 1960 N93-21612
Determination of longwave radiation reaching the surface from Meteosat images and radiation model calculations p 1962 N93-21625
Measurement and interpretation of the sunlight backscattered from clouds within the oxygen-A absorption band p 1963 N93-21627
Radiative transfer models [NASA-CR-192433] p 1979 N93-21698

RADICALS
Low-pressure diamond growth using a secondary radical source [AD-A258539] p 2077 N93-20055

RADIO ALTIMETERS
ERS-1 radar altimetry of ice sheets p 1959 N93-21606
Space radar altimetry development from ocean monitoring to land topography p 1965 N93-21640

RADIO ANTENNAS
Certification plan for a planar near-field range used for high-performance phased-array testing [PB92-213305] p 1885 N93-21493

RADIO ASTRONOMY
Thirteen new BL Lacertae objects discovered by an efficient x ray/radio/optical technique p 2095 N93-20796

RADIO FREQUENCIES
Microwave vs optical crosslink study [NASA-CR-192207] p 1879 N93-19989
An analytical and experimental investigation of FM-by-noise jamming [AD-A259124] p 1883 N93-20592
Video guidance sensor p 1812 N93-21409
Certification plan for a planar near-field range used for high-performance phased-array testing [PB92-213305] p 1885 N93-21493
Application of radiofrequency superconductivity to accelerators for high-current ion beams [DE93-002925] p 2066 N93-21979

RADIO FREQUENCY HEATING
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak [NIFS-165] p 2070 N93-20113
Review of Japanese results on heating and current drive [NIFS-193] p 2071 N93-20294

RADIO FREQUENCY INTERFERENCE
Effects of wind turbines on UHF television reception: Field tests in Denmark, November 1991 [BBC-RD-1992/7] p 1885 N93-21365

RADIO OBSERVATION
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data [PB92-213461] p 2101 N93-21375
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data [PB93-116945] p 2101 N93-21385
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data [PB92-235993] p 2101 N93-21469

RADIO RECEIVERS
Reduced electrical bandwidth receivers for direct detection 4-ary PPM optical communication intersatellite links [NASA-CR-192310] p 1880 N93-19993
Certification plan for a planar near-field range used for high-performance phased-array testing [PB92-213305] p 1885 N93-21493

RADIO RELAY SYSTEMS
Research on space communication equipment technology: Study on relay system p 1790 N93-20420

RADIO SIGNALS
Method and apparatus for passive direction finding with sideband determination [AD-D015546] p 1882 N93-20306

RADIO SOURCES (ASTRONOMY)
High resolution HI observations of HII regions. 3: Photodissociation regions and the magnetic field near Orion B [MPE-PREPRINT-214] p 2098 N93-21951

RADIO SPECTRA
Microwave spectroscopy of the active sun [NASA-CR-192135] p 2100 N93-20571

RADIO TELEMETRY
Micro-t telemetry system [AD-D015542] p 1822 N93-20305

RADIO TELESCOPES
Solar radio flares 1989-1991. Solar microwave flares observed at Metsaehovi Radio Research Station in 1989-1991 [PB93-111896] p 2101 N93-21786

RADIO TRANSMISSION
Selected worldwide Marine weather broadcasts [PB93-118164] p 2013 N93-21294

RADIO TRANSMITTERS
Micro-t telemetry system [AD-D015542] p 1822 N93-20305

RADIOACTIVE AGE DETERMINATION
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin [PB93-115640] p 2000 N93-21692

RADIOACTIVE DECAY
Inclusive beauty decays and the spectator model [PREPRINT-790] p 2061 N93-20850
Semi-leptonic decays of D-mesons in lattice QCD [PREPRINT-808] p 2062 N93-20905
Mixing and CP-violation in K and B-mesons: A lattice QCD point of view [PREPRINT-810] p 2062 N93-20923

RADIOACTIVE ISOTOPES
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992) [PB92-218155] p 2018 N93-21049
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin [PB93-115640] p 2000 N93-21692

Advanced design for a seafloor Gamma Measurement Data Collection System
[PB93-105013] p 2020 N93-21793

RADIOACTIVE MATERIALS
Automated technologies needed to prevent radioactive materials from reentering the atmosphere
p 1818 N93-21447

RADIOACTIVITY
Phenomenological correlations in nuclear structure: An opportunity for nuclear astrophysics and a challenge to theory
[DE93-003470] p 2098 N93-21775
Advanced design for a seafloor Gamma Measurement Data Collection System
[PB93-105013] p 2020 N93-21793

RADIOGRAPHY
Explosives detection limitations using dual-energy radiography and computed tomography
p 1767 N93-21878
Three-dimensional x ray imaging for the detection of contraband p 1768 N93-21882

RADIOMETERS
Calibration of field reference panel and radiometers used in FIFE 1989
[NASA-CR-192198] p 2100 N93-20045
Experimental investigations of undulator radiation compatability
[ETN-93-92566] p 2066 N93-20880

RADIOSONDES
Global temperature variations p 2003 N93-20068
Coordinated field study for CaPE: Analysis of energy and water budgets p 2005 N93-20079

RADOME MATERIALS
Fiber-reinforced monoclinic celsian matrix composite material
[NASA-CASE-LEW-15269-1] p 1831 N93-20040

RAIL TRANSPORTATION
Fatigue life assessment of service damaged and corroded members of structural steel
p 1949 N93-21331
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 2: Appendices
[PB92-224674] p 1916 N93-21714
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 1: Analysis
[PB92-224666] p 1916 N93-21715

RAIN
Global rainfall monitoring by SSM/I
p 2003 N93-20069
WetNet: Using SSM/I data interactively for global distribution of tropical rainfall and precipitable water
p 2005 N93-20082
Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360
Meteorological events in Arizona and New Mexico during Swamp
[PB93-100410] p 2013 N93-21227
Retrieval of cloud liquid water and precipitation from polarized microwave simulations and SSM/I measurements p 1960 N93-21613

RAMAN SPECTRA
Method and apparatus for generating Fraunhofer line laser source using stimulated Raman scattering
[AD-D015579] p 1910 N93-20770
Comparison of the efficiencies of lidar techniques for atmospheric-temperature measurement based on rotational Raman, and Rayleigh scattering
p 1960 N93-21614

RAMAN SPECTROSCOPY
Spectroscopic investigations of bending and microbending effects in single mode optical fibre: A feasibility study
[NPL-QU-90] p 1946 N93-20930
Inverse Raman spectroscopy measurements of line-shift coefficients in hydrogen perturbed by argon
[DE93-003906] p 1852 N93-21840

RANDOM ACCESS MEMORY
Research on single event resistance evaluation technology: Research by heavy ion irradiation
p 1801 N93-20483

RANDOM LOADS
Prediction of the random load fatigue life distribution
p 1922 N93-20337
Probabilistic chain fatigue model p 1922 N93-20338

RANDOM NOISE
Nonlinearization of nonlinear systems under external and parametric random excitations p 1945 N93-20730
Coherent interference tests for wind profilers
[PB92-227248] p 2013 N93-21202

RANDOM PROCESSES
Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872
An estimating function for a scalar parameter in a covariance operator
[RR-878-M] p 2054 N93-21050
Ultrametricity in an inhomogeneous simplest spin glass model
[PREPRINT-819] p 2055 N93-21181
Simulation method for stationary Gaussian random functions based on the sampling theorem
[PB93-127496] p 2059 N93-21818

RANDOM SAMPLING
Optimal sampling plans for items representing two population groups
[AD-A259429] p 2057 N93-20009

RANDOM VARIABLES
Stochastic orderings on partial sums of random variables and on counting measures of random intervals
[INRIA-RR-1422] p 2052 N93-20860
Coherent interference tests for wind profilers
[PB92-227248] p 2013 N93-21202
Stochastic scheduling with variable profile and precedence constraints
[INRIA-RR-1525] p 2059 N93-21396

RANGE
A new method for recognizing quadric surfaces from range data and its application to telerobotics and automation
[NASA-CR-192619] p 1892 N93-20910

RANGEFINDING
Approach range and velocity determination using laser sensors and retroreflector targets p 1812 N93-21410
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414
A comparison of laser-based ranging systems for AR/C p 1814 N93-21422

RAPID TRANSIT SYSTEMS
HSCT mission analysis of waverider designs
[NASA-CR-192193] p 1783 N93-21646
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 1: Analysis
[PB92-224666] p 1916 N93-21715

RARE EARTH COMPOUNDS
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides
[AD-A259136] p 1847 N93-20595

RARE EARTH ELEMENTS
Energy levels and predicted absorption spectra of rare-earth ions in rare-earth arsenides
[AD-A259136] p 1847 N93-20595

RAREFIED GAS DYNAMICS
Rarefied-flow Shuttle aerodynamics model
[NASA-TM-107698] p 1759 N93-19976

RASTER SCANNING
Computer aided cartographic generalization for the DCM derivation, with regard to feature displacement
p 1967 N93-20532
ATKIS: The introduction phase at IfAG
p 1967 N93-20533
The economic use of PC for cartographic distributed tasks p 1967 N93-20534

RATES (PER TIME)
Wetting of fibers measured by LPR-90 equipment
p 1835 N93-21139

RATIONS
Climatic variation of storms p 2006 N93-20084

RATS
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
The challenge of biodetection for screening persons carrying explosives p 1776 N93-21931

RAWINSONDES
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present
[PB93-112225] p 2013 N93-21229
Meteorological conditions over the South Atlantic Ocean during July and August of 1991
[PB92-235738] p 2015 N93-21503

RAY TRACING
The effects of small ice crystals on the infrared radiative properties of cirrus clouds
[NASA-CR-192181] p 2002 N93-20046
Birefringent polarization ray tracing: Theory and applications p 2067 N93-20285
Observation of ionospheric modification using high power oblique HF transmissions
[AD-A258706] p 1998 N93-20378
A radiosity approach realistic image synthesis system
[AD-A259082] p 2032 N93-20406
Magnetospheric space plasma investigations
[NASA-CR-192620] p 2074 N93-20914
CONPLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649

RAYLEIGH SCATTERING
Comparison of the efficiencies of lidar techniques for atmospheric-temperature measurement based on rotational Raman, and Rayleigh scattering
p 1960 N93-21614
Polarization effects in coherent and incoherent photon scattering: Survey of measurements and theory relevant to radiation transport calculations
[PB93-126092] p 2064 N93-21828

RAYLEIGH WAVES
Nondestructive evaluation of surface-breaking cracks in composite plates p 1936 N93-20680
Attenuation and source studies in Northern Eurasia
[AD-A259323] p 2000 N93-21700

RAYLEIGH-RITZ METHOD
A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649
Vibration of a multi-guided rotating string
p 1934 N93-20672
The free vibration of isotropic and specially orthotropic triangular plates p 1935 N93-20673
Semi-numerical approach to the buckling of composite panel p 1935 N93-20676
Improvement to the higher order finite strip method
p 1939 N93-20697

RDX
Growth and defects of explosives crystals
[DE93-003866] p 2082 N93-21780
Explosives detection by pure N-14 NQR
p 1770 N93-21897
A thermodynamic study of the vapor pressures of C-4 and pure RDX p 1772 N93-21906
Negative-ion formation in the explosives RDX, PETN, and TNT using the Reversal Electron Attachment Detection (READ) technique p 1773 N93-21910
Detection of explosives material on single microparticles p 1774 N93-21916
Fourier Transform Ion-Cyclotron Resonance (FT-ICR) mass spectrometry of RDX, PETN and other explosives
p 1774 N93-21921

REACTION BONDING
Polyorganosilazane preceramic binder development for reaction bonded silicon nitride composites
[DE93-004063] p 1844 N93-21842

REACTION CONTROL
Thruster configurations for maneuvering heavy payloads p 1813 N93-21415

REACTION KINETICS
Projectile base bleed technology. Part 2: User's guide CMINT computer code, version 5.04-BRL
[AD-A258630] p 1897 N93-19999
Surface pi bonding and the near-first-order desorption kinetics of hydrogen from Ge(100)2x1
[AD-A258534] p 1845 N93-20051
Pairing and clustering of hydrogen on Si(100)2x1: Monte Carlo studies
[AD-A258537] p 1846 N93-20054
Japan's microgravity combustion science program
p 1868 N93-20182
Competitive pairing and the chemistry of coadsorbed hydrogen and halogens on Ge(100)
[AD-A258538] p 1846 N93-20386
Bipolar rechargeable lithium battery for high power applications p 1987 N93-20526
Laser probes of natural gas ignition chemistry
[PB92-227776] p 1911 N93-21352
Diffusion and reaction layer structure and NOx reduction in turbulent gas flames
[PB93-114353] p 1850 N93-21456
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
Ozone as a sink for atmospheric carbon aerosols
[PB93-118594] p 1993 N93-21790

REACTION WHEELS
Research on equipment life extension technology
p 1793 N93-20436
Low cost attitude control system scanwheel development
[NASA-CR-191324] p 1824 N93-21003

REACTIVITY
New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986

REACTOR CORES
Automated technologies needed to prevent radioactive materials from reentering the atmosphere
p 1818 N93-21447

REACTOR DESIGN
Physics and engineering design studies on large helical device
[NIFS-161] p 2070 N93-20157
Design study on divertor plates of Large Helical Device (LHD)
[NIFS-190] p 2074 N93-21361
REACTOR SAFETY
Detection of incipient defects in cables by partial discharge signal analysis
[PB92-222744] p 1919 N93-21199
Software quality assurance: Documentation and reviews
[PB93-113694] p 2040 N93-21221
High integrity software standards and guidelines
[PB93-114619] p 2042 N93-21687
READ-ONLY MEMORY DEVICES
Development of 256 kbit PROM p 1799 N93-20470
Development of 256 kbit SRAM p 1799 N93-20471
Industrial IC evaluation test: 256 kbit EEPROM p 1800 N93-20481
READING
Representation and readability of logic diagrams and aspects of their automatic generation
[ETN-93-92559] p 1890 N93-20751
REAL GASES
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785
REAL NUMBERS
Contribution to computer arithmetic
[ETN-93-92680] p 2053 N93-20901
REAL TIME OPERATION
Real time data reformatting using the TMS320C25 development system
[AD-A259187] p 1882 N93-20273
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409
Neural networks for real-time sensory data processing and sensorimotor control
[AD-A259120] p 2046 N93-20557
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL
[AD-A259224] p 2033 N93-20577
The ARK (Autonomous Robot for a Known environment) project p 1917 N93-20621
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
Development of a realtime DGPS system
[DLR-MITT-92-06] p 1779 N93-20749
Knowledge-based consulting system for dynamic network security control
[ETN-93-93420] p 2028 N93-21069
Formal specification and timing analysis of high-integrity real-time systems
[REPT-92-041] p 2028 N93-21185
Investigation of the real-time accuracy of the DGPS method
[AD-A257692] p 1780 N93-21222
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present
[PB93-112225] p 2013 N93-21229
Autonomous pre-alignment of a docking mechanism p 1814 N93-21418
The realtime operations of the space shuttle orbiter during rendezvous and proximity operations p 1817 N93-21439
How real-time data assimilation benefits weather and climate studies through the validation, quality control and synthesis of remotely sensed data p 1960 N93-21610
Tracking radar advanced signal processing and computing for Kwajalein Atoll (KA) application
[AD-A259066] p 1886 N93-21756
Atmospheric pressure ionization time-of-flight mass spectrometer for real-time explosives vapor detection p 1773 N93-21914
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer p 1773 N93-21915
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940
Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957
RECEIVERS
Autonomous rendezvous and docking: A commercial approach to on-orbit technology validation p 1817 N93-21440
RECHARGING
Design considerations for rechargeable lithium batteries p 1987 N93-20527
RECIPROCATION
An evaluation of R/D needs based on cogeneration system operational experience
[PB93-114494] p 1987 N93-21455
RECIRCULATIVE FLUID FLOW
Wind-tunnel experiments on wind effects at tunnel portals
[NLR-TP-91191-U] p 1761 N93-20911
RECOMBINATION REACTIONS
Theoretical studies of important processes in planetary and comet atmospheres
[NASA-CR-192114] p 2098 N93-19959
RECONNAISSANCE
The future of the US Space Industrial Base p 1789 N93-20044
RECORDING INSTRUMENTS
Uninterrupted, enhanced-rate, event-time recorder with mixed-speed counter modules
[AD-D015578] p 1906 N93-20769
RECTANGLES
A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270
RECTANGULAR PLATES
High-frequency techniques for RCS prediction of plate geometries and a physical optics/equivalent currents model for the RCS of trihedral corner reflectors
[NASA-CR-192302] p 1881 N93-20233
Study of free vibration of orthotropic rectangular plates p 1935 N93-20674
RECTIFIERS
Development of high speed rectifier diodes p 1798 N93-20463
RECURSIVE FUNCTIONS
Recursive ascent parsing p 2030 N93-20222
REDUCED GRAVITY
A study of TRIGLYCINE SULFATE (TGS) crystals from the International Microgravity Laboratory Mission (IML-1)
[NASA-CR-191956] p 2078 N93-20127
The Second International Microgravity Combustion Workshop
[NASA-CP-10113] p 1868 N93-20178
The world of NASA microgravity science p 1868 N93-20179
Overview of NASA's microgravity combustion science and fire safety program p 1868 N93-20180
An overview of European activities on microgravity combustion p 1868 N93-20181
Japan's microgravity combustion science program p 1868 N93-20182
Capabilities and constraints of typical space flight hardware p 1868 N93-20183
Capabilities and constraints of NASA's ground-based reduced gravity facilities p 1819 N93-20184
Capabilities and constraints of combustion diagnostics in microgravity p 1869 N93-20185
Priorities for microgravity combustion research and goals for workshop discussions p 1869 N93-20186
Structure and soot properties of non-buoyant laminar round-jet diffusion flames p 1853 N93-20190
An experimental and theoretical study of radiative extinction of diffusion flames p 1853 N93-20191
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions p 1853 N93-20192
Visualization and imaging methods for flames in microgravity p 1853 N93-20193
Selected microgravity combustion diagnostic techniques p 1853 N93-20194
Laser diagnostics for microgravity droplet studies p 1853 N93-20195
Studies of premixed laminar and turbulent flames at microgravity p 1853 N93-20196
Modeling of microgravity combustion experiments p 1853 N93-20197
Structure and dynamics of premixed flames in microgravity p 1853 N93-20198
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
The effects of gravity on wrinkled laminar flames p 1853 N93-20200
Microgravity combustion of dust suspensions p 1853 N93-20201
Fire safety practices in the Shuttle and the Space Station Freedom p 1825 N93-20204
Ignition and subsequent flame spread over a thin cellulosic material p 1854 N93-20205
Opposed-flow flame spreading in reduced gravity p 1854 N93-20206
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
A fundamental study of smoldering combustion in microgravity p 1854 N93-20208
Flame spread across liquid pools p 1854 N93-20209
Metals combustion in normal gravity and microgravity p 1854 N93-20211
Studies of droplet burning and extinction p 1854 N93-20212
Computational/experimental studies of isolated, single component droplet combustion p 1854 N93-20213
Combustion experiments in reduced gravity with two-component miscible droplets p 1854 N93-20214
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
High-pressure droplet combustion studies p 1854 N93-20216
Combustion of interacting droplet arrays in a microgravity environment p 1854 N93-20217
Characterizing droplet combustion of pure and multi-component liquid fuels in a microgravity environment p 1855 N93-20219
Spacebound 1991
[CTN-93-60604] p 1802 N93-21070
Space station user development program: Future prospects p 1802 N93-21072
Long duration human exposure to microgravity p 1802 N93-21073
Microgravity science activities in Canada p 1803 N93-21075
UDP sponsored opportunities for microgravity environment p 1803 N93-21076
Float zone processing of germanium crystals on the KC-135 microgravity aircraft p 1803 N93-21077
GEODE 2: Manufacturing large area format cadmium-mercury-telluride crystals in a microgravity environment. Pressure sensor proof of concept p 1803 N93-21078
Electrochemical deposition of thin film semiconductors in microgravity: A feasibility study p 1803 N93-21079
Development of a Knudsen cell for molecular beam epitaxial growth of GaAs films in the microgravity environment p 1804 N93-21082
Crystallization of a protein aboard the US Space Shuttle flight STS-31 p 1804 N93-21086
Preparation results for a Marangoni-Benard experiment with Soret effect under microgravity conditions p 1805 N93-21088
Isopycnic systems as models for the behavior of liquids in a microgravity environment p 1805 N93-21089
Gas bubble generation in low gravity p 1805 N93-21090
Dynamics of sessile droplets distortion and disruption by electric field in microgravity conditions p 1805 N93-21091
Agglomeration of fractals in simulated reduced gravity p 1806 N93-21093
Quenching of a tube and filling of a vessel under microgravity p 1806 N93-21096
Canadian microgravity experiments flown in 1990-1991 p 1807 N93-21101
Experiments aboard the Caravelle for the 3 ESA campaigns in 1990 p 1807 N93-21102
International and commercial sub-orbital program for microgravity research p 1807 N93-21104
Studies of dispersed phase systems: Ostwald ripening and metal matrix composites p 1808 N93-21106
Polymer foam cell growth in microgravity p 1808 N93-21108
An experiment on producing foam metals in a microgravity environment aboard NASA KC-135 aircraft p 1808 N93-21109
Eye movements under altered gravitoinertial forces p 1809 N93-21111
The production of high iron glasses by RST in microgravity p 1810 N93-21117
Crystal growth through a computer controlled, eight zone thermal gradient freeze furnace p 1811 N93-21123
Acceleration levels on the KC-135 p 1784 N93-21124
Laser welding of plastics under low and high gravity conditions p 1811 N93-21125
Discussion of the optical effects created by a laser source on particles under microgravity p 1811 N93-21126
Recent results and new hardware developments for protein crystal growth in microactivity
[NASA-CR-191994] p 1875 N93-21356
Report on microgravity experiment by TR-1A rocket
[NASDA-EG-920021] p 1875 N93-21950
REDUNDANCY
URV flight test of an Ada implemented self-repairing flight control system
[AD-A259205] p 1787 N93-20551
REEFS
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536

REENTRY
Concept of overall operation of H-2 Orbiting Plane (HOPE) p 1791 N93-20424
REENTRY SHIELDING
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728
REENTRY VEHICLES
Orbit re-entry experiment vehicle development p 1792 N93-20432
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433
Calculation of hypersonic, viscous, non-equilibrium flows around reentry bodies using a coupled boundary layer/Euler method
[MBB-LME-211-S-PUB-0487] p 1762 N93-21058
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728
REFLECTANCE
Can measurements in the O2A- and B-bands be used for atmospheric correction of satellite measurements over the ocean? p 1955 N93-21581
Optical constants and scattering factors from reflectivity measurements: 50 eV to 5 keV
[DE93-003750] p 2068 N93-21674
REFLECTED WAVES
Calibration of field reference panel and radiometers used in FIFE 1989
[NASA-CR-192198] p 2100 N93-20045
Defect analysis using advanced interpretation of the reflected wave during ultrasonic scanning p 1843 N93-21528
REFLECTION
Explosive component acceptance tester using laser interferometer technology
[SAND-92-0324C] p 1866 N93-20152
REFLECTOMETERS
Optical constants and scattering factors from reflectivity measurements: 50 eV to 5 keV
[DE93-003750] p 2068 N93-21674
REFLECTORS
Neutral buoyancy test evaluation of hardware and extravehicular activity procedures for on-orbit assembly of a 14 meter precision reflector
[NASA-TM-107735] p 1824 N93-20922
REFRACTED WAVES
Cokriging surface elevation and seismic refraction data for bedrock topography
[DE93-001369] p 1999 N93-21225
REFRACTION
Optical fiber fluorosensor
[NASA-CASE-LAR-14525-1-CU] p 2069 N93-22008
REFRACTIVITY
A horizontal refractivity depiction product: An evaluation
[AD-A258738] p 1966 N93-20401
SSG 4.93: Wave propagation in refractive media p 1972 N93-20980
REFRACTORY COATINGS
Advanced ceramic component development for high temperature indirect gas-fired heating systems
[PB93-127033] p 1862 N93-21817
REFRACTORY MATERIALS
Method of bonding metal carbides in non-magnetic alloy matrix
[AD-D015591] p 1833 N93-20801
The high temperature materials laboratory: A research and user facility at the Oak Ridge National Laboratory
[DE93-003592] p 1953 N93-21994
REFRIGERATORS
A two-stage magnetic refrigerator for astronomical applications with reservoir temperatures above 4 K
[NASA-CR-192365] p 1878 N93-21815
Superfluid Stirling refrigerator with a counterflow regenerator
[DE93-003858] p 1879 N93-21971
REGENERATION (PHYSIOLOGY)
A membrane-based subsystem for water-vapor recovery from plant-growth chambers
[NASA-CR-177602] p 2025 N93-20065
REGENERATORS
Superfluid Stirling refrigerator with a counterflow regenerator
[DE93-003858] p 1879 N93-21971
REGIONAL PLANNING
Application of remote sensing for the water management in Drenthe (Netherlands)
[BCRS-91-42] p 1975 N93-21038
REGRESSION ANALYSIS
A necessary and sufficient condition for the existence of the maximum likelihood estimate in autoregressive models
[RR-866-M] p 2058 N93-20944
Estimation methods for parameters of multivariate autoregressive models
[ETN-93-92685] p 2059 N93-21062
Review of initial experiments using the Hawk model, dynamic rig facility, and the CED 1401 digital data acquisition equipment
[CRANFIELD-AERO-9017] p 1788 N93-21406
REGULARITY
Proximal techniques for convex programming
[RR-877-M] p 2039 N93-21167
REGULATIONS
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary
[PB92-182567] p 1867 N93-21717
REGULATORY MECHANISMS (BIOLOGY)
Measurement of behavioral thermoregulation
[PB92-217033] p 2024 N93-21046
Cerebral autoregulation in microgravity p 1809 N93-21112
REINFORCED PLASTICS
Mass loaded composite rotor for vibro-acoustic application
[AD-D015604] p 1831 N93-20016
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140
Predesign of the tubular braiding process using a mathematical process description p 1836 N93-21143
Infrared imaging of fibre reinforced plastic composites p 1838 N93-21162
REINFORCED SHELLS
Segmented composite cylinder assembly
[AD-D015603] p 1831 N93-20015
REINFORCING FIBERS
Effect of microstructure on the strength and fracture energy of bimaterial interfaces
[AD-A259181] p 1921 N93-20271
Influence of reinforcing fibers on the capacity for resistance to impact load, of composite materials
[MBB-FE-202-S-PUB-0496] p 1834 N93-21055
Production of highly integrated FRP parts in the braiding technology p 1835 N93-21136
Continuous fiber reinforced thermoplastic composites p 1835 N93-21138
Manufacture and application of biaxial and multiaxial knits as textile reinforcements in composite materials p 1836 N93-21141
Special fibres from natural polymers p 1837 N93-21151
REINFORCING MATERIALS
Textiles and Composites 1992
[VTT-SYMPOSIUM-133] p 1834 N93-21129
What's a Parabeam 3D? p 1835 N93-21137
RELATIVISTIC EFFECTS
Gravitational synchrotron radiation and gravitrons by lights
[PREPRINT-821] p 1999 N93-20951
Relativistic shock waves and the excitation of plerions
[DE93-003469] p 2066 N93-21729
RELATIVISTIC PARTICLES
Radiation from moving charged particles with spin
[DE93-004633] p 2063 N93-21703
Relativistic shock waves and the excitation of plerions
[DE93-003469] p 2066 N93-21729
RELATIVISTIC PLASMAS
Weibel instabilities in relativistic electron-positron plasmas
[DE93-003468] p 2077 N93-21990
RELATIVITY
SSG 4.119: Relativistic effects in geodesy p 1973 N93-20985
RELAXATION (MECHANICS)
Role of atomic size and valence in bonding and diffusion at metal surfaces
[DE93-003994] p 1857 N93-21972
RELIABILITY
Structure and reliability metal contacts to GaAs
[AD-A259184] p 1889 N93-20272
NiCd cell reliability in the mission environment p 1985 N93-20510
Reliability of failure envelopes for composite materials p 1929 N93-20642
Satisfying the customer's requirements
[PNR-90988] p 1785 N93-20735
Representation and readability of logic diagrams and aspects of their automatic generation
[ETN-93-92559] p 1890 N93-20751
An evaluation of R/D needs based on cogeneration system operational experience
[PB93-114494] p 1987 N93-21455
RELIABILITY ANALYSIS
Computer aided reliability, availability, and safety modeling for fault-tolerant computer systems with commentary on the HARP program
[NASA-CR-192405] p 2029 N93-19981
Development of high heat radiation printed boards p 1796 N93-20456
Review on aluminum electrolytic condensers development p 1797 N93-20457
Safety validation test equipment operation p 1801 N93-20487
Review on safety validation test p 1802 N93-20488
NiCd cell reliability in the mission environment p 1985 N93-20510
Reliability study of the NiH2 strain gage p 1908 N93-20515
An efficient method for the reliability analysis of geometric nonlinear frame structures p 1931 N93-20651
A comparative study of ship hull structures fatigue assessment methods p 1949 N93-21332
Instructions and advance training measures for the improvement of human reliability
[MBB-FE-313-S-PUB-0500] p 2025 N93-21402
Report of the SSME assessment team
[NASA-TM-108217] p 1830 N93-21645
RELIABILITY ENGINEERING
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371
RELIEF MAPS
Automatized cartography, using the Mitteldeutschen Kartographie and Druck GmbH system p 1967 N93-20529
REMOTE CONTROL
Remotely controlled C band signal generator
[AD-D015602] p 1880 N93-20014
Method and apparatus for preloading a joint by remotely operable means
[NASA-CASE-MSC-21940-1] p 1914 N93-20120
Research on data handling technology p 1795 N93-20448
Data handling in telescience experiments using the Prototype Optical Diagnostic Instrument (PODI)
[NLR-TP-90327-U] p 2090 N93-20917
Packet telecommand standard
[ESA-PSS-04-107-ISSUE-2] p 1884 N93-21001
REMOTE MANIPULATOR SYSTEM
Research on space robot technology p 1794 N93-20440
REMOTE REGIONS
Aerosol chemistry in GLOBE p 2009 N93-20102
REMOTE SENSING
Remote sensing of earth terrain
[NASA-CR-192139] p 1966 N93-19979
The Split Window Microwave Radiometer (SWMR) for hurricane wind speed measurement from space
[NASA-CR-192316] p 2002 N93-19987
High-bandwidth, high-dynamic-range, analog optical guided-wave systems for physics instrumentation
[DE93-001619] p 2066 N93-20022
Calibration of field reference panel and radiometers used in FIFE 1989
[NASA-CR-192198] p 2100 N93-20045
NASA/MSFC FY92 Earth Science and Applications Program Research Review
[NASA-CP-3184] p 2002 N93-20067
Global temperature variations p 2003 N93-20068
Coordinated field study for CaPE: Analysis of energy and water budgets p 2005 N93-20079
AMPR/SSMI data comparisons p 2005 N93-20081
WetNet: Using SSM/I data interactively for global distribution of tropical rainfall and precipitable water p 2005 N93-20082
Improvement and further development of SSM/I overland parameter algorithms using the WetNet workstation p 2005 N93-20083
Atmospheric electricity/meteorology analysis p 2006 N93-20086
Airborne full polarization radiometry using the MSFC Advanced Microwave Precipitation Radiometer (AMPR) p 2007 N93-20089
Microwave radiative transfer studies of precipitation p 2008 N93-20095
MAMS: High resolution atmospheric/surface properties p 2008 N93-20097
Aerosol chemistry in GLOBE p 2009 N93-20102
CO2 lidar backscatter experiment p 2009 N93-20103
Remote sensing of water vapor features p 2010 N93-20107
An investigation of the role of current and future remote sensing data systems in numerical meteorology p 2010 N93-20108
Data compression in remote sensing applications p 1881 N93-20172
Use of features derived from class proportions in a pixel for the multispectral classification of remote sensing images
[INPE-5306-TDI/456] p 1966 N93-20322

Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360
In-situ determination of optical properties of sea water and particle characteristics in the Corfu Sea (Mediterranean): Report on the first joint campaign of the Mito project

Microwave radiometry for monitoring the diverse cloudiness regimes on Earth: A review p 1958 N93-21600
Lake remote sensing for global climate research p 1958 N93-21602
Remote sensing of latent heat fluxes at the air-sea interface p 1959 N93-21603
Air/sea latent heat flux measurements with microwave radiometers p 1959 N93-21604
Retrieval of cloud liquid water and precipitation from polarized microwave simulations and SSM/I measurements p 1960 N93-21613
Model profiles of atmospheric temperatures, pressures and densities in south-eastern Europe during maximum and mimimum solar activity p 1961 N93-21615
Validation of ERS-1 synthetic aperture radar for imaging ocean waves: First results p 1961 N93-21616
Representativity of wind measurement from space p 1961 N93-21617
Sampling properties of a spaceborne lidar (ATLID) p 1961 N93-21618
Empirical model of winds in south-eastern Europe in connection with solar activity p 1961 N93-21619
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620
Utilization of remote sensing data at the Deutscher Wetterdienst p 1962 N93-21621
Qualitative and quantitative diagnosis of cloud images for use in weather forecast p 1962 N93-21623
Bispectral cloud analysis for the Atlantic-European region using digital Meteosat images p 1962 N93-21624
Determination of longwave radiation reaching the surface from Meteosat images and radiation model calculations p 1962 N93-21625
Measurement and interpretation of the sunlight backscattered from clouds within the oxygen-A absorption band p 1963 N93-21627
CLEOPATRA: A step towards GEWEX on the regional scale p 1963 N93-21628
SST monitoring of the European seas with AVHRR data p 1963 N93-21629
Mapping of satellite-derived sea surface temperatures at high resolution in cloudy regions p 1963 N93-21630
Modelling the skin-bulk temperature difference near the sea-atmosphere interface for remote sensing applications p 1963 N93-21631
A comprehensive comparison between skin and multi-channel sea surface temperatures as derived from AVHRR p 1963 N93-21632
Seasonal SST and upwelling indices along the northwest African coast p 1964 N93-21633
Surface circulation in the Adriatic Sea as observed by AVHRR p 1964 N93-21634
A study of the thermal bar in Lake Ladoga (Russia) using NOAA-AVHRR data p 1964 N93-21635
Intercomparison of satellite-derived sea surface temperatures p 1964 N93-21636
Generation and distribution of remotely-sensed sea surface temperature images p 1964 N93-21637
Satellite data assimilation in the wave model 3G-WAM p 1965 N93-21638
Space radar altimetry development from ocean monitoring to land topography p 1965 N93-21640
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641
Specialist meeting on microwave radiometry and remote sensing applications, murad 92
[PB93-105757] p 1979 N93-21657
Remote sensing: Environmental effects of surface films
[AD-A258571] p 1980 N93-21754
Lunar and asteroid composition assessment using remote secondary ion mass spectrometry
[DE93-003839] p 2098 N93-21849
Development of a multi-sensor in situ fiber optic fluorometer
[DE93-004646] p 1995 N93-21975

REMOTE SENSORS
Multi-center Airborne Coherent Atmospheric Wind Sensor (MACAWS) p 1913 N93-20101
Simulations of satellite Doppler wind observations p 2010 N93-20104
Radar Ocean Wave Spectrometer (ROWS) preprocessing program (PREROWS2.EXE). User's manual and program description
[NASA-TM-104579] p 2017 N93-20160
Research on advanced Earth observing sensors p 1790 N93-20416
IRCCD research p 1790 N93-20417
Evaluation and analysis of long term satellite operation data p 1796 N93-20454
Principles and application tendency of remote sensing: Its principle, function, and utilization p 1978 N93-21540

REMOTELY PILOTED VEHICLES
Report to the Chairman, Legislation, and National Security Subcommittee, Committee on Goverment Operations, House of Representatives. Unmanned aerial vehicles: More testing needed before production of short-range system
[AD-A259473] p 1780 N93-20245

RENAL FUNCTION
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497

RENDEZVOUS TRAJECTORIES
Operator-assisted planning and execution of proximity operations subject to operational constraints p 1817 N93-21436
The realtime operations of the space shuttle orbiter during rendezvous and proximity operations p 1817 N93-21439

REPORTS
The FY 1992 scientific and technical reports, articles, papers, and presentations
[NASA-TM-108392] p 2091 N93-20920
Summaries of the 1991 publications of DLR research reports and DLR communications
[ETN-93-92588] p 2103 N93-21022

REPRESENTATIONS
Representation and readability of logic diagrams and aspects of their automatic generation
[ETN-93-92559] p 1890 N93-20751
Basic and evolutive concepts of pattern recognition: Pluridiscipline approach. Approximation concept
[ISAL-91-0098] p 2047 N93-20941

REQUIREMENTS
Satisfying the customer's requirements
[PNR-90988] p 1785 N93-20735
Education in geodesy p 1975 N93-20996
Derating requirements applicable to electronic, electrical, and electro-mechanical components for ESA space systems
[ESA-PSS-01-301-ISSUE-2] p 1893 N93-21194

RESEARCH
The ARK (Autonomous Robot for a Known environment) project p 1917 N93-20621

RESEARCH AIRCRAFT
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255

RESEARCH AND DEVELOPMENT
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 27: Knowledge diffusion and US government technology policy: Issues and opportunities for sci/tech librarians
[NASA-TM-108680] p 2088 N93-20110
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 26: The relationship between technology policy and scientific and technical information within the US and Japanese aerospace industries
[NASA-TM-108679] p 2088 N93-20111
Research and development activities of the TsukubaSpace Center
[NASDA-TK-GC0066] p 1789 N93-20410
Activities of the Seibersdorf Research Center
[ETN-93-92597] p 2103 N93-20857

The 1992 Research/Technology report
[NASA-TM-105924] p 1759 N93-20902
Summaries of the 1991 publications of DLR research reports and DLR communications
[ETN-93-92588] p 2103 N93-21022
Fiber development in Japan p 1834 N93-21130
Thermoplastic composites for structural applications: Past and future p 1834 N93-21131
The 1991-2000 National Remote Sensing Program
[BCRS-91-35] p 1975 N93-21205
By the year 2000: First in the world. FY 1993 budget summary
[PB93-108512] p 2086 N93-21231
Continuous improvement on a research and development environment
[DE93-001561] p 2086 N93-21304
Opportunities in applied environmental research and development
[PB92-223189] p 1990 N93-21347
Defense science and technology strategy: Executive summary. 1: Background and overview. 2: The seven thrusts
[PB92-217785] p 2103 N93-21349
List of US Army Research Institute research and technical publications, October 1, 1990 to September 30, 1991 with author and subject index
[PB93-108611] p 2103 N93-21381
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-191991] p 2099 N93-21553
Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for Fiscal Year 1993. Part 3: Nondepartmental Witnesses
[S-HRG-102-716-PT-3] p 2093 N93-21676
Experimental nuclear physics
[DE93-004950] p 2063 N93-21705
Summaries of FY 1992 geosciences research
[DE93-004826] p 1965 N93-21726
Science and technology in US international affairs
[ISBN-1-881054-00-4] p 2094 N93-21758
Activities report of the European Space Agency
[ETN-93-93509] p 2103 N93-21764
Non-US artificial neural network research
[PB93-111508] p 2049 N93-21802
Journal of research of the National Institute of Standards and Technology, July-August 1992. Volume 97, number 4
[PB93-124246] p 2104 N93-21814
International environmental research and assessment: Proposals for better organization and decision making
[ISBN-1-881054-01-2] p 2087 N93-21949

RESEARCH FACILITIES

The world of NASA microgravity science p 1868 N93-20179
Structural dynamics branch research and accomplishments to FY 1992
[NASA-TM-105824] p 1925 N93-20368
Advanced UHV thin-film deposition facility for research in superconductivity and superconducting electronics
[AD-A259089] p 1889 N93-20395
Wright Laboratory research and development facilities handbook
[AD-A258746] p 2085 N93-20403
Safety validation test equipment operation p 1801 N93-20487
NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492
Activities of the Seibersdorf Research Center
[ETN-93-92597] p 2103 N93-20857
Touchstone for success: The Materials and Processes laboratories, ESTEC
[ESA-BR-52-REV] p 1830 N93-20926
UDP sponsored opportunities for microgravity environment p 1803 N93-21076
Development of the Aquatic Research Facility p 1807 N93-21100
The Wakeshield Facility: Free flyer and commercial experiment transporter programs p 1807 N93-21105
Goddard Space Flight Center: Decision to contract for plant operations and maintenance. Report to the Chair, Subcommittee on VA, HUD, and Independent Agencies, Committee on Appropriations, US Senate
[GAO/NSIAD-93-92] p 2086 N93-21357
The high temperature materials laboratory: A research and user facility at the Oak Ridge National Laboratory
[DE93-003592] p 1953 N93-21994

RESEARCH MANAGEMENT

Wright Laboratory research and development facilities handbook
[AD-A258746] p 2085 N93-20403
The 1991-2000 National Remote Sensing Program
[BCRS-91-35] p 1975 N93-21205
Canada's longterm space plan and ISY activities p 1819 N93-21284
Continuous improvement on a research and development environment
[DE93-001561] p 2086 N93-21304

RESEARCH PROJECTS

The 1992 Research/Technology report
[NASA-TM-105924] p 1759 N93-20902
Predicting our weather: A strategic plan for the US Weather Research Program
[PB93-101277] p 2013 N93-21293
Defense science and technology strategy: Executive summary. 1: Background and overview. 2: The seven thrusts
[PB92-217785] p 2103 N93-21349
Federal plan for meteorological services and supporting research, FY 1993
[PB92-233188] p 2014 N93-21502
NASA SBIR abstracts of 1990 phase 1 projects
[NASA-TM-108145] p 2087 N93-21794

RESEARCH VEHICLES

Orbit re-entry experiment vehicle development p 1792 N93-20432
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433

RESIDUAL STRENGTH

Influence of reinforcing fibers on the capacity for resistance to impact load, of composite materials
[MBB-FE-202-S-PUB-0496] p 1834 N93-21055
Allowable compression strength for CFRP-components of fighter aircraft determined by CAI-test p 1844 N93-21531
Numerical determination of the residual strength of battle damaged composite plates p 1844 N93-21533
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 1844 N93-21534

RESIDUAL STRESS

Method and apparatus for determination of material residual stress
[NASA-CASE-GSC-13451-1] p 1921 N93-20118
Finite element analytical techniques for ceramic production in microgravity-2 p 1809 N93-21116
Post-buckling analysis of thin-walled channel sections undergoing local and distortional buckling
[PB93-112928] p 1947 N93-21236
For a better fatigue strength of welded steel structures p 1949 N93-21333
A comment on the role of machining induced residual stresses on fatigue crack initiation p 1949 N93-21334
Diffraction measurements of residual stress in titanium matrix composites
[DE93-003855] p 1844 N93-21838

RESIDUES

Interferometric JFTOT tube deposit measuring device
[AD-D015599] p 1866 N93-20247
Role of advanced technology within a broad security approach p 1765 N93-21860
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006

RESIN MATRIX COMPOSITES

Thermoplastic composites p 1845 N93-20625
Influence of reinforcing fibers on the capacity for resistance to impact load, of composite materials
[MBB-FE-202-S-PUB-0496] p 1834 N93-21055
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517
Edge delamination of composite laminates p 1842 N93-21519

RESISTANCE HEATING

The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758

RESISTANCE THERMOMETERS

Comparison of the measurements of temperature and sensible heat flow with an ultrasonic anemometer-thermometer and a temporal high resolution platinum wire-resistance thermometer
[GKSS-92/E/11] p 1907 N93-21461

RESISTORS

Review on surface mounting components (wire wound chip resistors) development p 1797 N93-20459

RESONANCE SCATTERING

Theory and numerical modeling of low-frequency acoustic scattering from bubble plumes near the sea surface
[AD-A259199] p 2018 N93-20564

RESONANT FREQUENCIES

A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649
Free vibrations of a flexible tapered arm attached to a compliant hub p 1932 N93-20660
Resonant response analysis of a high speed gear p 1917 N93-20662
Transverse vibrations of an elastically restrained rod carrying a tip mass p 1934 N93-20669
The free vibration of isotropic and specially orthotropic triangular plates p 1935 N93-20673
Study of free vibration of orthotropic rectangular plates p 1935 N93-20674
Natural frequencies and response of spinning liquid column with partially sliding contact line
[LRT-WE-9-FB-24-1991] p 1903 N93-21298
Liquid oscillations under strong surface tension in a circular cylindrical container
[LRT-WE-9-FB-26-1991] p 1904 N93-21953

RESONANT VIBRATION

Elimination of resonance with a switching support p 1933 N93-20664
Solution of quadratic distributed control problems by optimization methods
[ETN-93-93409] p 2040 N93-21303

RESONATORS

The resonator handbook
[NASA-CR-192217] p 1894 N93-21559

RESOURCES MANAGEMENT

Report on environmental requirements and priorities
[PB92-208198] p 1989 N93-21028
Application of remote sensing for the water management in Drenthe (Netherlands)
[BCRS-91-42] p 1975 N93-21038
Public Access: A How To Guide
[PB93-111029] p 1990 N93-21378
Synoptic approach to cumulative impact assessment: A proposed methodology
[PB93-100147] p 1992 N93-21654
The 6th Conference Proceedings of the Pacific OCS Region Information Transfer Meeting
[PB93-119600] p 1992 N93-21684
Information integration for environmental monitoring and assessment: An annotated bibliography
[PB92-227461] p 1993 N93-21784

RESPIRATORY PHYSIOLOGY

Respiratory response to varying degrees of tilt and lower body negative pressure p 1809 N93-21114

RESPONSES

Effect of design selection on response surface performance
[NASA-CR-192275] p 2038 N93-20895

RESTORATION

Report on environmental requirements and priorities
[PB92-208198] p 1989 N93-21028

RETINAL IMAGES

Retinal information processing for minimum laser lesion detection and cumulative damage
[AD-A259195] p 2023 N93-20563

RETROREFLECTORS

Video guidance sensor p 1812 N93-21409
Approach range and velocity determination using laser sensors and retroreflector targets p 1812 N93-21410
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414

REUSABLE ROCKET ENGINES

Space Shuttle: Status of advanced solid rocket motor program. Report to the Chair, Subcommittee on Government Activities and Transportation, Committee on Government Operations, House of Representatives
[GAO/NSIAD-93-26] p 1829 N93-20293

REUSABLE SPACECRAFT

Future space transportation systems. Part 1: Safety aspects. Part 2: Technical aspects
[MBB-UK-0180-90-PUB-PT-1-2] p 1821 N93-20847

REVERSE ENGINEERING

Design recovery for software library population
[AD-A259292] p 2090 N93-20611

REVIEWING

Research and development activities of the TsukubaSpace Center
[NASDA-TK-GC0066] p 1789 N93-20410
Research on advanced spacecraft p 1789 N93-20411
Research on GPS utilization in space p 1780 N93-20453
Survey and review on adhesives p 1799 N93-20475
Japanese space activities p 1976 N93-21274

RHENIUM

Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114

RHENIUM ALLOYS

New developments in the 'ab initio' determination of transition metal alloy phase diagrams
[DE93-002540] p 1856 N93-21488

RHEOLOGY

Application of silicone fluid rheogoniometer measurements to despin moment studies in a spinning and coning cylinder
[AD-A259270] p 1901 N93-20599

Effect of surface active materials on bubble dynamics in two-phase flow
[AD-A259340] p 1902 N93-21264

RHO-MESONS
Semi-leptonic decays of D-mesons in lattice QCD
[PREPRINT-808] p 2062 N93-20905

RHODIUM
Metalloradical and electrophilic activation of methane
[PB93-123693] p 1851 N93-21813

RHODIUM ALLOYS
Field evaluation of six protective coatings applied to T-56 turbine blades after 2000 hours of engine use
[ARL-TR-2] p 1786 N93-21316

RIBS (SUPPORTS)
Segmented composite cylinder assembly
[AD-D015603] p 1831 N93-20015
Enhanced heat transfer in ribbed ducts using vortex generators
[PB93-114320] p 1902 N93-21219

RIEMANN MANIFOLD
On the origin of SL(nC) current algebra in generalized two dimensional gravity
[PREPRINT-818] p 2055 N93-21180

RIGID STRUCTURES
COLD-SAT dynamic model
[NASA-TM-105185] p 1822 N93-19988
Improvements to a method for the geometrically nonlinear analysis of compressively loaded stiffened composite panels
[NASA-CR-192183] p 1920 N93-20034
Dynamic simulation of flexible body systems by the vector solution method p 1933 N93-20666
Comparison of the efficiency of the various methods for rigid-body displacement analyses
p 1941 N93-20709
The linear invariants of the composition of two rotations p 1941 N93-20711
Higher frequency transmission properties of motor car-chassis systems
[ETN-93-92563] p 1915 N93-20877
A method for modeling contact dynamics for automated capture mechanisms p 1816 N93-21434
Development of a non-linear simulation for generic hypersonic vehicles - ASUHS1
[NASA-CR-192710] p 1783 N93-22003

RIGID WINGS
Analytical and experimental investigation of flutter suppression by piezoelectric actuation
[NASA-TP-3241] p 1781 N93-20584

RING LASERS
Injection seeded, diode pumped regenerative ring Nd:YAG amplifier for spaceborne laser ranging technology development
[NASA-CR-192171] p 1910 N93-20298

RING STRUCTURES
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831

RIPPLES
Transition to H-mode by energetic electrons
[NIFS-158] p 2070 N93-20156

RISK
Software development risk: Opportunity, not problem
[AD-A258743] p 2032 N93-20402

ROADS
Intelligent and localized weather prediction
[PB93-117992] p 2015 N93-21787

ROBOT ARMS
Research on space robot technology
p 1794 N93-20440
Free vibrations of a flexible tapered arm attached to a compliant hub p 1932 N93-20660
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Polynomial solution of the direct geometric problem of a parallel spherical manipulator p 1918 N93-20718
Command generator tracker based direct model reference adaptive control of a PUMA 560 manipulator
[NASA-CR-192756] p 2048 N93-21306
Intelligent systems technology infrastructure for integrated systems p 1815 N93-21424

ROBOT CONTROL
A prototype novel sensor for autonomous, space based robots, phase 2
[NASA-CR-191344] p 1913 N93-19978
The ARK (Autonomous Robot for a Known environment) project p 1917 N93-20621
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application
p 1940 N93-20706
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Comparison of the efficiency of the various methods for rigid-body displacement analyses
p 1941 N93-20709
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
The linear invariants of the composition of two rotations p 1941 N93-20711
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713
Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714
Modelling robot trajectory errors using time series
p 1942 N93-20716
Structural shape optimization of robotic links
p 1918 N93-20717
Polynomial solution of the direct geometric problem of a parallel spherical manipulator p 1918 N93-20718
Linear passive impedance p 1943 N93-20719
Grasp admittance center. A concept
p 1918 N93-20720
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
A modular structure for the control of an autonomous mobile robot
[LAAS-92137] p 1915 N93-20958
CTOS course
[NASA-CR-191866] p 2047 N93-21204
Command generator tracker based direct model reference adaptive control of a PUMA 560 manipulator
[NASA-CR-192756] p 2048 N93-21306
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307
Lecture materials for the CTOS/MCS introductory course
[NASA-CR-192734] p 2048 N93-21308
A family of asymptotically stable control laws for flexible robots based on a passivity approach
[NASA-CR-191870] p 2048 N93-21354
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371
A berthing and fastening strategy for orbital replacement units p 1814 N93-21420
ROMPS critical design review data package
[NASA-CR-191612] p 2041 N93-21472
Avoiding space robot collisions utilizing the NASA/GSFC tri-mode skin sensor
[NASA-CR-192292] p 2049 N93-21812

ROBOT DYNAMICS
Free vibrations of a flexible tapered arm attached to a compliant hub p 1932 N93-20660
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application
p 1940 N93-20706
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Comparison of the efficiency of the various methods for rigid-body displacement analyses
p 1941 N93-20709
The linear invariants of the composition of two rotations p 1941 N93-20711
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713
Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Modelling robot trajectory errors using time series
p 1942 N93-20716
Polynomial solution of the direct geometric problem of a parallel spherical manipulator p 1918 N93-20718
Grasp admittance center. A concept
p 1918 N93-20720
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
A modular structure for the control of an autonomous mobile robot
[LAAS-92137] p 1915 N93-20958
The complexity of the free space for a robot moving amidst fat obstacles
[RUU-CS-92-05] p 1915 N93-21171
Command generator tracker based direct model reference adaptive control of a PUMA 560 manipulator
[NASA-CR-192756] p 2048 N93-21306

ROBOT SENSORS
A prototype novel sensor for autonomous, space based robots, phase 2
[NASA-CR-191344] p 1913 N93-19978
Avoiding space robot collisions utilizing the NASA/GSFC tri-mode skin sensor
[NASA-CR-192292] p 2049 N93-21812

ROBOTICS
Research on space robot technology
p 1794 N93-20440
The ARK (Autonomous Robot for a Known environment) project p 1917 N93-20621
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application
p 1940 N93-20706
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713
Stabilization of kinematical constraints for open multibody chains p 1942 N93-20714
Structural shape optimization of robotic links
p 1918 N93-20717
Linear passive impedance p 1943 N93-20719
Grasp admittance center. A concept
p 1918 N93-20720
On identification of hydraulic compliance using a genetic algorithm p 1918 N93-20721
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 8: Aerothermodynamics Automation and Robotics (A/R) systems sensors, high-temperature superconductivity
[NASA-TM-108655] p 2085 N93-20775
A new method for recognizing quadric surfaces from range data and its application to telerobotics and automation
[NASA-CR-192619] p 1892 N93-20910
Testing of ROMPS robot mechanical interfaces and compliant device
[NASA-CR-192617] p 1915 N93-20918
Intelligent processing equipment within the Environmental Protection Agency
[PB92-217330] p 1989 N93-21011
CTOS course
[NASA-CR-191866] p 2047 N93-21204
Command generator tracker based direct model reference adaptive control of a PUMA 560 manipulator
[NASA-CR-192756] p 2048 N93-21306
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307
Lecture materials for the CTOS/MCS introductory course
[NASA-CR-192734] p 2048 N93-21308
The M68HC11 gripper controller electronics
[NASA-CR-192732] p 1893 N93-21309
Reliable fusion of control and sensing in intelligent machines
[NASA-CR-192780] p 2048 N93-21371
A berthing and fastening strategy for orbital replacement units p 1814 N93-21420
Intelligent systems technology infrastructure for integrated systems p 1815 N93-21424
Experimental validation of docking and capture using space robotics testbeds p 1817 N93-21441
Advancing automation and robotics technology for the Space Station Freedom and for the U.S. economy
[NASA-TM-103992] p 2027 N93-21807
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941
Robot friendly probe and socket assembly
[NASA-CASE-MSC-22028-1] p 1917 N93-22007

ROBOTS
A prototype novel sensor for autonomous, space based robots, phase 2
[NASA-CR-191344] p 1913 N93-19978
Structural shape optimization of robotic links
p 1918 N93-20717
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
Testing of ROMPS robot mechanical interfaces and compliant device
[NASA-CR-192617] p 1915 N93-20918
Robot friendly probe and socket assembly
[NASA-CASE-MSC-22028-1] p 1917 N93-22007

ROBUSTNESS (MATHEMATICS)
Reliability study of the NiH2 strain gage
p 1908 N93-20515
SSG 4.120: Non-linear adjustment
p 1973 N93-20986
Robust on-off pulse control of flexible space vehicles
[NASA-CR-192174] p 1824 N93-21644

ROCK MECHANICS
Cyclic behavior modelling
[ECL-92-09] p 1920 N93-20060

ROCKET ENGINE DESIGN
Research on advanced transportation systems
p 1789 N93-20414

ROCKET ENGINES
Thruster configurations for maneuvering heavy payloads p 1813 N93-21415

ROCKET PROPELLANTS
Research on advanced transportation systems
p 1789 N93-20414
Atomic hydrogen propellants: Historical perspectives and future possibilities
[NASA-TM-106053] p 1829 N93-20614

ROCKET THRUST
H2 arcjet performance mapping program
[NASA-CR-191073] p 1828 N93-20064
ROCKS
Elastic moduli and seismic wave attenuation in dry and saturated rock. Volume 2: Modulus dispersion and attenuation
[AD-A258711] p 1998 N93-20381
Cokriging surface elevation and seismic refraction data for bedrock topography
[DE93-001369] p 1999 N93-21225
RODS
Forced vibration of non-selfadjoint elastic systems
p 1934 N93-20668
ROLLERS
Thermal plastic strain fatigue life of the roll
p 1924 N93-20354
ROOTS OF EQUATIONS
The Weyl method for simultaneous calculation of polynomial roots (first part)
[RR-881-M] p 2055 N93-21169
ROTARY STABILITY
Stability of the fluid-fluid interphase in rotating systems subjected to different gravitational intensities
p 1805 N93-21087
ROTARY WING AIRCRAFT
A Government/Industry Summary of the Design Analysis Methods for Vibrations (DAMVIBS) Program
[NASA-CP-10114] p 1782 N93-21310
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: A government overview
p 1782 N93-21311
ROTARY WINGS
Damage tolerance of a helicopter rotor high-strength steel p 1948 N93-21322
ROTATING BODIES
Vibration of a multi-guided rotating string
p 1934 N93-20672
Comparison of the efficiency of the various methods for rigid-body displacement analyses
p 1941 N93-20709
The linear invariants of the composition of two rotations p 1941 N93-20711
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
ROTATING ELECTRICAL MACHINES
Monitoring of vibrating machinery using artificial neural networks
[DE93-003566] p 2050 N93-21848
ROTATING FLUIDS
The acquisition of velocity fields via the automatic analysis of motion, exemplarily demonstrated in a rotating fluid
[MPIS-102/1991] p 1902 N93-21023
Stability of the fluid-fluid interphase in rotating systems subjected to different gravitational intensities
p 1805 N93-21087
Natural frequencies and response of spinning liquid column with partially sliding contact line
[LRT-WE-9-FB-24-1991] p 1903 N93-21298
ROTATING PLASMAS
Poloidal rotation, density asymmetries, and momentum confinement in tokamak experiments
[DE93-002319] p 2069 N93-20026
ROTATING SHAFTS
A method of continuous coordinate condensation
p 1932 N93-20657
Elimination of resonance with a switching support
p 1933 N93-20664
ROTATING STALLS
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766
ROTATION
Method and apparatus for controlling internal rotation of principal axes in fabrication of birefringent fibers
[AD-D015611] p 2067 N93-20397
The linear invariants of the composition of two rotations p 1941 N93-20711
Towards autonomous motion vision
[AD-A259339] p 2068 N93-21263
Proximity operations considerations affecting spacecraft design p 1815 N93-21428
ROTATIONAL SPECTRA
Free radical and overtone spectroscopy
[NASA-CR-192136] p 1850 N93-21555
ROTOR AERODYNAMICS
Mean flow interactions of a counter-rotating propeller
p 1899 N93-20289
ROTOR BLADES (TURBOMACHINERY)
Analytic formulation of unsteady profile aerodynamics and its application to simulation of rotors
[ESA-TT-1244] p 1762 N93-21659
ROTOR DYNAMICS
Analytic formulation of unsteady profile aerodynamics and its application to simulation of rotors
[ESA-TT-1244] p 1762 N93-21659
ROTORS
Mass loaded composite rotor for vibro-acoustic application
[AD-D015604] p 1831 N93-20016
Stochastic finite element analysis for high speed rotors p 1918 N93-20696
The influence of the rotor test facilities ROTEST and ROTOS on the rotor inflow
[DLR-MITT-91-16] p 1785 N93-21173
ROUTES
An investigation of discovery-based learning in the route planning domain
[AD-A259141] p 1780 N93-20560
Effect of personal and situational variables on noise annoyance: With special reference to implications for en route noise
[NASA-CR-189676] p 2060 N93-21317
RUN TIME (COMPUTERS)
Stochastic scheduling with variable profile and precedence constraints
[INRIA-RR-1525] p 2059 N93-21396
RUNGE-KUTTA METHOD
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis. Computer program user's manual
[NASA-CR-187125] p 1784 N93-20583
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
RYDBERG SERIES
Photoionization experiments by multistage excitation in the zone of the second ionization threshold of CuI
[ETN-93-92569] p 2062 N93-20883

S

S WAVES
The sensitivity of seismic responses to gas hydrates
[DE93-000216] p 1999 N93-21253
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691
Attenuation and source studies in Northern Eurasia
[AD-A259323] p 2000 N93-21700
S-N DIAGRAMS
An experimental approach to size effect in rotating bending fatigue p 1922 N93-20339
Probabilistic assessment of machine parts from Kymenite, austempered ductile iron
p 1923 N93-20341
Fatigue performance of nine bolt materials in air and in sea water with cathodic protection
p 1924 N93-20349
Spectrum fatigue data in comparison to design curves in the long life regime p 1948 N93-21324
Fatigue life prediction for 6261-T6 aluminium alloy I-beams with welded cover plates p 1949 N93-21328
Fatigue of old metallic railroad bridges
p 1949 N93-21330
SAFETY
Laser-based firing systems for prompt initiation of secondary explosives p 1864 N93-20143
Upper interior head protection. Volume 1. The development of a research test procedure
[PB93-113769] p 2026 N93-21537
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 2: Appendices
[PB92-224674] p 1916 N93-21714
Safety of high speed magnetic levitation transportation systems. Magnetic field testing of the TR07 Maglev vehicle and system. Volume 1: Analysis
[PB92-224666] p 1916 N93-21715
Radiological safety aspects of TNA deployment
p 1770 N93-21893
SAFETY DEVICES
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
NASA pyrotechnically actuated systems program
p 1863 N93-20133
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
Proposed system safety design and test requirements for the microlaser ordnance system
p 1864 N93-20144
Laser diode ignition characteristics of Zirconium Potassium Perchlorate (ZPP) p 1865 N93-20145
Safety and arming system for tube launched projectile
[AD-D015557] p 1889 N93-20307
Detection of incipient defects in cables by partial discharge signal analysis
[PB92-222744] p 1919 N93-21199
Analysis of failure and maintenance experiences of motor operated valves in a Finnish nuclear power plant
[VTT-TIED-1322] p 1916 N93-21658
The challenge of biodetection for screening persons carrying explosives p 1776 N93-21931
A novel approach to design optimization of nuclear-based explosive detection systems
p 1777 N93-21935
SAFETY FACTORS
Proposed system safety design and test requirements for the microlaser ordnance system
p 1864 N93-20144
Laser diode initiated detonators for space applications
p 1865 N93-20147
Safety validation test equipment operation
p 1801 N93-20487
Review on safety validation test p 1802 N93-20488
SALINITY
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
World ocean circulation experiment. WOCE results of an oxygen/salinity comparison cruise on the R/VVernadsky
[PB93-116523] p 2018 N93-21214
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990
[PB93-116622] p 2019 N93-21688
SAMPLERS
Implementation and evaluation of a three-dimensional photometric sampler
[AD-A258636] p 1905 N93-20361
SAMPLING
Quality assurance in the future industrial plant
[PAPER-C-3-3] p 1919 N93-20837
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049
World ocean circulation experiment. WOCE results of an oxygen/salinity comparison cruise on the R/VVernadsky
[PB93-116523] p 2018 N93-21214
Hybrid single-particle Lagrangian integrated trajectories (HY-SPLIT): Version 3.0: User's guide and model description
[PB92-218114] p 2056 N93-21341
Sampling properties of a spaceborne lidar (ATLID)
p 1961 N93-21618
Simulation method for stationary Gaussian random functions based on the sampling theorem
[PB93-127496] p 2059 N93-21818
SAN FRANCISCO BAY (CA)
Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California
[PB93-118495] p 1994 N93-21805
SANDWICH STRUCTURES
What's a Parabeam 3D? p 1835 N93-21137
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517
SAPPHIRE
Fracture at Cu/sapphire interfaces
[DE93-003816] p 1857 N93-21779
SATELLITE ALTIMETRY
Satellite radar altimetry over sea ice
p 1957 N93-21596
ERS-1 radar altimetry of ice sheets
p 1959 N93-21606
The WAM model and ERS-1 p 1960 N93-21609
Global validation of the wave model WAM using Geosat wave height data p 1965 N93-21639
Space radar altimetry development from ocean monitoring to land topography p 1965 N93-21640
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641
SATELLITE ATMOSPHERES
Planetary atmospheres: Microwave spectroscopic studies of planetary atmospheres
[NASA-CR-192145] p 2099 N93-21642
SATELLITE ATTITUDE CONTROL
COLD-SAT dynamic model
[NASA-TM-105185] p 1822 N93-19988
SATELLITE COMMUNICATION
A simulation study of the effects of communication delay on air traffic control
[AD-A258593] p 1778 N93-19966

Microwave vs optical crosslink study
[NASA-CR-192207] p 1879 N93-19989
Computer simulation of a general purpose satellite modem
[AD-A259083] p 1882 N93-20392
Research and development activities of the TsukubaSpace Center
[NASDA-TK-GC0066] p 1789 N93-20410
Research on data relay and tracking satellite systems p 1790 N93-20418
Research on intersatellite laser communication p 1790 N93-20419
Research on space communication equipment technology: Study on relay system p 1790 N93-20420
Research and development of K-band intersatellite communication experiment equipment onboard ETS-6 p 1793 N93-20434
Error control techniques for satellite and space communications
[NASA-CR-192368] p 1884 N93-20613
Pre Asia Pacific ISY Conference
[NASDA-CM-174] p 1975 N93-21270
Overview of KITSAT p 1976 N93-21275
Space program in Malaysia p 1976 N93-21277
National space program in Australia p 1977 N93-21283
PARTNERS p 1978 N93-21287
Research in LMSS propagation
[NASA-CR-191915] p 1885 N93-21400

SATELLITE CONFIGURATIONS
Research on Earth observing satellite system: Conceptual study of Advanced Earth Observing Satellite-2 (ADEOS-2) p 1790 N93-20415

SATELLITE DESIGN
Research on advanced spacecraft p 1789 N93-20411
Research on Earth observing satellite system: Conceptual study of Advanced Earth Observing Satellite-2 (ADEOS-2) p 1790 N93-20415
Japanese space activities p 1976 N93-21274
Overview of KITSAT p 1976 N93-21275

SATELLITE IMAGERY
Research on diabatic initialization p 2004 N93-20075
Coordinated field study for CaPE: Analysis of energy and water budgets p 2005 N93-20079
Improvement and further development of SSM/I overland parameter algorithms using the WetNet workstation p 2005 N93-20083
OLS data system/global survey of lightning p 2006 N93-20085
Use of features derived from class proportions in a pixel for the multispectral classification of remote sensing images
[INPE-5306-TDI/456] p 1966 N93-20322
Space research and remote sensing programs in Bangladesh p 1975 N93-21271
International Space Year in China p 1975 N93-21272
Space program in Indonesia p 1975 N93-21273
Panel discussion: Roles of space program in the Asia Pacific region p 1819 N93-21286
Proceedings of the 14th Earth Observation Symposium
[JTN-93-80414] p 1978 N93-21539
Remote sensing data application on forests in Okinawa Islands focusing on mangrove forests p 1978 N93-21543
Production of teaching materials from Geostationary Meteorological Satellite Himawari images p 1978 N93-21544
Changing weather information: Roles of meteorological information through meteorological satellites p 1979 N93-21545
Finding fish way by using remote sensing p 1979 N93-21546
End-to-end tests of satellite data p 1953 N93-21571
Preparation of AVHRR GAC data sets for global change studies p 1954 N93-21573
The 8 years monthly vegetation index of central Europe p 1954 N93-21574
Monitoring wetland hydrology by remote sensing: A case study of the Sudd using infra-red imagery and radar altimetry p 1955 N93-21584
Cloud-generated radiative heating determined from satellite measurements p 1956 N93-21589
Lake remote sensing for global climate research p 1958 N93-21602
Remote sensing of latent heat fluxes at the air-sea interface p 1959 N93-21603
Utilization of remote sensing data at the Deutscher Wetterdienst p 1962 N93-21621
Qualitative and quantitative diagnosis of cloud images for use in weather forecast p 1962 N93-21623
Bispectral cloud analysis for the Atlantic-European region using digital Meteosat images p 1962 N93-21624
Determination of longwave radiation reaching the surface from Meteosat images and radiation model calculations p 1962 N93-21625
A comparative study of estimation of partial cloud coverage within a pixel: Proposed adaptive least square method with constraints p 1962 N93-21626
Mapping of satellite-derived sea surface temperatures at high resolution in cloudy regions p 1963 N93-21630
A comprehensive comparison between skin and multi-channel sea surface temperatures as derived from AVHRR p 1963 N93-21632
Seasonal SST and upwelling indices along the northwest African coast p 1964 N93-21633
A study of the thermal bar in Lake Ladoga (Russia) using NOAA-AVHRR data p 1964 N93-21635
Intercomparison of satellite-derived sea surface temperatures p 1964 N93-21636
Generation and distribution of remotely-sensed sea surface temperature images p 1964 N93-21637
Satellite data assimilation in the wave model 3G-WAM p 1965 N93-21638

SATELLITE INSTRUMENTS
Research on Earth observing satellite system: Conceptual study of Advanced Earth Observing Satellite-2 (ADEOS-2) p 1790 N93-20415
Research on advanced Earth observing sensors p 1790 N93-20416
NASA space geodesy program: Catalogue of site information
[NASA-TM-4482] p 1999 N93-21374

SATELLITE NETWORKS
Variance-covariance estimation and statistical testing of satellite networks
[PB92-225358] p 1824 N93-21048

SATELLITE OBSERVATION
The Split Window Microwave Radiometer (SWMR) for hurricane wind speed measurement from space
[NASA-CR-192316] p 2002 N93-19987
The effects of small ice crystals on the infrared radiative properties of cirrus clouds
[NASA-CR-192181] p 2002 N93-20046
Interactive access and management for four-dimensional environmental data sets using McIDAS p 1965 N93-20070
Research on diabatic initialization p 2004 N93-20075
Coordinated field study for CaPE: Analysis of energy and water budgets p 2005 N93-20079
AMPR/SSMI data comparisons p 2005 N93-20081
Improvement and further development of SSM/I overland parameter algorithms using the WetNet workstation p 2005 N93-20083
OLS data system/global survey of lightning p 2006 N93-20085
ER-2 investigations of lightning and thunderstorms p 2006 N93-20088
Tropical Pacific moisture variability p 2007 N93-20093
Investigation of cloud/water vapor motion winds from geostationary satellite p 2008 N93-20094
A satellite-borne radar wind sensor (RAWS) p 2008 N93-20096
MAMS: High resolution atmospheric/surface properties p 2008 N93-20097
Simulations of satellite Doppler wind observations p 2010 N93-20104
Remote sensing of water vapor features p 2010 N93-20107
Research and development activities of the TsukubaSpace Center
[NASDA-TK-GC0066] p 1789 N93-20410
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758
Botswana water and surface energy balance research program. Part 1: Integrated approach and field campaign results
[NASA-TM-108607] p 2018 N93-20891
Global change data base training exercise manual. Exploring Earth's environment: Africa as an example
[PB92-224682] p 1990 N93-21211
Pre Asia Pacific ISY Conference
[NASDA-CM-174] p 1975 N93-21270
Space research and remote sensing programs in Bangladesh p 1975 N93-21271

Principles and application tendency of remote sensing: Its principle, function, and utilization p 1978 N93-21540
Present status and tendency of satellite Earth observing systems p 1978 N93-21541
Study for natural environment in Okinawa Islands by using remote sensing p 1978 N93-21542
Remote sensing data application on forests in Okinawa Islands focusing on mangrove forests p 1978 N93-21543
Production of teaching materials from Geostationary Meteorological Satellite Himawari images p 1978 N93-21544
Changing weather information: Roles of meteorological information through meteorological satellites p 1979 N93-21545
Finding fish way by using remote sensing p 1979 N93-21546
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting
[ESA-ISY-1-VOL-1] p 1953 N93-21569
Earth observation in the TIGER programme of the UK Natural Environment Research Council p 1953 N93-21572
Marine productivity along the northwest coast of Africa (Mauritania): Estimation from satellite data p 1955 N93-21578
Key problems of global ecology and the International Space Year p 1955 N93-21579
Can measurements in the O2A- and B-bands be used for atmospheric correction of satellite measurements over the ocean? p 1955 N93-21581
Earth radiation and cloud cover analysis using NOAA satellite data p 1956 N93-21587
Climatological use of long time series of data from the water vapour channel of Meteosat p 1958 N93-21601
How real-time data assimilation benefits weather and climate studies through the validation, quality control and synthesis of remotely sensed data p 1960 N93-21610
Representativity of wind measurement from space p 1961 N93-21617
Sampling properties of a spaceborne lidar (ATLID) p 1961 N93-21618
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620
Utilization of remote sensing data at the Deutscher Wetterdienst p 1962 N93-21621
Operational cloud classification with Meteosat data p 1962 N93-21622
Qualitative and quantitative diagnosis of cloud images for use in weather forecast p 1962 N93-21623
Bispectral cloud analysis for the Atlantic-European region using digital Meteosat images p 1962 N93-21624
Determination of longwave radiation reaching the surface from Meteosat images and radiation model calculations p 1962 N93-21625
SST monitoring of the European seas with AVHRR data p 1963 N93-21629
Surface circulation in the Adriatic Sea as observed by AVHRR p 1964 N93-21634

SATELLITE ORBITS
Some observations of chaotic motion of satellites with damping in an elliptic orbit p 1826 N93-20726
SSG 2.106: Determination of orbits to cm-accuracy p 1971 N93-20973
SSG 4.119: Relativistic effects in geodesy p 1973 N93-20985
Satellite situation report, volume 32, no. 4
[NASA-TM-108203] p 1824 N93-20999

SATELLITE SOUNDING
Remote sensing of water vapor features p 2010 N93-20107
Pre Asia Pacific ISY Conference
[NASDA-CM-174] p 1975 N93-21270
Panel discussion: Roles of space program in the Asia Pacific region p 1819 N93-21286

Proceedings of the 14th Earth Observation Symposium
[JTN-93-80414] p 1978 N93-21539
Principles and application tendency of remote sensing: Its principle, function, and utilization
p 1978 N93-21540
Present status and tendency of satellite Earth observing systems p 1978 N93-21541
Study for natural environment in Okinawa Islands by using remote sensing p 1978 N93-21542
Requirements and projects for high-resolution atmospheric sounding p 1959 N93-21607
Routine validation of TOVS retrievals: Lessons learned from a pilot experiment p 1960 N93-21611
Transmittance coefficients generation for fast radiative transfer models: Application to new satellite sounding systems p 1960 N93-21612
Retrieval of cloud liquid water and precipitation from polarized microwave simulations and SSM/I measurements p 1960 N93-21613

SATELLITE-BORNE INSTRUMENTS
Multi-center Airborne Coherent Atmospheric Wind Sensor (MACAWS) p 1913 N93-20101
Research on space coolers p 1794 N93-20442
Research on satellite-borne high speed data recorder
p 1795 N93-20449
Retrieval of cloud liquid water and precipitation from polarized microwave simulations and SSM/I measurements p 1960 N93-21613
Representativity of wind measurement from space
p 1961 N93-21617
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620
Intercomparison of satellite-derived sea surface temperatures p 1964 N93-21636
Space radar altimetry development from ocean monitoring to land topography p 1965 N93-21640
A semi-custom dual channel peak hold circuit for spaceborne instrumentation
[DE93-003801] p 1828 N93-21777
A two-stage magnetic refrigerator for astronomical applications with reservoir temperatures above 4 K
[NASA-CR-192365] p 1878 N93-21815

SATELLITE-BORNE RADAR
A satellite-borne radar wind sensor (RAWS)
p 2008 N93-20096
Satellite radar altimetry over sea ice
p 1957 N93-21596

SCALE MODELS
Improved ceramic slip casting technique --- application to aircraft model fabrication
[NASA-CASE-LAR-14471-1] p 1858 N93-20041
A model study of the aircraft cabin environment resulting from in-flight fires
[DOT/FAA/CT-90/22] p 1764 N93-21557

SCALING LAWS
Dimensionless scaling of confinement in ATF
[DE93-001705] p 2069 N93-20030
Penning surface-plasma source scaling laws: Theory and practice
[DE93-003814] p 2076 N93-21778

SCANNERS
Automatized cartography, using the Mitteldeutschen Kartographie and Druck GmbH system
p 1967 N93-20529
Scanner technology as an alternative to manual digitizing. The data acquisition of the 1990s
p 1968 N93-20539
Low cost attitude control system scanwheel development
[NASA-CR-191324] p 1824 N93-21003
The evolution of Computed Tomography (CT) as an explosives detection modality p 1768 N93-21883

SCANNING
Development of an automated cartographic system
p 1967 N93-20530

SCANNING ELECTRON MICROSCOPY
Space station protective coating development
p 1848 N93-20816

SCANNING TUNNELING MICROSCOPY
Pairing and clustering of hydrogen on Si(100)2x1: Monte Carlo studies
[AD-A258537] p 1846 N93-20054

SCATTERING AMPLITUDE
Theory and numerical modeling of low-frequency acoustic scattering from bubble plumes near the sea surface
[AD-A259199] p 2018 N93-20564

SCATTERING COEFFICIENTS
Optical constants and scattering factors from reflectivity measurements: 50 eV to 5 keV
[DE93-003750] p 2068 N93-21674

SCATTERING CROSS SECTIONS
Neutron Elastic Scatter (NES) for Explosives Detection Systems (EDS) p 1766 N93-21868

SCATTEROMETERS
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620

SCENE ANALYSIS
Automatic modeling of nonpolyhedral objects by monocular observation
[ETN-93-92678] p 2068 N93-20898

SCHEDULES
Physics and engineering design studies on large helical device
[NIFS-161] p 2070 N93-20157
Total quality assurance
[PAPER-C-3-5] p 1920 N93-20839
Selected worldwide Marine weather broadcasts
[PB93-118164] p 2013 N93-21294

SCHEDULING
Building a knowledge base for the knowledge worker system
[AD-A258544] p 2089 N93-20370
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580
Stochastic scheduling with variable profile and precedence constraints
[INRIA-RR-1525] p 2059 N93-21396

SCHOTTKY DIODES
Planar monolithic Schottky varactor diode millimeter-wave frequency multipliers
[AD-A258616] p 1887 N93-19995
Review on Schottky barrier diode development
p 1798 N93-20464

SCHWARZ-CHRISTOFFEL TRANSFORMATION
The effective transverse resistivity in multifilamentary conductors
[MEMO-1027] p 1892 N93-21008

SCIENCE
Science and Engineering programs: On target for women
[PB93-116499] p 2084 N93-21797

SCIENTIFIC SATELLITES
Improved models of the inner and outer radiation belts
[AD-A258708] p 1998 N93-20379
Development and use of data analysis procedures for the CRRES payloads AFGL-701-2/Dosimeter and AFGL-701-4/Fluxmeter and application of the data analysis results to improve the static and dynamic models of the earth's radiation belts
[AD-A258710] p 1823 N93-20380
Simulation and calculation of the APEX attitude
[AD-A258716] p 1824 N93-20382
NASA Center update: Goddard Space Flight Center
p 1983 N93-20491
SSG 2.107: Gravity field determination by satelli te gravity-gradiometry p 1971 N93-20974
Activities report of the European Space Agency
[ETN-93-93509] p 2103 N93-21764

SCIENTISTS
Prologue to Action. Life Sciences Education and Science Literacy
[PB93-107514] p 2021 N93-21230
Science and Engineering programs: On target for women
[PB93-116499] p 2084 N93-21797

SCINTILLATION COUNTERS
Detector selection for nuclear-based explosive detection system p 1766 N93-21869
Design of a high current proton accelerator
p 1766 N93-21873

SCORING
Laser scribing system for amorphous silicon solar cells
[AD-A259287] p 1910 N93-20608

SEA FLOOR SPREADING
VENTS 1990 Cleft Segment plume monitoring experiment: Physical and chemical data, NOAA ship DISCOVERER, September 8-29, 1990
[PB93-116622] p 2019 N93-21688

SEA ICE
Use of ERS-1 SAR data in numerical sea ice modeling
p 1957 N93-21592
Remote sensing of Arctic sea ice using the ERS-1 SAR p 1957 N93-21593
Detecting new-ice in the Arctic from multispectral satellite data p 1957 N93-21594
Satellite radar altimetry over sea ice
p 1957 N93-21596
Improved use of passive microwave data for sea ice detection p 1957 N93-21597

SEA LEVEL
SSG 5.99: Tidal friction and the Earth's rotation
p 1974 N93-20992
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641

SEA SURFACE TEMPERATURE
Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360
SST monitoring of the European seas with AVHRR data p 1963 N93-21629
Mapping of satellite-derived sea surface temperatures at high resolution in cloudy regions
p 1963 N93-21630
Modelling the skin-bulk temperature difference near the sea-atmosphere interface for remote sensing applications p 1963 N93-21631
A comprehensive comparison between skin and multi-channel sea surface temperatures as derived from AVHRR p 1963 N93-21632
Seasonal SST and upwelling indices along the northwest African coast p 1964 N93-21633
Surface circulation in the Adriatic Sea as observed by AVHRR p 1964 N93-21634
Intercomparison of satellite-derived sea surface temperatures p 1964 N93-21636
Generation and distribution of remotely-sensed sea surface temperature images p 1964 N93-21637

SEA WATER
Fatigue performance of nine bolt materials in air and in sea water with cathodic protection
p 1924 N93-20349
In-situ determination of optical properties of sea water and particle characteristics in the Corfu Sea (Mediterranean): Report on the first joint campaign of the Mito project
[BCRS-92-04] p 2018 N93-20741
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049
World ocean circulation experiment. WOCE results of an oxygen/salinity comparison cruise on the R/VVernadsky
[PB93-116523] p 2018 N93-21214

SEALERS
SRB frustrum 'smiley' cracking phenomenon study
[NASA-CR-192621] p 1829 N93-20912

SEALS (STOPPERS)
Hatch securing mechanism
[AD-D015613] p 1914 N93-20399

SEAMOUNTS
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792

SEAMS (JOINTS)
High efficiency, low weight and volume energy absorbent seam
[AD-D015531] p 1877 N93-20765

SEAS
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641

SEASAT SATELLITES
Satellite data assimilation in the wave model 3G-WAM
p 1965 N93-21638

SECONDARY ION MASS SPECTROMETRY
Lunar and asteroid composition assessment using remote secondary ion mass spectrometry
[DE93-003839] p 2098 N93-21849

SECURITY
Proceedings of the First International Symposium on Explosive Detection Technology
[DOT/FAA/CT-92/11] p 1764 N93-21856
Role of advanced technology in the security of surface transportation p 1764 N93-21857
The UK perspective on aviation security
p 1764 N93-21858
Assessing the operational impacts of checked luggage screening p 1777 N93-21936
A systems approach to the explosive detection problem p 1778 N93-21942

SEDIMENTS
The sensitivity of seismic responses to gas hydrates
[DE93-000216] p 1999 N93-21253

SEGMENTS
Reflections on segmentation
[RR-873-I] p 2034 N93-20791
Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872
Geometric approaches of image generation using Voronoi models
[ETN-93-92690] p 2041 N93-21393
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940

SEISMIC WAVES
Elastic moduli and seismic wave attenuation in dry and saturated rock. Volume 2: Modulus dispersion and attenuation
[AD-A258711] p 1998 N93-20381
SEISMOLOGY
Lithospheric dynamics near plate boundaries
[NASA-CR-192108] p 1997 N93-20310
Sunspot dynamics
[NASA-CR-192284] p 2100 N93-20754
Cokriging surface elevation and seismic refraction data for bedrock topography
[DE93-001369] p 1999 N93-21225
The sensitivity of seismic responses to gas hydrates
[DE93-000216] p 1999 N93-21253
Summaries of FY 1992 geosciences research
[DE93-004826] p 1965 N93-21726
Wind and seismic effects. Proceedings of the 24th Joint Meeting of the US-Japan Cooperative Program in Natural Resources Panel on Wind and Seismic Effects
[PB93-120152] p 2001 N93-21801
SELECTION
Nonmonotonic temporal reasoning
[AD-A258699] p 2032 N93-20377
SELF CONSISTENT FIELDS
Selfconsistent analysis of radial electric field and fast ion losses in CHS Torsatron/Heliotron
[NIFS-178] p 2071 N93-20264
Effect of alpha particles on radial electric field structure in Torsatron/Heliotron reactor
[NIFS-182] p 2071 N93-20265
SELF INDUCED VIBRATION
Thermally induced vibrations in a temperature-rate dependent thermoelastic solid with a spherical cavity
p 1933 N93-20663
SELF ORGANIZING SYSTEMS
Thought analysis on self-organization theories of MHD plasma
[NIFS-164] p 2070 N93-20159
SELF PROPAGATION
Combustion synthesis of ceramic and metal-matrix composites p 1854 N93-20203
SEMANTICS
Tomita's algorithm in practical applications
p 2031 N93-20227
Resolution in modal propositional logic
[REPT-91-59] p 2052 N93-20853
A canonical calculus of residuals
[INRIA-RR-1542] p 2052 N93-20861
On semantics: The case of knowledge graphs
[MEMO-1028] p 2091 N93-20955
Maximal Kripke-type semantics for modal and superintuitionistic predicate logics
[ML-92-02] p 2054 N93-21009
Modelling knowledge in electronic study books
[MEMO-1029] p 2091 N93-21032
An order-theoretic model for the algebra of communicating processes
[RUU-CS-92-02] p 2054 N93-21034
Efficient implementation of a functional language for the definition of practicable, denotational semantics
[ETN-93-93413] p 2055 N93-21176
STEP development methods: Specification of semantics for information sharing
[PB93-113686] p 2091 N93-21218
SEMICONDUCTING FILMS
Electrochemical deposition of thin film semiconductors in microgravity: A feasibility study p 1803 N93-21079
SEMICONDUCTOR DEVICES
Interface properties of wide bandgap semiconductor structures
[AD-A259416] p 2078 N93-20131
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
A semiconductor bridge ignited hot gas piston ejector
p 1864 N93-20137
Proceedings of the International Workshop on Quantum Effect Physics, Electronics, and Applications
[AD-A259457] p 2084 N93-20242
Growth, characterization and device development in monocrystalline diamond films
[AD-A259099] p 2079 N93-20407
IRCCD research p 1790 N93-20417
Review on upgrading efficiency of silicon solar battery cells p 1798 N93-20466
Development of high density hybrid IC
p 1798 N93-20469
Research on single event resistance evaluation technology: Single event resistance evaluation by SEM
p 1801 N93-20484
Research on single event phenomenon on semiconductor devices p 1801 N93-20485
Construction of evaluation test equipment for 16 bit space MPU p 1801 N93-20486
SEMICONDUCTOR DIODES
Development of high speed rectifier diodes
p 1798 N93-20463
Microstructured diode lasers and pumped solid state lasers
[MBB-Z-0369-91-PUB] p 1910 N93-20804
SEMICONDUCTOR JUNCTIONS
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
SEMICONDUCTOR LASERS
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
Laser diode ordnance design p 1864 N93-20140
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142
Proposed system safety design and test requirements for the microlaser ordnance system
p 1864 N93-20144
Laser diode ignition characteristics of Zirconium Potassium Perchlorate (ZPP) p 1865 N93-20145
Advances in laser diodes for pyrotechnic applications
p 1865 N93-20146
Laser diode initiated detonators for space applications
p 1865 N93-20147
Transverse effects in a model of semiconductor laser arrays p 1909 N93-20284
The semiconductor laser applied to fibre optic sensors
p 1910 N93-20286
Injection seeded, diode pumped regenerative ring Nd:YAG amplifier for spaceborne laser ranging technology development
[NASA-CR-192171] p 1910 N93-20298
Space transfer with ground-based laser/electric propulsion
[NASA-TM-106060] p 1829 N93-20615
Microstructured diode lasers and pumped solid state lasers
[MBB-Z-0369-91-PUB] p 1910 N93-20804
Modulation behavior of semiconductor lasers with optical feedback
[ETN-93-92567] p 1911 N93-20881
Video guidance sensor p 1812 N93-21409
Optoelectronics research in the former Soviet Union
[PB93-111516] p 2069 N93-21804
SEMICONDUCTORS (MATERIALS)
Controlled nucleation and growth of semiconducting diamond
[AD-A258541] p 2078 N93-20056
Interface properties of wide bandgap semiconductor structures
[AD-A259416] p 2078 N93-20131
A coupled multi-ALU processing node for a highly parallel computer
[AD-A259455] p 2043 N93-20240
Structure and reliability metal contacts to GaAs
[AD-A259184] p 1889 N93-20272
Cluster formation and evolution on semiconductor surface
[AD-A259190] p 2078 N93-20274
Competitive pairing and the chemistry of coadsorbed hydrogen and halogens on Ge(100)
[AD-A258538] p 1846 N93-20386
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A259177] p 2079 N93-20561
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon
[DE93-003104] p 2080 N93-21240
Growth and characterization of binary and pseudo-binary 3-5 compounds exhibiting non-linear optical behavior. Undergraduate research opportunities in microgravity science and technology
[NASA-CR-192143] p 2068 N93-21363
SENSORIMOTOR PERFORMANCE
Neural networks for real-time sensory data processing and sensorimotor control
[AD-A259120] p 2046 N93-20557
Aimed arm movements under changed gravity
p 1809 N93-21113
SENSORS
Method and apparatus for determination of material residual stress
[NASA-CASE-GSC-13451-1] p 1921 N93-20118
The semiconductor laser applied to fibre optic sensors
p 1910 N93-20286
Smart Integrated Microsensor System (SIMS)
[AD-A259430] p 1907 N93-21247
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652
Optical fiber fluorosensor
[NASA-CASE-LAR-14525-1-CU] p 2069 N93-22008
SEPARATED FLOW
The structures and the sensitivity of an incompressible turbulent boundary layer in the vicinity of the separation
[ETN-93-92557] p 1902 N93-20892
Experimental investigations on wing-body combinations and their components at high angles of attack in the subsonic and transonic speed range
[DLR-FB-91-43] p 1783 N93-21762
Unsteady Navier-Stokes method for accelerated moving airfoils with separation
[DLR-FB-92-03] p 1763 N93-21763
SEPARATION
Acoustophoresis separation method
[NASA-CASE-LAR-13388-2] p 1846 N93-20570
SEPARATORS
NASA pyrotechnically actuated systems program
p 1863 N93-20133
Electrical characterization of the Magellan batteries after storage p 1984 N93-20506
SEQUENCING
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265
SERVICE LIFE
Service loading of work attachments of hydraulic excavators p 1924 N93-20351
Research on equipment life extension technology
p 1793 N93-20436
NASA Center update: Goddard Space Flight Center
p 1983 N93-20491
Nickel hydrogen capacity loss p 1983 N93-20498
Capacity fade in nickel cadmium and nickel hydrogen cells p 1984 N93-20499
NiH2 capacity fade during early cycling
p 1984 N93-20500
Characteristics of storage related capacity loss in Ni/H2 cells
[STD/92-118] p 1984 N93-20501
Nickel hydrogen battery cell storage matrix test
p 1984 N93-20502
Capacity recovery after storage negatively precharged nickel hydrogen cells p 1984 N93-20503
Charge retention test experiences on Hubble Space Telescope nickel-hydrogen battery cells
p 1984 N93-20504
Cycle life status of SAFT VOS nickel-cadmium cells
p 1985 N93-20511
The significance of service load data for fatigue life analysis p 1947 N93-21319
SERVOMECHANISMS
A contribution to the adaptive control of servo-drives with direct current motor
[ETN-93-92562] p 2047 N93-20876
ROMPS critical design review data package
[NASA-CR-191612] p 2041 N93-21472
SERVOMOTORS
A contribution to the adaptive control of servo-drives with direct current motor
[ETN-93-92562] p 2047 N93-20876
SET THEORY
Plane multiflows with a fixed number of demands
[RR-885-M] p 2034 N93-20788
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 1
[RR-874-M] p 2053 N93-20873
General antifactors of graphs
[RR-868-M] p 2054 N93-20946
A generalized cut condition for multiflows in matroids
[RR-869-M] p 2054 N93-20947
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 2
[RR-875-M] p 2056 N93-21395
SHAFTS (MACHINE ELEMENTS)
Method and apparatus for preloading a joint by remotely operable means
[NASA-CASE-MSC-21940-1] p 1914 N93-20120
Testing rig for low cycle fatigue tests in combined bending and torsion p 1923 N93-20345
Probabilistic aspects of growth of the fatigue cracks in the railroad axles p 1924 N93-20348
Robot friendly probe and socket assembly
[NASA-CASE-MSC-22028-1] p 1917 N93-22007
SHAPE FUNCTIONS
Boundary element shape function for bimaterial interface cracks p 1939 N93-20701
SHAPE MEMORY ALLOYS
Method and apparatus for preloading a joint by remotely operable means
[NASA-CASE-MSC-21940-1] p 1914 N93-20120
Analysis of hysteresis in shape memory alloys during thermal cyclic loading p 1858 N93-20694
Deformation of TiNi shape memory alloy under thermomechanical cycles p 1858 N93-20695

SHAPED CHARGES
Precision linear shaped charge severance of graphite-epoxy materials
[SAND-92-0610C] p 1865 N93-20151
SHAPES
Further developments in shape optimization of stress concentration regions. Part 1: General theory
p 1927 N93-20630
Further developments in shape optimization of stress concentration regions. Part 2: Applications
p 1928 N93-20631
Structural shape optimization of robotic links
p 1918 N93-20717
Towards autonomous motion vision
[AD-A259339] p 2068 N93-21263
The generalized Voronoi diagram for a set of polygons: Algorithms, operation and applications to shape analysis
[ETN-93-92689] p 2056 N93-21392
SHEAR FLOW
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence
[NASA-CR-189640] p 1899 N93-20253
Ordering of aggregating particle suspensions undergoing simple shear p 1805 N93-21092
SHEAR LAYERS
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
SHEAR PROPERTIES
Dissipation in adiabatic shear bands
[DE93-002280] p 1856 N93-20025
A recent boundary integral procedure on determining shear centers, warping constant and other cross sectional properties of a turbine blade p 1918 N93-20703
Relationships between layer linkage and mechanical properties of 3D woven textile structures
p 1836 N93-21144
SHEAR STRESS
Dissipation in adiabatic shear bands
[DE93-002280] p 1856 N93-20025
Multiaxial fatigue life prediction using a shear stress based critical plane failure criterion
p 1921 N93-20332
Application of silicone fluid rheogoniometer measurements to despin moment studies in a spinning and coning cylinder
[AD-A259270] p 1901 N93-20599
Traction and shearing dynamics of a three dimensional carbon/carbon composite
[REPT-921-430-109] p 1833 N93-20931
Buckling of restrained columns with shear deformation and axial shortening
[PB93-110476] p 1946 N93-21233
The behavior of intermetallic compounds at large plastic strains
[DE93-003820] p 1857 N93-21772
SHELLS (STRUCTURAL FORMS)
Description of wrinkles in membranes using nonlinear finite plate elements
[ETN-93-92565] p 1945 N93-20879
Nonlinear probabilistic finite element models of laminated composite shells
[NASA-CR-191069] p 1833 N93-20919
SHIFT REGISTERS
Precision digital phase lock loop circuit
[AD-D015594] p 1891 N93-20785
SHIP HULLS
A comparative study of ship hull structures fatigue assessment methods p 1949 N93-21332
SHIPS
A local approach for fatigue strength evaluation on ship structures p 1948 N93-21327
Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957
SHOCK FRONTS
Theoretical studies in interstellar cloud chemistry
[NASA-CR-192010] p 2096 N93-20269
SHOCK LOADS
Shock-dependent, optimum thrust wings in supersonic flow p 1760 N93-20169
SHOCK WAVE INTERACTION
Experimental investigations on converging second-sound shock waves in He 2
[MPIS-103/1991] p 2060 N93-20885
SHOCK WAVE PROPAGATION
Quantum dynamics of shock waves in molecular crystals
[AD-A258749] p 2079 N93-20404
Relativistic shock waves and the excitation of plerions
[DE93-003469] p 2066 N93-21729
SHOCK WAVES
Portable fiber optic coupled Doppler interferometer system for detonation and shock wave diagnostics
[SAND-92-1359C] p 1865 N93-20148
Quantum dynamics of shock waves in molecular crystals
[AD-A258749] p 2079 N93-20404
Experiments on the impingement of an underexpanded jet on a flat plate p 1937 N93-20685
Experimental investigations on converging second-sound shock waves in He 2
[MPIS-103/1991] p 2060 N93-20885
SHORT CIRCUITS
The ignition diffusion concerning contacted and non contacted n(+) emitter interrruptions
[ETN-93-92564] p 1891 N93-20878
SHROUDED PROPELLERS
Isoparametric finite element approach to particle trajectory: Applied as an analysis tool to CRISP aerodynamics
[DLR-FB-91-40] p 1763 N93-21760
SHUTTLE DERIVED VEHICLES
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
SHUTTLE IMAGING RADAR
Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445
SIDEBANDS
Method and apparatus for passive direction finding with sideband determination
[AD-D015546] p 1882 N93-20306
SIDELOBES
Real time data reformatting using the TMS320C25 development system
[AD-A259187] p 1882 N93-20273
SIGNAL ANALYSIS
Signal approximation with a wavelet neural network
[AD-A259081] p 1890 N93-20556
Discrete orthogonal wavelets
[REPT-91-45] p 2052 N93-20862
Variance-covariance estimation and statistical testing of satellite networks
[PB92-225358] p 1824 N93-21048
Detection of incipient defects in cables by partial discharge signal analysis
[PB92-222744] p 1919 N93-21199
SIGNAL ANALYZERS
Dual difference filtering: A replacement for interpolation and subtraction to detect changes in misregistered signals
[AD-A259440] p 1880 N93-20013
RASSP final technical report
[AD-A258562] p 1882 N93-20371
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937
SIGNAL DETECTION
Signal approximation with a wavelet neural network
[AD-A259081] p 1890 N93-20556
Evaluation and detection of a signal containing an autoregressive noise
[ETN-93-92684] p 1885 N93-21061
Joint parameters estimation and symbols detection for digital communication over linear or nonlinear unknown channels
[TELECOM-PARIS-91-D-013] p 1885 N93-21394
Explosives detection by pure N-14 NQR
p 1770 N93-21897
SIGNAL DETECTORS
Contribution to the development of an ISFET type integrated sensor using an ASIC thread in CMOS technology
[ECL-91-09] p 1892 N93-21006
SIGNAL FADING
Research in LMSS propagation
[NASA-CR-191915] p 1885 N93-21400
SIGNAL GENERATORS
Remotely controlled C band signal generator
[AD-D015602] p 1880 N93-20014
SIGNAL PROCESSING
Incipient failure detection using wavelets
[AD-A259423] p 1913 N93-20004
Dual difference filtering: A replacement for interpolation and subtraction to detect changes in misregistered signals
[AD-A259440] p 1880 N93-20013
Multi-stage decoding for multi-level block modulation codes
[NASA-CR-192363] p 1880 N93-20043
Mountain top measurements of beta(9.2 microns)
p 2009 N93-20099
A joint source/channel coder design
p 1881 N93-20177
Signal phase pattern sensitive neural network system and method
[AD-D015571] p 2046 N93-20308
RASSP final technical report
[AD-A258562] p 1882 N93-20371
Observation of ionospheric modification using high power oblique HF transmissions
[AD-A258706] p 1998 N93-20378
Uninterrupted, enhanced-rate, event-time recorder with mixed-speed counter modules
[AD-D015578] p 1906 N93-20769
Discrete orthogonal wavelets
[REPT-91-45] p 2052 N93-20862
Direct and inverse unitary eigenproblems in signal processing: An overview
[AD-A259348] p 2055 N93-21242
Improved use of passive microwave data for sea ice detection p 1957 N93-21597
An airborne millimeter-wave FM-CW radar for thickness profiling of freshwater ice
[AD-A259368] p 1886 N93-21669
Tracking radar advanced signal processing and computing for Kwajalein Atoll (KA) application
[AD-A259066] p 1886 N93-21756
An approach to improving TNA EDS
p 1765 N93-21864
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937
Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957
SIGNAL REFLECTION
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788
SIGNAL TO NOISE RATIOS
Evaluation and detection of a signal containing an autoregressive noise
[ETN-93-92684] p 1885 N93-21061
An airborne millimeter-wave FM-CW radar for thickness profiling of freshwater ice
[AD-A259368] p 1886 N93-21669
SIGNAL TRANSMISSION
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788
SIGNATURE ANALYSIS
High range resolution radar target identification using the Prony model and hidden Markov models
[AD-A259210] p 1883 N93-20553
Vibration monitoring with artificial neural networks
[DE93-003543] p 1952 N93-21992
Vibration monitoring of EDF rotating machinery using artificial neural networks
[DE93-003557] p 1952 N93-21993
SIGNATURES
Contamination signatures observed during the CIRRIS-1A mission
[AD-A258596] p 1820 N93-19982
Wright Laboratory research and development facilities handbook
[AD-A258746] p 2085 N93-20403
Principles of nuclear-based explosive detection systems p 1765 N93-21861
The GALLEX solar neutrino experiment
[DE93-003357] p 2102 N93-21962
SIGNS AND SYMPTOMS
Rapid susceptibility testing of mycobacterium avium complex and mycobacterium tuberculosis isolated from AIDS patients
[NASA-CR-192382] p 2023 N93-20736
SIKORSKY AIRCRAFT
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Sikorsky Aircraft: Advances toward interacting with the airframe design process p 1782 N93-21315
SILANES
Effect of the reinforcement finish in the mechanical performances of epoxy-glass composites
p 1836 N93-21146
SILICIDES
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114
Applications of Visil fibres in functional textiles
p 1837 N93-21154
SILICON
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
On the modelling of the dissolution and liquid phase epitaxial growth processes in a horizontal sandwich system p 1803 N93-21080
Defect characterization by means of positron annihilation p 1804 N93-21081

Construction of a channeling radiation source and production of intensive channeling radiation at the Darmstadt (Germany) superconductive electron accelerator
[ETN-93-93410] p 2066 N93-21206
Fast neutron-induced changes in net impurity concentration of high-resistivity silicon
[DE93-003104] p 2080 N93-21240
Bias-annealing experiments for doped a-Si:H layers
[MBB-Z-0316-90-PUB] p 2081 N93-21464
Semiempirical studies of atomic structure
[DE93-005117] p 2063 N93-21707
Design and characterization of the BVX: An 8-channel CMOS preamplifier-shaper for silicon strips
[DE93-003619] p 1894 N93-21733

SILICON CARBIDES
Microstructural development in a spray formed aluminum-silicon carbide based metal matrix composite
[AD-A259414] p 1832 N93-20124
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A259177] p 2079 N93-20561
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A259247] p 2080 N93-20581
Dynamic stress-strain behavior in shear of SiCwhisker reinforced aluminum alloy composites
p 1930 N93-20643
Experimental and theoretical study of the elastic and microplastic properties of particles reinforced metal matrix composites
[ISAL-92-0014] p 1833 N93-20942
Microgravity processing of ceramic composites
p 1809 N93-21115
Syntheses, structures and properties of polycarbosilanes formed directly by polymerization of Alkenylsilanes
[NASA-CR-191927] p 1860 N93-21189
Advanced lightweight ceramic candle filter module
[DE93-000211] p 1860 N93-21252
Advanced ceramic component development for high temperature indirect gas-fired heating systems
[PB93-127033] p 1862 N93-21817

SILICON NITRIDES
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738

SILICON OXIDES
Atomic oxygen resistant SiOx coated Kapton for Space Station Freedom, and alternate coatings
p 1849 N93-20821

SILICONE RESINS
Silicone softeners: Today p 1838 N93-21159

SILICONES
Application of silicone fluid rheogoniometer measurements to despin moment studies in a spinning and coning cylinder
[AD-A259270] p 1901 N93-20599

SILVER
Development of elements of a high T(sub c) superconducting cable
[AD-A259415] p 1888 N93-20130

SILVER ALLOYS
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738

SIMULATION
A simulation study of the effects of communication delay on air traffic control
[AD-A258593] p 1778 N93-19966
Application of surrogate materials in process study of actinides
[DE93-002257] p 1856 N93-20024
Particle simulation of auroral double layers
[AD-A258577] p 1996 N93-20032
CASE/simulation systems p 2088 N93-20165
Studies of premixed laminar and turbulent flames at microgravity p 1853 N93-20196
An estimating function for a scalar parameter in a covariance operator
[RR-878-M] p 2054 N93-21050
Agglomeration of fractals in simulated reduced gravity
p 1806 N93-21093
Simulation of the merged spectrum technique for aligning planar phased-array antennas, part 1
[PB93-113629] p 1885 N93-21237
A model study of the aircraft cabin environment resulting from in-flight fires
[DOT/FAA/CT-90/22] p 1764 N93-21557
Retrieval of cloud liquid water and precipitation from polarized microwave simulations and SSM/I measurements p 1960 N93-21613
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734
Validation of simulated explosives for testing TNA explosives detection systems p 1769 N93-21891

SINGLE CRYSTALS
Fatigue in single crystal nickel superalloys
[AD-A259191] p 1856 N93-20275
Growth, characterization and device development in monocrystalline diamond films
[AD-A259099] p 2079 N93-20407
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A259177] p 2079 N93-20561
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A259247] p 2080 N93-20581
Laser scribing system for amorphous silicon solar cells
[AD-A259287] p 1910 N93-20608
The roles of slip geometry and hardening behavior in intergranular toughness
[DE93-005647] p 2081 N93-21712
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738
Growth and defects of explosives crystals
[DE93-003866] p 2082 N93-21780

SINGLE EVENT UPSETS
Research on single event resistance evaluation technology: Single event resistance evaluation by SEM
p 1801 N93-20484
Research on single event phenomenon on semiconductor devices p 1801 N93-20485

SINGULARITY (MATHEMATICS)
Performances of finite element solution for crack problem p 1936 N93-20682
Non standard analysis and ordinary differential equations
[RR-884-M] p 2051 N93-20787
Singular points at infinity of quadratic systems of differential equations
[REPT-91-58] p 2052 N93-20852

SINKS
Ozone as a sink for atmospheric carbon aerosols
[PB93-118594] p 1993 N93-21790

SINTERING
Finite element analytical techniques for ceramic production in microgravity-2 p 1809 N93-21116
Properties of aligned YBa2Cu3O(7-delta) superconductor as a function of oxygen deficiency delta
[DE93-001707] p 2082 N93-21750

SIS (SUPERCONDUCTORS)
Research on space superconducting element technology p 1794 N93-20441

SISO (CONTROL SYSTEMS)
Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210

SITES
CSTG subcommission on Space Geodetic Measurement Sites (SGMS) p 1970 N93-20969

SIZE DETERMINATION
Drop sizing with thermal anemometry: A review
[DLR-MITT-91-18] p 1906 N93-21039

SIZE DISTRIBUTION
Drop sizing with thermal anemometry: A review
[DLR-MITT-91-18] p 1906 N93-21039

SKIN FRICTION
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268

SKIN TEMPERATURE (NON-BIOLOGICAL)
Modelling the skin-bulk temperature difference near the sea-atmosphere interface for remote sensing applications p 1963 N93-21631
A comprehensive comparison between skin and multi-channel sea surface temperatures as derived from AVHRR p 1963 N93-21632
Intercomparison of satellite-derived sea surface temperatures p 1964 N93-21636

SKY SURVEYS (ASTRONOMY)
A study of the large-scale infrared emission from a selected dark cloud
[NASA-CR-192263] p 1998 N93-20755
The Einstein All-Sky Slew Survey
[NASA-CR-192323] p 2095 N93-20793
Identifications of Einstein Slew Survey sources
p 2095 N93-20794
Einstein Slew Survey: Data analysis innovations
p 2095 N93-20795
Thirteen new BL Lacertae objects discovered by an efficient x ray/radio/optical technique
p 2095 N93-20796

SLIP CASTING
Improved ceramic slip casting technique --- application to aircraft model fabrication
[NASA-CASE-LAR-14471-1] p 1858 N93-20041
Finite element analytical techniques for ceramic production in microgravity-2 p 1809 N93-21116
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies
[DE93-002906] p 1919 N93-21956

SLURRIES
Ignition and combustion characteristics of metallized propellants
[NASA-CR-192231] p 1866 N93-20231

SMART STRUCTURES
MIT Space Engineering Research Center testbed programs
[NASA-CR-192115] p 2103 N93-21660

SMOKE
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255
Ozone as a sink for atmospheric carbon aerosols
[PB93-118594] p 1993 N93-21790

SNOW
Intelligent and localized weather prediction
[PB93-117992] p 2015 N93-21787

SOCIAL FACTORS
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses
[NASA-NP-136] p 2086 N93-21128
Small business profiles, 1992
[PB93-110914] p 2086 N93-21548

SODIUM CHLORIDES
Fatigue crack propagation of titanium alloys in salt water
[GKSS-91/E/46] p 1856 N93-21551

SODIUM SULFATES
Advanced turbine design for coal-fueled engines
[DE93-000224] p 1915 N93-21254

SODIUM SULFUR BATTERIES
The 1992 NASA Aerospace Battery Workshop
[NASA-CP-3192] p 1983 N93-20490
Lewis Research Center battery overview
p 1983 N93-20493
Eagle-Picher Industries Sodium Sulfur Program
p 1987 N93-20523

SOFTENING
Silicone softeners: Today p 1838 N93-21159

SOFTWARE ENGINEERING
Ada implementation of an object data repository
[AD-A259144] p 2087 N93-20002
A unified model of program behavior
[AD-A259142] p 2030 N93-20128
CASE/simulation systems p 2088 N93-20165
A parsing algorithm for non-deterministic context-sensitive languages p 2031 N93-20223
Software quality measurement: A framework for counting problems and defects
[AD-A258556] p 2032 N93-20387
Development of semantic metamodels for object orientation
[REPT-91-83] p 2038 N93-21037
A relocatable compiler for mathematical expressions
[REPT-92-035] p 2028 N93-21183
Software quality assurance: Documentation and reviews
[PB93-113694] p 2040 N93-21221
Software design document for the generic avionics data bus tool kit
[AD-A259329] p 1784 N93-21259
A phase one AR/C system design
p 1816 N93-21435
High integrity software standards and guidelines
[PB93-114619] p 2042 N93-21687
Integrated FASTBUS, VME and CAMAC diagnostic software at Fermilab
[DE93-004424] p 2042 N93-21845

SOFTWARE RELIABILITY
Computer aided reliability, availability, and safety modeling for fault-tolerant computer systems with commentary on the HARP program
[NASA-CR-192405] p 2029 N93-19981
Software quality measurement: A framework for counting problems and defects
[AD-A258556] p 2032 N93-20387
Multiversion software reliability through fault-avoidance and fault-tolerance
[NASA-CR-192191] p 2041 N93-21647
Domain engineering validation case study: Synthesis for the air traffic display/collision warning monitor domain version 01.00.03
[AD-A259407] p 1780 N93-21671

SOFTWARE REUSE
Design recovery for software library population
[AD-A259292] p 2090 N93-20611
Domain engineering validation case study: Synthesis for the air traffic display/collision warning monitor domain version 01.00.03
[AD-A259407] p 1780 N93-21671
SOFTWARE TOOLS
A new software tool for computing Earth's atmospheric transmission of near- and far-infrared radiation
[NASA-TM-103957] p 1996 N93-20066
Version and transaction management in OSMagic: An object-oriented database implementation of the Magic VLSI layout design tool
[AD-A259138] p 2033 N93-20574
Object-oriented design. MECANO: A method and an environment for object-oriented applications construction
[ETN-93-92682] p 2038 N93-20921
Verification methods of the behavioral specifications: Study and implementation
[ETN-93-92687] p 2044 N93-21064
A relocatable compiler for mathematical expressions
[REPT-92-035] p 2028 N93-21183
SOIL MAPPING
Multifrequency backscatter modelling of bare soil: Attema, Kats, and Krul model applied in Agriscatt 1987 data
[BCRS-91-43] p 1884 N93-20739
SOIL MECHANICS
Cyclic behavior modelling
[ECL-92-09] p 1920 N93-20060
SOIL MOISTURE
Botswana water and surface energy balance research program. Part 1: Integrated approach and field campaign results
[NASA-TM-108607] p 2018 N93-20891
SOILS
Delineate subsurface structures with ground penetrating radar
[DE93-000474] p 1886 N93-21664
SOL-GEL PROCESSES
Thin film processing of photorefractive BaTiO3
[NASA-CR-192169] p 2079 N93-20311
Microgravity processing of ceramic composites
p 1809 N93-21115
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
SOLAR ACTIVITY
Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359
Microwave spectroscopy of the active sun
[NASA-CR-192135] p 2100 N93-20571
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469
Model profiles of atmospheric temperatures, pressures and densities in south-eastern Europe during maximum and mimimum solar activity p 1961 N93-21615
Empirical model of winds in south-eastern Europe in connection with solar activity p 1961 N93-21619
SOLAR ARRAYS
Video guidance sensor p 1812 N93-21409
SOLAR CELLS
Review on upgrading efficiency of silicon solar battery cells p 1798 N93-20466
Solar cell calibration by balloon flight
p 1800 N93-20479
Radiation resistance evaluation test on parts and materials: Solar battery cell p 1800 N93-20482
Outline of SCM data processing system onboard ETS-5 p 1802 N93-20489
Laser scribing system for amorphous silicon solar cells
[AD-A259287] p 1910 N93-20608
Low-temperature emitter-passivation for silicon solar cells
[DE93-002483] p 1987 N93-21487
SOLAR CORONA
Microwave spectroscopy of the active sun
[NASA-CR-192135] p 2100 N93-20571
Theory of coronal streamer formation
[DE93-003736] p 2102 N93-21967
SOLAR CYCLES
Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292
SOLAR ECLIPSES
Interpretation of Voyager UVS observations of occultations by the atmosphere of Neptune
[NASA-CR-192131] p 2099 N93-20732
National Center for Atmospheric Research, Fiscal Year 1991
[PB93-129914] p 2000 N93-21547
SOLAR ENERGY
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
SOLAR FLARES
X ray spectra from Hinotori satellite and suprathermal electrons
[NIFS-197] p 2100 N93-20266
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
Solar-geophysical data number 576, August 1992. Part 2: (Comprehensive reports). Data for February 1992 and miscellaneous
[PB93-112548] p 2100 N93-21213
Solar-geophysical data number 574, June 1992. Part 2: (Comprehensive reports). Data for December 1991 and miscellaneous
[PB92-218767] p 2101 N93-21346
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 577, September 1992. Part 2: Comprehensive reports, data for March 1992 and miscellaneous
[PB93-116952] p 2101 N93-21386
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697
Solar radio flares 1989-1991. Solar microwave flares observed at Metsaehovi Radio Research Station in 1989-1991
[PB93-111896] p 2101 N93-21786
Theory of coronal streamer formation
[DE93-003736] p 2102 N93-21967
SOLAR FLUX
Flux concentrations on solar dynamic components due to mispointing
[NASA-TM-105756] p 1982 N93-20261
Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292
SOLAR FLUX DENSITY
Marine productivity along the northwest coast of Africa (Mauritania): Estimation from satellite data
p 1955 N93-21578
SOLAR MAGNETIC FIELD
Sunspot dynamics
[NASA-CR-192284] p 2100 N93-20754
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469
SOLAR NEUTRINOS
The GALLEX solar neutrino experiment
[DE93-003357] p 2102 N93-21962
SOLAR NEUTRONS
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
SOLAR OSCILLATIONS
The detection and characterization of high frequency and high-wavenumber solar oscillations
p 2100 N93-20291
Solar radio flares 1989-1991. Solar microwave flares observed at Metsaehovi Radio Research Station in 1989-1991
[PB93-111896] p 2101 N93-21786
SOLAR PHYSICS
The detection and characterization of high frequency and high-wavenumber solar oscillations
p 2100 N93-20291
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
Solar-geophysical data number 576, August 1992. Part 2: (Comprehensive reports). Data for February 1992 and miscellaneous
[PB93-112548] p 2100 N93-21213
Solar-geophysical data number 574, June 1992. Part 2: (Comprehensive reports). Data for December 1991 and miscellaneous
[PB92-218767] p 2101 N93-21346
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 577, September 1992. Part 2: Comprehensive reports, data for March 1992 and miscellaneous
[PB93-116952] p 2101 N93-21386
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470
Development of visual programming techniques to integrate theoretical modeling into the scientific planning and instrument operations environment of ISTP
[NASA-CR-192707] p 2042 N93-22004
SOLAR PROMINENCES
Solar-geophysical data number 576, August 1992. Part 2: (Comprehensive reports). Data for February 1992 and miscellaneous
[PB93-112548] p 2100 N93-21213
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Solar-geophysical data number 577, September 1992. Part 2: Comprehensive reports, data for March 1992 and miscellaneous
[PB93-116952] p 2101 N93-21386
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470
SOLAR PROTONS
Solar-geophysical data number 577, September 1992. Part 2: Comprehensive reports, data for March 1992 and miscellaneous
[PB93-116952] p 2101 N93-21386
SOLAR RADIATION
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984
Calibration of field reference panel and radiometers used in FIFE 1989
[NASA-CR-192198] p 2100 N93-20045
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292

Solar-geophysical data number 577, September 1992. Part 2: Comprehensive reports, data for March 1992 and miscellaneous
[PB93-116952] p 2101 N93-21386

SOLAR RADIO BURSTS
Solar-geophysical data number 576, August 1992. Part 2: (Comprehensive reports). Data for February 1992 and miscellaneous
[PB93-112548] p 2100 N93-21213
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Solar-geophysical data number 577, September 1992. Part 2: Comprehensive reports, data for March 1992 and miscellaneous
[PB93-116952] p 2101 N93-21386
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470

SOLAR RADIO EMISSION
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469

SOLAR SPECTRA
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984
Microwave spectroscopy of the active sun
[NASA-CR-192135] p 2100 N93-20571

SOLAR SYSTEM EVOLUTION
Lunar and asteroid composition assessment using remote secondary ion mass spectrometry
[DE93-003839] p 2098 N93-21849

SOLAR TERRESTRIAL INTERACTIONS
Survey of space environment services center users and services
[AD-A258672] p 2089 N93-20366
Solar-geophysical data number 576, August 1992. Part 1: (Prompt reports). Data for July, June 1992 and late data
[PB93-112530] p 2100 N93-21212
International Space Year in China
p 1975 N93-21272
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292
Solar-geophysical data number 574, June 1992. Part 2: (Comprehensive reports). Data for December 1991 and miscellaneous
[PB92-218767] p 2101 N93-21346
Development of visual programming techniques to integrate theoretical modeling into the scientific planning and instrument operations environment of ISTP
[NASA-CR-192707] p 2042 N93-22004

SOLAR THERMAL ELECTRIC POWER PLANTS
Conversion efficiency in solar thermal systems
p 1982 N93-20301

SOLAR WIND
Force balance near an X line along which E (dot) is less than 0
[NASA-CR-192341] p 2071 N93-20362
Formation of auroral arcs via magnetosphere-ionosphere coupling
[AD-A258641] p 1998 N93-20363
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782

SOLAR X-RAYS
Solar-geophysical data number 576, August 1992. Part 2: (Comprehensive reports). Data for February 1992 and miscellaneous
[PB93-112548] p 2100 N93-21213
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Solar-geophysical data number 577, September 1992. Part 2: Comprehensive reports, data for March 1992 and miscellaneous
[PB93-116952] p 2101 N93-21386
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470

SOLDERED JOINTS
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738

SOLDERING
Establishment of high density installation technology
p 1800 N93-20478

SOLDERS
Establishment of high density installation technology
p 1800 N93-20478

SOLENOIDS
Electromagnetic finite element analysis of a solenoid
[DE93-004635] p 1894 N93-21724

SOLID LUBRICANTS
LEO resistant thermal control materials and dry lubricants for the mobile servicing system
p 1848 N93-20818
Non-Newtonian temperature and pressure effects of a powder lubricant slurry in a rotating hydrostatic step bearing
[AD-A259325] p 1916 N93-21832

SOLID PROPELLANT IGNITION
The First NASA Aerospace Pyrotechnic Systems Workshop
[NASA-CP-3169] p 1863 N93-20132
Introduction of laser initiation for the 48-inch Advanced Solid Rocket Motor (ASRM) test motors at Marshall Space Flight Center (MSFC) p 1830 N93-20141
Laser diode ignition activities at Sandia National Laboratories p 1864 N93-20142

SOLID PROPELLANT ROCKET ENGINES
Space Shuttle: Status of advanced solid rocket motor program. Report to the Chair, Subcommittee on Government Activities and Transportation, Committee on Government Operations, House of Representatives
[GAO/NSIAD-93-26] p 1829 N93-20293
ASRM process development in aqueous cleaning
[NASA-CR-191949] p 1829 N93-21355

SOLID SOLUTIONS
New compounds obtained by LPCVD in the B-C-N chemical system
[REPT-921-430-111] p 1849 N93-20933

SOLID STATE
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598

SOLID STATE LASERS
Laser-based firing systems for prompt initiation of secondary explosives p 1864 N93-20143
Laser diode ignition characteristics of Zirconium Potassium Perchlorate (ZPP) p 1865 N93-20145
Laser diode initiated detonators for space applications
p 1865 N93-20147
Microstructured diode lasers and pumped solid state lasers
[MBB-Z-0369-91-PUB] p 1910 N93-20804

SOLID-SOLID INTERFACES
Nonhomogeneous interface stress analysis in composite media using a mixed finite element formulation
p 1929 N93-20640
Batman-cracks. Observations and numerical simulations p 1936 N93-20681
Boundary element shape function for bimaterial interface cracks p 1939 N93-20701
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738

SOLIDIFICATION
On the drag of model dendrite fragments at low Reynolds number
[NASA-TM-105916] p 1855 N93-19974
The production of high iron glasses by RST in microgravity p 1810 N93-21117
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres
[DE93-002999] p 2082 N93-21757
The application of quality criteria for the prediction of porosity in the design of casting processes
[DE93-001719] p 1857 N93-21773

SOLIDS
Calibration methods for explosives detectors
p 1773 N93-21911

SOLITARY WAVES
Non-topological solitons in astrophysics and cosmology p 2096 N93-20292
ESR spectra of photoinduced defects in MX chain solids
[DE93-003692] p 2083 N93-21997

SOLUBILITY
Thermodynamic modeling for organic solid precipitation
[DE93-000104] p 1851 N93-21767
Electrochemical characteristics of acid electrolytes for fuel cells
[PB93-124907] p 1988 N93-21826
Mechanisms of gas permeation through polymer membranes
[DE93-005960] p 1852 N93-21836

SOLUTES
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734

SOLVATION
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734

SOLVENT EXTRACTION
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049

SOLVENTS
Dual cure solventless coating process
[DE93-001351] p 1845 N93-20021
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770

SONAR
Pressure compensated transducer system with constrained diaphragm
[AD-D015580] p 1906 N93-20771

SOOT
Structure and soot properties of non-buoyant laminar round-jet diffusion flames p 1853 N93-20190
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions
p 1853 N93-20192
Selected microgravity combustion diagnostic techniques p 1853 N93-20194
Laser diagnostics for microgravity droplet studies
p 1853 N93-20195

SORET COEFFICIENT
Preparation results for a Marangoni-Benard experiment with Soret effect under microgravity conditions
p 1805 N93-21088

SOUND GENERATORS
Pressure compensated transducer system with constrained diaphragm
[AD-D015580] p 1906 N93-20771

SOUND TRANSDUCERS
Pressure compensated transducer system with constrained diaphragm
[AD-D015580] p 1906 N93-20771

SOUND WAVES
Stimulated Brillouin backscattering for nonlinear ionic sound waves in laser plasmas
[ETN-93-93415] p 2074 N93-21208
CONPLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649

SOUNDING ROCKETS
An investigation of the unexpected attitude dynamics experienced by the OEDIPUS-A tethered sounding rocket payload p 1830 N93-20724
Model profiles of atmospheric temperatures, pressures and densities in south-eastern Europe during maximum and mimimum solar activity p 1961 N93-21615

SOUTH KOREA
Korea space program p 1976 N93-21276

SOUTHERN HEMISPHERE
Observational and modeling studies of heat, moisture, precipitation, and global-scale circulation patterns
p 2007 N93-20092

SOUTHERN OSCILLATION
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics
[NASA-CR-192720] p 2014 N93-21492

SOVIET SPACECRAFT
Thirty years together: A chronology of U.S.-Soviet space cooperation
[NASA-CR-185707] p 2102 N93-19975

SOYUZ SPACECRAFT
Soviet automated rendezvous and docking system overview p 1818 N93-21444

SPACE ADAPTATION SYNDROME
Long duration human exposure to microgravity
p 1802 N93-21073

SPACE BASED RADAR
Space radar altimetry development from ocean monitoring to land topography p 1965 N93-21640

SPACE BASES
The future of the US Space Industrial Base
p 1789 N93-20044

SPACE COMMERCIALIZATION
Space station user development program: Future prospects p 1802 N93-21072
National Aeronautics and Space Administration: Statement of Chester Lee, Spacehab, Inc.
p 2093 N93-21677

SPACE COMMUNICATION
Communications system evolutionary scenarios for Martian SEI support
[NASA-CR-192206] p 1879 N93-19962
SPACE DEBRIS
Research on advanced spacecraft
p 1789 N93-20411
Satellite situation report, volume 32, no. 4
[NASA-TM-108203] p 1824 N93-20999
Automated technologies needed to prevent radioactive materials from reentering the atmosphere
p 1818 N93-21447
Hypervelocity impact tests and simulations of single Whipple bumper shield concepts at 10 km/s
[DE93-003999] p 1917 N93-21841
SPACE ENVIRONMENT SIMULATION
Recommended practices for in-space and ground laboratory. Atomic oxygen exposure and analysis
p 1848 N93-20814
Space station protective coating development
p 1848 N93-20816
LEO resistant thermal control materials and dry lubricants for the mobile servicing system
p 1848 N93-20818
Multipurpose protective coatings for spacecraft applications p 1849 N93-20822
Contribution to the study of composite material behavior in space environment
[REPT-921-430-112] p 1833 N93-20869
SPACE ERECTABLE STRUCTURES
Pre-integrated truss space station and method of assembly
[NASA-CASE-MSC-22015-1] p 1823 N93-20042
Robot-friendly connector --- space truss structures
[NASA-CASE-MSC-21864-1] p 1914 N93-20117
Research on large structure assembly technology: Research on deployable assembly structure
p 1795 N93-20444
Guideline requirements for serviceable spacecraft grasping/berthing/docking interfaces based on simulations and flight experience p 1816 N93-21429
SPACE EXPLORATION
Communications system evolutionary scenarios for Martian SEI support
[NASA-CR-192206] p 1879 N93-19962
Research on lunar and planet development and utilization p 1789 N93-20412
Lecture materials for the CTOS/MCS introductory course
[NASA-CR-192734] p 2048 N93-21308
SPACE FLIGHT
The 1992 Research/Technology report
[NASA-TM-105924] p 1759 N93-20902
Problem solving for long term, global scenarios of space traffic
[ILR-MITT-265(1991)] p 1821 N93-20906
Summaries of the 1991 publications of DLR research reports and DLR communications
[ETN-93-92588] p 2103 N93-21022
SPACE INDUSTRIALIZATION
The future of the US Space Industrial Base
p 1789 N93-20044
SPACE INFRARED TELESCOPE FACILITY
National Aeronautics and Space Administration: Statement of the Space Science Working Group
p 2094 N93-21682
SPACE LABORATORIES
Development of the Aquatic Research Facility
p 1807 N93-21100
CSAR-1: The first Canadian microgravity sounding rocket flight p 1807 N93-21103
SPACE MANUFACTURING
Research on space component and material manufacturing experiments utilizing microgravity environment p 1791 N93-20422
Report on microgravity experiment by TR-1A rocket
[NASDA-EG-920021] p 1875 N93-21950
SPACE MISSIONS
Thirty years together: A chronology of U.S.-Soviet space cooperation
[NASA-CR-185707] p 2102 N93-19975
NASA issues
[GAO/OCG-93-27TR] p 2085 N93-20904
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
SPACE NAVIGATION
Research on combined HOPE navigation technology
p 1792 N93-20428
Research on highly functional guidance and control technology p 1795 N93-20445
Research on GPS utilization in space
p 1780 N93-20453
Current and planned use of the Navstar Global Positioning System by NASA
[NASA-TM-108190] p 1779 N93-21190
Applicability of relative GPS to automated rendezvous between the space shuttle and Space Station
p 1780 N93-21413
Demonstration of automated proximity and docking technologies p 1814 N93-21423
Results of prototype software development for automation of shuttle proximity operations
p 1815 N93-21425
Autonomous docking ground demonstration
p 1816 N93-21430
An overview of autonomous rendezvous and docking system technology development p 1816 N93-21431
SPACE PLASMAS
The mid-latitude trough. A review
[AD-A258606] p 1995 N93-19985
Particle simulation of auroral double layers
[AD-A258577] p 1996 N93-20032
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760
Magnetospheric space plasma investigations
[NASA-CR-192620] p 2074 N93-20914
Solar-geophysical data number 576, August 1992. Part 2: (Comprehensive reports). Data for February 1992 and miscellaneous
[PB93-112548] p 2100 N93-21213
Solar-geophysical data number 574, June 1992. Part 2: (Comprehensive reports). Data for December 1991 and miscellaneous
[PB92-218767] p 2101 N93-21346
Solar-geophysical data number 573, May 1992. Part 2: Comprehensive reports, data for November 1991 and miscellaneous
[PB92-213479] p 2101 N93-21376
Ion trapping in dusty plasmas
[MPE-PREPRINT-219] p 2075 N93-21405
Solar-geophysical data number 575, July 1992. Part 2: (Comprehensive reports). Data for January 1992 and miscellaneous
[PB92-236009] p 2101 N93-21470
The Crab nebula's wisps as shocked pulsar wind
[DE93-003466] p 2097 N93-21673
Weibel instabilities in relativistic electron-positron plasmas
[DE93-003468] p 2077 N93-21990
SPACE PLATFORMS
Research on rendezvous and docking technology
p 1794 N93-20438
Principles and application tendency of remote sensing: Its principle, function, and utilization
p 1978 N93-21540
SPACE POWER REACTORS
Automated technologies needed to prevent radioactive materials from reentering the atmosphere
p 1818 N93-21447
SPACE PROCESSING
Spacebound 1991
[CTN-93-60604] p 1802 N93-21070
Float zone processing of germanium crystals on the KC-135 microgravity aircraft p 1803 N93-21077
Recent results and new hardware developments for protein crystal growth in microactivity
[NASA-CR-191994] p 1875 N93-21356
ROMPS critical design review data package
[NASA-CR-191612] p 2041 N93-21472
Report on microgravity experiment by TR-1A rocket
[NASDA-EG-920021] p 1875 N93-21950
SPACE PROGRAMS
The future of the US Space Industrial Base
p 1789 N93-20044
Pre Asia Pacific ISY Conference
[NASDA-CM-174] p 1975 N93-21270
Korea space program p 1976 N93-21276
Space program in Malaysia p 1976 N93-21277
National space programs and application of the remote sensing data in Mongolia p 1976 N93-21278
Thailand ISY activities p 1977 N93-21282
Panel discussion: Roles of space program in the Asia Pacific region p 1819 N93-21286
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-191991] p 2099 N93-21553
Environment Observation and Climate Modelling Through International Space Projects. Volume 1: Remote Sensing for Global Change, Climate Change and Atmosphere and Ocean Forecasting
[ESA-ISY-1-VOL-1] p 1953 N93-21569
SPACE RENDEZVOUS
Research on rendezvous and docking technology
p 1794 N93-20438
Research on docking mechanism system test
p 1794 N93-20439
NASA Automated Rendezvous and Capture Review. Executive summary
[NASA-TM-108597] p 1812 N93-21407
Coherent Doppler lidar for automated space vehicle rendezvous, stationkeeping and capture
p 1812 N93-21408
Approach range and velocity determination using laser sensors and retroreflector targets p 1812 N93-21410
Optical correlators for automated rendezvous and capture p 1813 N93-21416
A binocular stereo approach to AR/C at the Johnson Space Center p 1814 N93-21421
A comparison of laser-based ranging systems for AR/C p 1814 N93-21422
A phase one AR/C system design
p 1816 N93-21435
MMU applications for automated rendezvous and capture p 1817 N93-21438
Automated technologies needed to prevent radioactive materials from reentering the atmosphere
p 1818 N93-21447
NASA MSFC hardware in the loop simulations of automatic rendezvous and capture systems
p 1818 N93-21448
Space shuttle program: Automatic rendezvous, proximity operations, and capture p 1818 N93-21449
SPACE SHUTTLE BOOSTERS
Introduction of laser initiation for the 48-inch Advanced Solid Rocket Motor (ASRM) test motors at Marshall Space Flight Center (MSFC) p 1830 N93-20141
Advanced booster guidance studies
[NASA-CR-192336] p 1829 N93-20896
SPACE SHUTTLE MAIN ENGINE
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
Analysis of the Space Shuttle main engine simulation
[NASA-CR-191063] p 1820 N93-20251
Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
Report of the SSME assessment team
[NASA-TM-108217] p 1830 N93-21645
SPACE SHUTTLE MISSION 51-L
Report at a glance: Report of the Presidential Commission on the Space Shuttle Challenger Accident
p 1820 N93-20036
SPACE SHUTTLE ORBITERS
Rarefied-flow Shuttle aerodynamics model
[NASA-TM-107698] p 1759 N93-19976
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
Analysis of Space Shuttle accelerometer data
[NLR-TP-90141-U] p 1821 N93-20744
Numerical computation of complex multi-body Navier-Stokes flows with applications for the integrated Space Shuttle launch vehicle
[NASA-CR-192297] p 1901 N93-20767
The realtime operations of the space shuttle orbiter during rendezvous and proximity operations
p 1817 N93-21439
SPACE SHUTTLES
Capabilities and constraints of typical space flight hardware p 1868 N93-20183
Fire safety practices in the Shuttle and the Space Station Freedom p 1825 N93-20204
Multiple-body simulation with emphasis on integrated Space Shuttle vehicle
[NASA-CR-192289] p 1821 N93-20234
Applicability of relative GPS to automated rendezvous between the space shuttle and Space Station
p 1780 N93-21413
Six-Degree-of-Freedom Test Facility
p 1817 N93-21443
Space shuttle program: Automatic rendezvous, proximity operations, and capture p 1818 N93-21449
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
Report of the SSME assessment team
[NASA-TM-108217] p 1830 N93-21645
SPACE SIMULATORS
Applicability of relative GPS to automated rendezvous between the space shuttle and Space Station
p 1780 N93-21413
SPACE STATION FREEDOM
Pre-integrated truss space station and method of assembly
[NASA-CASE-MSC-22015-1] p 1823 N93-20042

Design considerations for an astronaut monorail system for large space structures and the structural characterization of its positioning arm p 1823 N93-20167
The world of NASA microgravity science p 1868 N93-20179
Overview of NASA's microgravity combustion science and fire safety program p 1868 N93-20180
Fire safety practices in the Shuttle and the Space Station Freedom p 1825 N93-20204
Flux concentrations on solar dynamic components due to mispointing
[NASA-TM-105756] p 1982 N93-20261
Radiological assessment for Space Station Freedom
[NASA-TM-104758] p 2022 N93-20303
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Spacecraft interaction with ambient and self-generated plasma/neutral environment
[AD-A258647] p 1823 N93-20364
Lewis Research Center battery overview p 1983 N93-20493
The 1992 Research/Technology report
[NASA-TM-105924] p 1759 N93-20902
Environmental health discipline science plan
[NASA-TM-108042] p 2024 N93-21369
Space human factors discipline science plan
[NASA-TM-108023] p 2026 N93-21370
A method for modeling contact dynamics for automated capture mechanisms p 1816 N93-21434
A phase one AR/C system design p 1816 N93-21435
Collision avoidance for CTV: Requirements and capabilities p 1817 N93-21437
Six-Degree-of-Freedom Test Facility p 1817 N93-21443
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477
National Aeronautics and Space Administration: Statement of Miguel A. Hernandez, Jr., Hernandez Engineering Co. p 2094 N93-21680
National Aeronautics and Space Administration: Statement of Len Ricks, Council of Engineers and Scientists Organizations p 2094 N93-21681
Advancing automation and robotics technology for the Space Station Freedom and for the U.S. economy
[NASA-TM-103992] p 2027 N93-21807
Space Station ECLSS integration analysis
[NASA-CR-192470] p 2027 N93-22002

SPACE STATION POWER SUPPLIES
Lewis Research Center battery overview p 1983 N93-20493

SPACE STATION STRUCTURES
Pre-integrated truss space station and method of assembly
[NASA-CASE-MSC-22015-1] p 1823 N93-20042
Design considerations for an astronaut monorail system for large space structures and the structural characterization of its positioning arm p 1823 N93-20167

SPACE STATIONS
Space station user development program: Future prospects p 1802 N93-21072
Applicability of relative GPS to automated rendezvous between the space shuttle and Space Station p 1780 N93-21413
Robust on-off pulse control of flexible space vehicles
[NASA-CR-192174] p 1824 N93-21644

SPACE SUITS
Physiological responses to wearing the space shuttle launch and entry suit and the prototype advanced crew escape suit compared to the unsuited condition
[NASA-TP-3297] p 2026 N93-20319

SPACE TRANSPORTATION
Problem solving for long term, global scenarios of space traffic
[ILR-MITT-265(1991)] p 1821 N93-20906

SPACE TRANSPORTATION SYSTEM
Contamination signatures observed during the CIRRIS-1A mission
[AD-A258596] p 1820 N93-19982
Research and development activities of the TsukubaSpace Center
[NASDA-TK-GC0066] p 1789 N93-20410
Research on advanced transportation systems p 1789 N93-20414
From Earth to Orbit: An assessment of transportation options
[NASA-CR-192729] p 1821 N93-21477

SPACE TRANSPORTATION SYSTEM FLIGHTS
Future space transportation systems. Part 1: Safety aspects. Part 2: Technical aspects
[MBB-UK-0180-90-PUB-PT-1-2] p 1821 N93-20847
Results of prototype software development for automation of shuttle proximity operations p 1815 N93-21425
The realtime operations of the space shuttle orbiter during rendezvous and proximity operations p 1817 N93-21439

SPACEBORNE EXPERIMENTS
Laboratory and theoretical models of planetary-scale instabilities and waves p 2004 N93-20074
A study of TRIGLYCINE SULFATE (TGS) crystals from the International Microgravity Laboratory Mission (IML-1)
[NASA-CR-191956] p 2078 N93-20127
Capabilities and constraints of typical space flight hardware p 1868 N93-20183
Research on space component and material manufacturing experiments utilizing microgravity environment p 1791 N93-20422
Materials Exposure in Low Earth Orbit (MELEO) experiment p 1848 N93-20817
Data handling in telescience experiments using the Prototype Optical Diagnostic Instrument (PODI)
[NLR-TP-90327-U] p 2090 N93-20917
Long duration human exposure to microgravity p 1802 N93-21073
Space life sciences overview p 1802 N93-21074
UDP sponsored opportunities for microgravity environment p 1803 N93-21076
The development of an automated cell culture system for use in space life science research p 1804 N93-21085
Crystallization of a protein aboard the US Space Shuttle flight STS-31 p 1804 N93-21086
Development of the Aquatic Research Facility p 1807 N93-21100
CSAR-1: The first Canadian microgravity sounding rocket flight p 1807 N93-21103
International and commercial sub-orbital program for microgravity research p 1807 N93-21104
The Wakeshield Facility: Free flyer and commercial experiment transporter programs p 1807 N93-21105
Elucidation of the role of gravity and gravity driven convection in the formation of silicon carbide/silicon nitride whiskers p 1808 N93-21107
Polymer foam cell growth in microgravity p 1808 N93-21108
An experiment on producing foam metals in a microgravity environment aboard NASA KC-135 aircraft p 1808 N93-21109
Pre Asia Pacific ISY Conference
[NASDA-CM-174] p 1975 N93-21270
Recent results and new hardware developments for protein crystal growth in microactivity
[NASA-CR-191994] p 1875 N93-21356
Space shuttle program: Automatic rendezvous, proximity operations, and capture p 1818 N93-21449
National Aeronautics and Space Administration: Statement of Chester Lee, Spacehab, Inc. p 2093 N93-21677

SPACEBORNE LASERS
Sampling properties of a spaceborne lidar (ATLID) p 1961 N93-21618

SPACEBORNE TELESCOPES
Very high energy gamma ray extension of GRO observations
[NASA-CR-192407] p 2094 N93-20746

SPACECRAFT ANTENNAS
Research on phased array antenna p 1795 N93-20446
Research on beam compression technology p 1795 N93-20447

SPACECRAFT COMMUNICATION
Packet telecommand standard
[ESA-PSS-04-107-ISSUE-2] p 1884 N93-21001

SPACECRAFT COMPONENTS
Research on space component and material manufacturing experiments utilizing microgravity environment p 1791 N93-20422
Research on HOPE actuator power unit p 1792 N93-20430
Research on HOPE heat sink device p 1792 N93-20431
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433
Conceptual study of ETS-7 p 1793 N93-20437
Research on docking mechanism system test p 1794 N93-20439
Research on space superconducting element technology p 1794 N93-20441
Research on space structure materials p 1794 N93-20443
Research on large structure assembly technology: Research on deployable assembly structure p 1795 N93-20444
Review on parts test data analyzing system p 1800 N93-20480
Safety validation test equipment operation p 1801 N93-20487
Review on safety validation test p 1802 N93-20488

SPACECRAFT CONFIGURATIONS
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
Report to Congress on the restructuring of the Earth Observing System
[PB93-108587] p 1978 N93-21506

SPACECRAFT CONSTRUCTION MATERIALS
Research and development activities of the TsukubaSpace Center
[NASDA-TK-GC0066] p 1789 N93-20410
Research on space component and material manufacturing experiments utilizing microgravity environment p 1791 N93-20422
Research on heat-resistance technology for HOPE p 1791 N93-20426
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433
Research on space structure materials p 1794 N93-20443
Survey and review on adhesives p 1799 N93-20475
Review on parts test data analyzing system p 1800 N93-20480
Safety validation test equipment operation p 1801 N93-20487
Review on safety validation test p 1802 N93-20488
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
Protection of Materials and Surface Finishes from the Low Earth Orbit Space Environment
[CTN-93-60605] p 1847 N93-20810
Recommended practices for in-space and ground laboratory. Atomic oxygen exposure and analysis p 1848 N93-20814
An overview of space qualification requirements for new materials p 1830 N93-20815
Space station protective coating development p 1848 N93-20816
Materials Exposure in Low Earth Orbit (MELEO) experiment p 1848 N93-20817
Protective coating development for Space Station Freedom at McDonnell Douglas p 1849 N93-20820
Atomic oxygen resistant SiOx coated Kapton for Space Station Freedom, and alternate coatings p 1849 N93-20821
Multipurpose protective coatings for spacecraft applications p 1849 N93-20822
Touchstone for success: The Materials and Processes laboratories, ESTEC
[ESA-BR-52-REV] p 1830 N93-20926
Measurement of the expansion coefficient between -150 C and +150 C for material composites for space applications
[REPT-921-430-115] p 1833 N93-20939
Structures and materials technologies for hypersonic vehicles: Lessons from Hermes experience
[REPT-921-430-108] p 1824 N93-21042
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195
Assessment of single-pulse laser damage to structural materials for spacecraft
[AD-A259387] p 1911 N93-21267
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728

SPACECRAFT CONTROL
Interplanetary Program to Optimize Simulated Trajectories (IPOST). Volume 2: Analytic manual
[NASA-CR-189653-VOL-2-REV] p 1821 N93-20121
An electromagnetically-controlled Precision Orbital Tracking Vehicle (POTV)
[AD-A259143] p 1823 N93-20129
Research on HOPE flight control technology p 1787 N93-20427
Research on combined HOPE navigation technology p 1792 N93-20428
Research on highly functional guidance and control technology p 1795 N93-20445
Research on GPS utilization in space p 1780 N93-20453
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 6: Controls and guidance
[NASA-TM-108654] p 2085 N93-20774
Proximity operations considerations affecting spacecraft design p 1815 N93-21428

SPACECRAFT DESIGN
Interplanetary Program to Optimize Simulated Trajectories (IPOST). Volume 2: Analytic manual [NASA-CR-189653-VOL-2-REV] p 1821 N93-20121

Research on lunar and planet development and utilization p 1789 N93-20412
Research on HOPE p 1791 N93-20423
Orbit re-entry experiment vehicle development p 1792 N93-20432
Conceptual study of ETS-7 p 1793 N93-20437
Research on docking mechanism system test p 1794 N93-20439
Research on large structure assembly technology: Research on deployable assembly structure p 1795 N93-20444
Numerical computation of complex multi-body Navier-Stokes flows with applications for the integrated Space Shuttle launch vehicle [NASA-CR-192297] p 1901 N93-20767
Low cost attitude control system scanwheel development [NASA-CR-191324] p 1824 N93-21003
Numerical methods for aerothermodynamic design of hypersonic space transport vehicles [MBB-FE-211-S-PUB-0481] p 1781 N93-21056
Development of the Aquatic Research Facility p 1807 N93-21100
Autonomous reconfigurable GPS/INS navigation and pointing system for rendezvous and docking p 1780 N93-21426
Proximity operations considerations affecting spacecraft design p 1815 N93-21428
Application of artificial neural networks to the design optimization of aerospace structural components [NASA-TM-4389] p 1952 N93-21831

SPACECRAFT DOCKING
Research on rendezvous and docking technology p 1794 N93-20438
Research on docking mechanism system test p 1794 N93-20439
NASA Automated Rendezvous and Capture Review. Executive summary [NASA-TM-108597] p 1812 N93-21407
Coherent Doppler lidar for automated space vehicle rendezvous, stationkeeping and capture p 1812 N93-21408
Approach range and velocity determination using laser sensors and retroreflector targets p 1812 N93-21410
Contact dynamics testing of automated three-point docking mechanism p 1812 N93-21411
TRAC based sensing for autonomous rendezvous p 1813 N93-21412
Applicability of relative GPS to automated rendezvous between the space shuttle and Space Station p 1780 N93-21413
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414
Autonomous pre-alignment of a docking mechanism p 1814 N93-21418
A berthing and fastening strategy for orbital replacement units p 1814 N93-21420
A binocular stereo approach to AR/C at the Johnson Space Center p 1814 N93-21421
Demonstration of automated proximity and docking technologies p 1814 N93-21423
Results of prototype software development for automation of shuttle proximity operations p 1815 N93-21425
Autonomous reconfigurable GPS/INS navigation and pointing system for rendezvous and docking p 1780 N93-21426
Guideline requirements for serviceable spacecraft grasping/berthing/docking interfaces based on simulations and flight experience p 1816 N93-21429
Autonomous docking ground demonstration p 1816 N93-21430
An overview of autonomous rendezvous and docking system technology development p 1816 N93-21431
An autonomous rendezvous and docking system using cruise missile technology p 1816 N93-21432
On-orbit demonstrations of automated closure and capture using ESA-developed proximity operations technologies and an existing serviceable NASA Explorer platform spacecraft p 1816 N93-21433
A method for modeling contact dynamics for automated capture mechanisms p 1816 N93-21434
A phase one AR/C system design p 1816 N93-21435
MMU applications for automated rendezvous and capture p 1817 N93-21438
Autonomous rendezvous and docking: A commercial approach to on-orbit technology validation p 1817 N93-21440
Experimental validation of docking and capture using space robotics testbeds p 1817 N93-21441
On-orbit operational scenarios, tools, and techniques p 1817 N93-21442
Six-Degree-of-Freedom Test Facility p 1817 N93-21443
Soviet automated rendezvous and docking system overview p 1818 N93-21444
Supervised autonomous rendezvous and docking system technology evaluation p 1818 N93-21445
Autonomous rendezvous and capture development infrastructure p 1818 N93-21446
NASA MSFC hardware in the loop simulations of automatic rendezvous and capture systems p 1818 N93-21448
Space shuttle program: Automatic rendezvous, proximity operations, and capture p 1818 N93-21449

SPACECRAFT ELECTRONIC EQUIPMENT
Research and development activities of the TsukubaSpace Center [NASDA-TK-GC0066] p 1789 N93-20410
Development of satellite borne nickel hydrogen battery experiment equipment for ETS-6 p 1793 N93-20435
Research on space superconducting element technology p 1794 N93-20441
Development of high heat radiation printed boards p 1796 N93-20456
Review on aluminum electrolytic condensers development p 1797 N93-20457
Improvement of LC feedthrough filters p 1797 N93-20458
Review on surface mounting components (wire wound chip resistors) development p 1797 N93-20459
Development of transistors (equivalent to 2SC3321) p 1797 N93-20460
Development of power MOSFET (150 W class) p 1797 N93-20461
Development of high speed rectifier diodes p 1798 N93-20463
Review on Schottky barrier diode development p 1798 N93-20464
Review on optical elements for intersatellite laser communication p 1798 N93-20465
Review on upgrading efficiency of silicon solar battery cells p 1798 N93-20466
Development of radiation resistant HCMOSIC p 1798 N93-20467
Development of radiation resistant linear IC (equivalent to mu PC 806) p 1798 N93-20468
Development of high density hybrid IC p 1798 N93-20469
Development of 256 kbit PROM p 1799 N93-20470
Development of 256 kbit SRAM p 1799 N93-20471
Development of 10 k gate-gate array p 1799 N93-20472
Development of 32 bit MPU p 1799 N93-20473
Review on radiation resistant 32 bit MPU p 1799 N93-20474
Research on large capacity Ni-Cd batteries p 1799 N93-20476
Research on Ni-H2 batteries p 1800 N93-20477
Establishment of high density installation technology p 1800 N93-20478
Industrial IC evaluation test: 256 kbit EEPROM p 1800 N93-20481
Radiation resistance evaluation test on parts and materials: Solar battery cell p 1800 N93-20482
Research on single event resistance evaluation technology: Research by heavy ion irradiation p 1801 N93-20483
Research on single event resistance evaluation technology: Single event resistance evaluation by SEM p 1801 N93-20484
Research on single event phenomenon on semiconductor devices p 1801 N93-20485
Construction of evaluation test equipment for 16 bit space MPU p 1801 N93-20486
Derating requirements applicable to electronic, electrical, and electro-mechanical components for ESA space systems [ESA-PSS-01-301-ISSUE-2] p 1893 N93-21194

SPACECRAFT ENVIRONMENTS
Manufacture of ADEOS borne technical data acquisition equipment p 1796 N93-20451

SPACECRAFT EQUIPMENT
Determination of pyrotechnic functional margin p 1863 N93-20134
Research on advanced Earth observing sensors p 1790 N93-20416
Research on two phase fluid loop type heat rejection technology p 1791 N93-20421
Research and development of K-band intersatellite communication experiment equipment onboard ETS-6 p 1793 N93-20434
Research on equipment life extension technology p 1793 N93-20436
Conceptual study of ETS-7 p 1793 N93-20437
Research on space robot technology p 1794 N93-20440
Research on space coolers p 1794 N93-20442
Research on phased array antenna p 1795 N93-20446
Research on beam compression technology p 1795 N93-20447
Research on data handling technology p 1795 N93-20448
Research on satellite-borne high speed data recorder p 1795 N93-20449
Manufacture of ADEOS borne technical data acquisition equipment p 1796 N93-20451
Operational support for ETS-5 secondary operational phase p 1796 N93-20455
Review on parts test data analyzing system p 1800 N93-20480

SPACECRAFT GUIDANCE
Research on HOPE flight control technology p 1787 N93-20427
Research on combined HOPE navigation technology p 1792 N93-20428
Research on highly functional guidance and control technology p 1795 N93-20445
Research on GPS utilization in space p 1780 N93-20453
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 6: Controls and guidance [NASA-TM-108654] p 2085 N93-20774

SPACECRAFT INSTRUMENTS
Development and use of data analysis procedures for the CRRES payloads AFGL-701-2/Dosimeter and AFGL-701-4/Fluxmeter and application of the data analysis results to improve the static and dynamic models of the earth's radiation belts [AD-A258710] p 1823 N93-20380
Research on equipment life extension technology p 1793 N93-20436
Conceptual study of ETS-7 p 1793 N93-20437
Research on highly functional guidance and control technology p 1795 N93-20445

SPACECRAFT LAUNCHING
Optimal guidance law development for an advanced launch system [NASA-CR-192189] p 1820 N93-20313
Numerical computation of complex multi-body Navier-Stokes flows with applications for the integrated Space Shuttle launch vehicle [NASA-CR-192297] p 1901 N93-20767
From Earth to Orbit: An assessment of transportation options [NASA-CR-192729] p 1821 N93-21477

SPACECRAFT MAINTENANCE
Proximity operations considerations affecting spacecraft design p 1815 N93-21428

SPACECRAFT MODELS
Rarefied-flow Shuttle aerodynamics model [NASA-TM-107698] p 1759 N93-19976
COLD-SAT dynamic model [NASA-TM-105185] p 1822 N93-19988
Multiple-body simulation with emphasis on integrated Space Shuttle vehicle [NASA-CR-192289] p 1821 N93-20234

SPACECRAFT MODULES
National Aeronautics and Space Administration: Statement of Chester Lee, Spacehab, Inc. p 2093 N93-21677

SPACECRAFT PERFORMANCE
Research on advanced spacecraft testing technology p 1796 N93-20452

SPACECRAFT POWER SUPPLIES
Development of satellite borne nickel hydrogen battery experiment equipment for ETS-6 p 1793 N93-20435
The 1992 NASA Aerospace Battery Workshop [NASA-CP-3192] p 1983 N93-20490
NASA Center update: Goddard Space Flight Center p 1983 N93-20491
NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492
Lewis Research Center battery overview p 1983 N93-20493
Marshall Space Flight Center battery activity p 1983 N93-20494
COMSAT's destructive physical analysis of aerospace nickel-cadmium cells for NASA/Goddard Space Flight Center p 1983 N93-20495
Mechanisms for capacity fading in the NiH2 cell and its effects on cycle life p 1983 N93-20496
Migration of Co in nickel oxide/hydroxide of a nickel electrode in a Ni/H2 cell p 1983 N93-20497
Nickel hydrogen capacity loss p 1983 N93-20498
Capacity fade in nickel cadmium and nickel hydrogen cells p 1984 N93-20499
NiH2 capacity fade during early cycling p 1984 N93-20500

Characteristics of storage related capacity loss in Ni/H2 cells
[STD/92-118] p 1984 N93-20501
Nickel hydrogen battery cell storage matrix test p 1984 N93-20502
Capacity recovery after storage negatively precharged nickel hydrogen cells p 1984 N93-20503
Charge retention test experiences on Hubble Space Telescope nickel-hydrogen battery cells p 1984 N93-20504
Air Force Ni-Cd cell qualification program update p 1984 N93-20505
Electrical characterization of the Magellan batteries after storage p 1984 N93-20506
TOPEX/Poseidon battery performance p 1984 N93-20507
Preliminary results: Root cause investigation of orbital anomalies and failures in NASA standard 50 ampere-hour nickel-cadmium batteries p 1985 N93-20508
NiCd cell reliability in the mission environment p 1985 N93-20510
The 2.5 inch nickel-hydrogen development p 1985 N93-20512
Hubble Space Telescope nickel hydrogen battery system briefing p 1985 N93-20513
An overview of eight years of activity developing French nickel-hydrogen technology p 1985 N93-20514
High specific energy, high capacity nickel-hydrogen cell design p 1986 N93-20516
Eagle-Picher SPV development p 1986 N93-20517
Nickel-hydrogen CPV battery update p 1986 N93-20518
Battery Review Board p 1986 N93-20519
Development of nickel-metal hydride cell p 1986 N93-20521
Phase-change composites TES for nickel-hydrogen batteries p 1987 N93-20524
The Galileo PPS expert monitoring and diagnostic prototype
[NASA-CR-191914] p 1828 N93-21823

SPACECRAFT PROPULSION
Advanced expander test bed program
[NASA-CR-191049] p 1828 N93-19991
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
Interplanetary Program to Optimize Simulated Trajectories (IPOST). Volume 2: Analytic manual
[NASA-CR-189653-VOL-2-REV] p 1821 N93-20121
Priorities for microgravity combustion research and goals for workshop discussions p 1869 N93-20186
Research on advanced transportation systems p 1789 N93-20414
Atomic hydrogen propellants: Historical perspectives and future possibilities
[NASA-TM-106053] p 1829 N93-20614
Space transfer with ground-based laser/electric propulsion
[NASA-TM-106060] p 1829 N93-20615
Thruster configurations for maneuvering heavy payloads p 1813 N93-21415
On-orbit operational scenarios, tools, and techniques p 1817 N93-21442

SPACECRAFT RADIATORS
Research on two phase fluid loop type heat rejection technology p 1791 N93-20421
Research on HOPE heat sink device p 1792 N93-20431

SPACECRAFT REENTRY
Concept of overall operation of H-2 Orbiting Plane (HOPE) p 1791 N93-20424
Orbit re-entry experiment vehicle development p 1792 N93-20432

SPACECRAFT SHIELDING
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728

SPACECRAFT STRUCTURES
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
Research on advanced spacecraft p 1789 N93-20411
Research on Earth observing satellite system: Conceptual study of Advanced Earth Observing Satellite-2 (ADEOS-2) p 1790 N93-20415
Research on HOPE p 1791 N93-20423
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433
Conceptual study of ETS-7 p 1793 N93-20437
Research on docking mechanism system test p 1794 N93-20439
Research on large structure assembly technology: Research on deployable assembly structure p 1795 N93-20444
Structures and materials technologies for hypersonic vehicles: Lessons from Hermes experience
[REPT-921-430-108] p 1824 N93-21042
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479

SPACECRAFT TRACKING
An electromagnetically-controlled Precision Orbital Tracking Vehicle (POTV)
[AD-A259143] p 1823 N93-20129
Research on GPS utilization in space p 1780 N93-20453

SPACECRAFT TRAJECTORIES
Interplanetary Program to Optimize Simulated Trajectories (IPOST). Volume 2: Analytic manual
[NASA-CR-189653-VOL-2-REV] p 1821 N93-20121
Operator-assisted planning and execution of proximity operations subject to operational constraints p 1817 N93-21436
The realtime operations of the space shuttle orbiter during rendezvous and proximity operations p 1817 N93-21439

SPACECREWS
Physiological responses to wearing the space shuttle launch and entry suit and the prototype advanced crew escape suit compared to the unsuited condition
[NASA-TP-3297] p 2026 N93-20319

SPACELAB
Overview of NASA's microgravity combustion science and fire safety program p 1868 N93-20180

SPACING
An experimental investigation of S-duct flow control using arrays of low-profile vortex generators
[NASA-TM-106030] p 1760 N93-19968

SPALLING
Assessment of single-pulse laser damage to structural materials for spacecraft
[AD-A259387] p 1911 N93-21267

SPATIAL DISTRIBUTION
Stratiform clouds and their interaction with atmospheric motion
[NASA-CR-192280] p 2002 N93-20038
Knitted carbon fiber reinforced thermoplastics: Structural characterization with image analysis p 1839 N93-21163
Dynamics of stellar populations in galactic disks
[MITT-SER-A-234] p 2097 N93-21300
Simulation method for stationary Gaussian random functions based on the sampling theorem
[PB93-127496] p 2059 N93-21818

SPATIAL RESOLUTION
Coherent Doppler lidar for automated space vehicle rendezvous, stationkeeping and capture p 1812 N93-21408
Mapping of satellite-derived sea surface temperatures at high resolution in cloudy regions p 1963 N93-21630
Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California
[PB93-118495] p 1994 N93-21805

SPECIFIC IMPULSE
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114

SPECIFICATIONS
Formalizing structured file services for the data storage and retrieval subsystem of the data management system for Spacestation Freedom
[NASA-CR-192293] p 2089 N93-20315
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL
[AD-A259224] p 2033 N93-20577
An overview of space qualification requirements for new materials p 1830 N93-20815
Specifying and modifying the Graphics Manager and the Graphic Calculator in D2M2edit
[REPT-91-56] p 2037 N93-20851
Nondestructive inspection of in-service aircraft
[ETN-93-93059] p 1763 N93-20928
Packet telecommand standard
[ESA-PSS-04-107-ISSUE-2] p 1884 N93-21001
Ground segment infrastructure standards
[ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002
Verification methods of the behavioral specifications: Study and implementation
[ETN-93-92687] p 2044 N93-21064
Formal specification and timing analysis of high-integrity real-time systems
[REPT-92-041] p 2028 N93-21185
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195
Conformance test specification for COBOL intrinsic function module
[PB92-229178] p 2040 N93-21351
Accurate test limits with estimated parameters
[MEMO-1024] p 1877 N93-21397

SPECIMEN GEOMETRY
Fracture at Cu/sapphire interfaces
[DE93-003816] p 1857 N93-21779

SPECIMENS
An experimental approach to size effect in rotating bending fatigue p 1922 N93-20339

SPECTRAL BANDS
Free radical and overtone spectroscopy
[NASA-CR-192136] p 1850 N93-21555
Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698

SPECTRAL EMISSION
IUE-ULDA access guide no. 4A: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume A
[ESA-SP-1153-VOL-A] p 2096 N93-21007
IUE-ULDA access guide no. 4B: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume B
[ESA-SP-1153-VOL-B] p 2097 N93-21015
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292

SPECTRAL ENERGY DISTRIBUTION
Use of features derived from class proportions in a pixel for the multispectral classification of remote sensing images
[INPE-5306-TDI/456] p 1966 N93-20322
IUE-ULDA access guide no. 3: International Ultraviolet Explorer-Uniform Low Dispersion Archive: Normal galaxies
[ESA-SP-1152] p 2094 N93-20541

SPECTRAL METHODS
Research in computational fluid dynamics and analysis of algorithms
[NASA-CR-192309] p 1901 N93-20748
SSG 3.113: Spectral gravity field modelling methods p 1971 N93-20978

SPECTRAL REFLECTANCE
Data analysis for bark and leaf reflectance measurements
[AD-A258598] p 1966 N93-19983
In-situ determination of optical properties of sea water and particle characteristics in the Corfu Sea (Mediterranean): Report on the first joint campaign of the Mito project
[BCRS-92-04] p 2018 N93-20741
End-to-end tests of satellite data p 1953 N93-21571
Marine productivity along the northwest coast of Africa (Mauritania): Estimation from satellite data p 1955 N93-21578

SPECTRAL RESOLUTION
Requirements and projects for high-resolution atmospheric sounding p 1959 N93-21607

SPECTRAL SIGNATURES
Vibration monitoring with artificial neural networks
[DE93-003543] p 1952 N93-21992
Vibration monitoring of EDF rotating machinery using artificial neural networks
[DE93-003557] p 1952 N93-21993

SPECTROMETERS
Experimental investigations of undulator radiation compatability
[ETN-93-92566] p 2066 N93-20880

SPECTRORADIOMETERS
Influence of terrain elevation on vegetation indices derived from NOAA AVHRR and EOS MODIS data p 1954 N93-21576

SPECTROSCOPIC ANALYSIS
Diffraction peaks in x ray spectroscopy: Friend or foe?
[DE93-002482] p 2081 N93-21486
Semiempirical studies of atomic structure
[DE93-005117] p 2063 N93-21707
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937

SPECTROSCOPIC TELESCOPES
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196

SPECTROSCOPY
Thirteen new BL Lacertae objects discovered by an efficient x ray/radio/optical technique p 2095 N93-20796
High frequency spectroscopy for collision excited helium atom fine structure of 1s4f configuration
[ETN-93-92560] p 2062 N93-20875

SPECTRUM ANALYSIS
X ray spectra from Hinotori satellite and suprathermal electrons
[NIFS-197] p 2100 N93-20266
An analytical and experimental investigation of FM-by-noise jamming
[AD-A259124] p 1883 N93-20592

Spectroscopic investigations of bending and microbending effects in single mode optical fibre: A feasibility study
[NPL-QU-90] p 1946 N93-20930
Simulation of the merged spectrum technique for aligning planar phased-array antennas, part 1
[PB93-113629] p 1885 N93-21237
Spectrum fatigue data in comparison to design curves in the long life regime p 1948 N93-21324
Advantages of tapering finite data records for spectral analysis
[PB93-116614] p 2092 N93-21475

SPECULAR REFLECTION
Implementation and evaluation of a three-dimensional photometric sampler
[AD-A258636] p 1905 N93-20361
A radiosity approach realistic image synthesis system
[AD-A259082] p 2032 N93-20406

SPEED CONTROL
Advanced control strategies for wind turbines
[DE93-003252] p 1989 N93-21961

SPHERICAL SHELLS
Numerical models of planetary dynamos
[DE93-003848] p 2098 N93-21970

SPIN DYNAMICS
Frequency ratio lock up in the attitude drift of a dissipative axisymmetric gyrostat p 1908 N93-20725

SPIN GLASS
Ultrametricity in an inhomogeneous simplest spin glass model
[PREPRINT-819] p 2055 N93-21181

SPIN REDUCTION
Application of silicone fluid rheogoniometer measurements to despin moment studies in a spinning and coning cylinder
[AD-A259270] p 1901 N93-20599

SPIN TESTS
Guided Weapons Division Spin Table Facility: Spin table control system
[AD-A259214] p 1788 N93-20555

SPIN-SPIN COUPLING
Frequency ratio lock up in the attitude drift of a dissipative axisymmetric gyrostat p 1908 N93-20725

SPINEL
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785

SPIRAL GALAXIES
Recurrent swing amplification induced by nonlinear amplitude effects
[MITT-SER-A-230] p 2097 N93-21302

SPLINES
Post-buckling analysis of thin-walled channel sections undergoing local and distortional buckling
[PB93-112928] p 1947 N93-21236

SPONTANEOUS EMISSION
IDA gamma ray laser: Investigation of the feasibility of developing a laser using nuclear transitions
[AD-A259476] p 1909 N93-20246
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments
[DE93-002897] p 1912 N93-21955

SPRAYERS
Combustion of interacting droplet arrays in a microgravity environment p 1854 N93-20217

SPRAYING
Combustion experiments in reduced gravity with two-component miscible droplets p 1854 N93-20214
The electrospray: Fundamentals and combustion applications p 1855 N93-20218

SPREADING
Opposed-flow flame spreading in reduced gravity p 1854 N93-20206

SPRINGS (ELASTIC)
On oscillatory motion of a spring-mass system subjected to piecewise constant forces p 1934 N93-20670
The effects of surface treatment on torsional fatigue failure in recoil springs
[AD-A259345] p 1952 N93-21987

SPUTTERING
Ion source AHKS-30
[DLR-MITT-91-20] p 1860 N93-21041
Metallization and sputtering of textiles: Preconditions for the substrate, properties and applications p 1838 N93-21158

SQUALLS
A numerical investigation of squall lines
[ISBN-0-315-69244-8] p 2011 N93-20280

STABILITY
Explicit representations of Lyapunov functions for stable analytic systems
[RR-402] p 2051 N93-20737
Determination of methane stability in the upper mantle and lower crust
[PB93-100931] p 2001 N93-21785
Stable clusters in the condensed state and some possibilities for gas phase clusters
[DE93-004446] p 2064 N93-21846

STABILITY TESTS
Stability of mixing layers
[NASA-CR-192225] p 1897 N93-19980
Safety validation test equipment operation p 1801 N93-20487

STABILIZATION
On the structure and stabilization mechanisms of planar and cylindrical premixed flames p 1853 N93-20199
Automatic design of a Maglev controller in state space
[AD-A259336] p 2047 N93-21261

STABILIZERS (FLUID DYNAMICS)
Apparatus and method for improving spin recovery on aircraft
[NASA-CASE-LAR-14747-1] p 1786 N93-20039
The influence of structural optimization on the aeroelastic properties of a vertical tail
[AD-A259140] p 1781 N93-20575

STAGE SEPARATION
Experimental results in aerodynamic stability and control of a TSTO configuration
[MBB-FE-211-S-PUB-0482-A] p 1787 N93-21057

STAGNATION FLOW
Experiments on the impingement of an underexpanded jet on a flat plate p 1937 N93-20685

STAINLESS STEELS
Damage tolerance of a helicopter rotor high-strength steel p 1948 N93-21322
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels
[DE93-003005] p 1857 N93-21985

STANDARD DEVIATION
The GALLEX solar neutrino experiment
[DE93-003357] p 2102 N93-21962

STANDARDIZATION
New methodologies toward the integration of tolerancing in CAD/CAM systems
[PAPER-C-1-2] p 2035 N93-20825
NASA systems engineering handbook. Draft
[NASA-TM-108702] p 2086 N93-21188
Metric transition plans and activities of Federal Government Agencies
[PB92-222249] p 1878 N93-21468

STANDARDS
Packet telecommand standard
[ESA-PSS-04-107-ISSUE-2] p 1884 N93-21001
Ground segment infrastructure standards
[ESA-PSS-07-0-ISSUE-1] p 1819 N93-21002
Reference model for the description of graphic data processing and for the integration of graphic systems with other data processing fields
[ETN-93-93417] p 2039 N93-21066
The total quality approach in the development of technical textiles p 1838 N93-21156
NASA systems engineering handbook. Draft
[NASA-TM-108702] p 2086 N93-21188
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195
Publications of the National Institute of Standards and Technology 1991 catalog
[PB92-217579] p 2091 N93-21344
Creep Laboratory manual
[NPL-DMM(A)-37] p 1951 N93-21565
High integrity software standards and guidelines
[PB93-114619] p 2042 N93-21687

STAR CLUSTERS
Dissolution of tidally limited star clusters in galaxies by passing giant molecular clouds or other massive objects
[MITT-SER-A-232] p 2097 N93-21301

STAR DISTRIBUTION
Dynamics of stellar populations in galactic disks
[MITT-SER-A-234] p 2097 N93-21300

STATE ESTIMATION
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265

STATIC LOADS
Fatigue experiments of microconcrete beams under a running load p 1923 N93-20346
Buckling of columns: Allowance for axial shortening
[PB93-110484] p 1947 N93-21234
Synergism between layer cracking and delaminations in MD-laminates of CFRE p 1842 N93-21520
Improving the selection of bolted joint parameters by using results from finite-element analysis
[DE93-002243] p 1951 N93-21774

STATIC PRESSURE
An experimental investigation of S-duct flow control using arrays of low-profile vortex generators
[NASA-TM-106030] p 1760 N93-19968

STATIC TESTS
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 1844 N93-21530

STATIONKEEPING
Coherent Doppler lidar for automated space vehicle rendezvous, stationkeeping and capture p 1812 N93-21408

STATISTICAL ANALYSIS
Probabilistic student modeling with knowledge space theory
[AD-A258622] p 2045 N93-19997
Mountain top measurements of beta(9.2 microns) p 2009 N93-20099
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence
[NASA-CR-189640] p 1899 N93-20253
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
Probabilistic assessment of machine parts from Kymenite, austempered ductile iron p 1923 N93-20341
Statistical analysis of fatigue tests p 1923 N93-20343
Discrete statistical model of fatigue crack growth in a Ni-base superalloy, capable of life prediction p 1923 N93-20344
Least square methods for solving systems of inequalities with application to an assignment problem
[AD-A258682] p 2050 N93-20391
NiCd cell reliability in the mission environment p 1985 N93-20510
A review of probabilistic fatigue life analyses for welded plate and tubular joints p 1944 N93-20728
Load experience variability of fighter aircraft
[NLR-TP-89172-U] p 1781 N93-20742
Quality assurance in the future industrial plant
[PAPER-C-3-3] p 1919 N93-20837
Statistical Process Control (SPC) in FMS/CIM systems
[PAPER-C-3-4] p 2037 N93-20838
Climatological study of ozone in the boundary layer above Belgium
[MISC-SER-A-127] p 1989 N93-20925
SSG 4.120: Non-linear adjustment p 1973 N93-20986
Variance-covariance estimation and statistical testing of satellite networks
[PB92-225358] p 1824 N93-21048
Simulation of clear-sky outgoing longwave radiation over the oceans using operational analyses p 1956 N93-21586
The influence of high clouds on climate p 1956 N93-21588
Climatological use of long time series of data from the water vapour channel of Meteosat p 1958 N93-21601

STATISTICAL DISTRIBUTIONS
On the evaluation of coherent structures using computer programs p 1937 N93-20688
Asymptotic behaviour of some bilinear functionals of the empirical process
[MEMO-1031] p 2059 N93-20956
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663

STATISTICAL MECHANICS
Adaptivity-fluids-localization. The challenge to computational mechanics p 1905 N93-20618
Numerical validation of a constitutive theory for an arbitrarily fractured solid
[DE93-003863] p 2064 N93-21739

STATISTICAL TESTS
Quality assurance in the future industrial plant
[PAPER-C-3-3] p 1919 N93-20837
Coherent interference tests for wind profilers
[PB92-227248] p 2013 N93-21202

STATISTICS
Higher order crossings
[AD-A258727] p 2050 N93-20327
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics
[NASA-CR-192720] p 2014 N93-21492

STEADY STATE
Steady state tokamak sustained by bootstrap current without seed current
[NIFS-159] p 2070 N93-20155
Erosion of composite ceramics
[DE93-004254] p 1862 N93-21853

STEAM
Material and method for fast generation of hydrogen gas and steam
[AD-D015559] p 1847 N93-20781

STEEL STRUCTURES
A non-linear phenomenon in the dynamic response of metallic and composite structures p 1926 N93-20620

Fatigue life assessment of service damaged and corroded members of structural steel
p 1949 N93-21331
Application of new experimental methods to pipeline stress corrosion cracking
[PB92-224575] p 1951 N93-21499

STEELS
A simulation of corrosion fatigue life distribution in low alloy steel p 1922 N93-20340
Fatigue assessment of a cast component for a timber crane p 1924 N93-20353
Fundamental advances for characterizing cathodic protection systems
[PB93-125003] p 1851 N93-21825
The effects of surface treatment on torsional fatigue failure in recoil springs
[AD-A259345] p 1952 N93-21987

STEERABLE ANTENNAS
Simulation of the merged spectrum technique for aligning planar phased-array antennas, part 1
[PB93-113629] p 1885 N93-21237

STEERING
Approach range and velocity determination using laser sensors and retroreflector targets p 1812 N93-21410

STELLAR ENVELOPES
The structure of circumstellar shells
[NASA-CR-192337] p 2096 N93-20757

STELLAR EVOLUTION
Field star interactions with globular clusters
p 2096 N93-20047

STELLAR MODELS
Dissolution of tidally limited star clusters in galaxies by passing giant molecular clouds or other massive objects
[MITT-SER-A-232] p 2097 N93-21301
Recurrent swing amplification induced by nonlinear amplitude effects
[MITT-SER-A-230] p 2097 N93-21302

STELLAR MOTIONS
Dynamics of stellar populations in galactic disks
[MITT-SER-A-234] p 2097 N93-21300
Recurrent swing amplification induced by nonlinear amplitude effects
[MITT-SER-A-230] p 2097 N93-21302

STELLAR OCCULTATION
Interpretation of Voyager UVS observations of occultations by the atmosphere of Neptune
[NASA-CR-192131] p 2099 N93-20732

STELLAR RADIATION
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196

STELLAR STRUCTURE
The structure of circumstellar shells
[NASA-CR-192337] p 2096 N93-20757
A new deconvolution method for the Doppler cartography of cool star surfaces and its use on AB Doradus
[MPE-236] p 2095 N93-21025

STELLAR SYSTEMS
Field star interactions with globular clusters
p 2096 N93-20047
Present status of work on the FK5 extension
[MITT-SER-B-229] p 2095 N93-21299

STELLAR WINDS
The Crab nebula's wisps as shocked pulsar wind
[DE93-003466] p 2097 N93-21673
Weibel instabilities in relativistic electron-positron plasmas
[DE93-003468] p 2077 N93-21990

STELLARATORS
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
Refined theory of diamagnetic effect in stellarators
[NIFS-162] p 2070 N93-20158
Design study on divertor plates of Large Helical Device (LHD)
[NIFS-190] p 2074 N93-21361
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362

STEREOPHOTOGRAPHY
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871

STEREOSCOPIC VISION
A binocular stereo approach to AR/C at the Johnson Space Center p 1814 N93-21421

STIFFNESS
Investigation of the bond strength of a discrete skin-stiffener interface p 1843 N93-21527

STIFFNESS MATRIX
Improvements to a method for the geometrically nonlinear analysis of compressively loaded stiffened composite panels
[NASA-CR-192183] p 1920 N93-20034
Hierarchical Poly Tree configurations for the solution of dynamically refined finte element models
[NASA-CR-191054] p 1921 N93-20232

STIMULATION
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760

STIRLING CYCLE
Superfluid Stirling refrigerator with a counterflow regenerator
[DE93-003858] p 1879 N93-21971

STOCHASTIC PROCESSES
Stochastic finite element analysis for high speed rotors p 1918 N93-20696
Nonlinearization of nonlinear systems under external and parametric random excitations p 1945 N93-20730
Stochastic orderings on partial sums of random variables and on counting measures of random intervals
[INRIA-RR-1422] p 2052 N93-20860
Estimates of cycle times in stochastic Petri nets
[INRIA-RR-1572] p 2058 N93-20897
A distributed Petri Net controller for a dual arm testbed
[NASA-CR-192733] p 2048 N93-21373
Stochastic scheduling with variable profile and precedence constraints
[INRIA-RR-1525] p 2059 N93-21396
Vlasov equation in the stochastic magnetic field
[NIFS-171] p 2075 N93-21567
La Recherche Aerospatiale Bimonthly Bulletin, no. 248, January - February
[ONERA-1989-1] p 1878 N93-21748

STOICHIOMETRY
Structure and reliability metal contacts to GaAs
[AD-A259184] p 1889 N93-20272

STOKES FLOW
Direct second kind boundary integral formulation for Stokes flow problems
[DE93-004069] p 1904 N93-22000

STORAGE
Characteristics of storage related capacity loss in Ni/H2 cells
[STD/92-118] p 1984 N93-20501
Nickel hydrogen battery cell storage matrix test
p 1984 N93-20502
Capacity recovery after storage negatively precharged nickel hydrogen cells p 1984 N93-20503

STORAGE BATTERIES
Mechanisms for capacity fading in the NiH2 cell and its effects on cycle life p 1983 N93-20496
Battery Review Board p 1986 N93-20519

STORAGE RINGS (PARTICLE ACCELERATORS)
Experimental investigations of undulator radiation compatability
[ETN-93-92566] p 2066 N93-20880
Anomalous WWZ couplings at future e(+)e(-) colliders
[PREPRINT-814] p 2066 N93-21177
Nuclear studies with intermediate energy probes
[DE93-002785] p 2062 N93-21481

STORAGE STABILITY
Research on equipment life extension technology
p 1793 N93-20436

STORAGE TANKS
Development of an all-composite NGV high pressure storage cylinder
[PB93-114429] p 1878 N93-21789

STORMS
Electrification in winter storms and the analysis of thunderstorm overflight data p 2006 N93-20087

STORMS (METEOROLOGY)
A numerical investigation of squall lines
[ISBN-0-315-69244-8] p 2011 N93-20280
Gust forecasting
[MISC-SER-A-125] p 2012 N93-20887

STOVL AIRCRAFT
Controller partitioning for integrated flight/propulsion control implementation
[NASA-TM-105804] p 1787 N93-21197

STRAIN DISTRIBUTION
Improvements to a method for the geometrically nonlinear analysis of compressively loaded stiffened composite panels
[NASA-CR-192183] p 1920 N93-20034
The role of least squares in variational principles of elasticity p 1926 N93-20619
Smart materials p 1845 N93-20624
Simplified analysis of elastic-plastic strain concentration in notched components under cyclic loading
p 1950 N93-21338

STRAIN ENERGY METHODS
Predicting the failure load of adhesive joints
p 1932 N93-20655
Prediction of fracture initiation in surface flaws
p 1935 N93-20678

STRAIN ENERGY RELEASE RATE
Predicting the failure load of adhesive joints
p 1932 N93-20655
Delamination and fatigue of composite materials: A review p 1840 N93-21509
Prediction of delamination in tapered unidirectional glass fibre epoxy with dropped plies under static tension and compression p 1844 N93-21530

STRAIN GAGES
Reliability study of the NiH2 strain gage
p 1908 N93-20515
Smart Integrated Microsensor System (SIMS)
[AD-A259430] p 1907 N93-21247
Automated connector force testing
[DE93-004634] p 1907 N93-21704

STRAIN HARDENING
The roles of slip geometry and hardening behavior in intergranular toughness
[DE93-005647] p 2081 N93-21712
The behavior of intermetallic compounds at large plastic strains
[DE93-003820] p 1857 N93-21772

STRAIN MEASUREMENT
Smart materials p 1845 N93-20624
Smart Integrated Microsensor System (SIMS)
[AD-A259430] p 1907 N93-21247

STRAIN RATE
Analysis of hysteresis in shape memory alloys during thermal cyclic loading p 1858 N93-20694

STRAKES
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255

STRANGE ATTRACTORS
A synergetic treatment of the vortices behaviour of a plasma with viscosity
[NIFS-166] p 2070 N93-20249
Peano-like dynamics as a model for strange nonchaotic behaviour p 1933 N93-20661

STRATIGRAPHY
Two-dimensional planar geosystems subjected to three-dimensional dynamic loads
[AD-A258723] p 1921 N93-20325
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin
[PB93-115640] p 2000 N93-21692
Evaluation of the cobalt crust continuum on seamounts in the EEZ of Hawaii
[PB93-120848] p 2019 N93-21792

STRATOCUMULUS CLOUDS
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984
Stratiform clouds and their interaction with atmospheric motion
[NASA-CR-192280] p 2002 N93-20038
Activities of South Dakota School of Mines and Technology
[AD-A259282] p 2012 N93-20607

STRATOSPHERE
Global temperature variations p 2003 N93-20068
Life cycles of transient planetary waves
p 2004 N93-20077
Detection of polar stratospheric clouds from satellite
p 1957 N93-21591

STRATOSPHERIC WARMING
Pinatubo eruption winter climate effects: Model versus observations
[NASA-CR-191955] p 1994 N93-21946

STRATUS CLOUDS
Activities of South Dakota School of Mines and Technology
[AD-A259282] p 2012 N93-20607
A documentation of icing-relevant cloud-physical parameters on vertical soundings of stratiform clouds (continuation)
[DLR-MITT-91-19] p 2012 N93-21040

STREAK CAMERAS
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments
[DE93-002897] p 1912 N93-21955

STREAMS
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
Use of ecoregions in biological monitoring
[PB93-106730] p 1992 N93-21656

STRESS (PHYSIOLOGY)
Evaluation of two microclimate cooling air vests on a heated mannequin
[AD-A259410] p 2026 N93-21269

STRESS ANALYSIS
The analytical representation of viscoelastic material properties using optimization techniques
[NASA-TM-108394] p 1920 N93-19972
Method and apparatus for determination of material residual stress
[NASA-CASE-GSC-13451-1] p 1921 N93-20118
The use of phase-stepping in the photoelastic analysis of complex components p 1928 N93-20636

Nonhomogeneous interface stress analysis in composite media using a mixed finite element formulation p 1929 N93-20640
Material nonlinear analysis of composites p 1929 N93-20641
Improvement to the higher order finite strip method p 1939 N93-20697
Boundary element fracture mechanics analysis in plane orthotropic elasticity p 1939 N93-20700
Post-buckling analysis of thin-walled channel sections undergoing local and distortional buckling [PB93-112928] p 1947 N93-21236
Fatigue Design 1992, volume 1 [VTT-SYMPOSIUM-130-VOL-1] p 1947 N93-21318
The least and most damaging histories which can be constructed from a specific from-to matrix p 1948 N93-21321
Spectrum fatigue data in comparison to design curves in the long life regime p 1948 N93-21324
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO p 1950 N93-21337
Simplified analysis of elastic-plastic strain concentration in notched components under cyclic loading p 1950 N93-21338
Multi-axial fatigue damage analysis using the boundary element method p 1950 N93-21339
Edge delamination of composite laminates p 1842 N93-21519
Experimental verification of the theory of plastic moment capacity of an inclined yield line under axial force [PB93-118792] p 1952 N93-21798
Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual [NASA-CR-191017] p 1953 N93-22005

STRESS CONCENTRATION
An engineering tool for solving multiaxial fatigue problems p 1922 N93-20334
Aspects of good design practice for fatigue-loaded welded components p 1925 N93-20356
Further developments in shape optimization of stress concentration regions. Part 2: Applications p 1928 N93-20631
On the extension of asymptotic analysis techniques to geometrically complicated stress concentration regions p 1928 N93-20632
Fracture toughness using circular discs p 1935 N93-20677

STRESS CORROSION
A simulation of corrosion fatigue life distribution in low alloy steel p 1922 N93-20340

STRESS CORROSION CRACKING
A simulation of corrosion fatigue life distribution in low alloy steel p 1922 N93-20340
Application of new experimental methods to pipeline stress corrosion cracking [PB92-224575] p 1951 N93-21499
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels [DE93-003005] p 1857 N93-21985

STRESS DISTRIBUTION
The role of least squares in variational principles of elasticity p 1926 N93-20619
Further developments in shape optimization of stress concentration regions. Part 1: General theory p 1927 N93-20630
Further developments in shape optimization of stress concentration regions. Part 2: Applications p 1928 N93-20631
On the extension of asymptotic analysis techniques to geometrically complicated stress concentration regions p 1928 N93-20632
The use of phase-stepping in the photoelastic analysis of complex components p 1928 N93-20636
Nonhomogeneous interface stress analysis in composite media using a mixed finite element formulation p 1929 N93-20640
Material nonlinear analysis of composites p 1929 N93-20641
Peak stresses in adhesive step lap joints with voids p 1932 N93-20656
Fracture toughness using circular discs p 1935 N93-20677
Main crack-microvoid interaction. The antiplane problem p 1937 N93-20684
Boundary element shape function for bimaterial interface cracks p 1939 N93-20701
A local approach for fatigue strength evaluation on ship structures p 1948 N93-21327
A comparative study of ship hull structures fatigue assessment methods p 1949 N93-21332
Finding fatigue resistant and lightweight designs using the optimization methods CAO and SKO p 1950 N93-21337
Improving the selection of bolted joint parameters by using results from finite-element analysis [DE93-002243] p 1951 N93-21774

STRESS FUNCTIONS
Fracture toughness using circular discs p 1935 N93-20677

STRESS INTENSITY FACTORS
Mixed mode fatigue crack propagation in a crankshaft p 1923 N93-20347
Analysis of mixed mode cracks in a cylindrical shell p 1936 N93-20683
Boundary element fracture mechanics analysis in plane orthotropic elasticity p 1939 N93-20700
Modelling of fatigue crack growth in flat plate weldments and tubular welded joints p 1948 N93-21326
Progressive delamination in polymer matrix composite laminates: A new approach p 1841 N93-21515

STRESS MEASUREMENT
The significance of service load data for fatigue life analysis p 1947 N93-21319
Microcomputer system for measurements and analysis of signals for fatigue life calculations under biaxial random stress state p 1948 N93-21320

STRESS PROPAGATION
Application of new experimental methods to pipeline stress corrosion cracking [PB92-224575] p 1951 N93-21499

STRESS RELAXATION
The analytical representation of viscoelastic material properties using optimization techniques [NASA-TM-108394] p 1920 N93-19972

STRESS WAVES
An acousto-ultrasonic NDE technique for monitoring material anisotropy [DE93-002994] p 1919 N93-21982

STRESS-STRAIN DIAGRAMS
A modified Miner rule to predict crack initiation p 1948 N93-21325
The use of finite element codes for cyclic stress-strain analysis p 1950 N93-21340

STRESS-STRAIN RELATIONSHIPS
Discriminating experiments for multiaxial fatigue damage models p 1921 N93-20331
Thermal plastic strain fatigue life of the roll p 1924 N93-20354
Dynamic stress-strain behavior in shear of SiCwhisker reinforced aluminum alloy composites p 1930 N93-20643
Peak stresses in adhesive step lap joints with voids p 1932 N93-20656
Deformation of TiNi shape memory alloy under thermomechanical cycles p 1858 N93-20695
Energy equation for beam lateral buckling [PB92-225390] p 1946 N93-21019
Buckling of restrained columns with shear deformation and axial shortening [PB93-110476] p 1946 N93-21233
The influence of particle/matrix debonding on the stress-strain behavior of particulate composites p 1843 N93-21525
The roles of slip geometry and hardening behavior in intergranular toughness [DE93-005647] p 2081 N93-21712

STRETCHING
Buckling of columns: Allowance for axial shortening [PB93-110484] p 1947 N93-21234

STRING THEORY
Lectures on 2D gravity and 2D string theory [DE93-003746] p 2084 N93-21737

STRINGS
Vibration of a multi-guided rotating string p 1934 N93-20672

STRUCTURAL ANALYSIS
Multidisciplinary tailoring of hot composite structures [NASA-TM-106027] p 1920 N93-19971
Improvements to a method for the geometrically nonlinear analysis of compressively loaded stiffened composite panels [NASA-CR-192183] p 1920 N93-20034
Multidisciplinary computational aerosciences [NASA-TM-103946] p 1759 N93-20323
Acoustic wave propagation in an adhesive bond model with degrading interfacial layers [AD-A258684] p 1918 N93-20373
The influence of structural optimization on the aeroelastic properties of a vertical tail [AD-A259140] p 1781 N93-20575
YIDOYU and its application to aircraft design [AD-A259262] p 1781 N93-20605
Proceedings of the Thirteenth Canadian Congress of Applied Mechanics, volumes 1 and 2 [ISBN-0920049-04] p 1925 N93-20616
Fluid/structures interactions. Aircraft considerations p 1787 N93-20628
Probabilistic design procedures for load bearing ceramic components p 1930 N93-20647
Instability and variation analysis using a parallel substructuring procedure p 1932 N93-20659
Nonlinear analysis of plates by the finite element method p 1939 N93-20698
MSC/NASTRAN structure optimization test module version 67 (preliminary) [REPT-5-191025] p 1945 N93-20907
Amorphous Mo/Si multilayers: Interdiffusion and structural relaxation; crystallization [ETN-93-92992] p 1859 N93-20909
Computational mechanics at Los Alamos National Laboratory [DE93-003725] p 2042 N93-21735

STRUCTURAL DESIGN
PDES application protocol suite for composites (PAS-C) 1992 annual report for the PAS-C program [AD-A258625] p 1831 N93-19998
Research on HOPE p 1791 N93-20423
The influence of structural optimization on the aeroelastic properties of a vertical tail [AD-A259140] p 1781 N93-20575
Probabilistic design procedures for load bearing ceramic components p 1930 N93-20647
Multimodal optimization of vibrating space frames p 1931 N93-20652
Analysis of structurally-varying systems using component-mode synthesis technique p 1932 N93-20658
The design of bonded structural assemblies [REPT-921-430-116] p 1824 N93-20934
An expert system to study bonded joints [REPT-921-430-113] p 1833 N93-20937
Fatigue Design 1992, volume 1 [VTT-SYMPOSIUM-130-VOL-1] p 1947 N93-21318
Delamination damage and its effect on buckling of laminated cylindrical shells p 1841 N93-21516
Application of artificial neural networks to the design optimization of aerospace structural components [NASA-TM-4389] p 1952 N93-21831

STRUCTURAL ENGINEERING
Reliable fusion of control and sensing in intelligent machines [NASA-CR-192780] p 2048 N93-21371

STRUCTURAL FAILURE
Delamination buckling in circular plates p 1931 N93-20652
Buckling of clamped angle-ply laminated plates under inplane loads p 1931 N93-20654
Predicting the failure load of adhesive joints p 1932 N93-20655
Semi-numerical approach to the buckling of composite panel p 1935 N93-20676
A comparative study of ship hull structures fatigue assessment methods p 1949 N93-21332
Edge delamination of composite laminates p 1842 N93-21519
The effects of surface treatment on torsional fatigue failure in recoil springs [AD-A259345] p 1952 N93-21987

STRUCTURAL MEMBERS
The influence of structural optimization on the aeroelastic properties of a vertical tail [AD-A259140] p 1781 N93-20575
Integrated view of methods in buckling analysis [PB93-110468] p 1946 N93-21232

STRUCTURAL PROPERTIES (GEOLOGY)
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion [PB93-115632] p 2000 N93-21691

STRUCTURAL RELIABILITY
An efficient method for the reliability analysis of geometric nonlinear frame structures p 1931 N93-20651
Fatigue of old metallic railroad bridges p 1949 N93-21330

STRUCTURAL STABILITY
Design considerations for an astronaut monorail system for large space structures and the structural characterization of its positioning arm p 1823 N93-20167
Probabilistic design procedures for load bearing ceramic components p 1930 N93-20647
An efficient method for the reliability analysis of geometric nonlinear frame structures p 1931 N93-20651
Prebuckling deflections and lateral buckling: Applications [PB92-225366] p 1946 N93-21017
Prebuckling deflections and lateral buckling: Theory [PB92-225382] p 1946 N93-21018
Energy equation for beam lateral buckling [PB92-225390] p 1946 N93-21019

STRUCTURAL VIBRATION
Multidisciplinary tailoring of hot composite structures [NASA-TM-106027] p 1920 N93-19971

Wavelet features for failure detection and identification in vibration systems
[AD-A259427] p 1914 N93-20007
Large amplitude free vibrations of cross-ply composite beams p 1930 N93-20646
On the vibration of thermally stressed laminated composite cylindrical shells p 1930 N93-20648
A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649
Multimodal optimization of vibrating space frames p 1931 N93-20652
Instability and variation analysis using a parallel substructuring procedure p 1932 N93-20659
Dynamic simulation of flexible body systems by the vector solution method p 1933 N93-20666
Green's function method for vibration of structures p 1934 N93-20667
Forced vibration of non-selfadjoint elastic systems p 1934 N93-20668
Transverse vibrations of an elastically restrained rod carrying a tip mass p 1934 N93-20669
On oscillatory motion of a spring-mass system subjected to piecewise constant forces p 1934 N93-20670
The free vibration of isotropic and specially orthotropic triangular plates p 1935 N93-20673

STRUCTURED PROGRAMMING
Database language SQL: Integrator of CALS data repositories
[PB93-113637] p 2040 N93-21239

STRUTS
Neutral buoyancy test evaluation of hardware and extravehicular activity procedures for on-orbit assembly of a 14 meter precision reflector
[NASA-TM-107735] p 1824 N93-20922

STUDENTS
Probabilistic student modeling with knowledge space theory
[AD-A258622] p 2045 N93-19997
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579
Linear algebra applied to physics determining small vibrations in conservative elastic systems
[AD-A259114] p 2050 N93-20589
Pathways to excellence: A Federal strategy for science, mathematics, engineering, and technology education
[NASA-EP-288] p 1819 N93-21538
Preliminary studies of planning and flight strip use as air traffic controller memory aids
[DOT/FAA/CT-TN92/22] p 1780 N93-21759

SUBJECTS
USA aviation digest index, 1989, volume 11
[AD-A258673] p 2089 N93-20388
Index to USA aviation digest, 1990
[AD-A258678] p 2089 N93-20389
Index to USA aviation digest, 1991
[AD-A258679] p 2089 N93-20390
Status of document search and data quality objective efforts
[DE93-003216] p 2092 N93-21959

SUBMARINES
Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957

SUBSIDIARIES
Nonmonotonic temporal reasoning
[AD-A258699] p 2032 N93-20377

SUBSONIC SPEED
Experimental investigations on wing-body combinations and their components at high angles of attack in the subsonic and transonic speed range
[DLR-FB-91-43] p 1783 N93-21762

SUBSTITUTES
Application of surrogate materials in process study of actinides
[DE93-002257] p 1856 N93-20024

SUBSTRATES
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119
High temperature substrate mount for chemical vapor deposition of diamond
[AD-D015563] p 1858 N93-20122
Structure and reliability metal contacts to GaAs
[AD-A259184] p 1889 N93-20272
Metallization and sputtering of textiles: Preconditions for the substrate, properties and applications p 1838 N93-21158

SUCTION
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
The effect of surface suction near the leading edge of a swept-back wing
[AERO-REPT-9205] p 1761 N93-20807

SUDAN
Deforestation in African dry lands: Assessment of changes in woody vegetation in semi arid Sudan p 1956 N93-21585

SUDDEN IONOSPHERIC DISTURBANCES
Solar-geophysical data number 573, May 1992. Part 1: Prompt reports, data for April, March 1992 and late data
[PB92-213461] p 2101 N93-21375
Solar-geophysical data number 577, September 1992. Part 1: Prompt reports, data for August, July 1992 and late data
[PB93-116945] p 2101 N93-21385
Solar-geophysical data number 575, July 1992. Part 1: (Prompt reports). Data for May, April 1992 and late data
[PB92-235993] p 2101 N93-21469

SULFATES
A study of TRIGLYCINE SULFATE (TGS) crystals from the International Microgravity Laboratory Mission (IML-1)
[NASA-CR-191956] p 2078 N93-20127
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302

SULFIDATION
Advanced turbine design for coal-fueled engines
[DE93-000224] p 1915 N93-21254

SULFUR
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302
Semiempirical studies of atomic structure
[DE93-005117] p 2063 N93-21707

SULFURIC ACID
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302

SUM RULES
Vacuum structure of pure gauge theories on the lattice
[DE93-001920] p 2081 N93-21701

SUN
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984

SUNLIGHT
Proceedings of the Workshop on the Solar Electromagnetic Radiation Study for Solar Cycle 22
[PB93-121846] p 2101 N93-21292
Video guidance sensor p 1812 N93-21409

SUNSPOTS
Sunspot dynamics
[NASA-CR-192284] p 2100 N93-20754

SUPERCHARGERS
Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development)
[PB92-227891] p 1878 N93-21465

SUPERCOMPUTERS
CRAY mini manual. Revision D
[NASA-TM-107599-REV-D] p 2028 N93-21027
Delivery of very high bandwidth with ATM switches and SONET
[DE93-004274] p 2045 N93-21721
Computational mechanics at Los Alamos National Laboratory
[DE93-003725] p 2042 N93-21735

SUPERCONDUCTING CAVITY RESONATORS
Application of radiofrequency superconductivity to accelerators for high-current ion beams
[DE93-002925] p 2066 N93-21979

SUPERCONDUCTING FILMS
Development of superconducting thin films with a critical temperature greater than 110 K
[AD-A257988] p 2080 N93-21224
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy
[DE93-002980] p 2083 N93-21981

SUPERCONDUCTING MAGNETS
Design study on divertor plates of Large Helical Device (LHD)
[NIFS-190] p 2074 N93-21361

SUPERCONDUCTING SUPER COLLIDER
Configuration and construction of a free electron laser in near infrared at the superconducting electron accelerator in Darmstadt (Germany)
[ETN-93-93412] p 1911 N93-21175

SUPERCONDUCTIVITY
Development of elements of a high T(sub c) superconducting cable
[AD-A259415] p 1888 N93-20130
Advanced UHV thin-film deposition facility for research in superconductivity and superconducting electronics
[AD-A259089] p 1889 N93-20395
The effective transverse resistivity in multifilamentary conductors
[MEMO-1027] p 1892 N93-21008
Development of superconducting thin films with a critical temperature greater than 110 K
[AD-A257988] p 2080 N93-21224
Properties of aligned YBa2Cu3O(7-delta) superconductor as a function of oxygen deficiency delta
[DE93-001707] p 2082 N93-21750
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres
[DE93-002999] p 2082 N93-21757
Application of radiofrequency superconductivity to accelerators for high-current ion beams
[DE93-002925] p 2066 N93-21979
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy
[DE93-002980] p 2083 N93-21981
Critical current density, irreversibility line, and flux creep activation energy in silver-sheathed Bi2Sr2Ca2Cu3O(sub x) superconducting tapes
[DE93-002998] p 2083 N93-21984

SUPERCONDUCTORS
Method to produce ceramic superconducting filaments bonded to metals
[AD-D015595] p 1859 N93-20786
Solution of large, sparse systems of linear equations in massively parallel applications
[DE93-004243] p 2045 N93-21741

SUPERFLUIDITY
Superfluid Stirling refrigerator with a counterflow regenerator
[DE93-003858] p 1879 N93-21971

SUPERHETERODYNE RECEIVERS
Planar monolithic Schottky varactor diode millimeter-wave frequency multipliers
[AD-A258616] p 1887 N93-19995
Method and apparatus for passive direction finding with sideband determination
[AD-D015546] p 1882 N93-20306

SUPERNOVA REMNANTS
Gravitational metric deviation by supernova neutrino bursts
[PREPRINT-789] p 2096 N93-20849

SUPERPOSITION (MATHEMATICS)
A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649
Study of free vibration of orthotropic rectangular plates p 1935 N93-20674
Main crack-microvoid interaction. The antiplane problem p 1937 N93-20684

SUPERSONIC AIRCRAFT
Supersonic transport: Which material for the engine
[DS-2023] p 1786 N93-21459

SUPERSONIC BOUNDARY LAYERS
On the disturbances development in the supersonic boundary layer p 1763 N93-20686

SUPERSONIC COMBUSTION
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237
A k-omega-multivariate beta PDF for supersonic combustion
[NASA-CR-191930] p 1851 N93-21749

SUPERSONIC COMBUSTION RAMJET ENGINES
Research in robust control for hypersonic vehicles
[NASA-CR-192127] p 1786 N93-20296
Computational parametric study of sidewall-compression scramjet inlet performance at Mach 10
[NASA-TM-4411] p 1900 N93-20299
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
Thermodynamic flow description of a ramjet for determination of engine forces and moments
[ESA-TT-1266] p 1786 N93-21288

SUPERSONIC COMMERCIAL AIR TRANSPORT
HSCT mission analysis of waverider designs
[NASA-CR-192193] p 1783 N93-21646

SUPERSONIC CRUISE AIRCRAFT RESEARCH
HSCT mission analysis of waverider designs
[NASA-CR-192193] p 1783 N93-21646

SUPERSONIC FLOW
Shock-dependent, optimum thrust wings in supersonic flow p 1760 N93-20169
A k-omega-multivariate beta PDF for supersonic combustion
[NASA-CR-191930] p 1851 N93-21749

SUPERSONIC JET FLOW
Experiment and modeling of the noise reduction for a turbulent supersonic jet by means of a nozzle with a sudden enlargement
[MPIS-15/1991] p 2060 N93-21024

SUPERSYMMETRY
Two-parameter quantum groups
[PREPRINT-820] p 2060 N93-21182
SUPPORT SYSTEMS
Construction of evaluation test equipment for 16 bit space MPU p 1801 N93-20486
Joint Typhoon Warning Center (JTWC92) model
[AD-A258646] p 2011 N93-20586
SUPPORTS
High temperature substrate mount for chemical vapor deposition of diamond
[AD-D015563] p 1858 N93-20122
SURFACE ACOUSTIC WAVE DEVICES
Vapor detection using SAW sensors
p 1773 N93-21912
SURFACE CRACKS
Prediction of fracture initiation in surface flaws
p 1935 N93-20678
Nondestructive evaluation of surface-breaking cracks in composite plates p 1936 N93-20680
SRB frustrum 'smiley' cracking phenomenon study
[NASA-CR-192621] p 1829 N93-20912
SURFACE DISTORTION
Surface/surface intersection on a processor mesh
[RR-864-M] p 2038 N93-20943
Dynamics of sessile droplets distortion and disruption by electric field in microgravity conditions
p 1805 N93-21091
SURFACE ENERGY
Coordinated field study for CaPE: Analysis of energy and water budgets p 2005 N93-20079
Elastic moduli and seismic wave attenuation in dry and saturated rock. Volume 2: Modulus dispersion and attenuation
[AD-A258711] p 1998 N93-20381
Botswana water and surface energy balance research program. Part 1: Integrated approach and field campaign results
[NASA-TM-108607] p 2018 N93-20891
SURFACE FINISHING
Ion source AHKS-30
[DLR-MITT-91-20] p 1860 N93-21041
Silicone softeners: Today p 1838 N93-21159
A comment on the role of machining induced residual stresses on fatigue crack initiation p 1949 N93-21334
SURFACE LAYERS
Interface properties of wide bandgap semiconductor structures
[AD-A259416] p 2078 N93-20131
Surface modification using a cascade arc plasma source
[ETN-93-93065] p 2074 N93-20936
SURFACE PROPERTIES
Low-pressure diamond growth using a secondary radical source
[AD-A258539] p 2077 N93-20055
TC curves and TS surfaces and their applications in CAD/CAM p 1943 N93-20723
Apparatus and method for non-contact surface voltage probing by scanning photoelectron emission
[AD-D015583] p 1891 N93-20799
Wetting of fibers measured by LPR-90 equipment
p 1835 N93-21139
Silicone softeners: Today p 1838 N93-21159
Effect of surface active materials on bubble dynamics in two-phase flow
[AD-A259340] p 1902 N93-21264
Can measurements in the O2A- and B-bands be used for atmospheric correction of satellite measurements over the ocean? p 1955 N93-21581
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
SURFACE REACTIONS
Surface pi bonding and the near-first-order desorption kinetics of hydrogen from Ge(100)2x1
[AD-A258534] p 1845 N93-20051
Interaction of hydrogen and water with diamond (100): Infrared spectroscopy
[AD-A258535] p 1846 N93-20052
Pairing and clustering of hydrogen on Si(100)2x1: Monte Carlo studies
[AD-A258537] p 1846 N93-20054
Low-pressure diamond growth using a secondary radical source
[AD-A258539] p 2077 N93-20055
Competitive pairing and the chemistry of coadsorbed hydrogen and halogens on Ge(100)
[AD-A258538] p 1846 N93-20386
Analysis of surfaces from the LDEF A0114, phase 2
[NASA-CR-192306] p 1847 N93-20756
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
SURFACE ROUGHNESS
Cyclic material properties at high strain ranges beyond the standard design codes p 1925 N93-20357
Implementation and evaluation of a three-dimensional photometric sampler
[AD-A258636] p 1905 N93-20361
Advanced control strategies for wind turbines
[DE93-003252] p 1989 N93-21961
SURFACE TEMPERATURE
A study of the thermal bar in Lake Ladoga (Russia) using NOAA-AVHRR data p 1964 N93-21635
SURFACE TREATMENT
Wetting of fibers measured by LPR-90 equipment
p 1835 N93-21139
The improvement of fatigue life of aluminum alloy structure by laser radiation p 1950 N93-21336
The Xu-Tec process of introducing normally solid materials into substrate surfaces
[DE93-005124] p 1861 N93-21708
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770
The effects of surface treatment on torsional fatigue failure in recoil springs
[AD-A259345] p 1952 N93-21987
SURFACE VEHICLES
Role of advanced technology in the security of surface transportation p 1764 N93-21857
SURFACE WATER
Hydrographic data from Texas continental shelf and the Northwest continental slope of the Gulf of Mexico: R/V GYRE Cruise 92G-03 (16-20 March 1992)
[PB92-218155] p 2018 N93-21049
SURFACTANTS
Effect of the reinforcement finish in the mechanical performances of epoxy-glass composites
p 1836 N93-21146
The effect of lamination angle on polymer retention
[DE93-004304] p 1861 N93-21722
SURVEYS
OLS data system/global survey of lightning
p 2006 N93-20085
Survey of space environment services center users and services
[AD-A258672] p 2089 N93-20366
Reports on cartography and geodesy, series 1, number 106
[ETN-93-92583] p 1967 N93-20528
Survey of nuclear activations for intense proton and deuteron beams
[AD-A259258] p 2061 N93-20604
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
Advanced very high resolution radiometer data to update forest area change for midsouth states
[PB93-121416] p 1979 N93-21685
Polarization effects in coherent and incoherent photon scattering: Survey of measurements and theory relevant to radiation transport calculations
[PB93-126092] p 2064 N93-21828
SURVIVAL
Nutrition and hydration status of aircrew members consuming the food packet, survival, general purpose, improved during a simulated survival scenario
[AD-A258744] p 2022 N93-20384
SUSPENDING (MIXING)
Ordering of aggregating particle suspensions undergoing simple shear p 1805 N93-21092
SUSPENSIONS
Microgravity combustion of dust suspensions
p 1853 N93-20201
Ordering of aggregating particle suspensions undergoing simple shear p 1805 N93-21092
SWEEP ANGLE
Computational parametric study of sidewall-compression scramjet inlet performance at Mach 10
[NASA-TM-4411] p 1900 N93-20299
SWEPT WINGS
Crossflow stability and transition experiments in a swept-wing flow
[NASA-TM-108650] p 1904 N93-21819
SWEPTBACK WINGS
The effect of surface suction near the leading edge of a swept-back wing
[AERO-REPT-9205] p 1761 N93-20807
SWITCHES
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
Delivery of very high bandwidth with ATM switches and SONET
[DE93-004274] p 2045 N93-21721
Dense plasma focus powered by flux compression generators
[DE93-003781] p 2076 N93-21837
An overview of Sandia National Laboratories' plasma switched, gigawatt, ultra-wideband impulse transmitter program
[DE93-003249] p 1886 N93-21960
SWITCHING
Characterization and snubbing of a bidirectional MCT in a resonant ac link converter
[NASA-CR-192230] p 1889 N93-20258
An overview of Sandia National Laboratories' plasma switched, gigawatt, ultra-wideband impulse transmitter program
[DE93-003249] p 1886 N93-21960
SWITCHING THEORY
Global stabilization of linear analytic systems
[RR-403] p 2051 N93-20738
SYMBOLIC PROGRAMMING
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
SYMBOLS
On the typography of flight-deck documentation
[NASA-CR-177605] p 2087 N93-19970
Development of an automated cartographic system
p 1967 N93-20530
SYMMETRY
The role of conditional symmetric instability in the development of moderate to heavy frozen precipitation bands
[AD-A258575] p 2002 N93-20031
An order-theoretic unification and generalisation of certain fundamental bijections in mathematical classification, 1
[RR-874-M] p 2053 N93-20873
SYNCHRONOUS PLATFORMS
Investigation of cloud/water vapor motion winds from geostationary satellite p 2008 N93-20094
SYNCHROTRON RADIATION
Experimental investigations of undulator radiation compatability
[ETN-93-92566] p 2066 N93-20880
Gravitational synchrotron radiation and gravitrons by lights
[PREPRINT-821] p 1999 N93-20951
The Crab nebula's wisps as shocked pulsar wind
[DE93-003466] p 2097 N93-21673
Radiation from moving charged particles with spin
[DE93-004633] p 2063 N93-21703
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments
[DE93-002897] p 1912 N93-21955
SYNCHROTRONS
Relativistic shock waves and the excitation of plerions
[DE93-003469] p 2066 N93-21729
SYNOPTIC METEOROLOGY
Stratiform clouds and their interaction with atmospheric motion
[NASA-CR-192280] p 2002 N93-20038
Synoptic/planetary-scale interactions and blocking over the North Atlantic Ocean p 2007 N93-20091
Meteorological conditions over the South Atlantic Ocean during July and August of 1991
[PB92-235738] p 2015 N93-21503
Routine validation of TOVS retrievals: Lessons learned from a pilot experiment p 1960 N93-21611
SYNTAX
Tomita's algorithm: Extensions and applications
[MEMO-INF-91-68] p 2030 N93-20220
SYNTHESIS (CHEMISTRY)
Fullerenes formation in flames p 1853 N93-20187
Combustion synthesis of ceramic and metal-matrix composites p 1854 N93-20203
Plant laboratory scale preparation and complete characterization of modified composition C-4 containing a taggant p 1775 N93-21928
SYNTHETIC APERTURE RADAR
Use of ERS-1 SAR data in numerical sea ice modeling
p 1957 N93-21592
Remote sensing of Arctic sea ice using the ERS-1 SAR p 1957 N93-21593
Validation of ERS-1 synthetic aperture radar for imaging ocean waves: First results p 1961 N93-21616
One-class classifiers and their application to synthetic aperture radar target recognition
[DE93-000716] p 1886 N93-21769
SYNTHETIC APERTURES
An overview of eight years of activity developing French nickel-hydrogen technology p 1985 N93-20514
SYNTHETIC FIBERS
Fiber development in Japan p 1834 N93-21130
New special chemical fibres p 1836 N93-21147

Features in PO fibre applications
p 1837 N93-21148
The production of fibres from polypropylene and liquid crystal polymer blends p 1837 N93-21149
Kynol (TM) Novoloid fibers: Survivable fibers for tough times p 1837 N93-21150
Twaron in composites and protective clothing
p 1837 N93-21153
Applications of Visil fibres in functional textiles
p 1837 N93-21154
Developments in heat and flame resistant textiles for protective clothing and barrier fabrics
p 1838 N93-21157
Correlation of results of radiant heat test and convective heat test for three layered protective clothing
p 1838 N93-21161

SYNTHETIC FUELS
First international alternative fueled vehicle round-up
[DE93-002779] p 1916 N93-21667

SYNTHETIC METALS
The polyanilines: A novel class of conducting polymers
[AD-A259386] p 1860 N93-21266

SYNTHETIC RESINS
Features in PO fibre applications
p 1837 N93-21148
Kynol (TM) Novoloid fibers: Survivable fibers for tough times p 1837 N93-21150
Twaron in composites and protective clothing
p 1837 N93-21153

SYSTEM EFFECTIVENESS
National Airspace System: Air traffic control and airspace management operational concept NAS-SR-132
[DOT/FAA/SE-92/5] p 1779 N93-20164

SYSTEM FAILURES
Report at a glance: Report of the Presidential Commission on the Space Shuttle Challenger Accident
p 1820 N93-20036
URV flight test of an Ada implemented self-repairing flight control system
[AD-A259205] p 1787 N93-20551
A simulator study into low speed longitudinal handling qualities of ACT transport aircraft
[NLR-TP-89387-U] p 1787 N93-20743

SYSTEM IDENTIFICATION
Identification of propulsion systems
[NASA-TM-106007] p 1784 N93-20109

SYSTEMS ANALYSIS
An object-oriented computer aided design program for modern control systems analysis
[AD-A259139] p 2033 N93-20559
Bond graph based modelling using MACROS: An introduction to the program BAMMS
[MEMT-18] p 2034 N93-20808
Explicit probabilities for the symmetric coupled processor
[REPT-91-43] p 2058 N93-20809
The origins of lambda-calculus and term rewriting systems
[INRIA-RR-1543] p 2053 N93-20870
Analysis of timed-token ring protocols
[INRIA-RR-1570] p 2044 N93-20894
On the comparison of sequences: Analyzing behavioural aspects of courseware development and use
[MEMO-1030] p 2038 N93-21033

SYSTEMS ENGINEERING
A framework for corporate implementation of object-oriented software development
[AD-A258717] p 2032 N93-20383
NASA issues
[GAO/OCG-93-27TR] p 2085 N93-20904
Optimization and sensitivity computations for the conception of internal ventilation system in the aircraft engine
[ETN-93-93375] p 1785 N93-20913
Object-oriented design. MECANO: A method and an environment for object-oriented applications construction
[ETN-93-92682] p 2038 N93-20921
NASA systems engineering handbook. Draft
[NASA-TM-108702] p 2086 N93-21188
The generalized Voronoi diagram for a set of polygons: Algorithms, operation and applications to shape analysis
[ETN-93-92689] p 2056 N93-21392
Naval research reviews, volume 44, no. 1, 1992
[PB93-129682] p 2104 N93-21808
An approach to improving TNA EDS
p 1765 N93-21864

SYSTEMS INTEGRATION
Interactive graphics intersection design system: First-stage development
[PB92-227693] p 2040 N93-21291
The integrated design and manufacturing of composite structures for aircraft using an advanced tape layering technology
[MBB-LME-251-S-PUB-0491-A] p 1783 N93-21401
Space Station ECLSS integration analysis
[NASA-CR-192470] p 2027 N93-22002

SYSTEMS MANAGEMENT
Demonstration of automated proximity and docking technologies p 1814 N93-21423

SYSTEMS SIMULATION
NASA MSFC hardware in the loop simulations of automatic rendezvous and capture systems
p 1818 N93-21448

T

T SHAPE
Plastic mechanism analysis of T-joints in RHS under concentrated force
[PB92-225374] p 1946 N93-21029

T-38 AIRCRAFT
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579

T-56 ENGINE
Field evaluation of six protective coatings applied to T-56 turbine blades after 2000 hours of engine use
[ARL-TR-2] p 1786 N93-21316

TABLES (DATA)
Surface observation climatic summaries
[AD-A258589] p 2001 N93-19964

TAIL ASSEMBLIES
Apparatus and method for improving spin recovery on aircraft
[NASA-CASE-LAR-14747-1] p 1786 N93-20039
The influence of structural optimization on the aeroelastic properties of a vertical tail
[AD-A259140] p 1781 N93-20575

TAKEOFF
Analysis of aircraft noise levels in the vicinity of start-of-takeoff roll at Baltimore-Washington International Airport
[PB92-221605] p 1991 N93-21501

TANKER AIRCRAFT
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities, volume 11
[AGARD-AG-300-VOL-11] p 1781 N93-21305

TAPERING
Advantages of tapering finite data records for spectral analysis
[PB93-116614] p 2092 N93-21475

TAPES
Manufacturing of high quality polypropylene/glass fibre prepreg tape p 1834 N93-21134
Thermoplastic tape winding parameters
p 1835 N93-21135

TARGET ACQUISITION
RASSP final technical report
[AD-A258562] p 1882 N93-20371
Demonstration of a 532 nm direct detection imaging laser radar using a Digicon receiver
[AD-A259226] p 1883 N93-20578
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414

TARGET RECOGNITION
RASSP final technical report
[AD-A258562] p 1882 N93-20371
High range resolution radar target identification using the Prony model and hidden Markov models
[AD-A259210] p 1883 N93-20553
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
One-class classifiers and their application to synthetic aperture radar target recognition
[DE93-000716] p 1886 N93-21769

TARGETS
Use of features derived from class proportions in a pixel for the multispectral classification of remote sensing images
[INPE-5306-TDI/456] p 1966 N93-20322
Contact dynamics testing of automated three-point docking mechanism p 1812 N93-21411
TRAC based sensing for autonomous rendezvous
p 1813 N93-21412

TARS
Gasifiers optimized for fuel cell applications
[DE93-003486] p 1988 N93-21781

TASK COMPLEXITY
The central executive component of working memory
[AD-A258724] p 2025 N93-20326

TASK PLANNING (ROBOTICS)
Grasp admittance center. A concept
p 1918 N93-20720
Distance estimation and collision prediction for on-line robotic motion planning
[NASA-CR-192737] p 2049 N93-21390
Task sequence planning in a robot workcell using AND/OR nets
[NASA-CR-192735] p 2049 N93-21391

TEARING MODES (PLASMAS)
Magnetic reconnection and current-sheet formation at x-type neutral points
[DE93-002161] p 2075 N93-21697

TECHNOLOGIES
Science and technology in US international affairs
[ISBN-1-881054-00-4] p 2094 N93-21758

TECHNOLOGY ASSESSMENT
Communications system evolutionary scenarios for Martian SEI support
[NASA-CR-192206] p 1879 N93-19962
SSTAC/ARTS review of the draft Integrated Technology Plan (ITP). Volume 1: Plenary Session
[NASA-TM-108651] p 2085 N93-20329
Review on optical elements for intersatellite laser communication p 1798 N93-20465
Establishment of high density installation technology
p 1800 N93-20478
Handling and using information systems with new technology
[PNR-90910] p 2090 N93-20734
CIME of microsystems
[MBB-Z-0428-92-PUB] p 2037 N93-20844
Problem solving for long term, global scenarios of space traffic
[ILR-MITT-265(1991)] p 1821 N93-20906
Electrochemical deposition of thin film semiconductors in microgravity: A feasibility study p 1803 N93-21079
Fiber development in Japan p 1834 N93-21130
Defense science and technology strategy: Executive summary. 1: Background and overview. 2: The seven thrusts
[PB92-217785] p 2103 N93-21349
Requirements and projects for high-resolution atmospheric sounding p 1959 N93-21607
Non-US artificial neural network research
[PB93-111508] p 2049 N93-21802
Advancing automation and robotics technology for the Space Station Freedom and for the U.S. economy
[NASA-TM-103992] p 2027 N93-21807
Test techniques for evaluating flight displays
[NASA-TM-103947] p 1783 N93-21810
International environmental research and assessment: Proposals for better organization and decision making
[ISBN-1-881054-01-2] p 2087 N93-21949

TECHNOLOGY TRANSFER
Structures and materials technologies for hypersonic vehicles: Lessons from Hermes experience
[REPT-921-430-108] p 1824 N93-21042

TECHNOLOGY UTILIZATION
Laser diode initiated detonators for space applications
p 1865 N93-20147
Current and planned use of the Navstar Global Positioning System by NASA
[NASA-TM-108190] p 1779 N93-21190
The 1991-2000 National Remote Sensing Program
[BCRS-91-35] p 1975 N93-21205
Information dissemination: Innovative ways agencies are using technology
[PB93-108462] p 2091 N93-21380
Manufacturing innovations and small business: How flexible manufacturing systems affect tooling and machining enterprises
[PB92-216258] p 2086 N93-21743
Science and technology in US international affairs
[ISBN-1-881054-00-4] p 2094 N93-21758
NASA SBIR abstracts of 1990 phase 1 projects
[NASA-TM-108145] p 2087 N93-21794
Advancing automation and robotics technology for the Space Station Freedom and for the U.S. economy
[NASA-TM-103992] p 2027 N93-21807
Role of advanced technology in the security of surface transportation p 1764 N93-21857

TECTONICS
NASA Space Geodesy Program: GSFC data analysis, 1992. Crustal Dynamics Project VLBI geodetic results, 1979 - 1991
[NASA-TM-104572] p 1999 N93-20900
SSG 5.122: Geodynamic effects of global gravity field variations p 1974 N93-20993
NASA space geodesy program: Catalogue of site information
[NASA-TM-4482] p 1999 N93-21374
Newly recognized ductile shear zone in the Northern Klamath Mountains, Oregon. Implications for Nevadan accretion
[PB93-115632] p 2000 N93-21691

TEFLON (TRADEMARK)
Electrochemical characteristics of acid electrolytes for fuel cells
[PB93-124907] p 1988 N93-21826

TELECOMMUNICATION
A simulation study of the effects of communication delay on air traffic control
[AD-A258593] p 1778 N93-19966
Study and simulation of low rate video coding schemes
[NASA-CR-191908] p 1880 N93-20170
Data compression in remote sensing applications
p 1881 N93-20172
Recursively indexed differential pulse code modulation
p 1881 N93-20175
A joint source/channel coder design
p 1881 N93-20177

TELEMETRY
Research relative to the heavy isotope spectrometer telescope experiment
[NASA-CR-192357] p 2097 N93-21196

TELEROBOTICS
A new method for recognizing quadric surfaces from range data and its application to telerobotics and automation
[NASA-CR-192619] p 1892 N93-20910

TELESCOPES
A cryogenic shutter for the VLT NIR camera
[MPE-237] p 1906 N93-20855

TELEVISION RECEIVERS
HELITRAK: A helicopter-tracking receiver system for television outside broadcast links
[BBC-RD-1992/5] p 1883 N93-20573

TELEVISION RECEPTION
Effects of wind turbines on UHF television reception: Field tests in Denmark, November 1991
[BBC-RD-1992/7] p 1885 N93-21365

TELEVISION SYSTEMS
Introduction to study and simulation of low rate video coding schemes p 1880 N93-20171
HELITRAK: A helicopter-tracking receiver system for television outside broadcast links
[BBC-RD-1992/5] p 1883 N93-20573

TEMPERATE REGIONS
Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990)
[PB93-116598] p 2019 N93-21389

TEMPERATURE CONTROL
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591
Crystal growth through a computer controlled, eight zone thermal gradient freeze furnace p 1811 N93-21123

TEMPERATURE DEPENDENCE
Cycle life status of SAFT VOS nickel-cadmium cells
p 1985 N93-20511
Time dependent formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20691
Thermal/chemical stability of ceramic cross flow filter materials
[DE93-002710] p 1860 N93-21491
Analysis of parametric drift of a MESFET-based GaAs MMIC due to 125 C storage
[DE93-000715] p 1894 N93-21768
Effective activation energy in the Bi-Sr-Ca-Cu-O systems
[DE93-002996] p 2083 N93-21983

TEMPERATURE DISTRIBUTION
An experimental investigation of a round turbulent jet in a cross-flow p 1905 N93-20689
Detection of polar stratospheric clouds from satellite
p 1957 N93-21591
Effect of quark-gluon plasma boundary on the momentum distribution of quarks
[DE93-004166] p 2064 N93-21740

TEMPERATURE EFFECTS
Flux concentrations on solar dynamic components due to mispointing
[NASA-TM-105756] p 1982 N93-20261
Cyclic material properties at high strain ranges beyond the standard design codes p 1925 N93-20357
Effects of microclimate cooling on physiology and performance while flying the UH-60 helicopter simulator in NBC conditions in a controlled heat environment
[AD-A258502] p 2023 N93-20400
Development of power MOSFET (150 W class)
p 1797 N93-20461
Radiation resistance evaluation test on parts and materials: Solar battery cell p 1800 N93-20482
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591
Creep of PEEK-graphite fibre composite material
p 1930 N93-20644
Analysis of hysteresis in shape memory alloys during thermal cyclic loading p 1858 N93-20694
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel
p 1950 N93-21335
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728
Thermodynamic modeling for organic solid precipitation
[DE93-000104] p 1851 N93-21767
Non-Newtonian temperature and pressure effects of a powder lubricant slurry in a rotating hydrostatic step bearing
[AD-A259325] p 1916 N93-21832

TEMPERATURE GRADIENTS
Measurement of behavioral thermoregulation
[PB92-217033] p 2024 N93-21046
Crystal growth through a computer controlled, eight zone thermal gradient freeze furnace p 1811 N93-21123
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668

TEMPERATURE MEASUREMENT
Analysis and measurement of thermal resistance in a 3-dimensional silicon multichip module populated with assembly test chips
[DE93-000743] p 1888 N93-20029
World ocean circulation experiment: Data summary of Japan Meteorological Agency surveys along 137 deg E (1967-1988)
[PB92-219658] p 2012 N93-21014
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
Comparison of the measurements of temperature and sensible heat flow with an ultrasonic anemometer-thermometer and a temporal high resolution platinum wire-resistance thermometer
[GKSS-92/E/11] p 1907 N93-21461
Rate of heating of the forest interior
[INPE-5235-RPQ/647] p 1979 N93-21648
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions
[PB92-238690] p 1878 N93-21650
The application of quality criteria for the prediction of porosity in the design of casting processes
[DE93-001719] p 1857 N93-21773
Total temperature probes for high-temperature hypersonic boundary-layer measurements
[NASA-TM-4407] p 1908 N93-21816

TEMPERATURE PROBES
Total temperature probes for high-temperature hypersonic boundary-layer measurements
[NASA-TM-4407] p 1908 N93-21816

TEMPERATURE PROFILES
Rate of heating of the forest interior
[INPE-5235-RPQ/647] p 1979 N93-21648

TEMPERATURE SCALES
Solar radio flares 1989-1991. Solar microwave flares observed at Metsaehovi Radio Research Station in 1989-1991
[PB93-111896] p 2101 N93-21786

TEMPORAL DISTRIBUTION
Coherent interference tests for wind profilers
[PB92-227248] p 2013 N93-21202

TENSILE STRENGTH
Ultimate strength of geometrically imperfect angle columns
[PB93-111771] p 1947 N93-21235

TENSILE TESTS
Traction and shearing dynamics of a three dimensional carbon/carbon composite
[REPT-921-430-109] p 1833 N93-20931
Delamination development under fatigue loading
p 1842 N93-21521
Stress corrosion cracking susceptibility of irradiated Type 304 stainless steels
[DE93-003005] p 1857 N93-21985

TENSOR ANALYSIS
Investigation of the bond strength of a discrete skin-stiffener interface p 1843 N93-21527

TENSORS
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence
[NASA-CR-189640] p 1899 N93-20253

TERMINOLOGY
Defining contract terms
[AD-A259088] p 2085 N93-20394
NASA thesaurus combined file postings statistics
[NASA-CR-192259] p 2090 N93-20602

TERMS
NASA thesaurus combined file postings statistics
[NASA-CR-192259] p 2090 N93-20602
The origins of lambda-calculus and term rewriting systems
[INRIA-RR-1543] p 2053 N93-20870

TERRAIN
Feature mapping in a photogrammetric GIS
[AD-A258595] p 1965 N93-19967
Information base procedures for generation of synthetic thermal scenes
[AD-A259202] p 2090 N93-20549
Digital topographic approach to modeling: The distribution of precipitation to mountainous terrain
[PB93-106649] p 2015 N93-21535
Influence of terrain elevation on vegetation indices derived from NOAA AVHRR and EOS MODIS data
p 1954 N93-21576
Intelligent and localized weather prediction
[PB93-117992] p 2015 N93-21787

TERRESTRIAL RADIATION
Development and use of data analysis procedures for the CRRES payloads AFGL-701-2/Dosimeter and AFGL-701-4/Fluxmeter and application of the data analysis results to improve the static and dynamic models of the earth's radiation belts
[AD-A258710] p 1823 N93-20380
Earth radiation and cloud cover analysis using NOAA satellite data p 1956 N93-21587

TEST EQUIPMENT
Flammability testing for the screening of space materials
[ESA-PSS-01-721-ISSUE-2] p 1849 N93-21195
Automated connector force testing
[DE93-004634] p 1907 N93-21704
Design and characterization of the BVX: An 8-channel CMOS preamplifier-shaper for silicon strips
[DE93-003619] p 1894 N93-21733

TEST FACILITIES
Evaluation of candidate working fluid formulations for the electrothermal - chemical wind tunnel
[NASA-CR-192196] p 1788 N93-20312
Testing rig for low cycle fatigue tests in combined bending and torsion p 1923 N93-20345
Research on advanced spacecraft testing technology
p 1796 N93-20452
Safety validation test equipment operation
p 1801 N93-20487
Review on safety validation test p 1802 N93-20488
NASA Center update: Jet Propulsion Laboratory
p 1983 N93-20492
Progress in the development of the laser-based R/D test-bed system p 1811 N93-21127
The influence of the rotor test facilities ROTEST and ROTOS on the rotor inflow
[DLR-MITT-91-16] p 1785 N93-21173
Six-Degree-of-Freedom Test Facility
p 1817 N93-21443
Autonomous rendezvous and capture development infrastructure p 1818 N93-21446
NIST impact test facility
[PB92-226315] p 1788 N93-21467
Creep Laboratory manual
[NPL-DMM(A)-37] p 1951 N93-21565
The high temperature materials laboratory: A research and user facility at the Oak Ridge National Laboratory
[DE93-003592] p 1953 N93-21994

TEST STANDS
Advanced expander test bed program
[NASA-CR-191049] p 1828 N93-19991
Single link flexible beam testbed project
[NASA-CR-192743] p 1947 N93-21307

TEST VEHICLES
Evaluation of a Schatz heat battery on a flexible-fueled vehicle. Phase 2
[PB92-204585] p 1893 N93-21377

TETHERLINES
Numerical stabilities aspects of cable dynamics simulation p 1931 N93-20650
An investigation of the unexpected attitude dynamics experienced by the OEDIPUS-A tethered sounding rocket payload p 1830 N93-20724

TEXTILES
Textiles and Composites 1992
[VTT-SYMPOSIUM-133] p 1834 N93-21129
Manufacture and application of biaxial and multiaxial knits as textile reinforcements in composite materials
p 1836 N93-21141
New types of textile fabrics for fibre composites
p 1836 N93-21142
Relationships between layer linkage and mechanical properties of 3D woven textile structures
p 1836 N93-21144
Applications of Visil fibres in functional textiles
p 1837 N93-21154
The total quality approach in the development of technical textiles p 1838 N93-21156

Metallization and sputtering of textiles: Preconditions for the substrate, properties and applications p 1838 N93-21158
Silicone softeners: Today p 1838 N93-21159

TEXTS
FASTUS: A system for extracting information from natural-language text
[AD-A259435] p 2087 N93-20011

THALLIUM
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy
[DE93-002980] p 2083 N93-21981

THEMATIC MAPPERS (LANDSAT)
Estimating chlorophyll concentrations from Thematic Mapper data p 1954 N93-21577

THEMATIC MAPPING
Reports on cartography and geodesy, series 1, number 106
[ETN-93-92583] p 1967 N93-20528
Thematic maps as data bank objects p 1968 N93-20536
Report of the NERC Unit for Thematic Information Systems
[REPT-1989/91] p 1968 N93-20846
End-to-end tests of satellite data p 1953 N93-21571

THEOREM PROVING
Upside-down meta-interpretation of the model elimination theorem-proving procedure for deduction and abduction
[AD-A259436] p 2046 N93-20012
On the existence of (0,2)-graph of order 18
[RR-887-I] p 2051 N93-20800
A Gentzen-system for CTL
[RR-865-I-IMAG-122-LIFIA] p 2051 N93-20803
Fast theorem proving in intuitionistic propositional logic
[CWI-CS-R9157] p 2051 N93-20840
Forcing colorations, intervals and the perfect graph conjecture (an extended abstract)
[RR-867-M] p 2053 N93-20945
General antifactors of graphs
[RR-868-M] p 2054 N93-20946
Counterexamples to three conjectures concerning perfect graphs
[RR-870-M] p 2054 N93-20948
Graphs with maximum number of minimum cuts
[RR-880-M] p 2054 N93-21168
Deterministic communication complexity of the Hamming distance
[MEMO-1026] p 2056 N93-21399

THEOREMS
Dynamic systems and normal forms
[RR-883-M] p 2051 N93-20784
Plane multiflows with a fixed number of demands
[RR-885-M] p 2034 N93-20788
On the existence of (0,2)-graph of order 18
[RR-887-I] p 2051 N93-20800
A Gentzen-system for CTL
[RR-865-I-IMAG-122-LIFIA] p 2051 N93-20803
Two strikes against perfect phylogeny
[RUU-CS-92-08] p 2021 N93-20848
Discrete orthogonal wavelets
[REPT-91-45] p 2052 N93-20862
General antifactors of graphs
[RR-868-M] p 2054 N93-20946
Counterexamples to three conjectures concerning perfect graphs
[RR-870-M] p 2054 N93-20948
Maximal Kripke-type semantics for modal and superintuitionistic predicate logics
[ML-92-02] p 2054 N93-21009
An order-theoretic model for the algebra of communicating processes
[RUU-CS-92-02] p 2054 N93-21034
Graphs with maximum number of minimum cuts
[RR-880-M] p 2054 N93-21168
Hexagonal grid drawings
[RUU-CS-92-06] p 2055 N93-21172

THEORETICAL PHYSICS
Physics-like mathematical model for chaos and ergodic criticality in four dimensions p 1944 N93-20729

THERMAL ANALYSIS
Analysis and measurement of thermal resistance in a 3-dimensional silicon multichip module populated with assembly test chips
[DE93-000743] p 1888 N93-20029
Development of cure cycles: From laboratory analysis and testing to production of large scale composites
[MBB-Z-0442-92-PUB] p 1833 N93-20845
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140

THERMAL BATTERIES
Laser-initiated ordnance for air-to-air missiles p 1864 N93-20139
Pyrite cathode material for a thermal battery
[AD-D015600] p 1891 N93-20792

THERMAL BOUNDARY LAYER
Investigation of the role of thermal boundary layer processes in initiating convection under the NASA SPACE Field Program p 2005 N93-20080

THERMAL BUCKLING
On improving accuracy of machining centers
[PAPER-C-3-1] p 2036 N93-20835

THERMAL CONDUCTIVITY
S. G. Romanovskiy method of thermal treatment and drying of nonconducting materials (Description of an invention for an author's certificate)
[AD-A258631] p 1831 N93-20000
Heat transfer device
[NASA-CASE-LEW-14162-4] p 1832 N93-20568
The effect of fiber concentration, length and orientation on the thermal conductivity of a polycarbonate/pitch-based carbon fiber composite p 1834 N93-21133

THERMAL CONTROL COATINGS
Stabilized zirconia/CoCrAlY high temperature coating
[AD-D015573] p 1859 N93-20276
LEO resistant thermal control materials and dry lubricants for the mobile servicing system p 1848 N93-20818
Protective coating development for Space Station Freedom at McDonnell Douglas p 1849 N93-20820

THERMAL CYCLING TESTS
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates
[NASA-TM-106016] p 1832 N93-20317
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Deformation of TiNi shape memory alloy under thermomechanical cycles p 1858 N93-20695
LEO resistant thermal control materials and dry lubricants for the mobile servicing system p 1848 N93-20818

THERMAL DIFFUSION
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119

THERMAL ENVIRONMENTS
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591

THERMAL EXPANSION
On improving accuracy of machining centers
[PAPER-C-3-1] p 2036 N93-20835
Measurement of the expansion coefficient between -150 C and +150 C for material composites for space applications
[REPT-921-430-115] p 1833 N93-20939
Diffraction measurements of residual stress in titanium matrix composites
[DE93-003855] p 1844 N93-21838
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978

THERMAL FATIGUE
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189220] p 1784 N93-20252
Fatigue in single crystal nickel superalloys
[AD-A259191] p 1856 N93-20275
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates
[NASA-TM-106016] p 1832 N93-20317

THERMAL MAPPING
Microwave spectroscopy of the active sun
[NASA-CR-192135] p 2100 N93-20571
The use of thermal infrared remote sensing for water management: Report of the operational research
[BCRS-91-34] p 1969 N93-20954
Growth and characterization of binary and pseudo-binary 3-5 compounds exhibiting non-linear optical behavior. Undergraduate research opportunities in microgravity science and technology
[NASA-CR-192143] p 2068 N93-21363
SST monitoring of the European seas with AVHRR data p 1963 N93-21629
Mapping of satellite-derived sea surface temperatures at high resolution in cloudy regions p 1963 N93-21630
A comprehensive comparison between skin and multi-channel sea surface temperatures as derived from AVHRR p 1963 N93-21632
Generation and distribution of remotely-sensed sea surface temperature images p 1964 N93-21637

THERMAL NEUTRONS
A pulsed fast-thermal neutron interrogation system p 1765 N93-21866
Detector selection for nuclear-based explosive detection system p 1766 N93-21869
Explosive detection system based on Electronic Neutron Generator (ENG) p 1766 N93-21870
Explosive detection using x rays and thermal neutron activation p 1768 N93-21884
Fusion of the nuclear and different x ray technologies for explosives detection p 1768 N93-21885
Bomb/no bomb: From multivariate analysis to artificial neural systems p 1776 N93-21934
Fast nuclear spectroscopy for explosive detection systems p 1777 N93-21937
A systems approach to the explosive detection problem p 1778 N93-21942
Logistics and the 'ilities' requirements for explosive detection systems p 1778 N93-21944
Impact on the air carrier of explosive detection systems p 1778 N93-21945

THERMAL NOISE
Thermally induced vibrations in a temperature-rate dependent thermoelastic solid with a spherical cavity p 1933 N93-20663

THERMAL PROTECTION
Research on heat-resistance technology for HOPE p 1791 N93-20426
Research on HOPE communication and data processing equipment p 1792 N93-20429
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433
SRB frustrum 'smiley' cracking phenomenon study
[NASA-CR-192621] p 1829 N93-20912
Oxide protective coatings on carbon composites for medium and high-temperature thermal cycling: New opportunities for the United Europe p 1838 N93-21160
Correlation of results of radiant heat test and convective heat test for three layered protective clothing p 1838 N93-21161
Nuclear thermal rocket entry heating and thermal response preliminary analysis
[DE93-002460] p 1830 N93-21728

THERMAL RESISTANCE
Research on heat-resistance technology for HOPE p 1791 N93-20426
Research on HOPE communication and data processing equipment p 1792 N93-20429
Development and tests on OREX vehicle thermal structure system p 1793 N93-20433
Development of high heat radiation printed boards p 1796 N93-20456
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591
Aramids in high performance protective clothing p 1837 N93-21155
Developments in heat and flame resistant textiles for protective clothing and barrier fabrics p 1838 N93-21157
Evolution of materials used in liquid propellant rocket engines
[DS-2025] p 1830 N93-21460

THERMAL STABILITY
Advances in laser diodes for pyrotechnic applications p 1865 N93-20146
Interferometric JFTOT tube deposit measuring device
[AD-D015599] p 1866 N93-20247
Thermal/chemical stability of ceramic cross flow filter materials
[DE93-002710] p 1860 N93-21491

THERMAL STRESSES
Thermal plastic strain fatigue life of the roll p 1924 N93-20354
On the vibration of thermally stressed laminated composite cylindrical shells p 1930 N93-20648
Thermally induced vibrations in a temperature-rate dependent thermoelastic solid with a spherical cavity p 1933 N93-20663
Derating requirements applicable to electronic, electrical, and electro-mechanical components for ESA space systems
[ESA-PSS-01-301-ISSUE-2] p 1893 N93-21194

THERMOCHEMISTRY
Thermochemical evaluation of proposed electrothermal-chemical propellants
[AD-A259110] p 1866 N93-20588

THERMOCLINES
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031

THERMODYNAMIC EFFICIENCY
Gasifiers optimized for fuel cell applications
[DE93-003486] p 1988 N93-21781

THERMODYNAMIC EQUILIBRIUM
Molecular theory and computer simulation studies of natural and synthetic gas mixtures
[PB92-235696] p 1850 N93-21651

Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698

THERMODYNAMIC PROPERTIES
S. G. Romanovskiy method of thermal treatment and drying of nonconducting materials (Description of an invention for an author's certificate)
[AD-A258631] p 1831 N93-20000
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734
Thermodynamic modeling for organic solid precipitation
[DE93-000104] p 1851 N93-21767
A thermodynamic study of the vapor pressures of C-4 and pure RDX p 1772 N93-21906
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978

THERMODYNAMICS
Thermodynamic data for fifty reference elements
[NASA-TP-3287] p 2084 N93-19977
Investigation of the role of thermal boundary layer processes in initiating convection under the NASA SPACE Field Program p 2005 N93-20080
Structure and dynamics of premixed flames in microgravity p 1853 N93-20198
Microgravity combustion of dust suspensions p 1853 N93-20201
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
A boundary element formulation for thermo-hydrodynamic lubrication problem p 1918 N93-20704
Thermodynamic flow description of a ramjet for determination of engine forces and moments
[ESA-TT-1266] p 1786 N93-21288
Metalloradical and electrophilic activation of methane
[PB93-123693] p 1851 N93-21813

THERMOELASTICITY
Thermally induced vibrations in a temperature-rate dependent thermoelastic solid with a spherical cavity p 1933 N93-20663
On the thermoelastohydrodynamic lubrication dimensionless problem formulations p 1917 N93-20693
Boundary element formulation for thermoelastohydrodynamic contact problems p 1918 N93-20705
Numerical analysis of the thermoelastic effects in laminated structures and its use in the identification of defects p 1841 N93-21511

THERMOELECTRIC COOLING
Calorimetric examination of the polarization cluster of the beginning ferroelectric material KTaO3
[ETN-93-93418] p 2084 N93-21067

THERMOELECTRIC GENERATORS
GPHS-RTGs in support of the Cassini mission
[DE93-002035] p 1825 N93-21702

THERMOELECTRICITY
Thermochemical evaluation of proposed electrothermal-chemical propellants
[AD-A259110] p 1866 N93-20588

THERMOGRAPHY
Noncontact nondestructive tests
[ETN-93-93060] p 1919 N93-20929
Infrared imaging of fibre reinforced plastic composites p 1838 N93-21162

THERMOHYDRAULICS
A study of the thermal bar in Lake Ladoga (Russia) using NOAA-AVHRR data p 1964 N93-21635

THERMOMETERS
Comparison of the measurements of temperature and sensible heat flow with an ultrasonic anemometer-thermometer and a temporal high resolution platinum wire-resistance thermometer
[GKSS-92/E/11] p 1907 N93-21461

THERMOPLASTIC RESINS
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
Advanced industrial materials. An overview p 1845 N93-20623
Thermoplastic composites p 1845 N93-20625
Creep damage of carbon fiber reinforced PEEK p 1862 N93-20639
Thermoplastic composites for structural applications: Past and future p 1834 N93-21131
Manufacturing of high quality polypropylene/glass fibre prepreg tape p 1834 N93-21134
Thermoplastic tape winding parameters p 1835 N93-21135
Continuous fiber reinforced thermoplastic composites p 1835 N93-21138
Knitted carbon fiber reinforced thermoplastics: Structural characterization with image analysis p 1839 N93-21163

THERMOPLASTICITY
Mode 2 damage development in carbon fibre reinforced plastics p 1842 N93-21523

THERMOREGULATION
Measurement of behavioral thermoregulation
[PB92-217033] p 2024 N93-21046

THERMOSETTING RESINS
Advanced industrial materials. An overview p 1845 N93-20623

THERMOSPHERE
The effects on the ionosphere of inertia in the high latitude neutral thermosphere
[NASA-CR-192358] p 1998 N93-20758

THESAURI
NASA thesaurus combined file postings statistics
[NASA-CR-192259] p 2090 N93-20602

THICK PLATES
Barely visible damage threshold in a BMI p 1843 N93-21524

THICKNESS
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 1844 N93-21534
Use of ERS-1 SAR data in numerical sea ice modeling p 1957 N93-21592
The Xu-Tec process of introducing normally solid materials into substrate surfaces
[DE93-005124] p 1861 N93-21708
Use of radar technology for pavement layer evaluation
[PB92-226166] p 1912 N93-21744

THIN FILMS
Laser damage in thin film optical coatings
[AD-A259425] p 1909 N93-20005
Examination of laser conditioning using atomic force microscopy
[DE93-001328] p 1909 N93-20020
Oriented, single-phase thin films of potassium tantalate-niobate
[AD-D015543] p 2077 N93-20027
Atomic and electronic structure of ultrathin films p 2078 N93-20287
Thin film processing of photorefractive BaTiO3
[NASA-CR-192169] p 2079 N93-20311
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A259247] p 2080 N93-20581
Analysis of surfaces from the LDEF A0114, phase 2
[NASA-CR-192306] p 1847 N93-20756
Structural equilibration in intrinsic, single-doped, and compensated TFT's: Experiments and calculations
[MBB-Z-0377-91-PUB] p 1891 N93-20841
New compounds obtained by LPCVD in the B-C-N chemical system
[REPT-921-430-111] p 1849 N93-20933
Electrochemical deposition of thin film semiconductors in microgravity: A feasibility study p 1803 N93-21079
Development of superconducting thin films with a critical temperature greater than 110 K
[AD-A257988] p 2080 N93-21224
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362
Sensor technology for internal inspection systems
[PB93-101020] p 1907 N93-21652
The role of microstructural phenomena in magnetic thin films
[DE93-005132] p 2081 N93-21710
Current Status, Research Needs, and Opportunities in Applications of Surface Processing to Transportation and Utilities Technologies
[DE92-016446] p 1861 N93-21765
Magnetically insulated ion diodes for synthesis of advanced materials
[DE93-003747] p 2076 N93-21776

THIN PLATES
The free vibration of isotropic and specially orthotropic triangular plates p 1935 N93-20673
Semi-numerical approach to the buckling of composite panel p 1935 N93-20676
Experiment and modeling of air-coupled ultrasonic excitation of plate waves p 1936 N93-20679
Nonlinear analysis of plates by the finite element method p 1939 N93-20698

THIN WALLS
Energy equation for beam lateral buckling
[PB92-225390] p 1946 N93-21019
The flexural behaviour of thin-walled singly symmetric columns
[PB92-225408] p 1946 N93-21020
Post-buckling analysis of thin-walled channel sections undergoing local and distortional buckling
[PB93-112928] p 1947 N93-21236

THORAX
Neural networks for real-time sensory data processing and sensorimotor control
[AD-A259120] p 2046 N93-20557

THREADS
Single screw interrupted thread positive displacement mechanism
[AD-D015596] p 1915 N93-20790

THREE BODY PROBLEM
On the normalized Hamiltonian formulation of the restricted three-body problem p 1944 N93-20727
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems
[DE93-004531] p 2064 N93-21742

THREE DIMENSIONAL BODIES
Multimodal optimization of vibrating space frames p 1931 N93-20652
A new method for recognizing quadric surfaces from range data and its application to telerobotics and automation
[NASA-CR-192619] p 1892 N93-20910
Magnetron sputtering on 3D components with less accessible areas
[MBB-Z-0360-91-B-PUB] p 1878 N93-21745

THREE DIMENSIONAL BOUNDARY LAYER
On the stability of nonlinear viscous vortices in three-dimensional boundary layers
[NASA-CR-189637] p 1899 N93-20254

THREE DIMENSIONAL COMPOSITES
Nonlinear probabilistic finite element models of laminated composite shells
[NASA-CR-191069] p 1833 N93-20919
Traction and shearing dynamics of a three dimensional carbon/carbon composite
[REPT-921-430-109] p 1833 N93-20931

THREE DIMENSIONAL FLOW
Assessment of higher order turbulence models for complex two- and three-dimensional flowfields
[NASA-TM-103944] p 1897 N93-20035
Experimental investigations on wing-body combinations and their components at high angles of attack in the subsonic and transonic speed range
[DLR-FB-91-43] p 1783 N93-21762

THREE DIMENSIONAL MODELS
Three-dimensional Navier-Stokes heat transfer predictions for turbine blade rows
[NASA-TM-105800] p 1897 N93-19969
Multidisciplinary tailoring of hot composite structures
[NASA-TM-106027] p 1920 N93-19971
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices p 1865 N93-20150
Two-dimensional planar geosystems subjected to three-dimensional dynamic loads
[AD-A258723] p 1921 N93-20325
Comprehensive simulation study on local and global development of auroral arcs and field-aligned potentials
[NIFS-195] p 2073 N93-20764
Validity and well-formedness of dimension and tolerance information in solid modeling systems
[PAPER-C-2-2] p 2035 N93-20831
Tolerance, chains and setting of machines: Three dimensional statistical model of machined dimensions
[PAPER-C-2-5] p 2036 N93-20833
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
Generalized 3D Voronoi diagram: First results
[RR-879-M] p 2039 N93-21051
Electromagnetic finite element analysis of a solenoid
[DE93-004635] p 1894 N93-21724

THREE DIMENSIONAL MOTION
Multiple-arm joint rate solution by branch result assembly p 1918 N93-20708
Comparison of the efficiency of the various methods for rigid-body displacement analyses p 1941 N93-20709
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710
On the formulation of linear homogeneous velocity constraints in mechanical systems p 1941 N93-20712
Nonlinear friction effects on precise motion control of a manipulator p 1918 N93-20713

THRESHOLD LOGIC
Fuzzy set methods for object recognition in space applications
[NASA-CR-191986] p 2041 N93-21563

THRUST
Shock-dependent, optimum thrust wings in supersonic flow p 1760 N93-20169

THRUST CHAMBERS
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket
[NASA-CR-191014] p 1829 N93-20114
THRUSTORS
Ion source AHKS-30
[DLR-MITT-91-20] p 1860 N93-21041
THUNDERSTORMS
Electrification in winter storms and the analysis of thunderstorm overflight data p 2006 N93-20087
ER-2 investigations of lightning and thunderstorms p 2006 N93-20088
Meteorological events in Arizona and New Mexico during Swamp
[PB93-100410] p 2013 N93-21227
National Center for Atmospheric Research, Fiscal Year 1991
[PB93-129914] p 2000 N93-21547
THYRISTORS
Characterization and snubbing of a bidirectional MCT in a resonant ac link converter
[NASA-CR-192230] p 1889 N93-20258
The ignition diffusion concerning contacted and non contacted n(+) emitter interrruptions
[ETN-93-92564] p 1891 N93-20878
Magnetic switching techniques for high power pulse generation
[ISBN-90-9004705-0] p 1892 N93-20935
TIDES
Preliminary results of altimeter data analysis for studying the water exchange between the Atlantic Ocean and the Nordic Seas p 1965 N93-21641
TIME DEPENDENCE
Solution of a one-dimensional ablation model
[INPE-5357-TDI/464] p 1900 N93-20321
Time dependent formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20691
On a possible non-Lorentzian energy-dependence of the K neutral(sub S)
[PREPRINT-807] p 2053 N93-20903
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems
[DE93-004531] p 2064 N93-21742
TIME DIVISION MULTIPLEXING
Data Multiplexing Network (DMN). Phase 3: Equipment Operational Test and Evaluation (OT/E) integration test report
[DOT/FAA/CT-TN92/49] p 1779 N93-20612
TIME FUNCTIONS
Simulation method for stationary Gaussian random functions based on the sampling theorem
[PB93-127496] p 2059 N93-21818
TIME MARCHING
Time dependent formulation of the heat transfer problem in nonhomogeneous media p 1905 N93-20691
Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773
Further development of the CANAERO computer code to include a time-stepping capability
[DREA-CR-91-478] p 2042 N93-21820
TIME MEASUREMENT
Timing analysis of low-energy gamma ray emission from galactic compact objects using the Gamma Ray Observatory
[NASA-CR-192253] p 2102 N93-20747
Redesigning the window protocol: The block acknowledgement revisited
[RUU-CS-92-04] p 2039 N93-21170
TIME OF FLIGHT SPECTROMETERS
Atmospheric pressure ionization time-of-flight mass spectrometer for real-time explosives vapor detection p 1773 N93-21914
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer p 1773 N93-21915
TIME SERIES ANALYSIS
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984
Modelling robot trajectory errors using time series p 1942 N93-20716
Inverse sequential detection of parameter changes in developing time series
[NASA-CR-191996] p 2059 N93-21191
Mean seasonal cycles and interannual variations at 0 deg, 110 deg W and 0 deg, 140 deg W during 1980-1991
[PB93-114726] p 2014 N93-21388
Advantages of tapering finite data records for spectral analysis
[PB93-116614] p 2092 N93-21475
TIME SHARING
STEP development methods: Specification of semantics for information sharing
[PB93-113686] p 2091 N93-21218
TIMING DEVICES
Office of Spaceflight Standard Spaceborne Global Positioning System (GPS) user equipment project p 1780 N93-21417
TITAN
Planetary atmospheres: Microwave spectroscopic studies of planetary atmospheres
[NASA-CR-192145] p 2099 N93-21642
TITANIUM
Reduction of bend losses for titanium diffused waveguides in lithium niobate
[ETN-93-92558] p 1884 N93-20750
TITANIUM ALLOYS
Deformation of TiNi shape memory alloy under thermomechanical cycles p 1858 N93-20695
Grain refinement of Al-Cu-Ti alloys in microgravity p 1810 N93-21120
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
Fatigue crack propagation of titanium alloys in salt water
[GKSS-91/E/46] p 1856 N93-21551
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738
Diffraction measurements of residual stress in titanium matrix composites
[DE93-003855] p 1844 N93-21838
TITANIUM CARBIDES
Method of bonding metal carbides in non-magnetic alloy matrix
[AD-D015591] p 1833 N93-20801
TITANIUM NITRIDES
Interfacial structure of Si3N4 brazed with an Ag-Cu-Ti alloy
[DE93-003777] p 2081 N93-21738
TOKAMAK DEVICES
Poloidal rotation, density asymmetries, and momentum confinement in tokamak experiments
[DE93-002319] p 2069 N93-20026
High frequency ion Bernstein wave heating experiment on JIPP T-2U tokamak
[NIFS-165] p 2070 N93-20113
Steady state tokamak sustained by bootstrap current without seed current
[NIFS-159] p 2070 N93-20155
Transition to H-mode by energetic electrons
[NIFS-158] p 2070 N93-20156
The effects of externally imposed magnetic perturbations on plasmas in TEXT p 2071 N93-20282
Review of Japanese results on heating and current drive
[NIFS-193] p 2071 N93-20294
Model of the L-mode confinement in tokamaks
[NIFS-187] p 2072 N93-20545
A review on application of MHD theory to plasma boundary problems in tokamaks
[NIFS-163] p 2073 N93-20762
A role of neutral hydrogen in CHS plasmas with reheat and collapse and comparison with JIPP T-IIU tokamak plasmas
[NIFS-186] p 2073 N93-20763
L-mode confinement model based on transport-MHD theory in tokamaks
[NIFS-192] p 2074 N93-21192
Current-drive and plasma-formation experiments on the Versator-2 tokamak using lower-hybrid and electron-cyclotron waves
[DE93-002333] p 2075 N93-21482
TFTR experimental data analysis collaboration
[DE93-002365] p 2075 N93-21483
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809
Simulation models for tokamak plasmas
[DE93-002876] p 2076 N93-21988
Kinetic theory of toroidicity and ellipticity-induced Alfven eigenmodes
[DE93-003634] p 2077 N93-21995
TOLERANCES (MECHANICS)
Tolerancing for function in a CAD/CAM environment
[PAPER-C-1-1] p 2034 N93-20824
New methodologies toward the integration of tolerancing in CAD/CAM systems
[PAPER-C-1-2] p 2035 N93-20825
Elements of computer-aided tolerance analysis
[PAPER-C-1-3] p 2035 N93-20826
Vectorial tolerancing
[PAPER-C-1-4] p 2035 N93-20827
Development of algorithms for composite positional tolerance measurement using coordinate measuring machines
[PAPER-C-1-6] p 2035 N93-20829
Functional tolerancing in CAD/CAM
[PAPER-C-2-1] p 2035 N93-20830
Validity and well-formedness of dimension and tolerance information in solid modeling systems
[PAPER-C-2-2] p 2035 N93-20831
Toward a computer aided functional tolerancing model
[PAPER-C-2-4] p 2036 N93-20832
Tolerance, chains and setting of machines: Three dimensional statistical model of machined dimensions
[PAPER-C-2-5] p 2036 N93-20833
Tolerancing in the context of the automated manufacturing and the design axioms
[PAPER-C-2-6] p 2036 N93-20834
On improving accuracy of machining centers
[PAPER-C-3-1] p 2036 N93-20835
Problems of quality inspection and diagnosing in modern manufacturing systems
[PAPER-C-3-2] p 2036 N93-20836
Damage tolerance and arrest characteristics of pressurized graphite/epoxy tape cylinders
[NASA-CR-192618] p 1945 N93-20915
TOLUENE
Modification and evaluation of a microwave plasma/atomic emission detector system
[PB92-217959] p 2074 N93-21203
TOMOGRAPHY
Flexible prior models in Bayesian image analysis
[DE93-003728] p 2059 N93-21736
TOPEX
NASA Center update: Jet Propulsion Laboratory p 1983 N93-20492
TOPEX/Poseidon battery performance p 1984 N93-20507
TOPOGRAPHY
Feature mapping in a photogrammetric GIS
[AD-A258595] p 1965 N93-19967
Investigation of the role of thermal boundary layer processes in initiating convection under the NASA SPACE Field Program p 2005 N93-20080
Reports on cartography and geodesy, series 1, number 106
[ETN-93-92583] p 1967 N93-20528
Development of an automated cartographic system p 1967 N93-20530
Computer aided cartographic generalization for the DCM derivation, with regard to feature displacement p 1967 N93-20532
ATKIS: The introduction phase at IfAG p 1967 N93-20533
Cokriging surface elevation and seismic refraction data for bedrock topography
[DE93-001369] p 1999 N93-21225
Digital topographic approach to modeling: The distribution of precipitation to mountainous terrain
[PB93-106649] p 2015 N93-21535
Influence of terrain elevation on vegetation indices derived from NOAA AVHRR and EOS MODIS data p 1954 N93-21576
TOPOLOGY
Topological approach for the study of electromagnetic coupling
[ONERA-P-1992-2] p 1881 N93-20230
Fuzzy connectivity and mathematical morphology
[TELECOM-PARIS-92-D-001] p 2053 N93-20940
Automatic design of a Maglev controller in state space
[AD-A259336] p 2047 N93-21261
TORNADOES
Climatic variation of storms p 2006 N93-20084
TOROIDAL PLASMAS
Effects of nonclassical ion losses on radial electric field in CHS torsatron/heliotron
[NIFS-160] p 2069 N93-20112
Steady state tokamak sustained by bootstrap current without seed current
[NIFS-159] p 2070 N93-20155
Transition to H-mode by energetic electrons
[NIFS-158] p 2070 N93-20156
Thought analysis on self-organization theories of MHD plasma
[NIFS-164] p 2070 N93-20159
Physical mechanism of E(sub psi)-driven current in asymmetric toroidal systems
[NIFS-172] p 2070 N93-20263
The effects of externally imposed magnetic perturbations on plasmas in TEXT p 2071 N93-20282
Effects of net toroidal current on Mercier criterion in the Large Helical Device
[NIFS-174] p 2072 N93-20543
Long pulse discharges sustained by second harmonic electron cyclotron heating using a 35 GHz gyrotron in the Advanced Toroidal Facility
[NIFS-183] p 2072 N93-20544

Beta-limiting phenomena in high-aspect-ratio toroidal helical plasmas
[NIFS-188] p 2072 N93-20546
Neoclassical theory of the plasma edge
[PB93-123586] p 2075 N93-21668
Physics models and user's guide for the neutral beam module of the SuperCode
[PB93-121887] p 2076 N93-21809
Effect of alpha particles on toroidal Alfven eigenmodes
[DE93-003635] p 2076 N93-21830

TORQUE
Efficient and accurate on-line computation of motor torques for robotic manipulators p 1918 N93-20710

TORSION
The effects of surface treatment on torsional fatigue failure in recoil springs
[AD-A259345] p 1952 N93-21987

TORSIONAL STRESS
Cyclic behavior modelling
[ECL-92-09] p 1920 N93-20060
Multiaxial fatigue life prediction using a shear stress based critical plane failure criterion
p 1921 N93-20332
Effect of phase lag on cyclic durability of laminated composite p 1922 N93-20333
Testing rig for low cycle fatigue tests in combined bending and torsion p 1923 N93-20345
A variational approach for torsion of multiply connected composite sections p 1845 N93-20633
The effects of surface treatment on torsional fatigue failure in recoil springs
[AD-A259345] p 1952 N93-21987

TORUSES
Optimal broadcasting algorithms on torus
[RR-872-I] p 2043 N93-20789

TOTAL QUALITY MANAGEMENT
Quality assurance in the future industrial plant
[PAPER-C-3-3] p 1919 N93-20837
Total quality assurance
[PAPER-C-3-5] p 1920 N93-20839
Database language SQL: Integrator of CALS data repositories
[PB93-113637] p 2040 N93-21239
Continuous improvement on a research and development environment
[DE93-001561] p 2086 N93-21304

TOUGHNESS
Toughness of Si3N4-SiC whisker composites
[REPT-921-430-118] p 1839 N93-21295
The roles of slip geometry and hardening behavior in intergranular toughness
[DE93-005647] p 2081 N93-21712

TOXIC HAZARDS
Toxic substances registry system: Index of material safety data sheets
[NASA-TM-108582] p 2024 N93-20998
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
Monitoring human tissues for toxic substances
[PB92-223239] p 2024 N93-21498
Surface-coating-free materials workshop
[PB93-101160] p 1861 N93-21683

TOXICITY
Analysis strategy for organic bromine flame-retardant compounds as environmental contaminants
p 1839 N93-21164
Monitoring human tissues for toxic substances
[PB92-223239] p 2024 N93-21498

TOXICITY AND SAFETY HAZARD
Toxic substances registry system: Index of material safety data sheets
[NASA-TM-108582] p 2024 N93-20998
Some constitutive modifiers of the kinetic and dynamic behavior of non-essential metals
[PB92-227347] p 1856 N93-21497
Monitoring human tissues for toxic substances
[PB92-223239] p 2024 N93-21498

TRACE CONTAMINANTS
Biochemically active layers for selective material detection sensors
[MBB-Z-0440-92-PUB] p 2021 N93-20959
Earth observation in the TIGER programme of the UK Natural Environment Research Council
p 1953 N93-21572

TRACKING (POSITION)
RASSP final technical report
[AD-A258562] p 1882 N93-20371
HELITRAK: A helicopter-tracking receiver system for television outside broadcast links
[BBC-RD-1992/5] p 1883 N93-20573
Diagnostic Report of the National Hurricane Center. October and November 1991, volume 4, number 3
[PB93-126464] p 2014 N93-21478

TRACKING NETWORKS
Research on data relay and tracking satellite systems
p 1790 N93-20418

TRACKING RADAR
Automated technologies needed to prevent radioactive materials from reentering the atmosphere
p 1818 N93-21447
Tracking radar advanced signal processing and computing for Kwajalein Atoll (KA) application
[AD-A259066] p 1886 N93-21756

TRAINING DEVICES
Measurement of modulation transfer functions of simulator displays
[AD-A259401] p 1788 N93-21268

TRAJECTORY ANALYSIS
Some observations of chaotic motion of satellites with damping in an elliptic orbit p 1826 N93-20726

TRAJECTORY CONTROL
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Modelling robot trajectory errors using time series
p 1942 N93-20716
Distance estimation and collision prediction for on-line robotic motion planning
[NASA-CR-192737] p 2049 N93-21390
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414

TRAJECTORY OPTIMIZATION
Operator-assisted planning and execution of proximity operations subject to operational constraints
p 1817 N93-21436

TRAJECTORY PLANNING
Modelling robot trajectory errors using time series
p 1942 N93-20716
A 3D world model builder with a mobile robot
[INRIA-RR-1546] p 2047 N93-20871
Avoiding space robot collisions utilizing the NASA/GSFC tri-mode skin sensor
[NASA-CR-192292] p 2049 N93-21812

TRANSCONDUCTANCE
A semi-custom dual channel peak hold circuit for spaceborne instrumentation
[DE93-003801] p 1828 N93-21777

TRANSFER FUNCTIONS
An object-oriented computer aided design program for modern control systems analysis
[AD-A259139] p 2033 N93-20559

TRANSFORMATIONS (MATHEMATICS)
Incipient failure detection using wavelets
[AD-A259423] p 1913 N93-20004
Wavelet features for failure detection and identification in vibration systems
[AD-A259427] p 1914 N93-20007
Calibration of the imaging conditions for the retransformation of digitized images obtained from laser light sheets
[DLR-MITT-92-04] p 1910 N93-20745
C-integrable nonlinear PDE's. 1
[PREPRINT-787] p 2051 N93-20805
C-integrable nonlinear PDE's. 2
[PREPRINT-788] p 2053 N93-20874
A preliminary study of the Gribov ambiguity in lattice SU(3) Coulomb gauge
[PREPRINT-816] p 2055 N93-21179

TRANSIENT HEATING
Planetary circulations in the presence of transient and self-induced heating p 2003 N93-20071

TRANSISTORS
Development of transistors (equivalent to 2SC3321)
p 1797 N93-20460
Structural equilibration in intrinsic, single-doped, and compensated TFT's: Experiments and calculations
[MBB-Z-0377-91-PUB] p 1891 N93-20841

TRANSITION METALS
New developments in the 'ab initio' determination of transition metal alloy phase diagrams
[DE93-002540] p 1856 N93-21488
Chemical and catalytic activation of methane by metal oxide surfaces
[PB93-121994] p 1851 N93-21803
Metalloradical and electrophilic activation of methane
[PB93-123693] p 1851 N93-21813
Stable clusters in the condensed state and some possibilities for gas phase clusters
[DE93-004446] p 2064 N93-21846

TRANSITION PROBABILITIES
Semiempirical studies of atomic structure
[DE93-005117] p 2063 N93-21707

TRANSITION TEMPERATURE
Development of elements of a high T(sub c) superconducting cable
[AD-A259415] p 1888 N93-20130
Oxygen configurations and their effect on charge transfer in YBa2Cu3O(z)
[DE93-002543] p 2081 N93-21489
The application of quality criteria for the prediction of porosity in the design of casting processes
[DE93-001719] p 1857 N93-21773

TRANSLATING
An empirical comparison of generalized LR tables
p 2031 N93-20228
The origins of lambda-calculus and term rewriting systems
[INRIA-RR-1543] p 2053 N93-20870
Towards autonomous motion vision
[AD-A259339] p 2068 N93-21263
Proximity operations considerations affecting spacecraft design p 1815 N93-21428

TRANSLATIONAL MOTION
Vibration of a multi-guided rotating string
p 1934 N93-20672
Comparison of the efficiency of the various methods for rigid-body displacement analyses
p 1941 N93-20709
Load carrying capacity for a two-link planar flexible arm p 1918 N93-20715
Motion and structure estimation of manoeuvring objects in multiple-camera image sequences
[AD-A259371] p 1907 N93-21265

TRANSMISSION LINES
Detection of incipient defects in cables by partial discharge signal analysis
[PB92-222744] p 1919 N93-21199

TRANSMISSIONS (MACHINE ELEMENTS)
Research on HOPE actuator power unit
p 1792 N93-20430
Parallel axes gear set optimization in two-parameter space p 1917 N93-20637
Higher frequency transmission properties of motor car-chassis systems
[ETN-93-92563] p 1915 N93-20877

TRANSMISSOMETERS
Analysis of solar transmission data from SABLE 89
[AD-A258602] p 2001 N93-19984

TRANSMITTANCE
A new software tool for computing Earth's atmospheric transmission of near- and far-infrared radiation
[NASA-TM-103957] p 1996 N93-20066
Transmittance coefficients generation for fast radiative transfer models: Application to new satellite sounding systems p 1960 N93-21612

TRANSMITTERS
Development of a 100 mJ, 5 Hz, flashlamp-pumped, Cr,Tm:YAG coherent lidar transmitter
p 1912 N93-20100
An overview of Sandia National Laboratories' plasma switched, gigawatt, ultra-wideband impulse transmitter program
[DE93-003249] p 1886 N93-21960

TRANSONIC FLOW
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
La Recherche Aerospatiale Bimonthly Bulletin, no. 249, March - April
[ONERA-1989-2] p 1762 N93-21747

TRANSONIC SPEED
Computation of H2/air reacting flowfields in drag-reduction external combustion
[NASA-CR-191071] p 1846 N93-20237
Application of the Euler method EUFLEX to a fighter-type airplane configuration at transonic speed
[MBB-FE-211-S-PUB-0489-A] p 1762 N93-21059
Experimental investigations on wing-body combinations and their components at high angles of attack in the subsonic and transonic speed range
[DLR-FB-91-43] p 1783 N93-21762

TRANSPONDERS
Research on space communication equipment technology: Study on relay system p 1790 N93-20420

TRANSPORT AIRCRAFT
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
A simulator study into low speed longitudinal handling qualities of ACT transport aircraft
[NLR-TP-89387-U] p 1787 N93-20743

TRANSPORT PROPERTIES
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
Process modelling for materials preparation experiments
[NASA-CR-192319] p 2078 N93-20236

TRANSPORT THEORY
L-mode confinement model based on transport-MHD theory in tokamaks
[NIFS-192] p 2074 N93-21192

Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields
p 1955 N93-21580

Variational nodal solution algorithms for multigroup criticality problems
[DE93-003462] p 2042 N93-21964

TRANSPORTATION

Energy utilization and greenhouse gas emissions: Transportation sector
[PB93-110161] p 1991 N93-21384

Role of advanced technology in the security of surface transportation p 1764 N93-21857

TRANSPUTERS

A contribution to the study of OR-parallel in PROLOG over distributed memory machines
[ETN-93-92681] p 2044 N93-20886

TRANSVERSE OSCILLATION

Transverse vibrations of an elastically restrained rod carrying a tip mass p 1934 N93-20669

TRAPEZOIDS

A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270

Dynamic location in an arrangement of line segments in the plane
[INRIA-RR-1558] p 2037 N93-20872

TRAPPED PARTICLES

Dimensionless scaling of confinement in ATF
[DE93-001705] p 2069 N93-20030

Ion trapping in dusty plasmas
[MPE-PREPRINT-219] p 2075 N93-21405

TRAVELING SALESMAN PROBLEM

Comparison of artificial neural networks with a conventional heuristic technique for optimization problems
[AD-A259207] p 2046 N93-20552

TRAYS

Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006

TREES (MATHEMATICS)

Hierarchical Poly Tree configurations for the solution of dynamically refined finte element models
[NASA-CR-191054] p 1921 N93-20232

Optimal broadcasting algorithms on torus
[RR-872-I] p 2043 N93-20789

Two strikes against perfect phylogeny
[RUU-CS-92-08] p 2021 N93-20848

Resolution in modal propositional logic
[REPT-91-59] p 2052 N93-20853

A canonical calculus of residuals
[INRIA-RR-1542] p 2052 N93-20861

An O(n squared) maximal planarization algorithm based on PQ-trees
[RUU-CS-92-03] p 2038 N93-21035

Conformal length of graphs
[ETN-93-93419] p 2054 N93-21068

TREES (PLANTS)

Quantitative registration of tree vitality and physiological changes with colour-infrared and multispectral photography
[BCRS-91-44] p 1968 N93-20740

Deforestation in African dry lands: Assessment of changes in woody vegetation in semi arid Sudan
p 1956 N93-21585

Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788

TREND ANALYSIS

Trends in nitrogen in the Chesapeake Bay, 1984-1990
[PB93-122174] p 1990 N93-21217

Current information technology resource requirements of the Federal Government, FY 1993
[PB92-233238] p 2092 N93-21500

Principles and application tendency of remote sensing: Its principle, function, and utilization
p 1978 N93-21540

Present status and tendency of satellite Earth observing systems p 1978 N93-21541

Monitoring of vibrating machinery using artificial neural networks
[DE93-003566] p 2050 N93-21848

TRESCA FLOW

Theoretical analysis of plastic moment capacity of an inclined yield line under axial force
[PB93-118784] p 1951 N93-21689

TRIANGULATION

Triangulating planar graphs while minimizing the maximum degree
[RUU-CS-92-07] p 2054 N93-20950

History of geodesy p 1975 N93-20997

TROPICAL METEOROLOGY

A procedure to reduce northward drift of tropical storms in a numerical model
[PB92-226406] p 2013 N93-21290

Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics
[NASA-CR-192720] p 2014 N93-21492

Climatological use of long time series of data from the water vapour channel of Meteosat p 1958 N93-21601

TROPICAL REGIONS

Planetary circulations in the presence of transient and self-induced heating p 2003 N93-20071

Research on diabatic initialization
p 2004 N93-20075

WetNet: Using SSM/I data interactively for global distribution of tropical rainfall and precipitable water
p 2005 N93-20082

Atmospheric electricity/meteorology analysis
p 2006 N93-20086

ER-2 investigations of lightning and thunderstorms
p 2006 N93-20088

Observational and modeling studies of heat, moisture, precipitation, and global-scale circulation patterns
p 2007 N93-20092

Tropical Pacific moisture variability
p 2007 N93-20093

Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360

Shipboard acoustic Doppler current profiler data collected during the Subtropical Atlantic Climate Studies (STACS) Project (1989-1990)
[PB93-116598] p 2019 N93-21389

Pinatubo eruption winter climate effects: Model versus observations
[NASA-CR-191955] p 1994 N93-21946

TROPICAL STORMS

The role of conditional symmetric instability in the development of moderate to heavy frozen precipitation bands
[AD-A258575] p 2002 N93-20031

Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360

A procedure to reduce northward drift of tropical storms in a numerical model
[PB92-226406] p 2013 N93-21290

Diagnostic Report of the National Hurricane Center. October and November 1991, volume 4, number 3
[PB93-126464] p 2014 N93-21478

TROPOSPHERE

NASA/MSFC FY92 Earth Science and Applications Program Research Review
[NASA-CP-3184] p 2002 N93-20067

Life cycles of transient planetary waves
p 2004 N93-20077

Aerosol chemistry in GLOBE p 2009 N93-20102

Simulations of satellite Doppler wind observations
p 2010 N93-20104

Isotopes of carbon monoxide in the free troposphere and their implications to atmospheric chemistry
[PB92-218650] p 2001 N93-21783

Pinatubo eruption winter climate effects: Model versus observations
[NASA-CR-191955] p 1994 N93-21946

TROUGHS

The mid-latitude trough. A review
[AD-A258606] p 1995 N93-19985

TRUSSES

Pre-integrated truss space station and method of assembly
[NASA-CASE-MSC-22015-1] p 1823 N93-20042

Robot-friendly connector --- space truss structures
[NASA-CASE-MSC-21864-1] p 1914 N93-20117

Design considerations for an astronaut monorail system for large space structures and the structural characterization of its positioning arm
p 1823 N93-20167

Multimodal optimization of vibrating space frames
p 1931 N93-20652

Neutral buoyancy test evaluation of hardware and extravehicular activity procedures for on-orbit assembly of a 14 meter precision reflector
[NASA-TM-107735] p 1824 N93-20922

TUBERCULOSIS

Rapid susceptibility testing of mycobacterium avium complex and mycobacterium tuberculosis isolated from AIDS patients
[NASA-CR-192382] p 2023 N93-20736

TUNABLE LASERS

Efficient CW operation of a 2.75 micrometer Er(3+)-doped fluorozirconate fibre laser pumped at 650 and 795 nm
[MBB-Z-0384-91-PUB] p 1911 N93-20916

Infrared tunable difference frequency laser source
[DE93-005128] p 1912 N93-21709

TUNGSTEN CARBIDES

Method of bonding metal carbides in non-magnetic alloy matrix
[AD-D015591] p 1833 N93-20801

TUNGSTEN COMPOUNDS

New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986

TUNGSTEN OXIDES

New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986

TUNING

A high-speed auto-tuning PID regulator based on programmable logic devices
[REPT-92-042] p 2047 N93-21186

TUNNELS

Wind-tunnel experiments on wind effects at tunnel portals
[NLR-TP-91191-U] p 1761 N93-20911

TURBINE BLADES

Three-dimensional Navier-Stokes heat transfer predictions for turbine blade rows
[NASA-TM-105800] p 1897 N93-19969

Fatigue in single crystal nickel superalloys
[AD-A259191] p 1856 N93-20275

Computational fluid flow and heat transfer. An engineering tool p 1905 N93-20617

Advanced turbine design for coal-fueled engines
[DE93-000224] p 1915 N93-21254

Field evaluation of six protective coatings applied to T-56 turbine blades after 2000 hours of engine use
[ARL-TR-2] p 1786 N93-21316

Fatigue of fiberglass wind turbine blade materials
[DE93-005381] p 1951 N93-21711

TURBINE PUMPS

Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753

Evolution of materials used in liquid propellant rocket engines
[DS-2025] p 1830 N93-21460

TURBINES

Use of the boundary element method in the resolution of the quasi-elliptic Navier-Stokes equations: Application to the calculation of a turbine flow
[ECL-91-13] p 1902 N93-20893

TURBOCOMPRESSORS

Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development)
[PB92-227891] p 1878 N93-21465

TURBOFAN ENGINES

Applications of active adaptive noise control to jet engines
[NASA-CR-192277] p 1785 N93-21210

Supersonic transport: Which material for the engine
[DS-2023] p 1786 N93-21459

TURBOMACHINE BLADES

A recent boundary integral procedure on determining shear centers, warping constant and other cross sectional properties of a turbine blade p 1918 N93-20703

TURBOMACHINERY

Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773

TURBOPROP ENGINES

Investigation of advanced counterrotation blade configuration concepts for high speed turboprop systems. Task 5: Unsteady counterrotation ducted propfan analysis
[NASA-CR-187126] p 1785 N93-20773

Structural Tailoring of Advanced Turboprops (STAT). Theoretical manual
[NASA-CR-191017] p 1953 N93-22005

TURBULENCE

A finite-difference multigrid algorithm for the direct numerical simulation of transition and turbulence in incompressible flow p 1898 N93-20168

The effects of gravity on wrinkled laminar flames
p 1853 N93-20200

Observations of turbulence, internal waves, and background flows: An inquiry into the relationships between scales of motion
[AD-A259361] p 2019 N93-21244

A k-omega-multivariate beta PDF for supersonic combustion
[NASA-CR-191930] p 1851 N93-21749

La Recherche Aerospatiale Bimonthly Bulletin, no. 250, May - June
[ONERA-1989-3] p 2060 N93-21948

TURBULENCE MODELS
Projectile base bleed technology. Part 2: User's guide CMINT computer code, version 5.04-BRL
[AD-A258630] p 1897 N93-19999
Assessment of higher order turbulence models for complex two- and three-dimensional flowfields
[NASA-TM-103944] p 1897 N93-20035
Turbulence modeling for hypersonic flight
[NASA-CR-192288] p 1760 N93-20235
The structures and the sensitivity of an incompressible turbulent boundary layer in the vicinity of the separation
[ETN-93-92557] p 1902 N93-20892
A k-omega-multivariate beta PDF for supersonic combustion
[NASA-CR-191930] p 1851 N93-21749
TURBULENT BOUNDARY LAYER
Study of a turbulent boundary layer modified by the insertion of a Large Eddy Break Up (LEBU) device
[ECL-92-11] p 1898 N93-20061
Visualization of turbulent flows with simultaneous velocity and vorticity measurements
p 1900 N93-20290
The structures and the sensitivity of an incompressible turbulent boundary layer in the vicinity of the separation
[ETN-93-92557] p 1902 N93-20892
TURBULENT DIFFUSION
Diffusion and reaction layer structure and NOx reduction in turbulent gas flames
[PB93-114353] p 1850 N93-21456
TURBULENT FLOW
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
Injection of drag-reducing additives into turbulent water flows. Investigation of laser-induced fluorescence for concentration measurements
[AD-A259459] p 1898 N93-20243
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence
[NASA-CR-189640] p 1899 N93-20253
Analysis and evaluation of an integrated laminar flow control propulsion system
[NASA-CR-192162] p 1899 N93-20268
Visualization of turbulent flows with simultaneous velocity and vorticity measurements
p 1900 N93-20290
Methodology for sensitivity analysis, approximate analysis, and design optimization in CFD for multidisciplinary applications
[NASA-CR-192172] p 1900 N93-20297
Study of multi jet burner for gases
[INPE-5416-TDI/480] p 1846 N93-20320
Stability and transition of hypersonic boundary layer
p 1763 N93-20687
An experimental investigation of a round turbulent jet in a cross-flow p 1905 N93-20689
An assessment of laser velocimetry in hypersonic flow
[NASA-CR-190895] p 1762 N93-21556
Large eddy simulations and direct numerical simulations of high speed turbulent reacting flows
[NASA-CR-192654] p 1903 N93-21662
Advanced control strategies for wind turbines
[DE93-003252] p 1989 N93-21961
An axisymmetric, turbulent flow analysis of contaminant infiltration into a pressurized structure with a fabric endcap
[AD-A259344] p 1904 N93-21977
TURBULENT JETS
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions
p 1853 N93-20192
Experiment and modeling of the noise reduction for a turbulent supersonic jet by means of a nozzle with a sudden enlargement
[MPIS-15/1991] p 2060 N93-21024
TURBULENT MIXING
Gust forecasting
[MISC-SER-A-125] p 2012 N93-20887
Observations of turbulence, internal waves, and background flows: An inquiry into the relationships between scales of motion
[AD-A259361] p 2019 N93-21244
Lewis number effects on turbulent premixed flame structure
[DE93-002571] p 1852 N93-21976
TWO DIMENSIONAL FLOW
Assessment of higher order turbulence models for complex two- and three-dimensional flowfields
[NASA-TM-103944] p 1897 N93-20035
La Recherche Aerospatiale Bimonthly Bulletin, no. 250, May - June
[ONERA-1989-3] p 2060 N93-21948
TWO DIMENSIONAL MODELS
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices
p 1865 N93-20150
A numerical investigation of squall lines
[ISBN-0-315-69244-8] p 2011 N93-20280
Two-dimensional planar geosystems subjected to three-dimensional dynamic loads
[AD-A258723] p 1921 N93-20325
Quantum dynamics of shock waves in molecular crystals
[AD-A258749] p 2079 N93-20404
On the origin of SL(nC) current algebra in generalized two dimensional gravity
[PREPRINT-818] p 2055 N93-21180
Two-parameter quantum groups
[PREPRINT-820] p 2060 N93-21182
TWO FLUID MODELS
A visualization study of the diffusion process between two liquids of different densities under microgravity conditions p 1806 N93-21095
Internal structure and interfacial area in two-phase flow systems
[DE93-000921] p 1903 N93-21672
TWO PHASE FLOW
Film condensation in a horizontal rectangular duct
[NASA-CR-191061] p 1898 N93-20063
Research on two phase fluid loop type heat rejection technology p 1791 N93-20421
Quenching of a tube and filling of a vessel under microgravity p 1806 N93-21096
Effect of surface active materials on bubble dynamics in two-phase flow
[AD-A259340] p 1902 N93-21264
Internal structure and interfacial area in two-phase flow systems
[DE93-000921] p 1903 N93-21672
TYPHOONS
Joint Typhoon Warning Center (JTWC92) model
[AD-A258646] p 2011 N93-20586

p 1764 N93-21859
UNIVERSE
Numerical examination of Kelvin-Helmholtz instability with self gravitation and cosmologic expansion: A contribution to the formation of structure in the Universe
[MPE-238] p 2096 N93-20856
Aspects of the electroweak phase transition
[DE93-004629] p 2063 N93-21723

UNIVERSITIES
Education in geodesy p 1975 N93-20996
Pathways to excellence: A Federal strategy for science, mathematics, engineering, and technology education [NASA-EP-288] p 1819 N93-21538
UNIVERSITY PROGRAM
Joint services electronics program [AD-A259179] p 1890 N93-20562
The NASA Plan: To award eight percent of prime and subcontracts to socially and economically disadvantaged businesses [NASA-NP-136] p 2086 N93-21128
NASA Space Engineering Research Center for utilization of local planetary resources [NASA-CR-191991] p 2099 N93-21553
NASA Space Engineering Research Center for utilization of local planetary resources [NASA-CR-191992] p 2103 N93-21554
UNMANNED SPACECRAFT
Research on advanced spacecraft p 1789 N93-20411
Concept of overall operation of H-2 Orbiting Plane (HOPE) p 1791 N93-20424
UNSTEADY AERODYNAMICS
Analytic formulation of unsteady profile aerodynamics and its application to simulation of rotors [ESA-TT-1244] p 1762 N93-21659
UNSTEADY FLOW
Numerical solution of three-dimensional unsteady viscous flows [AD-A259464] p 1899 N93-20244
Unsteady Navier-Stokes method for accelerated moving airfoils with separation [DLR-FB-92-03] p 1763 N93-21763
Further development of the CANAERO computer code to include a time-stepping capability [DREA-CR-91-478] p 2042 N93-21820
UNSWEPT WINGS
Application of a flush airdata sensing system to a wing leading edge (LE-FADS) [NASA-TM-104267] p 1784 N93-20163
UPPER ATMOSPHERE
The mid-latitude trough. A review [AD-A258606] p 1995 N93-19985
Observation of ionospheric modification using high power oblique HF transmissions [AD-A258706] p 1998 N93-20378
Pakistan Space and Upper Atmosphere Research Commission p 1819 N93-21285
UPPER ATMOSPHERE RESEARCH SATELLITE (UARS)
Preliminary results: Root cause investigation of orbital anomalies and failures in NASA standard 50 ampere-hour nickel-cadmium batteries p 1985 N93-20508
UPSTREAM
On a ballistic method for double layer regeneration in a Vlasov-Poisson plasma [NIFS-153] p 2070 N93-20154
UPWELLING WATER
Marine productivity along the northwest coast of Africa (Mauritania): Estimation from satellite data p 1955 N93-21578
Model predictions of the cross-slope transport of shelf organic carbon in the northwest African upwelling zone calibrated by satellite derived pigment fields p 1955 N93-21580
Seasonal SST and upwelling indices along the northwest African coast p 1964 N93-21633
URBAN PLANNING
The distribution of green areas in urban areas: Cartography and comparative analysis of LANDSAT TM and HRV/SPOT data [INPE-5262-PRE/1686] p 1979 N93-21560
URBAN RESEARCH
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project [PB93-129815] p 1994 N93-21827
URBAN TRANSPORTATION
Public transportation alternative fuels: A perspective for small transportation operations [PB92-120120] p 1866 N93-21716
Public transportation alternative fuels: A perspective for small transportation operations. Executive summary [PB92-182567] p 1867 N93-21717
USER MANUALS (COMPUTER PROGRAMS)
PL/GPD DMSP data archiving from VAX to exabyte tapes [AD-A258607] p 2002 N93-19994
Management of Automatic Data Processing (ADP) system documentation in the Department of Defense [AD-A258507] p 2088 N93-20048
Radar Ocean Wave Spectrometer (ROWS) preprocessing program (PREROWS2.EXE). User's manual and program description [NASA-TM-104579] p 2017 N93-20160
MAPPER: A personal computer map projection tool [NASA-TM-4445] p 2034 N93-20778
User's guide to the on-line bibliographic reference system for the NIST process planning testbed [PB92-226307] p 2091 N93-21012
CRAY mini manual. Revision D [NASA-TM-107599-REV-D] p 2028 N93-21027
Computer Security Bulletin Board System: User's guide [PB93-113553] p 2029 N93-21255
Conformance test specification for COBOL intrinsic function module [PB92-229178] p 2040 N93-21351
Expanded user's documentation for SHIMS [PB93-101905] p 2092 N93-21694
Physics models and user's guide for the neutral beam module of the SuperCode [PB93-121887] p 2076 N93-21809
USER REQUIREMENTS
User interface of complex interactive computer systems [ECL-92-05] p 2030 N93-20059
Product development of a user interface for Geographic Information Systems (GIS) and remote sensing for training purposes [BCRS-90-32] p 2091 N93-20952
Field screening for environmental pollutants: Defining user instrumentation needs [PB93-117885] p 1993 N93-21791
UTILIZATION
Utilization of remote sensing data at the Deutscher Wetterdienst p 1962 N93-21621

V

VACILLATION
Basic studies of baroclinic flows p 2003 N93-20073
VACUUM APPARATUS
High temperature substrate mount for chemical vapor deposition of diamond [AD-D015563] p 1858 N93-20122
The Wakeshield Facility: Free flyer and commercial experiment transporter programs p 1807 N93-21105
VACUUM CHAMBERS
Nickel-hydrogen CPV battery update p 1986 N93-20518
VACUUM DEPOSITION
Metallization and sputtering of textiles: Preconditions for the substrate, properties and applications p 1838 N93-21158
VACUUM GAGES
Vacuum structure of pure gauge theories on the lattice [DE93-001920] p 2081 N93-21701
VALIDITY
The WAM model and ERS-1 p 1960 N93-21609
How real-time data assimilation benefits weather and climate studies through the validation, quality control and synthesis of remotely sensed data p 1960 N93-21610
VALLEYS
Multispectral and multitemporal aerial photography as an aid for the evaluation of land in regions of the Limagne Rift Valley (France) [BCRS-91-29] p 1968 N93-20953
VALVES
Damped vibration of engine valve train by recent transfer matrix and matrix procedures p 1933 N93-20665
Analysis of failure and maintenance experiences of motor operated valves in a Finnish nuclear power plant [VTT-TIED-1322] p 1916 N93-21658
VAPOR DEPOSITION
Low-pressure diamond growth using a secondary radical source [AD-A258539] p 2077 N93-20055
Controlled nucleation and growth of semiconducting diamond [AD-A258541] p 2078 N93-20056
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket [NASA-CR-191014] p 1829 N93-20114
High temperature substrate mount for chemical vapor deposition of diamond [AD-D015563] p 1858 N93-20122
Cluster formation and evolution on semiconductor surface [AD-A259190] p 2078 N93-20274
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts [AD-A259247] p 2080 N93-20581
New compounds obtained by LPCVD in the B-C-N chemical system [REPT-921-430-111] p 1849 N93-20933
Low-temperature emitter-passivation for silicon solar cells [DE93-002483] p 1987 N93-21487
Magnetically insulated ion diodes for synthesis of advanced materials [DE93-003747] p 2076 N93-21776
Advanced ceramic component development for high temperature indirect gas-fired heating systems [PB93-127033] p 1862 N93-21817
VAPOR PHASES
Principles of gas phase processing of ceramics during combustion p 1862 N93-20188
A numerical simulation of two-phase jet spreading using an Euler-Lagrangian technique [AD-A259326] p 1902 N93-21258
Stable clusters in the condensed state and some possibilities for gas phase clusters [DE93-004446] p 2064 N93-21846
VAPOR PRESSURE
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures [PB93-102242] p 1850 N93-21653
Explosive vapor emission p 1772 N93-21905
A thermodynamic study of the vapor pressures of C-4 and pure RDX p 1772 N93-21906
VAPORIZING
Status of the CNRS-LCSR program on high pressure droplet vaporization and burning p 1854 N93-20215
VAPORS
Role of advanced technology within a broad security approach p 1765 N93-21860
Dichotomous key approach for high confidence level identification of selected explosive vapors p 1771 N93-21904
Explosive vapor emission p 1772 N93-21905
A thermodynamic study of the vapor pressures of C-4 and pure RDX p 1772 N93-21906
Extraction, transportation and processing of explosives vapor in detection systems p 1772 N93-21907
Vapor sampling using controlled heating p 1772 N93-21908
Efficient collection of explosive vapors, particles and aerosols p 1772 N93-21909
Calibration methods for explosives detectors p 1773 N93-21911
Vapor detection using SAW sensors p 1773 N93-21912
Fourier-transform infrared spectroscopy applied to explosive vapor detection p 1773 N93-21913
Atmospheric pressure ionization time-of-flight mass spectrometer for real-time explosives vapor detection p 1773 N93-21914
Real-time explosives/narcotics vapor enhancement and collection systems for use with the atmospheric pressure ionization time-of-flight mass spectrometer p 1773 N93-21915
Tandem mass spectrometry for explosives vapor detection p 1774 N93-21917
Program to tag military plastic/sheet explosives p 1775 N93-21926
An improved vapor taggant detector p 1775 N93-21927
VARACTOR DIODES
Planar monolithic Schottky varactor diode millimeter-wave frequency multipliers [AD-A258616] p 1887 N93-19995
VARIABILITY
Planetary circulations in the presence of transient and self-induced heating p 2003 N93-20071
Nonlinear dynamics of global atmospheric and Earth system processes p 2001 N93-20076
Tropical Pacific moisture variability p 2007 N93-20093
Geometry and photometry in 3D visual recognition [AD-A259443] p 2066 N93-20126
Determination of methane stability in the upper mantle and lower crust [PB93-100931] p 2001 N93-21785
VARIABLE MASS SYSTEMS
Dynamic analysis of a variable-mass multibody system p 1934 N93-20671
VARIANCE (STATISTICS)
Interactive graphics system for the study of variance/covariance structures of bivariate and multivariate normal populations [AD-A259449] p 2030 N93-20058
The development of the Navy's multivariate optimum interpolation analysis system [AD-A258569] p 2058 N93-20358
VARIATIONAL PRINCIPLES
The overall response of composite materials undergoing large deformations [AD-A259278] p 1832 N93-20606
VARIATIONS
Global temperature variations p 2003 N93-20068
Life cycles of transient planetary waves p 2004 N93-20077
SSG 5.122: Geodynamic effects of global gravity field variations p 1974 N93-20993

VECTOR PROCESSING (COMPUTERS)
ATKIS: The introduction phase at IfAG p 1967 N93-20533
VECTOR SPACES
C-integrable nonlinear PDE's. 1 [PREPRINT-787] p 2051 N93-20805
C-integrable nonlinear PDE's. 2 [PREPRINT-788] p 2053 N93-20874
An estimating function for a scalar parameter in a covariance operator [RR-878-M] p 2054 N93-21050
VECTORS (MATHEMATICS)
On the formulation of linear homogeneous velocity constraints in mechanical systems p 1941 N93-20712
Dynamic systems and normal forms [RR-883-M] p 2051 N93-20784
VEGETATION
Multifrequency backscatter modelling of bare soil: Attema, Kats, and Krul model applied in Agriscatt 1987 data [BCRS-91-43] p 1884 N93-20739
Global models of ecosystem change p 1953 N93-21570
Evaluation of the international directory network for location of data sets useful in global vegetation change assessment p 1954 N93-21575
Vegetation cover mapping over France using NOAA-11/AVHRR p 1955 N93-21582
Deforestation in African dry lands: Assessment of changes in woody vegetation in semi arid Sudan p 1956 N93-21585
Global Change Data Base Pilot (Diskette) Project for Africa. Dase base documentation version 1.1 [PB93-117927] p 2000 N93-21686
Chicago's evolving urban forest: An initial report of the Chicago Urban Forest Climate Project [PB93-129815] p 1994 N93-21827
VEGETATION GROWTH
A membrane-based subsystem for water-vapor recovery from plant-growth chambers [NASA-CR-177602] p 2025 N93-20065
VEGETATIVE INDEX
Remote sensing data application on forests in Okinawa Islands focusing on mangrove forests p 1978 N93-21543
The distribution of green areas in urban areas: Cartography and comparative analysis of LANDSAT TM and HRV/SPOT data [INPE-5262-PRE/1686] p 1979 N93-21560
The 8 years monthly vegetation index of central Europe p 1954 N93-21574
Influence of terrain elevation on vegetation indices derived from NOAA AVHRR and EOS MODIS data p 1954 N93-21576
Vegetation cover mapping over France using NOAA-11/AVHRR p 1955 N93-21582
Estimation of carbon storage and organic matter in boreal forests using optical remote sensing data p 1955 N93-21583
Deforestation in African dry lands: Assessment of changes in woody vegetation in semi arid Sudan p 1956 N93-21585
VELOCITY DISTRIBUTION
Digital image processing of hydrogen bubble lines for instantaneous velocity profiles [AD-A258592] p 1897 N93-19965
Study of a turbulent boundary layer modified by the insertion of a Large Eddy Break Up (LEBU) device [ECL-92-11] p 1898 N93-20061
On a ballistic method for double layer regeneration in a Vlasov-Poisson plasma [NIFS-153] p 2070 N93-20154
Neural networks for real-time sensory data processing and sensorimotor control [AD-A259120] p 2046 N93-20557
On the formulation of linear homogeneous velocity constraints in mechanical systems p 1941 N93-20712
The structures and the sensitivity of an incompressible turbulent boundary layer in the vicinity of the separation [ETN-93-92557] p 1902 N93-20892
The acquisition of velocity fields via the automatic analysis of motion, exemplarily demonstrated in a rotating fluid [MPIS-102/1991] p 1902 N93-21023
Use of ERS-1 SAR data in numerical sea ice modeling p 1957 N93-21592
Empirical model of winds in south-eastern Europe in connection with solar activity p 1961 N93-21619
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620
VELOCITY MEASUREMENT
The Split Window Microwave Radiometer (SWMR) for hurricane wind speed measurement from space [NASA-CR-192316] p 2002 N93-19987
Portable fiber optic coupled Doppler interferometer system for detonation and shock wave diagnostics [SAND-92-1359C] p 1865 N93-20148
Explosive component acceptance tester using laser interferometer technology [SAND-92-0324C] p 1866 N93-20152
Robot motion vision by fixation [AD-A259456] p 2046 N93-20241
Characterization of the confined ceiling jet in the presence of an upper layer in transient and steady-state conditions [PB92-238690] p 1878 N93-21650
VENTILATION
Optimization and sensitivity computations for the conception of internal ventilation system in the aircraft engine [ETN-93-93375] p 1785 N93-20913
A model study of the aircraft cabin environment resulting from in-flight fires [DOT/FAA/CT-90/22] p 1764 N93-21557
VENUS ATMOSPHERE
Planetary atmospheres: Microwave spectroscopic studies of planetary atmospheres [NASA-CR-192145] p 2099 N93-21642
VERBAL COMMUNICATION
Comparison of performance on the Shipley Institute of Living Scale, Air Traffic Control Specialist Selection Test, and FAA Academy Screen [AD-A259249] p 1779 N93-20582
VERTICAL PERCEPTION
Eye movements under altered gravitoinertial forces p 1809 N93-21111
VERY HIGH FREQUENCIES
Development of a realtime DGPS system [DLR-MITT-92-06] p 1779 N93-20749
VERY LARGE SCALE INTEGRATION
Version and transaction management in OSMagic: An object-oriented database implementation of the Magic VLSI layout design tool [AD-A259138] p 2033 N93-20574
ProperCAD: A portable object-oriented parallel environment for VLSI CAD [NASA-CR-192308] p 2033 N93-20603
VERY LONG BASE INTERFEROMETRY
Commission 10: Continental networks. Subcommission for the European Reference Frame (EUREF) p 1969 N93-20961
Activity report of the IRIS subcommission in the period 1987-1991 p 1970 N93-20970
Commission 7: Recent crustal movements p 1973 N93-20988
International Earth Rotation Service p 1974 N93-20990
SSG 5.99: Tidal friction and the Earth's rotation p 1974 N93-20992
SSG 5.123: Definition and realization of terrestrial reference systems p 1974 N93-20994
Analysis and synthesis of catalogues of extragalactic radio sources [MITT-SER-A-231] p 2102 N93-21053
VERY LOW FREQUENCIES
Improved visual aid for VLF MSK signals [AD-D015576] p 1882 N93-20277
VESTS
Evaluation of two microclimate cooling air vests on a heated mannequin [AD-A259410] p 2026 N93-21269
VHSIC (CIRCUITS)
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL [AD-A259224] p 2033 N93-20577
A VHDL interpreter for model-based diagnoses [AD-A259122] p 2046 N93-20590
VIBRATION
Vibrational spectroscopic studies of adsorbates on bimetallic surfaces [AD-A258578] p 1855 N93-19963
Linear algebra applied to physics determining small vibrations in conservative elastic systems [AD-A259114] p 2050 N93-20589
Fluid/structure interactions. Internal flows p 1905 N93-20629
Vibration of a multi-guided rotating string p 1934 N93-20672
A Government/Industry Summary of the Design Analysis Methods for Vibrations (DAMVIBS) Program [NASA-CP-10114] p 1782 N93-21310
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: A government overview p 1782 N93-21311
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program : Bell Helicopter Textron accomplishments p 1782 N93-21312
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Boeing Helicopters airframe finite element modeling p 1782 N93-21313
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: McDonnell-Douglas Helicopter Company achievements p 1782 N93-21314
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: Sikorsky Aircraft: Advances toward interacting with the airframe design process p 1782 N93-21315
Solution of large, sparse systems of linear equations in massively parallel applications [DE93-004243] p 2045 N93-21741
Monitoring of vibrating machinery using artificial neural networks [DE93-003566] p 2050 N93-21848
VIBRATION DAMPING
Mass loaded composite rotor for vibro-acoustic application [AD-D015604] p 1831 N93-20016
Structural dynamics branch research and accomplishments to FY 1992 [NASA-TM-105824] p 1925 N93-20368
Analytical and experimental investigation of flutter suppression by piezoelectric actuation [NASA-TP-3241] p 1781 N93-20584
Elimination of resonance with a switching support p 1933 N93-20664
Damped vibration of engine valve train by recent transfer matrix and matrix procedures p 1933 N93-20665
Apparatus for reduction of vibration in liquid-injected gas compressor system [AD-D015607] p 1914 N93-20772
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program : Bell Helicopter Textron accomplishments p 1782 N93-21312
VIBRATION MEASUREMENT
Vibration monitoring with artificial neural networks [DE93-003543] p 1952 N93-21992
Vibration monitoring of EDF rotating machinery using artificial neural networks [DE93-003557] p 1952 N93-21993
VIBRATION MODE
A non-linear phenomenon in the dynamic response of metallic and composite structures p 1926 N93-20620
A superposition-Rayleigh Ritz method for free vibration analysis of nonuniformly stretched rectangular membranes p 1931 N93-20649
Transverse vibrations of an elastically restrained rod carrying a tip mass p 1934 N93-20669
A comparison of force reconstruction methods for a lumped mass beam [DE93-002461] p 1951 N93-21484
Identification of delamination by eigenfrequency degradation: An inverse problem p 1843 N93-21526
VIBRATION TESTS
Advanced small rocket chambers: Option 1, 14 lbf Ir-Re rocket [NASA-CR-191014] p 1829 N93-20114
Nickel-hydrogen CPV battery update p 1986 N93-20518
Experimental and analytical investigation of dynamic characteristics of extension-twist-coupled composite tubular spars [NASA-TP-3225] p 1925 N93-20585
VIBRATIONAL SPECTRA
Free radical and overtone spectroscopy [NASA-CR-192136] p 1850 N93-21555
VIBRATORY LOADS
Damped vibration of engine valve train by recent transfer matrix and matrix procedures p 1933 N93-20665
VIDEO COMMUNICATION
Night vision goggle training: Development and production of six video programs [AD-A258529] p 2025 N93-20050
A robust coding scheme for packet video p 1881 N93-20174
VIEWING
Geometric aspects of visual object recognition [AD-A259454] p 2046 N93-20239
VIRTUAL REALITY
A synthetic environment flight simulator: The AFIT virtual cockpit [AD-A259220] p 1788 N93-20576
Real image visual display system [AD-A259125] p 2033 N93-20593
VISCOELASTICITY
The analytical representation of viscoelastic material properties using optimization techniques [NASA-TM-108394] p 1920 N93-19972
Application of silicone fluid rheogoniometer measurements to despin moment studies in a spinning and coning cylinder [AD-A259270] p 1901 N93-20599
Viscoelastic analysis of bonded connections p 1929 N93-20638
Creep damage of carbon fiber reinforced PEEK p 1862 N93-20639

Well-posedness and stabilizability of a viscoelastic equation in energy space
[PB93-111920] p 2056 N93-21474

VISCOPLASTICITY
La Recherche Aerospatiale Bimonthly Bulletin, no. 248, January - February
[ONERA-1989-1] p 1878 N93-21748

VISCOSITY
Measurement and interpretation of crustal deformation rates associated with postglacial rebound
[NASA-CR-192245] p 1996 N93-20238
A synergetic treatment of the vortices behaviour of a plasma with viscosity
[NIFS-166] p 2070 N93-20249
Repairing delaminations with low viscosity epoxy resins p 1844 N93-21532

VISCOUS FLOW
The semi-discrete Galerkin finite element modelling of compressible viscous flow past an airfoil
[NASA-CR-192161] p 1760 N93-20018
Numerical solution of three-dimensional unsteady viscous flows
[AD-A259464] p 1899 N93-20244
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
Computation of incompressible viscous flows through turbopump components
[NASA-CR-192296] p 1901 N93-20753
Calculation of hypersonic, viscous, non-equilibrium flows around reentry bodies using a coupled boundary layer/Euler method
[MBB-LME-211-S-PUB-0487] p 1762 N93-21058

VISUAL ACUITY
Retinal information processing for minimum laser lesion detection and cumulative damage
[AD-A259195] p 2023 N93-20563

VISUAL AIDS
Improved visual aid for VLF MSK signals
[AD-D015576] p 1882 N93-20277
Production of teaching materials from Geostationary Meteorological Satellite Himawari images p 1978 N93-21544

VISUAL OBSERVATION
Stratiform clouds and their interaction with atmospheric motion
[NASA-CR-192280] p 2002 N93-20038

VISUAL PERCEPTION
Three dimensional x ray systems and image enhancement techniques p 1767 N93-21876

VISUAL TASKS
Eye movements under altered gravitoinertial forces p 1809 N93-21111

VITERBI DECODERS
CMOS circuit technique for integrated Viterbi decoders
[ETN-93-92568] p 1892 N93-20882

VLASOV EQUATIONS
Vlasov equation in the stochastic magnetic field
[NIFS-171] p 2075 N93-21567

VOICE COMMUNICATION
A simulation study of the effects of communication delay on air traffic control
[AD-A258593] p 1778 N93-19966

VOICE CONTROL
A simulation study of the effects of communication delay on air traffic control
[AD-A258593] p 1778 N93-19966

VOICE DATA PROCESSING
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409

VOID RATIO
Internal structure and interfacial area in two-phase flow systems
[DE93-000921] p 1903 N93-21672

VOIDS
Metal-coated, ordered void piezoelectric ceramic material
[AD-D015540] p 1859 N93-20304
Peak stresses in adhesive step lap joints with voids p 1932 N93-20656
Role of porosity in estimates of composite elastic constants
[DE93-002887] p 1845 N93-21989

VOLCANOES
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302
Pinatubo eruption winter climate effects: Model versus observations
[NASA-CR-191955] p 1994 N93-21946

VOLCANOLOGY
Sulfur mass loading of the atmosphere from volcanic eruptions: Calibration of the ice core record on basis of sulfate aerosol deposition in polar regions from the 1982 El Chichon eruption
[NASA-CR-192409] p 1997 N93-20302
Pinatubo eruption winter climate effects: Model versus observations
[NASA-CR-191955] p 1994 N93-21946

VOLTAGE AMPLIFIERS
Measurement of the dielectric constant of polymeric films at high fields
[PB92-238625] p 1860 N93-21471

VOLTAGE CONTROLLED OSCILLATORS
Remotely controlled C band signal generator
[AD-D015602] p 1880 N93-20014

VOLUMETRIC ANALYSIS
P-V-T surface studies for normal fluid-hydrogen bonding fluid mixtures
[PB93-102242] p 1850 N93-21653

VORTEX ALLEVIATION
Aerodynamic surface tip vortex attenuation system
[AD-D015606] p 1760 N93-20017

VORTEX AVOIDANCE
Proceedings of the Aircraft Wake Vortices conference, volume 1
[PB93-126449] p 1763 N93-21796
Proceedings of the Aircraft Wake Vortices conference, volume 2
[PB93-127728] p 2015 N93-21799

VORTEX GENERATORS
An experimental investigation of S-duct flow control using arrays of low-profile vortex generators
[NASA-TM-106030] p 1760 N93-19968
Enhanced heat transfer in ribbed ducts using vortex generators
[PB93-114320] p 1902 N93-21219

VORTEX SHEDDING
Experiments on smooth cantilevered circular cylinders in low-turbulence uniform flow. Part 1: Mean loading with aspect ratios in the range 4 to 30
[PB93-111763] p 1903 N93-21383

VORTICES
Waves and instability in the atmosphere of Mars: NASA planetary atmospheres program
[NASA-CR-192381] p 2099 N93-19961
A synergetic treatment of the vortices behaviour of a plasma with viscosity
[NIFS-166] p 2070 N93-20249
On the stability of nonlinear viscous vortices in three-dimensional boundary layers
[NASA-CR-189637] p 1899 N93-20254
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-192272] p 1788 N93-20255
Advanced adaptive computational methods for Navier-Stokes simulations in rotorcraft aerodynamics
[NASA-CR-192282] p 1761 N93-20256
Ship-of-opportunity hydrographic transect of warm-core eddy Triton: 27-29 January 1992
[PB92-218171] p 2018 N93-21031
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620
Large eddy simulations and direct numerical simulations of high speed turbulent reacting flows
[NASA-CR-192654] p 1903 N93-21662
La Recherche Aerospatiale Bimonthly Bulletin, no. 249, March - April
[ONERA-1989-2] p 1762 N93-21747
Proceedings of the Aircraft Wake Vortices conference, volume 1
[PB93-126449] p 1763 N93-21796
Proceedings of the Aircraft Wake Vortices conference, volume 2
[PB93-127728] p 2015 N93-21799
Crossflow stability and transition experiments in a swept-wing flow
[NASA-TM-108650] p 1904 N93-21819

VORTICITY
Statistical analysis of the rate of strain tensor in compressible homogeneous turbulence
[NASA-CR-189640] p 1899 N93-20253
Visualization of turbulent flows with simultaneous velocity and vorticity measurements p 1900 N93-20290

VULNERABILITY
Insights into US domestic aviation p 1764 N93-21859

W

WAFERS
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591

WAKES
Advanced control strategies for wind turbines
[DE93-003252] p 1989 N93-21961

WALKING MACHINES
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application p 1940 N93-20706

WARFARE
Subjective fatigue in A-6, F-14, and F/A-18 aircrews during operations Desert Shield and Storm
[AD-A259243] p 2023 N93-20580

WARNING SYSTEMS
A horizontal refractivity depiction product: An evaluation
[AD-A258738] p 1966 N93-20401
Joint Typhoon Warning Center (JTWC92) model
[AD-A258646] p 2011 N93-20586

WARPAGE
A recent boundary integral procedure on determining shear centers, warping constant and other cross sectional properties of a turbine blade p 1918 N93-20703

WASPALOY
Discrete statistical model of fatigue crack growth in a Ni-base superalloy, capable of life prediction p 1923 N93-20344

WASTE ENERGY UTILIZATION
Gasifiers optimized for fuel cell applications
[DE93-003486] p 1988 N93-21781

WASTE HEAT
Gasifiers optimized for fuel cell applications
[DE93-003486] p 1988 N93-21781

WATER
Global water cycle p 2004 N93-20078
Coordinated field study for CaPE: Analysis of energy and water budgets p 2005 N93-20079
Preserving our future today: Your guide to the United States Environmental Protection Agency
[PB92-226190] p 1990 N93-21345
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362
Fatigue crack propagation of titanium alloys in salt water
[GKSS-91/E/46] p 1856 N93-21551
Hydrophobic effects from cavity statistics
[DE93-003698] p 1904 N93-21734

WATER CIRCULATION
Surface circulation in the Adriatic Sea as observed by AVHRR p 1964 N93-21634

WATER COLOR
Estimating chlorophyll concentrations from Thematic Mapper data p 1954 N93-21577

WATER MANAGEMENT
The use of thermal infrared remote sensing for water management: Report of the operational research
[BCRS-91-34] p 1969 N93-20954
Application of remote sensing for the water management in Drenthe (Netherlands)
[BCRS-91-42] p 1975 N93-21038

WATER POLLUTION
Trends in nitrogen in the Chesapeake Bay, 1984-1990
[PB93-122174] p 1990 N93-21217
Perspectives on the marine environment. Proceedings from a symposium on the marine environment of Southern California
[PB93-120053] p 2019 N93-21536
Protecting the nation's wetlands, oceans, and watersheds: An overview of programs and activities
[PB93-105609] p 1992 N93-21655
Evaluation of the extent and magnitude of biological effects associated with chemical contaminants in San Francisco Bay, California
[PB93-118495] p 1994 N93-21805

WATER QUALITY
Trends in nitrogen in the Chesapeake Bay, 1984-1990
[PB93-122174] p 1990 N93-21217
Synoptic approach to cumulative impact assessment: A proposed methodology
[PB93-100147] p 1992 N93-21654
Protecting the nation's wetlands, oceans, and watersheds: An overview of programs and activities
[PB93-105609] p 1992 N93-21655

WATER RECLAMATION
Trends in nitrogen in the Chesapeake Bay, 1984-1990
[PB93-122174] p 1990 N93-21217

WATER RESOURCES
Application of remote sensing for the water management in Drenthe (Netherlands)
[BCRS-91-42] p 1975 N93-21038
WATER RUNOFF
Monthly precipitation and runoff data for validation of climate models p 1959 N93-21605
WATER TEMPERATURE
A study of the thermal bar in Lake Ladoga (Russia) using NOAA-AVHRR data p 1964 N93-21635
WATER TREATMENT
A membrane-based subsystem for water-vapor recovery from plant-growth chambers
[NASA-CR-177602] p 2025 N93-20065
Study on environment control and life support technology p 1789 N93-20413
WATER TUNNEL TESTS
Integrating real-time digital signal processing capability into a large research and development facility
[DE93-003085] p 2060 N93-21957
WATER VAPOR
A membrane-based subsystem for water-vapor recovery from plant-growth chambers
[NASA-CR-177602] p 2025 N93-20065
Global water cycle p 2004 N93-20078
WetNet: Using SSM/I data interactively for global distribution of tropical rainfall and precipitable water p 2005 N93-20082
Investigation of cloud/water vapor motion winds from geostationary satellite p 2008 N93-20094
Remote sensing of water vapor features p 2010 N93-20107
A comparison of intense extratropical cyclone life cycles from diverse geographical locations p 2011 N93-20278
Accurate procedure for calibrating the CAO optical hygrometer
[AP-30] p 1906 N93-20927
Pumping experiment of water on B and LaB6 films with electron beam evaporator
[NIFS-196] p 2074 N93-21362
Climatological use of long time series of data from the water vapour channel of Meteosat p 1958 N93-21601
WATER WAVES
Nonlinear ocean waves
[AD-A259335] p 2019 N93-21260
The WAM model and ERS-1 p 1960 N93-21609
Validation of ERS-1 synthetic aperture radar for imaging ocean waves: First results p 1961 N93-21616
Modelling the skin-bulk temperature difference near the sea-atmosphere interface for remote sensing applications p 1963 N93-21631
Satellite data assimilation in the wave model 3G-WAM p 1965 N93-21638
Global validation of the wave model WAM using Geosat wave height data p 1965 N93-21639
WATERSHEDS
Protecting the nation's wetlands, oceans, and watersheds: An overview of programs and activities
[PB93-105609] p 1992 N93-21655
WAVE ATTENUATION
Elastic moduli and seismic wave attenuation in dry and saturated rock. Volume 2: Modulus dispersion and attenuation
[AD-A258711] p 1998 N93-20381
Spectroscopic investigations of bending and microbending effects in single mode optical fibre: A feasibility study
[NPL-QU-90] p 1946 N93-20930
Attenuation and source studies in Northern Eurasia
[AD-A259323] p 2000 N93-21700
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788
WAVE FRONTS
TREND field test report
[AD-A258568] p 2067 N93-20372
Optical correlators for automated rendezvous and capture p 1813 N93-21416
WAVE FUNCTIONS
Towards a time-dependent description of electron-atom/ion collisions: Two electron systems
[DE93-004531] p 2064 N93-21742
WAVE PROPAGATION
Observation of ionospheric modification using high power oblique HF transmissions
[AD-A258706] p 1998 N93-20378
An iterative approach to curved ray photoelastic analysis p 1928 N93-20635
Radio stimulation and diagnostics of space plasmas
[NASA-CR-192366] p 2072 N93-20760
Wideband propagation measurements at 30.3 GHz through a pecan orchard in Texas
[PB93-111466] p 1886 N93-21788
WAVE REFLECTION
Joint services electronics program
[AD-A259179] p 1890 N93-20562
WAVE SCATTERING
Topological approach for the study of electromagnetic coupling
[ONERA-P-1992-2] p 1881 N93-20230
Nondestructive evaluation of surface-breaking cracks in composite plates p 1936 N93-20680
WAVEFORMS
Variable phase sine wave generator for active phased arrays
[AD-D015558] p 1888 N93-20028
An analytical and experimental investigation of FM-by-noise jamming
[AD-A259124] p 1883 N93-20592
WAVEGUIDES
High-bandwidth, high-dynamic-range, analog optical guided-wave systems for physics instrumentation
[DE93-001619] p 2066 N93-20022
An investigation of the channel crosstalk in optical heterodyne controlled phased array radars
[AD-A259168] p 1884 N93-20597
Reduction of bend losses for titanium diffused waveguides in lithium niobate
[ETN-93-92558] p 1884 N93-20750
WAVELENGTHS
Microstructured diode lasers and pumped solid state lasers
[MBB-Z-0369-91-PUB] p 1910 N93-20804
WAVERIDERS
Computational analysis of hypersonic flows past generalized cone-derived waveriders p 1761 N93-20288
HSCT mission analysis of waverider designs
[NASA-CR-192193] p 1783 N93-21646
WEAK INTERACTIONS (FIELD THEORY)
Study of electroweak interactions
[DE93-004367] p 2061 N93-20385
Aspects of the electroweak phase transition
[DE93-004629] p 2063 N93-21723
WEAPON SYSTEMS
NASA pyrotechnically actuated systems program p 1863 N93-20133
Precision linear shaped charge severance of graphite-epoxy materials
[SAND-92-0610C] p 1865 N93-20151
Performance testing of explosives and weapons detection systems p 1769 N93-21889
WEAPONS DEVELOPMENT
Data analysis for bark and leaf reflectance measurements
[AD-A258598] p 1966 N93-19983
WEAR RESISTANCE
Coatings on composites: New developments and applications in the aerospace industry
[MBB-Z-0443-92-PUB] p 1840 N93-21404
WEATHER
Surface observation climatic summaries
[AD-A258589] p 2001 N93-19964
Manual on climate of the USSR. Issue 16: Armenian SSR. Part 5: Cloud cover and atmospheric phenomena-translation
[AD-A259288] p 2012 N93-20609
SSG 5.98: Atmospheric excitation of the Earth's rotation p 1974 N93-20991
Climate of Salt Lake City, Utah
[PB92-228402] p 2013 N93-21200
Meteorological conditions over the South Atlantic Ocean during July and August of 1991
[PB92-235738] p 2015 N93-21503
Proceedings of the International COADS workshop
[PB93-123552] p 1993 N93-21800
WEATHER FORECASTING
The Split Window Microwave Radiometer (SWMR) for hurricane wind speed measurement from space
[NASA-CR-192316] p 2002 N93-19987
A horizontal refractivity depiction product: An evaluation
[AD-A258738] p 1966 N93-20401
Joint Typhoon Warning Center (JTWC92) model
[AD-A258646] p 2011 N93-20586
Gust forecasting
[MISC-SER-A-125] p 2012 N93-20887
Nocturnal temperature forecasting
[MISC-SER-A-126] p 2012 N93-20888
Hydrostatically consistent North American radiosonde data base at the Forecast Systems Laboratory, 1946-present
[PB93-112225] p 2013 N93-21229
Predicting our weather: A strategic plan for the US Weather Research Program
[PB93-101277] p 2013 N93-21293
Diagnostic Report of the National Hurricane Center. October and November 1991, volume 4, number 3
[PB93-126464] p 2014 N93-21478
Global analyses from ECMWF and Atlas of 1000 to 10 mb circulation statistics
[NASA-CR-192720] p 2014 N93-21492
Use of AVHRR-derived cloudiness and precipitation in operational weather forecasting and in model studies p 1959 N93-21608
Utilization of remote sensing data at the Deutscher Wetterdienst p 1962 N93-21621
Qualitative and quantitative diagnosis of cloud images for use in weather forecast p 1962 N93-21623
Intelligent and localized weather prediction
[PB93-117992] p 2015 N93-21787
WEATHERING
Dynamic mechanical properties of plastic composites measured by DMTA technique p 1835 N93-21140
WEAVING
What's a Parabeam 3D? p 1835 N93-21137
Manufacture and application of biaxial and multiaxial knits as textile reinforcements in composite materials p 1836 N93-21141
New types of textile fabrics for fibre composites p 1836 N93-21142
Predesign of the tubular braiding process using a mathematical process description p 1836 N93-21143
Relationships between layer linkage and mechanical properties of 3D woven textile structures p 1836 N93-21144
WEIBEL INSTABILITY
Weibel instabilities in relativistic electron-positron plasmas
[DE93-003468] p 2077 N93-21990
WEIBULL DENSITY FUNCTIONS
Load experience variability of fighter aircraft
[NLR-TP-89172-U] p 1781 N93-20742
WEIGHT REDUCTION
Research on heat-resistance technology for HOPE p 1791 N93-20426
Evolution of materials used in liquid propellant rocket engines
[DS-2025] p 1830 N93-21460
WEIGHTING FUNCTIONS
Guide to microwave weighting function calculations
[NASA-CR-192719] p 1885 N93-21201
A comparison of force reconstruction methods for a lumped mass beam
[DE93-002461] p 1951 N93-21484
WEIGHTLESSNESS
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
WEIGHTLESSNESS SIMULATION
UDP sponsored opportunities for microgravity environment p 1803 N93-21076
Isopycnic systems as models for the behavior of liquids in a microgravity environment p 1805 N93-21089
Microgravity combustion of dust clouds p 1806 N93-21094
WELD STRENGTH
Fatigue life prediction for 6261-T6 aluminium alloy I-beams with welded cover plates p 1949 N93-21328
WELDABILITY
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
WELDED JOINTS
Aspects of good design practice for fatigue-loaded welded components p 1925 N93-20356
A review of probabilistic fatigue life analyses for welded plate and tubular joints p 1944 N93-20728
Laser welding of plastics under low and high gravity conditions p 1811 N93-21125
Modelling of fatigue crack growth in flat plate weldments and tubular welded joints p 1948 N93-21326
A local approach for fatigue strength evaluation on ship structures p 1948 N93-21327
For a better fatigue strength of welded steel structures p 1949 N93-21333
Evaluation of HAZ liquation cracking susceptibility and HAZ softening behavior in modified 800H
[DE93-004064] p 1876 N93-21999
WELDED STRUCTURES
Fracture-mechanical analysis of the residual service life of the welded main girders of the highway bridges of Ruedersdorf p 1949 N93-21329
For a better fatigue strength of welded steel structures p 1949 N93-21333
WELDING
Cyclic material properties at high strain ranges beyond the standard design codes p 1925 N93-20357
WEST GERMANY
Automatized cartography, using the Mitteldeutschen Kartographie and Druck GmbH system p 1967 N93-20529
ATKIS: The introduction phase at IfAG p 1967 N93-20533

WET CELLS
COMSAT's destructive physical analysis of aerospace nickel-cadmium cells for NASA/Goddard Space Flight Center p 1983 N93-20495
WET SPINNING
Fiber development in Japan p 1834 N93-21130
WETLANDS
Monitoring wetland hydrology by remote sensing: A case study of the Sudd using infra-red imagery and radar altimetry p 1955 N93-21584
Synoptic approach to cumulative impact assessment: A proposed methodology
[PB93-100147] p 1992 N93-21654
Protecting the nation's wetlands, oceans, and watersheds: An overview of programs and activities
[PB93-105609] p 1992 N93-21655
WETTING
Wetting of fibers measured by LPR-90 equipment p 1835 N93-21139
WHISKER COMPOSITES
Dynamic stress-strain behavior in shear of SiCwhisker reinforced aluminum alloy composites p 1930 N93-20643
Toughness of Si3N4-SiC whisker composites
[REPT-921-430-118] p 1839 N93-21295
Erosion of composite ceramics
[DE93-004254] p 1862 N93-21853
WHISKERS (CRYSTALS)
Elucidation of the role of gravity and gravity driven convection in the formation of silicon carbide/silicon nitride whiskers p 1808 N93-21107
WHITE NOISE
An analytical and experimental investigation of FM-by-noise jamming
[AD-A259124] p 1883 N93-20592
Coherent interference tests for wind profilers
[PB92-227248] p 2013 N93-21202
WIND (METEOROLOGY)
The role of conditional symmetric instability in the development of moderate to heavy frozen precipitation bands
[AD-A258575] p 2002 N93-20031
A satellite-borne radar wind sensor (RAWS) p 2008 N93-20096
CO2 lidar backscatter experiment p 2009 N93-20103
Satellite data assimilation in the wave model 3G-WAM p 1965 N93-21638
WIND DIRECTION
Hybrid single-particle Lagrangian integrated trajectories (HY-SPLIT): Version 3.0: User's guide and model description
[PB92-218114] p 2056 N93-21341
Theory and performance of the WPL Crosswind Profiler Model 2
[PB93-116606] p 2014 N93-21452
WIND EFFECTS
Wind-tunnel experiments on wind effects at tunnel portals
[NLR-TP-91191-U] p 1761 N93-20911
Seasonal SST and upwelling indices along the northwest African coast p 1964 N93-21633
Wind and seismic effects. Proceedings of the 24th Joint Meeting of the US-Japan Cooperative Program in Natural Resources Panel on Wind and Seismic Effects
[PB93-120152] p 2001 N93-21801
WIND MEASUREMENT
A satellite-borne radar wind sensor (RAWS) p 2008 N93-20096
Multi-center Airborne Coherent Atmospheric Wind Sensor (MACAWS) p 1913 N93-20101
Coherent interference tests for wind profilers
[PB92-227248] p 2013 N93-21202
Theory and performance of the WPL Crosswind Profiler Model 2
[PB93-116606] p 2014 N93-21452
The WAM model and ERS-1 p 1960 N93-21609
Representativity of wind measurement from space p 1961 N93-21617
Empirical model of winds in south-eastern Europe in connection with solar activity p 1961 N93-21619
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620
WIND PRESSURE
Proxy and in-situ studies of dayside magnetopause reconnection
[DE93-003740] p 2000 N93-21782
WIND PROFILES
Gust forecasting
[MISC-SER-A-125] p 2012 N93-20887
Coherent interference tests for wind profilers
[PB92-227248] p 2013 N93-21202
Theory and performance of the WPL Crosswind Profiler Model 2
[PB93-116606] p 2014 N93-21452
WIND TUNNEL APPARATUS
Review of initial experiments using the Hawk model, dynamic rig facility, and the CED 1401 digital data acquisition equipment
[CRANFIELD-AERO-9017] p 1788 N93-21406
WIND TUNNEL MODELS
Improved ceramic slip casting technique --- application to aircraft model fabrication
[NASA-CASE-LAR-14471-1] p 1858 N93-20041
Improved empirical model for base drag prediction on missile configurations based on new wind tunnel data
[AD-A258753] p 1761 N93-20405
Review of initial experiments using the Hawk model, dynamic rig facility, and the CED 1401 digital data acquisition equipment
[CRANFIELD-AERO-9017] p 1788 N93-21406
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766
WIND TUNNEL STABILITY TESTS
Review of initial experiments using the Hawk model, dynamic rig facility, and the CED 1401 digital data acquisition equipment
[CRANFIELD-AERO-9017] p 1788 N93-21406
WIND TUNNEL TESTS
Application of a flush airdata sensing system to a wing leading edge (LE-FADS)
[NASA-TM-104267] p 1784 N93-20163
Improved empirical model for base drag prediction on missile configurations based on new wind tunnel data
[AD-A258753] p 1761 N93-20405
Research on continuous and instantaneous heavy gas clouds: Summary of a joint European project
[FOA-C-40296-4.5] p 1901 N93-20858
Wind-tunnel experiments on wind effects at tunnel portals
[NLR-TP-91191-U] p 1761 N93-20911
Contribution to the study of the atmospheric surface layer in stable conditions, simulated in a wind tunnel
[ECL-91-15] p 2012 N93-21010
Experimental results in aerodynamic stability and control of a TSTO configuration
[MBB-FE-211-S-PUB-0482-A] p 1787 N93-21057
The influence of the rotor test facilities ROTEST and ROTOS on the rotor inflow
[DLR-MITT-91-16] p 1785 N93-21173
An assessment of laser velocimetry in hypersonic flow
[NASA-CR-190895] p 1762 N93-21556
Program of research in flight dynamics in the JIAFS at NASA-Langley Research Center
[NASA-CR-191885] p 1762 N93-21562
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766
Crossflow stability and transition experiments in a swept-wing flow
[NASA-TM-108650] p 1904 N93-21819
WIND TUNNELS
Evaluation of candidate working fluid formulations for the electrothermal - chemical wind tunnel
[NASA-CR-192196] p 1788 N93-20312
WIND TURBINES
Effects of wind turbines on UHF television reception: Field tests in Denmark, November 1991
[BBC-RD-1992/7] p 1885 N93-21365
Combined experiment, phase 1
[DE93-000012] p 1763 N93-21766
Advanced control strategies for wind turbines
[DE93-003252] p 1989 N93-21961
WIND VELOCITY
The Split Window Microwave Radiometer (SWMR) for hurricane wind speed measurement from space
[NASA-CR-192316] p 2002 N93-19987
Simulations of satellite Doppler wind observations p 2010 N93-20104
Relationship between ozone concentrations and air transport over western Arizona
[PB93-114007] p 1990 N93-21238
Empirical model of winds in south-eastern Europe in connection with solar activity p 1961 N93-21619
Assimilation of satellite borne wind scatterometer observations p 1962 N93-21620
CONPLT: A program to generate contours from HARPO/HARPA environmental models. Data documentation
[PB92-218544] p 1992 N93-21649
Advanced control strategies for wind turbines
[DE93-003252] p 1989 N93-21961
WINDING
Thermoplastic tape winding parameters p 1835 N93-21135
WINDSHIELDS
T-38 forward windshield development and performance demonstration report
[AD-A259240] p 1781 N93-20579
WINGS
Shock-dependent, optimum thrust wings in supersonic flow p 1760 N93-20169
Application of artificial neural networks to the design optimization of aerospace structural components
[NASA-TM-4389] p 1952 N93-21831
WINTER
Electrification in winter storms and the analysis of thunderstorm overflight data p 2006 N93-20087
A comparison of intense extratropical cyclone life cycles from diverse geographical locations p 2011 N93-20278
Meteorological conditions over the South Atlantic Ocean during July and August of 1991
[PB92-235738] p 2015 N93-21503
Pinatubo eruption winter climate effects: Model versus observations
[NASA-CR-191955] p 1994 N93-21946
WIRING
Vacuum multilayer lamination of printed wiring boards
[DE93-004912] p 1894 N93-21727
WISCONSIN
Geology and geochemistry of early proterozoic rocks in the Dunbar area, Northeastern Wisconsin
[PB93-115640] p 2000 N93-21692
WOOL
Wetting of fibers measured by LPR-90 equipment p 1835 N93-21139
WORK HARDENING
Selection criteria for metallic high temperature structural materials in hypersonic flying equipment
[MBB-LME-221-HYPAC-PUB-2-A] p 1783 N93-21479
The behavior of intermetallic compounds at large plastic strains
[DE93-003820] p 1857 N93-21772
WORKING FLUIDS
Evaluation of candidate working fluid formulations for the electrothermal - chemical wind tunnel
[NASA-CR-192196] p 1788 N93-20312
WORKSTATIONS
Improvement and further development of SSM/I overland parameter algorithms using the WetNet workstation p 2005 N93-20083
Real image visual display system
[AD-A259125] p 2033 N93-20593
WOVEN COMPOSITES
What's a Parabeam 3D? p 1835 N93-21137
Manufacture and application of biaxial and multiaxial knits as textile reinforcements in composite materials p 1836 N93-21141
WRINKLING
Description of wrinkles in membranes using nonlinear finite plate elements
[ETN-93-92565] p 1945 N93-20879
WROUGHT ALLOYS
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-189220] p 1784 N93-20252

X

X RAY APPARATUS
Ultrafast laser generation of hard x rays p 1912 N93-21952
X RAY ASTRONOMY
IUE-ULDA access guide no. 4B: International Ultraviolet Explorer-Uniform Low Dispersion Archive active galactic nuclei, volume B
[ESA-SP-1153-VOL-B] p 2097 N93-21015
X RAY BINARIES
Timing analysis of low-energy gamma ray emission from galactic compact objects using the Gamma Ray Observatory
[NASA-CR-192253] p 2102 N93-20747
X RAY DETECTORS
A transportable luggage examination system based on neutron interrogation p 1765 N93-21863
Explosives detection limitations using dual-energy radiography and computed tomography p 1767 N93-21878
X RAY DIFFRACTION
Diffraction peaks in x ray spectroscopy: Friend or foe?
[DE93-002482] p 2081 N93-21486
Diffraction measurements of residual stress in titanium matrix composites
[DE93-003855] p 1844 N93-21838
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978
X RAY FLUORESCENCE
Diffraction peaks in x ray spectroscopy: Friend or foe?
[DE93-002482] p 2081 N93-21486
X RAY IMAGERY
Army medical imaging system - ARMIS
[AD-A258685] p 2089 N93-20374
Photons in - photons out: Non-destructive inspection of containers using x ray and gamma ray techniques p 1767 N93-21875

Three dimensional x ray systems and image enhancement techniques p 1767 N93-21876
Detection of objects concealed under persons' clothing using the SECURE system p 1767 N93-21879
New x ray technology for the detection of explosives p 1767 N93-21880
Advanced dual energy x ray for explosives detection p 1767 N93-21881
Three-dimensional x ray imaging for the detection of contraband p 1768 N93-21882
Explosive detection using x rays and thermal neutron activation p 1768 N93-21884
Explosive detection for checked luggage by DETEX, a combined x ray and positron-tomograph system p 1768 N93-21886
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940

X RAY INSPECTION
An explosive detection system for screening luggage with high energy x rays p 1767 N93-21877
Explosives detection limitations using dual-energy radiography and computed tomography p 1767 N93-21878
Three-dimensional x ray imaging for the detection of contraband p 1768 N93-21882
Segmentation of x ray images using probabilistic relaxation labeling p 1777 N93-21940
Robotic systems for deployment of explosive detection sensors and instruments p 1777 N93-21941
Impact on the air carrier of explosive detection systems p 1778 N93-21945

X RAY SCATTERING
Detection of objects concealed under persons' clothing using the SECURE system p 1767 N93-21879
Advanced dual energy x ray for explosives detection p 1767 N93-21881
Explosive detection using x rays and thermal neutron activation p 1768 N93-21884
Fusion of the nuclear and different x ray technologies for explosives detection p 1768 N93-21885

X RAY SOURCES
The Einstein All-Sky Slew Survey [NASA-CR-192323] p 2095 N93-20793
Identifications of Einstein Slew Survey sources p 2095 N93-20794
Einstein Slew Survey: Data analysis innovations p 2095 N93-20795
The nitrogen camera: A new explosive detector p 1766 N93-21867
Explosives detection limitations using dual-energy radiography and computed tomography p 1767 N93-21878

X RAY SPECTRA
X ray spectra from Hinotori satellite and suprathermal electrons [NIFS-197] p 2100 N93-20266

X RAY SPECTROSCOPY
Space station protective coating development p 1848 N93-20816

X RAYS
Design and analysis of a fast, two-mirror soft-x-ray microscope [NASA-CR-191440] p 2067 N93-20316
Can the cosmic x ray and gamma ray background be due to reflection of a steep power law spectrum and Compton scattering by relativistic electrons? [NASA-CR-192255] p 2102 N93-20601
Electron optical defect inspection in x ray lithography masks [ETN-93-92570] p 1919 N93-20884
Photons in - photons out: Non-destructive inspection of containers using x ray and gamma ray techniques p 1767 N93-21875
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies [DE93-002906] p 1919 N93-21956
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr [DE93-002911] p 2082 N93-21978

XENON CHLORIDE LASERS
Method and apparatus for generating Fraunhofer line laser source using stimulated Raman scattering [AD-D015579] p 1910 N93-20770

Y

YBCO SUPERCONDUCTORS
Studying the kinetics of magnetization in high Tc superconductors [NASA-CR-192159] p 1890 N93-20572
Properties of aligned YBa2Cu3O(7-delta) superconductor as a function of oxygen deficiency delta [DE93-001707] p 2082 N93-21750
Magnetization and flux pinning in high-Tc cuprates: Irradiated and oxygen deficient materials [DE93-004169] p 2082 N93-21844

YIELD POINT
Laser damage in thin film optical coatings [AD-A259425] p 1909 N93-20005
Plastic mechanism analysis of T-joints in RHS under concentrated force [PB92-225374] p 1946 N93-21029
Effect of impacts on CFRP structures, results of a comprehensive test program for practical use p 1844 N93-21534
Experimental verification of the theory of plastic moment capacity of an inclined yield line under axial force [PB93-118792] p 1952 N93-21798

YIELD STRENGTH
Peak stresses in adhesive step lap joints with voids p 1932 N93-20656
Plastic mechanism analysis of T-joints in RHS under concentrated force [PB92-225374] p 1946 N93-21029

Z

ZINC COMPOUNDS
Frequency conversion of a CO2 laser with ZnGeP2 [PB92-222785] p 1911 N93-21016

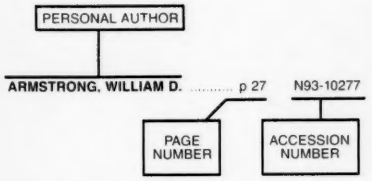
ZIRCONIUM
Laser diode ignition characteristics of Zirconium Potassium Perchlorate (ZPP) p 1865 N93-20145

ZIRCONIUM OXIDES
Stabilized zirconia/CoCrAlY high temperature coating [AD-D015573] p 1859 N93-20276
Microgravity processing of ceramic composites p 1809 N93-21115
Oxide protective coatings on carbon composites for medium and high-temperature thermal cycling: New opportunities for the United Europe p 1838 N93-21160
Effect of coating-layer thickness on high temperature fatigue strength in thermal-barrier-coated steel p 1950 N93-21335

ZOOPLANKTON
How do zooplankton feed? A critical microgravity experiment p 1806 N93-21097
Gravity as a factor in the orientation and vertical migration of marine zooplankton p 1806 N93-21098

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The page number helps you locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

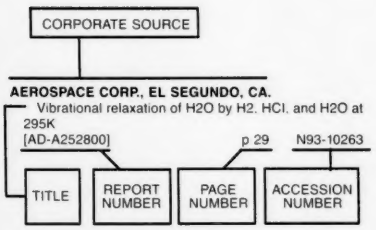
CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number denotes the number by which the citation is identified. The page number helps you locate the citation in the abstract section. The titles are arranged under each corporate source in ascending accession number order.

A

AALBORG UNIV. (DENMARK).
Probabilistic chain fatigue model p 1922 N93-20338
AASTRA AEROSPACE, INC., DOWNSVIEW (ONTARIO).
Microgravity processing of ceramic composites p 1809 N93-21115
ABB CORPORATE RESEARCH, BADEN (SWITZERLAND).
Simplified analysis of elastic-plastic strain concentration in notched components under cyclic loading p 1950 N93-21338
ABB CORPORATE RESEARCH, VAESTERAAS (SWEDEN).
Spectrum fatigue data in comparison to design curves in the long life regime p 1948 N93-21324
ACADEMY OF SCIENCES OF THE ESTONIAN SSR, TALLINN.
The use of 2D NMR spectroscopy in the analysis of isomeric polyamides p 1839 N93-21166
ACADEMY OF SCIENCES (USSR), KAZAN.
The predicting crack growth for mixed mode fracture under biaxial loads p 1922 N93-20336
ACADEMY OF SCIENCES (USSR), LENINGRAD.
A comparative study of ship hull structures fatigue assessment methods p 1949 N93-21332
ACADEMY OF SCIENCES (USSR), MOSCOW.
Probabilistic assessment of machine parts from Kymenite, austempered ductile iron p 1923 N93-20341
Russian space system for the Earth remote sensing p 1977 N93-21280
Key problems of global ecology and the International Space Year p 1955 N93-21579
ACADEMY OF SCIENCES (USSR), NOVOSIBIRSK.
On the disturbances development in the supersonic boundary layer p 1763 N93-20686
Stability and transition of hypersonic boundary layer p 1763 N93-20687
ACCSYS TECHNOLOGY, INC., PLEASANTON, CA.
The RFQ LINAC: A high-current compact ion accelerator for explosive detection p 1766 N93-21872
ADVANCED TECHNOLOGY MATERIALS, INC., DANBURY, CT.
Controlled nucleation and growth of semiconducting diamond
[AD-A258541] p 2078 N93-20056
ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Mission planning systems for tactical aircraft (pre-flight and in-flight)
[AGARD-AR-313] p 1764 N93-21187
The testing of fixed wing tanker and receiver aircraft to establish their air-to-air refuelling capabilities, volume 11
[AGARD-AG-300-VOL-11] p 1781 N93-21305
Debonding/Delamination of Composites
[AGARD-CP-530] p 1840 N93-21507
AEROJET STRATEGIC PROPULSION CO., SACRAMENTO, CA.
Introduction of laser initiation for the 48-inch Advanced Solid Rocket Motor (ASRM) test motors at Marshall Space Flight Center (MSFC) p 1830 N93-20141
AERONAUTICAL RADIO, INC., ANNAPOLIS, MD.
An evaluation of R/D needs based on cogeneration system operational experience
[PB93-114494] p 1987 N93-21455
AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Guided Weapons Division Spin Table Facility: Spin table control system
[AD-A259214] p 1788 N93-20555
Field evaluation of six protective coatings applied to T-56 turbine blades after 2000 hours of engine use
[ARL-TR-2] p 1786 N93-21316
AEROSPACE CORP., EL SEGUNDO, CA.
Special tests and destructive physical analyses as used by the Aerospace Corporation with nickel-hydrogen cells
[NASA-CR-192318] p 1888 N93-20162
Force balance near an X line along which E (dot) is less than 0
[NASA-CR-192341] p 2071 N93-20362
Formation of auroral arcs via magnetosphere-ionosphere coupling
[AD-A258641] p 1998 N93-20363
Mechanisms for capacity fading in the NiH2 cell and its effects on cycle life p 1983 N93-20496
AEROSPACE CORP., LOS ANGELES, CA.
Application of the MESA reactive hydrocode to space vehicle explosive ordnance devices p 1865 N93-20150
AEROSPATIALE, PARIS (FRANCE).
Contribution to the study of composite material behavior in space environment
[REPT-921-430-112] p 1833 N93-20869
Traction and shearing dynamics of a three dimensional carbon/carbon composite
[REPT-921-430-109] p 1833 N93-20931
The holographic interferometry: An industrial tool
[REPT-921-430-110] p 1906 N93-20932
New compounds obtained by LPCVD in the B-C-N chemical system
[REPT-921-430-111] p 1849 N93-20933
The design of bonded structural assemblies
[REPT-921-430-116] p 1824 N93-20934
An expert system to study bonded joints
[REPT-921-430-113] p 1833 N93-20937
Electromagnetic characterization measurements at 1000 C in Aerospatiale Microwave Department
[REPT-921-430-114] p 1884 N93-20938
Measurement of the expansion coefficient between -150 C and +150 C for material composites for space applications
[REPT-921-430-115] p 1833 N93-20939
Structures and materials technologies for hypersonic vehicles: Lessons from Hermes experience
[REPT-921-430-108] p 1824 N93-21042
Toughness of Si3N4-SiC whisker composites
[REPT-921-430-118] p 1839 N93-21295
Carbon/carbon and ceramic composites made by Aerospatiale
[REPT-921-430-106] p 1840 N93-21457
Testing and characterization of composite materials by Compton tomodensitometry
[REPT-921-430-107] p 1840 N93-21458
Buckling and post-buckling behavior of a delamination in a carbon-epoxy laminated structure: Experiments and modelling p 1841 N93-21514
AICHI INST. OF TECH., TOYOTA (JAPAN).
Deformation of TiNi shape memory alloy under thermomechanical cycles p 1858 N93-20695
AIR FORCE ACADEMY, CO.
Linear algebra applied to physics determining small vibrations in conservative elastic systems
[AD-A259114] p 2050 N93-20589
AIR FORCE ENVIRONMENTAL TECHNICAL APPLICATIONS CENTER, SCOTT AFB, IL.
Surface observation climatic summaries
[AD-A258589] p 2001 N93-19964
AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OH.
Vibrational spectroscopic studies of adsorbates on bimetallic surfaces
[AD-A258578] p 1855 N93-19963
S. G. Romanovskiy method of thermal treatment and drying of nonconducting materials (Description of an invention for an author's certificate)
[AD-A258631] p 1831 N93-20000
Ada implementation of an object data repository
[AD-A259144] p 2087 N93-20002
The role of conditional symmetric instability in the development of moderate to heavy frozen precipitation bands
[AD-A258575] p 2002 N93-20031
Particle simulation of auroral double layers
[AD-A258577] p 1996 N93-20032
Interactive graphics system for the study of variance/covariance structures of bivariate and multivariate normal populations
[AD-A259449] p 2030 N93-20058
A unified model of program behavior
[AD-A259142] p 2030 N93-20128
An electromagnetically-controlled Precision Orbital Tracking Vehicle (POTV)
[AD-A259143] p 1823 N93-20129
A study of heat flux induced dryout in capillary grooves
[AD-A259175] p 1899 N93-20270
Effects of material degradation on large space structures dynamic response
[AD-A258574] p 1823 N93-20324
Equatorial F-region electron densities over a solar cycle: Comparisons between observations and numerical models
[AD-A258572] p 1997 N93-20359
Satellite derived rainfall and the intensity of tropical cyclones and possible relationships to sea surface temperature
[AD-A258573] p 2011 N93-20360
A framework for corporate implementation of object-oriented software development
[AD-A258717] p 2032 N93-20383
Computer simulation of a general purpose satellite modem
[AD-A259083] p 1882 N93-20392
Defining contract terms
[AD-A259088] p 2085 N93-20394
A radiosity approach realistic image synthesis system
[AD-A259082] p 2032 N93-20406
A comparison of computational fluid dynamics computer programs for hypersonic propulsive nozzle flowfields
[AD-A259146] p 1900 N93-20408
Efficient derivation and approximation of cepstral coefficients for speech coding
[AD-A259147] p 2032 N93-20409
Comparison of artificial neural networks with a conventional heuristic technique for optimization problems
[AD-A259207] p 2046 N93-20552

High range resolution radar target identification using the Prony model and hidden Markov models
[AD-A259210] p 1883 N93-20553
Signal approximation with a wavelet neural network
[AD-A259081] p 1890 N93-20556
Recurrent neural networks for radar target identification
[AD-A259127] p 1883 N93-20558
An object-oriented computer aided design program for modern control systems analysis
[AD-A259139] p 2033 N93-20559
An investigation of discovery-based learning in the route planning domain
[AD-A259141] p 1780 N93-20560
Version and transaction management in OSMagic: An object-oriented database implementation of the Magic VLSI layout design tool
[AD-A259138] p 2033 N93-20574
The influence of structural optimization on the aeroelastic properties of a vertical tail
[AD-A259140] p 1781 N93-20575
A synthetic environment flight simulator: The AFIT virtual cockpit
[AD-A259220] p 1788 N93-20576
Formalizing, validating, and verifying real-time system requirements with Reacto and VHDL
[AD-A259224] p 2033 N93-20577
A VHDL interpreter for model-based diagnoses
[AD-A259122] p 2046 N93-20590
Silicon micromachining applied to the management of the thermal environment in wafer scale integration technology
[AD-A259123] p 1890 N93-20591
An analytical and experimental investigation of FM-by-noise jamming
[AD-A259124] p 1883 N93-20592
Real image visual display system
[AD-A259125] p 2033 N93-20593
Design of a laboratory computer interface
[AD-A259126] p 2028 N93-20594
Failure identification using multiple model adaptive estimation for the LAMBDA flight vehicle
[AD-A259137] p 1787 N93-20596
The effect of oxide layers and boron doping on the breakdown of high purity silicon
[AD-A259171] p 2080 N93-20598
YIDOYU and its application to aircraft design
[AD-A259262] p 1781 N93-20605
Laser scribing system for amorphous silicon solar cells
[AD-A259287] p 1910 N93-20608
Manual on climate of the USSR. Issue 16: Armenian SSR. Part 5: Cloud cover and atmospheric phenomena-translation
[AD-A259288] p 2012 N93-20609
Design recovery for software library population
[AD-A259292] p 2090 N93-20611
GaAs computer technology
[AD-A259259] p 2080 N93-21241

AIR FORCE OFFICE OF SCIENTIFIC RESEARCH, BOLLING AFB, WASHINGTON, DC.
Crustal deformation measurements in the vicinity of Vandenberg Air Force Base
[AD-A258536] p 1996 N93-20053

AIR FORCE SATELLITE CONTROL FACILITY, SUNNYVALE, CA.
Survey of space environment services center users and services
[AD-A258672] p 2089 N93-20366

AIR FRANCE, PARIS.
Role of advanced technology within a broad security approach p 1765 N93-21860

AKRON UNIV., OH.
Hierarchical Poly Tree configurations for the solution of dynamically refined finte element models
[NASA-CR-191054] p 1921 N93-20232
Analysis of the Space Shuttle main engine simulation
[NASA-CR-191063] p 1820 N93-20251
Characterization and snubbing of a bidirectional MCT in a resonant ac link converter
[NASA-CR-192230] p 1889 N93-20258

AKZO FASER A.G., WUPPERTAL (GERMANY).
Twaron in composites and protective clothing p 1837 N93-21153

ALABAMA A & M UNIV., NORMAL.
A study of TRIGLYCINE SULFATE (TGS) crystals from the International Microgravity Laboratory Mission (IML-1)
[NASA-CR-191956] p 2078 N93-20127

ALABAMA UNIV., BIRMINGHAM.
Design and analysis of a fast, two-mirror soft-x-ray microscope
[NASA-CR-191440] p 2067 N93-20316
Recent results and new hardware developments for protein crystal growth in microactivity
[NASA-CR-191994] p 1875 N93-21356

ALABAMA UNIV., HUNTSVILLE.
Computer modeling of pulsed CO2 lasers for lidar applications p 1913 N93-20106
Process modelling for materials preparation experiments
[NASA-CR-192319] p 2078 N93-20236
Analysis of surfaces from the LDEF A0114, phase 2
[NASA-CR-192306] p 1847 N93-20756
Magnetospheric space plasma investigations
[NASA-CR-192620] p 2074 N93-20914
Radiative transfer models
[NASA-CR-192433] p 1979 N93-21698

ALABAMA UNIV., TUSCALOOSA.
Numerical stabilities aspects of cable dynamics simulation p 1931 N93-20650

ALBERTA UNIV., EDMONTON.
A method of continuous coordinate condensation p 1932 N93-20657
On the thermoelastohydrodynamic lubrication dimensionless problem formulations p 1917 N93-20693

ALENIA AERONAUTICA, TORINO (ITALY).
Fracture analysis of BMI system in presence of moisture p 1842 N93-21517

ALENIA SPAZIO S.P.A., ROME (ITALY).
MSC/NASTRAN structure optimization test module version 67 (preliminary)
[REPT-5-191025] p 1945 N93-20907
Space radar altimetry development from ocean monitoring to land topography p 1965 N93-21640

ALLIED-SIGNAL AEROSPACE CO., KANSAS CITY, MO.
Automated connector force testing
[DE93-004634] p 1907 N93-21704
Electromagnetic finite element analysis of a solenoid
[DE93-004635] p 1894 N93-21724
Microelectronics packaging automation
[DE93-004822] p 1894 N93-21725
Vacuum multilayer lamination of printed wiring boards
[DE93-004912] p 1894 N93-21727

ALPHATECH, INC., BURLINGTON, MA.
Incipient failure detection using wavelets
[AD-A259423] p 1913 N93-20004
Wavelet features for failure detection and identification in vibration systems
[AD-A259427] p 1914 N93-20007

ALZETA CORP., SANTA CLARA, CA.
Adiabatic radiant hot air burner
[PB93-114486] p 1987 N93-21220

AMERASIA TECHNOLOGY, INC., WESTLAKE VILLAGE, CA.
Vapor detection using SAW sensors p 1773 N93-21912

AMERICAN GAS ASSOCIATION LABS., CLEVELAND, OH.
Engine driven chiller and thermal storage integration (Large tonnage engine driven chiller development)
[PB92-227891] p 1878 N93-21465

AMERICAN SCIENCE AND ENGINEERING, INC., CAMBRIDGE, MA.
New x ray technology for the detection of explosives p 1767 N93-21880

AMERICAN UNIV., WASHINGTON, DC.
Injection seeded, diode pumped regenerative ring Nd:YAG amplifier for spaceborne laser ranging technology development
[NASA-CR-192171] p 1910 N93-20298

AMES LAB., IA.
Macroscopic surface cleaning using a high repetition rate ultraviolet laser
[DE93-002545] p 1912 N93-21770
Stable clusters in the condensed state and some possibilities for gas phase clusters
[DE93-004446] p 2064 N93-21846
New pathways to tungsten and molybdenum oxides, nitrides, and azides
[DE93-003051] p 1857 N93-21986

AMSTERDAM UNIV. (NETHERLANDS).
Unrestricted on-line parsing and transduction with graph structured stacks p 2031 N93-20224
Maximal Kripke-type semantics for modal and superintuitionistic predicate logics
[ML-92-02] p 2054 N93-21009

ANALYTIC SCIENCES CORP., READING, MA.
PL/GPD DMSP data archiving from VAX to exabyte tapes
[AD-A258607] p 2002 N93-19994

ANN ARBOR NUCLEAR, INC., MI.
Neutron Elastic Scatter (NES) for Explosives Detection Systems (EDS) p 1766 N93-21868

ARGONNE NATIONAL LAB., IL.
The electromagnetic calorimeter for the STAR experiment at RHIC
[DE93-002780] p 2062 N93-21480
Neutron study of crystal-field transitions in ErPO4
[DE93-004131] p 2081 N93-21719
Non-equilibrium structures induced by ion irradiation in Ni4Mo
[DE93-004193] p 2063 N93-21720
Solution of large, sparse systems of linear equations in massively parallel applications
[DE93-004243] p 2045 N93-21741
Many-body effects in Cu(2+)(H2O)(sub m) clusters
[DE93-002988] p 2082 N93-21752
Melt processing of the Bi2Sr2CaCu2O(y) superconductor in oxygen and argon atmospheres
[DE93-002999] p 2082 N93-21757
Erosion of composite ceramics
[DE93-004254] p 1862 N93-21853
Comments on advanced, time-resolved imaging techniques for Free-Electron Laser (FEL) experiments
[DE93-002897] p 1912 N93-21955
Use of volume x ray tomography for characterizing density variations in as-cast ceramic bodies
[DE93-002906] p 1919 N93-21956
The Natural Gas Vehicle Challenge 1992: Exhaust emissions testing and results
[DE93-002997] p 1917 N93-21974
Diffraction studies of the thermal properties of nanocrystalline Pd and Cr
[DE93-002911] p 2082 N93-21978
Application of radiofrequency superconductivity to accelerators for high-current ion beams
[DE93-002925] p 2066 N93-21979
Microstructural characterization of Ag-sheathed Tl-Ba-Ca-Cu-O and Bi-Sr-Ca-Cu-O superconducting tapes by analytical electron microscopy
[DE93-002980] p 2083 N93-21981
An acousto-ultrasonic NDE technique for monitoring material anisotropy
[DE93-002994] p 1919 N93-21982
Effective activation energy in the Bi-Sr-Ca-Cu-O systems

[NASA-TM-108582] p 2024 N93-20998

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION. LYNDON B. JOHNSON SPACE CENTER, HOUSTON, TX.
Pre-integrated truss space station and method of assembly
[NASA-CASE-MSC-22015-1] p 1823 N93-20042
Robot-friendly connector
[NASA-CASE-MSC-21864-1] p 1914 N93-20117
Method and apparatus for preloading a joint by remotely operable means
[NASA-CASE-MSC-21940-1] p 1914 N93-20120
Radiological assessment for Space Station Freedom
[NASA-TM-104758] p 2022 N93-20303
Effect of aerobic capacity on Lower Body Negative Pressure (LBNP) tolerance in females
[NASA-TP-3298] p 2022 N93-20318
Physiological responses to wearing the space shuttle launch and entry suit and the prototype advanced crew escape suit compared to the unsuited condition
[NASA-TP-3297] p 2026 N93-20319
Battery Review Board p 1986 N93-20519
Long duration human exposure to microgravity p 1802 N93-21073
TRAC based sensing for autonomous rendezvous p 1813 N93-21412
Trajectory control sensor engineering model detailed test objective p 1813 N93-21414
Optical correlators for automated rendezvous and capture p 1813 N93-21416
Office of Spaceflight Standard Spaceborne Global Positioning System (GPS) user equipment project p 1780 N93-21417
A binocular stereo approach to AR/C at the Johnson Space Center p 1814 N93-21421

Results of prototype software development for automation of shuttle proximity operations
p 1815 N93-21425
Autonomous docking ground demonstration
p 1816 N93-21430
A phase one AR/C system design
p 1816 N93-21435
MMU applications for automated rendezvous and capture p 1817 N93-21438
Space shuttle program: Automatic rendezvous, proximity operations, and capture p 1818 N93-21449
Lunar soils grain size catalog
[NASA-RP-1265] p 2100 N93-21663
Analysis of impactor residues in tray clamps from the Long Duration Exposure Facility. Part 1: Clamps from Bay A of the satellite
[NASA-TM-104759] p 1852 N93-22006
Robot friendly probe and socket assembly
[NASA-CASE-MSC-22028-1] p 1917 N93-22007

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION. LANGLEY RESEARCH CENTER, HAMPTON, VA.

A gridless Euler/Navier-Stokes solution algorithm for complex-aircraft applications
[NASA-TM-107727] p 1760 N93-19973
Rarefied-flow Shuttle aerodynamics model
[NASA-TM-107698] p 1759 N93-19976
Apparatus and method for improving spin recovery on aircraft
[NASA-CASE-LAR-14747-1] p 1786 N93-20039
Improved ceramic slip casting technique
[NASA-CASE-LAR-14471-1] p 1858 N93-20041
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 27: Knowledge diffusion and US government technology policy: Issues and opportunities for sci/tech librarians
[NASA-TM-108680] p 2088 N93-20110
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 26: The relationship between technology policy and scientific and technical information within the US and Japanese aerospace industries
[NASA-TM-108679] p 2088 N93-20111
Shuttle orbiter with telescoping main propulsion unit and payload
[NASA-CASE-LAR-13586-1] p 1821 N93-20115
A method of making a single layer multi-color luminescent display
[NASA-CASE-LAR-14811-1] p 1888 N93-20119
Determination of pyrotechnic functional margin
p 1863 N93-20134
Development of a NASA standard gas generator
p 1863 N93-20135
Computational parametric study of sidewall-compression scramjet inlet performance at Mach 10
[NASA-TM-4411] p 1900 N93-20299
Oxygen plasma resistant phosphine oxide containing imide/arylene copolymers
[NASA-TM-107712] p 1859 N93-20300
Imide/arylene ether copolymers containing phosphine oxide groups
[NASA-CASE-LAR-14925-1] p 1859 N93-20567
System for determining the angle of impact of an object on a structure
[NASA-CASE-LAR-14817-1] p 1906 N93-20569
Acoustophoresis separation method
[NASA-CASE-LAR-13388-2] p 1846 N93-20570
Analytical and experimental investigation of flutter suppression by piezoelectric actuation
[NASA-TP-3241] p 1781 N93-20584
Experimental and analytical investigation of dynamic characteristics of extension-twist-coupled composite tubular spars
[NASA-TP-3225] p 1925 N93-20585
The LDEF experience. Materials p 1847 N93-20811
Neutral buoyancy test evaluation of hardware and extravehicular activity procedures for on-orbit assembly of a 14 meter precision reflector
[NASA-TM-107735] p 1824 N93-20922
CRAY mini manual. Revision D
[NASA-TM-107599-REV-D] p 2028 N93-21027
A Government/Industry Summary of the Design Analysis Methods for Vibrations (DAMVIBS) Program
[NASA-CP-10114] p 1782 N93-21310
The NASA/industry Design Analysis Methods for Vibrations (DAMVIBS) program: A government overview
p 1782 N93-21311
A comparison of laser-based ranging systems for AR/C p 1814 N93-21422
Total temperature probes for high-temperature hypersonic boundary-layer measurements
[NASA-TM-4407] p 1908 N93-21816
Optical fiber fluorosensor
[NASA-CASE-LAR-14525-1-CU] p 2069 N93-22008

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION. LEWIS RESEARCH CENTER, CLEVELAND, OH.

An experimental investigation of S-duct flow control using arrays of low-profile vortex generators
[NASA-TM-106030] p 1760 N93-19968
Three-dimensional Navier-Stokes heat transfer predictions for turbine blade rows
[NASA-TM-105800] p 1897 N93-19969
On the drag of model dendrite fragments at low Reynolds number
[NASA-TM-105916] p 1855 N93-19974
Thermodynamic data for fifty reference elements
[NASA-TP-3287] p 2084 N93-19977
COLD-SAT dynamic model
[NASA-TM-105185] p 1822 N93-19988
Fiber-reinforced monoclinic celsian matrix composite material
[NASA-CASE-LEW-15269-1] p 1831 N93-20040
Numerical simulation of a high Mach number jet flow
[NASA-TM-105985] p 1898 N93-20057
Identification of propulsion systems
[NASA-TM-106007] p 1784 N93-20109
Pyrotechnically actuated systems database and applications catalog p 1864 N93-20136
The Second International Microgravity Combustion Workshop
[NASA-CP-10113] p 1868 N93-20178
Overview of NASA's microgravity combustion science and fire safety program p 1868 N93-20180
Capabilities and constraints of typical space flight hardware p 1868 N93-20183
Capabilities and constraints of NASA's ground-based reduced gravity facilities p 1819 N93-20184
Capabilities and constraints of combustion diagnostics in microgravity p 1869 N93-20185
Effects of buoyancy on laminar, transitional, and turbulent gas jet diffusion flames p 1853 N93-20189
Soot formation and radiation in turbulent jet diffusion flames under normal and reduced gravity conditions
p 1853 N93-20192
Visualization and imaging methods for flames in microgravity p 1853 N93-20193
Selected microgravity combustion diagnostic techniques p 1853 N93-20194
Fire safety practices in the Shuttle and the Space Station Freedom p 1825 N93-20204
Opposed-flow flame spreading in reduced gravity
p 1854 N93-20206
Combustion of solid fuel in very low speed oxygen streams p 1854 N93-20207
Flame spread across liquid pools
p 1854 N93-20209
Combustion of interacting droplet arrays in a microgravity environment p 1854 N93-20217
Compressing subbanded image data with Lempel-Ziv-based coders
[NASA-TM-105998] p 1882 N93-20257
Full wave characterization of microstrip open end discontinuities patterned on anisotropic substrates using potential theory
[NASA-TM-106037] p 1889 N93-20259
Modal ring method for the scattering of electromagnetic waves
[NASA-TM-105966] p 1882 N93-20260
Flux concentrations on solar dynamic components due to mispointing
[NASA-TM-105756] p 1982 N93-20261
Effects of thermal and mechanical fatigue on the flexural strength of G40-600/PMR-15 cross-ply laminates
[NASA-TM-106016] p 1832 N93-20317
Structural dynamics branch research and accomplishments to FY 1992
[NASA-TM-105824] p 1925 N93-20368
Lewis Research Center battery overview
p 1983 N93-20493
Atomic oxygen protective coating with resistance to undercutting at defect sites
[NASA-CASE-LEW-15306-1] p 1859 N93-20566
Heat transfer device
[NASA-CASE-LEW-14162-4] p 1832 N93-20568
Atomic hydrogen propellants: Historical perspectives and future possibilities

Wright Laboratory research and development facilities handbook
[AD-A258746] p 2085 N93-20403
Compression-after-impact behavior of ARALL(trade name)-1 laminates
[AD-A259203] p 1832 N93-20550
URV flight test of an Ada implemented self-repairing flight control system
[AD-A259205] p 1787 N93-20551
Free edge delamination prevention in composite laminates p 1840 N93-21508
Initiation and prevention of edge delamination with and without residual stresses p 1841 N93-21510
Barely visible damage threshold in a BMI p 1843 N93-21524
WRIGHT STATE UNIV., DAYTON, OH.
Computer-oriented closed-form algorithm for constrained multibody dynamics for robotics application p 1940 N93-20706

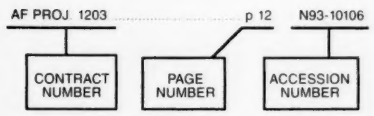
X

XONTECH, INC., HUNTINGTON BEACH, CA.
Tracking radar advanced signal processing and computing for Kwajalein Atoll (KA) application
[AD-A259066] p 1886 N93-21756

Y

YALE UNIV., NEW HAVEN, CT.
Nonlinear dynamics of global atmospheric and Earth system processes p 2001 N93-20076
The electrospray: Fundamentals and combustion applications p 1855 N93-20218
Experimental nuclear physics
[DE93-004950] p 2063 N93-21705
YAMAGATA UNIV. (JAPAN).
Fiber development in Japan p 1834 N93-21130
YARDNEY TECHNICAL PRODUCTS, INC., PAWCATUCK, CT.
Bipolar rechargeable lithium battery for high power applications p 1987 N93-20526
YORK UNIV. (ONTARIO).
Aimed arm movements under changed gravity p 1809 N93-21113
Laser welding of plastics under low and high gravity conditions p 1811 N93-21125

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

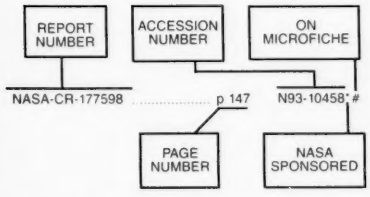
Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The accession number denotes the number by which the citation is identified. The page number helps to locate the citation in the abstract section. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

Appendix

NASA SCIENTIFIC AND TECHNICAL INFORMATION PROGRAM PRODUCTS AND SERVICES

The NASA Scientific and Technical Information (STI) Program provides for the collection and announcement of aerospace-related reports and literature obtained worldwide through agreements and exchanges. The result of the collection is the comprehensive NASA STI Database that covers aeronautics, space, and supporting disciplines.

The STI Database, documents generated or obtained by NASA, and products and services derived from or supporting the database are made available to the NASA research community and to the public. Descriptions and sources of these items are presented in the following pages.

Scientific and Technical Aerospace Reports (*STAR*) is an abstract journal, listing citations with abstracts for aerospace-related reports obtained from worldwide sources. *STAR* is issued on the first of each month, and announces current documents that have been entered into the NASA STI Database during the previous month. The reports are of the following types:

- NASA, NASA contractor, and NASA grantee reports;
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms;
- Translations in report form;
- NASA-owned patents and patent applications;
- Other U.S. Government agency and foreign patents and patent applications;
- Domestic and foreign dissertations and theses.

Journal, book, and conference literature, journal translations, and certain foreign dissertations having the same subject scope as *STAR* are announced in a companion journal, *International Aerospace Abstracts* (*IAA*). *IAA* is issued on the 1st and 15th of each month and is available from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, NY 10019.

ELIGIBILITY AND REGISTRATION FOR NASA STI PRODUCTS AND SERVICES

Organizations of the type listed below that have registered with NASA can receive products and services.

- NASA offices and installations, contractors, subcontractors, grantees, and consultants;
- Other U.S. Government agencies and their contractors;
- Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
- Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
- Organizations abroad that have established reciprocal documents exchange arrangements with NASA.

The central service points — central points of document acquisition and control within qualified organizations — or individuals are eligible to register for NASA STI products and services. Domestic organizations or individuals may be eligible to receive various classes of NASA publications and services and should address their requests for registration or further information to:

ATTN: Registration Services
NASA Center for AeroSpace Information
800 Elkridge Landing Road
Linthicum Heights, MD 21090-2934
301-621-0390

Organizations abroad should direct requests to:

National Aeronautics and Space Administration
Scientific and Technical Information Program (JTT)
International STI Program
Washington, DC 20546-0001
USA
703-271-5640

SUBJECT SCOPE

The subject scope of *STAR* and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of Earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

HOW TO USE *STAR* SUBJECT CATEGORIES

Abstracts in *STAR* are categorized by 10 major subject divisions that are divided further into 76 specific subject categories. The subject divisions and categories are listed in the Table of Contents together with a note for each that defines its scope and provides any cross-references. For example:

16 SPACE TRANSPORTATION
Includes passenger and cargo space transportation, e.g., shuttle operations; and space rescue techniques. For related information see also *03 Air Transportation and Safety* and *18 Spacecraft Design, Testing and Performance.* For space suits see *54 Man/System Technology and Life Support.*

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents available on microfiche are designated by a pound sign (#) following the accession number.

LIMITED REPRODUCIBILITY

A note of limited reproducibility appears in the citation, if there are factors affecting the reproducibility of more than 20% of the document. These factors include faint or broken type, color photographs, black and white photographs, foldouts, dot matrix print, or some other factor that limits the reproducibility of the document. This notation also appears on the microfiche header.

COLOR COPIES

An increasing number of NASA scientific and technical reports are being produced with color graphs, charts, illustrations, and photographs. An indication that a document has color pages follows the source and pricing (SAP) information in the *STAR* citation.

Registered users of the NASA Scientific and Technical Information Program will receive ordered documents with color at no additional cost, as long as stock copies of the document are available. Otherwise, an additional fee of $2.00 per color page will be charged. The NASA Center for AeroSpace Information staff will contact registered users to determine individual user's needs.

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number, and the U.S. Patent Class. Patent applications are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

Printed copies of patents (which are not microfiched) are available for purchase from the U.S. Patent and Trademark Office.

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the U.S. Patent and Trademark Office.

NASA patent application specifications are sold in both paper copy and microfiche by the NASA Center for AeroSpace Information (CASI). The N accession number should be used in ordering either paper copy or microfiche from CASI.

The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

National Aeronautics and Space Administration
Associate General Counsel for Intellectual Property
Code GP
Washington, DC 20546-0001

SOURCES FOR DOCUMENTS

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below, and their addresses are listed on page A-6. If the publication is available from a source other than those listed, the publisher and address will be displayed on the availability line or in combination with the corporate source line.

Avail: CASI. Sold by the NASA Center for AeroSpace Information. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page A-7.

NOTE ON ORDERING DOCUMENTS: When ordering publications from CASI, use the N accession number or other report number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, address inquiry to the BLL.)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page A-6.

Avail: Fachinformationszentrum, Karlsruhe. Gesellschaft fur wissenschaftlich-technische Information mbH 7514 Eggenstein-Leopoldshafen 2, Germany.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration (JBD-4), Public Documents Room (Room 1H23), Washington, DC 20546-0001, or public document rooms located at NASA installations, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: NTIS. Sold by the National Technical Information Service. Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) are available. For information concerning this service, consult the NTIS Subscription Section, Springfield, VA 22161.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications on page A-3.)

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed on page A-6. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

FEDERAL DEPOSITORY LIBRARIES: To provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 53 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. (These libraries are not sales outlets.) At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 53 regional depositories. A list of the regional GPO libraries, appears on page A-8. A local library can contact a regional depository library to help locate specific reports, or direct contact may be made by an individual.

PUBLIC COLLECTION OF NASA DOCUMENTS

An extensive collection of NASA and NASA-sponsored publications is maintianed by the British Library Lending Divison, Boston Spa, Wetherby, Yorkshire, England, for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*.

European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA—Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

SUBMITTING DOCUMENTS

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those you will transmit to NASA, DOD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Center for AeroSpace Information, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR*'s companion journal, *IAA*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on a public sale at the NASA Center for AeroSpace Information. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

STAR is publicly available on annual subscription from the NASA Center for AeroSpace Information (CASI) at $94.00 domestic, $117.00 foreign. Single copy prices: $33/domestic, $41/foreign.

An annual, cumulative *STAR Index* is also available at $54/domestic and $65/foreign.

STAR is available to registered users on annual subscription from the NASA Center for AeroSpace Information, ATTN: Registration Services, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Microfiche of the abstract sections of *STAR* are available, on annual subscription, from CASI. Annual subscription rates are $216.00 North America; $432.00 foreign.
